This book is devoted to a specific theological topic, that of theodicy. Theodicy is that branch of theology that elaborates on divine justice and seeks to explain the existence of evil in relation to it. The opening question is: where does Ibn Taymīyah stand between the two main trends of Islamic theology concerning the relationship between evil and divine justice? These two trends are the so-called free will tradition, as represented by Muʿtazilī *kalām,* and the optimistic tradition, exemplified mainly by Ibn Sīnā. Jon Hoover's detailed and competent analysis of Ibn Taymīyah's writings leads to the conclusion that, while on the specific problem of evil Ibn Taymīyah is to be set along the optimistic trend of al-Ghazālī and Ibn Sīnā, his very original image of a dynamic and perpetually active God sets him apart both from the *mutakallimūn* and the philosophers' idea of God's perfection in its unchanging and timeless essence. This analysis emerges from Chapter 2, which focuses on Ibn Taymīyah's elaboration of God's wise purpose *(ḥikmah)* while preserving his self-sufficiency. Hoover examines Ibn Taymīyah's argument for the rationality of God's acts, demonstrating how he distanced himself from the Ashʿarī denial of God's wise purpose in creation, from the Muʿtazilī disassociation of any wise purpose from God *(al-ḥikmah al-maṭlūbah munfaṣilah ʿanhu),* and from Ibn Sīnā's stress on God's strong self-referentiality that finds its utmost expression in creation by emanation and in the eternity of the world. The unique idea of God's perpetual dynamism in acting and willing (already discussed by Hoover in two important articles) shapes a personal and "close" image of God that can be seen to set aside Ibn Taymīyah from the previous traditions.[1]

[1] It may be noted that at p. 79 (a quote from Ibn Taymīyah's *Majmūʿāt al-Fatāwá,* ed. ʿAbd al-Raḥmān ibn Muḥammad ibn al-Qāsim and Muḥammad ibn ʿAbd al-Raḥmān ibn Muḥammad [Cairo, n.d.], 8:84), it would be more appropriate to translate *maḥdhūrān* as "two things to be afraid of or to be

If things are so, Ibn Taymīyah then needs to explain how it is possible to maintain human accountability. This is the subject of Chapters 3 and 4. Hoover opens here with a commentary on a passage of the *Tadmurīyah* that presents a three-fold typology of human error in relation to the issue of compatibility between God's creation (of all human acts: *khalq*) and his command *(amr),* the former corresponding to God's decree *(al-qaḍāʾ wa-al-qadar)* and the latter to the revealed law *(al-sharʿ)*. He examines the "polemical" labels (p. 106) Ibn Taymīyah exploits to outline the error of these groups and notes the "oddity" (p. 112) of grouping together as *mushrikūn* Jahmīs, Jabrīs, Ashʿarīs, and antinomian mystics.

More could have been said in this regard. The topic is intriguing and the linguistic choices of Ibn Taymīyah reveal much of his originality and deserve further investigation. *Mushrik* is primarily the person who associates other beings with God as objects of worship or prayer. Next, *mushrik* is commonly taken to be an idolater (one who worships an *eidos,* literally an image [of God]), although the Arabic root *(sh.r.k)* is not semantically equivalent to that of idolatry. Yet, as Gerald Hawting has recently shown, both Muslim tradition (outside the Quran) and the secondary literature generally identify *mushrikūn* as idolaters/polytheists, whereas in the Quran the *mushrikūn* are presented as "imperfect monotheists."[2] Ibn Taymīyah proposes a strikingly similar view to this Quranic conception of *shirk*. In fact, here and elsewhere he takes the *mushrikūn* to represent those whose monotheistic faith is incomplete.[3] One has the impression that Ibn Taymīyah deploys a targeted communicational strategy here. On the one hand, he draws upon Quranic terminology for the labels of the three erring groups *(Majūs, Mushrik, Iblīs)*. On the other, he bends the original meaning of these words to serve his own needs and understanding of their error. Thus, his personal interpretation shapes three collective categories which are closely connected to scriptural language. Seen in this way, the "oddity" (p. 112) Hoover perceives in Ibn Taymīyah's

avoided," rather than "two prohibited things."

[2] Gerald Hawting, *The Idea of Idolatry and the Emergence of Islam: From Polemic to Histor*y (Cambridge: Cambridge University Press, 1999). The expression "imperfect monotheists" is taken from Gerald Hawting, "Idolatry and Idolater," *The Encyclopaedia of the Qurʾān* 2:478.

[3] See for instance, *Majmūʿāt al-Fatāwá,* 10:264-65: the *mushrikūn* among the Arabs were those who professed the *tawḥīd al-rubūbīyah* (the uniqueness of God's lordship), but not the *tawḥīd al-ulūhīyah* (the uniqueness of God's divinity). They did not fully accept Muhammad's message and the priority of joining both the confessional and practical dimension of the proclamation of God's uniqueness *(wa-lā yajmaʿūna bayna al-tawḥīd al-qawlī wa-al-tawḥīd al-ʿamalī)*. In fact, they did not deny that God was the Creator, but "together with their recognition that Allah is the only Creator, they used to consider other Gods together with Him." Also translated by Yahya Michot, "La Foi et l'Amour: du *tawḥīd* théorique à sa mise en œuvre effective," *Textes Spirituels* VI, in *Le Musulman* 19 (Paris, 1992): 11–12.

grouping of *mushrikūn* is perhaps not so odd. Each of the three rubrics is both broad enough and clearly enough defined to embrace different theological stances with regard to the issue of compatibility between *khalq* and *amr*. Ibn Taymīyah's criterion is not that of the classical theological approaches to the problem of evil, but is strictly related to the strong ethical concern of neglecting God's command. Thus, the *mushrikūn* equally comprise Jahmīs, Jabrīs, Ashʿarīs (i.e., al-Rāzī) and antinomian Sufis. Their common denominator is their disregard towards the commanded aspect of divine creation (i.e., the law) by stressing the compulsion of God's will. They are incomplete in their *īmān*. While Hoover identifies their determinism as the common element characterizing their imperfect faith (pp. 12 and 114), he fails to highlight properly the ethical outlook that drives Ibn Taymīyah's categorization and his understanding of Islamic history and tradition that underpins the choice of his labels. This is all the more relevant considering that in the first chapter the author outlines Ibn Taymīyah primarily as a jurist even in his theological discourse. Thus, these people's dismissal of God's *amr* and their consequent nullification of the value of *sharʿ* are for Ibn Taymīyah a major concern and explain why the *mutaṣawwifah*, in their claim of attaining Reality *(al-ḥaqīqah)* are classified under this label. For the same reason, elsewhere Ibn Taymīyah violently attacks the epistemological validity of Aristotelian logic as a means of attaining metaphysical knowledge. As Wael B. Hallaq has rightly remarked, Ibn Taymīyah's final preoccupation is that of destroying the metaphysical foundation of speculative mysticism that nullifies the distinction between Commander and commanded, hence the value of the law. Hoover could usefully have used Hallaq's analysis in order to clarify Ibn Taymīyah's thinking on this point.

The second part of Chapter 3 tackles the causes of error and shows Ibn Taymīyah's concern with balancing out "creation" and "command." Hoover usefully familiarizes the reader with the key terminological accord between *khalq* and *amr* by which Ibn Taymīyah often describes these two branches of God's activity. He also illustrates Ibn Taymīyah's failure in elaborating a full argument for the compatibility between the two.

Chapter 4 examines the problem of human acts. Here Hoover exploits Western philosophical categories, moving away from previous interpretations of Ibn Taymīyah's thought on this issue by Laoust, Makari, and Gimaret. He classifies the Hanbali theologian as a "soft determinist" or a "compatibilist," that is, as admitting human choice within the framework of a strong determinism. Given the importance of al-Rāzī for the understanding of Ibn Taymīyah's doctrine, one would have expected the author to have made direct use of Rāzīyan texts rather than relying upon those quoted by Gimaret. A slip occurs at p. 170, where the

Sunnah of Abū Bakr al-Khallāl (d. 311/923) is quoted as no longer extant, whereas it has recently been published.[4]

The final two chapters get to the heart of the theodicean problem, and they deal respectively with evil and divine justice. What does Ibn Taymīyah make of evil? Hoover's attention to this issue is substantially new in the field of Taymīyan scholarship. In trying to make sense of the existence of evil, Ibn Taymīyah is shown to have echoed a series of Avicennan optimistic solutions, while embarking upon an edifying and spiritual understanding of evil's wise purpose that draws him close to Sufi and Muʿtazilī ideas. The other side of the coin is divine justice. Ibn Taymīyah confronts the two extremes (Muʿtazilī free-will theodicy and Ashʿarī voluntarism), setting himself apart by connecting divine justice to God's wise purpose and accepting Ibn Sīnā's optimism through al-Ghazālī's "best of all possible worlds." This analysis is especially interesting because it shows the connection of Ibn Taymīyah to the "optimism" of al-Ghazālī (and Ibn ʿArabī). It is a shame, however, that Hoover did not take this further and attempt a more detailed explanation of the reasons for the *shaykh al-islām*'s ambivalent attitude towards al-Ghazālī's dictum. This may have thrown further light on the development of the shaykh's thought on the issue and on his relationship with his own sources. Another important issue—beyond the scope of the book but interesting for future research—is that of Ibn Taymīyah's (or Ibn ʿArabī's?) contribution to the acceptance of al-Ghazālī's dictum from the fourteenth century onwards. This will give an idea of the impact of some Taymīyan ideas on the surrounding intellectual *milieux*.

From this book, Ibn Taymīyah emerges as a literalist theologian drawing upon elements of Islamic philosophy in order to provide a further rationale for revealed knowledge. By doing so, he produced a highly original synthesis of Islamic tradition that in terms of methodology aimed at keeping together reason and revelation, and in terms of ethics sought to guide the believer towards the right path to God. Hoover has done a good job in highlighting two key elements in Ibn Taymīyah's theory of God's acts and the Taymīyan way of talking about God: God's wise purpose and "the highest similitude." Both recur throughout the book and will hopefully be useful interpretative tools for further research. The purpose of the book is to shed new light on Ibn Taymīyah's theodicy through an analysis of the shaykh's own arguments and by contextualizing his thought in the main trends of Islamic philosophy and theology. While the first is fully accomplished, the second is less thoroughly achieved (the author is aware of this: see pp. 4 and 237). That said, Hoover has offered the reader a solid intellectual framework in which to set the topic of theodicy and has provided a stimulus for further research. A more

[4] Abū Bakr Aḥmad ibn Muḥammad al-Khallāl, *Al-Sunnah,* 5 vols., ed. ʿAṭīyah ibn ʿAtīq al-Zahrānī (Riyadh: Dār al-Rāyah, 1995).

complete appreciation of Ibn Taymīyah's originality as a theologian will emerge not only by exploring his appropriation of the doctrines of previous thinkers, but also by considering what the Hanbalis of his time were writing, studying, and discussing, as well as their position on the theological issues that animated late thirteenth- and fourteenth-century traditionalist circles.

That criticism aside, Hoover's book is the first in a Western language solely devoted to Taymīyan theology. While Chapters 2 to 6 will be of interest mainly to the specialist in theology, Chapter 1 provides an excellent grid of interpretation for the scholar interested in any of Ibn Taymīyah's fields of knowledge. It is an attempt to define the authentic quality of Taymīyan scholarship and activism. The latter is an aspect that deserves more consideration, not as something that dictates the shaykh's ideology, as Hoover rightly points out (p. 24), but as a concrete expression of a system where not only theology and jurisprudence but also action are intimately intertwined. Hoover's definition of Ibn Taymīyah's theology as a theological *fiqh* is penetrating.[5] It implies that *fiqh* is inclusive of theology and that Ibn Taymīyah's scholarship is to be seen as jurisprudential even when he is deeply preoccupied with specific theological questions. In this regard, it will be important to further investigate the shaykh's legal writings with attention to his views on theology in a non-theological context. By itself, this definition calls for a more vigilant interest in Ibn Taymīyah's engagement in the affairs of the society in which he lived.

As a framework in which to set Ibn Taymīyah's discourse on theodicy, Hoover's book represents an important contribution towards the understanding of the meaning of Ibn Taymīyah's scholarship. In a consistent and informative way, Hoover builds on the work of Yahya Michot in challenging the established idea of Ibn Taymīyah's strict traditionalism. In doing so, he does justice to the complexity of one of the most important thinkers in the Islamic tradition. By making available in a single volume a broad spectrum of hitherto underutilized sources, it paves the way for a new understanding of Taymīyan theodicy and related issues.

[5] It should be read in conjunction with Yossef Rapoport's contribution on Ibn Taymīyah's legal thought, which also draws attention to the deep correspondence between theology and *fiqh:* Yossef Rapoport, "Ibn Taymiyya's radical legal thought: Rationalism, pluralism and the primacy of intention," in *Ibn Taymiyya and his Times,* ed. Shahab Ahmad and Yossef Rapoport (forthcoming, Karachi: Oxford University Press).

Sami G. Massoud, *The Chronicles and Annalistic Sources of the Early Mamluk Circassian Period* (Leiden and Boston: Brill, 2007). Pp. 477 + xii.

Reviewed by Paulina B. Lewicka

The corpus of annalistic literature dating back to the Circassian, or Burji, Mamluk period includes over seventeen titles, most of which constitute fundamental source material for all kinds of researchers dealing with the Mamluk epoch. As such, these sources—and particularly their published majority—are constantly read, re-read, reconsidered, and referenced. Oddly enough, until now we have had at our disposal only fragmentary studies discussing this corpus from a historiographical point of view. The research undertaken by Sami Massoud is, to use his own words, a result of his endeavor to "fill this lacuna," by which he means establishing "the value of the Burjī historical works in their own right [and] in relation to one another" (p. 6). Indeed, Massoud's *Chronicles and Annalistic Sources* is the first comprehensive critical analysis of the works written by the historians and chroniclers of the Burji Mamluk era.

In order to realize his objectives, Massoud applied, "albeit with some modifications," the methodology pioneered by Donald P. Little in his study of the sources for the reign of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn. In practical terms, this means that Massoud's method, which he calls a "micro" approach to historiography, consists of word-by-word comparisons of individual accounts of particular events as recorded in chronicles and annalistic sources of the epoch. Indeed, there is probably no other way to detect the inter-relatedness and inter-dependence of the sources, identify borrowings, discover the original contribution of each historian, and explore the genesis and scope of reports and their impact on the construction of the narrative. By applying this textual collation in order to analyze his sources, Massoud also intended to provide "a detailed understanding of the events of a given year." This avowed intention might appear to be a gesture towards the limited circle of readers interested in the details of the developments of 778, 793, and 804 A.H. However, this is not the case: by providing a detailed understanding of particular events, Massoud wants to make it possible for "modern historians to revisit, reevaluate, and reconsider historical data" (p. 7).

Has Massoud achieved what he planned? The essential part of *Chronicles and Annalistic Sources* consists of three chapters, each of them devoted to a discussion of records relating to one historical annal. The choice of each of the three annals subjected to source analysis was not made at random. Chapter one deals with the annal of 778/1376-77, which was a year of mamluk rebellions against, and subsequent murder of, the sultan al-Ashraf Shaʿbān. It seems the annal was chosen by Massoud because the events surrounding the sultan's murder permeate all the

narratives about the year 778 produced by authors over the next century and beyond. The year 793/1390–91, to which chapter two is devoted, was the year of the "aftershock" of Barqūq's overthrow and his return to rule, as well as the year in which he consolidated his power. As Massoud observes, it would have probably been more interesting to study the accounts of the disturbances that accompanied Barqūq's resumption of power at the turn of 791 and in the early part of 792. Due to their multitude and diversity, however, analyzing the events and records of either of these years would have been too demanding to reach satisfactory conclusions. One of the reasons, therefore, why the annal of the year 793/1390–91 was subjected to analysis was simply that it was less complicated than the previous two. The third annal analyzed by Massoud, that of 804/1401–2, does not relate to any particular political or social event. From a historical point of view, the records making up this annal reflect, on the one hand, the ongoing strife within the Mamluk governing circles in Syria, and on the other, they echo the aftermath of the devastation which Syria suffered as a result of Tamerlane's incursion of 803/1400. From a historiographical point of view, the year 804/1401–2 represents, as Massoud puts it, "the end of a historiographical cycle" (p. 8), by which he means that the works of three authors who witnessed the emergence of the Circassian sultanate as mature historians conclude just before 804/1401–2. At the same time, the year 804 heralded the beginning of a new generation of self-conscious historians who were old enough to comprehend and record the events of their day. As such, the year 804 is, according to Massoud, pivotal from both historical and historiographical points of view, which apparently was the reason why he subjected it to analysis.

Within each chapter, the analysis of records related to a given annal is preceded by a concise presentation of crucial developments which took place in the year discussed. In each of the three chapters, the examined sources are divided into two main categories: the works of authors whose lives coincided with the events reported in a given annal, and the works of later historians. Each of these two categories is further subdivided into a section devoted to Egyptian historians and a section devoted to Syrian historians. In turn, each of these sections consists of subsections discussing individual historians and their works, many of which are still available only in manuscript form. Generally, the historians are introduced into the text according to their year of birth. The analysis of accounts written by a given historian is preceded by a concise presentation of his biography.

For example, in chapter three, in which the annal of 804/1401–2 is studied, first the appropriate accounts of contemporary Egyptian historians are discussed. The list includes Ibn Duqmāq, al-ʿAynī, al-Maqrīzī, and al-ʿAsqalānī. The analysis of their works is followed by an examination of accounts written by contemporary Syrian authors. In this case, the appropriate section includes the analysis of *Tārīkh*

Ibn Ḥijjī. Analogically, the subchapter dealing with "Later historians" includes a section on "Egyptian historians," and the list includes Ibn Taghrībirdī, al-Ṣayrafī, al-Malaṭī, Ibn Iyās, and an anonymous author of a chronicle entitled *Jawāhir al-Sulūk fī al-Khulafāʾ wa-al-Mulūk*. In the section devoted to later Syrian historians, Massoud examines the accounts written by Ibn Qāḍī Shuhbah. As in the case of two previous chapters, chapter three ends with brief comments on "minor historians."

These three analytical chapters are followed by three appendices, one appendix supplementing each of the chapters. Generally speaking, these appendices include the English rendering of the individual reports which were subjected to analysis in the preceding chapters; each of the three appendices consists of entries referencing reports mentioned in the analysis. Each entry is numbered and organized according to four categories (political/military/administrative affairs, religious life, social history/ miscellany, and foreign affairs) and then identified by the abbreviation of its author's name. As a result, the reader can easily check the text of the reports referred to in the study, as well as find their location in the sources.

Due to its very particular nature, a study based on a word-by-word analysis of sources by means of textual collation can hardly be summarized. However, the intrinsic value of this kind of work consists not in its storyline, but in the details which fill it and which take the form of dozens of conclusions and hypotheses drawn by the author in the course of the Benedictine effort made in comparing the records. Therefore, to appreciate a study such as Massoud's *Chronicles and Annalistic Sources,* one has to savor its details (including the collated fragments of transcribed Arabic records inserted into the text) and recognize their value. Taking this into consideration, it seems that the most appropriate way to demonstrate the quality and significance of the discussed work is to indicate some of the most characteristic conclusions and hypotheses formulated by its author.

Generally speaking, the opinions and judgments expressed by Massoud can be divided into those that refer to micro-scale historiography and those that apply to a more universal context. The former are the direct result of Massoud's efforts to achieve one of the main objectives of his research, that is "to examine inside the confines of a single annal, the disposition of *akhbār* and their interrelation within sources" (p. 10). Meticulous, precise, and insightful, these opinions not only define a given historian's contribution to our knowledge about the events of a given year, they also constitute essential material without which formulating more universal comments would not be possible. Thus one can learn, for example, that Ibn al-ʿIrāqī's chronicle "is of little value for anyone interested in investigating the social and political scene in Egypt in 778" (p. 48); that "for the year 778 . . . [al-ʿAynī's] *ʿIqd al-Jumān* has absolutely nothing original to offer" (p. 40); or that "as regards the annal of the year 778, the primary significance of al-Maqrīzī

[i.e., his *Kitāb al-Sulūk*] is that he replicates the contents of Ibn al-Furāt's *Tārīkh al-Duwal*" (p. 49). One can also learn details such as the fact that Ibn Ḥajar al-ʿAsqalānī's *Inbāʾ al-Ghumr* "offers a rather poor account of the events of the year 778," that "it is a condensed summary of other people's work" (p. 59), and that it "does not add anything dramatically original to our knowledge of the year 793" (p. 118). A researcher can also read that "the annal of the year 778 in *Jawāhir al-Sulūk* does not reflect Ashtor's assertion that it contains original data not found in contemporary sources" (p. 77), and that generally "*Jawāhir al-Sulūk* is not a very useful source for the events of the year 778" (p. 81). As for Ibn Iyās, we can learn that "perhaps the most striking characteristic of the annal of the year 793 in *Badāʾiʿ al-Zuhūr* is the extent to which it diverges in many parts of its narrative from the general consensus sketched by the other chronicles" (p. 137).

Naturally enough, a great many of Massoud's micro-scale conclusions result from his investigation of textual borrowings. Al-Sakhāwī, for example, relied mostly on Ibn Ḥajar's *Inbāʾ al-Ghumr*, but also on Ibn al-ʿIrāqī's *Dhayl,* at least for the year 778. As for Ibn Ḥajar's *Inbāʾ al-Ghumr*, "the highly condensed and disorganized nature of the narrative, coupled with his [Ibn Ḥajar's] propensity to rewrite other authors' *akhbār*" (p. 55), made it arduous to identify the sources from which Ibn Ḥajar borrowed. However, as far as his elaboration of the annal of 778 is concerned, it can be established with some degree of certainty that he relied on Ibn al-Furāt, Ibn Duqmāq, and Ibn Ḥijjī. Sometimes, as in the case of Ibn Khaldūn's *Kitāb al-ʿIbar,* the clues are so confusing that it is impossible to give a clear answer regarding borrowings. At other times, as in the case of certain data included in the annal of 793/1390–91 in the anonymous *Jawāhir al-Sulūk,* Massoud leaves it for others to determine "whether the author derived this information from an unknown source . . ." or "had recourse to artistic licence by simply inventing this account" (p. 142).

As for Massoud's more general assumptions, comments, and hypotheses, they refer to many different aspects of the works discussed. Most often, they concern a given historian, his style, his reliability, and the value of his work for modern historians. A typical example of such comments are the remarks referring to Ibn Duqmāq's *Nuzhat al-Anām:* the analysis of this chronicle brings Massoud to the fundamental conclusion that it is "the most original of sources in that it was copied extensively by other authors, such as Ibn al-Furāt and al-ʿAynī, and yet does not appear to contain major borrowings from any other works" (p. 34). From the section on Ibn al-Furāt one can learn that *Al-Muntaqá* (i.e., Ibn Qāḍī Shuhbah's selections from *Tārīkh Ibn al-Furāt*) is "superior to all other chronicles in terms of wealth of information," and that "it contains a substantial number of in-depth additional data that appear to be original" (p. 36). Moreover, *Al-Muntaqá* "contains more accounts of political events than any other contemporary source,

and it also outdoes these with regard to social and religious affairs" (p. 38). As for the anonymous *Jawāhir al-Sulūk,* Massoud warns researchers that reading this chronicle "leaves one with the impression that its author was more interested in the form that his narrative would take than in the historical content it might provide. Moreover, he took some liberty in rewriting history" (p. 80).

Perhaps the most illustrative of Massoud's shrewd and expert style are the sections devoted to Ibn Iyās. Thus, all those who use, or intend to use, Ibn Iyās's *Badāʾiʿ al-Zuhūr* can learn that one of the many narrative techniques used by Ibn Iyās was combining story elements from different sources. However, beyond the data he borrowed from others, the chronicle contains a "substantial amount of information found in no other source" (p. 72). Such a feature would generally be considered a positive quality. However, Massoud leaves no doubt as to the value of at least some of such pieces of information, which he describes as "likely to have been nothing but dramatic embroiderings" (p. 73). Massoud further devalues the quality of Ibn Iyās's accounts by stressing that the chronicler used to take "considerable liberty in rearranging the story line and plots of certain events" or, in other words, to romanticize certain events whenever these lent themselves to such a treatment, and to alter the storyline for dramatic purposes (p. 75). In practical terms, this means that "the fundamental narrative elements of some series of *akhbār* in *Badāʾiʿ al-Zuhūr* are generally common to Ibn Iyās and to most other historians, but their order of appearance, chronological anchoring, circumstantial dimensions, and, more importantly, the dramatic results of the events they depict," (p. 138) frequently place "his narrative at odds with the accounts of most other historians" (p. 73). However, one should remember that "despite the profound changes to which Ibn Iyās subjected a number of his reports, the information he used to construct his narrative was made up of historical facts" (p. 75).

In other words, Ibn Iyās's *Badāʾiʿ al-Zuhūr* is a mixture of history and fiction. The main problem with Ibn Iyās, however, is that he was the foremost chronicler to witness the decline of the Mamluk state and Egypt's transition from Mamluk to Ottoman rule. Consequently, modern historians dealing with this period are forced to rely on him as far as the source material is concerned; for this reason, Massoud's remarks should always be kept in mind. In fact, Massoud's *Chronicles and Annalistic Sources* is an extremely useful and indispensable guide to all Burji historiography. The textual collation applied by Massoud has resulted in the production of what Mamlukologists need most of all (and what D. P. Little sought to establish): "an analytical survey of the sources of the period that aims at classifying them in terms of their value to modern historians" (quoted on p. 7). Sami Massoud did his work perfectly. The few typing errors, such as misspelling Jo Van

Steenbergen's name as "Joe" (p. 42), are probably the only examples of imprecision or oversight in this book. The term "*muswadda*" as used by Massoud on p. 22 and defined as "foundation" (of a book) could be also spelled "*musawwadah,*" as it was in Ayman Fuʾād Sayyid's 1995 edition of al-Maqrīzī's *Musawwadat Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār*. The form "*musawwadah*" is not the only correct form, but it is perhaps less Egyptian—and therefore more classical—in flavor. In general, due to its informativeness and uniqueness, the value of the book cannot be overestimated.

BERNADETTE MARTEL-THOUMIAN, *Catalogue des manuscrits historiques de la Bibliothèque nationale de Damas: Période mamlouke* (Damascus: Institut français du Proche-Orient, 2003). Pp. 336.

REVIEWED BY RENÉ-VINCENT DU GRANDLAUNAY, Institut dominicain d'Études orientales

The manuscript collection in the Damascus National Library has numbered over 40,000 titles ever since collections from various Syrian cities were assembled there in the 1980s. Catalogues previous to this date are perforce obsolete. Such is not the case for the catalogue reviewed here: though published in 2003, the author has personally told me that it was completed ten years earlier, in 1993. In this work, Bernadette Martel-Thoumian has compiled the catalogue of manuscripts concerning the Mamluk period (648–922/1250–1517) found in this sizeable and outstanding collection. She grounds her undertaking on previous works, in which she occasionally shows undue trust. We wish to mention specifically the two-volume *Fihris Makhṭūṭāt Dār al-Kutub al-Ẓāhirīyah: al-Tārīkh wa-Mulḥaqātuhu,* published by the Majmaʿ al-ʿIlmī al-ʿArabī bi-Dimashq, the first volume of which was edited by Yusuf Eche in 1947, and the second by Khālid al-Rayyān in 1973.

Note that manuscripts dating to the Mamluk period, but containing pre-Mamluk texts, have justifiably been omitted from this description. Likewise, from works on general history, only the manuscript sections related to the Mamluk period have been retained. Hence, manuscripts of *Al-Bidāyah wa-al-Nihāyah* by Ibn Kathīr (d. 774/1373) are not comprehensively described [26–27]:[1] only volume 10, covering the period from 617/1220 to 702/1303, has been included in this work. Similarly, from the anonymous manuscript of the *Tārīkh al-Islām* [38], only the specifically Mamluk sections 7, 8, and 9 have been described.

[1] The description number in Martel-Thoumian's catalogue is enclosed in square brackets.

This work begins with an introduction primarily concerned with the codicological content of the catalogue. It provides such information about the manuscripts as the type of ink utilized by the writer, the written symbols and ornaments, the catchwords and voweling, the paper, the types of annotation, and the quires and binding. Following the introduction, the main body of the work includes 237 manuscript descriptions, arranged by alphabetical order of title. Fifteen illustrations of specimens are then displayed, followed by a selected bibliography and indexes.

The 237 descriptions cover fewer than 160 titles. All in all, this is quite a small sample for a historical period spanning nearly 300 years and for such a large collection as this. Each description follows a uniform pattern:

1. The header: sheet number (we prefer the French term "notice" to Martel-Thoumian's "fiche"), manuscript number in the new collection (the previous call numbers of manuscript excerpts from the Ẓāhirīyah are mentioned), Arabic title of the work transliterated into Roman letters, name of the author transliterated into Roman letters, title of the work in Arabic, name of the author in Arabic.

2. Description: the nature of the work, the *incipit* followed by the *explicit,* a description of the manuscript, a codicological description, the place of origin of the manuscript, marks indicating the ownership or previous reading of the manuscript.

3. Reference to text editions

The indexes provided are numerous, but inconsistent in their presentation: they appear in Arabic script and in Roman transliteration. Thus, seven indexes are rendered in French: (1) Manuscripts (which might have been more accurately termed "Titles"), (2) Authors, (3) Copyists, (4) *Waqf* founders, (5) Owners, (6) Sellers and buyers, (7) Readers. Two indexes appear in Arabic: (1) *al-makhṭūṭāt* (understand *al-ʿanāwīn*) and (2) *al-mūʾallifūn.*

The Codicological Description

Martel-Thoumian's work, while inspired by her predecessors', is novel in that it takes into account the newly expanded collection of Damascus manuscripts. Most importantly, it undertakes a systematic codicological description, which has been heretofore lacking. In addition to being far superior to the descriptions included even in the best editions, it is above all more comprehensive than those included in similar catalogues. The precision which characterizes this work was made possible by the author's regular immersion in manuscript texts. Our gratitude must be extended to the directors of the Damascus National Library for authorizing the creation of such a catalogue.

Additional Remarks

The following remarks are meant both as an encouragement of and a contribution to a much-needed Arabic edition of this exquisite catalogue.

A. Romanization

It is regrettable that the Roman transliteration of the modern names cited in this catalogue is somewhat imprecise. As a rule, using abbreviations in Arabic is a perilous undertaking. Only specialists will recognize that, for instance, the designations A. M. Hilw [129] and F. M. Ḥilū [135] refer to the same individual, ʿAbd al-Fattāḥ Muḥammad al-Ḥilū. Likewise, A. Bigawi, the Egyptian editor of *Tabṣīr al-Muntabih fī Taḥrīr al-Mushtabih* by Ibn Ḥajar, becomes A. M al-Bagawi [189]. Another Egyptian editor, ʿAlī Muḥammad ʿUmar, is called A. M. Umarau [145]. With regard to Arabic spelling, the *alif* in *ibn* is too often accompanied by a *hamzah* [71], [82], [138], [215].

B. The Text Editions

After listing the items which are to receive descriptions, Martel-Thoumian states in her introduction that she "might provide the text edition." We wish to elaborate on this point, which will hopefully be handled more carefully in future manuscript catalogues. This holds especially true when dealing with the Arabic-Islamic heritage, which is presently experiencing a proliferation of editing, not always of the highest quality.[2] An effort to mention text editions would have been expected within the framework of this catalogue; however, only forty descriptions provide satisfactory information in this regard. Obviously, to indicate every single edition of a given text is out of the question, for this is not the main purpose of a catalogue of manuscripts. Nonetheless, if a text has only one edition, however mediocre, it must be mentioned and qualified as such. Indeed, familiarity with poor editions provides incentive for the production of more thorough works. As stated at the beginning of this review, the catalogue was completed in 1993. Hence, its list of text editions appears somewhat outdated to readers in 2003. In 2007, the year of the present review, its datedness is more glaring still. Here, we

[2] Though these texts don't always deserve to be edited (i.e., descriptions 107, 183), we list hereunder those in the catalogue which have not been edited, at the date of the present review: [3], [4], [5, 6, 7], [12], [25], [30, 31], [32, 33], [34], [38–39], [41], [42], [53, 54], [55], [56], [57], [58], [59], [60], [61], [62], [63], [68], [69], [70], [71], [75], [80], [81], [82], [83], [84], [85], [91, 92], [96], [101, 102, 103], [105], [107], [108], [112], [119], [128], [137], [138], [143], [148] [148], [149], [150], [151], [152], [153], [155], [156], [157, 158], [179], [181], [182], [183], [187], [188], [190], [191], [192], [193], [194], [197], [198], [199], [200, 201], [202, 203], [207], [215], [216], [219], [235], [236], [237].

provide a list of editions with which Martel-Thoumian might have acquainted herself, in addition to those published after 1993.

[1] *Āthār al-Bilād wa-Akhbār al-ʿIbād* by al-Qazwīnī (d. 682/1283). This text was first edited by F. Wüstenfeld in *Zakarija ben Muhammed ben Mahmud el-Cazwini's Kosmographie* (Götingen: Verlag der Dietrichschen Buchhandlung, 1848–49). It has been reprinted twice: (1) Wiesbaden: M. Sändig, 1967; and (2) Frankfurt: Institute for the History of Arabic-Islamic Science, 1994.

[2] *Kitāb Ikhbār al-Kirām bi-Akhbār al-Masjid al-Ḥarām* by al-Asadī (d. 1066/1656). A mediocre edition of this text has been produced by al-Ḥāfiẓ Ghulām Muṣṭafá (Cairo: Dār al-Ṣaḥwah, 1985.)

[3] *Irshād al-Sālik ilá Manāqib al-Mālik* by Ibn Mibrad (d. 909/1503). To be more precise, the author's *nasab* (the string of ancestors mentioned in a name) is Yūsuf ibn Ḥasan ibn Aḥmad ibn Ḥasan ibn ʿAbd al-Hādī. Reference number 6 to Brockelmann is mistaken: instead of II, pp. 130–31, read GII, 107–8, and SII, 130–31.

[8] *Asmāʾ Muʾallafāt al-Imām Taqī al-Dīn Aḥmad ibn Taymīyah* by Ibn Qayyim al-Jawzīyah (d. 751/1350). Surprisingly, the author failed to connect this text with the manuscript later described in description [213], though they both share the same *incipit.*

[13] [14] [15] *Kitāb al-Iʿlām bi-Aʿlām Bayt Allāh al-Ḥarām* by al-Nahrawālī (d. 990/1582). It is regrettable that ʿAlī Muḥammad ʿUmar fails to annotate the text in his edition (Cairo: Maktabat al-Thaqāfah al-Dinīyah, 2004).

[16] *Al-Iʿlām fī Wafayāt al-Aʿlām* by al-Dhahabī (d. 748/1347). The first edition was published in Beirut in 1991 by ʿAbd al-Jabbār Zakkār and Riyyāḍ ʿAbd al-Majīd Murād.

[26][27] *Al-Bidāyah wa-al-Nihāyah* (*al-juzʾ al-ʿāshir*) by Ibn Kathīr (d. 774/1373). One should now depend on ʿAbd Allāh ibn ʿAbd al-Muḥsin al-Turkī's edition (Cairo: Dār Hajar, 1999), which includes annotations and indexes.

[35][36][37] *Tāj al-Tarājim* by Ibn Quṭlūbughā (d. 879/1474). We can now rely on the edition by Muḥammad Khayr Ramaḍān Yūsuf (Damascus: Dār al-Qalam, 1992), which includes annotations and indexes.

[45][46][47][48][49] *Tuḥfat al-Anām fī Faḍāʾil al-Shām* by Ibn al-Imām (d. 1015/1606). A good edition, including annotations and indexes, has been made by ʿAbd al-ʿAzīz Fayyāḍ Ḥarfūsh (Damascus: Dār al-Bashāʾir, 1998).

[51][52] *Tuḥfat al-Ẓurafāʾ bi-Asmāʾ al-Khulafāʾ* by al-Suyūṭī (d. 911/1505). Al-Suyūṭī inserted this poem, which he composed in a traditional form, as a conclusion to his *Tārīkh al-Khulāfāʾ*. This poem is contained in the two manuscripts described here. It is located at the end of the extremely mediocre editions of the *Tārīkh al-Khulāfāʾ*. However, Maḥmūd Naṣṣār's edition of al-Suyūṭī's *Kitāb al-Tabarrī min*

Maʿarrat al-Maʿarrī (Beirut: Dār al-Jīl, 1989) also contains an edition of the *Tuḥfat al-Ẓurafāʾ*.

[60] *Tarjamat al-Badawī* by Ibn Ḥajar al-ʿAsqalānī (d. 852/1448). This proves the existence of a second manuscript of this *Tarjamah* of Aḥmad al-Badawī written by Ibn Ḥajar. In her superb work, *Al-Sayyid Aḥmad al-Badawī, un grand saint de l'islam égyptien* (Cairo: Institut Français d'Archéologie Orientale [IFAO], 1994), Catherine Mayeur-Jaouen presumed that there was only one extant manuscript (p. 16). Apparently, this text has not yet been edited.

[76][77][78] *Tawḍīḥ al-Mushtabih* by Ibn Nāṣir al-Dīn al-Qaysī (d. 842/1438). The manuscript in this collection does not display the title or author's name. On page 196 of his *Fihrist Makhṭūṭāt Dār al-Kutub al-Ẓāhirīyah: al-Tārīkh wa-Mulḥaqātuhu*, published in Damascus, Yusuf Eche ascribes this text to Ibn Ḥajar al-ʿAsqalānī, thus confusing it with another work by Ibn Ḥajar, *Tabṣīr al-Muntabih fī Taḥrīr al-Mushtabih*. However, in 1964, ʿAlī Muḥammad al-Bijāwī edited this *Tabṣīr al-Muntabih* (Cairo: Muʾassasah al-Miṣrīyah al-ʿĀmmah lil-Taʾlīf wa-al-Anbāʾ wa-al-Nashr). A simple comparison between both *incipit*s dispels all ambiguity: the *Tabṣīr al-Muntabih* must be distinguished from the *Tawḍīḥ al-Mushtabih*. Moreover, in 1986, Muḥammad Naʿīm al-ʿIrqūsī edited the latter text (Beirut: Muʾassasat al-Risālah), which he attributed to its true author, Shams al-Dīn Muḥammad ibn ʿAbd Allāh ibn Muḥammad al-Qaysī al-Dimashqī (d. 842), better known by his *shuhrah* Ibn Nāṣir al-Dīn. Hence, Martel-Thoumian's erroneous attribution is surprising inasmuch as she is familiar with the edition of the *Tabṣīr al-Muntabih* and probably with the *Tawḍīḥ al-Mushtabih*, re-edited in 1993.

[79] *Thabt al-Bulqīnī* by Ibn al-Bulqīnī (d. 868/1464). Note that this work is comprised of a list of the shaykhs of Sirāj al-Dīn Abū Ṣāliḥ ʿUmar ibn Raslān al-Bulqīnī (d. 805/1403), compiled by his son Sāliḥ (cf. Yūsuf ʿAbd al-Raḥmān al-Marʿashlī, *Muʿjam al-Maʿājim wa-al-Mashyākhāt* [Riyadh: Maktabat al-Rushd, 2002], 1:493).

[86][87][88] *Ḥusn al-Muḥāḍarah fī Akhbār Miṣr wa-al-Qāhirah* by al-Suyūṭī (d. 911/1505). Note ʿAlī Muḥammad ʿUmar's very recent edition of *Ḥusn al-Muḥāḍarah* (Cairo: Maktabat al-Khanjī, 2007), with notes and indexes.

[89] *Tārīkh al-Khamīs fī Aḥwāl Anfas Nafīs* by al-Diyārbakrī (d. 966/1559). The Beirut edition referred to in this catalogue is most likely the 1984 reprint by the Muʿassasat Shaʿbān lil-Nashr wa-al-Tawzīʿ.

[101][102][103] *Dhayl Lawāqiḥ al-Anwār fī Ṭabaqāt al-Sādah al-Akhyār* by al-Shaʿrānī (d. 973/1565). This is likely *Al-Ṭabaqāt al-Ṣughrá,* the most recent edition of which, by Saʿīd Hārūn ʿĀshūr (Cairo: Maktabat al-Ādāb), completely ignores the three Damascus manuscripts.

[104] *Sukkardān al-Sulṭān* by Ibn Abī Ḥajalah (d. 776/1375). This has been edited by ʿAlī Muḥammad ʿUmar (Cairo: Maktabat al-Khanjī, 2001).

[111] *Al-Shamʿah al-Muḍīʾah fī Akhbār al-Qalʿah al-Dimashqīyah* by Ibn Ṭūlūn (d. 953/1546). The information provided about the text edition is somewhat succinct. At the very least, we may add that this text was printed without notes on the basis of the Damascus manuscript by the Maktabat al-Qudsī wa-al-Budayr, Damascus, 1929. Dār Zāhid al-Qudsī, Cairo, recently reprinted this edition without dating it. However, we believe it was produced at the beginning of the 1990s.

[123][124][125][126][127] *Ṭabaqāt al-Ḥanafīyah* by al-Ḥināʾī (d. 979/1571). Although unable to consult this text, we know of its existence; it has been edited in three volumes by Muḥyī al-Dīn Hilāl al-Sarḥān (Baghdad: Maṭbaʿat al-Waqf al-Sunnī, 2004).

[129] *Al-Jawāhir al-Muḍīʾah fī Ṭabaqāt al-Ḥanafīyah* by Ibn Abī al-Wafāʾ (d. 775/1373). The Cairo edition by ʿAbd al-Fattāḥ Muḥammad al-Ḥilū, with notes and indexes, is preferable (Giza: Muʾassasat al-Risālah, 1993).

[134] *Ṭabaqāt al-Shāfiʿīyah* by Abū Bakr al-Muṣannif (d. 1014/1605). This was first edited by Nuʿmān al-Aʿẓamī al-Kutubī (Baghdad: al-Maktabah al-ʿArabīyah, 1937), and then by ʿĀdil Nuwayhiḍ (Beirut: Dār al-Afāq al-Jadīdah, 1971).

[139][140] *Ṭabaqāt al-Lughawīyīn wa-al-Nuḥāh* by al-Suyūṭī (d. 911/1505). The second Cairo edition by Muḥammad Abū al-Faḍl Ibrāhīm (ʿIsá al-Bābī al-Ḥalabī) was made in 1964, not in 1973 as Martel-Thoumian claims. A third Cairo edition was published in 2005. The editor, ʿAlī Muḥammad ʿUmar, provides few annotations and, as usual, neglects both of these Damascus manuscripts.

[141] *Ṭabaqāt al-Mufassirīn* by al-Dāwūdī (d. 945/1539). ʿAlī Muḥammad ʿUmar has produced an edition (Cairo: Maktabat Wahbah, 1972), with few notes, but some indexes.

[159][160] *Al-Kawākib al-Durrīyah fī Tarājim al-Sādah al-Ṣūfīyah* by al-Munāwī (d. 1031/1621). The most recent edition is likely that of Muḥammad Adīb al-Jādir (Beirut: Dār Ṣādir, 1999). This edition mainly relies on the manuscript described in [159], and it includes notes and indexes.

[162] *Kawkab al-Rawḍah* by al-Suyūṭī (d. 911/1505). This text was edited by Muḥammad al-Shishtāwī in 2001 (Cairo: Dār al-Afāq al-ʿArabīyah) and is yet another example of an Egyptian editor's ignoring all manuscripts located outside of Egypt.

[163][164] *Lubb al-Lubāb fī Taḥrīr al-Ansāb* by al-Suyūṭī (d. 911/1505). We may also mention, with the utmost reservation, the edition by Muḥammad and Ashraf Aḥmad ʿAbd al-ʿAzīz available at the Dār al-Kutub al-ʿIlmīyah (Beirut, 1991).

[166]–[175] *Lawāqiḥ al-Anwār fī Ṭabaqāt al-Sādah al-Akhyār* by al-Shaʿrānī (d. 973/1565). ʿAbd al-Raḥmān Ḥasan Maḥmūd prepared the latest edition (Cairo: Maktabat al-Ādāb, 1993 [vol. 1], 2001 [vol. 2]). However, a critical edition is still needed.

[176][177] *Al-Majmaʿ al-Muʾassas lil-Muʿjam al-Mufahras* by Ibn Ḥajar al-ʿAsqalānī (d. 852/1448). Yūsuf ʿAbd al-Raḥmān al-Marʿashlī has indeed edited this text in 4 volumes (Beirut: Dār al-Maʿrifah, 1992). This edition takes into account the two manuscripts described in this work. The editor mentions another manuscript which should have been included in this catalogue since it belongs to Al-Maktabah al-ʿUthmānīyah of Aleppo, no. 241 (395 fols.), and dates back to the year 895. Neither the editor nor Martel-Thoumian were able to consult the manuscript—it seems to have disappeared.

[184] *Mudhakkirāt Yawmīyah* by Aḥmad ibn Ṭawq (d. 915/1509). Jaʿfar al-Muhājir completed the edition of this text between 2000 and 2004 at the Institut Français du Proche-Orient (IFPO) in Damascus (formerly the Institut Français d'Etudes Arabes de Damas [IFEAD]). The title in French is *Journal d'Aḥmad Ibn Ṭawq, 834–915/1430–1509 : La vie quotidienne à Damas à la fin de l'époque mamelouke*. It includes notes and indexes.

[186] *[Dhayl] Mirʾāt al-Zamān* by al-Yunīnī (d. 726/1326). Note that the title of al-Yunīnī's work is *Dhayl Mirʾāt al-Zamān*, which continues Sibṭ ibn al-Jawzī's (d. 1256/654) *Mirʾāt al-Zamān*.

[195] *Al-Maʿazzah fīmā qīla fī al-Mazzah* by Ibn Ṭūlūn (d. 953/1546). Note the Egyptian re-edition in 2002 (Cairo: Dār Zāhid al-Qudsī) of the 1929 edition.

[196] *Al-Muqtaná fī al-Kuná* by al-Dhahabī (d. 748/1347). This manuscript provided the basis for Ayman Ṣāliḥ Shaʿbān's edition (Beirut: Dār al-Kutub al-ʿIlmīyah, 1997).

[204][205][206] *Manāqib Ibn Qawwām* (not Qawām), i.e., Abū Bakr ibn Qawwām (d. 659/1261), written by his grandson Muḥammad ibn ʿUmar ibn Abī Bakr Ibn Qawwām (d. 718/1318). We have grouped the descriptions 204, 205, and 206 in the same paragraph, since we believe them to be three manuscripts of a single text, authored by the same person. The manner of their presentation in this catalogue is misleading. A comparison with a similar manuscript belonging to the Dār al-Kutub in Cairo might explain their different *explicits*. Manuscript DK 2597 Tārīkh, which Aḥmad Farīd al-Mazīdī "transcribed" in a recent commercial edition, resembles the manuscript portrayed in description 206. This manuscript comprises two distinct texts: (1) *Manāqib Ibn Qawwām*, then (2) *Manāqib Sayyidī Abī al-ʿAbbās al-Sabtī*. One might easily overlook the second text, the title of which adjoins the end of the *Manāqib Ibn Qawwām*. For this reason, the *explicit* of the *Manāqib Sayyidī Abī al-ʿAbbās al-Sabtī* is often taken to belong to the *Manāqib Ibn Qawwām*. We believe this to hold true in the present case, since the *explicit* provided in description 206 is identical to the one at the end of the *Manāqib Sayyidī Abī al-ʿAbbās al-Sabtī*. The *Manāqib Ibn Qawwām* has therefore been "edited," though very poorly, by Aḥmad Farīd al-Mazīdī (Beirut: Dār al-Kutub al-ʿIlmīyah, 2005).

[208] *Al-Minhāj al-Sawī fī Tarjamat al-Nawawī* by al-Suyūṭī (d. 911/1505). Note the existence of an edition one year older than the one indicated in this catalogue, by Aḥmad Shafīq Damj (Beirut: Dār Ibn Ḥazm, 1998), with notes.

[209][212] *Al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* by al-Maqrīzī (d. 845/1442). Ayman Fuʾād Sayyid's edition must now be added (London: Al-Furqan Islamic Heritage Foundation, 2002–4), with notes and indexes.

[213] *Muʾallafāt Ibn Taymīyah* by "Ibrāhīm, the author's student" (!): probably the same text as the one presented in [8]. The late copyist limited his undertaking to Quran-related works, for which he listed approximately twenty titles.

[217][218] *Nuzhat al-Anām fī Maḥāsin al-Shām* by Ibn al-Badrī (d. 894/1489). An edition based on manuscript 9210, portrayed in description [218], has since been made by Ibrāhīm Ṣāliḥ (Damascus: Dār al-Bashāʾir, 2006), with notes and indexes.

This fine research tool provided by Martel-Thoumian compels us to dream of a time when conscientious editors may gain easy access to such sources as these. If, for instance, the number of manuscripts consulted in some Egyptian editions is limited, it is probably simply because the task of collating all known manuscripts often proves discouraging. Yet, this is no justification—intellectual endeavors must be judged by their own standards. Admittedly, research conditions in Arab countries are not yet conducive to progress. The complicated process involved in accessing the Damascus manuscripts is a most significant example of this.

Let us conclude by saying that the usefulness of this work will only be felt when similar endeavors are initiated and related to one another. Indeed, the study of a manuscript in isolation contributes nothing, in and of itself, to its intelligibility. It must rather be understood within the wider context of manuscript production, in which texts can be categorized according to manufacturing techniques or places of production. Other similar works would create a corpus of codicological studies, making a worthwhile investigation of manuscript production possible.

Finally, we express the hope that an Arabic edition of this catalogue might be published, thus offering encouragement to the numerous Arab editors and historians of the Mamluk period. The French text will remain inaccessible to the majority of these scholars, whose thirst for progress we do not question

YOSSEF RAPOPORT, *Marriage, Money and Divorce in Medieval Islamic Society* (Cambridge University Press, 2005). Pp. 137 + xii.

REVIEWED BY LI GUO, University of Notre Dame

The book under review is, to my knowledge, the first monograph in a western language that "sets out to explain the economic, legal and social causes of Muslim divorce in the Middle Eastern cities of Cairo, Damascus and Jerusalem in the Mamluk period (1250-1517)" (p. 4). In doing so, the author has utilized an impressive array of primary sources and recent scholarship, all woven into a narrative that is graced with clarity, precision, and erudition. The result is a splendid blend of social history and Islamic Studies (Islamic law in particular), of macroscopic breadth and microscopic minutiae, of solid quantitative analysis and fine storytelling.

In his introduction to the subject, scope, and sources, the author is quick to warn us that this is not "a grand narrative about patriarchy and Islam" (p. 7), nor does it touch upon *all* the issues related to marriage and family, among these the choice of spouses, polygamy and concubinage, love and sexuality (p. 11). In other words, this is not just another book on marriage and divorce, or gender and women, in Islam in general. Five chapters—the first three on economic issues and the last two on legal discourse—constitute the main narrative, followed by a short conclusion. In a sense, each chapter can be read separately as an independent essay on the given topic. (As a matter of fact, earlier versions of chapters 4 and 5 have been published elsewhere as independent papers.) But they all relate to one another within a grand framework: while the first three chapters focus on "money," namely, money brought into marriage, money earned outside of marriage, and money managed within a marriage, the last two "legal" chapters examine divorce in practical procedures and divorce/repudiation in practice and theory, respectively.

Chapter 1, "Marriage, divorce and the gender division of property," deals with the nuts and bolts of the economics in a Muslim marriage and divorce. Various forms of financial and monetary deals that were brought into a marriage are on display, under the rubrics of "the dowry," "dowry and inheritance," and "land, cash and credit." Here we witness the exquisite method at work, a remarkable feature of the book. The chapter starts off with an intriguing divorce case, which leads to a thorough pondering of the sources and some in-depth discussion, winding down with succinct summation and conclusion. The presentation of the individual cases does not stop at what the sources have to offer, but extends to an interpretation, with a modern sensibility, of legal opinions from various schools of Muslim legal

tradition (for example, pp. 17, 21, 23–24, etc.). The author posits the interesting argument that the exclusion of Mamluk elite women from receiving landed revenue as trousseaux, a practice that had been common in the Ayyubid time, pushed them towards the credit market to gain economic independence (pp. 22–25). However, the gender (or gendered) division of property was sometimes challenged, not by legal thinking, but rather by natural disaster, such as the Black Death. In such cases, large fortunes were temporarily moved to elite daughters out of anxiety, resulting in elite women, married or single, becoming major patrons of religious buildings (pp. 26–29). The phenomenon of Mamluk elite women becoming major patrons of religious endowments has long been noted by historians—Stephen Humphreys, Carl Petry, Jonathan Berkey, among others—and now, thanks to the present book, we have a better idea as to how and why this happened.

It may initially come as a surprise that the ensuing Chapter 2, "Working women, single women and the rise of the female *ribāṭ*," seems to step away from the topic of marriage and divorce, and instead explores some of the unknown, or least investigated, aspects of salaried women in and out of wedlock. The rationale for such a "side tour" is explained by the author, in his Introduction, as follows: for the majority of working women, dowries were of less value, and therefore an investigation of women's employment and wages is "crucial for an understanding of the balance of power that existed between husbands and wives, as well as for a comprehension of the phenomenon of frequent divorce" (p. 6). This chapter is for me the most unexpected, ground-breaking, and thought provoking segment of the book, not least because the medieval sources are notoriously silent on women living on the margins of society, but also because the subject of "working women" has yet to be adequately addressed in modern scholarship. Once again, the author is in total control of his sources and has done an admirable job in combing through historical narratives as well as literary texts, such as poetry, for fragmentary piecemeal materials. He has also successfully avoided the easy pitfall of sensationalizing the gender-sensitive subject (the phrase "working women" alone would surely bring about a dubious wince from some corners) by focusing on three socio-economic arenas where single women either shone or made their presence keenly felt: the textile industry, the women's shelter *(ribāṭ)*, and women immigrants in Jerusalem. The three segments deal with these arenas from different angles: professional, institutional, and demographic. While the discussion of women in the textile industry (spinning and embroidery were "the female professions par excellence" in the Islamic Near East, as we are told [p. 34]) dwells heavily on the well-known sources, such as the Cairo Geniza and S. Goitein's monumental synthesis of it, it has also incorporated recent scholarship, such as Bethany Walker's discussion of Mamluk textiles (pp. 37–38). With regard to elite single women's shelter/lodging, Remie Constable's book on the *funduq*

appeared too late for the author to consult. It would be very interesting to see if some comparison between the two would yield a new understanding of this fascinating issue. The picture of the immigrant women in Jerusalem depicted in this chapter is an intriguing one: some of them were probably, judging from the descriptions in the sources, "part-time spinners, part-time beggars and part-time pilgrims" (p. 49). Again, the survey relies on well-known sources, such as the Ḥaram documents and Huda Lutfi's examination of them, but Rapoport has also utilized some new and/or little used sources—namely three literary works—that shed light on working women in Mamluk Syria (p. 49). Although he does not treat these sources extensively, one can hope that more investigation and study are to come from the author.

Chapter 3, "The monetization of marriage," takes us once again back to Muslim marriage per se, or the monetary arrangements within a marriage, to be more precise. Various forms of domestic monetary and financial arrangements are discussed, among them the marriage gift *(ṣadāq),* marital support, and a cash allowance—ranging from food money *(idam),* clothing *(kiswah),* to "bed-fee" (*ḥaqq al-firāsh*; one ought to read the book to find out what is at stake here; pp. 60–61). The thematic discussion is followed, and illustrated, by a case study of the saga of Zumurrud, a slave-girl in Mamluk Jerusalem whose revolving-door marriages drive home the many points elucidated herein (pp. 64–68). This is the most fun chapter to read. What makes it even more enjoyable is the fact that all the colorful anecdotal accounts (from sources no less than Ibn Ṭawq, whose Damascene diary offers an endless supply of such material, among others) are accompanied by the author's careful number crunching, based on the documents (contracts, legal opinions, etc.).

As the book takes the commonly high divorce rate in the Islamic Near East as its starting point, chapter 4, "Divorce, repudiation and settlement," and chapter 5, "Repudiation and public power," dive into the thick of Islamic legal discourse regarding the institutional aspects of divorce and repudiation procedures, as well as their impact on society as a whole. Chapter 4 begins with a general outline of the issues and questions at stake, and proceeds to deal with several carefully chosen topics. The topics in this chapter include the various steps in a divorce case, stemming from the initial repudiation and leading to the final showdown in court, in both the Islamic courts (pp. 74–78) and the military courts (pp. 79–82). The chapter winds up with a synthesis of divorce in fifteenth-century Cairo (pp. 82–88). Chapter 5 tackles the rift between the state and the religious scholars over the use of repudiation, and more specifically the Sunni law regarding the use of divorce oaths. The discussion proceeds in two directions: one historical (pp. 91–96), in a survey and narration of the societal, cultural, and even linguistic, functions of divorce oaths in Mamluk society, and one legal (pp. 96–105), through a retelling

and contextualization of the failed "reform" championed by Ibn Taymīyah, which eventually got him into serious trouble. On the widely practiced use of divorce oaths in daily life situations, the author weaves a tapestry of individual scenes where divorce oaths were used in such a "baffling variety of social contexts" (p. 92)—such as in connection with financial obligations, in the marketplace, during quarrels, and associated with gift giving in popular literature (by the way, the *Arabian Nights,* which is essentially a Mamluk text, is also full of such expressions uttered by the characters in all the above-mentioned situations)—that they lost their true meaning and judicial function. The discussion of the legal hair-splitting regarding the fine line between real divorce oaths and subterfuges designed to circumvent them is based on a thorough reading of the sources and a careful re-construction of how the jurists and Everymen handled the challenge (pp. 93–96). The discussion of Ibn Taymīyah's attempted reform of the divorce oath is enhanced by a clear and nuanced analysis of his writings on the subject and their theological background and doctrinal ramifications. In the final analysis, as the author has strongly argued, the Sunni doctrine on divorce oaths "withstood Ibn Taymiyya's attack" (p. 105), in part due to the efforts of the state authorities to suppress the Hanbali's extremist dogma, and, more importantly, due to the fact that it never gained currency among jurists, let alone the common people, who continued using non-committal "divorce" oaths in their daily life as they pleased. "Ibn Taymiyya's attempt to reform the Sunni law on divorce oaths," as the author puts it, "highlights the inextricable link between the patriarchal order of the domestic sphere and the patriarchal values at the heart of the political and social order. Perhaps more than any individual story of failed marriage, the reaction of the Mamluk state to the ideas of Ibn Taymiyya demonstrates the crucial role of the institution of divorce within medieval Islamic society" (pp. 109–10). Hence the significance of the subject, which has received a superb and well-deserved treatment in this magnificent book.

There are many reasons to admire this book. For a serious scholarly work that tackles such an important topic on such a large scale, it is pleasantly readable: exquisitely compact and clear, free of dreadful jargon, and oftentimes amusing and fun. Not a single page is dull, insofar as theoretical discourse is always illustrated by a slew of case studies full of dicey dilemma, colorful personality, and dramatic punch. And it is typo-free; no small feat for a work with extensive quotes from Arabic material. What a treat!

CATERINA BORI, *Ibn Taymiyya: una vita esemplare: Analisi delle fonti classiche della sua biografia* (Pisa and Rome: Istituti editoriali e poligrafici internazionali, 2003) (Supplemento n. 1 alla Rivista degli studi orientali volume LXXVI). Pp. 234.

REVIEWED BY ARAM SHAHIN, University of Chicago

This monograph, originally presented as a doctoral dissertation at the University of Rome, grew out of the author's research into Ibn Taymīyah's *fatāwá* against the Mongols. The aim of the study is to analyze the representation or the image of Ibn Taymīyah as propounded by the various biographers of his life. The author does not offer a study of Ibn Taymīyah's doctrines or his thought, nor does she aim for a historical reconstruction of his biography. The critical analysis of the biographical material focuses on the texts composed during the eighth/fourteenth century (p. 19). The premise is that this biographical material must be read as a reflection of the conflicts that arose around Ibn Taymīyah and his authority. The biography is thus seen as a polemical and political instrument. It becomes a battleground in which the focus is not simply the authority of Ibn Taymīyah himself, but rather that of the individual or group whom he represents and which legitimizes or perpetuates its own social status by taking advantage of the image of Ibn Taymīyah (p. 20).

The author lays out the required steps for the study of Ibn Taymīyah as follows: (1) a comparison of all available versions of a notice or report; (2) the contextualization of each report, taking into account the formation of the writer, his *madhhab,* the group that he represents, and his relation to Ibn Taymīyah or to his adversaries; and (3) the identification of the doctrinal and moral model which Ibn Taymīyah needed to fit in order to recognize the more personal and individual characteristics of his image. The author also points out the importance of identifying the individual(s) for whom the biography was intended (p. 24). Following this approach, the study of the biographical tradition of an individual ought to reveal important information concerning the biographers themselves and of the social, political, and cultural context in which the portrayal of the individual is created (p. 24).

The division of the various chapters of the book does not follow a chronological pattern, but rather proceeds according to themes. The monograph itself is divided into two parts. Part one (pp. 27–59) is a description of the sources utilized in the study. Part two (pp. 61–170), comprising the bulk of the work, is dedicated to the study of various aspects of the biographical tradition concerning Ibn Taymīyah.

The author divides the sources that she utilized for her study into three categories: (1) biographical monographs and biographical notices in biographical dictionaries and chronicles; (2) chronicles; and (3) polemical texts composed

against Ibn Taymīyah or against the ideas of which he was a proponent. In chapter one, which comprises the entirety of part one, the author gives a brief description of the sources that she deems most important and that she utilized most frequently. This is not simply a description of the contents of each work accompanied by a short biographical notice of its author, but also a description of the sources utilized by the author of the work. The reader is thus introduced to the interconnectedness of all of these sources, as many depend on others and derive from them while sometimes presenting the information from a different perspective and with different aims.

The second chapter (pp. 63–110) is an evaluation of how the biographical tradition developed the material for the biography of Ibn Taymīyah with the focus being placed on four aspects: (1) the intellectual formation of Ibn Taymīyah; (2) the moral ideal attributed to him; (3) his polemical image; and (4) the formation of his myth.

With regard to the intellectual formation of Ibn Taymīyah (pp. 63–77), Bori points out a number of aspects that do not conform to the list of conventional *topoi* that one finds given in biographies of Muslim scholars in Islamic literary sources. One of these is the lack of mobility of Ibn Taymīyah during this formative period. Unlike what is usually described of other scholars, once the family of Ibn Taymīyah moved to Damascus, Ibn Taymīyah himself never traveled in search of teachers and knowledge. He, therefore, did not embark on the *riḥlah fī ṭalab al-ʿilm,* which seems to have been an essential part of the career of a religious scholar (pp. 66–67). Despite this, Ibn Taymīyah wrote a number of treatises on hadith. Thus, he was, as Bori remarks, "a *muḥaddith* without *riḥlah*" (p. 68). As such, Ibn Taymīyah cannot be considered a true *muḥaddith,* but rather an expert in the use and citation of Prophetic hadith as proofs in argumentation (ibid.). This would put in doubt the true value of some of the titles that are ascribed to him by some biographers. It is possible that such titulature was given to him to impress rivals and strengthen his credibility (pp. 68–70).

The absence of the *riḥlah* in the formative period of Ibn Taymīyah lends weight to the hypothesis that he obtained his education entirely in Damascus. The majority of his teachers who are mentioned in his biographies were Hanbalis and Damascenes. Those who were not originally from Damascus had moved there or passed by there, imparting their knowledge to Damascene students, thereby creating an inversion of the *riḥlah* model (pp. 69–70).

One aspect of the intellectual creativity of Ibn Taymīyah was his poetical compositions. Apparently, he was a mediocre poet who did not compose much poetry. Some critical biographers, like al-Dhahabī, point this out, whereas more adoring students, like Ibn ʿAbd al-Hādī, omit any mention of it. Whether the poetic inadequacy of Ibn Taymīyah was due to his austere nature and the revulsion that he

might have had towards poetry or to some other factor, remains an open question (pp. 70–72). However, if we wanted to suppose that he, following the admonition of some sayings attributed to the Prophet, shunned poetry for religious reasons, we would need to wonder why he bothered to compose any poetry at all.

There are two tendencies in the biographical sources in depicting Ibn Taymīyah: one makes him follow the model of Ibn Ḥanbal, while the other depicts him as an independent scholar who did not follow any particular juristic *madhhab* (p. 73). In the latter case, hagiographers tend to present the independence of Ibn Taymīyah as a positive aspect of his juristic thought. However, others, like al-Dhahabī, saw this in a negative light and condemned his teacher's break with the four legal *madhhab*s (pp. 75–77).

The exemplary model on which the biography of Ibn Taymīyah is based is that of Aḥmad ibn Ḥanbal, while the moral ideal attributed to Ibn Taymīyah is based on two intertwined aspects: (1) the idea of *zuhd,* understood as total dedication to knowledge, extreme religious devotion, and detachment from worldly material attractions; and (2) activism and polemic in the struggle for a rigid and literal interpretation of the Quran and the Sunnah, which is expressed in the participation in public life with the conviction that this action is in the best interests of the community (p. 77). The *zuhd* of Ibn Taymīyah was expressed and described mainly through three aspects of his lifestyle: (1) his parsimony in nourishing himself; (2) his abhorrence of expensive clothing that might make him stand out from common people; and (3) his disinterest in money (pp. 78–82).

One interesting aspect of Ibn Taymīyah's life is his celibacy. As the author points out, despite the existence of a number of precedents for this, it is quite unusual for a Muslim religious scholar not to marry, as marriage is considered a *sunnah* of the Prophet and the foundation block of Islamic society. Bori suggests that Ibn Taymīyah might have been of the opinion, shared by a few other scholars, that marriage and family were an impediment from the proper pursuit of knowledge. However, the biographers of the Damascene celibate inserted the information concerning his celibacy within a discussion of his asceticism, probably in an attempt to disguise an aspect of his life that did not conform well to the Islamic model of a Muslim scholar (pp. 82–86).

Some of the more endearing qualities of Ibn Taymīyah's character were his confrontational and aggressive attitude. Some of his students applauded his relentlessness in standing up for his beliefs, but others lamented his uncouth manners and his attachment to polemics. There might have been an attempt by later Hanbali scholars to distance themselves from this aspect of Ibn Taymīyah's opinions and scholarship (pp. 86–91).

Bori selects two episodes from the biographical narratives of Ibn Taymīyah to show the creation of the mythos surrounding his character. The first episode is his

funeral, whereas the second one is his meeting with the Ilkhanid ruler Ghāzān.

The reports about the funeral of Ibn Taymīyah emphasize the attendance of large numbers of people, both men and women. Ironically, the reports also give details of popular commotion, excessive manifestations of grief, and acts of veneration and mass hysteria that accompanied the funeral—the kinds of behavior that Ibn Taymīyah had fought against during his own lifetime. The model on which the narrative of the funeral is based is that of Ibn Ḥanbal himself. The absence of three individuals who were associated with the governor of Damascus and were responsible in some way or another for the imprisonment and eventual death of Ibn Taymīyah is mentioned in the reports. This seems to be done in order to contrast the overwhelming popular presence at the funeral with the absence of an official representation, establishing a dichotomy between the people and the administration (pp. 92–99).

The second episode which Bori studies in detail is the meeting between Ibn Taymīyah and the Ilkhanid sovereign Ghāzān. Here, the author contrasts the information presented in chronicles with that given in biographies of Ibn Taymīyah. As is to be expected, the latter are more detailed, more dramatic, and accentuate more the role and character of Ibn Taymīyah (pp. 99–108). Bori seems to give more credence to the chronicles than to the biographies and describes how al-ʿUmarī "constructs" an episode and an anecdote (pp. 106–7). That biographies of Ibn Taymīyah would tend to eulogize and aggrandize him and to exaggerate certain points in his favor is to be expected. However, I do not see why chronicles should be considered more impartial and objective or why chroniclers should be considered more trustworthy than biographers. In some instances, the chronicler and the biographer were the same individual.

The third chapter of the book discusses the activism of Ibn Taymīyah. Bori begins by giving us glimpses of the activism, both military and religious, of a number of individuals who lived in the thirteenth century in Damascus. This is done for the purpose of contextualizing the activism of Ibn Taymīyah himself and to show the existence of tensions between religious groups, in particular between Hanbalis and Shafiʿis (pp. 112–17). The activism of Ibn Taymīyah himself is divided into:

(1) military activism, including: exhortation of governors and sultans to defend the Muslims from the Mongols; negotiating with the Mongols to secure the release of prisoners or the sparing of bloodshed; and participation in campaigns against the Mongols and against the Shiʿites in Lebanon (pp. 118–23). Bori notes that the most significant of Ibn Taymīyah's initiatives in this regard occurred during the years 698–705/1298–1305 (p. 118). She also sees a difference in the perspective of Syrian and Egyptian historiography with regard to Ibn Taymīyah's role in military events. Syrian historiography, especially that based in Damascus, portrays

Ibn Taymīyah as a local hero. On the other hand, Egyptian historiography often neglects to mention his interventions and participation in these events (p. 123).

(2) civil activism, including: the smashing of wine containers; the destruction of stones and idols that attracted people; and the disruption of chess games (pp. 123–30). Bori points out that none of Ibn Taymīyah's activism was directed against the authorities themselves, rather, contrary to the practice of Ibn Ḥanbal, Ibn Taymīyah cooperated with them and in his writings urged obedience to rulers.

Some sources imply that the reason behind Ibn Taymīyah's activism was his political ambitions, and some accusations were leveled against him of plotting sedition against the governorate of Damascus. Some of Ibn Taymīyah's supporters, like Ibn Kathīr, attributed these accusations to envy (pp. 131–33). Bori argues that the accusations and tribulations that Ibn Taymīyah suffered have to be seen within the larger framework of the conflict and competition between the different *madhhab*s and religious factions (pp. 136–39).

A contradictory image of Ibn Taymīyah thus arises in the biographical sources. There is an oscillation between the image of the wise ascetic who abstains from any contact with the political world following the model of Ibn Ḥanbal, and the image of an activist who willfully cooperates with those in power, especially in cases of military emergencies. However, this contradiction is balanced by the coherence of Ibn Taymīyah's actions and his political thought that envisaged a position of intermediary power for the ulama in Islamic society. Although this is a break with the original Hanbali position, it is echoed in the local Damascene Hanbali activism of the twelfth and thirteenth centuries (p. 139).

The fourth and last chapter of the book provides a biographical study of some contemporaneous adversaries of Ibn Taymīyah and authors of polemics against him. The objectives of this study are three: (1) to identify the dynamics of social competition in Damascus at the end of the thirteenth century and the beginning of the fourteenth century in which to place some of the tensions that were focused around Ibn Taymīyah; (2) to point out the themes over which he was mostly attacked; and (3) to give a portrait of Ibn Taymīyah as depicted by his adversaries (p. 141). It would seem that the role, social position, and doctrinal position of the polemicists are often more revealing than the contents of their writings themselves, which were a vehicle and symbol of the conflict, not its true essence (ibid.).

Bori begins by arguing for the correctness of the attribution of *Al-Naṣīḥah al-Dhahabīyah,* a critical letter addressed to Ibn Taymīyah, to his disciple al-Dhahabī (pp. 142–48). The letter strongly criticizes Ibn Taymīyah's excessively polemical attitude. It also shows Ibn Taymīyah's involvement in the struggle among the ulama to acquire prestige and authority through the control of the religious institutions of Damascus (pp. 147–48).

Bori then presents brief biographical sketches of five of the adversaries of Ibn

Taymīyah: four Syrian residents in Damascus and one Egyptian, three of whom were Shafiʿis, one Hanafi, and one Maliki (pp. 148–54). The author argues that the intellectual polemic against Ibn Taymīyah and the traditionalist group led by him cannot be separated from the battles for the control of teaching positions at religious institutions (p. 154).

Most of the writings of the five individuals presented in the previous section have not survived. On the other hand, the numerous writings of Taqī al-Dīn al-Subkī (d. 756/1355–56) against Ibn Taymīyah have survived, and this allows for a more in-depth study of the polemics aimed at Ibn Taymīyah. The rest of the chapter is dedicated exclusively to the polemics of al-Subkī (pp. 155–69).

The book concludes with four appendices: (1) a description of biographies of Ibn Taymīyah that were deemed of secondary importance by Bori due to their brevity or derivative content (pp. 177–81); (2) a table listing the teachers of Ibn Taymīyah as given in seven sources (pp. 183–86); (3) a table listing the titles given to Ibn Taymīyah in eight sources (pp. 187–90); and (4) a translation of *Al-Naṣīḥah al-Dhahabīyah* (pp. 191–94).

This is a very interesting study that highlights a number of aspects of Ibn Taymīyah's life and the way that they have been portrayed by various writers who were mostly his contemporaries. For those readers who are approaching Ibn Taymīyah for the first time, it is advisable that they start by reading a standard biography of the scholar before immersing themselves in Bori's work so that they may become familiar with the general outline of the events of Ibn Taymīyah's life. However, for all the Ibn Taymīyah enthusiasts out there, this will be required reading and a necessary reference point for all future research on the Damascene scholar's life as well as the religious and social milieu in which he lived.

Having said that, I must point out that this must be the worst edited book that I have read—either that or it is the first one that I have read with any diligence. In the 177 pages of text, from the preface to the last appendix, I have found at least one error in 116 pages, or in about 66% of the pages of the book. This is quite frustrating for the reader, especially since the majority of these errors are obvious slips or typographical errors that should have been easily corrected. In what follows, I will mention a number of the more salient errors.

• The word Ǧumādā [Jumādá] that appears in the names of two lunar Islamic months has two long vowels and not just one, Ǧumāda, as given on pp. 46, 51, 53, 68, 82 (note 89), 120, 131 (note 80), 134, and 151.

• The Arabic equivalent of the name David is Dāʾūd or Dāwūd, with two long vowels, not Daʾūd or Dawūd as it appears in the name of Abū Dāʾūd on pp. 92 (note 133), 95 (in text and in note 151), 98, 130 (note 74), 195 (the bibliography), and 215 (the index).

• The name of the city on the Mediterranean coast is ʿAkkā, with a long vowel, not ʿAkka as given on pp. 122 (in the text and in note 41), 123, and 215 (the index).

• The name Ibn Ruššayq al-Maġribī is found on pp. 40 (in text and in note 54), 148 (note 30), and 221 (the index), and as Ibn al-Ruššayq al-Maġribī on pp. 148 (in the text) and 163 (in the text and in note 129). The name of the student of Ibn Taymīyah is actually Ibn Rushayyiq al-Maghribī (d. 749/1348 or 9), as is clearly voweled by Shams and al-ʿImrān.[1]

• The title of the work by Ibn Taghrībirdī is *Al-Manhal al-Ṣāfī,* not *al-Manḥal al-Ṣāfī* as given on pp. 40 (note 52), 43 (in the text and in note 74), 44 (notes 74, 75, and 76), 149 (note 40), 198 (twice, in the bibliography).

• Marğ al-Rāhiṭ on pp. 100, 104, and 105 (twice) should be corrected to Marğ Rāhiṭ.

• There is some confusion in the name of Ğahm b. Ṣafwān. The name is given correctly twice on p. 162, note 124, but in the same note and in the text on the same page as well as on p. 164, the name is incorrectly given as Ğahm b. Ṣufyān.

• Two works that are cited in the book are not listed in the bibliography: Ibn al-Ḥāğğ, *al-Madḫal al-šarʿ al-šarīf* [sic] on p. 80 (note 80),[2] and M. Sakhy, "al-Wāsiṭ," on p. 116 (note 21), that should be corrected to M. Sakly, "Wāsiṭ."

• On p. 41, note 59, the title of a second article by de Somogyi and its page numbers has been completely omitted, although it is listed in the bibliography on p. 212. In the bibliographic entry, in the title of the article, it is "Adh-Dhahabī's record" not "Adh-Dhahabī record," and the article appears in the *Ignace Goldziher Memorial Volume,* not the *Goldziher Memorial Volume,* as correctly given in note 59 on p. 41.

• On p. 42, note 67, Ğamāl al-Dīn Āqqūš al-Afram is identified as governor, first of Damascus from 698 to 709 AH (1298–1309/1310 AD), and then of Kark. Within the text on the same page, his death date is given as ca. 720 AH/1320–21 AD. This information is repeated in an article by the author, except that the death date of al-Afram is given for certain as 720 AH.[3] Throughout the article, Bori

[1] See *Al-Jāmiʿ li-Sīrat Shaykh al-Islām Ibn Taymīyah (661–728) (khilāl Sabʿat Qurūn),* collected by Muḥammad ʿUzayr Shams and ʿAlī ibn Muḥammad al-ʿImrān (Mecca: Dār ʿĀlam al-Fawāʾid lil-Nashr wa-al-Tawzīʿ, 1420/[1999]), 10–13 and 220. For biographical information on Ibn Rushayyiq, see the references on p. 11, note 3. On pp. 10–13, Shams and al-ʿImrān argue that Ibn Rushayyiq al-Maghribī is the author of a short work entitled "Asmāʾ Muʾallafāt Ibn Taymīyah" that has been attributed to Ibn Qayyim al-Jawzīyah by some other scholars.

[2] The name of Ibn al-Ḥāğğ in the index on p. 220 is not placed in the correct alphabetical order, and neither is Ibn Ḫallikān nor Ibn Ḫaldūn.

[3] Caterina Bori, "A New Source for the Biography of Ibn Taymiyya," *Bulletin of the School of*

identifies the second place of his governorate as Kark (on pp. 42, 148, and 222). The correct place name is al-Karak, in central Jordan. Reuven Amitai reads the name of the individual as Aqūsh al-Afram.[4]

There is one major complaint that I have, and that is in the method of citation of modern Arab authors. Bori has taken the approach of citing these authors by using initials for the first and middle names. I cannot recommend this method at all and must insist on seeing the full names of the authors to avoid any possible confusion in their identities. This might work for Western authors (although I would like to see the full name of these fellows as well), but for Arabic authors it can be nightmarish. What exactly is one supposed to do with the author identified simply as M. Y. Mūsā (p. 18, note 30)?[5] This system also fails to indicate compound names. For example, ʿA. ʿA. al-Marāġī (ibid.) is supposed to be the abbreviation for ʿAbd al-ʿAzīz al-Marāġī. But how can the reader know whether the two *ʿayns* represent the initials of two separate names or whether they are indeed representing the given compound name? And what exactly happened to the definite article in front of the second *ʿayn*?[6] Bori herself is inconsistent, as she sometimes cites some scholars with their full name, while at other times she only gives the scholar's last name. As is to be expected, the use of abbreviated names has led her to commit some errors. For example, on p. 18, note 30, Ṣ. ʿA. al-Ḥāmid is supposed to stand for Ṣāʾib ʿAbd al-Ḥamīd. The author of *Tarjamat Shaykh al-Islām Ibn Taymīyah* is Muḥammad Kurd ʿAlī, not ʿA. al-Kurdī. On p. 24, note 56, the editor's name is not ʿA. Ğ. al-Faryawāʾī, but ʿAbd al-Raḥmān ibn ʿAbd al-Jabbār al-Faryawāʾī. I think that it is always best to give the full name of all cited scholars, especially those with Arabic names.

Oriental and African Studies 67, pt. 3 (2004): 344, note 35. This article is an edition, translation, and study of a biography of Ibn Taymīyah by his student Shams al-Dīn al-Dhahabī (d. 748/1347 or 48) given the title *Nubdhah min Sīrat Shaykh al-Islām Taqī al-Dīn ibn Taymīyah.*

[4] Reuven Amitai, "The Remaking of the Military Elite of Mamlūk Egypt by al-Nāṣir Muḥammad b. Qalāwūn," *Studia Islamica* 72 (1990): 159–60.

[5] The full name of the scholar is Muḥammad Yūsuf Mūsá.

[6] The same problem arises with the name of the scholar Ṣalāḥ al-Dīn al-Munajjid, whose full name is cited a number of times, but at others is abbreviated as Ṣ. D. al-Munajjid.

Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	’	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	‘				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
َا	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Avoid using apostrophes or single quotation marks for ʿ*ayn* and *hamzah*. Instead use the Unicode characters ʿ (02BF) and ʾ (02BE).

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before “sun” letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. Beginning with volume XIII, no. 1, *Mamlūk Studies Review* will no longer appear in conventional print format, but will continue as an open-access online publication. The goals of Mamlūk Studies Review are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. Mamlūk Studies Review also solicits edited texts and translations of shorter Arabic source materials (waqf deeds, letters, fatāwá and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to The Chicago Manual of Style, 14th edition. Submissions should be composed with current word-processing software, and if possible should use a Unicode font, such as Charis SIL (see the website below for further information). Submissions may be made via email, but authors must also send a printed copy and a labeled CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://www.lib.uchicago.edu/e/su/mideast and http://mamluk.uchicago.edu. These sites provide links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, and The Chicago Online Encyclopedia of Mamluk Studies, as well as other resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the Review.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson and Gregg Reynolds are providing valuable technical and conceptual assistance in the journal's transition to online format.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA. The editor can be contacted by email at brcr@uchicago.edu.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2009 Prize, dissertations must be defended by December 31, 2009, and submitted to the Prize Committee by January 31, 2010. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

Previous Prize Winners:
2004: Tamer el-Leithy, Princeton University, "Coptic Culture and Conversion in Medieval Cairo: 1293-1524."

2005: Zayde G. Antrim, Harvard University, "Place and Belonging in Medieval Syria, 6th/12th to 8th/14th Centuries."

2006: Nahyan A. G. Fancy, University of Notre Dame, "Pulmonary Transit and Bodily Resurrection: The Interaction of Medicine, Philosophy and Religion in the Works of Ibn al-Nafīs (d. 1288)."

2007: No prize was awarded.

2008: No prize was awarded.

Winslow W. Clifford, 1954–2009

The teachers, colleagues, and friends of Wyn Clifford at the University of Chicago regarded him as a young scholar of uncommon promise. Had his career not been interrupted some twenty years ago by the first in a series of recurring cancers, there is no doubt he would have produced a much larger body of important scholarship in the field of Mamluk studies. Instead, from his early thirties onward, his daily existence was dominated by his determined, stoic will to survive. That he managed to do so for so long is remarkable and is a tribute to his grit and valor. He died on February 6 in Whittier, California. With his passing, our field has lost someone special.

Winslow Williams Clifford was born on September 13, 1954, in the Army hospital at the Presidio in San Francisco, California. At the age of 5, he moved with his family to Japan, where his father, Carleton, a colonel in the Army Corps of Engineers, was sent to work in the reconstruction after World War II. When the family returned to the U.S. after a lengthy stay in Japan, they settled in Whittier, where Wyn graduated from La Serna High School. He then entered Pomona College, in Claremont, California, from which he graduated, with honors, in 1975, with a degree in Early Modern European (Economic) History.

Wyn arrived at the University of Chicago at the age of 22 in 1976. Even though he would eventually spend more than half his life in Chicago, he pointedly clung to his Californian persona. He had come to Chicago to study Byzantine history, and in 1978 he was awarded a Master's degree in History, after defending his thesis "The Life of St. Theodore of Sykeon: Socio-Economic Aspects of the Byzantine East on the Eve of the Muslim Conquest," which he wrote under the direction of Walter E. Kaegi.

At some point in his studies, he developed an interest in Arab history. He then embarked on the study of Syro-Egypt, focusing on the history of the Mamluk Sultanate. During the next few years he occupied himself with an intensive reading program, formal seminars on Middle Eastern history, and learning Arabic, a task at which he was entirely self-taught, owing to his impatience with the conventional way in which it was taught. During these years he also worked as a research assistant, instructor, and librarian.

In 1994, while still a graduate student, he published two important articles in the influential German journal Der Islam on the relations between the Mamluk Sultanate and the Safavid rulers of Iran. These articles were based on a research paper he wrote for a seminar conducted by his mentor, John E. Woods. They

displayed a striking level of intellectual maturity, and announced his arrival on the scholarly scene. The very next year he submitted his Ph.D. dissertation "State Formation and the Structure of Politics in Mamluk Syro-Egypt, 1250–1340." In his dissertation, he introduced a new level of analysis in Mamluk history based on social theory. His skillful interpretation of Mamluk politics using models of social theory, much of which had been developed by a group of sociologists of the so-called "Chicago School," was immediately recognized as ground-breaking and revolutionary, and established for him a unique niche in the field. It is a great pity that it was never published so that it could have reached a wider audience. His intention to expand and amplify it for publication was never realized.

In 19Ḻ̄7, he was among a handful of scholars at the University of Chicago who founded this journal. He served as book review editor of MSR for a number of years, and contributed several influential articles, most importantly "Ubi Sumus? Mamluk History and Social Theory," in which he called for a wider application of social theory to the analysis of Mamluk history.

Wyn was widely esteemed for his intellectual prowess and ability to articulate scholarly issues. His passing has deprived the field of one of its most promising voices. He was a man of refined taste; he loved vintage cars (especially BMWs), and appreciated the cut of a finely-tailored Italian wool suit. He was legendarily at home in the kitchen and knew his way around a wine cellar. Curiously, he never visited the Middle East. He is survived by his former wife, Mary Montgomery, of Chicago, and his fiancée, Elena Medellin, of Whittier.

Introduction

When Donald Little wrote his influential article on "Religion under the Mamluks" in 1983, his focus was on the religious beliefs and practices of the Mamluks themselves. Little comes to the conclusion that "out of religious conviction and personal piety in some instances but also with an acute sense of their own welfare," they strove "to keep diverse religious forces in Egypt and Syria in a state of equilibrium."[1] Since then great progress has been made, as Emil Homerin's detailed, comprehensive survey of the study of Islam in the Mamluk period demonstrates.[2] The ulama are now seen as a heterogeneous group exhibiting a wide range of religious opinions. Furthermore, Sufism as well as what could be called popular religion have attracted much interest in the last few years. Homerin thus summarizes that "a two-tier model of religion with a high faith of a literate elite above the vulgar superstitions of the masses is an inaccurate and misleading description of religion in the Mamluk period." Rather, "a wide array of regional and cultural interpretation and expression" of Islam could be found.[3]

It seems that recent study of religion in the Mamluk period has produced a quite nuanced and differentiated picture of Muslim society. However, Homerin was well aware of the fact that "in Mamluk domains, religion had three major instantiations: Judaism, Christianity, and Islam."[4] Indeed the Mamluk state as other states in the eastern Mediterranean was characterized by its multi-ethnic and multi-religious character. Only an interdisciplinary approach will make it possible to illustrate the complexity of its social reality.[5] The study of Sufism has already helped to widen Mamluk studies to include non-Muslim communities.[6] However, one of the best examples for a new cross-cultural approach is Tamer El-Leithy's still unpublished dissertation on Coptic culture and conversion in Mamluk Cairo. Using legal documents in addition to other sources, El-Leithy reconstructs everyday social practices and settlement patterns of converts and their families which quite often maintained their Christian faith.[7]

Thus, it is the goal of this theme issue of *Mamlūk Studies Review* to bring

together scholars working on Islamic history and scholars interested in the history of oriental Christian or Jewish communities as a first step for interdisciplinary research on religion and religious culture in the Mamluk period. For the Muslim part of the society, Jonathan Berkey examines in his article on "Mamluk Religious Policy" the complex and nuanced relationship between religious and political authority. The most consistent feature of what could be called the religious policy of the Mamluks was the cultivation of a symbiotic relationship of the Mamluks with the ulama. Besides defending Syria and Egypt against the Mongols, the Mamluks' main service to Islam consisted, according to Berkey, in embracing the active and munificent support of the religious establishment which in exchange validated the Mamluk regime.

While Berkey's paper deals mainly with the Mamluks, Daniella Talmon-Heller studies how the ulama, the ones who possess *ʿilm* (knowledge of the religious sciences) secured power and prestige under the Ayyubids and Mamluks. It seems that the mastery of religious knowledge implied also the authority to mediate and intercede *(shafāʿah),* and the capacity to bestow spiritual and material blessing *(barakah),* at times through the manifestation and manipulation of metaphysical power *(karamāt)*. Muslim sainthood was obviously not reserved to Sufism.

One of the most influential as well as controversial religious scholars of the Mamluk period was Ibn Taymīyah. However, without students who were engaged in activities of copying, abridging, and commenting on his work, he would not have achieved the prominent position he still has today for many Muslims. Caterina Bori studies the process of the formation of a circle of students and the transmission of Ibn Taymīyah's writings. Actually, by the time of his death the status of Ibn Taymīyah was more problematic and less consolidated than we are accustomed to considering it. So it is thanks to the action of a few determined students that his work was preserved and disseminated.

Ibn Taymīyah was a fervent advocate of his idea of Islam. However, to use the terms "orthodox" and "heretic" in this context is problematic. Richard McGregor points out that these terms have their roots in European intellectual history. For Islam it seems more appropriate to use the term "orthodox" as a historically determined qualifier indicating a position of relative dominance, rather than for signifying a supposedly unchanging and ahistorical core of doctrinal commitments. Especially with regard to Sufism these categories are of little analytical value.

Ibn Taymīyah also participated in the theological debate with an unknown Christian writer from Cyprus who sent his apologetic treatise to Ibn Taymīyah and his contemporary Muḥammad Ibn Abī Ṭālib al-Dimashqī at the beginning of the fourteenth century. This provoked both Muslim scholars to write long and disparaging replies which constitute the most substantial correspondence in the history of Christian-Muslim relations. David Thomas presents the Christian

text and al-Dimashqī's answer and analyzes the very different attitudes towards the respective opponent. While al-Dimashqī seems more concerned to appeal to Muslims and was not engaged on any deep level with the Christian treatise, the Christian author obviously hoped to start a serious debate in which his arguments were weighed dispassionately.

Contact between Christians and Muslims in the realm of art is studied by Lucy-Anne Hunt in her article on an illuminated Arab gospel book from the Coptic Museum in Cairo. The large size of the book and its pristine state indicates that it was intended to impress. Maybe one of its purposes was also to dissuade those who may have been tempted to convert to Islam. Its style of decoration points to a discourse representing Arab Christian culture within, and sensitive to, its Islamic environment.

The last contribution deals with the relations of the Jews with the ruling elite. Marina Rustow questions the stereotypical view of the Jews as passive victims of an oppressive Mamluk regime. Indeed this picture is based in many cases on the impression given by Muslim and Jewish sources, which both for different reasons tend to present the events as coming about on the initiative of the Muslims—be it the sultan and his amirs or the qadi—while in reality the Jews manipulated them to serve their own political aims.

Certainly the articles collected in this issue do not cover all aspects of the religious life of Muslims, Christians, and Jews in the Mamluk period. Papers on the Coptic community, the Syrian Orthodox church or other Christian communities, as well as articles on Jewish religious beliefs and practices at the time would have been welcome. What is particularly missing are further studies on the relationship of Muslims with Christians from the Islamicists' side. There is a certain danger in seeing the society of Mamluk Egypt and Syria almost exclusively as an Islamic entity. The influence as well as the numbers of the non-Muslim communities might have declined from the thirteenth century on, but still these groups must be taken into account as important factors of social life under the Mamluks despite the partial view of the sources that were written in their majority by the ulama.

Mamluk Religious Policy

Al-Islām dawlah wa-dīn, runs a well-known adage in the Muslim world, one translated very imperfectly as "Islam is both a state and a religion." The relationship between political and religious authority has been subject to distinctive pressures in the Muslim world, and it consequently has developed along a very different course than that with which most societies in the West are familiar. At the time of Muḥammad and the very early caliphs, there was probably little if any separation between the two. The subsequent history of the relationship between political and religious authority is, however, much more complex. With the gradual emergence of a distinctive group of religious scholars, the ulama, a locus of authority arose which challenged the undifferentiated character of the caliphs' power. The failure of al-Maʾmūn's *miḥnah* in the ninth century is sometimes, and with reason, taken to mark a fundamental turning point: that the ulama and not the caliphs (or, indeed, subsequent Islamic rulers who held different titles) were recognized as the ultimate arbiters of matters of doctrine. But the fallout of the *miḥnah* entailed nothing like a separation of church and state, and political authority remained deeply entwined with the religious authority exercised by the ulama. The power of caliphs, amirs, and sultans was conceptualized and justified in explicitly religious terms, and the fundamental purpose of any Islamic state was to implement the shariʿah, the law articulated by the jurists.

By the time of the rise of the Mamluk regime in the middle of the thirteenth century, more than six hundred years had elapsed since the rise of Islam—more than six hundred years of complex development in the relationship between political and religious authority. From a certain standpoint (including that of the Salafists in the contemporary world), this development was largely one of linear decline. Each turn of Islamic history brought with it a further distancing from the norms and ideals established in the foundational narratives. The caliphs had adopted the trappings and attitudes of mere monarchs; the caliphs' political authority was supplanted by that of amirs and sultans; finally the caliphs, who in at least residual form marked a sort of chain of "apostolic" authority, were swept away by the Mongol tide. In this view, the rise of the Mamluk regime became a benchmark for what we could almost call a "secularization," unwanted and un-Islamic, of political authority. The Mamluks themselves were of non-Muslim origin; they frequently indulged in frankly un-Islamic behavior; and they had

overthrown a regime (that of the Ayyubids) that many Muslims had come to revere for its services in restoring the religion and the political fortunes of Islam in the eastern Mediterranean.

In fact, of course, the religious character of the Mamluk regime, and the relationship between religious and political authority under its rule, was much more complex and nuanced. One of the dominant themes of scholarship about the Mamluks over the last three decades has been to assert and trace the close and in many cases symbiotic relations between the political and religious establishments. For all that they might complain about the behavior of individual Mamluks, the ulama were generally appreciative of the regime and its services to the faith—whether that meant protecting it from external enemies, such as the Mongols and Crusaders, or providing the infrastructure of religious life at home. Through those moments at which political and religious authority intersected, we can trace the outlines of the religious policies of the Mamluk state.

Religious *policies*—although not, perhaps, a religious policy. It is difficult to discern an overriding, clearly-defined religious objective of the Mamluk state, or a coordinated series of sustained activities designed to accomplish a broad religious goal. It is much easier to detect such a coordinated policy in the earlier Sunni regimes which, to some degree, provided models for the Mamluks. The Saljuqs in Iraq and Iran, for example, particularly under their vizier Niẓām al-Mulk, deliberately sought to strengthen the institutional infrastructure and ideological matrix of Sunni Islam in the face of the challenge posed by both Ismaʿili and Twelver Shiʿism. The Ayyubids in Syria and Egypt, a more proximate model for the Mamluks, also left evidence of a coordinated religious policy. Their construction and endowment of madrasahs, and their efforts to promote and extend the authority of jurists and the various schools of law *(madhāhib),* served both to revitalize a Sunni community which (in Egypt) had atrophied under Fatimid rule, and to circumscribe the aspirations of a renascent Christian population emboldened by the prominence of Christian officers and soldiers under the later Fatimids—and also, perhaps, to provide a symbolic response to the perceived threat of the Christian Crusaders.[1] In both the Saljuq and Ayyubid cases, the religious challenges were clear—whether they emanated from Twelver crowds in the city of Baghdad, or Ismaʿili Assassins in their redoubts in Iran and the Jazirah, or Crusader principalities in Syria, or Armenian warriors controlling the apparatus of the state in Fatimid Egypt. Consequently, the responses of the new Sunni regimes to those challenges were equally clear.

[1] Ira M. Lapidus, "Ayyubid Religious Policy and the Development of the Schools of Law in Cairo," *Colloque internationale sur l'histoire du caire* (Cairo, 1969), 279–86; Gary L. Leiser, "The *Madrasa* and the Islamization of the Middle East: The Case of Egypt," *Journal of the American Research Center in Egypt* 22 (1985): 29–47.

By contrast, there is an ad hoc and pragmatic feel to the religious policies of the Mamluk sultans. Individual sultans responded to particular religious crises and questions, but continuity between the religious policies of one ruler and his successors was mostly fortuitous rather than planned. There are any number of reasons why this should have been the case. In part it simply reflects the limited and extemporaneous character of most pre-modern political structures. In part it reflects the long duration of Mamluk rule and the differing circumstances faced by Mamluk rulers over that long period of time. (A similar stretch at the beginning of Islamic history would lead from the state of the Prophet at Medina, through the rule of the "rightly-guided" caliphs, through that of the Umayyads and early Abbasids, to the time of the *miḥnah* and beyond. What "religious policy" could be discerned in that broad sweep of history?) Above all, perhaps, the absence of a continuous religious policy reflects the contentious and factional character of Mamluk politics. The overriding concern of individual Mamluks was to acquire and retain power; what we might call ideological or theoretical concerns were distinctly secondary.[2]

Not surprisingly, the clearest evidence of a deliberate religious policy can be found in accounts of the earliest Mamluk sultans, especially Baybars (r. 1260–77). It is possible that this is an optical illusion, generated by the fact that Baybars' reign has been studied more thoroughly than that of any other Mamluk ruler. But more likely it reflects Baybars' response to the particular circumstances he faced, which required a more conscious and deliberate religious policy. Baybars was not the first Mamluk to rule, but he was in many ways the effective founder of the Mamluk state and was responsible for justifying the Mamluk seizure of power; the policies he adopted continued, often simply through inertia, to serve his successors thereafter. Moreover, external religious challenges were still palpable in the mid and late thirteenth century, in the form of Christian Crusaders and pagan Mongols. Most importantly, Baybars operated under the shadow of Ayyubid rulers (the memory of whom was still fresh), and many of his religious policies can be viewed as building upon those of his predecessors.

Baybars cemented the centrality of jihad as a foundation of his state—a stance that was of course consistent with that of most medieval Sunni regimes. For Baybars, as for the Ayyubids, the principal threats were both external and religious: Christian Crusaders and pagan Mongols. That fortuitous combination tended to sharpen the ideological importance of jihad—that is, to mark this religious duty as an aspect of state policy. As one of the heroes of the Mamluk victory over the Mongols in Syria, Baybars stood out as a *mujāhid*. It was he who set in motion the series of campaigns which ultimately resulted in the final expulsion of the Crusaders from

[2] See Robert Irwin, "Factions in Medieval Egypt," *Journal of the Royal Asiatic Society* (1986): 228–46, esp. 236–37.

Palestine. His status as a holy warrior made the defense of Islam through jihad one of the principal pillars of Mamluk legitimacy, which it remained to the end of the regime. The language of both the literary record, especially chronicles of the period, and also official documents and decrees, reinforced the ideal of the sultan as *mujāhid*. Subjects of the Mamluks were reminded of their rulers' status as wagers of jihad in myriad ways. As Stephen Humphreys has speculated, even the external decoration of the congregational mosque constructed by Baybars in the northern suburbs of Cairo, which reminds the observer less of a mosque than a fortress, may have been intended to link the Mamluk regime with the fortunes of "Sunni Islam militant and triumphant."[3]

But jihad was as broad and malleable a principle in the thirteenth, fourteenth, and fifteenth centuries as it is in the twenty-first, and the Mamluk regime's rhetorical and ideological commitment to it should not suggest that they engaged in a continuous policy of fighting Islam's external enemies. When threats appeared, the Mamluks responded to them. Qalāwūn continued and all but brought to fruition Baybars' campaign against the remaining Crusader forces in Palestine (he died just as the Mamluk army that would conquer Acre was leaving Cairo)—an event which the Muslim historians trumpeted as full of religious import, although from Qalāwūn's perspective the campaign may have loomed larger for its commercial significance and its strategic relationship to the Mamluk war against the Ilkhanids.[4] Even after the Crusaders had been driven from Palestine, the possibility of a new Crusader threat loomed over the Mamluks and their subjects—a threat that was not entirely fanciful, as the attack of Peter of Lusignan on Alexandria in 1365 would make clear. Concern over this perceived threat was one factor driving Barsbāy's invasion of Cyprus in 1426. But with the slow evaporation of the Crusader threat, and with the conversion of the Ilkhanids to Islam, the powerful and convenient concatenation of military and religious threats was broken. The strategic rivals of the later Mamluks were mostly Muslims—the Ak-Koyunlus, for example, or the Ottomans. In this altered environment, the obligation of struggling on behalf of religion might be understood differently—as confronting internal Muslim challenges to accepted Sunni norms or doctrines, for example, or even simply supporting the institutions and scholars who propagated the faith.[5]

A more concrete policy adopted by Baybars to legitimate his rule was his decision to recognize a member of the Abbasid family and refugee from the Mongol destruction of Baghdad as caliph in Cairo—or more accurately, to recognize in rapid succession two such Abbasid refugees. These two individuals, al-Mustanṣir and then al-Ḥākim, were the first of a series of Abbasids who reigned as caliphs in Cairo until its conquest by the Ottomans in 1517, although few outside Egypt recognized their authority. (There were some exceptions, foreign rulers who sought formal investiture from the caliphs, including the sultans of Delhi.) Few within Egypt took their authority seriously either, beyond recognizing the caliphs as titular heads of the Islamic community. For the most part, the caliphs of Cairo wielded no power; some lived under what amounted to house arrest. The historian al-Maqrīzī painted a dismissive portrait of the caliphs of Cairo, deprived of real power and reduced to flitting on holidays from the houses of the Mamluk amirs to those of the chief scribes and judges.[6] Their anomalous and marginal political position has given rise to a well-developed scholarly literature analyzing the historical significance of the Abbasid caliphate of Cairo.

For Baybars, the recognition of the Abbasid caliphs was a deliberate choice, taken with very specific objectives in mind. Most importantly, of course, it represented an effort to confer legitimacy on the new Mamluk regime in accordance with the tenets of traditional Islamic political theory—that is, to make the new regime more palatable in the eyes of the ulama and a pious public. Not only had the Mamluks only recently come to power by overthrowing the respected Ayyubids, but Baybars himself was responsible for the murder of his Mamluk predecessor, Quṭuz—a violent seizure of power which might well be attenuated by a stamp of caliphal approval. On this point most recent studies agree, although they differ on how significantly Baybars' recognition of the caliph figured in his broader effort to legitimize his regime. But a caliph sitting in Cairo could serve Baybars in more immediate ways, too, particularly in helping to draw the newly-converted ruler of the Golden Horde, Berke Khan, into an alliance against his Mongol cousins and the Mamluks' principal strategic rival, the Ilkhanids.[7] After this, however, the caliphs played little political role. Baybars' recognition of the Abbasid caliph was a decision which, once taken, became for later sultans simply part of the background fabric of political life in Mamluk Egypt—a product of political inertia, rather than a matter for conscious policy-making.

On the other hand, that inertia was not something the Mamluks could ignore, for all that they ignored the particular holders of the caliphal office. Chroniclers

of the period often mark the beginning of each reign, or each year, by listing the chief holders of political and religious offices, and the caliph routinely appears at the top of the list.[8] Some contemporary writers dismissed the traditional insistence of Islamic political theory that the authority of a Muslim government depended on the delegation of power from an imam or caliph of the Quraysh tribe—that is, that the only legitimate source of political authority was a Qurashī caliph, which the Abbasids were.[9] But others did not. The Shafiʿi jurist Badr al-Dīn Ibn Jamāʿah, author of one of the most important Mamluk-era treatises on political authority, recognized that the caliphs might in fact have delegated all effective authority to the sultans; nonetheless he retained, at least as an ideal, the ancient principle that that authority should be properly delegated from a Qurashī imam.[10] After Baybars' re-establishment of the Abbasid line in Cairo, future sultans would mark their accession with a formal ceremony during which the caliph would delegate his powers to the new ruler and bestow on him a robe of investiture.[11] The residual hold of the idea of the caliphate on the Mamluks' Muslim subjects was profound—witness, for example, the historical writings of Jalāl al-Dīn al-Suyūṭī, who even at the end of the Mamluk period could insist on the imperative of caliphal authority.[12] In the end, the position of the caliphs under the Mamluks was inherently anomalous: no Mamluk sultan could even contemplate a policy of completely dispensing with the caliph, but neither did any Mamluk sultan feel compelled to pay the caliph much attention.

A more proactive and innovative policy of Baybars concerns his decision to

[9] Wilferd Madelung, "A Treatise of the Imamate Dedicated to Sultan Baybars I," *Proceedings of the 14th Congress of the Union européenne des arabisants et islamisants* (Budapest, 1995), Part 1:91–102.

[10] Badr al-Dīn Ibn Jamāʿah, *Taḥrīr al-Aḥkām fī Tadbīr Ahl al-Islām,* ed. Hans Kofler, "Handbuch des islamischen Staats- und Verwaltungsrechtes von Badr-ad-Din Ibn Ǧamaʿah," *Islamica* 6 (1934): 349–414 and 7 (1935): 1–64. See esp. 6:355–65.

[11] For one example of such a ceremony, see Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 10:4–5. However, the subordinate political position of the caliphs is often evident in the ceremonies of investiture, or in the language with which the historians describe them—in which, for example, the caliphs, along with the qadis and others, were "summoned" to participate. See, for example, ibid., 15:526.

[12] Especially in *Tārīkh al-Khulafāʾ* (Cairo, 1964) and *Ḥusn al-Muḥāḍarah* (Cairo, 1967). Cf. Jean-Claude Garcin, "Histoire, opposition politique et piétisme traditionaliste dans le *Husn al-muhadarat* de Suyuti," *Annales islamologiques* 7 (1967): 33–89. On the continuing resonance of the *idea* of the caliphate with both the ulama and the common people, see Lutz Wiederhold, "Legal-Religious Elite, Temporal Authority, and the Caliphate in Mamluk Society: Conclusions Drawn from the Examination of a 'Zahiri Revolt' in Damascus in 1386," *International Journal of Middle East Studies* 31 (1999): 203–35.

appoint four qadis, one for each of the principal schools of Islamic law—a policy which has also generated considerable discussion in the secondary literature. In this matter, it is again possible to trace continuity between Baybars' action and developments under the Ayyubids and even earlier Sunni rulers. We are accustomed to thinking of the mutual recognition of the four *madhāhib* and their acknowledgement of the legitimacy of each as characteristic of Sunni Islam, although in fact it only gradually emerged as such over the medieval period.[13] Already in the twelfth century, the sultan Nūr al-Dīn had appointed qadis belonging to the four *madhāhib* in the territories he ruled in Syria.[14] The Ayyubid ruler al-Malik al-Ṣāliḥ (r. 1240–49) established a madrasah in Cairo with provisions for the instruction of jurisprudence according to all four of the *madhāhib*—the first of its kind in Egypt, although many of those constructed and endowed by the Mamluks followed this pattern as well. Before formally appointing qadis according to all four schools, Baybars had instructed the Shafiʿi qadi Ibn Bint al-Aʿazz to appoint three deputies, one for each of the Hanafi, Maliki, and Hanbali *madhāhib*. Al-Maqrīzī saw Baybars' decision to appoint four chief qadis as a defining moment, the culmination of a long process through which the four Sunni schools emerged as the only acceptable forms of normative Sunni Islam.[15] After the formal appointment of the four chief qadis in Cairo, the pattern was extended to Damascus and other provinces in the Mamluk empire. Baybars' action did not end all tension between the *madhāhib*—the endowment deed of one Damascene madrasah stipulated that "no Jew, Christian, Magian, or Hanbali" should enter it, which certainly put the Hanbalis in their place.[16] But it did mark an important step in the emerging pattern of roughly equal status among the schools of law, if only because of the importance of the Mamluk capital of Cairo as a center of Islamic culture in the post-Mongol period.

Beyond fitting into an evolving pattern of mutual recognition among the four Sunni schools of law, what did Baybars' decision mean? Sherman Jackson has argued convincingly that the sultan's action had (again) a very specific and immediate goal: namely, overcoming the reluctance of Ibn Bint al-Aʿazz, in his capacity as Shafiʿi qadi, to implement decisions according to the other schools

[13] In the early medieval period, competition between the adherents of the different Sunni schools sometimes turned violent, as Richard Bulliet showed concerning the city of Nishapur in eastern Iran. *The Patricians of Nishapur: A Study in Medieval Islamic Social History* (Cambridge, Mass., 1972).

[14] Nikita Elisséef, *Nur al-Din: un grand prince musulman de Syrie au temps des croisades (511–569h/1118–1174)* (Damascus, 1967), 3:826.

[15] Al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1853–54), 2:344.

of law. The Shafiʿi chief judge was too esteemed and powerful to be dispensed with, but his refusal to respect the rulings of the non-Shafiʿi *madhāhib* was a source of disruptive contention, and so Baybars' action served to unify the ulama belonging to the different schools of law and to attract their support for the new Mamluk regime.[17] More recently, Yossef Rapoport has pointed out that making judges of the four schools roughly equal in authority[18] had the effect of providing flexibility to an increasingly rigid legal system. As the authority of the *madhāhib* became more firmly established, and as the legal principle of *taqlīd* narrowed the scope of ruling acknowledged as acceptable according to the consensus of the jurists, a degree of flexibility in the outcome of legal disputes could be retained by judiciously selecting which judge (Shafiʿi, Hanafi, Maliki, or Hanbali) heard a particular case—although whether Baybars' reform of the judicial system deliberately "aimed" at this result is perhaps less clear.[19]

No later Mamluk sultan attempted any reform of the judicial system so sweeping as Baybars' action, but they did routinely intervene in matters judicial; moreover, Rapoport's analysis points to a broader conclusion, that under the Mamluks "the state was more actively involved in the legal sphere than is commonly assumed."[20] It is only to be expected that the Mamluks would keep a close watch on judicial matters: even if the formulation of the law was exclusively the preserve of the ulama, its application was a matter of intense interest to the political authorities. At the most obvious level, of course, the sultans retained the right to appoint the chief qadis of the different schools, and over the course of the Mamluk period they exercised their authority to appoint (or dismiss) qadis for a variety of reasons: competence, personality issues, policy differences.

But sultans also exercised a kind of supreme judicial authority of their own. The prerogative of the ruler to hold judicial sessions for those seeking redress of grievances is of course a very old one in the Middle East, one that was well-established at the rise of Islam, and one that was recognized by the early Muslim jurists under the rubric of *maẓālim,* that is, "the [righting of] wrongs." The pre-eminent historian of *maẓālim* under the Mamluks, J. S. Nielsen, is skeptical of the direct connection between the Mamluk sultans' administration of justice

and the theory of *maẓālim* as developed by earlier writers such as al-Māwardī.[21] But two things about the *maẓālim* as administered by the Mamluks are clear. In the first place, while the *maẓālim* has been viewed as a kind of "secular justice" (in Nielsen's phrase) and the prerogatives of the sultan's court allowed him to sidestep some of the niceties of Islamic law (involving, for example, rules of evidence), there was an unmistakably religious flavor to the proceedings, and the sultan's obligation to use them to administer justice was an important part of the ideological underpinnings of the Mamluk state. Ibn Jamāʿah cited the responsibilities of the ruler in dispensing justice, along with his obligation to wage jihad, as the most important duties of the sovereign.[22] Following Ayyubid precedent, the Mamluks at first supervised judicial sessions in a madrasah, an institution devoted to instruction in Islamic jurisprudence, although later they were transferred to a "house of justice" *(dār al-ʿadl)* constructed explicitly for this purpose.[23] Wherever they were held, the presence of the qadis and other religious scholars lent them a religious imprimatur.

In the second place, the Mamluks on the whole took their judicial responsibilities quite seriously. To be sure, there was a kind of bureaucratization of the sultan's responsibility to administer justice under the Mamluks.[24] But the highly-organized character of the process by which a subject might petition the ruler, and by which the ruler or his delegated subordinates would respond, could be read as a mark of the importance they attached to the subject. Not all Mamluk rulers took a keen personal interest in supervising *maẓālim* sessions—some, of course, especially those whose reigns were abortive either because of the ruler's youth or because of the brevity of his rule, had little opportunity to demonstrate an interest in the process—but others certainly did. Qāytbāy (r. 1468–96), for instance, cleverly used his *maẓālim* sessions to cultivate a reputation for delivering firm, swift, compassionate justice, and so to build a following among the masses. Despite his occasional public criticism or humiliation of a scholar or jurist, even the ulama on the whole were impressed by Qāytbāy's commitment to justice and to Sunni orthodoxy. Even al-Ghawrī (r. 1501–16), while not as politically nimble as Qāytbāy, understood the importance of his judicial responsibilities and actively

[22] Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 6:369–74.

[23] The institution of the *dār al-ʿadl* itself had an ideological significance, giving concrete expression to the understanding of the medieval jurists (such as Ibn Jamāʿah) that the administration of *justice*—and a justice conceived in explicitly Islamic terms—was the fundamental purpose of the Muslim state. See Nasser O. Rabbat, "The Ideological Significance of the *Dār al-Adl* in the Medieval Islamic Orient," *International Journal of Middle East Studies* 27 (1995): 3–28.

[24] Nielsen, *Secular Justice*, passim, esp. chapters 5 and 6.

exploited them.[25] Twice-weekly formal processions of the sultan and the officials who advised him to the madrasah or other institution where the *maẓālim* sessions were held were among the most prominent public spectacles in Mamluk Cairo. Clearly, the active and successful administration of their judicial responsibilities was a persistent cornerstone of Mamluk religious policy.

Given limitations on both their time and interest, the Mamluks seem not to have intervened across the broad gamut of matters regulated by the law. As a general rule, only those questions that had political ramifications regularly captured their attention—the malfeasance of officials, for example. But where the established order was threatened, the Mamluks were ready and willing to intervene. One of the more famous examples involves the ever-controversial Ibn Taymīyah, who in 1320 was arrested and imprisoned as a consequence of fatwas he had issued on the subject of divorce and oaths by which husbands would repudiate their wives. At first sight, such matters would seem to fall within a sphere of doctrine—the law of personal status—over which the political authorities had little or no authority. Ibn Taymīyah, however, had espoused positions on the force and legitimacy of oaths of repudiation which threatened the established order, either by brazenly challenging the jurisprudential consensus of the ulama, or possibly by implicitly undermining the oaths which the Mamluks themselves had sworn to obey the reigning sultan. The sultan's efforts to muzzle Ibn Taymīyah, therefore, served both to protect his own throne and to reinforce the authority of the ulama as a whole—that is, to defend the established order.[26] Sometimes the intervention itself became the issue—when, that is, the sultan's reputation and public responsibility as enforcer of the shariʿah needed reinforcement. So, for example, al-Ghawrī, not generally reckoned the most pious and scrupulous of Mamluk sultans, furiously rebuked all four of the chief qadis in a case involving adultery—again an apparently apolitical matter. The jurists had recommended lenience to the adulterers. Their reluctance to prescribe the *sharʿī* penalty, stoning, allowed al-Ghawrī to pose as defender of the shariʿah and reinforce his authority over the judicial sphere.[27]

Not surprisingly, many if not most of those legal cases in which the state intervened directly concerned issues involving theoretically inalienable

[27] Petry, "Royal Justice in Mamluk Cairo," esp. 207ff; idem, *Protectors or Praetorians? The Last Mamluk Sultans and Egypt's Waning as a Great Power* (Albany, 1994), 149–58.

endowments (*awqāf*, sing. *waqf*).[28] This was a matter of vital concern to the Mamluk state, for two inter-related reasons. On the one hand, *waqf*s posed a potential threat to the fiscal health of the state, either by reducing the tax base or by threatening the economic productivity of the property included in the endowment. On the other hand, sultans and other Mamluks made extensive use of the Islamic law of *waqf* to protect their own property for themselves and for their heirs, and also to legitimize their rule—a point we will return to shortly. At the same time, endowments mattered tremendously to the ulama, both because the shariʿah was quite explicit about how *waqf*s were to be treated, and also because endowments provided the funds that supported the mosques and other religious institutions in which the ulama worked. The history of endowments under the Mamluks is essentially a balancing act, in which the competing religious and material pressures compelled Mamluks and ulama to negotiate solutions suiting the shifting contingencies of the moment.[29] It illustrates the fundamentally pragmatic character of Mamluk religious policies as clearly as any issue does.

Law was one area of religious concern where the sultan (and the political establishment) had a prescribed and necessary role. But over other religious matters, the Mamluks' authority was limited at best. This reflects, among other things, one practical consequence of the resolution of the ninth-century *miḥnah*—that the ulama, and not the rulers, were responsible for judging what was properly Muslim. Consequently, the Mamluks were generally reluctant to intervene in disputes over questions of a spiritual or doctrinal nature. Occasionally, accusations of blasphemy or other heretical behavior were brought to the sultan's attention. He might, for example, be asked to adjudicate disputes among the ulama themselves over the behavior of some mendicant Sufi, or the sermons of some controversial preacher.[30] Where an individual's offending behavior drew upon him a judgment of apostasy, the political authorities might be called upon to intervene, either to resolve differences among the qadis, or, more practically, simply to carry out a sentence of execution. Not infrequently, however, one senses a tired, almost exasperated reluctance on the part of the ruling authorities to involve themselves in complicated doctrinal issues.[31]

[28] As numerous scholars have observed. See, for instance, Joseph Escovitz, *The Office of the Qâḍî al-Quḍât in Cairo under the Baḥrî Mamlûks* (Berlin, 1984), 148–54, and Nielsen, *Secular Justice*, 45. Cf. Muḥammad M. Amīn, *Al-Awqāf wa-al-Ḥayāh al-Ijtimāʿīyah fī Miṣr, 638–923/1250–1517* (Cairo, 1980), 125ff.

[29] One particularly clear moment of such negotiations occurred in a meeting of leading Mamluk amirs, including the future sultan Barqūq, and prominent ulama in 1379. See al-Maqrīzī, *Al-Sulūk,* 3:345–47.

[30] Escovitz, *Office,* 134–47, surveys a number of such incidents.

[31] Consider, for example, the case of Shihāb al-Dīn Aḥmad ibn Murrah, a disciple of Ibn Taymīyah

With regard to religious communities that lay outside the Sunni norm, in particular various Shiʿi groups, Mamluk policies were more tolerant than has sometimes been supposed, or at least more indifferent and inconsistent. Whether or not there was such a thing as a "Sunni renaissance," that is, a sharpening of Sunni identity fostered by the predominantly Turkish regimes which came to power in the later Islamic Middle Period in response to the Shiʿi regimes (such as the Buyids and Fatimids) which had dominated the Middle East in the tenth and eleventh centuries, it is difficult to discern anything approaching an "inquisition" under the Mamluks.[32] To be sure, there were occasions when the Mamluks took measures, including violent measures, to oppose or suppress various manifestations of Shiʿism. This was especially true in Syria—not surprisingly, since Syria contained a larger proportion of Shiʿis than other provinces of the Mamluk empire. For the most part, however, these episodes resulted not from a systematic campaign to expunge Shiʿism from the realm, but from the perception of an immediate political threat—a rebellion by Shiʿis in conjunction with a Mongol invasion, for example.[33] At other times, Shiʿis moved reasonably freely in Mamluk society. Their number included prominent *ashrāf* in Damascus, and even the famous Shiʿi jurist Muḥammad ibn Makkī, executed under sultan Barqūq and known therefore to Shiʿis as *al-shahīd*, "the martyr," had traveled widely within the Mamluk realm, encountering, befriending, and studying with Sunni ulama.[34]

Indeed, the Mamluks themselves were often drawn to expressions of Islam that were not entirely kosher in the eyes of the leading Sunni ulama. Individual Mamluks submitted themselves to the spiritual direction of controversial religious figures—mendicants, renunciants, preachers, and others whose teaching or practices generated considerable skepticism and criticism from the more established religious elite. Many of those religious figures revered by the Mamluks, of course, were Sufis, and the devotion of the Mamluks to Sufism generally is by now well established. Their Sufi inclinations were not, however, in any way unusual, since

---

whose attacks on Sufis aroused the anger of both leading religious scholars and their supporters among the ranks of the amirs. Ibn Murrah was brought before a council presided over by the sultan for judgment, at which Ibn Murrah's accusers and defenders almost came to blows. The sultan, according to the sources, unable to resolve the dispute, simply referred it to the *nāʾib* (deputy) for resolution. See al-Maqrīzī, *Al-Sulūk,* 2:263; Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah* (Cairo, 1966–67), 1:323.

[32] As Eliyahu Ashtor famously did in "L'inquisition dans l'état mamlouk," *Rivista deglie studi orientali* 25 (1950): 11–26.

[33] Henri Laoust, "Remarques sur les expéditions du Kasrawan sous les premiers Mamluks," *Bulletin du Musée de Beyrouth* 4 (1940): 93–115.

[34] A history of Shiʿism under the Mamluks is an important *desideratum* of the field. For now, see Stefan Winter, "Shams al-Dīn Muḥammad ibn Makkī 'al-Shahīd al-Awwal' and the Shiʿah of Syria," *Mamlūk Studies Review* 3 (1999): 149–82.

Sufism itself was widely accepted among Sunni Muslims in the Middle East by the fourteenth and fifteenth centuries. What was perhaps more notable about the Mamluks was the particular nature of some of the Sufis and other religious figures whom they admired. Baybars himself had a famous and psychologically complex attachment to a somewhat bizarre shaykh, Khāḍir al-Mihrānī, known especially for his divinatory powers.[35] Divination, in fact, was a common fascination of the Mamluks—perhaps, some have speculated, a legacy of the shamanism to which many were exposed as children and youth in the Central Asian homelands.[36]

But the Mamluks' attraction to marginal religious figures may reveal less about them as a distinctive cultural group than it does about the widespread and remarkable diversity of Islam in medieval Middle Eastern society. Take, for instance, Barak Baba, a flamboyant, antinomian Turkish ascetic whose appearance in Damascus in the early fourteenth century generated controversy. Donald Little has seen in the inconsistent reaction of the Mamluks to Barak Baba—the viceroy in the city at first welcomed him, other amirs were offended by the dervish's unruly asceticism, the sultan in Cairo finally forbade him from approaching that city—an ambivalence in their attitude toward religion: on the one hand they allied themselves with the normative Islam of the urban ulama, on the other they retained a more-than-vestigial interest in religious ideas and practices associated in a general way with Central Asian shamanism. But the truth is Barak Baba had followers among local Muslims as well.[37] Similarly, toward the end of the Mamluk period, several Mamluks, including the sultan Qāytbāy, became embroiled in a controversy over the legacy of the Sufi poet Ibn al-Fāriḍ. Some of the ideas expressed in Ibn al-Fāriḍ's verse were subjected to scathing criticism from scholars such as Ibn Ḥajar al-ʿAsqalānī, who saw in them an un-Islamic monism. But the Mamluks who defended Ibn al-Fāriḍ were not alone: they took their cues from other local ulama, including the historian al-Suyūṭī and the esteemed jurist Zakarīyā al-Anṣārī.[38]

Whatever peculiar proclivities and sensibilities the Mamluks may or may not have brought to Islam as experienced under their rule, the most consistent feature of the relations of the Mamluk state with the religious establishment—the thing that came closest to a permanent religious policy—was the symbiotic relationship

they cultivated with the ulama. Each group was able to supply the other with something it needed. The Mamluks provided the ulama with the physical and financial infrastructure for their professional and religious activities. Not all mosques, madrasah*s*, and *khānqāhs* constructed in Cairo and other cities during the Mamluk period were constructed by the sultans and amirs, but the vast majority of them, and almost all of the largest institutions, were the product of Mamluk largesse.[39] Both within and beyond the world of religious institutions, patronage of the ulama by the ruling authorities constituted a central feature of their professional lives. Michael Chamberlain has brilliantly illustrated how the competition for the "monetized honors" offered by religious institutions shaped the social world of the ulama, and also how their social relations paralleled those within the Mamluk elite itself.[40] But there was a vertical as well as horizontal character to the struggle for place, position, and money, and patronage of individual scholars by individual Mamluks played an important role, particularly in the competition for positions at the disposal of the government, such as appointments as qadis.[41] This patronage was not necessarily venal—it was rather a natural by-product of the fact that the articulation and enforcement of Islamic law required the cooperation of both the ulama and the ruling authorities.[42]

In exchange, the Mamluks received a good deal from their relationship with the ulama. In the first place, and not to be dismissed as a motivating factor, there were perceived spiritual benefits to the relationship and to the ruling elite's patronage of the ulama and their institutions. Some Mamluks may have been only superficially Islamicized, but many others were sincerely committed to their adopted faith. Moreover, the benefits that might accrue as a result of being buried next to a mosque or madrasah—and many such institutions included tombs intended for the burial of their founders—were available to anyone, pious or not (although the efficacy of such benefits is not something that historians can measure!). In addition, of course, there were material advantages to establishing a foundation to support a religious institution, since by it a Mamluk could preserve at least a portion of his wealth from confiscation and pass on to his heirs that part of a foundation's income not committed to the institution's upkeep and expenses.

[39] For one study of this phenomenon, see Jonathan Berkey, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education* (Princeton, 1992).

[40] Chamberlain, *Knowledge and Social Practice,* passim.

[41] See, for example, Joseph Escovitz, "Patterns of Appointment to the Chief Judgeships of Cairo During the Bahri Mamluk Period," *Arabica* 30 (1983): 147–68.

[42] The *fact* of such patronage is well known, but the overall parameters and consequences for Mamluk society of what the Ottomans would later call *intisap* await fuller study. On the Ottoman case, see Norman Itzkowitz, "Eighteenth-Century Ottoman Realities," *Studia Islamica* 16 (1962): 73–94.

Especially under the later Mamluks, religious endowments were employed not simply to preserve private wealth but to provide the sultan with the financial means to carry out political policies.[43] More generally, and more importantly, the ulama granted the Mamluks a sort of seal of approval. The scholars' willingness to receive appointments to remunerative posts as professors, prayer leaders, preachers, etc., in institutions founded by the Mamluks, and very often housing their tombs as well, worked to legitimate the regime itself as well as the rule and reputations of the individual Mamluk benefactors. There are signs that the Mamluks understood quite explicitly the political benefits their munificence promised—hence, for example, Qalāwūn soon after his accession as sultan embarked on a program of constructing and repairing religious institutions in the sacred towns of Medina, Jerusalem, and Hebron as a way of solidifying support for his new regime.[44]

This is not to say that the interests of the Mamluks and of the ulama were perfectly aligned. The political priorities of the Mamluks could trump the spiritual or material concerns of the ulama—as, for instance, when al-Nāṣir Muḥammad closed the recently-constructed *khānqāh* of his rival Baybars al-Jashankīr.[45] For all his devotion to Khāḍir al-Mihrānī, Baybars allowed himself to be persuaded that state security required the shaykh's imprisonment. At their accessions, Mamluk sultans sometimes announced plans to enforce shariʿah rules—for example, the suppression of non-*sharʿī* taxes, or enforcement of legal restrictions on the behavior of the *dhimmīs*—although the repetition of such proclamations over time suggest that the ruling authorities did not follow through consistently and whole-heartedly. One of the most important points of conflict between the interests of the Mamluks and the ulama concerned the religious minorities whom the Mamluks had reason to protect, especially those Copts who served in the government bureaucracies.[46] For all that they might admire and venerate the ulama, the Mamluks also feared them for their potential to mobilize opposition to the Mamluk regime. Upon the death of the respected shaykh Ibn ʿAbd al-Salām, Baybars is said to have remarked that only now was his kingdom secure, since Ibn ʿAbd Salām could have led the people to drive him from his throne.[47] The late-Mamluk/early-Ottoman Sufi and scholar al-Shaʿrānī recalled that his master, the illiterate but revered shaykh Ibrāhīm al-Matbūlī, so frequently opposed Qāytbāy on various matters that the sultan finally remarked, quite literally, that Egypt was

not big enough to hold both of them.[48]

Such moments of conflict, however, did little to affect the larger pattern of cooperation between the Mamluks and the ulama. Their tacit alliance lay at the foundation of contemporary justifications for Mamluk rule and appreciations of the Mamluks' place in history. As David Ayalon famously pointed out, no less an authority than Ibn Khaldūn understood the nature of their contribution and acknowledged their role in saving Islam, in particular from the Mongol onslaught.[49] But the Mamluks' service to Islam went well beyond military valor, to embrace the active and munificent support of the ulama establishment. In exchange, the ulama validated the Mamluk regime generally and the rule of individual sultans in particular. Like any good relationship, this one had its difficult moments, but it lasted for more than two and half centuries and may have helped to shape the character of relations between political and religious authorities in the Sunni Islamic Middle East long after the Mamluks themselves were gone.

ʿIlm, Shafāʿah, and *Barakah:* The Resources of Ayyubid and Early Mamluk Ulama

> We were attending al-Ḥāfiẓ's class outdoors, on a very hot day. He said: "Let us move away from this heat into the mosque." Just as we were getting ready to go, and perhaps some of us had already risen, a cloud suddenly covered the sun, and he told us to sit down again. I saw our friends looking at each other, the word spreading among them: "Why, this is a *karāmah;*[1] there was not a cloud to be seen in the sky!" And Ḍiyāʾ al-Dīn al-Maqdisī told many things of this kind.[2]

This fascinating glimpse into the way medieval Muslims perceived the working of *barakah* is offered in Ibn Rajab's *Dhayl Ṭabaqāt al-Ḥanābilah,* an early fourteenth-century biographical dictionary of Hanbali scholars, as a quotation of the Damascene historian Ḍiyāʾ al-Dīn al-Maqdisī (d. 643/1245). In the rest of the entry, Ḍiyāʾ al-Dīn portrays al-Ḥāfiẓ ʿAbd al-Ghanī al-Maqdisī (d. 600/1203–4), his uncle, as an outstanding authority on hadith with a special expertise in *ʿilm al-rijāl* (the study of hadith transmitters), and as a stringent moralist and ascetic. Illustrating how ʿAbd al-Ghanī's reputation of sanctity sprang up, this little story also reveals how easily the ordinary and the extraordinary merged for these medieval men, as perhaps

Earlier versions of this paper were presented at the International Workshop on "Facing Modernity: Rethinking ʿUlama in the Middle East," at The Institute for Advanced Studies at the Hebrew University of Jerusalem, in June 2006, and at a meeting of the Medieval Islamic Colloquium of Israel, November 2007, at Bar-Ilan University. I thank the organizers and participants of those panels for their invitations and comments. I also benefited greatly from the advice of my friends and colleagues Nimrod Hurvitz, Cana Werman, Yuval Harari, Daphna Ephrat, and Yaacov Lev. My special thanks are due to Johannes Pahlitzsch, who wrote the introduction to this volume.

[1] A wonder or marvel of a holy man *(walī),* perceived as a token of God's special blessing *(barakah),* and differentiated from *muʿjizah:* the demonstrative miracles of prophets (see Louis Gardet, "Karāma," *The Encyclopaedia of Islam*, 2nd ed., 4:615–16), and *siḥr:* sorcery, attributed to heretics and infidels (see Michael Winter, *Society and Religion in Early Ottoman Egypt: Studies in the Writings of ʿAbd al-Wahhāb al-Shaʿrānī* [New Brunswick and London, 1982], 188).

[2] Ibn Rajab, *Al-Dhayl ʿalá Ṭabaqāt al-Ḥanābilah,* ed. Muḥammad al-Ṭayyib Ḥamīd al-Fiqī (Cairo, 1952–53), 2:16–17.

for devout believers of all ages.

ʿAbd al-Ghanī al-Maqdisī was an *ʿālim,* a teacher of hadith in two central institutions: the Great Mosque of Damascus and the Hanbali mosque of the nearby suburb on Jabal Qāsyūn. He was a troublemaker who often confronted colleagues and political authorities and was made to pay the price,[3] but most ulama of his kind enjoyed unprecedented prosperity during the Ayyubid and early Mamluk periods. Members of the ruling elite extended their patronage to dozens of religious institutions in capital cities and in provincial towns. They constructed and refurbished mosques, madrasahs, colleges for the study of hadith, Quranic schools, Sufi lodges, commemorative shrines, and mausolea with sanctuaries and sacred relics. Laymen contributed money and labor to the building or reconstruction of numerous smaller religious institutions and donated funds for study circles and assemblies for the recitation of Quran or hadith in mosques and mausolea. Ulama who invested in reaching out to wider circles were rewarded with admiration, popularity, and economic benefits.[4] Evidently, *ʿilm* (knowledge of the religious sciences) secured identity, power, prestige, and livelihood in the medieval Middle East, not to speak of its spiritual rewards.

All this is well documented in the Arabic sources and has been studied by quite a few modern scholars.[5] Yet, the specific venues by which *ʿilm* served as a resource of power in medieval Muslim societies deserve further study and elaboration. My contention here is that for men of the Mamluk period the mastery of religious knowledge implied much more than the right to teach and the duty to expound the shariʿah. It carried with it also the authority to mediate and intercede *(shafāʿah)*[6] and the capacity to bestow spiritual

[3] For a summary of his biography, see Stefan Leder, "Charismatic Scripturalism: The Ḥanbalī Maqdisīs of Damascus," *Der Islam* 74 (1997): 297–300.

[4] Preoccupied as they were with networking within the scholarly class, ulama seem to have cared very much about their popularity in wider circles as well. They do not fail to mention the attendance of the *ʿāmmah* at their sermons, assemblies, and funerals, conveying the impression that the presence of men of plebeian classes was worthy of notice and added to the prestige of scholars.

[5] E.g., Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, MA, 1967; second edition 1984); Joan Gilbert, "Institutionalization of Muslim Scholarship and Professionalization of the *ʿUlamāʾ* in Medieval Damascus," *Studia Islamica* 52 (1980): 105–35; R. [6] On *shafāʿah* in medieval sacred and secular contexts, see Shaun E. Marmon, "The Quality of

and material blessing *(barakah),*[7] at times through the manifestation and manipulation of metaphysical power *(karāmāt)*. The purpose of this article is to explore perceptions of the relationship between *ʿilm, barakah,* and *shafāʿah* in Ayyubid and early Mamluk times, and to analyze the discourse about wonder-working scholars. Surprisingly little attention has been given to these phenomena in modern scholarly literature, perhaps because a "symbiotic relationship between Muslim sainthood and Sufism" (to use Vincent Cornell's phrase)[8] has always been assumed, and therefore Muslim sainthood has been studied almost exclusively in Sufi contexts.[9] Another reason may be modern Western rationalism, which classifies belief in miracles as incompatible with "serious" learning or scholarship. This attitude is nicely illustrated in Fritz Meier's introduction to the hagiographical work of thirteenth-century Sufi authors: "A common characteristic of the three above-mentioned authors . . . is their credulity, their uncritical attitude in dealing with the subject and their unbridled interest in miracles. They are not unique in this respect . . . this is particularly astonishing in the case of so great a mind as Ibn al-ʿArabi."[10]

It is worth noting that the comparable case of the miracle-working Jewish sages of late antiquity has been studied with considerable methodological sophistication and has produced some very interesting insights on the

Mercy: Intercession in Mamluk Society," *Studia Islamica* 87 (1998): 125–40; in more recent religious imagination, see Catherine Mayeur, "L'Intercession des saints en islam Egyptian: autour de Sayyid al-Badawī," *Annales Islamologiques* 25 (1991): 363–88. For mediation as the essential component of the spiritual authority of Sufi shaykhs from the ninth century onwards, see Arthur F. Buhler, *Sufi Heirs of the Prophet: The Indian Naqshbandiyya and the Rise of the Mediating Sufi Shaykh* (Columbia, SC, 1998), 10–13.

[7] For a rich discussion of the concept, see Joseph W. Meri, "Aspects of *Baraka* (Blessings) and Ritual Devotion among Medieval Muslims and Jews," *Medieval Encounters* 5 (1999): 46–69.

complex connections between knowledge, power, religion, and magic.[11] *Mutatis mutandis,* I hope to draw on some of these insights in my analysis of the medieval Arabic sources: primarily the biographical dictionaries of the Mamluk historians Ibn Rajab (d. 795/1393) and al-Subkī (d. 771/1369), and a few other contemporaneous historical and theological works.

Barakat al-ʿIlm

The study of the religious sciences and their transmission *(taʿallum and taʿlīm),* just like prayer and Quran recitation, were regarded as pregnant with *barakah* and were considered to affect circles far wider than those of learned shaykhs and their intimate disciples. This *barakah* was known to benefit also the passive attendants of large study assemblies, which included ordinary men who did not belong to the scholarly class and may have hardly been able to follow the lectures, and the community of Muslims as a whole.[12] These notions are clearly expressed already in the eleventh century, by Ibn Abī Yaʿlá (d. 458/1066), the compiler of the first Hanbali biographical dictionary. Writing about the close disciple of a great saintly scholar, he mentions the flow of *barakah:* "The blessing of his teacher reflected upon him, and he became learned, ascetic, and pious. He was popular and well-loved by the people, and known to have his prayers answered *(ʿādat barakatuhu ʿalayhi fa-sāra ʿāliman, zāhidan, ʿābidan, wa-ẓahara la-hu fī al-nās al-qubūl wa-al-maḥabbah wa-ijābat al-duʿāʾ).*"[13] Referring to his father,

For Seljuk Baghdad see Ephrat, *A Learned Society,* 144–47; for Ayyubid Damascus see Chamberlain, *Knowledge,* 122; for Mamluk Cairo, see Jonathan Berkey, *The Transmission of Knowledge in Medieval Cairo*: *A Social History of Islamic Education* (Princeton, 1992), ch. 7.

[13] Ibn Abī Yaʿlá, *Ṭabaqāt al-Ḥanābilah,* ed. Muḥammad al-Ṭayyib Ḥamīd al-Fiqī (Cairo, 1952), 2:255–56. Al-Yūnīnī conveys a similar notion in the late thirteenth century, writing

Abū Yaʿlá Muḥammad ibn al-Ḥusayn (d. 390/1000), whom he presents as a great scholar in all branches of *ʿilm* and who had assembled unprecedented audiences for his public classes of hadith, Ibn Abī Yaʿlá says that "the people received blessing by looking at him *(bi-al-naẓar ilayhi yatabarrakūna)*."[14] *Barakat al-ʿilm* was considered effective even for the dead. Hence, those who could afford it located their mausolea as close as possible to madrasahs. Founders of madrasahs asked to be buried in the institutions of study they had patronized and brought their relatives for burial within them. Nūr al-Dīn's funerary madrasah, constructed in Damascus in 1168, several years before the sultan's death, is an early example of such an arrangement.[15] The historian and qadi Bahāʾ al-Dīn Ibn Shaddād (d. 632/1234) located his own *turbah* in between the two institutions of learning he had earlier endowed in Aleppo: a madrasah and a *dār al-ḥadīth*. The whole complex had connecting doors and seven inner grille windows on a single axis.[16] The biographer Ibn al-Wardī (d. 749/1348) quotes the people of Aleppo conjecturing that Ibn Shaddād "had hoped that the *barakah* of learning *(barakat al-ʿilm)* would affect him in death, as it had served him in life."[17] Berkey notes that in the later Mamluk period the connection between institutions of learning and places of burial was so natural that the terms madrasah and *turbah* could be conflated.[18]

Yet, as we can learn from our sources, ulama did not necessarily propagate *barakah* through teaching or by the direct utilization of religious knowledge. For one, there may have been a notion that *barakah* is inherent in some official or semi-official positions. Consider the following excerpt from Bahāʾ al-Dīn Ibn Shaddād, regarding the *barakah* of preachers (*khaṭīb*s). "Saladin

---

about another disciple of another shaykh: "He became his student and was known by his companionship. . . . The light of the shaykh and his *barakah* reflected upon him and he acquires his virtues," al-Yūnīnī, *Dhayl Mirʾāt al-Zamān* (Hyderabad, 1954–61), 2:57; Chamberlain, *Knowledge,* 109, 118–19.

[14] Ibn Abī Yaʿlá, *Ṭabaqāt,* 2:201. Mentioning his father and forefathers he adds: "*wa-jaʿala dhikrunā la-hum barakah taʿūdu ʿalaynā*" [and may our recalling be a blessing for them, that returns to us], Ibn Abī Yaʿlá, *Ṭabaqāt,* 2:208.

[15] For other funerary mosques and madrasahs in Ayyubid Damascus see R. Stephen Humphreys, "Women as Patrons of Religious Architecture in Ayyūbid Damascus," *Muqarnas* 11 (1994): 38–49; for Mamluk Cairo, see John A. Williams, "Urbanization and Monument Construction in Mamluk Cairo," *Muqarnas* 2 (1984): 34–35; Doris Behrens-Abouseif, *Islamic Architecture in Cairo: an Introduction* (Leiden, 1989), 95–105.

always sought out Fridays for his battles, especially the times of Friday prayer," he explains in his biography of the sultan, "to gain the blessing *(barakah)* of the preachers' prayers on the pulpits, for they were perhaps more likely to be answered."[19] The Shafiʿi ʿIzz al-Dīn ibn ʿAbd al-Salām al-Sulamī (d. 660/1262), one of the most important, learned, and assertive scholars of his age, seems to be combating the idea of such "automatic" *barakah* and *shafāʿah* in one of his fatwas. He warns *khaṭīb*s that if they phrase their supplications in false terms, using the laudatory titles *(alqāb)* of rulers without justification (calling a tyrant *al-ʿādil,* or an ignoramus *al-ʿālim,* for example) their *shafāʿah* would become null and void.[20]

Some ulama transmitted *barakah* by touch: the direct touch of their hand, or the mediated touch of their garment or seat, food they had partly consumed, the utterance of a phrase, a book or an amulet containing their handwriting *(bi-khaṭṭihi)*.[21] Talismans and amulets are rarely mentioned in narrative sources, but on the basis of extant medieval "magic material," as yet little researched, we have good reason to assume that they were in common use.[22] Talismans prepared by the very learned *muḥaddith* and *muftī* Abū Aḥmad al-Silafī of Alexandria (d. 576/1180), for example, were known to be particularly effective for women in labor.[23] The uncle of the Aleppan historian Ibn al-ʿAdīm, a copyist well versed in hadith and *fiqh*

[19] Richards, *The Rare and Excellent History,* 72. Nūr al-Dīn is quoted expressing a similar dependence on intercessory prayers *(duʿāʾ)*—those of jurists, Quran reciters, ascetics, and Sufis; see Yaacov Lev, "Piety and Political Activism in Twelfth Century Egypt," *Jerusalem Studies in Arabic and Islam* 31 (2006): 225.

[20] ʿIzz al-Dīn ʿAbd al-ʿAzīz ibn ʿAbd al-Salām al-Sulamī, *Fatāwá,* ed. Muḥammad Jumʿah al-Kurdī (Beirut, 1996), 400–1. True to himself, al-Sulamī refused to mention the title "al-Ṣāliḥ" (the righteous) of the Ayyubid ruler al-Malik Ismāʿīl ibn al-ʿĀdil II in his Friday sermon, holding him a traitor to the Muslim cause on account of the treaty he had concluded with the Franks in 638/1240. As a result, al-Sulamī's *shafāʿah* may have remained intact, but his pulpit was taken away from him, and after a short period in jail he was banished from Damascus. For the historical context, see R. Stephen Humphreys, *From Saladin to the Mongols: The Ayyūbids of Damascus, 1193–1260* (Albany, 1977), 266–67.

[21] For Joseph Meri's typology of the transmission of *barakah,* see his "Aspects of *Baraka,*" 63–64.

[22] For a short introduction on amulets and talismans see Emilie Savage-Smith, "Introduction," in *Magic and Divination in Early Islam,* ed. idem (Aldershot, 2004), xxii–xxv. She claims that "the twelfth century, for whatever reason, saw a marked increase of interest in magic . . . and the production of magical texts began to increase dramatically," ibid., xxvii.

[23] One of his disciples reveals, sarcastically I think, that what the shaykh actually wrote was: "*Allāhumma, innahum qad aḥsanū ẓannahum bī, fa-lā tukhayyib ẓannahum fiyya"* [God, they think well of me. May they not be disappointed]. Al-Dhahabī, *Siyar Aʿlām al-Nubalāʾ,* ed. Bashshār ʿAwwād al-Maʿrūf and Muḥyī Hilāl al-Sirḥān (Beirut, 1981), 21:28.

who was extremely fond of the works of al-Tirmidhī and had collected most of his volumes, used to prepare charms *(taʿāwīdh)* from the pen parings *(barawāt al-aqlām)* he gathered during the months of Ramaḍān, which he spent copying the Quran and practicing *iʿtikāf* (seclusion in a mosque). The *barakah* of those charms was well known, according to Yāqūt.[24]

Finally, medieval biographers tell of ulama whose *barakah* was manifest in the performance of wonders *(karāmāt),* implying that they enjoyed the elevated status of *wilāyah*—sainthood emanating from intimacy with God.

THEORY OF *KARĀMĀT*

The first extant coherent theory of *wilāyah* was composed by al-Ḥakīm al-Tirmidhī, one of the greatest and most prolific Sufi authors of the ninth century. According to his theosophical system, the *awliyāʾ* are second to the prophets in the spiritual hierarchy of the cosmos. They, rather than the scholars, are the true heirs of the prophets,[25] and their proximity and direct access to God accord them second sight *(firāsah),* divine inspiration *(ilhām),* and the power to perform wondrous feats *(karāmāt)*. For al-Tirmidhī, all this was so self evident that he could not think of any motive other than envy behind the stand of those who denied the existence of the above-mentioned hierarchy.[26] Stories about the wondrous deeds of the friends of God have been collected and transmitted since the ninth century, one of the earliest compilations being *Kitāb al-Awliyāʾ* by Ibn Abī al-Dunyā (d. 281/894).[27] Eleventh-century Sufi authorities such as al-Hujwīrī, al-Qushayrī, and al-Ghazzālī repeated and developed those perceptions.[28]

At the same time, the notion of sainthood and the feasibility of *karāmāt*

became widely acknowledged well beyond the Sufi milieu. In the tenth century most Ashʿaris and even some Muʿtazilis developed theological-scholastic arguments that supported the validity of *karāmāt.*[29] In the early thirteenth century, the renowned Hanbali jurist Ibn Qudāmah al-Maqdisī wrote the following paragraph in praise of the people of the Sunnah: "It is amongst them [the Sunnis] that one finds the observant ulama *(al-ʿulamāʾ al-ʿāmilūn),* the friends of God *(al-awliyāʾ),* and the righteous *(al-ṣāliḥūn)* . . . and *ahl al-walāyāt wa-al-karāmāt*. . . . They are a refuge to men afflicted by hardship, and kings and others of lesser ranks go out and visit them, and are blessed by their supplications *(yatabarrakūna bi-duʿāʾihim),* and appeal to God through their intercession *(yastashfaʿūna bi-him)*."[30] Whether Ibn Qudāmah is speaking of four separate categories, or of overlapping groups, it is clear that this excerpt (taken from his polemical anti-Muʿtazili treatise) unequivocally illustrates the wide recognition of *barakah* and its manifestation in *karāmāt* in all echelons of society. It also establishes a clear connection between piety, intercession, and wondrous deeds.[31]

In some circles, however, the notion of sainthood remained contested throughout the ages, due to different theological reasoning,[32] or because of the apprehension that charismatic, spiritual, non-scholarly, and potentially disruptive authority aroused among the established ulama.[33] In anti-Sufi

[32] For al-Andalus, see Maribel Fierro, "The Polemic about the *Karāmāt al-Awliyāʾ* and the Development of Sufism in al-Andalus (fourth/tenth–fifth/eleventh centuries)," *Bulletin of the School of Oriental and African Studies* 55 (1992): 236–49. Fierro finds that the polemic was imported into al-Andalus from Qayrawān in the second half of the fourth/tenth century, and was concerned mainly with the danger of discrediting prophets. Al-Sulamī, in sixth/thirteenth-century Syria, disputes with "the Muʿtazilis and others," who consign miracles and wonders to prophets only, denying *karāmāt al-awliyāʾ* (al-Sulamī, *Zabad Khulāsat al-Taṣawwuf al-musammá bi-Ḥall al-Rumūz wa-Mafātīḥ al-Kunūz* [Cairo, 1995], 77–78). See a short discussion of this theme in William M. Brinner, "Prophet and Saint: The Two Exemplars of Islam," in *Saints and Virtues,* ed. John S. Hawley (Berkeley, 1987), 36–51.

For a live (and lively) contest between a wonder-worker (the Sufi shaykh Ibn Qawām, d. 658/1260) and anti-Sufi scholars and dignitaries in a northern Syrian town, see al-Yūnīnī, *Dhayl,* 1:392–412, or al-Subkī, *Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* ed. A. M. al-Hulūʾ and M. al-

polemics well into the Mamluk period, miracle-workers were unfavorably compared with men of intellectual and educational superiority, and their *karāmāt* were juxtaposed with the knowledge, rectitude, and piety of the scholars. A fine example may be quoted from ʿAbd al-Ghanī al-Maqdisī, the protagonist of our first anecdote. Asked why more tales of *karāmāt* are told about "shaykhs" *(mashāyikh)* than about scholars, he answers: "Can the scholars wish for a greater wonder than their being preoccupied with study *(ishtighālihim bi-al-ʿilm)*?"[34]

The apologia of the Egyptian scholar and Sufi Ibn Abī ʿAṭāʾ Allāh (d. 709/1309) "on the theme of saint's miracles" seems to indicate that he felt the need to defend "such things as the collapsing of the distance between one place and another, walking on water, flying through the air, cognizance of entities which used to exist [but exist no longer], or of entities which have not yet come into existence through supernatural means, multiplying food or drink, producing fruit out of season . . . etc." He also piously adds that "miracles of the spirit," e.g., constant observance of God and sincere reliance on him, are the greatest of wonders.[35]

While the realness of wondrous feats was hardly doubted (allegations of trickery are very rare in our sources), the sanctity of individuals who were known to perform them was not necessarily beyond doubt. It was questioned in sayings such as "Satan goes in one moment from the East to the West" (attributed to Abū Saʿīd ibn Abī al-Khayr of the tenth century),[36] or in Ibn Taymīyah's claim that "a premonition or inspiration about something, or supernatural deeds . . . allegedly occur [also] to many infidels, unbelievers, and heretical innovators."[37] Some wonder-workers were suspected of collaboration with jinn, rather than with divine grace.[38] ʿIzz al-Dīn al-Sulamī insists that a *karāmah* may occur only to a true believer and devout Muslim, neither by his choice, nor necessarily with his awareness. Moreover, the true saint was expected to conceal his *karāmāt*.[39]

The best indication of the near-consensus in favor of the recognition of sainthood and its wondrous manifestations may be found in the occurrences

of *awliyāʾ* and *karāmāt* in non-Sufi literature, written by judicially trained ulama. General (as opposed to Sufi) biographical dictionaries, and the *wafayāt* sections of chronicles, relate anecdotes about wondrous feats. These include restoring health, assuring safety in perilous situations, thwarting sin and crime, securing the supply of water and grain, conveying knowledge of future events and things hidden from the eye, arbitrating with humans and with God, and bringing about conversion to Islam. In these genres scholars could be praised both for their literary production and for performing wonders in the same entry. A comparable mingling of the fields of scholarly work and magic, which secular men and women of the modern age usually find surprising, could be found on the institutional level in Mamluk cities. The *dār al-ḥadīth* constructed by the Ayyubid sultan al-Malik al-Ashraf (d. 635/1237) in Damascus was designated to serve a double purpose: the study of prophetic tradition, and the display of a sandal of the Prophet, a precious relic that was bequeathed to the sultan by one of his subjects. The combining of the cult of the Prophet as a saint and the "academic" study of his lore must have made perfect sense to al-Malik al-Ashraf and to his contemporaries.[40] Another institution that disseminated *ʿilm* and *barakah* simultaneously was the Madrasah al-Jawharīyah, established in Cairo some 300 years later, in which a magical pearl and a talismanic bowl were kept for healing purposes.[41]

Biographical Literature

The eleventh-century biographer Ibn Abī Yaʿlá, the author of the first comprehensive dictionary of Hanbalis (to which Ibn Rajab later added his *Dhayl*), glorifies God, saying: "He has made the scholars of this nation *(ummah)* absolutely the most virtuous among the scholars of all nations, and the most blessed. And he has provided them with wonders *(karāmāt)*."[42] Ibn Abī Yaʿlá does not mention any wonders in the entries dedicated to members of the first two generations of the Hanbali school. *Barakah* and *karāmāt* first appear in his book with scholars of the third generation, men of the fourth/tenth century, in the second volume of the modern edition of the work. The numbers are small: 10 of the 129 entries of the volume report about the *barakah* and *karāmāt* of their biographees. The first case appears in the biography of Abū al-Ḥasan al-Zāhid al-ʿArīf (d. 313/925). Moved by the misery of a student who is about to have his hand amputated by his

[40] For a full account of this story see my *Islamic Piety,* 203–5.

[41] Jonathan Berkey, "Tradition, Innovation, and the Construction of Knowledge in the Medieval Near East," *Past and Present* 146 (1995): 38–39.

[42] Ibn Abī Yaʿlá, *Ṭabaqāt,* 2:212.

physician, Abū al-Ḥasan beseeches God's mercy in a somewhat provocative manner, then "reads over" the sick man (most likely Quranic verses, but perhaps some other formulae), and the hand is cured. Interestingly, Abū al-Ḥasan's colleagues, who are quoted discussing his *shafāʿah*, *barakah,* and spiritual ranking, use the typically Sufi terms *awliyāʾ, abdāl* ("substitutes," an elevated saintly status),[43] and *mustakhlifūn* ("successors," here designating an even higher rank, equivalent to that of the prophets).[44] A similar scene is depicted in the biography of Shaykh Abū Bakr ʿAbd al-ʿAzīz ibn Jaʿfar (d. 363/974), who was an author of varied scholarly works. Ibn Abī Yaʿlá's informant describes a group of people standing at the city gate, talking about *karāmāt al-awliyāʾ*.[45] Whether the voice speaking is that of the eleventh-century compiler or that of the tenth-century discussants at the gate (a feasible possibility, in my mind), *karāmāt* obviously formed a part of the religious imagination of scholars from an early stage, even if they were not often ascribed to men of their own circles.

Ibn Rajab's "appendix" to Ibn Abī Yaʿlá's work, *Al-Dhayl ʿalá Ṭabaqāt al-Ḥanābilah,* is comprised of 613 entries dedicated to Hanbalis who lived between ca. 400/1010 and 740/1340. Many entries are very short: merely 2–3 lines that supply minimal data. Some are several pages long (up to 38 pages), rich with anecdotes about the biographee, descriptions of his scholarly works, and summaries of the juristic and theological debates he took part in. *Karāmāt* are ascribed to 27 of the biographees. If we do not take into account some 40 entries which provide hardly anything more than names and dates of death (assuming that at least in some of those cases the dearth of material is due to the compiler's limited access to information, rather than to the biographee's insignificance),[46] five percent of shaykhs are portrayed as possessing *barakah* and *karāmāt*.

The seventh and eighth volumes of Tāj al-Dīn al-Subkī's *Ṭabaqāt al-Shāfiʿīyah al-Kubrá* include 480 entries dedicated to men who had died

[43] According to Sufi theory, a fixed number of *abdāl* are chosen by God to preserve universal equilibrium, especially during periods between prophets, and to perform *shafāʿah* for their brethren on the Day of Judgement (Jacqeline Chabbi, "Abdāl," *Encylopaedia Iranica* [London, 1985], 1:173–74).

[44] "*Al-mustakhlif fī al-arḍ makāmuhu makām al-anbiyāʾ*" (Ibn Abī Yaʿlá, *Ṭabaqāt,* 2:62–63). For more anecdotes, see the appendix.

[45] Ibn Abī Yaʿlá, *Ṭabaqāt,* 2:123.

[46] This is explicitly acknowledged by Ibn Rajab at the end of his very short entry about al-Ḥusayn ibn al-Hamadhānī: "*wa-lā aʿlamu min ḥālihi ghayr hādhā*" (Ibn Rajab, *Al-Dhayl,* 1:208; similar comment ibid., 2:481).

between 500/1106 and 700/1300 (excluding a hundred "empty"[47] and extremely brief entries). The vast majority of the biographees are scholars, but some members of the ruling and military elite are included as well. Most entries are very short and strictly informative. Some of the longer entries consist of anecdotes of sorts, poems, fatwas, and selected scholarly contributions, especially in the field of jurisprudence. Slightly more than six percent of the entries relate wondrous doings or occurrences, or explicitly mention *barakah* and *shafāʿah*.

Ibn Rajab and al-Subkī are much alike in their treatment of *barakah* and *karāmāt* not only number-wise, but also in the typology of their wonder-working scholars. Early and late wonder-working scholars in both works are constructed by similar characteristics: extraordinary piety expressed by devotional works, commitment to the service of fellow men, frugality and asceticism. Both dictionaries, however, also portray ascetics *(zuhhād)* and Sufis to whom no wonders are ascribed.[48]

The first wonder-working scholar in Ibn Rajab's dictionary is Abū al-Wafāʾ ibn al-Qawās (d. 476/1083–84), a member of the twelfth generation of Hanbalis, an ascetic who spent fifty years in retreat in his mosque. A student who used to study Quran with the shaykh narrates the wonder, referring to it, rather generously, as "remarkable." It is a rather unassuming version of *firāsah:* the shaykh astonished his student by offering him, at the end of the school day, the exact sum he needed for the return trip home, but had lost on his trip to town earlier that day.[49]

An unusually dense concentration of *karāmāt* is to be found in the biographies of scholars belonging to the Hanbali milieu of the Ṣāliḥīyah, a neighborhood that was established in the 1160s by emigrants from Jabal Nāblus.[50] Stephan Leder treated the outstanding members of this clan, known as al-Maqādisah, in a fine article in *Der Islam* (1997). He coined the term "charismatic scripturalism" to characterize their particular type of

[47] Entries that consist of nothing more than a name. Perhaps al-Subkī had meant to complete them at a later stage of his work, but never did; perhaps information was lost by copyists of later generations.

[48] For example: 7:112–14, 156–57. Abū al-Qāsim al-Ṣūfī, the nephew of the Shaykh Abū Najīb al-Suhrawardī, who was master to many novices, is not described as a wonder-worker, but his *barakah* is mentioned as the power that has led sinners to repentance and men to God (al-Subkī, *Ṭabaqāt,* 8:340).

[49] Ibn Rajab, *Al-Dhayl,* 1:39.

[50] See Daniella Talmon-Heller and Benjamin Z. Kedar, "Did Muslim Survivors of the 1099 Massacre of Jerusalem Settle in Damascus? The True Origins of the al-Ṣāliḥīyah Suburb," *Al-Masāq* 17 (2005): 165–69.

religious leadership, highlighting their "extraordinary ability to combine two elements of religious experience which were often held distinct: the literalist aspect of traditionalist religious orientation, and charismatic religious leadership."[51] The *muḥaddith* ʿAbd al-Ghanī al-Maqdisī, with whom we opened this paper, was one of them. His two cousins, shaykh Abū ʿUmar Ibn Qudāmah and Muwaffaq al-Dīn Ibn Qudāmah, enjoyed a similar, if not higher, reputation. Abū ʿUmar, the imam and *khaṭīb* of the Hanbali mosque in the Ṣāliḥīyah, was known for piety, *shafāʿah,* and *karāmāt*. His prayer for rain during a dry season (which he carried out with his female relatives on a holy site in the vicinity of Damascus) was instantly accepted. He could recognize indecency and read thoughts. People believed that he mediated *barakah* by the vocalization of certain verses from the Quran. A member of his community gives eloquent testimony to the efficacy of the shaykh's *barakah,* saying that Abu ʿUmar's custom of frequently reciting the *āyāt al-ḥaras* (Quran 2:284–86, 7:52–54, 7:109–11, 9:256, 37:1–11, 55:33–36, 59:212–14, 70:1–4) and *āyat al-kursī* (2:255) kept evil away from them in times of constant warfare, violence, and banditry. He also used to copy the Quran and certain works of exegesis, Hanbali theology and law, and Sufi biographies, and distributed them gratis among community members. Books in his handwriting were considered to carry *barakah* into the homes of those holding them. Likewise, petitions he addressed to local governors and officials on behalf of people who asked for his intercession in matters of this world were considered to be helpful not necessarily on account of their content, but rather due to the *barakah* contained in the document he had handled. A riot almost broke out at his funeral, as men and women fought over the water that had washed his body in preparation for burial.[52]

Muwaffaq al-Dīn, author of the first comprehensive compilation of Hanbali law, *Al-Mughnī,* and of several important theological treatises, was regarded as an extraordinary scholar by his contemporaries and throughout the centuries. His biography in Ibn Rajab's *Dhayl Ṭabaqāt al-Ḥanābilah* includes the following laudatory quotation of the Baʿlabakī Hanbali scholar ʿAbd Allāh al-Yūnīnī (d. 617/1220), who must have known him in person:

> I have seen his noble character, his fine companionship, his abundant forbearance, great knowledge and intelligence, his

[51] Leder, "Charismatic," 298.

[52] For a detailed portrait of shaykh Abū ʿUmar, see Daniella Talmon-Heller, "Ḥanbalite Islam in 12th–13th Century Jabal Nāblus and Jabal Qāsyūn," *Studia Islamica* 79 (1994): 103–20. Chamberlain suggests that copying had a talismanic power not only by transmitting the *barakah* of the copyist, but also of the author, whether alive or dead (*Knowledge,* 144).

> perfect manliness and great modesty and constant cheerfulness and his detachment from things of this world and its people and offices, to a degree that the greatest *awliyāʾ* hardly attain. The Prophet had said: "The greatest blessing that God can bestow upon his servant is to inspire him with constant remembrance of himself," which means that *ilhām al-dhikr* is worthier than *karāmāt,* and the worthiest *dhikr* is that which extends benefits to other men, namely the teaching of the religious sciences and the sunnah.[53]

Al-Yūnīnī seems to be engaging in a competition between scholars and Sufis. Himself at home in both traditions,[54] al-Yūnīnī praises scholars using Sufi discourse, especially the theme of *nafʿ*—benefit to the people. Here, he positions Ibn Qudāmah as more virtuous than most *awliyāʾ* in this respect and stresses his righteousness. A few lines down the page the compiler Ibn Rajab dedicates a paragraph to "the mention of some of his [Ibn Qudāmah's] wonders." There we find two rather pale examples of Ibn Qudāmah's penetrating insight and healing techniques, crowned by the following little anecdote, which is related by the *qawwām* (keeper) of the Damascene mosque Ibn Qudāmah used to frequent. The *qawwām* says: "When Ibn Qudāmah spends the night in the mosques, the doors open for him and close behind him by themselves."[55]

ʿImād al-Dīn al-Maqdisī was another renowned saintly figure of the Banū Qudāmah in thirteenth-century Damascus. Though learned, he preferred good works to scholarly work ("*wa-kāna min kuthrat ishghālihi wa-ishtighālihi lā yatafarraghu lil-taṣnīf wa-al-kitābah*"), and never completed his book on religious law.[56] His devotion and generosity to his students and to those who came to seek his guidance, advice, and help was legendary. Many *karāmāt* were attributed to him, such as the overwhelming effect his presence had on a sinner.[57] It was even said that he was one of "the seven who uphold

[53] Ibn Rajab, *Al-Dhayl,* 2:138. On the importance attached to *dhikr,* the memory of God, in Christian and Islamic non-Sufi contexts, see Johannes Pahlitzsch, "The Concern for Spiritual Salvation and *Memoria* in Islamic Public Endowments in Jerusalem (XII–XVI C.) as compared to the Concepts of Christiandom," in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras,* vol. 3, ed. Urbain Vermeulen and Jo van Steenbergen (Leuven, 2001), 332–35.

[54] Al-Yūnīnī, *Dhayl,* 2:57. See Li Guo, *Early Mamluk Syrian Historiography* (Leiden, 1998), 1:15, about Sufism in the al-Yūnīnī family.

[56] Ibid., 2:94–95.

[57] Ibid., 2:101.

the earth."[58] Another family member to whom *aḥwāl* (spiritual "states") and *karāmāt* (especially of multiplying food for the needy) are attributed is Aḥmad ibn Abī al-Makārim (d. 1225/622), the righteous imam and *khaṭīb* of the village of Mardā (Jabal Nāblus).[59]

The Banū Qudāmah correspond well to Ernst Gellner's category of "charismatic lineages," typical of the Moroccan Atlas.[60] *Barakah* "ran" in the family for at least four consecutive generations, perhaps due to the particular characteristics of the community that recorded its wonders. It was a community of emigrants from a rural area, with an extraordinarily dedicated and competent leadership,[61] and with a documented tendency towards the veneration of holy men and the production of a hagiographical tradition.[62] If we surmise that stories of *karāmāt* are told where there are not only charismatic shaykhs, but also needy communities and convincing storytellers, the case of the Banū Qudāmah is a combination of all three prerequisites.

A few other examples will take us away from the Banū Qudāmah. Speaking about the grammarian, poet, and expert on *qirāʾāt* Abū Muḥammad al-Qāsim ibn Fīrruh al-Shāṭibī (d. 590/1194) of the Madrasah al-Fāḍilīyah in Cairo, the Damascene historian Abū Shāmah (d. 665/1267) notes that Shaykh al-Shāṭibī not only "combined learning with good works," but was also a saint of well-known miracles.[63] Muḥammad ibn al-Khiḍr Ibn Taymīyah (d. 622/1225) was the undisputable spiritual leader of Ḥarrān, on top of being the learned author of many works. He served as the *khaṭīb* and imam of the great mosque of Ḥarrān, he taught in one of its main madrasahs (al-Nūrīyah), and he held popular assemblies of exhortation *(majālis al-waʿẓ)* for both the elite and the commoners. Ibn Rajab notes that he was known to have performed wondrous deeds and supernatural feats *(karāmāt wa-*

[63] ʿAbd al-Raḥmān ibn Ismāʿīl Abū Shāmah, *Al-Bāʿith ʿalá Inkār al-Bidaʿ wa-al-Ḥawādith,* ed. H. Salmān (Riyadh, 1990), 223; Ibn al-ʿImād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab,* ed. ʿAbd al-Qādir al-Arnāʾūt and Muḥammad al-Arnāʾūt (Beirut, 1991), 6:494–95. Ibn al-ʿImād does not relate the *karāmāt,* but he stresses the righteousness of al-Shāṭibī and his special pious customs.

khawāriq), but he does not give specific examples. He does offer a detailed account of the shaykh's theological disputations with Muwaffaq al-Dīn ibn Qudāmah, and of dreams attesting to the shaykh's elevated status post mortem.[64]

In the very long biographical entry dedicated to ʿIzz al-Dīn al-Sulamī in *Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* al-Subkī inserts short stories about al-Sulamī's *karāmāt* between the plot of a complicated theological debate in which the shaykh was involved, and a presentation of his *fatāwá* regarding highly contested political issues. In one anecdote, al-Sulamī recognizes the impurity of a piece of cheese brought to him as a present (and indeed it turns out that it had been bought from a *dhimmī* woman who had pork on her hands).[65] The most spectacular wondrous doing of his was performed during the battle of al-Manṣūrah in the winter of 647/1250. When the Frankish boats came dangerously near to the Muslim forces, al-Sulamī raised his hands towards the wind and ordered it, in a loud voice, to turn against the enemy. The wind immediately changed its course, the Frankish boats capsized, and many of their passengers drowned. The Muslims gave thanks to God "for giving them a man whom the wind obeys,"[66] "a man that, had he been in India, or at the very end of the world, the sultan should do his utmost to bring him to his country in order to secure his blessings for himself and for his country" *(law kāna fī al-Hind aw fī aqṣá al-dunyā kāna yanbaghī lil-sulṭān an yasʿa fī ḥulūlihi fī bilādihi li-tatimma barakatuhu ʿalayhi wa-ʿalá bilādihi)*.[67]

Claiming that it was superfluous to tell the *karāmāt* of al-Sulamī's contemporary and fellow Shafiʿi Yaḥyá ibn Sharaf al-Nawawī (d. 676/1278) since they were so well known, al-Subkī reproduces only a small hagiographical anecdote about the scholar's childhood. He quotes al-Nawawī's father, telling that when Yaḥyá was only seven years old, he was the only one in the household to be awakened by a glorious light in the middle of *laylat al-qadr*. Al-Subkī also comments that the impossibly huge volume of al-Nawawī's writing must be regarded as wondrous. Al-Nawawī himself, in his exemplary piety, was willing to recognize as wondrous only an answered prayer, a sip of water in the desert, or a piece of bread in the wilderness.[68]

The only shaykh whose *karāmāt* were transmitted *bi-al-tawātur,*

[64] Ibn Rajab, *Al-Dhayl,* 2:151–62.

uninterruptedly (according to ʿIzz al-Dīn ibn ʿAbd al-Salām al-Sulamī), and to whom the largest number of *karāmāt* were attributed (according to Muwaffaq al-Dīn Ibn Qudāmah), was Shaykh ʿAbd al-Qādir al-Jīlānī (d. 563/1166). Known by later generations as the founder of a Sufi *ṭarīqah,* in Ibn Rajab's biographical dictionary he is presented as a renowned preacher, connected with a large madrasah. Ibn Rajab relates only a few of his wonders (all demonstrating *firāsah*) and emphasizes that he was admired by both scholars and ascetics ("*akthar mashāyikh al-arḍ, min al-ʿulamāʾ wa-al-zuhhād*").[69]

Tales of the wondrous deeds of ulama may be found also in Mamluk pilgrimage guides to the cemetery of al-Qarāfah. Christopher Taylor, who worked on a collection of such manuscript guides, retells some of these stories. He mentions the jurist Abū ʿAbd al-Raḥmān Raslān (d. 571/1175–76), who made a wheat merchant's business prosperous by touching his merchandise (until a Jew touched the wheat and ruined everything!), helped a woman in difficult childbirth by giving her a mirror with a line of his writing, and turned water into honey.[70] The Hanbali jurist Abū ʿAmr ʿUthmān ibn Marzūq (d. 564/1168–69) made the Nile rise when it was too low, or recede when it was too high, just by performing his ritual ablutions at the river's bank.[71] The jurist Abū al-Ḥasan ʿAlī ibn Marzūq Abū ʿAbd Allāh al-Rudaynī (d. 1145–46) is reported to have flown like a bird to a disputation with a colleague. After his death, he answered the fervent prayers of a poor man who visited his tomb and miraculously supplied him with the 10,000 dirhams he needed in order to pay his creditor.[72] A house was robbed in a Cairene neighborhood and the frightened neighbors went to the jurist Abū Isḥāq Ibrāhīm, also known as Ibn Khallās al-Anṣarī, and asked him to pray on their behalf. Thanks to his prayer, local inhabitants were spared from beatings by the police; the robber confessed, repented, and was also spared.[73] The tombs of all these saintly ulama, so we learn from Christopher Taylor, were popular sites for visitation. Men wished to be buried in their proximity in pursuit of the *barakah* they believed would help them in this world, and ease their way to the hereafter.[74]

Conclusions

From the tenth century onwards, comments such as "he was [a man] of wonders *(kāna dhā karāmāt),*" and anecdotes that relate the wondrous doings of learned men, some of whom were madrasah professors and authors of scholarly volumes on jurisprudence, commentary, and theology, are integrated into biographical dictionaries and chronicles. Such a mixture of hagiography and supposedly realistic historical data about jurisconsults and theologians may be disturbing to our understanding of the world,[75] despite recent scholarship that repeatedly deconstructs previously assumed dichotomies between religion and magic, scholars and saints,[76] learned versus vulgar, or "high" culture versus "low" or popular culture.[77] As I have attempted to illustrate in this paper, this mixture of the miraculous and the mundane was perfectly congruent with the sensibilities of men of the Ayyubid and Mamluk periods, learned and unlearned. In their minds—as mirrored in the biographical and theological works they have produced—knowledge of religious lore *(ʿilm),* successful intercession with God and with secular powers *(shafāʿah),* and spiritual metaphysical powers *(barakah)* were interconnected, intertwined, and even organically tied to each other.

At this stage, I would like to offer some further thoughts on the issue of hagiographies of scholars, in an attempt to enhance our understanding of the roles and images of ulama in Mamluk society from a rarely posed perspective. As we have seen, the discourse of ulama about themselves reflects the appropriation of Sufi terminology and the employment of the characteristic traits of ascetics and mystics. In Michael Chamberlain's words, "The learned associated themselves with other forms of ritual power [other than *ʿilm*] by linking their *ʿilm* to Sufism . . . by casting themselves as 'true' Sufis, and by using Sufi terms."[78] The impetus, I would like to add, could also have come from below. Namely, the disciples of ulama—ranging from the humble yet popular imam of a neighborhood mosque to a renowned jurist and author—and their admirers from among commoners attached some of the attributes of Sufi shaykhs onto them. The gatekeeper of the mosque Ibn Qudāmah used to frequent at night, the Muslim soldiers at al-Manṣūrah, and the crowd at the funeral of ʿImād al-Dīn Ibn Qudāmah (all

[75] As expressed in Stefan Leder's interpretation of ʿAbd al-Ghanī's rejection of his own saintliness, namely "that any other attitude would probably have been inconsistent with his serious, down-to-earth and toilsome work as a scholar" (Leder, "Charismatic," 299).

[76] See Cornell's refutation of Gellner's oppositional pairs: Cornell, *The Realm,* xxvii, 106.

[77] Regarding the inappropriateness of these dichotomies in Islamic context see Savage-Smith, *Magic and Divination,* iii. She contends that boundaries are indistinct and shifting.

[78] Chamberlain, *Knowledge,* 128–30.

of whom are mentioned as the informants of the biographers and compilers of written biographical material) certainly did.

Alternatively, or simultaneously, the discourse about wonder-working scholars may have been tied to a competition that took place within the ranks of the ulama, rather than between them and Sufis (who, according to most contemporary researchers, were separated from scholars by rather porous boundaries, with a significant overlap between the two categories).[79] In this context, *karāmāt* were the signifiers of impeccably pious and ethical men, scholars who thanks to their righteousness enjoyed the grace of unusual intimacy with God. The identity of ulama was first and foremost constructed on the acquisition and dissemination of *ʿilm,* of course.[80] The unusual authority scholars had in medieval Muslim societies drew also upon the *shafāʿah* and *barakah* (in varying combinations and degrees) that was attributed to them. *Karāmāt* were the "special ingredient" of the depiction of the saintly scholar, who outdid his peers in piety and good works.

[79] See, for example, Emil Homerin, "Sufis and their detractors in Mamluk Egypt," in *Islamic Mysticism Contested*, 226–27.

[80] I thank Yaacov Lev for stressing this for me.

APPENDIX

Selected anecdotes about wondrous doings of scholars from Ibn Abī Yaʿlá, Ibn Rajab, and al-Subkī:

1. The Prophet appears in a dream of an anonymous *muḥaddith,* who had spent years in search of an answer to some peculiar theological question that bothered him, and refers him to Shaykh Abū Bakr ʿAbd al-ʿAzīz ibn Jaʿfar, better known as Ghulām al-Khalāl (d. 363/974). The *muḥaddith* hastily departs for Baghdad, enters Jāmiʿ al-Khalīfah (as instructed), and easily recognizes the shaykh by his particular eyebrows and especially loud voice. Shaykh ʿAbd al-ʿAzīz approaches him first, and discreetly asks him if he is the fellow sent by the Prophet.[81] In a second anecdote the shaykh himself is the narrator. He tells of a wonder he had witnessed when accompanying his shaykh on a visit to the keeper *(nāṭūr)* of Bāb al-Ḥarb: the transformation of food into gold (supposedly, for his own sake). More interestingly, the scene depicted by the narrator is that of a group of people telling *karāmāt al-awliyāʾ*. After his death, a ray of light *(ʿamūd nūr)* was seen rising from his grave to the sky.[82] A Muslim who lived in the vicinity of the grave heard the Prophet in his dream, promising that a visit to shaykh Abū Bakr's grave secures God's forgiveness.[83] He is said to have foreseen the exact day of his own death: a Friday at the age of 78, just like Aḥmad ibn Ḥanbal and Abū Bakr al-Murūdī. Ibn Abī Yaʿlá notes that "*hādhihi karāmah ḥasana la-hu*."[84]

2. Abū al-Ḥusayn Muḥammad ibn Aḥmad Ibn Samʿūn (d. 387/997), known for his *zuhd fī al-dunyā,* tells the following story: on a visit to Jerusalem, after a sojourn in Medina, his *nafs* craved for fresh dates. He admonished it, and took out the dry dates he had put aside for his meal. To his great surprise, they were fresh! He did not touch them. By suppertime, he found that they had been restored to their former, dry, condition, so he ate some of them.

According to an anecdote told by a student of his, Abū al-Ḥusayn could read thoughts and predict the future. Thanks to his advice, the student did not sell his last belongings, despite his stressful economic situation, and waited patiently for God's succor. It indeed came. Another informant recalls that the shaykh had paused for an hour in the middle of one of his

[82] Ibid., 2:124–25

[83] Here the editor, Muḥammad al-Fiqī, adds a footnote, commenting in a typically modernist fashion that it is a shame that such pagan mausolea and sanctuaries were built.

[84] Ibn Abī Yaʿlá, *Ṭabaqāt,* 2:126–27.

sermons, so as not to disturb a student who had dozed off, explaining that the latter was enjoying the apparition of the Prophet in his dream.[85] Finally, Abū al-Ḥusayn predicted that some time after his death his body would be taken out of its grave, and then reburied. When this indeed happened, his shrouds were found intact.[86]

3. Muḥammad ibn al-Ḥasan ibn Jaʿfar al-Radhānī (d. 494/1101) was an ascetic *muqriʾ* and *faqīh* whose prayers were answered ("*mujāb al-daʿwah*"). He was also a wonder-worker ("*ṣāḥib karāmāt*"). One of his wonders is spelled out: a deer came over to play with his little son one morning, in accordance with a promise he had given the child on the night before.[87]

4. The Bedouin shaykh *(baʿḍ ahl al-bādiyah)* Abū Ṭālib al-ʿAshārah, Muḥammad ibn ʿAlī ibn al-Fatḥ (d. 451/1059), who was an ascetic and an expert on hadith, was known to pray for rain effectively in times of drought. Ibn Abī Yaʿlá adds: "*wa-la-hu karāmāt kathīrah.*"[88]

5. Abū Bakr Aḥmad ibn ʿAlī al-ʿUlthī (d. 503/1109–1110), a student of Abū Yaʿlá, restored the health of a sick little boy (with the recitation of Quranic verses, and his saliva), and "not few of his [other] wonders became known."[89]

6. ʿUthmān ibn Marzūq al-Qurashī, known also as Abū ʿUmar al-Zāhid (d. 564/1168–69), described as "*al-faqīh, al-ʿārif al-zāhid,*" who taught both law and mysticism, was involved in theological debate (regarding *khalq al-afʿāl*) and had "*karāmāt wa-aḥwāl wa-maqāmāt wa-kalām ḥasan ʿalá lisān ahl al-ṭarīqah.*" Once, he stopped the Nile from flooding agricultural land, and in another year, he prevented a severe drought.[90]

7. Al-Ḥasan ibn Aḥmad Abū al-ʿAlāʾ, known as al-ʿAṭṭār Shaykh Hamadhān (d. 569/1173–74), is described as a prominent scholar of hadith, author of works on different branches of hadith studies and devotional treatises *(zuhdīyāt wa-al-raqāʾiq wa-ghayr dhālika)*. He was popular among scholars and commoners, including Muʿtazilis and Jews(!), and inclined towards asceticism. The preacher Nāṣiḥ al-Dīn ibn al-Ḥanbalī is quoted saying about him: "and his standing in the eyes of the common people and the elite is

[85] Ibid., 2:157.

[87] Ibn Rajab, *Al-Dhayl,* 1:92.

[88] Ibn Abī Yaʿlá, *Ṭabaqāt,* 2:192.

[89] Ibid., 2:255–56; Ibn Rajab, *Al-Dhayl,* 1:130–31. In Ibn Rajab's version, Abū al-Ḥusayn (Ibn Abī Yaʿlá) precedes the story with the somewhat apologetic "*akhbaranī man athiqu bi-hi.*"

[90] Ibn Rajab, *Al-Dhayl,* 1:306–11.

well known, as are his *karāmāt.*"[91]

8. Ismāʿīl ibn Ẓafar Abū Ṭāhir al-Mundhirī al-Dimashqī (d. 639/1241–42) traveled extensively for the study of hadith. Little else is said of him, except that he was pious, righteous, chivalrous, and humble, as well as *ṣāḥib karāmāt.*[92]

9. Muḥammad ibn Aḥmad al-Yūnīnī al-Baʿalbakī "*aḥad aʿlām wa-shuyūkh al-islām,*" (d. 658/1260), was a scholar versed in hadith and *fiqh*, and a Sufi, a disciple of shaykh ʿAbd Allāh al-Yūnīnī (also renowned for *karāmāt* and *aḥwāl),* who donned the Sufi mantle *(khirqah)* he had received from shaykh ʿAbd Allāh al-Baṭāʾiḥī. He had also attained mystical states and performed *karāmāt,* but he was reluctant to expose wondrous doing, claiming that: "God has commanded the prophets to exhibit their miracles *(muʿjizāt),* and the saints *(awliyāʾ)* to conceal their wonders."[93]

10. ʿAbd Allāh ibn Yaḥyá al-Suʿbī (d. 553/1158–59) was a pious Yemenite scholar and author. It was told about him that he was once attacked with swords (the circumstances are not revealed), but turned out to be immune to their edge. He himself recalled reciting *sūrat yāʾ sīn,* or according to another version, seven other specific verses. He claimed to have learnt of their protective power being a witness to a wondrous sight: a lamb playing at the side of a wolf, unharmed, thanks to a folded piece of paper which was tied around its neck, containing these very verses.[94]

11. ʿAbd al-Malik al-Ṭabarī (d. in the 530s/1135–45), *ṣāḥib al-aḥwāl wa-al-karāmāt wa-al-jidd fī al-ʿibādāt,* was a professor at the Niẓāmīyah, but resigned and settled in Mecca, where he spent the final forty years of his life in absolute poverty. A little pool or cistern would fill up with water exclusively for him, whenever he needed water for performing ablutions.[95]

12. Aḥmad ibn Yūsuf al-Shaybānī al-Mawṣilī, known as al-Kawāshī (d. 680/1281–82), *al-mufassir, al-rajul al-ṣāliḥ, al-zāhid, al-wariʿ, dhū al-aḥwāl wa-al-karāmāt* (too many to tell!), resided in the mosque of Mosul for more than forty years. He was the author of a Quran exegesis in two versions, honored and sought by the sultan "and by his inferiors," and known to master "the greatest name of God *(ism Allāh al-aʿẓam)*."[96]

13. ʿAbd al-Ghaffār ibn ʿAbd al-Karīm al-Qazwīnī, Najm al-Dīn (d. 665/1267), author of *Al-Ḥāwī* and other works, including a book on arithmetic *(Kitāb al-Ḥisāb),* "*kāna min al-ṣāliḥīn arbāb al-aḥwāl wa-al-karāmāt.*" He could write his work at night thanks to a wondrous light glowing from his finger. Al-Subkī adds that two other Qazwīnīs were blessed by the very same wonder: ʿAbd al-Karīm ibn Muḥammad al-Rāfiʿī and his father.[97] Al-Rāfiʿī's powers are attested in a separate entry,[98] where he is described as exceptionally learned and pious, an author of important works in jurisprudence, *tafsīr,* and hadith, and highly praised by contemporary scholars. Al-Nawawī is quoted as saying that al-Rāfiʿī (d. 623/1226) was "one of the local righteous men *(al-ṣāliḥīn al-mutamakkinīn),* who had many *karāmāt.*"[99]

The Collection and Edition of Ibn Taymīyah's Works: Concerns of a Disciple

In the world of medieval Islam generally, and particularly in the Mamluk period with which we are concerned here, the transmission of knowledge was closely connected to the willingness and ability of a scholar's pupils to transmit his writings. This implies the existence of a circle of students and their engagement in activities of copying, abridging, and commenting on a scholar's work. In itself, this constituted a mark of recognition and affiliation.

In a book devoted to the formation of the four Sunni schools of law *(madhāhib)* in the ninth and tenth centuries, Christopher Melchert has significantly highlighted the pivotal moment of this process as the point when the students of the four imams started recognizing their doctrines, collecting and editing them, and then teaching them. The subsequent formal inclusion of the schools' adherents in collections of biographies organized according to school affiliation substantially contributed to the formalization of the schools, as did the development of a system of qualification for the transmission of knowledge in teaching institutions.[1] Although this discourse concerns the end of the formative period of Islam (ninth and tenth centuries A.D.), which is not the one involved in this article (first half of the fourteenth century A.D.), some of these observations can serve as theoretical focal points for the case presented in this contribution. Additionally, Michael Chamberlain has written a fascinating and rich book on the social dynamics that affected the production and reproduction of knowledge in medieval Damascus (1190–1350).[2] His arguments on the importance of personal affiliation and mechanisms of loyalty form the general framework of this article.

Despite the attention that the renowned Hanbali jurist and theologian Ibn Taymīyah (d. 728/1328) has attracted in recent years, Ibn Taymīyah's journey to modernity remains a fascinating and relatively unexplored subject of research. This article tackles the earliest stage of the long and complex process of the transmission of Ibn Taymīyah's works after his death. It will also bring to light

[1] All these issues are synthesized and critically presented by Christopher Melchert, "The Formation of the Sunni Schools of Law," in *The Formation of Islamic Law,* ed. Wael B. Hallaq (Aldershot, 2004), 351–66, and see the bibliography therein; idem, *The Formation of the Sunni Schools of Law, 9th–10th Centuries C.E.* (Leiden, 1997).

[2] Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (Cambridge, 1994).

some issues regarding the status of Ibn Taymīyah that have been discussed in greater detail elsewhere.[3]

A number of factors could affect the survival, transmission, and eventual circulation and success of somebody's corpus of knowledge in the Mamluk period. Among these, one can cite the position that a scholar enjoyed among the influential people who promoted a culture of patronage in important teaching institutions. Patronage of urban works and scholarly enterprise was indeed an important cultural and political feature of Mamluk society, as a good deal of modern scholarship devoted to this topic shows.[4] Another non-negligible aspect concerns the popularity of the ideas and practices endorsed by a given scholar, as well as the ability of his scholarship to offer appropriate responses to the religious and social demands of his time. The dynamics that the circulation of somebody's ideas created in the political, social, and religious arena in which he was located, and the consequent need to respond to his doctrines, should also be taken into account. This latter factor may be relevant when dealing with some of the controversial doctrines of Ibn Taymīyah. However, a thorough analysis of scholarly reactions to Taymīyan doctrines has yet to be carried out.[5]

As for the first two factors, I am of the opinion that neither played a relevant role in the transmission and dissemination of Ibn Taymīyah's scholarship. As far as patronage is concerned, the common idea that Ibn Taymīyah was at odds with the Mamluk authorities needs to be revisited.[6] Nevertheless, his closeness

---

[3] Caterina Bori, "Ibn Taymiyya *wa-jamāʿatu-hu*: Authority, Conflict and Consensus in Ibn Taymiyya's Circle," in *Ibn Taymiyya and His Times,* ed. Shahab Aḥmad and Yossef Rapoport (Karachi, forthcoming), 23–52.

[4] For Mamluk patronage in teaching institutions and scholarly life, see Jonathan Berkey, *The Transmission of Knowledge in Medieval Cairo*: *A Social History of Islamic Education* (Princeton, 1992), 95–127, esp. 96–107; Mohammad Awad, "Sultan al-Ghawri: His Place in Literature and Learning (Three Books Written under His Patronage)," in *Actes du XXe congrès international des orientalistes, Bruxelles, 5–10 September 1938* (Louvain, 1940), 321–22; Carl F. Petry, "A Paradox of Patronage during the Later Mamluk Period," *The Muslim World* 73 (1983): 182–207; idem, "Scholastic Stasis in Medieval Islam Reconsidered: Mamluk Patronage in Cairo," *Poetics Today* 14 (1993): 323–48; Anne F. Broadbridge, "Academic Rivalry and the Patronage System in Fifteenth-Century Egypt: Al-ʿAynī, al-Maqrīzī, and Ibn Ḥajar al-ʿAsqalānī," *Mamlūk Studies Review* 3 (1999): 85–107.

[5] The most notorious group of texts produced in refutation of some of Ibn Taymīyah's doctrines is that by Taqī al-Dīn al-Subkī (d. 756/1355), *Al-Rasāʾil al-Subkīyah fī al-Radd ʿalá Ibn Taymīyah wa-Tilmīdhihi Ibn Qayyim al-Jawzīyah,* ed. Kamāl Abū al-Mūná (Beirut, 1983). An analysis of polemical reactions to Ibn Taymīyah in the first half of the fourteenth century can be found in Caterina Bori, *Ibn Taymiyya: una vita esemplare*: *analisi delle fonti classiche della sua biografia,* Supplemento monografico n. 1 alla *Rivista degli Studi Orientali* 76 (Pisa, 2003), 141–70.

[6] The idea of conflict between the Mamluk authorities and Ibn Taymīyah is upheld, for instance, in an influential article by Donald P. Little, "The Historical and Historiographical Significance of the Detention of Ibn Taymiyya," *International Journal of Middle East Studies* 4, no. 3 (1973):

311–27. Biographical sources and chronicles report plenty of evidence regarding the relationship between Ibn Taymīyah and the Mamluk authorities. For instance, Ibn Taymīyah seems to have been on good terms with the amir Sayf al-Dīn Jāghān, the finance agent *(mushidd al-dawāwīn)* in Damascus between 697 and 702/1297 and 1303 and occasionally deputy of the viceroy (Ibn ʿAbd al-Hādī [d. 744/1343], *Al-ʿUqūd al-Durrīyah min Manāqib Shaykh al-Islām Ibn Taymīyah,* ed. Muḥammad al-Ṭayyib Ḥāmid al-Fiqī [Cairo, 1938], 198–99). He had good relations with the governor of Damascus Jamāl al-Dīn al-Afram (d. ca. 720/1320–21) as well. Ibn Kathīr reports that he had accompanied al-Afram on one of the campaigns against the Shiʿi populations of Kasrawān in 699/1300 (Ibn Kathīr [d. 774/1373], *Al-Bidāyah wa-al-Nihāyah fī al-Tārīkh,* ed. Fuʾād ʿAlī al-Kurdī [Cairo, 1932–39], 14:12, ll. 12–20). In the year 700/1300 the viceroy and the amirs of Damascus are described as asking Ibn Taymīyah to go to Egypt to exhort the sultan to send his troops against the Tatars (Ibn Kathīr, *Bidāyah,* 14:15, ll. 15–20). According to Ibn Kathīr's version, in Cairo Ibn Taymīyah met with the sultan, the vizier, and the notables who consented to come to Syria (Ibn Kathīr, *Bidāyah,* 14: 6, ll. 11–13). Ibn Taymīyah's interventions regarding both the Mongol authorities and the Egyptian administration are recorded by several chronicles (al-Birzālī [d. 739/1339], *Al-Muqtafá,* in *Al-Jāmiʿ li-Sīrat Shaykh al-Islām Ibn Taymīyah (661–728) khilāl Sabʿat Qurūn,* ed. Muḥammad ʿUzayr Shams and ʿAlī ʿImrān [Mecca, 1420 H], 149–50; Ibn Kathīr, *Bidāyah,* 14:8 and 14; al-Yūnīnī [d. 726/1326], *Early Mamluk Syrian Historiography: Al-Yūnīnī's Dhayl Mirʾāt al-Zamān,* ed. and trans. Li Guo [Leiden, 1998], 2:108–9, 119, 123–24; Ibn Dawādārī [d. ca. 736/1335], *Kanz al-Durar wa-Jāmiʿ al-Ghurar,* ed. Hans Robert Roemer [Cairo, 1960], 9:32–33, 36; Karl Vilhelm Zetterstéen, ed., *Beiträge zur Geschichte der Mamlukensultane in den Jahren 690–741 der Higra nach arabischen Handschriften* [Leiden, 1919], 69–70, 76–79; al-Nuwayrī [d. 733/1333], *Nihāyat al-Arab fī Funūn al-Adab,* ed. al-Bāz al-ʿArīnī [Cairo, 1992], 31:395). It is hard to believe that he acted only privately. According to al-ʿUmarī (d. 749/1349), al-Afram was not willing to let Ibn Taymīyah go to Egypt when summoned there in 705/1306 (al-ʿUmarī, *Masālik al-Abṣār fī Mamālik al-Amṣār,* in *Al-Jāmiʿ li-Sīrat Shaykh al-Islām Ibn Taymīyah,* 260: "*fa-manaʿa nāʾib al-shām . . .*"). The sultan Qalāwūn (d. 741/1341), after regaining power in 709/1310, asked Ibn Taymīyah to avenge his enemies with a fatwa, but the shaykh refused (Ibn ʿAbd al-Hādī, *ʿUqūd,* 282–83). In the same year Ibn Taymīyah persuaded the sultan to maintain the status of *dhimmīs* as instituted by Baybars al-Jashnikīr (Ibn ʿAbd al-Hādī, *ʿUqūd,* 281). In 711/1311–12 Ibn Taymīyah is reported to have advised Qalāwūn to appoint al-Afram to the vice-regency of Tripoli (Ibn Kathīr, *Bidāyah,* 14:60–61: "*intaqala al-Afram ilá niyābat Ṭarābulus bi-ishārat Ibn Taymīyah ʿalá al-sulṭān bi-dhālika*"). In the same year he went back to Damascus in the company of the sultan and the army (Ibn Kathīr, *Bidāyah,* 14:67, ll. 7–10), where he is reported to have aroused the envy of some of his fellow scholars "*li-taqaddumihi ʿinda al-dawlah*" (Ibn Kathīr, *Bidāyah,* 14:37, l. 7). Ibn Taymīyah himself declares his allegiance to the Mamluk regime in various instances: "There is no enmity or hatred between me and anybody in Egypt. I never stopped loving them (the Mamluks) and considering them as friends: their amirs, their scholars and judges" (Ibn Taymīyah, *Majmūʿ Fatāwá Shaykh al-Islām Aḥmad ibn Taymīyah,* ed. ʿAbd al-Raḥmān ibn Muḥammad ibn Qāsim al-Najdī al-Ḥanbalī [Rabat, 1981], 3:259, ll. 5–7; see also 3:216, ll. 7–8). The very composition of his political treatise *Al-Siyāsah al-Sharʿīyah* is usually associated with Ibn Taymīyah's close connection with the sultan Qalāwūn (see Caterina Bori, "Thélogie politique et Islam, à propos d'Ibn Taymiyya [d. 728/1328] et du sultanat mamelouk," *Revue de l'Histoire des Religions* 224, no.1 (2007): 10, n. 13, for all the references regarding the composition of the *Siyāsah* according to Henri Laoust. See also Ibn Taymīyah, *Les intermédiares entre Dieu et l'homme* [*Risâlat al-wâsita bayna l-khalq wa l-haqq*], *suivi de Le Shaykh de l'Islam Ibn Taymiyya: Chronique d'une vie de thélogien militant,* ed. Yahya

to some prominent men of the military elite does not imply any kind of direct patronage either from the Mamluk authorities themselves or from other powerful scholars of his time. This does not mean that he was beyond the dynamics of competition that characterized the scholarly life of his time. On a few instances he is reported as actively taking part in the struggles for control of stipendiary posts *(manāṣib)*.[7] Even so, generally speaking Ibn Taymīyah's teaching activities took place in peripheral institutions.[8] While some aspects of his scholarship and personal activism seem to have been appreciated—I am thinking mainly of both his physical and intellectual engagement in activities of jihad—nevertheless, many other aspects of his doctrines remained minority views.[9] I am referring to his unpopular positions on divorce oaths and triple divorce *(al-ḥilf bi-al-ṭalāq* and *al-ṭalāq al-thalāth)* and the visitation to tombs of pious men *(ziyārat al-qubūr)* in particular, but also to his open criticism of Sufi ideas and practices.[10]

Michot [Paris, 1996], 22). The letters that Ibn Taymīyah wrote to the sultan to support the war against the Mongols or to promote the Islamization of the Jabal Kasrawān populations also point in the same direction (see Ibn ʿAbd al-Hādī, *ʿUqūd,* 182–94, and Ibn Taymīyah, *Risālah ilá al-Sulṭān al-Malik al-Nāṣir fī Shaʾn al-Tatār,* ed. Ṣalāḥ al-Dīn al-Munajjid [Beirut, 1976]). It was the *fitnah* which broke out in Damascus in 718/1318 regarding divorce oaths that caused Ibn Taymīyah to lose the support of both the sultan and the governor of Damascus, Tankiz (d. 740/1339). In fact, as demonstrated by Yossef Rapoport, the position of Ibn Taymīyah on divorce oaths did not only challenge well-established social practices and issues of patriarchal authority, but also the sphere of public life. See Yossef Rapoport, *Marriage, Money and Divorce in Medieval Islamic Society* (Cambridge, 2005), esp. 89–110; and idem, "Ibn Taymiyya on Divorce Oaths," in *The Mamluks in Egyptian Syrian and Society,* ed. Michael Winter and Amalia Levanoni (Leiden, 2004), 191–217.

[7] See the reports about the deliberations (and subsequent strife) over the allocation of positions that took place at the death of the shaykh al-Fāriqī (d. 703/1304) (see Ibn Kathīr, *Bidāyah,* 14:28, and al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab,* ed. Fahīm Muḥammad ʿUlwī Shaltūt [Cairo, 1998], 32:79–80) and at the death of the shaykh Kamāl al-Dīn al-Sharīsī (d. 718/1318) (see al-Dhahabī, *Thalāth Tarājim Nafīsah lil-Aʾimmah al-Aʿlām: Shaykh al-Islām Ibn Taymīyah, al-Ḥāfiẓ ʿAlam al-Dīn al-Birzālī, al-Ḥāfiẓ Jamāl al-Dīn al-Mizzī: Min Kitāb Dhayl Tārīkh al-Islām,* ed. Muḥammad ibn Nāṣir al-ʿAjmī [Kuwait, 1995], 56).

[8] See Bori, "Ibn Taymiyya *wa-jamāʿatu-hu,*" 31–32.

[9] Ibn Taymīyah's intervention during the Mongol invasions of Syria has been an important factor in the construction of his image as a paradigm of activism to this very day. The bio-hagiographical literature has doubtless exploited Ibn Taymīyah's activism in jihad as an undisputable point in his favor (see for instance al-Bazzār, *Al-Aʿlām al-ʿAlīyah fī Manāqib Shaykh al-Islām Ibn Taymīyah,* ed. Ṣalāḥ al-Dīn al-Munajjid [Beirut, 1976], 63–65; al-ʿUmarī, *Masālik,* 253–54, 258–59; Ibn ʿAbd al-Hādī, *ʿUqūd,* 177–80; al-Marʿī ibn Yūsuf al-Karmī [d. 1033/1623–24], *Al-Kawākib al-Durrīyah fī Manāqib al-Mujtahid Ibn Taymīyah,* ed. Najm ʿAbd al-Raḥmān Khalaf [Beirut, 1986], 93–94). On jihad against the Mongols, now see Denise Aigle, "The Mongol Invasion of Bilād al-Shām by Ghāzān Khān and Ibn Taymīyah's Three 'Anti-Mongol' Fatwas," *Mamlūk Studies Review* 11, no. 2 (2007): 89–120.

[10] On the *ṭalāq* controversy, see—as quoted above—Yossef Rapoport, *Marriage, Money and Divorce;*

With this in mind, the role of his circle of pupils must have been crucial in the process of transmission of his work. The massive 37-volume fatwa collection of Ibn Taymīyah, the many printed books of his writings available on the market today, and the large number of manuscripts lying scattered in libraries all over the world encourage one to imagine a steady, ongoing, and successful transmission throughout the centuries.[11] Contrary to these expectations, this article will show that just after Ibn Taymīyah's death, the issue of the collection and transmission of his *muʾallafāt* (writings) was a rather troublesome matter for one scholar in particular.

A Disciple's Practical Concerns

An impressive amount of biographical material on Ibn Taymīyah has survived. No other contemporary scholar was the subject of such a large number of biographical writings. Among these, two monographs written shortly after his death stand out, together with a third, later one, which does not impress the reader with its originality—in fact, it draws heavily on previous materials.[12] A series of biographical entries in collective dictionaries or obituaries in chronicles adds to

idem, "Ibn Taymiyya on Divorce Oaths"; and Abdul Hakim I. Al-Matroudi, *The Ḥanbalī School of Law and Ibn Taymiyyah: Conflict or Conciliation* (London and New York, 2006), 171–85. For Ibn Taymīyah's criticism of Sufi ideas and popular practices, see Jon Hoover, *Ibn Taymiyya's Theodicy of Perpetual Optimism* (Leiden, 2007), 108–14; Josef W. Meri, *The Cult of Saints among Muslims and Jews in Medieval Syria* (Oxford, 2002), 126–38, esp. 130–34; Alexander D. Knysh, *Ibn ʿArabī in the Later Islamic Tradition: The Making of a Polemical Image in Medieval Islam* (Albany, 1999), 87–111; Christopher S. Taylor, *In the Vicinity of the Righteous: Ziyāra and the Veneration of Muslim Saints in Late Medieval Egypt* (Leiden, 1999), 168–218; Thomas E. Homerin, "Ibn Taymiyya's *al-Ṣūfiyya wa-al-fuqarāʾ*," *Arabica* 32 (1985): 219–44; idem, "Sufis and their Detractors in Mamluk Egypt: a Survey of Protagonists and Institutional Settings," in *Islamic Mysticism Contested*: *Thirteen Centuries of Controversies and Polemics,* ed. Frederick De Jong and Bernd Radtke (Leiden, 1999), 225–45, esp. 231–35; Niels H. Olesen, *Culte des saints et pèlerinages chez Ibn Taymiyya (661/1263–728/1328)* (Paris, 1991); Thomas F. Michel, *A Muslim Theologian's Response to Christianity*: *Ibn Taymiyya's* al-Jawāb al-Saḥīḥ (Delmar, NY, 1984), 5–14 and 24–39; Paul Nwyia, "Une cible d'Ibn Taymîya: Le moniste al-Timlisânî (m. 690/1291)," *Bulletin d'Etudes Orientales* 30 (1978): 127–45; Muhammad Umar Memon, *Ibn Taimīya's Struggle against Popular Religion* (The Hague, 1976).

[11] However, it should be noted that some of Ibn Taymīyah's most voluminous works are not included in the Saudi collection of his *fatāwá*. See, among others, Ibn Taymīyah, *Darʾ Taʿāruḍ al-Naql wa-al-ʿAql,* ed. Muḥammad Rashād Sālim, 11 vols. (Riyadh, 1981–83); and idem, *Minhāj al-Sunnah al-Nabawīyah fī Naqd Kalām al-Shīʿah al-Qadarīyah*, ed. Muḥammad Rashād Sālim, 9 vols. (Riyadh, 1986).

[12] Ibn ʿAbd al-Hādī, *ʿUqūd*. See also the new edition from a different manuscript, *Kitāb al-Intiṣār fī Dhikr Aḥwāl Qāmiʿ al-Mubtadiʿīn wa-Ākhir al-Mujtahidīn Taqī al-Dīn Abī al-ʿAbbās Aḥmad Ibn Taymīyah,* ed. Muḥammad al-Sayyid al-Jalaynad (Cairo, 2003). Al-Bazzār, *Al-Aʿlām al-ʿAlīyah;* al-Marʿī ibn Yūsuf al-Karmī, *Al-Kawākib al-Durrīyah.*

this bulk of texts.[13] To my knowledge, no other fourteenth-century scholar was inundated by such a cascade of bio-hagiographical attention, let alone the single-subject volumes composed for him in the style of *manāqib* (usually monographic biographical works of a laudatory nature). For instance, although the powerful Shafiʿi chief qadi Taqī al-Dīn al-Subkī (d. 756/1355) received an impressively long and wordy *tarjamah* (biographical notice) composed by his son Tāj al-Dīn (d. 771/1369) that was inserted in his monumental *Al-Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* no monographs were penned to enhance his personal and scholarly status.[14] Sultans did enjoy the privilege of being subjects of *sīrah*s, but this is a matter of an altogether different nature.[15]

Luckily, many epistles of Ibn Taymīyah to his family and companions have withstood the ravages of time, as have some letters written by members of his close circle of students and supporters. These materials do not usually share the language and purpose of the bio-hagiographical tradition, but they can still be considered biographical materials.[16] Some of them display an interesting personal flavor mixed with doctrinal issues that help contextualize and further our understanding of the vicissitudes of the *shaykh al-islām* and the cultural and political milieu of which he was a part. Among these letters is that of Ibn Murrī al-Ḥanbalī, to which I shall now turn my attention.

Ibn Murrī was a Hanbali scholar from Baʿlbak. This background in itself did not necessarily entail his being a follower of Ibn Taymīyah, but he indeed was. His name comes up in the sources in connection with some disturbances that

[13] For a critical survey of Ibn Taymīyah's biographical tradition, see Hasan Qasim Murad, "Miḥan of Ibn Taymiyya: A Narrative Account based on a Comparative Analysis of the Sources" (M.A. thesis, McGill University, 1968), 1–73; and Bori, *Ibn Taymiyya: una vita esemplare,* 29–59, 177–81. Al-ʿUlaymī (d. 927/1520–21), *Al-Manhaj al-Aḥmad fī Tarājim Aṣḥāb al-Imām Aḥmad,* ed. ʿAbd al-Qādir al-Arnāʿūt et al. (Beirut, 1997), 5:24–44, should be added to the list of sources examined in the latter reference. I should like to thank Christopher Melchert for letting me have a copy of the text.

[14] Tāj al-Dīn al-Subkī, *Al-Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* ed. Maḥmūd Muḥammad al-Ṭanāhī and ʿAbd al-Fattāḥ Muḥammad al-Ḥilw (Cairo, 1964–76), 10:139–340.

[15] See for instance Shams al-Dīn Muḥammad ibn Muḥammad Ibn Nāhiḍ (d. 841/1438), "Ibn Nāhiḍ's *as-Sīra aš-Šaykhiya* (Eine Lebensgeschichte des Sultans al-Muʾayyad Šaykh): Ein Beitrag zur Sīra-Literatur," ed. Rudolf Veselý, *Archìv Orientálnì* 67, no. 2 (1999): 149–220; Muḥyī al-Dīn Ibn ʿAbd al-Ẓāhir (d. 692/1292), *Al-Rawḍ al-Ẓāhir fī Sīrat al-Malik al-Ẓāhir,* ed. ʿAbd al-ʿAzīz al-Khuwayṭir (Riyadh, 1976). Paulina B. Lewicka, *Šāfiʿ ibn ʿAlī's Biography of the Mamluk Sultan Qalāwūn* (Warsaw, 2000), contains a critical edition of a biography of the sultan Qalāwūn (d. 689/1290) entitled *Al-Faḍl al-Maʾthūr min Sīrat al-Sulṭān al-Malik al-Manṣūr.*

[16] See Ibn ʿAbd al-Hādī, *ʿUqūd,* 257–59, 259–67, 272–77, 284–85, 291–321; Ibn Taymīyah, *Majmūʿ Fatāwá,* 3:202–10, 211–47, 249–77; 28:30–46, 47–48, 48–50, 50–57, 57–59. Some of the letters in *Majmūʿ Fatāwá* coincide with those in *ʿUqūd.* This list does not include the letters sent to the sultan Qalāwūn, which display, all in all, a different type of discourse.

took place in the year 725/1324–25 in Cairo, where he was tried and punished by the Maliki judge al-Ikhnāʾī (d. 732/1331–32) for preaching in support of Ibn Taymīyah's ideas on asking for the Prophet's aid and intercession *(al-istighāthah wa-al-tawassul)*. The affair concluded in his expulsion from Cairo together with his family.[17]

Ibn Murrī is the author of a *risālah* to Ibn Taymīyah's pupils. The letter was written shortly after the shaykh's death,[18] and it has the clear purpose of encouraging Ibn Taymīyah's students to engage in the collection and edition of their master's works. Ibn Murrī's concern regards the state of Ibn Taymīyah's *muʾallafāt*—which, he laments, are scattered, disordered, and full of lacunae—and their subsequent transmission.

He illustrates this painful situation as follows:

> I urge your sound endeavors to get hold of the notebooks *(karārīs)* of the "Refutation of the Doctrines of the Philosophers" *(Al-Radd ʿalá ʿAqāʾid al-Falāsifah),* as there is not a complete extant copy of this work except mine, which was stored in the northern cabinet *(al-khuristān al-shamālī)* of our shaykh's madrasah.[19] The shaykh Sharaf al-Dīn[20]—may God be compassionate to him—informed me that he had deposited the whole collection in a secure place, but he was loath to help me access these notebooks when he went to Damascus—God is the uniquely powerful. Abū ʿAbd Allāh [ibn Rushayyiq] took the fourth one from me, which is [now] with him,

[17] A biographical note on Ibn Murrī can be found in Ibn Ḥajar, *Durar,* 1:178–79. For an account of his *fitnah,* see al-Jazarī (d. 739/1338–39), *Tārīkh Ḥawādith al-Zamān wa-Anbāʾihi wa-Wafayāt al-Akābir wa-al-Aʿyān min Abnāʾihi al-Maʿrūf bi-Tārīkh Ibn al-Jazarī,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut, 1998), 2:61–62. Ibn Kathīr, *Bidāyah,* 14:117; al-Maqrīzī (d. 845/1441), *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk,* ed. Muḥammad Musṭafá Ziyādah (Cairo, 1971), 2:1:263; Hasan Qasim Murad, "Ibn Taymiyya on Trial: A Narrative Account of his Mihan," *Islamic Studies* 18 (1979): 24–25; and idem, "Miḥan of Ibn Taymiyya: A Narrative Account based on a Comparative Analysis of the Sources," 110–11. Joseph H. Escovitz, *The Office of Qāḍī al-Quḍāt in Cairo under the Baḥrī Mamlūks* (Berlin, 1984), 141–43.

[18] Ibn Murrī, *Risālah,* in *Al-Jāmiʿ li-Sīrat Shaykh al-Islām Ibn Taymīyah,* 97–104. One of the people mentioned in the letter as most suitable to revise and edit Ibn Taymīyah's work is the qadi Sharaf al-Dīn who died in 731. One may therefore assume that the letter was written between 728 and 731. Ibid., 100.

[19] Perhaps *al-madrasah al-ḥanbalīyah* where he last taught. For the history of the madrasah, see al-Nuʿaymī (d. 927/1521), *Al-Dāris fī Tārīkh al-Madāris,* ed. Ibrāhīm Shams al-Dīn (Beirut, 1990), 2:50–62. For Ibn Taymīyah's teaching career there, see ibid., 57–58.

[20] It is unclear who the person in question is. Perhaps it is Ibn Taymīyah's brother, Sharaf al-Dīn, who died in 727/1326–27, i.e., before Taqī al-Dīn. Alternatively, perhaps it is the judge Sharaf al-Dīn mentioned below.

> while the original copy written by the shaykh is in a state of severe disarray *(fī al-qaṭʿ al-kabīr);* that one was also here [with me]. Less than one page remains of the other two copies. So let all this reach Abū ʿAbd Allāh that he may complete the copy until he says: "This is a chapter and that is a chapter. God knows best what is right."[21]

On the one hand, and as underscored elsewhere, this source demonstrates Ibn Murrī's close and active affiliation with Ibn Taymīyah. On the other hand, and more significantly for the purposes of this paper, it brings to light the issue of the written transmission of Ibn Taymīyah's works. In this regard, Ibn Murrī's practical concern is fascinating in its seemingly down-to-earth character. In fact, in its unusual nature, the *risālah* is an interesting text since it is not primarily concerned (at least apparently) with God's eternal attributes and the great theoretical debates that animated theological and religious scholarship in fourteenth-century Mamluk Egypt and Syria, but with the material survival of his teacher's books, obviously instrumental to the circulation and consolidation of his doctrine. For a number of concrete reasons, the issue was not at all banal.

Firstly, Ibn Taymīyah was renowned for being a very prolific author: "From one day to the next he would write four quires or more of exegesis, jurisprudence, the principles of Islamic religion, and refutation[s] of the philosophers and of the speculative sciences. It is no exaggeration [to say] that up to now his writings have reached five hundred volumes."[22] Al-Dhahabī also mentions "the utmost difficulty and obscurity" of his handwriting.[23] His most renowned biographer, Ibn ʿAbd al-Hādī (d. 744/1343), was well aware of the difficulty of putting together a complete list of Ibn Taymīyah's *muʾallafāt,* and, with due caution, he warns that it is almost an impossible task due to the amount he wrote, the speed with which he wrote, and the fact that he used to write from memory without relying on any written texts *(wa-yaktubu min ḥifẓihi min ghayr naql).*[24] Yet, he promises he will make every effort to compile a comprehensive list. To a certain extent, the dismay of the shaykh's biographer can be understood, for even today it is not easy to acquire a systematic knowledge of the whereabouts of Ibn Taymīyah's

---

[21] Ibn Murrī, *Risālah,* 99.

[22] Al-Dhahabī, *Nubdhah min Sīrat Shaykh al-Islām Taqī al-Dīn Aḥmad ibn Taymīyah,* in Caterina Bori, "A New Source for the Biography of Ibn Taymiyya," *Bulletin of the School of Oriental and African Studies* 67, no. 3 (2004): 321–48, quotation is from p. 341. See also Ibn ʿAbd al-Hādī, *ʿUqūd,* 64–65.

[23] Al-Dhahabī, *Nubdhah,* 340.

[24] Ibn ʿAbd al-Hādī, *ʿUqūd,* 64. One should not forget the hagiographical character of such statements. In this case memory *(ḥifẓ)* is emphasized as a most desirable quality for the good traditionist. As a matter of fact, in one of the letters sent to Damascus from Egypt, Ibn Taymīyah asks for some books to be brought to him; Ibn ʿAbd al-Hādī, *ʿUqūd,* 285.

manuscripts and writings.[25]

Secondly, in the first half of the fourteenth century it is unlikely that any copyists would assure the reproduction and diffusion of somebody's work in exactly the way it was first conceived by its author. Moreover, Ibn Taymīyah did not have a systematic mind. Rather, he was unsystematically explosive both in the quantity and in the quality of his works. Anybody approaching his writings must cope with his digressive and repetitive style, with the immense number of authorities and past scholars he had in mind or to whom he directly refers, and with his polemical language and the targets it implicitly or explicitly strikes.

To this one may add that his mandatory travels and changes of residence (from Damascus to Cairo, from Cairo to Alexandria, from Alexandria back to Cairo, then finally to Damascus), combined with his ongoing intellectual activity, must have contributed to the dispersal. Ibn Murrī mentions several times. Furthermore, when he was imprisoned in 726/1326 in the Citadel of Damascus, his books were taken away and were only recovered after his death by the amir Sayf al-Dīn Quṭlūbughā al-Fakhrī (d. 742/1343). Ibn Taymīyah himself recalls the confiscation episode in two of his letters. He rejoices that his books were taken from the prison (Damascus, 728/1328), for they would be read and understood and his arguments would show the wrong charges of his enemies.[26] It seems that the recovery of Ibn Taymīyah's books was a bone of contention between the amir al-Fakhrī, who held Ibn Taymīyah in great esteem, and Taqī al-Dīn al-Subkī, the major detractor of Ibn Taymīyah. Once he had successfully retrieved them, al-Fakhrī is said to have handed them to over Ibn Qayyim al-Jawzīyah and to Ibn Taymīyah's brother Zayn al-Dīn.[27]

Should we believe al-Bazzār (d. 749/1349) when he highlights the shaykh's great generosity by reporting that he gave his books away to whoever came to visit him and asked for one of them? The anecdotal and hagiographic character of these reports revolves around the idea that Ibn Taymīyah did not stop anybody from accessing religious knowledge, therefore complying with prophetic injunctions.[28] We read of him saying about the confiscation of his books in prison: "I have never

[25]The following catalogs may be of use: *Majmūʿat Muʾallafāt Shaykh al-Islām Ibn Taymīyah al-Makhṭūṭah (al-Aṣlīyah wa-al-Matbūʿah) al-Maḥfūẓah fī al-Maktabah al-Sulaymānīyah bi-Istānbūl,* ed. Muḥammad Ibrāhīm al-Shaybānī, pt. 1 (Kuwait, 1993); *Majmūʿat Muʾallafāt Shaykh al-Islām Ibn Taymīyah al-Makhṭūṭah (al-Aṣlīyah wa-al-Matbūʿah) al-Maḥfūẓah fī Markaz al-Makhṭūṭāt wa-al-Turāth wa-al-Wathāʾiq,* ed. idem, pt. 1 (Kuwait, 1993).

[26] Ibn Taymīyah, *Majmūʿ Fatāwá,* 28:47 and 58.

[27] See Ibn Kathīr, *Bidāyah,* 14:197–98; and Henri Laoust, "Hanbalisme sous les Mamlouks Bahrides (658/784–1260/1382)," *Revue des Etudes Islamiques* 28 (1960): 60.

[28] Meaning not necessarily, or not only, the books he had written, but also the books he possessed. See al-Bazzār, *Al-Aʿlām al-ʿAlīyah,* 65–66.

written anything in order [for it] to be concealed from anybody."[29]

Moreover, we are informed that: "He would write an answer, and if somebody turned up to make a good copy of it, [it would be preserved], otherwise the person who asked for it *(al-sāʾil)* would take his writing and go," or: "Perhaps one of his disciples took it, so it was impossible to get it transcribed, [and furthermore] he did not return it, so it was gone."[30] This report points to the circumstantial nature of Ibn Taymīyah's scholarship, which is attested by the shaykh himself. In various instances, he affirms that he used to write (in matters of belief [*iʿtiqād*]) only at the request of a person that would present him with a query and press him for an answer.[31] The *mustaftī,* the person who demands a legal response *(fatwá),* is here defined as *mustarshid,* seeking (and being in need of) guidance. In this way the ethical value of conveying knowledge is also underlined.

It is the very circumstantial nature of his *fatāwá* (the occasions of their composition are often left unspecified) and the overwhelming quantity of Ibn Taymīyah's production that makes it hard even today to date Ibn Taymīyah's production. Ibn ʿAbd al-Hādī was fully aware of this, as he explains:

> He was asked about something, so he would answer, "I have already written about this but do not remember where it is." So he turned to his disciples and told them, "Return my writing to me and show it to him (i.e., the *mustaftī*) so that it may be transmitted." But because of their own greed to keep it *(fa-min ḥirsihim ʿalayhi),* they would not bring it back, and because of their own inability, they would not transmit it, so his work got lost and its title remained unknown. For this and other reasons it is impossible to enumerate what he wrote and what he composed.[32]

In a somewhat dramatic picture, we are then informed that when Ibn Taymīyah was imprisoned, his followers were dispersed, as were his books *(tafarraqa atbāʿuhu wa-tafarraqa kutubuhu)*. His disciples were afraid of showing his books, so they fled with them, kept them hidden, sold them, and gave them away as gifts; some of their books were even stolen or their existence disavowed.[33] Loyalty turned into shameful behavior, it would seem.

This leads to the most relevant point of my argument: despite Ibn Taymīyah's

[30] Ibn ʿAbd al-Hādī, *ʿUqūd,* 65.

[31] Ibn Taymīyah, *Majmūʿ Fatāwá,* 3:161, 243, 258–59.

[32] Ibn ʿAbd al-Hādī, *ʿUqūd,* 65.

[33] Ibid.

immense popularity, which is stressed by all of his biographical accounts, there seems to be a very limited number of people Ibn Murrī envisages as capable transmitters of the shaykh's thought and doctrines. He remarks, "There will be no substitute for any of the most important brothers once they have gone, after him" *(wa-kull man dhahaba baʿdahu min akābir al-ikhwān mā ʿanhu ʿiwaḍ)*.[34] What is more, and worse, Ibn Murrī seems to question the willingness of the shaykh's pupils to engage fully in this crucial activity. Hence, he composed the *risālah*.

In sum, the situation was dire enough to cause Ibn Murrī substantial worry. As a remedy, Ibn Murrī proposes to his addressees a communal editorial undertaking. Ibn Taymīyah's writings should be gathered and handed over to Ibn Rushayyiq (d. 749/1348), whom he considers the most competent and expert of the group, for "he is the one of the *jamāʿah* who best knows the possible locations of the individual benefits which have been cut off from their original source" *(huwa akhbar al-jamāʿah bi-maẓānn al-maṣāliḥ al-mufradah allātī qad inqaṭaʿa māddatuhā)*.[35] His efforts should next be checked by the best of the group *(jamāʿah)*, or collated with the original copy. A further revision should then be carried out by the traditionist al-Mizzī (d. 742/1341–42), the most trustworthy of them,[36] and then by Ibn Qayyim (d. 750/1351)[37] and the judge Sharaf al-Dīn,[38] who are the most proficient in the rational method *(al-manāhij al-ʿaqlīyah)* and theological research *(al-mabāḥith al-uṣūlīyah)*. A sound transmission will thus be guaranteed.[39]

The real protagonist of this procedure is the above-mentioned Ibn Rushayyiq, who emerges as the new face of this group of scholars. An attentive reading of the sources indicates that Ibn Rushayyiq, a Maliki, was a faithful disciple of Ibn Taymīyah, as well as the one who was most dedicated to the collection and edition of his works. Ibn Kathīr (d. 774/1373) and Ibn ʿAbd al-Hādī confirm Ibn Murrī's

[34] Ibn Murrī, *Risālah,* 100.

[35] Ibid. By *al-maṣāliḥ al-mufradah,* the author means any single-topic work (such as a *risālah* or a fatwa), or even a passage, paragraph, or sentence from such a work, which is beneficial for the *jamāʿah* or to readers in general. The meaning of this phrase, as well as the phrase *qad inqaṭaʿa māddatuhā,* is clarified in an earlier passage of Ibn Murrī's *risālah,* when he laments the loss of many of Ibn Taymīyah's works or parts of them: "We ask God for assistance in the recovery of these splendid benefits after their dispersal" *(. . . jamʿ shaml hādhihi al-maṣāliḥ al-jalīlah baʿda shatātihā)*. In his opinion, Ibn Rushayyiq is the only one capable of recovering these works or restoring the fragments to their original source material *(māddah)*. My gratitude goes to Livnat Holtzman for her help with this passage.

[39] Ibn Murrī, *Risālah,* 100.

view.[40] For instance, it is reported that a small part of what the *shaykh al-islām* wrote during his last incarceration relating to Quranic exegesis was sent by him to Ibn Rushayyiq, whereas the rest remained with the judges. Then, according to Ibn Rushayyiq, "The shaykh died and his works are still with them, approximately fourteen bundles *(rizmah)*."[41] Ibn Murrī encourages his "brothers" (as he calls them) to support, help, and protect Ibn Rushayyiq, for "he has truly remained peerless in this skill *(li-annahu qad baqiya fī fannihi farīdan)* and no one of the *jamāʿah* can ever, in any way, replace him . . . so write down the works that he has with him and let him write what you have with you."[42]

On the basis of Ibn Murrī's letter combined with other evidence, the editors of the large collection of biographical materials on Ibn Taymīyah, Muḥammad ʿUzayr Shams and ʿAlī ʿImrān, believe that the list of Ibn Taymīyah's writings usually attributed to Ibn Qayyim and published by Ṣalāḥ al-Dīn al-Munajjid in 1953 should instead be attributed to Ibn Rushayyiq.[43] The point is well taken, but the issue is still open to further research. In any case, the letter brings to light somebody who was hardly known from previous studies, and it also offers a starting point for reflection over Ibn Qayyim's long-assumed role in the reception and transmission of his master's work.

What is at stake is quite clear: a sound and attentive transmission of Ibn Taymīyah's doctrines is obviously vital to the survival of his thought and of his understanding of Islam: "As the shaykh benefited from the scholarship *(kalām)* of the previous imams, similarly who comes after him will benefit from his scholarship. So, follow the divine command and engage in the collection of everything you can of the different types of his voluminous writings *(al-muʾallafāt al-kibār),* of the scattered pieces of his small questions, of the copies of his dispersed fatwas, and

[40] Ibn Kathīr, *Bidāyah,* 14:229; Ibn ʿAbd al-Hādī, *ʿUqūd,* 27.

[41] Ibn ʿAbd al-Hādī, *ʿUqūd,* 28.

[42] Ibn Murrī, *Risālah,* 98.

[43] Shams and ʿImrān, *Al-Jāmiʿ li-Sīrat Shaykh al-Islām Ibn Taymīyah,* 8–13, 98 n. 1, and 220ff. Ibn Qayyim al-Jawzīyah, *Asmāʾ Muʾallafāt Ibn Taymīyah,* ed. Ṣalāḥ al-Dīn al-Munajjid (Damascus, 1953). Their argument is based on various observations: (1) a confusion created by the fact that the two authors (Ibn Rushayyiq and Ibn Qayyim) share the same *kunyah* (Abū ʿAbd Allāh); (2) that Ibn ʿAbd al-Hādī and Ibn Kathīr make statements about Ibn Rushayyiq's engagement in the writing down of Ibn Taymīyah's works; (3) that Ibn ʿAbd al-Hādī reports some parts of Ibn Rushayyiq's list of the shaykh's works (4) on the basis of Ibn Murrī's *Risālah.* As for point 3, it needs to be noted that Ibn ʿAbd al-Hādī does not report the *Risālah* of Ibn Rushayyiq, but only some titles of Ibn Taymīyah's works on the authority of Ibn Rushayyiq. Ibn ʿAbd al-Hādī reports the opening of a work called *Kitāb Tanbīh al-Rajul al-ʿĀqil ʿalá Tamwīh al-Jadal al-Bāṭil* (pp. 29–35), followed by a list of the shaykh's *muʾallafāt* which, however, is not attributed to Ibn Rushayyiq (pp. 35–67). See also Hoover, *Ibn Taymiyya's Theodicy of Perpetual Optimism,* 6, n. 14.

of the rest of his scholarship that has already been dictated."[44]

What is less obvious is the reason for Ibn Murrī's anxious concern over this issue. Was the problem simply that Ibn Taymīyah had been overly productive and, unfortunately, rather careless in the compilation of his works? Or was the sense of vacuum left by the death of the *shaykh al-islām* so overwhelming as to produce the urgent appeal of this text? The letter seems to follow shortly after Ibn Taymīyah's death. The passing of time (*al-fawt*) looms heavily in the *risālah* and hints at both the death of the shaykh and the threatened loss of his precious oeuvre unless a collective effort to preserve it is promptly undertaken.[45] But is the death of the shaykh enough to have caused Ibn Murrī's lack of confidence and gloomy state of mind? Or does the letter reflect something else about the status of Ibn Taymīyah (and of his scholarship) among his circle of scholars at the time of his death? I propose that the latter is true, for it seems that a subtext lurks behind the lines of Ibn Murrī's *risālah*.

In Search of Unchallenging Authorities: Ibn Ḥanbal, al-Bukhārī, and Ibn Taymīyah

If Ibn Taymīyah was such a popular scholar and his ideas were so widely known and accepted (except by those who persistently criticized him), what would inspire Ibn Murrī's urgent and insistent call to take action against the loss of his works? If his "circle of pupils" *(jamāʿah)* or his "brothers" *(ikhwān)* (both words are repeatedly used by Ibn Murrī) were the people most faithful to Ibn Taymīyah—those who had attended him, studied with him, shared with him his understanding of Islam (with its active implications) and experienced his grievances and sorrows—why would they need to be so strongly exhorted?

As noted above, Ibn Murrī is not confident about the eagerness of his "brothers" to commit to assuring Ibn Taymīyah's works the survival they deserve. Sorrow and mourning for Ibn Taymīyah's death are simply not enough to preserve his memory and do not do justice to Ibn Taymīyah's efforts. Spreading his knowledge is intended as a fulfilment God's command in a charismatic vision of activism that perfectly matches that of Ibn Taymīyah.[46] At some point, he admonishes them: "Do not behave at present as you have behaved in the past."[47] The allusion is not completely clear here, but it has recently been sufficiently demonstrated that Ibn Taymīyah's theological and legal choices created uneasiness even in his own circle of scholars. Ibn Taymīyah himself seems to be well aware of this when he writes in one of his letters from Egypt to his companions: "Even when someone

[44] Ibn Murrī, *Risālah,* 101.

[45] Ibid., 98, 99, 101.

[46] Ibid., 97, 104.

[47] Ibid., 98.

from the group has remained absent from us, or has come to us only now, his status in our eyes today is [nevertheless] greater, higher, and more honorable than it was before" *(wa-mā ghāba ʿannā aḥad min al-jamāʿah, aw qadima ilaynā al-sāʿah, illā wa-manzilatuhu ʿindanā al-yawm aʿẓam min mā kānat, wa-ajall, wa arfaʿ).*[48] The main idea running through the text is that of forgiveness towards those who have harmed him, be it his enemies or some of the people close to him.[49]

Ibn Murrī provides two authoritative examples from the past by which he presumably intends to motivate his addressees and to corroborate Ibn Taymīyah's stature. The first one is Aḥmad Ibn Ḥanbal (d. 241/855). He mentions Ibn Ḥanbal's dislike of his opinions being recorded. But after his death, writes Ibn Murrī, his disciples *(aṣḥābuhu)* attended to this matter: "They transmitted his knowledge, clarified his objectives, and made his benefits known, so his way *(ṭarīqatuhu)* became victorious and his footsteps were followed."[50] In other words, Ibn Ḥanbal's opinions became the basis for a "school" *(madhhab),* although this is not what he would have liked.[51] Ibn Taymīyah's followers are therefore encouraged to imitate Ibn Ḥanbal's pupils' example, with the difference that Ibn Taymīyah does not seem to have been disturbed by the idea of his doctrines being written down; however, the parallel is evocative. Ibn Murrī then goes on to reassure any sceptics that Ibn Taymīyah's scholarship *(kalām)* will be accepted *(maqbūl)*.

The vicissitudes of the famous traditionist al-Bukhārī (d. 256/870) are then mentioned as somebody who, despite the excellence of his knowledge, was banned (from Nishapur) and died as an outcast *(thumma māta baʿda dhālika gharīban)*. The allusion here is to the charge made against al-Bukhārī late in his life that he held that the uncreatedness of the Quran did not apply to its recitation: "The Quran is the uncreated speech of God, but the deeds of men are created." Or, more explicitly: "Al-Bukhārī . . . was among those who stated, 'my pronunciation of the Quran is created' *(lafẓī al-qurʾān makhlūq)*. For this reason he died in the

[48] See Ibn ʿAbd al-Hādī, *ʿUqūd,* 264; on the previous page Ibn Taymīyah hints at dissent among his own companions concerning him. See Bori, "Ibn Taymiyya *wa-jamāʿatu-hu*" for plenty of other pieces of evidence.

[49] Ibn ʿAbd al-Hādī, *ʿUqūd,* 259–67; also in Ibn Taymīyah, *Majmūʿ Fatāwá,* 28:50–57.

[50] Ibn Murrī, *Risālah,* 101–2: "It is known that, in his life, al-Imām Aḥmad Ibn Ḥanbal prohibited the writing down of his opinions *(kalām)* so that the hearts may keep together on the original great source *(al-māddah al-aṣlīyah al-ʿuẓmá).*" On Ibn Ḥanbal's reluctance about his opinions being written down, see Melchert, *The Formation of the Sunni Schools of Law,* 137, 141, and idem, *Aḥmad ibn Ḥanbal* (Oxford, 2006), 59, 81.

[51] On the formation of the Hanbali *madhhab,* see Melchert, *The Formation of the Sunni Schools of Law,* esp. 137–55; Nimrod Hurvitz, "Schools of Law and Historical Context: Re-examining the Formation of the Ḥanbalī Madhhab," *Islamic Law and Society* 7, no. 1 (2000): 37–64; and idem, *The Formation of Hanbalism: Piety into Power* (London, 2002): 103–12.

sorrow of hostility."[52] Yet, God compensated his misfortunes with success and wide acknowledgment of his works and skills. Great men are destined to meet with obstacles and grief, but it is part of God's plans to turn seeming defeats into victories. It is not difficult to detect here a pattern of prophetic lives in general, and of the Muḥammadan *sīrah* in particular.[53] Towards the conclusion, Ibn Murrī expresses his wish for Ibn Taymīyah's scholarship to enjoy a great share in this authentic heritage *(al-wirāthah al-ṣāliḥah),* referring to the above-mentioned al-Bukhārī.

Here Ibn Taymīyah is firmly placed in the most honored traditionist scholarly experience. In so doing, Ibn Murrī prepares the ground for the exposition of Ibn Taymīyah's rational theological method. He used correct tradition *(al-naql al-ṣaḥīḥ)* as the foundation for each of his scholarly statements, and then corroborated them by sound reasoning *(bi-al-ʿaqlīyāt al-ṣaḥīḥah)*. Ibn Taymīyah's ultimate goal, states Ibn Murrī, was to demonstrate the lack of contradiction between the two kinds of proofs while connecting his views back to the *salaf* (the early generation of pious Muslims).[54] In a letter written from Egypt in the month of Ramaḍān 706/1307 to an unspecified addressee, Ibn Taymīyah uses similar language when he refers to the lack of argument produced by his enemies against him:

> If they want to refute [my beliefs] with whatever they will of the rational and traditional arguments *(min ḥujaj ʿaqlīyah wa-samʿīyah),* I will answer them to all of it and I will explain by clear exposition—understandable both to the elite and the commoners—that my words are in agreement with what reason and constitutional nature have made necessary *(li-ḍarūrat al-ʿaql wa-al-fiṭrah)* and that they are in agreement with the Book, the Sunnah, and the Consensus of the Pious Ancestors of the community, and that the person who contradicts all this opposes clear reason and correct tradition *(sarīḥ al-maʿqūl wa-ṣaḥīḥ al-manqūl)*.[55]

[52] See al-Khaṭīb al-Baghdādī (d. 463/1071), *Tārīkh Baghdād aw Madīnat al-Salām* (Cairo, 1931), 2:4–34, esp. 30–33; al-Subkī, *Al-Ṭabaqāt al-Shāfiʿīyah,* 2:212–41, esp. 228–30, and 218–20 (quotations are from pp. 228, ll. 9–10, and 229, ll. 16–17); Ibn Ḥajar al-ʿAsqalānī (d. 852/1449), *Tahdhīb al-Tahdhīb* (Hyderabad, 1907–9), 9:47–55, esp. 53–55, and 2:361–62.

[53] For instance, on the theme of Muḥammad's persecution, see Uri Rubin, *The Eye of the Beholder: The Life of the Prophet as viewed by the early Muslims: A Textual Analysis* (Princeton, 1995), 127–66.

[54] Ibn Murrī, *Risālah,* 103. For a competent exposition of his method, see now Hoover, *Ibn Taymiyya's Theodicy of Perpetual Optimism,* 19–69; Shahab Ahmed, "Ibn Taymiyya and the Satanic Verses," *Studia Islamica* 87 (1998): 67–124, esp. 112.

[55] Ibn Taymīyah, *Majmūʿ Fatāwá,* 3:246, ll. 6–9. The letter is dated by Yahya Michot between Shawwāl and the beginning of Dhū al-Ḥijjah 706 (April–beginning of June 1307); see Yahya Michot, "Textes Spirituels d'Ibn Taymiyya IX: *«Moi, je ne vous ai pas demandé de me faire sortir*

A number of important recent studies have highlighted Ibn Taymīyah's combination of philosophical and traditionist discourses, which led him to support his literalist views with a selective and highly original application of rational argumentation.[56] Accordingly, the long-established image of Ibn Taymīyah as an uncompromising anti-rationalist is now undergoing a process of serious revision. Ibn Murrī was aware of the novelty that Ibn Taymīyah's views represented in the fourteenth-century Syrian and Egyptian traditionist milieu, and he therefore had to convince his addressees that, despite his trials and tribulations, Ibn Taymīyah could still be considered as having the same rank as Ibn Ḥanbal and al-Bukhārī and that his works were thus worthy of transmission.

The absolute prominence Ibn Taymīyah attributes to the *salaf* in his own theological and legal reasoning is crucial and can explain some of the tensions his doctrine created in his own environment. In this regard, it is worth mentioning that Ibn Murrī already defines the Taymīyan way as *al-ṭarīqah al-salafīyah* (the way of the pious ancestors).[57] Islam, like Christianity and Judaism, draws its concept of authority from the past. Identification with the *salaf* was therefore a very powerful weapon that allowed Ibn Taymīyah to support the incontestability of his arguments in the face of the condemning authorities, while simultaneously leading him to bypass the boundaries of the dominant theological and legal schools which were a significant component of the Mamluk legal system, a focal point of social identity, and an important form of professional network.[58]

Ibn Taymīyah's challenge is exemplified by the charge commonly levelled against him of contradicting the four schools of law, as well as by the sentiment

---

d'ici…»," p. 2, n. 7, located at www.muslimphilosophyonline.com/it/index.html, under the heading "His Works" and the subheading "TEXTES SPIRITUELS I–XVI." Here Michot presents the translation of some excerpts of the letter. A summary of the letter can be found in Henri Laoust, *La profession de foi d'Ibn Taymiyya: La Wasitiyya* (Paris, 1986), 26–29.

[56] The best demonstration of this Taymīyan method is now that of Hoover, *Ibn Taymiyya's Theodicy of Perpetual Optimism*. See also Yahya Michot, "Vanités intellectuelles…L'impasse de rationalistes selon *Le Rejet de la contradiction* d'Ibn Taymiyya," *Oriente Moderno* 19 (2000): 597–617; idem, "A Mamluk Theologian's Commentary on Avicenna's *Risāla aḍḥawiyya*: Being a Translation of a Part of the *Darʾ al-Taʿāruḍ* of Ibn Taymiyya, with Introduction, Annotation and Appendices," *Journal of Islamic Studies* 14 (2003): 149–203, esp. 165–72, and 309–63. On different issues regarding Ibn Taymīyah's rational theology and methodology, see also the articles by Livnat Holtzman, Jon Hoover, Mehmet Sait Özervarli, and Racha el-Omari in *Ibn Taymiyya and His Times*.

[57] Ibn Murrī, *Risālah,* 101.

[58] On the meaning of the *salaf* in Ibn Taymīyah's thought, see the papers of Walid Salih and Rascha el-Omari in *Ibn Taymiyya and His Times* and the introduction to the volume. For Ibn Taymīyah's attitude to *madhāhib,* see the articles of Yossef Rapoport and Caterina Bori in the same volume. For Ibn Taymīyah versus his own school, see now Al-Matroudi, *The Ḥanbalī School of Law and Ibn Taymiyyah,* 40–45.

expressed in his own words:[59]

> In my life up to this point, I have never pushed anybody in the field of theology *(fī uṣūl al-dīn)* to join the school of Aḥmad or anybody else, and I have not supported this sort of attitude nor have I mentioned it in my doctrine. I only mention that upon which the Pious Ancestors of the community and its imams have agreed. In spite of this, I have told them [i.e., his opponents in the 706/1307 Egyptian trial] more than once: I am indulgent with he who has been contradicting me for [the last] three years [and I wait for him] to come about with one word on the authority of the imams of the first three centuries that contradicts what I have said.[60]

This attitude towards creed goes hand in hand with that towards jurisprudence in a logical correspondence between theological and legal reasoning.[61] In the same text, Ibn Taymīyah expounds on the ways the term *sharʿ* was understood in his day. Three basic meanings are highlighted: the revealed law *(al-sharʿ al-munazzal),* the interpreted law *(al-sharʿ al-muʾawwal),* and the distorted law *(al-sharʿ al-mubaddal).* The first consists of the Book and of the Sunnah of the Prophet. Adherence to it is compulsory *(wa-hādhā yajibu ittibāʿuhu)* and punishment *(al-ʿuqūbah)* must be inflicted on whoever contradicts it. The second consists of the activity of *ijtihād* and the opinions of the scholars. It is into this category that the various *madhāhib* fall, and adherence to them is permissible but not obligatory. Nobody can either compel the commoners to follow the opinions of a jurist or prevent them from doing so; *taqlīd* is not prohibited, but neither is it encouraged, especially for the majority of Muslims.[62] The distorted or substituted law consists of lies made in the name of God, the Prophet, or other religious figures, and propagated by means of false testimonies *(al-shahādāt al-zūr).* The person who engages in it is an unbeliever.[63] In this context, Ibn Taymīyah's organization of the meanings of law works in his defense and serves to invalidate the judgment of his prosecutor, Ibn Makhlūf. In

[59] For instance: Ibn Taymīyah, *Majmūʿ Fatāwá,* 3:217, 253; but also Ibn Kathīr, *Bidāyah,* 14:67; Ibn Rajab (d. 795/1393), *Kitāb Dhayl ʿalá Ṭabaqāt al-Ḥanābilah,* ed. Muḥammad Hāmid Fiqī (Cairo, 1952–53), 2:389, 394.

[60] Ibn Taymīyah, *Majmūʿ Fatāwá,* 3:229.

[61] On this point see Hoover, *Ibn Taymiyya's Theodicy of Perpetual Optimism,* 19–69, and Yossef Rapoport, "Ibn Taymiyya's radical legal thought: Rationalism, pluralism and the primacy of intention," in *Ibn Taymiyya and His Times,* 193–95.

[62] Ibn Taymīyah, *Majmūʿ Fatāwá,* 11:265 and 431: "*wa-lā yajibu ʿalá ʿumūm al-muslimīn ittibāʿ aḥad bi-ʿaynihi illā rasūl Allāh"* (the polemic runs here towards those pseudo-Sufis and ascetics who blindly imitated their shaykhs).

[63] Ibn Taymīyah, *Majmūʿ Fatāwá,* 3:268.

fact, he argues, no matter to which school Ibn Makhlūf (d. 718/1318) belongs, it is not his right to compel people to accept it. Before, he had strongly argued for the incompetence of Ibn Makhlūf in matters of creed, in order to explain his failure to produce a favorable verdict.[64] Yet, the debate over Ibn Makhlūf's competency has far-reaching implications. It reveals a contention over who is entitled to have the final word in cases involving religious issues. In the same letter, Ibn Taymīyah broaches the boundaries of both the sultan's and the judges' judicial power in matters of religious sciences; his imprisonment provided a crucial opportunity to reflect upon these matters. He argues that it does not devolve to the judge to resolve disputes concerning issues of universal religious knowledge *(fī masā'il al-ʿilm al-kullīyah),* such as Quranic exegesis, hadith, jurisprudence *(fiqh),* and so forth.[65] On the contrary, it is incumbent upon the sultan either to resolve these disputes by referring to the Book and the Sunnah (Q. 4:59 is the verse quoted) or to accept the way in which his subjects live, their doctrines *(madhāhib)* included. Yet, whenever innovations are manifestly opposed to the shariʿah, it is the sultan's duty to declare their reprehensible character *(ʿalá al-sulṭān inkāruhā).* Since the number of innovators is so high, it can happen that their doctrines are considered equivalent to those of righteous people (here *ahl al-ʿilm wa-al-sunnah*). In this case, the authority *(man yatawallá al-amr)* is in need of "somebody that brings to light the proof of God *(ḥujjat Allāh)* and explains it clearly so that after the proof there can be the punishment." The formulation of the punishment before the proof is presented is unlawful *(mashrūʿ).* Thus, the sultan is to be assisted by experts in religious science who help him produce legal proofs, without which no judgement is permissible and no punishment applicable. What does the qadi do, then? He basically ascertains what the disputants involved in the case have said or done, and he assesses the proofs, but he is not asked to produce a legal verdict on general statements that belong to the realm of doctrine.[66]

A broader look at Ibn Taymīyah's *fatāwá* shows that his differentiation of the three *sharʿ* types occurs a few other times.[67] He specifies that "the interpreted law" consists of the judgment of the person who is entitled to formulate it *(ḥukm al-ḥākim),* and this person may be right or wrong. What Ibn Taymīyah is trying to say here is that there is a high possibility for a judge to be wrong: "When a

[64] Ibid., 3:235–36, 255.

[65] Ibid., 3:238.

[66] Ibid., 3:240–41. These passages have been also translated and commented upon by Yahya Michot, "Textes spirituels d'Ibn Taymiyya X *« Je ne suis dans cette affaire qu'un musulman parmi d'autres...»,"* *Le Musulman* 23 (Paris, 1994): 27–29 (reproduced at the website www.muslimphilosophyonline.com/it/index.html; see n. 54 above).

[67] Ibn Taymīyah, *Majmūʿ Fatāwá,* 11:262–65, 430–31, 506–9, in particular 506–7; 19:308–9; 35: 389 (for *al-sharʿ al-munazzal*) and 395–96.

judge judges according to something that he considers a legal proof *(al-ḥujjah al-sharʿīyah),* like a piece of indisputable evidence *(bayyinah)* or a confession *(iqrār),* and the inner meaning is in contradiction with the outward one, it is not permissible for the person in favor of whom the judgement was produced *(al-maqḍī lahu)* to follow it, and this should be agreed upon."[68] Thus, it is not only the doctrinal authority of the four schools, but also that of judges, that the *shaykh al-islām* is trying to define and, in the case of his own trial, to restrict.[69]

The theological controversy over the createdness of the Quran that is implicit in the mentioning of al-Bukhārī is also significant. Ibn Murrī seems to imagine an invisible thread joining the three vexed traditionists. The *miḥnah* regarding the createdness of the Quran *(khalq al-qurʾān)* initiated by the caliph al-Maʾmūn (d. 218/833) reflected some Hanafi and Muʿtazili positions.[70] The eventual defeat of al-Maʾmūn's position was not only a milestone in the consolidation of the ninth century ulama's religious authority[71] and in the formation of the dogma of the uncreated and eternal Quran,[72] but, more specifically, it marked the success of the party headed by Aḥmad ibn Ḥanbal and established his fame once and for

[68] Ibn Taymīyah, *Majmūʿ Fatāwá,* 11:262–63.

[69] For an overview on the judges' competencies and activities during the Bahri period in Cairo, read Escovitz, *The Office of Qāḍī al-Quḍāt in Cairo under the Baḥrī Mamlūks*, 131–72, and esp. 133–47 for cases involving charges of *kufr, zandaqah,* and apostasy.

[70] Joseph Schacht was the first to suggest a connection between the issue of the created Quran and some fringes of Hanafi thinking rather than Muʿtazili doctrine. See Joseph Schacht, *The Origins of Muḥammadan Jurisprudence* (Oxford, 1950), 258–59; Joseph van Ess, "Ḍirār b. ʿAmr und die 'Cahmīya': Biographie einer vergessenen Schule," *Der Islam* 13 (1967): 1–70, esp. 35; and idem, *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra* (New York, 1992), 3:175–88. Martin Hinds' article "Miḥna," in the *Encyclopaedia of Islam,* 2nd ed. (Leiden, 1993): 7:2–6, remains a good starting point on this fascinating episode of early Islamic history and contains a useful bibliography. More recent analyses of the *miḥnah* are to be found in John A. Nawas, "A reexamination of three current explanations for al-Maʾmūn's introduction of the Miḥna," *International Journal of Middle East Studies* 35 (1994): 615–29; Michael Cooperson, *Classical Arabic Biography: The Heirs of the Prophet in the Age of al-*Maʾmūn (Cambridge, 2000), 117–38; Nimrod Hurvitz, "Miḥna as self-defense," *Studia Islamica* 92 (2001): 93–111; idem, *The Formation of Hanbalism,* 115–57.

[71] The *loci classici* of this argument are Ira M. Lapidus, "The Separation of State and Religion in the Development of Early Islamic Society," *International Journal of Middle East Studies* 6 (1975): 363–85; and Patricia Crone and Martin Hinds, *God's Caliph: Religious Authority in the First Centuries of Islam* (Cambridge, 1986). Muhammad Qasim Zaman has challenged the argument of the separation between state and religion in his *Religion and Politics under the early Abbasids: The Emergence of the Proto-Sunni Elite* (Leiden, 1997), 70–118.

[72] For an analysis of the early development of the dogma with reference to Ibn Taymīyah as well, see Wilferd Madelung, "The Origins of the Controversy Concerning the Creation of the Koran," in *Orientalia Hispanica sive Studia F. M. Pareja octogenario dicata,* ed. J. M. Barral (Leiden, 1974), 1:504–25.

all.[73] The highly respected traditionist al-Bukhārī was possibly as involved in this controversy concerning the physical recitation of the Quran as some other scholars of his time.[74] For his part, Ibn Taymīyah elaborated a dynamic vision of God's essence that led him to a similar conclusion, i.e., that God speaks from eternity by his will and power, that the Quran is uncreated, but its human recitation is created.[75] The issue was one that Ibn Ḥanbal apparently shunned, preferring that the matter be avoided.[76]

In connecting the life stories of Ibn Ḥanbal, al-Bukhārī, and Ibn Taymīyah, Ibn Murrī reveals not only his need to ground the soundness of Ibn Taymīyah's method and scholarship in the example and experience of eminent past authorities, but he also explicates his own understanding of Ibn Taymīyah's lack of consensus in his own time, which he attributes to theological factors.

Conclusions

In fourteenth-century Mamluk Syria and Egypt, knowledge was transmitted from master to student, and this process took place both inside and outside formal teaching institutions. At that time the qualification that granted somebody the authority to transmit a scholar's corpus of knowledge was sometimes formalized by written certification *(ijāzah),* and sometimes not. Yet, the *ijāzah* was not a *conditio sine qua non* for knowledge to be transmitted. As Michael Chamberlain has put it, the *ijāzah* represented a formal acknowledgement through which "shaykhs deemed disciples ready to represent a body of knowledge and to exemplify its carriers."[77] However, without a social network of loyal pupils willing to recognize their affiliation and legal or theological orientation openly, the process of transmission would have been severely hampered.[78]

The letter of Ibn Murrī concerns exactly this topic. The text deals with the issue of the transmission of Ibn Taymīyah's writings and presents some practical concerns. Who was to carry out the work, and how? A group of followers is identified as apt to do the job, and some names are specified; Ibn Rushayyiq stands out among these names, and not Ibn Qayyim as one would normally expect. Ibn Murrī is rather direct about the method to be followed. He envisages it as a collective endeavor, but highlights the names of the most skilful. So far, no inconsistencies emerge except for the fact that, for some reason, the project seemed problematic to Ibn Murrī. Why was that? Two main reasons have been identified. The first is the state of disorder of Ibn Taymīyah's writings (confirmed by other sources); the second is an embarrassing reluctance on the part of those who would have normally performed the task.

As I have argued elsewhere, by the time of his death, the status of Ibn Taymīyah was more problematic and less established than we are accustomed to believe (as also the amount of his biographical writings confirm), and this is true even among the traditionist ulama of his circle. The letter of Ibn Murrī splendidly testifies to this situation. By recalling Ibn Taymīyah's rational method and the theological issue of the uncreated Quran, Ibn Murrī suggests that the uneasiness was theological. Here and elsewhere, I suggest that Ibn Taymīyah's detachment from the authority of the four *madhāhib* and his challenge to judicial authority became socially and politically inconvenient at some point, as his death in prison shows. These different factors do not contradict each other. On the contrary, they underline Ibn Taymīyah's scholarly consistency and complexity.

Finally, one must note that in spite of all the difficulties, the plea of Ibn Murrī did not go unheard. Ibn Rushayyiq seems to have done a good job, for we do possess today the large collection of *fatāwá* and many other fulsome volumes. How, to what extent, where, and in which circles and circumstances Ibn Taymīyah's ideas were eventually taught, discussed, and transmitted after his death remains an unexplored subject of research.[79] On a broader level, the letter sheds light on the patterns of transmission of religious knowledge among the civilian elite of fourteenth-century Mamluk society and confirms the logic of personal affiliation and social consensus to which it was subjected.

The Problem of Sufism

Anyone visiting the modern city of Cairo will surely be struck with the impression that medieval Egypt, and particularly the capital city of the Mamluk empire, remains close at hand. In fact, it remains literally at arm's length through its monumental architecture, its ordering of the cityscape, and even its design aesthetic that in the twentieth century has been reborn as the "classical" style of Islamic Egypt. This neo-Mamluk design phenomenon may rightly be interrogated, among other things, for some of the easy assumptions it makes about "high" culture and our urge, even in the modern age, to streamline the past and oversimplify our historiography.

An even greater challenge to us as historians are the various phenomena that together constituted Sufism in the Mamluk period. I point to this as a problem because it appears that within our field there has recently been a significant increase in research relating to Sufism, and yet, as the following pages will show, in many instances we continue to labor under a methodology that is far from perfect and at times even misleading. By identifying the *problem of Sufism* as my object of study, I seek to bring to light the challenge Sufism continues to represent to our historiographical methods. I will briefly survey some of the more promising recent research in this area, and follow with an inquiry into one area of particular importance to the study of Sufism. Specifically, my aim will be to show that contemporary historians' use of terminology relating to the concept of "orthodoxy" in discussions of Mamluk Sufism has failed in its account of the particular historical examples it confronts and has steered us away from the deeper methodological challenge that the phenomenon of Sufism represents for historians.

The study of Sufism has recently contributed to a number of wider debates and thematic explorations within the field of Mamluk studies. One theme rather well developed in the historiography of the medieval West, but only recently taken up in earnest by students of the Mamluk period, centers on the tension between city and countryside. Contributions to this area have come from research on particular Sufi figures and, more widely, the religious topography of the Egyptian Delta.[1] Jean-Claude Garcin's work on the Upper Egyptian city of Qūṣ has recently

[1] Catherine Mayeur-Jaouen, *Al-Sayyid al-Badawî: un grand saint de l'islam égyptien* (Cairo, 1994); idem, "Maîtres, cheikhs et ancêtres: saints du Delta à l'époque mamelouke," in *Le développement du soufisme en Égypte à l'époque mamelouke,* ed. Richard McGregor and Adam Sabra (Cairo, 2006),

become available in a re-edition; elsewhere he has revisited a phenomenon he first addressed in 1969, namely that of rural Sufis and their integration into the urban fabric of Cairo.[2] Of particular significance are his observations that, although historians have often avoided using Sufi literature, this material can in fact provide unique perspectives on the diversity of social groupings as well as popular conceptions and critiques of Mamluk political authority. In the same direction, Adam Sabra has drawn on Sufi literature to animate certain dimensions of social history.[3]

Of singular importance in urban settings are the phenomena of procession and pilgrimage. These practices go back at least to the Fatimids in Cairo, and from early on they have been studied with emphasis on the roles, both actual and symbolic, of the ruling elite.[4] But recent research into the use of public space for Sufi parading, and the impact of pilgrimage routes and visitation sites on the urban topography, has continued to develop. Analysis of pilgrimage literature, itineraries, topography, and the range of personal titles associated with venerated Sufis has shed statistical and quantitative light on lesser-known dimensions of pilgrimage and procession.[5]

Mamluk society was of course multi-religious. To date, good research has been produced on this topic, although often from the wider perspectives of Jewish history or the history of Eastern Christianity. The study of Sufism has begun to help us here, widening Mamluk studies to include these minority communities. Comparison of saint-day *(mawlid)* celebrations in the Muslim and Coptic traditions has expanded our model of popular piety across religious boundaries.[6] The role sometimes played by prominent Sufis in anti-Christian public violence has recently

been studied, shedding new light on inter-communal relations.[7] Finally, Paul Fenton has contextualized and illuminated important elements of the devotional life of Egyptian Jews by drawing on Sufi literature.[8]

This short list of recent work on the history of Sufism should make clear the substantial contribution of specialists in this lesser-known area to the wider field of Mamluk studies. Beyond its value to the broader historical themes outlined above, this research opens up significant new materials for analysis. Until recently, devotional and mystical literature, saintly *vitae (manāqib),* and pilgrimage manuals had rarely been exploited. It is as a corrective to this historiographical blind spot that I enumerate the studies above; however, my primary concern in this article is to refine the methodological basis upon which these and future historians will address the problem of Sufism. To this end, I will briefly explore the science of early and medieval *kalām,* paying particular attention to the boundaries of the concept "orthodoxy." For a second perspective, I will turn to the fourteenth-century historian Ibn Khaldūn, who will nuance this methodological landscape further. With these insights in mind, I will then explore some specific examples of historical research on Sufism that suffer because of their reliance on an overly simplified conception of "orthodoxy." This oversimplification has its roots in European intellectual history, and more specifically the complex phenomenon known in our field as Orientalism.

On Theology and Authority

As we turn to the methodological issues at stake in our discussion of Mamluk era Sufism, we must consider some of the underlying conceptual structures upon which such analysis rests. While a systematic survey of terms such as "orthodoxy" and "heresy" is well beyond the scope of this article, a summary comment is certainly in order. The issue may first be considered from the perspective of institutional authority. In the Christian West the categories of "orthodoxy" and "heresy" arose from the history of church doctrine. Through various institutions the Catholic Church honed its theological positions, defended them, and variously enforced them. By the Middle Ages, in European social and intellectual history "orthodoxy" had become more than simply a measure of proper belief: it had become synonymous with the authority of institutionalized religion. In short, the Church simply was "orthodoxy." Not surprisingly, this association of institution and doctrinal authority made its way into the religious conceptions and categories

of Western Orientalists as they produced knowledge of the Islamic world.[9] The implication of this for our present study is that modern scholarship maintains this inherited categorization. More particularly, as will be seen in detail in the final section of this article, historians have tended to project this pattern onto their analyses of the Islamic religious tradition, in essence treating the learned class (or ulama) as a functional equivalent to the Church.

Beyond this institutional association, a second issue is one of implementation. Certainly the history of synods, councils, and inquisitions in the Western tradition is complex, but for our purposes one simple point is that, in contrast to Mamluk Egypt, medieval Europe at its harshest moments asserted "orthodoxy" through Church tribunals. The situation in the Islamic context was rather different, in that questions of "orthodoxy," while also the concern of theologians and their supporters in the civil authority, were equally the concern of the jurists *(fuqahāʾ),* a class of religious functionaries that has no equivalent in the Christian context. The jurists played an essential role in translating any transgression, often articulated first by theologians in doctrinal terms, into points of religious law. One might be accused of "heresy" (e.g., *zandaqah, kufr, shirk,* etc.), and the case may have been strong, but the charge would eventually have to be put into legal terms if punishment were ever to be meted out. Despite his attacks elsewhere on the unacceptable theses of the philosophers, al-Ghazzālī (d. 505/1111) makes just such a point when he warns against the hasty use of *takfīr,* saying that unbelief is a purely legal category.[10] At the risk of overstating the distinction between theologians and jurists,[11] my point here is simply to underline the essential function of law in the Islamic equation.

This legal dimension is important to our consideration of terminology and method, in that it represents a point of significant divergence between what lies behind the common Orientalist usage of the term "orthodox" and the historical situation of medieval Egypt. Wielding the term uncritically, we evoke a process (albeit in vague non-historical terms) in which theological discourse has identified "heresy" and responded to it with censure. As carried over into the Islamic context, this picture is misleading in two important ways. First, as we have just seen, the uniquely Islamic institution of religious law will have been marginalized. But perhaps more significantly, this perspective will prevent us from understanding an important reality on the ground. In historical practice, the censure of questionable religious behavior and belief was carried out by political

[9] Carl W. Ernst, *The Shambhala Guide to Sufism* (Boston, 1997), xiii–xiv, 1–5.

[10] Josef van Ess, *The Flowering of Muslim Theology,* trans. J. M. Todd (Cambridge, MA, 2006), 39–40.

[11] They were often the same individuals, and jurists regularly generated their own cases against "heresy."

authorities, not as an implementation of a ruling of "heresy" as identified by theologians, but rather more typically in their role as protectors of public order, itself a concept defined within Islamic law. In other words, to echo al-Ghazzālī, the censure of "heresy" should stand primarily as a matter of law. If we as historians turn to such phenomena with the conceptual assumptions of "orthodoxy" and "heresy" transferred from the Christian context, our analysis will suffer due to an incongruity of categories and actors. Insisting, for example, on characterizing a censured miracle worker as a "heretic" will evoke a theological reflection and procedure that very likely never occurred, while blinding us to the much more plausible explanation that representatives of the regime were carrying out censure within a conceptual framework of response to infractions against public order.

Despite my somewhat abstract presentation so far, it should be noted that these methodological issues are in fact anchored in the history of texts, schools of thought, and religious movements. The danger, however, is that students of this history, if employing the terms "orthodoxy" and "heresy" uncritically, will produce analyses that, in the words of one historian, "disregard the intrinsic pluralism and complexity characteristic of the religious life of the Muslim community. . . ."[12] This overlooked complexity inheres in the discourse itself and calls for an open-ended historical elaboration. In other words, the attempts made to speak for "orthodoxy" in the Islamic tradition have always succeeded only temporarily. On the one hand, the essential elements of the discourse remain constant, but the competition to speak authoritatively for them continues. It is this ongoing process of negotiation that is in danger of being lost to us if our historiography insists on a static determination of "orthodoxy." The tenth-century heresiographer al-Shahrastānī reflects this reality in his typologies and descriptions of the *Religious and Philosophical Sects*.[13] His overarching presentation of Muslim debate on right belief describes "a perpetual collision of individual opinions over an invariant set of theological problems that eventually leads to a transient consensus that already contains the seeds of future disagreement."[14]

This insight into the continuously evolving historical reality of "orthodoxy" is not only a challenge to our methodology; it is also a challenge to much of the Islamic tradition's self-understanding. Joseph van Ess has recently made just such a point. In the context of a wide-ranging study of Islamic theology, he describes an early landscape in which "local orthodoxies" rose and fell. Developing one of these trends, he expands on the case of Muʿtazilism, attributing its success to its ability to extend its relevance beyond its original locale, Basra, largely by

[12] Alexander Knysh, "'Orthodoxy' and 'Heresy' in Medieval Islam: an Essay in Reassessment," *The Muslim World* 83, no. 1 (1993): 62.

[13] Muḥammad al-Shahrastānī, *Kitāb al-Milal wa-al-Niḥal,* ed. W. Cureton (Piscataway, NJ, 2002).

[14] Knysh, "'Orthodoxy' and 'Heresy' in Medieval Islam," 57.

broadening its theoretical base and making its rationalist approach relevant to several of the perspectives it was competing against. But this success was not a simple triumph—despite the *miḥnah*—nor was its eventual defeat ever complete. Not only when it was the "orthodox" position did it fail to do away with its rivals (e.g. the Shiʿah, Kharijites, Murjiʿites, Qadarites), but when replaced by other "orthodoxies" it continued to exert a significant influence on them and other subsequent movements. Van Ess's point as it relates to our concern here is that from a historical perspective, doctrinal positions and their authority over the determination of right practice and belief, far from being complete, unmoving or final, in reality adapt to the various realities they find themselves in. They rise and fall, wax and wane, compete and often compromise. Van Ess's study goes on to make clear that as historians we would do well to avoid the anachronistic and oversimplified narratives that later perspectives routinely impose upon earlier ones: "Theological problems may be eternal, but they are not static. The responses that befit a given situation at a given time quickly become rigid stereotypes."[15] These anachronisms, it should be restated, loom not only over the work of the historian, but are also well entrenched in the Islamic tradition itself.

In light of these comments from Knysh and Van Ess as to the rivalrous and diverse historical reality underlying these constructed "rigid stereotypes," we may expand further on the category of "orthodoxy." My argument here is that ultimately the only academically defensible use of the term "orthodox" is one that takes it simply as a qualifier, and not a signifier of any particular doctrine, school or practice. In other words, the terms "orthodox" and "orthodoxy" have no universal content to them, nothing outside of their immediate historical reality.

The Historian Ibn Khaldūn on Sufism

To conceive of a full history of Sufism is itself a daunting challenge. The variety of associated phenomena, institutions, texts, and practices, to say nothing of the social, political, and economic roles it played in Mamluk Egypt, together make for an object of study almost beyond circumscription. However, impressive studies have been completed, focusing on particular aspects of Sufism. One approach centers on the development of buildings dedicated to Sufism;[16] others have treated individual figures of the period.[17] By far the most wide-ranging study in the area to date is that of Éric Geoffroy, which is a work truly impressive in scope.[18]

[18] Eric Geoffroy, *Le Soufisme en Égypte et en Syrie sous les derniers mamelouks et les premiers ottomans:*

However, for a discerning first-hand perspective on Mamluk-era Sufism we may turn to an author who, though not a Sufi himself, was directly involved with the phenomenon. This would be Ibn Khaldūn (d. 808/1406),[19] who had traveled from Tunis to Cairo in the 1380s, took up the post of Grand Qadi of the Maliki school of law, and was appointed director of the Sufi hospice Saʿīd al-Suʿadāʾ (or *khānqāh* Sultan Baybars Jashankīr), the most prominent official institution of its kind. Although certainly best known today for his innovative philosophy of history, Ibn Khaldūn's detailed discussion of Sufism in his *Muqaddimah* preserves for us a careful and nuanced presentation, with particular emphasis on the position of Sufism among the other religious sciences.[20]

We are told from the start that Sufism is an essential dimension of the Islamic religious impulse: it is "one of the lawful sciences of the (Islamic) community. Its basis is the path that was established among the earliest ancestors and the most prominent companions (of the Prophet), their immediate successors, and those who followed. It is a true path that leads to devotion and divine worship, and freedom from the temptations and distractions of a worldly life. . . . All of this was common among the ancestors and companions."[21] For Ibn Khaldūn the origin of Sufism is clearly identified with the origin of the Islamic community itself; but as a good historian, he goes on to nuance its subsequent developments.

In addition, Ibn Khaldūn was clearly familiar with the practices of Sufism. He summarizes for his readers central concepts such as remembrance of God *(dhikr),* asceticism *(zuhd),* and spiritual retreat *(khalwah),* and he singles out the Sufi concern for the self-scrutiny and self-discipline that for them lay behind the common acts of worship and obedience to the Law. We are told that by the second century, worldly matters had become the primary concern of most Muslims. At that point a minority who devoted themselves fully to worship came to be designated

orientations spirituelles et enjeux culturels (Damascus, 1995).

[19] He was buried in Cairo in the northern section of the Qarāfah cemetery, but his tomb was destroyed in 2003 in the course of a road-widening project.

[20] The *Muqaddimah* was composed shortly before leaving the Maghreb for Egypt. Ibn Khaldūn had written even earlier on Sufism. For a discussion of his *Shifāʾ al-Sāʾil li-Tahdhīb al-Masāʾil,* ed. M. al-Tanjī (Istanbul, 1957), translated by R. Pérez as *La Voie et la voie, ou le maître et le juriste* (Paris, 1991), and more on his understanding of Sufism that with time seems to have hardened particularly against the school of thought identified with Ibn ʿArabī and Ibn al-Fāriḍ, see Alexander Knysh, *Ibn 'Arabi in the Later Islamic Tradition: the Making of a Polemical Image in Medieval Islam* (Albany, 1999), 187–97.

[21] *Muqaddimat Ibn Khaldūn,* ed. Aḥmad al-Zuʿbī (Beirut, 2001), 517. Also in English translation as *The Muqaddimah: An Introduction to History,* trans. Franz Rosenthal, 3 vols. (Princeton, 1967), but cf. Fritz Meier, "Khurasan and the End of Classical Sufism," in *Essays on Islamic Piety and Mysticism,* trans. John O'Kane (Leiden, 1999), 189–90.

as Sufis *(al-ṣūfīyah wa-al-mutaṣawwifah)*.[22] Due to this concern, and the concepts and terminology specific to such reflections, the Sufis emerged as a distinct class among the ulama. According to Ibn Khaldūn, the Sufis had become specialized in a kind of knowledge *(ʿilm)* that no other branch of the lawful sciences covered.[23] The Sufis systematized their field of inquiry, just as the jurists and exegetes did. We are told that, "Once the sciences *(ʿulūm)* were collected and recorded, and the jurists *(fuqahāʾ)* began writing on jurisprudence and its principles, as well as speculative theology, Quran exegesis, and similar things, the men of this path (i.e., Sufis) wrote on their discipline *(ṭarīqah)*."[24] Thus emerges a clear early division within the tradition, each branch with its own area of focus and expertise. The simple model here is one of increasing specialization among the Islamic sciences, and the attendant development of classes of religious specialists.

Ibn Khaldūn's historical analysis of Sufism continues with the introduction of a further distinction, that between ancient and recent Sufis. This distinction is largely, but not wholly, temporal. In a discussion of the various positions taken on the existential relationship of God to creation, Ibn Khaldūn surveys the jurists, the hadith scholars, the speculative theologians, and the philosophers. In this mix of opinions he identifies a mainstream position—one that emphasizes the distinctiveness and separateness of God's essence and attributes from those of creation—and ascribes it to most of the religious scholars, including the ancient Sufis. Interestingly, these "ancients" are identified as those represented in al-Qushayrī's *Risālah* and those who follow their example.[25]

According to Ibn Khaldūn, the recent Sufis include those who more closely identify God with creation, some even going as far as adopting the doctrine of divine indwelling or *ḥulūl*. Another distinction to be made is that between the ancients' commitment to cultivating speculation on spiritual matters, along with the language and terminology required for such, and the recent Sufis' concern with themes such as divine self-disclosure *(tajallī)* and manifestation *(maẓhar)*.[26] The latter category of recent Sufis is further divided between those who hold to this "oneness" shared by God and creation, and those who hold an even more integrative position identified in short by the term "absolute oneness."[27] Ibn Khaldūn further nuances his categories by identifying the Sufis of veracity *(al-*

[23] Ibid., 519.

[24] Ibid.

[25] Ibid., 529. Al-Qushayrī wrote in the fifth/eleventh century.

[26] Ibid., 522.

[27] For more on the polemical context of some these doctrinal positions see Michel Chodkiewicz, "Le procès posthume d'Ibn ʿArabi," in *Islamic Mysticism Contested: Thirteen Centuries of Controversies and Polemics,* ed. Frederick De Jong and Bernd Radtke (Leiden, 1999), 101–3.

muḥaqqiqūn min al-mutaṣawwifah) among the recent Sufis. These are a later group whose doctrine allows them to bridge the earlier differences between the ancient and recent Sufis, specifically relating to the existential question of God's relationship to creation. These Sufis of veracity recognize the reality of the "oneness" perspective or experience; however, they move beyond this stage to reassert the distinction *(farq)* between the created individual mystic and God.[28] These categories and concepts would reward further inspection in light of the wider intellectual history of Mamluk-period Sufism, but for our present purposes the central point is one of the diversity within the science of Sufism. Ibn Khaldūn's breakdown of the Sufism of his day along temporal and doctrinal lines gives us an insight into the complexity of this religious discourse.

However, our historian is not content simply to describe the doctrinal hairsplitting that went on among Sufi theorists, nor does he shy away from condemning what he sees as unacceptable behavior. To his credit, and perhaps not surprisingly, Ibn Khaldūn presents a nuanced picture of one of the more controversial practices among Sufis (both ancient and recent), the ecstatic utterances known as *shaṭaḥāt*. These were the inspired statements, often cryptic or startling, that most branches of Sufism took to be a form of legitimate inspiration. Our historian opens his discussion by describing some of the responses to this issue from the wider ulama. We are told that, "Many of the jurists and muftis are intent on rejecting these recent Sufis . . . and insist that everything on the (Sufi) path is loathsome. However, the truth is that their discourse is quite complex."[29] Here Ibn Khaldūn is making the point that such blanket condemnations are a disservice, particularly where informed critique is vital for discerning which Sufi positions are to be challenged. To the *shaṭaḥāt* he argues that three responses are possible: approval, interpretation, and condemnation.[30] He claims that since Sufis are simply overcome by these inspirations, and that such unusual experiences cannot easily be put into common speech, we must judge the status and character of the individual, rather than the content of the utterances themselves. The premise is that, in this state, Sufis "are beyond the sensory realm and are overwhelmed by their spiritual inspirations such that they speak out in unintended ways. This enraptured individual is beyond reasoning with, and *he who is compelled is excused*."[31] Thus, Ibn Khaldūn argues that the character and sincerity of the individual Sufi are grounds for discerning when these utterances are objectionable. Those Sufis who are meritorious and worthy of emulation are not to be condemned for

[28] *Muqaddimat Ibn Khaldūn,* 524.

[29] Ibid., 526.

[30] Ibid.

[31] Ibid, 527.

their *shaṭaḥāt,* but those whose character and background are unknown should indeed be censured if they make such declarations, since there would be no basis for properly interpreting such speech. The instances that categorically require censure are those in which the individual is insincere by virtue of having retained his faculties—that is, he declares *shaṭaḥāt* while in control of his senses, and is thus indeed the author of his own speech. Such an individual then assumes responsibility for his transgression. Ibn Khaldūn makes it clear that such censure would come as much from other Sufis as from the jurists. Of the famous case of al-Ḥallāj, we are told that for this very reason the jurists and the prominent Sufis *(akābir al-mutaṣawwifah)* of the time together issued a legal opinion calling for his execution *(aftá . . . bi-qatl al-Ḥallāj).*[32]

The events surrounding the execution of al-Ḥallāj in 309/922 were hardly so neat, but that is not our historian's central point. What is of concern here is that questions of censure and legitimacy were not categorical; that is, Sufis condemned *some* Sufis, and the better jurists also condemned *some* Sufis.[33] Ibn Khaldūn extends this illustration to include other practices. Although some ulama express reservations, exercises for spiritual discipline and discussions of saintly miracles are for the most part sound *(ṣaḥīḥ)* and should not be criticized. Our historian again takes the middle ground when he comes to the question of mystical discourse on "realities of the higher order."[34] Here he suspends judgment, saying such language should be left un-interrogated and un-interpreted, much as the ambiguous passages *(al-mutashābihāt)* of the Quran are.[35]

Writing More Clearly

With Ibn Khaldūn's observations in mind, we turn now to the problem of Sufism as it has more recently appeared among modern historians of the Mamluk period. More precisely, my claim here will be that in applying the terms "orthodoxy" and "heresy" with little qualification, or as supposedly self-evident terms, our historical analyses can be seriously misdirected. In the remaining pages I will attempt to show exactly how this has happened.

In one particularly influential study of medieval Egyptian society, Boaz Shoshan throws light on what life would have been like for the popular classes.

---

[32] Ibid.

[33] This diverse reality is reflected in the case of the third/ninth century ascetic Ghulām Khalīl, who led the persecution in Baghdad of the Sufi Abū al-Ḥasan al-Nūrī. See Josef van Ess, "Sufism and its Opponents: Reflections on Topoi, Tribulations, and Transformations," in *Islamic Mysticism Contested,* 26–27. On the complex relationship between Sufis, Hanbalis, and Muʿtazilites, see Florian Sobieroj, "The Muʿtazila and Sufism," in *Islamic Mysticism Contested,* 68–92.

[34] *Muqaddimat Ibn Khaldūn,* 527.

[35] Here the reference is to Quran 3:7.

The essays presented in this study are innovative in conception and thorough in documentation; however, the treatment of Sufism undoes one of the central aims of the book. Shoshan's otherwise nuanced treatment of popular versus elite runs into trouble when it turns to an analysis of Sufism. The author makes clear that he is trying to substantiate "that there was 'another' Islam in medieval Cairo (as elsewhere)—an Islam practiced and experienced by the commoners."[36] This thesis is a worthy one, and the collection and presentation of such data relating to culture and religion on the popular level is a service in itself as a corrective to the more prevalent "top down" approach to social history. However, in this case the effort is undone by a flawed conception of Sufism. In the heart of his study he moves to nuance the high versus low dichotomy and identifies Sufism essentially with lower culture, in contrast to the elite who are the agents of "orthodoxy." However, the historical data will not cooperate, and Shoshan is left with a dilemma. The problem is (and Shoshan deserves credit for resisting any selective presentation of the facts) that the historian is quickly confronted with Sufis who do not belong to the popular class. That Sufis of this upper social class are prevalent undoes the earlier claim that Sufism is to be associated with the popular classes. Sufism among the elite of Cairo is in fact easily found; one thinks simply of the early Shādhilīyah (Ibn Bākhilā, Ibn ʿAṭāʾ Allāh al-Iskandarī), or al-Shaʿrānī's beloved Wafāʾīyah.[37] But Shoshan, as a good historian who has committed himself to a less than perfect argument, tries to save his sinking thesis with a patch. He endeavors to explain away the historical inconsistencies by proposing that Sufism was allowed to "climb up the social ladder." That is, despite being essentially popular, Sufism had somehow obscured its origins and "found its way not only into the ruling body, but also into the world of orthodox scholars."[38] We will return to the problem of "orthodox scholars" in another context below, but here we can address this confusion of category by simply returning to Ibn Khaldūn. The latter clearly presents Sufism as a branch of religious knowledge *(sharīʿah)* and not as the religious pursuit of one social class or another. Ibn Khaldūn is not reductive in his analysis, nor is he idealistic in his account of Sufism; we noted earlier the series of distinctions he identifies within Sufi doctrine, and the variety of positions he entertains with regard to censure. Before running up against data that would not fit into his model, Shoshan would have done better to incorporate some of Ibn Khaldūn's insights, which would have forced Shoshan to nuance his stark untenable binary of popular Sufism versus elite "orthodoxy."

Shoshan is not alone in struggling under this burden. Other important studies

of religious and social history of the Mamluk period are methodologically hamstrung by a messy and less than rigorous conception of Sufism. The following passage is illustrative of some of this: "It is extremely difficult to generalize about the connections between orthodoxy and Sufism, owing to the complexity and subtlety of these ties and the different nature of each of these two aspects of Islam. While orthodoxy was quite uniform, Sufism was amorphous and multifaceted. The education and attitudes of the ulama were similar everywhere throughout the (Sunni) Islamic world, despite local scholastic differences. By contrast, the Sufi movement revealed a confusing diversity. . . ."[39]

The first problem to note here is that of the category of "orthodoxy." It is presented simply as the antipode to Sufism, which in such an equation would constitute the "heretical" or "unorthodox." We may object to this inasmuch as "orthodox"—according to our arguments above—does not indicate a substantive category, but only primacy of position, and thus in this passage we are facing a false comparison. Further, and perhaps more substantively, we might appeal to Ibn Khaldūn's presentation of censure. As we saw above, he is careful to show that censure did not simply follow the dividing lines between the sciences. That is, censure (the identification of "heresy") was neither a distinguishing feature of any particular science, nor was it essential to the relationship between any of the sciences. Ibn Khaldūn is happy to expand on the distinctions between branches of religious knowledge, but "heresy" will not be part of such categorization. One might object further to Winter's statement above by asking about the other side of the equation, that is, who exactly is intended by the term "orthodox"? Ibn Khaldūn is of little help here, since in his schema the sciences were fundamentally present but undifferentiated in the earliest community, and were later distinguished from one another only as they became more systematized among later generations. In this analysis none is more or less "orthodox" than any other. The only remaining possibility would be to identify the "orthodox" as the adherents of all the other sciences put together. To speculate, this is likely the answer most in the spirit of Winter's passage quoted above. However, such a conception is unsustainable as a category since we can hardly say that all religious thought other than Sufism is to be automatically taken as "orthodox." Another point raised in the above passage points to the *unity* of the "orthodox" ulama, contrasting it to the *diversity* of Sufism. Here we would do well to recall Van Ess's warning (albeit specifically within the field of theology) against the blind spot that a stereotypical snapshot has for diversity of opinion. But beyond this, the deeper problem is that the passage assumes the religious culture of the "orthodox" is different from that of the Sufis. This is untenable historically. Sufis were very often the same people who were

[39] Michael Winter, *Egyptian Society Under Ottoman Rule 1517–1798* (London, 1992), 129.

muftis, judges, jurists, traditionists, theologians, etc.[40] The ulama class contained many Sufis, and every learned Sufi could claim membership in the ulama.

This use of "orthodoxy" as synonymous with the ulama, identified essentially by their common opposition to Sufism, is also problematic in that it retroactively projects clear distinctions that in fact were never there.[41] Following the quotation above, we read: "From earliest times, orthodoxy and Sufism were rivals." And more specifically, that this rivalry opposed "the mystics on the one hand and the theologians, jurists, and *madrasa* teachers on the other. . . ."[42] This characterization of permanent categorical conflict, as we saw above, runs contrary to Ibn Khaldūn's understanding of how the sciences are divided and how censure should be properly exercised. But just as importantly, this categorization fails to reflect the historical reality that a great many theologians, jurists, and madrasah teachers were themselves trained in Sufism and retained some affiliation with a Sufi order or teacher. Although we cannot quantify the numbers involved,[43] in the Mamluk period many prominent individuals embodied just such an overlap.[44] At least as significant is the fact that: "No single *ʿālim* [Ibn Taymīyah included] can be named as disapproving of Sufism in principle."[45] That is, this categorization was never even a rhetorical reality. The wider methodological problem represented here again rests in the use of the term "orthodox." The characterization is that Sufism is a category universally opposed to that of the "orthodox." The presentation of Sufism here is oversimplified, but more importantly the category of the "orthodox" is thrown up as if it were a historically identifiable entity. The reality is much more complex, rendering the category of the "orthodox" of little analytical value.

A strikingly different use of the term "orthodoxy" appears in discussions of some of the doctrinal (and ritual) disputes among Sufis of the Mamluk period. Here again, inappropriate terminology hinders analysis and argument. One such discussion opens with the question of the identification of the various Sufi

[40] In a study of urban elites of Damascus, Michael Chamberlain's categories of learned elites as distinct from Sufis leads him to the untenable claim that: "The learned elite were often Sufis themselves . . . but they still competed with Sufis for the capacity to represent ʿilm [religious knowledge]." Here of course epistemologies compete, not social classes. See *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (New York, 1994), 128.

[41] Th. Emil Homerin makes this point explicitly in "Sufis and Their Detractors in Mamluk Egypt: A Survey of Protagonists and Institutional Settings," in *Islamic Mysticism Contested*, 226.

orders, some being "orthodox" and others not.[46] However, at the same time these orders "were capable of transforming themselves from orthodoxy to heterodoxy and vice versa."[47] The context for this statement is the variety of doctrines and practices that could be found under a single order designation—in particular those of the Shādhilīyah and the Aḥmadīyah. Here some individuals within an order are described as agents of true and uncorrupted Islam, making them the "orthodox" Sufis. (At this point we are quite far from the juxtaposition of Sufism with "orthodoxy" we saw earlier.) In one sense, this recognition of dissent and diversity within single orders is welcome—and Ibn Khaldūn's argument for censure certainly resonates here. However I would argue that the utility of the term "orthodox" remains questionable. Ibn Khaldūn would not have understood proper censure (which we remember for him is not a simple binary of "heresy" versus "orthodoxy") as Sufis doing the job of non-Sufi ulama; rather, all the ulama, including educated Sufis, should engage in censure of objectionable practices or ideas. But more importantly, in these discussions the qualifying term "orthodox" is inconsistent. At times it is used to denote the practices of certain dominant Sufi groups, while in other instances it evokes the entire non-Sufi ulama.

The unfortunate assumptions behind such uses of the term "orthodoxy" can quickly lead us to historically indefensible positions. One such dead end is the argument tying Sufism to cultural decline. The reasoning here seems to be that "orthodoxy" is civilization's bulwark against chaos and barbarity. This methodological assumption, when fused with an amorphous and unchanging ulama identified as "orthodox" and pitted categorically against Sufism, can lead to clearly false conclusions. One analysis describes a rise in prominence of Sufism shortly after the establishment of Ottoman rule in Egypt. This ascendancy is apparently inversely proportionate to a "decline of the ulama." The argument is that this decline was precipitated by the Ottoman regime's removing the Egyptian elite from important positions such as judgeships, and appointing Turks to these key offices. The attendant rise of Sufism is described thus: "All these developments were the result of Egypt's relegation from an Empire to a province, which may have caused a widespread malaise that was favorable for Sufism. The strengthened position of Sufism may serve as a barometer of the Egyptian people's general cultural and intellectual decline during the Ottoman period."[48] Here the association of Sufism with cultural decay could not be stated more clearly. This argument, however, can only be sustained by an un-inspected assumption of Sufism as somehow anti-ulama—and thus a degenerate force—and certainly not by historical evidence.

[46] Ibid., 132.

[47] Ibid., 134.

[48] Ibid.

In fact, the latter speaks to the contrary, even in the pages of this same study. Sensibly, elsewhere we are told that Mamluk-era Sufism was well positioned, and that "there was no lack of support for Sufis among the Mamluk emirs. Although the Ottomans' patronage of the Sufis is well documented, Mamluk support for them did not lag far behind."[49] To assert that Sufism was present, even flourishing, in the Mamluk period is hardly contentious. However, to sustain the argument above, one would have to claim that the Mamluk period, in order to reach the cultural and intellectual heights it did, was instead free of Sufism, or at least had held such a destructive force at bay. This was clearly not the case. Simply put, the problem here is that in the Mamluk period Sufism and the ulama of the remaining branches of religion thrived under shared political and cultural conditions. The characterization above of an unchecked Sufism pulling society towards decline is contrary to the historical evidence. This argument fails because of its commitment to an untenable characterization of Sufism.

The wider intention of this study has been to set forth a more nuanced and accurate conception of Sufism, not by presenting new and better definitions, but rather by pointing out methodological bottlenecks that obstruct sound historical treatment of the subject. I have argued that the terms "orthodoxy" and "heresy" should not be used without first exploring the theological baggage they usually carry with them. My efforts here have also been aimed at illustrating how this baggage can tilt and even overturn the analyses of the best historians among us. Sufism becomes a problem for the historian when perspectives such as those of Ibn Khaldūn are pushed aside in preference for terminology and categories that are more familiar and easily applied. Ibn Khaldūn's portrayal of a Sufism diverse in both doctrine and practice, along with his wider view of the process of censure—one that places it above the lines dividing the various branches of the ulama—obliges us to nuance, if not abandon, our common use of the terms "orthodoxy" and "heresy." However, if we choose to preserve these categories, we would do well to incorporate Van Ess's observations on the fluid and impermanent historical reality of the "orthodox." In this spirit, my own proposal would be simply that we apply the term "orthodox" as a historically determined qualifier, one that indicates a position of relative dominance, rather than allowing it to continue to function as the signifier of a supposedly unchanging and ahistorical core of doctrinal commitments.

Idealism and Intransigence: A Christian-Muslim Encounter in Early Mamluk Times

Sometime just before 1316 an unknown Christian author resident in Cyprus wrote a carefully composed letter in which he showed how his own faith was supported by the Quran. He wrote with the evident intention of opening a debate with Muslims, because in 1316 itself a copy was sent to Ibn Taymīyah in Damascus, and then five years later another was sent to Muḥammad Ibn Abī Ṭālib, a local celebrity in the Damascus area. It provoked both scholars to write long and disparaging replies, making what is undoubtedly the most substantial correspondence in the history of Christian-Muslim relations—few in number at only three items but containing two of the longest Muslim responses to any claims by Christians. The correspondence is unique in the detailed knowledge of the beliefs and doctrinal positions of the other that is shown by the three participants, but it is typical in many ways of the relations between followers of the two faiths that had developed over the seven centuries since the origin of Islam. Moreover, it eloquently represents the regard—or lack of it—that Christians and Muslims held towards one another in the turbulent times in which the letters were written.

The story of this correspondence actually begins about a century before the first letter was written. This was when the Melkite bishop of Sidon, Paul of Antioch, sent his politely worded but ingeniously subversive letter to a Muslim friend.[1] Writing in Arabic, he employed the personae of Christian scholars in Europe to demonstrate that in its own terms the Quran proves that Muḥammad was sent with an Arabic revelation to the pagan Arabs alone, and that its teachings give unmistakable indications that the main elements of Christian belief and practice are sound and God-given. Exactly when Paul wrote is not known,[2] but a date in the latter years of the twelfth century seems best to fit the available evidence.

This letter circulated widely among Christians,[3] and it evidently became known to Muslims as well because in the mid-thirteenth century the Egyptian jurist Aḥmad Ibn Idrīs al-Qarāfī (1228–85) targeted its arguments in his *Al-Ajwibah al-Fākhirah*

[1] Paul Khoury, *Paul d'Antioche, évêque melkite de Sidon (xiie s.)* (Beirut, 1964).

[3] Taqī al-Dīn Ibn Taymīyah, *Al-Jawāb al-Ṣaḥīḥ li-man Baddala Dīn al-Masīḥ,* ed. ʿAlī Ibn Ḥasan Ibn Nāṣir et al. (Riyadh, 1999), 1:101.

ʿ*an al-As*ʾ*ilah al-Fājirah,* though without identifying it.[4] Then, sometime in the early fourteenth century the anonymous Christian in Cyprus made Paul's letter the basis of his own initiative to encourage some debate with Muslim scholars about faith.

This unknown master worked carefully through Paul's letter and made subtle changes, additions, and omissions to turn it into a document with a rather altered character from the original.[5] It could be that a different temperament was responsible, or that changed political and social conditions demanded a new tenor, but the result is a work that invites agreement and acknowledgement rather than the provocation and assertiveness of Paul's original.

A close comparison of the two letters shows that the anonymous author approached Paul's letter conservatively, but with his own clear intentions; he went much further than simply editing it.[6] Put briefly, he completed quotations from the Quran that Paul had edited down in order to fit his arguments, he removed some of the more pointed exegeses of verses used by Paul to bring out Christian significances, and he added a long series of verses from the Quran and Bible, mainly the Old Testament. Thus, he removed quotations that might have caused unnecessary offense to Muslims, and reduced the chances of his version of the letter provoking disagreement. Whereas Paul might be said to compel his reader to admit the pure logic of his case, this author was more concerned to persuade and maybe to commend the point that Christianity and Islam were complementary faiths that need not compete.

Two features of his letter give strong indications that this was indeed the author's intention. The first is the long series of quotations from Old Testament books that show uncompromising prejudice against the Jews. These are added to Paul's original in a series of lengthy blocs,[7] which serve to demonstrate that although the Jews possessed in their scriptures clear indications that God would send Christ, they ignored them, and more seriously they ignored the commands he gave:

> When Moses withdrew from them onto the mountain to converse

[6] On this see ibid., 1–14, and more fully, David Thomas, "Paul of Antioch's *Letter to a Muslim Friend* and *The Letter from Cyprus,*" in *Syrian Christians under Islam: the First Thousand Years,* ed. idem (Leiden, 2001), 203–21.

[7] Ebied and Thomas, *Muslim-Christian Polemic during the Crusades,* 76–81, 84–89, 98–107, and particularly 108–17.

with God the exalted, and took the Torah from the hand of God the exalted for them, they abandoned the worship of God and forgot all his acts, worshipping a heifer's head.

Then after this they worshipped idols, not once but many times. They made sacrifices to them, not inarticulate animals but their sons and daughters. This is according to what the prophets prophesied against them. All their acts are written in the chronicles of the People of Israel.

When God, blessed and exalted, saw the hardness of their hearts, their stubbornness and their disbelief in him, and their vile, abominable acts, he grew angry with them and made them contemptible and insignificant among all the nations, and they have had no king, priest or prophet ever again. This is as the prophets prophesied about them, and as their books, which they have in their possession today, bear witness.

To this effect is what God said to the prophet Isaiah, "Go, say to this people: You will hear but not understand, you will look but not see, because the minds of this people have been dulled and they understand little of what they hear; they have closed their eyes so that they cannot see or hear with their ears or understand with their minds or turn to me to save them."

Isaiah also said, "Likewise your sabbaths and new moons are abominable to me and have become despicable in my eyes"; God said: "On that day I will put an end to all sabbaths and festivals, and I will give you a new chosen law, not like the law I gave to my servant Moses on the day of Horeb, the day of the great assembly, but a new chosen law which I will enjoin and will send out from Zion." Now Zion is Jerusalem, and the new chosen law is the law which we Christians have received from the hands of the Apostles, the holy disciples. What demonstration could be clearer than this that we have quoted from the word of God the exalted, particularly since our enemies the Jews acknowledge to us that this is correct? If they did make a denial, this would be a denial among those who had no knowledge of their books, and this is due to their wickedness, ignorance and stubbornness. Just as these prophecies are in our possession, so they are in the possession of the Jews and also of all the Christians scattered over all the world and in all their languages, as they received them from the pure Apostles, to this day a single message.

As for the Jews' argument concerning these prophecies, they

> say and believe that they are true, and they do not deny that they are the word of God, blessed and exalted. But they say that they will be fulfilled and completed when the Messiah comes, though the Messiah has not come and is far off, and he who has come is not the Messiah. And not only do they not believe, but they want only to compound their unbelief by saying that he was a deceiver, for the Messiah is still to come, and the prophecies of the prophets' will be fulfilled. "And when he comes, we will follow him."
>
> This is what they think and believe about the lord Christ, though what greater disbelief could there be than theirs? It is because of this that the Quran has called them "those who earn thine anger," because of their dispute over the word of God which he uttered through the mouths of the prophets. And since we Christians adhere to the word of the prophets, and since we hold to what the pure Apostles commanded us, it calls us "those whom thou hast favoured."[8]

Clearly, the Jews have been superseded by the God-given truth of Christianity. In developing this idea at such length, the author is inviting his Muslim readers to acknowledge that his own faith is part of God's plan in history, and he is also perhaps appealing to them to unite in friendship with the Christians, as both of them express a common hatred of the Jews. Here he would have been inviting his Muslim correspondents to admit openly the same prejudices that four hundred years earlier the essayist and stylist Abū ʿUthmān al-Jāḥiẓ (d. 869) had resentfully mocked among the people of Baghdad. In the Abbasid capital al-Jāḥiẓ noted how Muslims admired Christians because of their senior positions in commerce and the professions, while both faiths despised the Jews because of their inferior trades and their physical ugliness.[9] The author of this letter appears to be appealing to a similar sentiment as he documents the stubbornness of the Jews and their condemnation by God, and thereby distinguishes the Christians, who by comparison are obedient and blessed by God, for commendation by Muslims.

The second feature is what the author says about Muḥammad and Islam. This is more implicit than direct, but he makes plain at the beginning that the Prophet, who was sent to the Arabs with an Arabic scripture, was clearly sent from God as an inspired messenger.[10] While he does not develop this point at any length,

[8] Ibid., 111–17.

[9] Al-Jāḥiẓ, *Fī al-Radd ʿalá al-Naṣārā,* in *Thalāth Rasāʾil li-Abī ʿUthmān al-Jāḥiẓ,* ed. Joshua Finkel (Cairo, 1926), [10–38] 13–19; trans. (in part) Joshua Finkel, "A Risāla of al-Jāḥiẓ," *Journal of the American Oriental Society* 47 (1927): [311–34] 322–30.

[10] Ebied and Thomas, *Muslim-Christian Polemic during the Crusades,* 56–61.

his use of the Quran as the basis or support for many of his arguments in favor of Christianity presupposes that he accepts it as an authentic scripture.

Both these features are present in Paul of Antioch's original, but the anonymous author makes more of them by adding illustrative verses from the Bible and Quran to present by implication an argument that seeks to locate Christianity as a faith that commands respect and acceptance in a relationship with Islam in which both figure as inspired dispensations.

This much will, in theory, have attracted, or been intended to attract, Muslim readers to the letter, and warmed them towards the arguments it contains. The author ingeniously suggests a communion of spirit between the two faiths in their ascendancy over the Jews, and also finds a place for the Prophet and the Quran within a divine economy centered on Christianity. This is extremely unusual among Christians before the modern era, and it shows remarkable openness towards a figure who among Europeans at the time was conventionally cast as demonic and condemned to the lowest circles of hell. The conclusion can thus be understood as a sincere declaration of agreement between the faiths, and a well-meant invitation to constructive debate:

> This is what I was able to ascertain about the views of the people I met and conferred with, and about the arguments they were using on their own behalf. Praise and blessing be to God, for he has brought unanimity of view and put an end to suspicion between his servants the Christians and Muslims, may God protect them all!
>
> If he has found anything different from this, may our master the revered teacher (may God eternally protect him and prolong his existence) point it out so that I may inform them about it and determine what views they have on it. For they have asked me to do this and made me a mediator. Praise be to God, Lord of the worlds.[11]

This is a singular and in many ways startling composition. The positive attitude towards Islam it expresses leads one to ponder the author's intention in writing, though the investigation of what this may have been introduces less constructive implications than at first appear and relates this apparently enlightened initiative to the stubborn difficulties that waylaid Christian-Muslim relations from the start.

Nothing is known about the author apart from what is given in this letter,

[11] Ibid., 147.

which is very little.[12] Writing from Cyprus, he was obviously at home with Arabic, editing Paul of Antioch's letter and turning it into his own Arabic composition. This raises the question whether he was, in fact, a native of the island or had come there from the mainland. He knows the Quran intimately, and maybe by heart, so much so that he could change Paul's edited version of Q 57:25: "And we sent our messengers with clear proofs, with them the book, that mankind might observe right measure," to the correct: "Indeed, we sent our messengers with clear proofs, and we sent down with them the book and the balance, that mankind might observe right measure."

Paul's small omissions create the impression that the messengers sent with the book are the Apostles of Jesus, though the anonymous author's restoration shows this is a distortion of the original. He was also able to supply the names of surahs, as well as quote the Bible in Arabic. And lastly, he knew Damascus so well that he was able to identify as recipients of his letter not only the renowned scholar Ibn Taymīyah but also the more locally known Ibn Abī Ṭālib. Thus it is possible that he was originally from the Damascus area and may even have been a convert to Christianity from Islam.[13] This being so, his letter may not have had the pure intentions which the reading offered above suggests. For one thing, his portrayal of the Jews may not have been simply historical and literal, relating how they turned away from the signs and revelation given by God to follow their own intransigent ways. He may also have meant it symbolically to refer to Islam, with the veiled warning that if the Muslims ignore what is evident in their scripture about Christianity, which he spells out in the course of this letter, they risk the same fate as the Jews: religious rejection and social ostracism. And for another, his portrayal of Muḥammad and the Quran ranks them below Christ and Christianity. For, as the letter says at the start,[14] the Quran was not sent to people who already had a scripture, but as an Arabic revelation it was intended only for native Arabic speakers. Thus, the Prophet, although sent from God, possessed only local significance in Arabic-speaking areas, and coming after the revelation of Christianity he was secondary in status, a messenger sent to bring the pagans to a simple form of monotheism.

The apologetic purpose that is detectable in the letter may be taken as a reflection of the wider inter-religious context in which it was written.[15] This would be in the period after 1291 when the Crusader forces had lost their last possessions on the mainland and the refuges that many had sought in Cyprus had

[12] Ibid., 5–19, contains a full discussion of most of the following details.

[13] Of course, Paul of Antioch's intimacy with the Quran indicates that not only Muslims learnt it, though he does not show the evident respect for it that this author does.

[14] Ebied and Thomas, *Muslim-Christian Polemic during the Crusades,* 55–61.

[15] Ibid., 13–17.

become permanent homes—in fact, could the author have been a refugee (and if a convert, someone who had found it acutely necessary to escape from the incoming Mamluks)? Moreover, this was after the invading Mongols had dashed Christian hopes by failing to join an alliance against the resurgent Muslims, had been defeated at ʿAyn Jālūt in 1260, and had become Muslims. So there could have been an imperative, in some minds at least, to maintain an engagement of sorts with the Muslims in order to appear not to have surrendered completely. In fact, at the time of writing in the early fourteenth century, the author would have been aware of numerous plans to launch fresh crusading offensives against the eastern and southeastern shores of the Mediterranean with Cyprus as the marshalling point. Almost every few years a new plan was presented in the papal and royal courts of Europe, and in Cyprus rumors about these plans must have kindled hopes and expectations, though the lack of armies to put these plans into effect must have made them seem progressively hollow and fanciful, continually raising hopes and then dashing them.

The author of the letter may, therefore, have had in mind the plan to produce a sound theological argument that proved the ascendancy of Christianity in order to show to leading Muslims that his faith was not to be dispensed with easily, but commanded respect and careful consideration. Thus, while Christian forces may have suffered a temporary loss, the faith itself retained the integrity it had been given by God at the beginning. It is also possible that he wrote to encourage Christians who could read his words, especially the remnant communities who lived under Muslim rule, to remain loyal to their faith. This they would do when they were reminded that the faith of their rulers was in its essence a distorted form of an original that was not only compatible with Christianity, if a pale preliminary version of it, but also derived from a scripture that attested to Christian truth and that was intended only for the local audience of pagan Arabia. They might thus be able to put Islam in its proper relationship with Christianity and not give in to the temptation to convert.

Of course, the letter gives no indication of its purpose or its author's intention. But if the inferences drawn here are at all accurate then it can be seen as more a weapon of hostility or a defensive mechanism than its conciliatory and persuasive tone at first suggests. Offering discussion on grounds that Muslims would find familiar and presumably acceptable, with the implicit acknowledgement that the Quran and Muḥammad are authentic, it actually leads to the ascendancy of Christianity over Islam. No wonder the two scholars it is known to have reached replied so vehemently and at such inordinate length; they must have seen these dangers, and they took elaborate measures to counter them.

From very early times, Muslim attitudes towards Christianity were based on the acknowledgement that the earlier dispensation was given from God with a

scripture that agreed in essence with the Quran mediated by a messenger who was like Muḥammad. But it very quickly qualified these appraisals with the accusation that Christians had distorted the pure teachings about God, had divinized Jesus, and had mistaken or textually distorted the teachings of the Gospel. There was a strong element in their attitude that Islam had come not only to confirm but also to correct Christianity, and there was little that this fractured faith could give them in return. Added to this, for purposes of social relations, Christians, like other scriptural believers, were given client status and were governed by the set of regulations known as the Pact of ʿUmar, after the second caliph. The precise form that these took in the early centuries is not clear, but there is enough evidence in the documents that have survived to show that by the ninth century they theoretically imposed upon *dhimmī*s restrictions that separated them from Muslims in society and impressed upon them a clear sense of their own inferiority.

By the time this letter from Cyprus was written, it is likely that the regulations of the Pact of ʿUmar had become so internalized into Muslim consciousness that they formed the framework in which attitudes to matters of society and religion were expressed. An eloquent attestation of this is to be found in the *Refutation of the Client People and Those Who Follow Them,* which was probably written a few decades before the letter from Cyprus by a certain Ghāzī al-Wāsiṭī.[16] Originally from Iraq, as his name indicates, this author had served in northern Syria in the mid-thirteenth century before moving to Egypt where he wrote his refutation. The latest reference he gives is datable to 1292,[17] so his work may have appeared in Egypt within twenty years of the letter from Cyprus. It is a colorful portrayal of the place of *dhimmī*s in the society that al-Wāsiṭī knew.

Like the *Refutation of the Christians* of al-Jāḥiẓ, written more than four hundred years earlier about the Christians of Baghdad,[18] al-Wāsiṭī's work has the character of a resentful complaint against the liberties taken by Christians in Ayyubid and Mamluk Syria and Egypt and their ungrateful and deceptive ways. Although it shows no knowledge of the earlier diatribe, this thirteenth-century reply could almost have been framed on its predecessor.

Al-Wāsiṭī sets out his general attitude at the very start: "The protected people who, not being subjected to fear, have been allowed to live freely in Egyptian and Syrian regions, some of them unbelievers belonging to the Jewish faith and

[16] Richard Gottheil, "An Answer to the Dhimmis," *Journal of the American Oriental Society* 41 (1921): 383–457. Moshe Perlmann, "Notes on Anti-Christian Propaganda in the Mamlūk Empire," *Bulletin of the School of Oriental and African Studies* 10 (1942): 844, suggests 721/1321 as a possible date of composition but without offering an explanation.

[17] Gottheil, "Answer," 384.

[18] See n. 9 above.

others to sects of the Christians, are worse unbelievers and more stiff-necked than those who wield the sword *(ahl bi-al-sayf)* who have kept their hold over Islam by oppression and tyranny."[19] He draws a contrast between the client populations and the Crusaders, and he implicitly questions the attitude of the former, who show hostility even though they are given freedom and treated fairly. His understanding is evidently that they have no reason to be anything but compliant because their treatment is unexceptionable, and they are religiously in the wrong anyway.

Al-Wāsiṭī begins to build his case by quoting Quranic verses that condemn the People of the Book and counsel separation between them and Muslims—there is no mention of such positive verses as Q 5:82, where Christians are called the nearest in affection to the believers. He follows with prophetic hadiths, injunctions from the founders of the Sunni law rites, and stories of dealings between early caliphs and Christians, all showing that the authorities of Islam distanced themselves from Christians while treating them with fairness and respect. The underlying reason is religious, as he indicates early on in his argument: "Just as soon as any one of the People of the Book declares the law of Allah and of his Prophet to be untrue, and disobeys the demands as laid down by the Prophet of Allah, idolatry adheres to him *(fa-lazimahu al-shirk)*."[20] As *mushrikūn,* associators of other divinities with God, Christians among other People of the Book are religiously suspect and unclean. Therefore, as the stories from the Prophet and the caliphs describe, even the help offered in warfare and in bureaucratic jobs must be refused. The priority of doctrinal principle over practical considerations is so important to al-Wāsiṭī that even financial loss is better than allowing Christians to go on unimpeded. He makes his point with a well-known story from the Umayyad caliph ʿUmar ibn ʿAbd al-ʿAzīz, who, when the governor of Egypt informed him that conversions from the client populations to Islam were reaching such a pitch that tax revenues from them were at risk of drying up, ordered the governor to be punished and expressed the hope that they would all be converted, for "Allah has sent Muḥammad as a preacher, not as a tax-gatherer."[21]

Al-Wāsiṭī builds upon this a series of stories from nearer his own time about the perfidiousness of Christians and Jews in Egypt, including one of the Christian Ibn Dukhkhān who spied for the Crusaders,[22] and another of Christians who dressed

[19] Gottheil, "Answer," 416 (quotations are from his translation with reference to the Arabic text).

[20] Ibid., 418. Al-Wāsiṭī's condemnation of Christians and Jews committing the sin of *shirk* (he may have in mind Q 9:30: "The Jews call ʿUzayr son of God and the Christians call Christ son of God") may seem extreme, but it is paralleled in al-Dimashqī, who habitually accuses his Christian opponents of committing this same sin; Ebied and Thomas, *Muslim-Christian Polemic during the Crusades,* e.g., 217, 291, 295, 385.

[21] Gottheil, "Answer," 424.

[22] Ibid., 435–38.

to look like Muslims and intentionally misled Muslims out of spite.[23] He goes on to complain about the Christians who profess to be Muslims for professional reasons but retain their own beliefs and practices in private, and he includes a story in which he was personally involved of Christians in Damascus who took advantage of the ruling Mongols' declaration that all faiths could be followed freely to write books exposing contradictions in the Quran.[24] Maybe his most telling point from his own times is his contrasting of Christians who amass wealth from public service which they use for their own enrichment and pleasure with Muslims who use the earnings from the same service "for the interests of the Sultanate and increasing its splendour. . . . Indeed, at the end of their life they are in debt and poor, because of the strength of mind they have shown and their fidelity [to the ruling house]."[25] The Christian is self-centered and ready to take personal advantage of the position granted him in society, while the Muslim is public-spirited and open to acknowledging his debt to society.

This refutation is, of course, a collection of arguments and illustrations intended to prove al-Wāsiṭī's point about the inferiority and untrustworthiness of Christians (and to some extent Jews). In this respect, it must be treated with care as a historical document, though it is evidently indicative of one attitude towards Christians that must have been recognizable and was maybe acceptable in early Mamluk society. Furthermore, at least some of the stories and appraisals it brings together must have been known to its intended readers. Thus, it can be taken as giving some indications of popular estimations of Christians in the society of the time, and as revealing an ingrained impression that, apart from any religious or doctrinal errors Christians preserved in their beliefs, they were social pariahs who took advantage of the privileges they were accorded by Muslims to betray the trust placed in them and harm wider society in whatever ways they could. The series of complaints brought together here point to rivalry and mistrust in all relations between the two faiths, arising from the moral failure that is consistently shown by Christians. The clear implication is that the faith they profess is fatally fractured, and there is little profit in taking them as colleagues and friends, or at all seriously.

This refutation gives some hints about Muslim attitudes towards Christians at the time the anonymous Christian author sent his letter from Cyprus. Interestingly,

[23] Ibid., 439–40.

[24] Ibid., 445–50. Al-Wāsiṭī's brief reference to one of these, entitled *Al-sayf al-murhaf fī al-radd ʿalá al-muṣḥaf,* "The sharp sword, in refutation against the Scripture" (447–49), shows it contained arguments long known in Christian anti-Muslim polemic. Its author's knowledge of the Quran shows none of the completeness of the author of the Letter from Cyprus, and certainly none of his respect.

[25] Gottheil, "Answer," 445.

it says little about the Crusaders themselves; they are on the margins of al-Wāsiṭī's concerns as a menace with whom the indigenous *dhimmī* Christians are often in conspiracy. It is as though they are a defining evil, against which the betrayals and malevolent acts of Christians within Muslim society can be gauged. If these latter are unworthy of anything but the harshest treatment, the Crusaders are beyond any fair treatment at all.

The date when the anonymous author in Cyprus wrote cannot be known exactly. But since his reworked version of Paul of Antioch's letter reached Ibn Taymīyah in 1316, having been sent to him expressly, it is unlikely that it was finished very much earlier. It was, of course, sent to him as the leading religious scholar of his day, and certainly the best known religious authority in Damascus. It was sent with the express intention of inviting a reply; as its conclusion, which has been quoted above, innocently says, let the recipient indicate any points on which he disagrees, so that there can be discussion between the two sides.[26] But if he thought he would start a serious debate in which the Muslim would weigh the points he had made and ponder them dispassionately, he was completely wrong.

Ibn Taymīyah replied with the *Jawāb al-Ṣaḥīḥ li-Man Baddala Dīn al-Masīḥ,*[27] a painstakingly detailed exposure of Christianity that is not rivalled in the whole of Islam for its detail and length. This text has been the subject of a number of studies,[28] although a full analysis of its contents remains to be made. In short, it can be said that Ibn Taymīyah pays little regard to the arguments from Cyprus, but rather uses the letter to show how Muslims can be led away from the path of true faith by distorted interpretations such as this. While he quotes the letter at length in the course of his reply, he does not so much give answers to it as employ it as a warning to fellow Muslims of the dangers of any deviation from the norms of the Quran. Thus, his *Jawāb al-Ṣaḥīḥ* is not addressed to the author from Cyprus or even to Christians, but to Muslims, and it ranks Christianity with forms of Shiʿi extremism as a faith that departs from true monotheism.

Whether this thundering reply was ever sent to Cyprus is not known. But about five years after the anonymous author sent his first copy to Ibn Taymīyah in Damascus, he sent another copy, this time to Abū ʿAbd Allāh Muḥammad Ibn

Abī Ṭālib, a well-known scholar in the town and, like Ibn Taymīyah, someone whose response would be based on experience and sincere scholarship in faith. His reply, written in 1321, within a few months of receiving the letter, can be placed alongside Ghāzī al-Wāsiṭī's refutation as a prime example of the attitudes held among Muslims towards Christians in early Mamluk times, and an indication of the tremendous differences between the faiths that present obstacles not only at times of open hostility such as the Crusades but at all times.

While he apparently did not enjoy the international celebrity status of Ibn Taymīyah, al-Dimashqī was enough of a celebrity in Damascus to merit an entry in al-Ṣafadī's *Al-Wāfī bi-al-Wafayāt* and again in his *Aʿyān al-ʿAṣr wa-Aʿwām al-Naṣr.*[29] Al-Ṣafadī was, in fact, a personal friend of al-Dimashqī and remembered spending time at his home and being asked by him to revise one of his poems. He regarded al-Dimashqī as "one of the cleverest people alive, with the power to penetrate into every discipline and the boldness to write about every field."[30] Thus, to anyone in Cyprus who knew something about the intellectual and cultural life in Damascus, he would be the natural recipient of a letter that was intended to start a public discussion.

Al-Dimashqī followed Ibn Taymīyah in replying to the anonymous letter with one of the longest and most detailed exposés of Christianity that has survived, the *Jawāb Risālat Ahl Jazīrat Qubruṣ.*[31] He may, in fact, have known Ibn Taymīyah's *Jawāb al-Ṣaḥīḥ*—he certainly knew that Ibn Taymīyah had been sent another copy of the letter[32]—because a number of the illustrative arguments he employs are also found in the earlier work. But a close examination of the two remains to be made.[33]

Al-Dimashqī gives some details about the circumstances in which he received the letter from Cyprus, recounting that it was personally delivered to him by a

[33] A full investigation of Ibn Taymīyah's *Jawāb al-Ṣaḥīḥ* and al-Dimashqī's *Jawāb Risālat Ahl Jazīrat Qubruṣ* should also include Ibn Taymīyah's *Risālat al-Qubruṣīyah,* which contains some of the same arguments; ed. and trans. (French) Jean Michot, *Lettre à un roi croisé = al-Risâlat al-Qubrusiyya)* (Louvain-la-Neuve and Lyon, 1995). This work, which was written to a noble in Cyprus to request fair treatment for Muslim prisoners, can be dated to just after 1300, a good fifteen years before the correspondence between the anonymous author in Cyprus and the two Damascus scholars began. It might be assumed that it forms part of the background reason for the Christian letter, but the latter shows no explicit or implicit awareness of it or of its contents.

certain Kilyām the merchant, chamberlain of the Watchtower *(wazīr al-Marqab)*.[34] Al-Marqab (Margat) was the great Crusader fortress along the shore road north of Latakia that was captured by Sultan Qalāwūn in 1285, and Kilyām (presumably Guillaume), if he was a real person, would have been one of the original garrison. He is mentioned a number of times in the *Jawāb,* though al-Dimashqī appears to use him as a persona to whom to attach questions and arguments in the letter from Cyprus that are otherwise awkwardly anonymous. If he was indeed real, he serves to show that in a period of open hostility, when papal edicts frequently forbade trade between Muslim and Christian areas, communications were still in fact maintained.

The letter reached al-Dimashqī in March 1321, and he completed his reply in June of the same year. Like Ibn Taymīyah, he follows the method of quoting a passage from the letter and using it as the basis for a demonstration of the truth of Islam and the impoverishment of Christianity. He finds no merit at all in what the letter attempts to set out, and he dismisses its arguments without any constructive response. A Muslim would find many familiar arguments in it, for while the *Jawāb* is directed at the Christians, it was clearly intended for a Muslim audience as well. His reply is a sustained attestation to Muslim self-confidence and the intolerance towards Christianity that Ghāzī al-Wāsiṭī exemplifies in his briefer refutation.

Al-Dimashqī divides his *Jawāb* into thirteen sections, each headed by a quotation from the letter, together with a short introduction. He makes his stance clear at the very start, where he explains his interpretation of the intention held by the people of Cyprus in writing the letter: "They were opening up means of seeking a confrontation through it, under the impression that they had mastered what they had been assured was teaching, or that this might lead straight to the religion by mention of it."[35] His realistic assessment of the letter, that all it is attempting to do is either to confuse Muslims or convert them, shows that he has seen through its politeness and irenic posturing and has sensed the danger implicit in what it proposes.

Al-Dimashqī gets into the main argument of the *Jawāb* in response to the first claim he identifies in the letter, namely that Muḥammad appeared without warning rather than after announcements from earlier prophets and the miraculous signs that were conventionally associated with each advent of a prophet. This section of the *Jawāb* is the longest,[36] and it affords an excellent insight into his approach, giving a perspective of the general Muslim attitude towards the supremacy of Islam at the time.

[34] Ebied and Thomas, *Muslim-Christian Polemic during the Crusades,* 154–55.
[35] Ibid., 156–57.
[36] Ibid., 158–227.

Al-Dimashqī expresses shock at this accusation and systematically presents a long string of proof texts and stories to counter it. He begins with a series of quotations from the Old and New Testaments that from the ninth century or earlier had been seen by Muslims to contain references to the Prophet.[37] Many of these were familiar by the fourteenth century, and some, such as the riders on the ass and the camel of Isaiah 21 and the promises of the coming of the Paraclete in the Last Supper discourses in John 15 and 16, were commonplace. But they serve his purpose more than adequately. He adds to them stories that had passed from legend into religious history, such as the discovery of portraits of the Prophet and Rightly-Guided Caliphs in the possession of the people of Sicily when the first Muslims landed there,[38] and the surrender of Jerusalem to the caliph ʿUmar when the people recognized him as the one foretold: "This would never have happened unless they had known about the mission of Muḥammad (may God bless him and give him peace) to all humankind and the pre-eminence of his religion over all others, and, from his particular description and bearing, that his caliph ʿUmar would be the conqueror of Jerusalem."[39]

Of course, there is no question of the veracity of these stories, but more importantly there is no evident need for al-Dimashqī to do much more than refer to them or summarize them for him to consider his point made. They are obviously so well known among Muslims that the simple reminder of what they say is enough. This is strongly suggestive of widely held prejudices throughout Muslim society at this time.

But al-Dimashqī does not leave the matter with this spectacular display of evidence in support of Muḥammad's being attested by prophecies and miracles. He goes on to explain why Christians have ignored them, locating the guilt for this in the early community. In a breathtaking rewriting of known historical facts, he recounts how Constantine was converted to Christianity and wanted to proclaim his new faith in the empire. So Christian teachings were put in order, and the emperor was informed about the Gospel references to the Paraclete, though the religious experts were afraid that he might abandon his faith if he knew the true identity of this being and said it was the Holy Spirit. "This became Constantine's conviction, for he had been a Ṣābian, a worshipper of idols and the spiritual forces of the stars. So he accepted what they claimed about the matter of the Holy Spirit because he himself was familiar with belief in spiritual forces."[40] This official acceptance of the misinterpretation of Jesus' true teachings is the starting

[37] Ibid., 162–75.

[38] Ibid., 174–76.

[39] Ibid., 178–79.

[40] Ibid., 184–85.

point of Christian errors and the reason why, in al-Dimashqī's explanation, the Quran contains condemnations of the distorted doctrines of the Trinity and Incarnation.[41]

To say that this reinterpretation of well-known Christian history is contentious is to state the obvious. Christians would have challenged every detail and insisted upon its factual inaccuracy. Al-Dimashqī, however, is clearly untroubled by this eventuality. The version of this history he preserves, and particularly the key role played by Constantine in perverting original Christian truth, is so securely accepted among his fellow Muslims that any challenge would stand little chance of a hearing, let alone acceptance. It shows how fully Muslims at this time were provided with an explanation of the way in which Christianity originally presented true teachings, as the Quran states, but these were distorted through wilful misinterpretation by a power-seeking elite, and how Islam then came to restore the truth and expose the criminal distortions.

It cannot be assumed that this recasting of the history of Constantine and the early years of the emancipated church is al-Dimashqī's own composition. Certainly, Constantine is conventionally implicated in Muslim explanations of the distorted form of Christianity.[42] And judging by another story al-Dimashqī employs, it might well be the case that with Constantine as well he is drawing upon a well-recognized tradition. This other story concerns St. Paul and his part in the corruption of the faith.

According to al-Dimashqī, Paul, who lived about a hundred and fifty years after Christ, was at first a persecutor of the Christians but then "he showed a desire for Christianity." So he withdrew from the world and was served in his seclusion by four scholars. He took each of these aside in turn and fed him teachings about the nature of Christ, each slightly different, and "in this way they became four sects."[43]

This account is as neat as the story of Constantine, telling how historical Christianity split into the main denominations known within the Muslim world. Its historicity is, of course, entirely spurious since it conflates the ministry of Paul in the first century with the emergence of the non-Chalcedonian churches in the fifth century and after. But al-Dimashqī need not be troubled about questions of factual accuracy, because this etiology had been circulating in different forms since at least the eighth century.[44] And if the historian Sayf ibn ʿUmar (d. 796 or

[41] Ibid., 186–93.

[42] See Samuel M. Stern, "ʿAbd al-Jabbār's Account of How Christ's Religion was Falsified by the Adoption of Roman Customs," *Journal of Theological Studies,* new series 19 (1968): 142–45, 159–76.

[43] Ebied and Thomas, *Muslim-Christian Polemic during the Crusades,* 398–401.

[44] Ibid., 397–99, n. 23.

slightly later), who wrote one of the first accounts of the dissension within the earliest Muslim community, is to be believed, the account can be traced back to ʿAbd Allāh Ibn ʿAbbās, the Prophet's cousin, in the seventh century.[45] In Sayf's version the fourth servant of Paul was a certain al-Muʾmin. He rejected what Paul said, and he and his successors preserved the true monotheistic teaching of Jesus until the coming of Muḥammad.

This example, from later in the *Jawāb,* serves to show how full al-Dimashqī's work is with tales and examples from Islamic polemic and apologetic history, and how by his time this history had achieved a complexity and substantiality that would withstand any attempts by Christians to suggest the facts might tell a different story.

Returning to the first section of the *Jawāb,* having now established to his own satisfaction that Muḥammad was foretold in Christian scripture, that his coming was accompanied by miraculous events, and that Christians only reject this because of distortions in their history, al-Dimashqī now adds eight anecdotes, as he calls them, to support and confirm his argument.[46] They contain further elucidations of Biblical verses to show that these refer to Muḥammad, a reconstruction of the events of the passion and crucifixion of Christ to indicate the truth of the Muslim belief that he himself was not executed, but Judas in his place, and a retelling of further details of Christian history to explain the theologizing attempted by Christians in their endeavor to explain why Christ was sent by God to die.

This great accumulation of arguments goes further than supporting the contention that Muḥammad was truly sent by God, for it gradually retells early Christian history and suggests why the account preserved by Christians is wrong in the places where it diverges from the Quran-based account. Al-Dimashqī exhibits supreme confidence in the approach he takes, with no acknowledgement that his rival reconstruction may not command the acceptance of his Christian opponents. His disdain for them is well demonstrated in his concluding comment to his examination of the Christian account of the death of Christ:

> People with understanding and compassion took some consideration for the Christians and said to advise and admonish them, "If anyone were to relate to you part of this tragic joke from other people, and reported that they had cut themselves off from humankind in a corner of the earth, and that this doctrine was theirs, this creed theirs, and this supposition about the Lord of the worlds was theirs, would you people regard them as reasonable, call them people

[46] Ebied and Thomas, *Muslim-Christian Polemic during the Crusades,* 192–221.

> of religion, say that they followed the religion of any prophet, or had any serious purpose? No, by God! Instead, you would be amazed at God's gentleness and forbearance towards them, and you would conclude that they were in error and ignorance. And as a declaration that he is above all this you would say, 'Our God is holy, and is far above the things with which these people associate him and characterise him.'"[47]

He essentially dismisses the Christian doctrine of the atonement as an irrational fantasy.

Al-Dimashqī rounds off this long and variegated reply to the first point in the letter from Cyprus by dealing with the interpretations given there of Quran verses that refer to the specifically Arabic Quran. The anonymous author maintains that these verses indicate the Quran was not intended as a universal scripture but was sent only for Arabic speakers. However, al-Dimashqī shows, one by one, that the verses do have a universal reference, and so they actually destroy the Christian's case rather than support it. A single example from his response to this matter gives an indication of his uncompromising approach. The Christian has quoted Q 3:164, "By sending them a messenger of their own," as part of his point that Muḥammad was from the Arabs and for them, following the conventional vocalization of the last words, *min anfusihim* (pl. of *nafs*), to understand them as "from among themselves," with the implied restriction upon his activities and relevance. But al-Dimashqī challenges this, reading the last words as *min anfasihim* with the slightly changed vocalization to mean "from the most distinguished among them," in which *anfasihim* is taken as the elative form of the adjective *nafīs,* and the verse is open to mean that Muḥammad was the most distinguished person of his time.[48] This reading had substantial authority, in that the Prophet himself was supposed to have sanctioned it,[49] but it presumably did not have much currency in al-Dimashqī's own time or the anonymous author would not have risked the reading he did. But al-Dimashqī will not concede even this one point, and is prepared to challenge the received reading of this verse in order to maintain his resistance.

This response to the first point made in the letter from Cyprus comprises an onslaught that brings together a substantial variety of scriptural, historical, to some extent rational, and exegetical arguments. Al-Dimashqī evidently intends to remove all possibilities that might suggest his opponent's arguments have validity. He repeats this procedure in all the other twelve sections of his *Jawāb,* building up

[47] Ibid., 216–17.

[48] Ibid., 222–23.

[49] Cf. al-Zamakhsharī, *Kashshāf ʿan Ḥaqāʾiq Ghawāmiḍ al-Tanzīl,* ed. ʿĀdil Aḥmad ʿAbd al-Mawjūd and ʿAlī Muḥammad Muʿawwaḍ (Riyadh, 1998) ad Q 9:128.

one form of argument upon another to provide an unanswerable demonstration that the contents of the letter do not deserve any serious reception.

He is clearly incensed by what he reads in the letter (this is evident from the very start of his reply where he upbraids the author for not using the proper form of commendation when referring to Muḥammad),[50] and maybe he perceives the implicit intention to make Muḥammad and the Quran secondary in importance to Christianity and restricted in relevance to the Arabian peninsula and its inhabitants. His approach, with the confident arguments he adduces, perhaps has something in common with al-Wāsiṭī's refutation, in that it appears to assume from the start that the Christian approach is insincere and bound up with trickery, as well as having no validity in either reason or scripture. Again, words from the opening of his *Jawāb* strongly suggest this: "A letter came . . . exemplary in politeness but alien in intention and shocking in purpose."[51] Beneath its courteous surface he detects duplicity and cunning.

Whatever the true intention of the Christian, who may or may not have meant to imply that Muḥammad and the Quran were secondary to Christianity itself, al-Dimashqī's reply contains a degree of rejection that amounts to vehemence. He does not so much want to show where these particular points are wrong, or even where Christian doctrines and beliefs are wrong, but appears to want to prove that both Christianity as a faith and Christians as people are to be condemned and dismissed as valueless and contemptible. In this, his stance is the same as that of al-Wāsiṭī and Ibn Taymīyah, and it contrasts noticeably with the more measured approach of earlier Muslim masters.

Three or four centuries before al-Dimashqī's explosive reply to Christian claims, Muslim theologians such as al-Māturīdī, al-Bāqillānī, and ʿAbd al-Jabbār also wrote about Christianity. These three leaders of theological thinking left the first surviving treatises of Islamic theology, in which they combined in different forms demonstrations of their own theology with refutations of Christianity and other non-Muslim faiths.[52] With some subtlety they positioned these refutations in relation to their presentation of positive Muslim doctrine so as to make clear that the errors of logic in the way the practitioners of these faiths presented them both made them unviable and also proved the validity and inevitability of the strict monotheism of Islam. Thus, for example, the Muʿtazilī ʿAbd al-Jabbār (who died in 1025, three hundred years before this correspondence between Cyprus and Damascus), in his great theological compendium the *Mughnī,* places his refutation

[51] Ibid., 155.

[52] Cf. David Thomas, "Dialogue with Other Faiths as an Aspect of Islamic Theology," in *Religious Polemic in Context,* ed. Theo L. Hettema and A. van der Kooij (Assen, The Netherlands, 2004), 93–109.

of Christianity, together with attacks on dualist faiths, after his exposition of the Muʿtazilī doctrine of *tawḥīd*. Just as he proves that dualist versions of doctrine are wrong, so he proves that the Trinity, which fragments the being of God, and the Incarnation, which brings divinity into intimate proximity with creaturely humanity, are also wrong in that they cannot be given a rational foundation. According to the severely rational frame of reference he sets himself, his arguments disprove Christianity as uncompromisingly as al-Dimashqī's, but he does so in a measured, systematic way that Christians who observed the same logical method could appreciate and either accept or respond to with arguments of a similar character. The same applies to other tenth-century theological refutations, which forensically analyze the doctrines they have before them and expose their deficiencies with unrelenting logical rigor.

The dispassionate, abstract approach of these Muslim precursors is far from the arguments assembled by al-Dimashqī, not least in the way their argumentative cogency contrasts with the anecdotes and popular tales he employs. Their intention is manifestly to impress their religious opponents with points that must be accepted by rational minds, while al-Dimashqī seems more concerned to appeal to Muslims who would accept his accounts of Christian belief and history and traditions of the Prophet's veracity than to Christians who would decry them as unfounded. His stance is utterly different from his predecessors of a few centuries.

One can imagine that as an individual al-Dimashqī would be less concerned to win the minds of Christians than to display to local Muslims the strength of his case for rejecting the contents of the letter. But one must wonder whether, in the circumstances of the time, with the Christian West in retreat and Islam triumphant in lands that within living memory had been occupied by Crusaders and invaded by Mongol armies, there was a more widespread sense that Christians and their faith did not have to be taken seriously. There was no need to engage on any deep level with the claims of their faith, the intellectual battle had been won just as the military encounter had proved decisive, and it was now a matter of reminding oneself and one's fellow believers about the reasons for accepting the supremacy of Islam.

Al-Dimashqī says nothing to support such suppositions, and the relative superficiality of his huge response to the carefully worked letter cannot be finally explained. But in this instance of an apparently naïve and idealistic Christian constructing fragile possibilities and an intransigent Muslim countering with unconvincing stories is to be found one of the permanent traits of encounters between followers of the two faiths. True meeting of minds was a rare occurrence in this period, though it has hardly occurred between Christians and Muslims at any other.

A Christian Arab Gospel Book: Cairo, Coptic Museum MS Bibl. 90 in its Mamluk Context

The illuminated manuscript of the Arabic Gospels (Cairo, Coptic Museum MS Bibl. 90) (figs. 1–6), written and illuminated in Mamluk Damascus in 1340, is a major expression of Christian religious and artistic practice and scholarship in the Mamluk period. This contribution aims to draw attention to the insight the manuscript offers into Christian cultural, artistic, and intellectual concerns of the middle of the fourteenth century. This will be undertaken through an assessment of the information that is known or can deduced about the book, and a discussion of aspects of its illumination, suggesting that its points of contact with both the Quran and other eastern Christian illuminated manuscripts indicate a discourse representing Arab Christian culture within, and sensitive to, its Islamic environment.

While the manuscript has been known through brief surveys in the catalogues of Marcus Simaika Pasha and Georg Graf before the mid-twentieth century, a fuller description of the illumination in the light of the text is timely (see appendix 1).[1] In

[1] I am grateful to Madame Samiha Abd al-Shaheed, Chief Curator of Manuscripts of the Coptic Museum, Old Cairo, for facilitating my study of the manuscript. I am also grateful to Dr. Filiz Çağman and Dr. Banu Mahir at the Topkapı Sarayı Müzesi as well as Dr. Michel Garel at the Bibliothèque Nationale in Paris for enabling my study of other manuscripts discussed here. The work in Istanbul was made possible through a British Academy Grant in the Humanities. The manuscript is included in Lucy-Anne Hunt and Leslie MacCoull, with the collaboration of Fr. Wadi Abullif and others, *Catalogue of the Illustrated Manuscripts in the Coptic Museum, Old Cairo* (forthcoming, as part of the *Catalogue Général du Musée Copte*).

addition to the four Gospels, the book contains an Introduction and Canon Tables, as well as a Prologue and Tables of Chapters accompanying each Gospel. Each section has illuminated headpieces, and there is a double frontispiece page before St. Matthew's Gospel. A large book (its folios measure 36 x 25 cm) and aniconic in its illumination, it represents a counterweight to the large display Qurans produced under the Mamluks. There is a unity to the book, its organization, and its calligraphy, which points to its purpose as a Christian Arab textual exemplar and work of art. Made of fine, smoothly prepared paper, there is a consistency and finesse to its calligraphy, with its titles in *thuluth, muḥaqqaq,* and Kufic, with the vocalized text throughout in *naskh* against a red scrolled or hatched ground.

The manuscript is very informative (see appendix for description of folios 1–24r and pages numbered 1–624 following thereafter). The note at the end of the book (p. 624) records that it was copied during the primacy of Anbā Buṭrus, the metropolitan of the Copts of Jerusalem and Syria, by the priest Jirjis Abū al-Faḍl; the text was copied and collated with an autograph manuscript written by the Egyptian scribe al-Asʿad ibn al-ʿAssāl.[2] The copyist, Jirjis Abū al-Faḍl, points out that he has not included any of the words added in the Arabic manuscripts, as they do not appear in the Coptic, Greek, or Syriac. He goes on to say that the present manuscript was collated in the presence of this metropolitan and the monk Tūma, known as Ibn al-Ṣāʾigh. This monk is himself known as a copyist.[3] The manuscript's frontispiece page (fol. 20r) also includes the information that the book was made for the library of the lord and shaykh al-Asʿad. Fr. Samir Khalil Samir has suggested that this shaykh al-Asʿad might in fact have been al-Asʿad ibn al-ʿAssāl himself, the scribe of the prototype manuscript, and that this is evidence that his own library was maintained and replenished nearly forty years after his death.[4] This library would have been an important repository and resource for Coptic ecclesiastics and scholars and others, and it should be seen as comparable in importance and influence to the many Islamic libraries of the Mamluk period.

While the copyist's colophon provides, then, a clue to the variety of Christian books that al-Asʿad's library contained, it is necessary to step back to the thirteenth century to the formulation of this version of the Gospels and to the activity of al-Asʿad himself, his family, and intellectual circle. Al-Asʿad ibn al-ʿAssāl's critical version of the Gospels was completed during the course of 1253.[5] Written as an

[2] Samir, "Version arabe," 466, identifies this metropolitan as Buṭrus II (1340–62).

alternative to the available Arabic version of his day, the so-called "Egyptian Vulgate," al-Asʿad produced his version taking into account other Arabic versions, derived from Greek, Syriac, or Coptic, as well as returning to the original Greek, Syriac, and Coptic versions themselves.[6] He worked as a copyist in Damascus, as in 1230, where he acquired manuscripts for his library.[7] He was famed for his skill, and one of the brothers of the Awlād al-ʿAssāl, or their father, is credited with developing *al-khaṭṭ al-asʿadī,* the script identified by Georg Graf as being used in Bibl. 90.[8] The Coptic family Awlād al-ʿAssāl played a major role as intellectuals and leaders within the minority Coptic community with a residence in Cairo. They combined a mastery of Arabic with their knowledge of Coptic, Greek, and Syriac.[9] The commissioning of manuscripts for their libraries formed part of their intellectual activities. The scribe Gabriel (later Patriarch Gabriel III) wrote the bilingual text of a Copto-Arabic Gospel book (Cairo, Coptic Museum Bibl. 93) in 1257 in the household of shaykh al-Amjad ibn al-ʿAssāl, al-Asʿad's half brother, to which he had been attached, in Syria and Cairo, for the previous ten years.[10]

Bible translations were one aspect of the preservation of Coptic Christian culture in the face of the inevitable dominance of Arabic. This ran concurrently with the process of codification, including the writing of Copto-Arabic grammars and dictionaries to ensure the preservation of Coptic culture and also to ensure its future development through the medium of Arabic. An example of this type of synthesis is the Nomocanon, a work dealing with both canon and civil law written in ca. 1235 by al-Ṣafī Abū al-Faḍāʾil ibn al-ʿAssāl, another member of Awlād al-ʿAssāl and brother of al-Asʿad, for the patriarch Kīrillus Ibn Laqlaq.[11] Such a description could as well be applied to the Gospel book Bibl. 90.

Al-Asʿad's famous library in Cairo was enriched both from his acquisitions of manuscripts during his travels outside Egypt—including those to Syria—and the

production of manuscripts in his own house, and it remained a reference point for later writers.[12] It was not unique. An example of another Christian library of the fourteenth century is that of the son of the late Fakhr al-Dīn Abū al-ʿAlāʾ, for which the Istanbul Gospel book Topkapı Sarayı MS Ahmet III 3159 was made. Although undated, the colophon states that the Istanbul Gospels were made for this "old, Christian and venerable" library.[13] We do not know where this library was located, but either Damascus or Cairo is likely in the light of the present discussion. The manuscript has been attributed to Egypt or Syria in the middle or second half of the fourteenth century, with the middle to third quarter being the most likely.[14] It is a smaller manuscript than the Cairo Gospels (18.7 x 13.7 cm) and was surely made as a private prayer book for the inheritor of the library.[15]

The similarity of Bibl. 90 to Quran manuscripts raises the question of the parallel, and even inter-related functions, of Muslim and Christian libraries. This is dependent on contacts between Christians and Muslims, especially through the Mamluk administration, in the service of which Copts were useful as scribes, administrators, and intermediaries with foreign powers.[16] The educational function of Islamic libraries—including those of madrasahs and other institutions—has been highlighted, as has the role of the madrasah in upholding the supremacy of Sunni orthodoxy, not least in the light of Christian attempts to retain the independence

Sharpe III and Kimberly Van Kampen (London and New Castle, DE, 1998), reprinted in idem, *Byzantium, Eastern Christendom and Islam: Art at the Crossroads of the Medieval Mediterranean* (London, 2000), 2:20–21, with pl. 7.

[16] The attacks on Christians in the fourteenth century, including inciting the mob to violence, were not official Mamluk policy: see, recently, Johannes Pahlitzsch, "Mediators between East and West: Christians under Mamluk Rule," *Mamlūk Studies Review* 9, no. 2 (2005): esp. 38–39 with bibliographical summary, n. 24.

they enjoyed under the Ayyubids.[17] The presence of a wide variety of books, including Qurans, in a Muslim Mamluk scholar's library is attested by the books itemized in the estate sale of the Sufi scholar and qadi Burhān al-Dīn al-Nāṣirī, who died in 790/1388.[18] But Christian books also found their way into Muslim libraries. When the library of the Bayt al-Māl of the Great Mosque of Damascus was finally reopened in 1317/1899 by the Ottoman sultan Abd al-Hamid II, it was reported that, in addition to Qurans, there were fragments with "[Biblical] hymns in the old Palestinian Aramaic language . . . treatises on [Christian] theology, literature, and stories dealing with monasticism—all transcribed in the Greek handwriting . . . full copies of the Bible and the Torah. . . . Even poems dating back to the Crusades were also located. These items were variously written in the Coptic, Kurji, Armenian, Hebrew, Samarian, Latin, and French vernaculars."[19]

The Illumination of MS Cairo, Coptic Museum Bibl. 90 (with Reference to Appendix and Figs. 1–6)

The close similarity between the illustration of Bibl. 90 and Quran manuscripts is evident. The large size of the manuscript, the script, type of geometric illumination, and use of gold, as well as ornamental features, penmanship, and bordering are all features in common. David James has even described the manuscript as "almost Islamic in conception" and pointed out that Coptic manuscripts with "Islamic" illumination "can be used to fill gaps in our knowledge of Islamic manuscript illumination, for there are no Qurans from the first fifty years of Mamlūk rule in Egypt."[20] He draws particular attention to a comparison with a Quran in the National (Iran Bastan) Museum in Tehran, written in 739/1338–39 by a named scribe, particularly in the appearance of gold strapwork, blossom design, and "gold-on-gold" decoration, the use of concave cartouches, and the accuracy of workmanship.[21] Indeed, it is on the basis of this comparison that he attributes this Quran, the earliest in the "classical" style following the dominance of the master-illuminator Abū Bakr known as Ṣandal, to Damascus. James also makes comparisons with two Qurans in the Nasser D. Khalili collection of Islamic art,

one of which was written in Damascus by a scribe with an Iranian background.[22] Bibl. 90 is, therefore, a major plank in James' argument for the productivity and superiority of Damascus in relation to Cairo in the production of Quran manuscripts at the time.

And yet, there are also elements comparable with the work of the illuminator Muḥammad ibn Mubādir working in Cairo at the turn of the fourteenth century, again with Coptic links.[23] A section of a Quran, formerly attributed to Damascus in the 1340s, has recently been re-attributed to the hand of Ibn Mubādir working in Cairo for Rukn al-Dīn Baybars al-Jāshnakīr, either as vizier or sultan, in ca. 1298–1310.[24] If correct, the rounded cartouches, strapwork, and use of white beading here all preempt their appearance in Bibl. 90 by thirty to forty years.

Furthermore, alongside the inquiry into the close association with Quran manuscripts, it is also important to view this symbiosis in the light of the Copto-Arabic tradition, and to point to the internal structure and illumination of the manuscript and its decoration as a Christian Arab document. The case needs to be made for a more nuanced discourse to include awareness of Arab Christian visual culture in its own right, rather than assuming that it was merely subsumed into Islamic art. The close links between Cairo and Damascus of the al-ʿAssāl family, and subsequently of the Christian community in general, argue against thinking in terms of a dichotomy between manuscript production in Damascus and Cairo. Instead, it may well be that productivity in these centers was interconnected through family and institutional library networks with their origins in Ayyubid workmanship and scholarship, as well as absorbing Iranian and Iraqi innovations.

Illumination and enlightenment according to a Christian interpretation are stressed in the inscriptions and complement the golden illumination of Bibl. 90. The Kufic inscriptions in white in cartouches at the top and bottom of each of fols. 23v–24r, the dual frontispieces to St. Matthew's Gospel, read "The pure Gospel, the shining lamp which is the source of life and the ship of salvation according to the Holy Apostles" (fig. 4). The Quran terms itself as light, a theme which is borne out in Quranic illumination, including the verse numbering in the margins ringed in gold with golden rays, with examples in the Tehran Quran and another from 600/1203–4 in Istanbul (Turkish and Islamic Museum T 107).[25] This echoes the

divine light illumination suffused from Mamluk mosque lamps, especially of the late thirteenth to mid-fourteenth century, inscribed with the *ayat al-nūr* (Verse of Light, 34:35), and the appearance of the symbol of the lamp in prayer rugs and architectural sculpture and other forms of decoration.[26]

However, the idea of a lamp providing clarity and illumination is also central to Christian thought in the fourteenth century. This is exemplified in the work of the encyclopedist Abū al-Barakāt, known as Ibn Kabar (d. 1324), who codified canon law and church services in his twenty-four-volume work "The Lamp of Darkness for the Elucidation of the Service (of the Church)."[27] A priest at the church of al-Muʿallaqah in Old Cairo, as well as historian and secretary in Sultan Baybars al-Jāshnakīr's administration, Ibn Kabar's writing in the first quarter of the fourteenth century has been seen to typify the elegant use of Arabic by arabophone Christians who were determined, from the end of the twelfth century, to wrest the use of elegant literary Arabic from the sole domain of Muslim writers.[28] His work has been shown to draw directly on al-Asʿad ibn al-ʿAssāl's work.[29] It is not unreasonable to assume, therefore, that he for one had access to al-Asʿad's library.

Canon Tables

While the Introduction is opened (fol. 1v) with the *bismillāh* phrase in black and title in gold, the main illustrative process of the manuscript starts with the Eusebian canon tables. The preliminaries to the canon tables are headed by titling which employs three scripts (fol. 14v, fig. 1). The *bismillāh* phrase is in golden *thuluth* on a white-dotted blue ground, with the title below in *muḥaqqaq,* followed by the vocalized *naskh* text written in black ink and contained in cloud shapes on a red-hatched ground. A similar bold headpiece appears in the fourteenth-century Arabic book in Istanbul (Topkapı Sarayı Library Ahmet III 3519 fol. 176v) containing the *bismillāh* above the introduction to St. John's Gospel (fig. 9), even

[29] Samir, "Version arabe," 448 with n. 4, 457.

though *muḥaqqaq* is used and the cloud shapes surrounding the text itself are in beige.[30] Described as an "hieratic" ornamental script, it has been noted that *thuluth* is rarely used for the text of Qurans; it is rather used in titles, colophons, and headpieces, although a particular example of its use is found in the golden text of the seven-volume Quran in the British Library, written by the scribe Muḥammad ibn al-Waḥīd for Baybars al-Jāshnakīr in 704–5/1304–6.[31] So, while it does not appear again in Bibl. 90, its appearance here is an impressive statement early in the manuscript's illumination.

The canon tables of Bibl. 90 are gilded with lotuses in blue in the spandrels (fig. 1). There are several examples of the appearance of lotuses in Mamluk manuscripts, a feature which is often ascribed to Ilkhanid influence.[32] However, they appear considerably earlier, in thirteenth-century eastern Christian painting, including Copto-Arabic and Syriac manuscript painting. The curtain suspended above the head of St. Luke in the portrait of the evangelist in the mid-thirteenth century Copto-Arabic New Testament (now divided between Cairo and Paris), written by the aforementioned scribe Gabriel, displays a lotus design, as does the cloth draped over the table in the scene of the Supper at Emmaus in a thirteenth-century Syriac lectionary.[33] The lotus design also appears in a double frontispiece in the Istanbul Gospels, at the end of the chapter titles and the beginning of St. John's Gospel (fols. 10v–11r, fig. 8).[34] Relations between eastern Christians—especially Syrians and Armenians—and the Mongols might well explain the introduction

For the British Library Quran (BL Additional MSS 22406–22413) as a whole, see also recently Colin F. Baker, *Qurʾan Manuscripts: Calligraphy, Illumination, Design* (London, 2007), 43–56 with color plates, and http://www.bl.uk/collections/treasures/quran/quran_broadband.htm?top (Turning the Pages).

[32] Martin Lings and Yasin Hamid Safadi, *The Qurʾān* (Catalogue of the exhibition at the British Library 3 April–15 August 1976) (London, 1976), nos 79–80 reproduced in color, plates XII–XIII of the frontispieces of two Qurans, the first donated in 769/1368 and the other attributed to the late fourteenth century. James, *Qurʾāns of the Mamlūks,* points out that the Ilkhanid elements in Mamluk manuscripts precedes 1326, the usually ascribed date.

[33] Paris, Institut Catholique Copte-Arabe 1, fol. 105v (St. Luke), and London BL Add. 7171, fol. 163v (Supper at Emmaus), both conveniently reproduced in Lucy-Anne Hunt, "Christian-Muslim Relations in Painting in Egypt of the Twelfth to mid-Thirteenth Centuries: Sources of Wallpainting at Deir es-Suriani and the Illustration of the New Testament MS Paris, Copte-Arabe 1/Cairo Bibl. 94," *Cahiers Archéologiques* 33 (1985), reprinted in Lucy-Anne Hunt, *Byzantium, Eastern Christendom and Islam: Art at the Crossroads of the Medieval Mediterranean* (London, 1998), respectively 1:261 with fig. 11 and 263 with fig. 23.

[34] Leroy, "Évangélaire arabe," 121, 127 with pl. XI, 1; Dimiriz, "Topkapı Sarayı," 93 with fig. 13.

of this motif in advance of its appearance in Quran manuscripts.[35] Other eastern Christian parallels are apparent. The rounded arches of the canon tables in Bibl. 90 (fig. 1) give way to ogive-shaped arches on fol. 17v. A parallel for these more pointed arches is in the canon tables of an Armenian manuscript illustration of the thirteenth century, now Erevan, Matenadaran MS 9422.[36]

FRONTISPIECES

The frontispiece preceding the prologue to St. Matthew's Gospel (fol. 20r, fig. 2) continues the tripartite sequence established in fol. 14v. The phrase "The Holy Gospel and the Shining Star" is in gold *muḥaqqaq* on a blue ground with white foliage scrolls. This is followed by the phrase below introducing the four Gospels, with Matthew as the first, against the red scrollwork arabesque, with pointed medallions with a lotus design indicating the text. The latter are not unlike the floral motifs "floating" above the text of fol. 1v of a Quran produced in Cairo in 744/1344.[37] The statement that the manuscript was made for al-Asʿad's library comes at the bottom in gold *muḥaqqaq,* with the later inscriptions of patriarchal ownership above and below it.

The double-page frontispiece to St. Matthew's Gospel (fols. 23v–24r, fig. 4) with its structure of four octagons in the central field converging in a star-shaped center, Kufic text of "the pure Gospel, the shining lamp," is appropriately golden, with blue as the secondary color with some green. It is ambitious in its associations. A parallel for the geometric structure of the central field, as well as the floral border beyond the strapwork, is the double frontispiece to the second volume fols. 1v–2r of the Quran of Baybars al-Jāshnakīr illuminated by Ibn Mubādir in Cairo in 704–5/1304–6.[38] A nearer-contemporary example is the left-hand frontispiece of a Quran in Istanbul (Topkapı Sarayı Library 138.M5) dated 741/1341 and attributed to Damascus, in which four eight-pointed stars occupy the main field with Kufic inscription in cartouches above and below, surrounded by strapwork

[38] London BL Add. 22406–13, fols. 1v–2r: see James, *Qurʾāns of the Mamlūks,* 44, fig. 22. For this manuscript see also above, n. 31. Nelson, "Icon at Mt. Sinai," 214 with figs. 24 and 27, draws a parallel between the Bibl. 90 frontispiece and London, BL Or. 848.

and a floral border.[39] Eight-pointed stars are also the main motif of the illuminated left-hand frontispiece to the Istanbul Gospels Topkapı Sarayı Library Ahmet III 3519 (fol. 2r, fig. 7 here), the inscriptions of which also refer to the pure Gospel and the shining lamp.[40] Here, too, there is elaborate bordering, white beading, and blue outlining, and Kufic inscriptions above and below, albeit in gold in the Istanbul Gospels. Also similar is the color balance. While the predominant colors are gold and blue, there is a noticeable mid-green presence in the petals of the eight-pointed stars and octagonal. Another Christian manuscript may be drawn into the discussion. The white Kufic text in blue cartouches and the strapwork with squares and floral border are also found in an Arabic Pentateuch of 1353 (Paris, Bibliothèque Nationale Arabe 12).[41] This manuscript was written by the priest Abū al-Mufaḍḍal collating Greek, Hebrew, and Coptic against a manuscript written by Ibn Kabar.

Prologues

The text of St. Matthew's Prologue (fols. 20v–21v) does not have a titlepiece at the start of the text, but the tripartite formula of rectangular titlepiece with *muḥaqqaq* text on a blue background with gilded scrolls is followed across the openings of the Prologues of Mark (p. 162) and John (p. 470). These have rectangular frames at the top with the *bismillāh* phrase, the title below in gold *muḥaqqaq* against the red foliage scrollwork, and the text below in a cloud pattern against a red hatched ground. Luke (p. 276) reverses the upper and middle fields, with the rectangular blue title band in the center of the page.

An oval medallion on fol. 21v (fig. 3) marks the end of the Prologue to Matthew and the start of a new section. It takes up the bottom third of the page and is ornamented with a foliage scroll design in red penmanship, surrounded by borders of white strapwork and beading, completed by the ubiquitous blue frame. Similar oval section dividers are found in the margins of fourteenth-century Mamluk Quran manuscripts.[42] Another shaped motif, similar although in three parts, is

[39] Fol. 2r: James, *Qurʾāns of the Mamlūks,* 143 fig. 95 (cat. 21), where, despite the attribution to Damascus, he makes a comparison with a Cairene Quran of 731/1132 (cat. 16).

[40] Leroy, ""Évangélaire arabe," 128 with pl. IX, 1. The parallel between the two frontispieces was noted by Nelson, "Icon," 214 with figs 24–25.

[41] Marie-Geneviève Guesdon entry in *L'Art Copte en Égypte: 2000 ans de christianisme* (Catalogue of an exhibition, Institut du monde arabe Paris, 15 May to 3 September 2000 and the Musée de l'Éphèbe au Cap d'Agde, 30 September to 7 January 2001) (Paris, 2000), 85 no. 63 with 57, color reproduction.

[42] Lings and Safadi, *The Qurʾān*, 55 no. 78, reproduces an example from a fourteenth-century Quran in a private collection, which was probably made in Egypt. An oval marking the beginning of a new section of the Quran text *(niṣf ḥizb)* placed vertically at the beginning of a surah in London BL Or 848, fol. 27r, is described and reproduced by Baker, *Qurʾan Manuscripts*, 65–66 with fig. 34.

found on page 163 marking the end of the Prologue to St. Mark's Gospel.

Titles of the Tables of Chapters

The title of the tables of chapters to St. Matthew's Gospel (fols. 21v–22r, fig. 3) is written in a rectangular frame in white *muḥaqqaq* on a gold ground, with small dark crosses in a checkered design at either end. This headpiece is marked with a gilded medallion, surrounded with blue, in the left margin. Thereafter, in the headpieces to the other Gospels, Kufic texts (mostly white) are the norm, in more colorful cartouches of different shapes. Page 164 (table of the chapters of St. Mark's Gospel) sees the introduction of a white Kufic title in a rounded-ended cartouche. Green is used with blue for the scrolled ground, with gilded foliage on a gilded ground at the four edges in the spandrels. A blue, green, and gold hasp extends into the left margin. The color scheme changes again for the headpiece to the table of chapters of St. Luke's Gospel (p. 278), which displays a red Kufic title with green and red foliage scrolls on a gold ground in an oval-ended cartouche. There is gold foliage on a red ground in the corners and the hasp is in gold, red, and blue. Finally, the title of the table of chapters of St. John's Gospel (p. 473, fig. 6) is in white Kufic contained in a cartouche of interlocking semicircular shapes drawn in white, blue, and gold. Behind the script are gold foliage scrolls on a blue ground. At the four corners of the rectangular frame is a design of gold foliage on a red ground, as in St. Luke, suggesting the same illuminator's hand. A blue and white hasp, with a triple leaf tinged with red, extends into the right margin. The interlocking shapes of this last headpiece are also found in the headpieces to the books of Exodus and Leviticus in the Paris Pentateuch, Paris Bibliothèque Nationale MS Arabe 12.[43] Such interlocking shapes reappear in the Eastern Kufic surah headings in a Quran illuminated in Cairo in 734/1334.[44]

Gospel Texts

The opening to St. Matthew's Gospel (pp. 1–2, fig. 5) displays white Kufic inscriptions against a blue ground with gilded foliage scrolls which compare with headpieces in the Pentateuch in Paris, Bibliothèque Nationale MS Arabe 12 of 1358.[45] It also very closely resembles a folio from the Quran in Tehran, National

Oval marginal markers are a special feature of the section of a Quran recently re-attributed to the workmanship of Muḥammad ibn Mubādir, ca. 1298–1310; see Fraser, *Geometry in Gold*, 16 with diagram F in color. See also n. 24 above.

[43] Fols. 72v–73r; 132v–133r.

[44] Cairo, National Library 81, fols. 375v–376r; Lings, *The Quranic Art of Calligraphy*, 119 with color plate 63.

[45] *L'Art Copte en Egypte,* no. 63 with 57, color plate of fols. 2v–3r, the titlepiece and beginning of Genesis.

(Bastan) Museum MS 2061 of 739/1339–39 in several further respects. These include the white Kufic inscriptions in rounded-ended cartouches linked to a floral medallion on either side, the strapwork border with intermittent squares, the framing of white beading and blue outlining, and medallions in the outer margins.[46] As noted earlier, very similar features appear in a Quran of contemporary date in the Nasser D. Khalili collection.[47] The use of color is also paralleled elsewhere, including the mid-green, with the white, blue, and gold in the frontispiece page in the fourteenth-century Quran in London (British Library Or. 848), later donated to a mosque in Cairo during the reign of Sultan Faraj ibn Barqūq.[48]

As with the titles to the table of chapters, a wider range of colors make an appearance in the headpieces preceding the Gospels of Saints Mark, Luke, and John. The gold *bismillāh* text in *muḥaqqaq* preceding St. Mark's and St. Luke's Gospels (pp. 166 and 281) is set against colorful red scrolls on a blue ground. The text numbering below, on a gray scrolled ground, has a pendant floral marker very similar to those in fol. 20r (fig. 2). The white *bismillāh* text preceding John (p. 475) reverts to the gold foliage scrolls on a blue ground, but the circles of the letters are filled in red, and the text below is in blue Kufic against beige foliage scrolls. The floral motif in the center of the gilded numbering text harks back to those at the center of the octagons in fols 23v–24r (fig. 4), and that in the circular medallion in the margin is similarly drawn and colored to the spandrels of the canon tables (fol. 15r, fig. 1). This similarity suggests that despite variety in the illumination—including the varied colored scheme of the titles of the tables of chapters—it probably represents the work of one illuminator, who was probably the scribe, the priest Jirjis Abū al-Faḍl ibn Luṭf Allāh.

Conclusion

The Gospel book Bibl. 90 raises a number of issues. Its colophon elucidates the planning and production of a major Christian Arab manuscript—the copy of al-Asʿad's autograph manuscript of the four Gospels—for the important library that bore his name. This is not unlike the combined effort of the production of a Mamluk Quran. Its illumination then provides an insight into the articulation of Christian Arabic calligraphy and illumination, subtly engaging with its Quranic counterparts while remaining distinct from them. The book itself emerges as an

[47] Idem, *The Master Scribes*, 180 with color plates, 181–82.5 (cat. 44). James related the manuscript to that produced from the Great Mosque in Damascus from the same collection: ibid., 176 with plates, pp. 177–79 (cat. 43.)

[48] Lings and Safadi, *The Qurʾān*, 55 no. 75 with cover plate in color; Baker, *Qurʾan Manuscripts,* 65 with fig. 33 in color. This manuscript was part of the same Quran as Dublin, Chester Beatty Library MS 1465, for which see n. 14 above.

instrument of Christian-Muslim debate and exchange in the Mamluk period.

The large size of the book and its pristine state (apart from the addition of the printed illustrations in 1915, for which see the appendix here) indicate that it was intended to stand as an exemplar, a definitive version, a display copy. Qurans too were designated to be copied.[49] Several people were also often involved in their making. Such a lavish Gospel book as Bibl. 90 must have been intended to impress, and it can be suggested that one of its purposes may also have been to dissuade those who may have been tempted to convert to Islam.

The fact that the three men—the copyist/priest, the monk, and the metropolitan of the Copts of Jerusalem and Syria—came together in Damascus for the purpose of copying and collating this manuscript indicates the importance of the project. One may speculate as to why this took place in Damascus. It may well have been due to the availability of books and libraries there; the copyist's note (p. 624) suggests that Coptic, Greek, and Syriac manuscripts were on hand. It may also be attributed to the presence of diverse Christian groups and their respective manuscript collections in Damascus in the fourteenth century.[50] Given their similarities with Bibl. 90, it is possible that the Paris Pentateuch and Istanbul Gospels may also have been made in Damascus, an avenue which needs further exploration, taking into account the Istanbul Gospel's figural evangelist portraits as well. The scribal tradition in Damascus may also have played a part; or perhaps it was for political reasons. However, given that both individuals and books can and did travel, and also given that close associations existed between Cairo and Damascus (as well as other centers such as Jerusalem), it may well be that artistic practices were similar in both places. Above all, Bibl. 90 demonstrates the role of the visual within our growing knowledge of Arab Christian culture operating within the Islamic Mamluk state.

---

[49] Cairo, National Library 72 part 19, made in 713/1313 for a royal patron al-Malik al-Nāṣir Muḥammad, was given as *waqf* in 726/1326 to a funerary foundation in Cairo with the intention that it be used as a model for copying; see Lings, *Quranic Art,* 119 with pl. 54.

[50] The existence of these groups is touched on by Juan Pedro Montferrer-Sala, "An Arabic-Muslim quotation of a biblical text: Ibn Kathīr's al-Bidāya wa-l-nihāya and the construction of the arc of the covenant," in *Studies in the Christian Arabic Heritage in Honour of Father Prof. Dr Samir Khalil Samir S. J. at the Occasion of his Sixty-Fifth Birthday,* ed. Rifaat Ebied and Herman Teule (Louvain, 2004), 265 with n. 5, 277. Johannes Pahlitzsch, "The Translation of the Byzantine *Procheiros Nomos* into Arabic: Techniques and Cultural Context," *Byzantinoslavica* 65 (2007): 19–29, esp. 22–23, points to Damascus as a center of Melkite Arabic learning in the thirteenth century on the grounds that several manuscripts of the *Procheiros nomos* were copied there anew by collating different Arabic and Greek manuscripts.

APPENDIX

Cairo, Coptic Museum Library MS Bibl. 90.

Contents:
Four Gospels in Arabic, written in Damascus in 1340 according to the recension of al-Asʿad ibn al-ʿAssāl. Prefaced by an introduction and canon tables, with a prologue and tables of chapters accompanying each Gospel.

1. Introduction
Fols. 1v–13r: Introduction to the Gospels, headed with the *bismillāh* phrase in black ink, and gilded title. Punctuation: blue rosettes.

2. Canon Tables
Fol. 14v (fig. 1): Preliminaries to the Eusebian canon tables. The tables are headed (fol. 14v) by the *bismillāh* phrase in *thuluth* script, gilded, on a blue ground with white dots in a rectangular frame. Below this, against a red cross-hatched ground, is the title in gold in *muḥaqqaq* script and explanatory text in vocalized black *naskh*. The page is completed by a survey of the ten canons, in tabular form, written in gold and black. The page is bordered with white beading, completed with a thin line of blue, with finials at the four corners. This framing is characteristic of the illuminated pages of the manuscript as a whole.

Fols. 15r (fig. 1)–18v: Canon tables. Each page is headed by the title in gold in *muḥaqqaq* in a rectangular cross-hatched red frame. Below this stands the framing device of the canons, with gilded columns with gilded capitals and column bases supporting spandrels of a lotus design on a blue ground, between which the names of the evangelists appear in gold. This structure is doubled up on fols. 17r, 18r, and 18v, while the arches of fol. 17v are ogive rather than rounded.

Base of fol. 18r–fol. 19r: Tabulated lists of texts particular to specific Gospels, with the title for each Gospel in *muḥaqqaq* in gold in a rectangular frame on a red cross-hatched ground.

3. 20r Frontispiece Page (Fig. 2)
The folio is divided into three: (1) At the top, written in *muḥaqqaq* in gold against white foliage scrolls on a blue ground, is the text "The Holy Gospel and the shining star." (2) Below, in *naskh* in black ink and drawn around with a fine red scrollwork arabesque, flanked by two pointed medallion lotus-style markers, acting as text markers, the text continues: "legislation of help and the source of

life, written by the four pure disciples in far-away countries and at different times, and they are Matthew, Mark, Luke, and John; the first of these good tidings is that of the apostle Matthew." (3) At the bottom, written in *muḥaqqaq* in gold, is the text "For the sublime library of the lord and master, the shaykh al-Asʿad, may God conserve it."

Above and below this third text are later statements of ownership, in black ink (see below, Inscriptions and Stamps).

4. St. Matthew's Gospel

Fols. 20v–21v: Prologue to Matthew, written against a red-hatched ground, scattered with triple black dots, with gold rosette punctuation marks finished in red and blue, completed by an elliptical shape at the base of fol. 21v (fig. 3) containing a delicate foliage design in red and bordered with bands of white interlace and white beading.

Fols. 22r–23r: Table of chapters (85), written in three series in black ink, numbered in gold. Fol. 22r (fig. 3): title written in white *muḥaqqaq* on a gold ground within rectangular frame with decorative end pieces in gold and blue forming small crosses, and a circular medallion in the margin.

Fols. 23v–24r (fig. 4): Dual frontispieces to Matthew's Gospel. The Kufic inscriptions in white in cartouches at top and bottom of each page, against a blue ground with gold foliage tendrils, read "The pure Gospel, the shining lamp which is the source of life and the ship of salvation according to the Holy Apostles." At the heart of the page four large octagons and a smaller central one interlock. Each contain floral motifs and the whole design comes to rest at a central, floral-filled star.

Fol. 24v, modern Arabic page 1–page 161: Text of St. Matthew's Gospel.

Pages 1–2 (fig. 5): Beginning of text of St. Matthew's Gospel with white Kufic headings in blue cartouches with gold floral scrolling. These are linked, with white beading banding, to roundels which each contain a flower, with blue outer petals and green inner ones. The text is bordered with strapwork interspersed with small blue squares. Initial chapter numbering (Coptic) "a" is in dark red.

5. St. Mark's Gospel

Page 162–163: Prologue to St. Mark's Gospel.

Page 162 (recto page): The *bismillāh* phrase in gold *muḥaqqaq* at the top of the page is contained within a blue rectangular frame with gilded foliage scrolls. The title

of Mark's Gospel below is in gold *muḥaqqaq* on a red foliage scrollwork ground with small triple black dots. A floral marker stands to the left side of the rectangle. The main text below is written in black *naskh* in cloud patterning between red cross-hatching. Page 163 (verso page): completion of the text between the red cross-hatching with black dots. There is a tripartite shape at the bottom of the page in a rectangular band, with scrollwork arabesques in red.

Pages 164–165: Table of chapters (52).
Page 164 (recto page): In a cartouche, a white Kufic title ("translation of the divisions of Mark the Apostle") to the Prologue is written against blue-green scrolls, bordered with gold foliage on a red ground. A hasp in gold, green, and blue is attached to the left of the rectangular frame.
Pages 166–275: Text of St. Mark's Gospel.
Page 166 (recto page): The *bismillāh* phrase at the top appears in gold *muḥaqqaq* against a red and blue ground, with a gold and blue hasp to the left of the rectangular frame beaded in white. The *muḥaqqaq* title below is in gold against a gray finely scrolled, dotted ground, with a green, blue, and gold marker, with an initial (Coptic) "A" in the margin. Gilded rosettes encircled in red, gold, and blue form the punctuation in the text of Mark's Gospel.

6. St. Luke's Gospel
Pages 276–277: Prologue to St. Luke's Gospel.
Page 276 (recto page): The *bismillāh* phrase is in gold *muḥaqqaq* against a red scrollwork arabesque ground. In a band in the middle of the page is the title in red *muḥaqqaq* against a background of blue scrolls on a gold ground. The text, in *naskh* black ink against the red hatched, black dotted ground, completes the lower part of the page, and the next, between red hatching. Blue floral punctuation marks.

Pages 278r–280: Table of chapters.
Page 278 (recto page): At the top, the red Kufic title is in a gold ground, against green foliage scrolls in an oval-ended cartouche. Gold leaves on a red ground complete the rectangular frame, which is a simple blue line rather than the beading. Hasp in blue, gold, and red to the left.

Pages 281–468: Text of St. Luke's Gospel.
Page 281 (verso page): The *bismillāh* phrase at the top is in gold *muḥaqqaq*, against a background of red scrolls on a blue ground. The heading below is also in gold *muḥaqqaq,* against a red scrolled ground, with white beaded and blue bordering.

The gold rosette punctuation in Luke is sometimes encircled in red, gold, and blue.

7. St. John's Gospel

Pages 470–472: Prologue to St. John's Gospel.
Page 470 (recto page): The *bismillāh* phrase at the top is in a rectangular frame in red *muḥaqqaq* behind which are gold foliage scrolls on a blue ground, and a hasp to the left in gold, blue, and red. Below this is the title in gold *muḥaqqaq* against red scrollwork arabesque. Below and subsequent text of the table of chapters is written in black *naskh* in cloud patterning between red hatching with triple black dots.

Pages 473 (fig. 6)–474: Table of chapters (45).
Page 473 (verso page): Title written in white Kufic in interlocking shapes in a rectangular band with golden scrolls behind on a blue ground. In the corners are gold foliage motifs on a red ground. The tables have the same format as the tables preceding the other Gospels, also written in gold and black ink.

Pages 475–624: Text of St. John's Gospel.
Page 475: The *bismillāh* text is in white *muḥaqqaq* in a rectangular panel against gold scrolls on a blue ground, with some of the "eyes" of the letters filled in red. The heading below is in blue Kufic against beige scrollwork arabesque. The chapter numbering heading is in gold, with a floral star design in the centre, and there is an A marker in the margin. A circular hasp in the margin is in blue, red, and gold. Gold/blue bordering. Punctuation marks are ringed in red, gold, and blue.

Folios:
345 folios. Paper. Folios measure 36 x 25 cm. There are 9 binding pages in front, with one marbled page (opposite the binding) and the same in the back of the book. European numbering (which actually starts on the original second page of the manuscript) exists to fol. 24. The manuscript is thereafter (from fol. 24v to the end) numbered consecutively in modern Arabic numbering, pages 1 to 624. The earlier Arabic numbering, on the rectos, is partially preserved. Graf's correct numbering is followed in this description.

Ruling:
Ruled on verso, 11 lines of text in a single central column (26 x 17 cm), written through the ruled line, with an additional margin of 2.6 cm to contain numberings

Script:
Vocalized *naskh* in black ink, elegant, regular, and vocalized, with gilded rosettes as punctuation. There are blue rosettes as punctuation in the Introduction.

Quiring:
Quires are numbered in Arabic in red on the top left of rectos. The quiring is in quinions: 34 x 5 +5 folios (this excludes binding folios).

Binding:
Twentieth-century binding of red leather stamped with a gold decorated cross within two gilded borders.

Inscriptions and stamps:
Fol. 1r: titles and stamps of the Patriarch Cyril V.
Fol. 13v: The book is signed and sealed to left and right by the patriarch Cyril V A.D. 1915. The signature above the left seal reads "the 112th Patriarch of Alexandria."

Fol. 20r (fig. 2): In the centre of the lower part of the page is the original gilded dedication to the library of Shaykh al-Asʿad (see above, fol. 20r). Below it is a later inscription recording that the manuscript came into the possession of the patriarchal library in the month of Hatūr 1127 A.M. (November 1410 A.D.) and asserting that no one has the authority to remove it. Above it, with the stamps of Patriarch Cyril V and dated 15 Baramūda 1631 A.M. (23 April 1915 A.D.), is another inscription asserting that the book is the pious endowment of the Coptic Orthodox Patriarchate in Cairo and Alexandria.[51]

Page 624: A scribal note at the bottom of the page, at the end of St. John's Gospel, gives the information that the manuscript was completed in 1056 (era of the Martyrs), 1652 (Alexandrian era), 751 (A.H.), equivalent to 18 October 1340 A.D., during the primacy of Buṭrus, metropolitan of the Copts in Jerusalem and Syria. It was copied by the priest Jirjis Abu al-Faḍl ibn Luṭf Allāh and collated with the original manuscript written by the hand of the shaykh, the venerable master al-Asʿad Abū al-Faraj Hibat Allāh, the Egyptian scribe known as Ibn al-ʿAssāl. He here asks that everyone who uses the book beseech for him the mercy and pardon of God. He also notes that he has not included words added in Arabic manuscripts because these are not found in the Coptic, Greek, or Syriac.

[51] The Coptic Museum was founded in 1910 by Marcus Simaika Pasha. It is now under the authority of the Egyptian Ministry of Culture but was until 1931 under the control of the Coptic Patriarchate (http://www.copticmuseum.gov/english/internal/brief_history.asp).

The present manuscript was copied and collated in the presence of the above mentioned Buṭrus, metropolitan of Jerusalem, and the monk Tūmā, known as the monk Ibn al-Ṣāʾigh.

EARLY TWENTIETH-CENTURY NEW TESTAMENT RUSSIAN PRINTED ILLUSTRATIONS ADDED TO THE TEXT, 1915:
Last binding page verso: Nativity.
Fol. 19v: Crucifixion.
Page 275: Annunciation; Angels.
Page 469: Baptism; Last Supper.

Some of these accompany later inscriptions, e.g., Fol. 19v: the image of the Crucifixion is pasted onto the folio below the added text "In the name of the One God the Father the Son and the Holy Spirit, this book is read by the most miserable and shameful of servants." This and the other Russian images were added in 1915.

At the Limits of Communal Autonomy: Jewish Bids for Intervention from the Mamluk State

The mid fifteenth century in Egypt witnessed an unusual concentration of state legislation in Jewish affairs. In 1442, inspectors looking for signs of illegal synagogue repairs discovered Arabic inscriptions on a synagogue minbar that they read as Aḥmad and Muḥammad and thus signs of blasphemy, since anyone ascending the minbar would have been forced to step on them. The investigation resulted in the destruction of the minbar and three confessions. Those who confessed were beaten publicly; two died of their wounds and the third converted to Islam. Churches and synagogues throughout the capital were subsequently inspected and fined.[1] Six years later, in 1448, an edict from Cairo prohibited Christian and Jewish doctors from treating Muslims, though in 1463, when the sultan reissued a previous ban on *dhimmī* employment in the state bureaucracy, he made the prudent exception of physicians and moneychangers.[2] Were Jews and Christians the hapless victims of a rapacious Mamluk state bent on interfering in their communal life and mulcting their property to the maximum extent possible?

In principle, premodern Jews held the twin prerogatives of judicial and administrative autonomy, which granted them the latitude to adjudicate court cases according to Jewish law and appoint leaders to administer public affairs. But a long-standing historiographic consensus has taken these twin prerogatives to indicate—sometimes despite evidence to the contrary—that in practice, Jews sought neither redress in Islamic courts nor the interference of state authorities, for fear of eroding their communal autonomy. Scholars have now questioned this consensus on the basis of Fatimid, Ottoman, and medieval Iberian records, and their questions might profitably be asked of Mamluk material as well: did *dhimmī*s jealously guard their communal autonomy, balking at the intervention of the chancery or the qadi courts in their affairs? Did they, in fact, actively

[1] For details and the sources, see Mark R. Cohen, "Jews in the Mamluk Environment: The Crisis of 1442 (a Geniza Study)," *Bulletin of the School of Oriental and African Studies* 47 (1984): 425–48, and below.

protect their right to communal autonomy, and were they as loath to invite the state and Muslim judicial authorities into their affairs as the entrenched view has maintained?[3]

Jews in the Mamluk period stood heir to a long political tradition of both leaders and factions within the community utilizing the state to help promote personal or collective interests. The state, for its part, gladly interfered in their affairs when asked to do so, not because it felt nefariously compelled to control its *dhimmī* subjects, but because its interest in extending the domain of its administrative power coincided with the Jews' own desire to govern their community and be governed more effectively (i.e., with resort to stronger punitive sanctions against their co-religionists). Most often, then, the state intervened at the behest of the *dhimmī*s themselves and according to the agenda that they dictated.

This suggests the need to revisit the notion that the *dhimmī* communities lay locked in a struggle over their communal autonomy with the Mamluk state. Such a notion substitutes a set of presumptions about the structure of Mamluk-*dhimmī* relations for actual analysis of how power operated. It also fails to consider a tradition of Jewish politics, dating from well before the Islamic conquests, according to which Jews cultivated vertical alliances with the highest government authorities and negotiated both their status and their judicial and administrative privileges with them directly. Yosef Hayim Yerushalmi has commented at length on this "royal alliance" and noted that Jews in early modern Christian Europe, after the series of expulsions that culminated in their exile from the entire Iberian peninsula, continued to place their faith in it even after it had failed them.[4] The

"royal alliance," as both an arrangement of political expediency and a topos sustained by habit, was a persistent feature of Jewish politics under Muslim rule as well.

This article will argue, first, that repeated state intervention in *dhimmī* affairs was not new to the Mamluk period, but continued a long-standing pattern of administrative relations between *dhimmī*s and the palace in Cairo. That pattern originated during the Fatimid period—a strange statement at first glance, since the Fatimids were notoriously laissez-faire in their dealings with *dhimmī*s, while medieval chronicles lauded the Ayyubids and Mamluks as having restored Sunni Islam and returned the *dhimmah* to their rightful place in the religious hierarchy. The Fatimids used chancery petitions and rescripts *(al-tawqīʿ ʿalá al-qiṣaṣ)* as a method of rule, effectively handing their subjects the latitude to arrange their own communities' administrative structures, which the chancery then ratified; the Ayyubids and Mamluks, on the other hand, are generally viewed as having tightened the reins of the administration and shifted power from the populace to the palace. This shift would seem to suggest a radical reconfiguration of the relationship between *dhimmī*s and the palace; how can the Mamluk pattern be seen as continuing an earlier Fatimid one?

The answer hinges on two questions. The first is whether one sees the initiative for Mamluk legislation as coming from the government or the *dhimmī*s themselves. In fact, it came from both, for different reasons at various times. Though the Mamluk era did witness a progressive deepening of state and judicial intervention, it did not necessarily lead to the administrative passivity of the Jewish community, let alone to the situation of persecution and decline that is a motif of modern historiography on Mamluk Jews. On the contrary: the Jews responded to centralization and intensified government control by utilizing the system in new and sometimes ingenious ways. The second question is how the Ayyubid and Mamluk chroniclers represented the regimes whose deeds they preserved for posterity. Precisely the desire to paint a picture of Sunni orthodoxy and *dhimmī* subservience sometimes led the medieval historians to overlook the fact that *dhimmī*s themselves often created and helped to maintain the state's interest in their affairs. The historians thereby made the regime seem more omnipotent than it really was.

All this, in turn, touches on the problem of what a trend in modern historiography has termed "agency": the extent to which subalterns are capable of acting in furtherance of their own interests or exerting pressure on those in power.[5] Subaltern agency under the Mamluks has recently been the subject of several important studies that have inspired the approach I take in this article. Yossef Rapoport

[5] The now classic theoretical statement of subaltern power is James C. Scott, *Domination and the Arts of Resistance: Hidden Transcripts* (New Haven and London, 1990).

has argued that when in 1265 Baybars (r. 1260–77) decreed the appointment of four chief qadis, one from each Sunni school, the effect was not just to regulate and organize the judiciary, but to allow claimants a modicum of flexibility in seeking justice, regardless of which school they claimed personally.[6] Rapoport has extended the search for agency to women, arguing that divorce in medieval Egypt was frequent and not merely the result of a patriarchal order in which men could repudiate their wives at will. "The majority of divorces in Mamluk society were consensual separations," he writes, demonstrating the economic independence of women sustained by dowries, banking instruments, and paid labor, particularly textile production.[7] Similarly, in an exhaustively researched dissertation, Tamer El-Leithy argues that *dhimmī* subjects of the Mamluks used to their advantage the legal multiplicity afforded by the four *madhāhib,* gaining economic and legal concessions by seeking different rulings from the qadis of one school or another. He demonstrates that Copts utilized an extraordinarily sophisticated set of techniques for manipulating the Islamic legal system to their advantage. One such strategy he discusses is single-generation conversion, whereby male heads of household converted to Islam while keeping their wives and children Christian or Jewish, thus both exempting themselves from the *jizyah* and preserving their family's inheritance.[8] These studies suggest the importance of considering power not just as a prerogative of the elite but as the product of negotiation between those on various levels of the social, judicial, and administrative hierarchy. To consider the elite point of view alone results in a distortion of the historical events under consideration—and of the meaning of power.

The second argument I will make, then, concerns the models with which historians have habitually understood religious hierarchies and, in particular, *dhimmī* communities in the medieval Near East. I will suggest that these models rest on the presumption that any act involving politics and the law served the interests of religious piety and communal unity. In fact, the evidence suggests that more prevalent motives were convenience, self-interest, and political advantage. The interests of elites on both sides dictated how the memory of Mamluk-*dhimmī* relations has been passed on for posterity. The pyramidal model of Muslim-*dhimmī* relations—or the rigid model of state power that pits the Mamluk state against its *dhimmī* subjects—might, then, be replaced with a more flexible one in which those

elites shared interests and did what they could to wield power over others.[9]

FATIMID PRECEDENTS

Beginning with Fatimid rule from Cairo—the first period in which there is substantial documentation about Jews under Islamic rule—Jewish elites utilized the caliph's chancery to further their pursuit of power over their followers and over each other. Both of the Jewish *madhhab*s, the Rabbanites and the Qaraites, proved capable of availing themselves of governmental authority and possessed a subtle understanding of high politics. That understanding increased progressively over their decades of experience with the caliphal court.[10]

Between 969 and 1041, Jews submitted no fewer than seventeen petitions to the Fatimid chancery or to local governors in Palestine seeking to support a particular leader or to check the rights and prerogatives of one political faction in the community and further the interests of another.[11] All of these decrees served them as instruments of power in communal conflicts, and all point to the same general pattern: Jews sought intervention in order to strengthen the hand of a reigning leader or in a situation of political deadlock, when neither of the Jewish factions managed to impose its will upon the other without resort to the state. This pattern is in keeping with the paradoxical nature of *dhimmī* administrative autonomy. Though in theory the Jewish community governed its members independently from the state, in fact it depended on the government for its exercise of power, and especially of physical coercion.

For this reason, too, Jewish courtiers played an enormously important role in communal life. They were the ones who offered their co-religionists access to the chancery. It is no accident that thirteen of the petitions date from the second quarter of the eleventh century, a period in which three Jews held formal or informal positions at court and also served as leaders within the Jewish community. All of them, coincidentally, were Qaraite: Abū Naṣr Ḥesed al-Tustarī and his brother Abū Sahl Ibrāhīm, in their capacity as long-distance traders and bankers, served the court of al-Ẓāhir (1021–36) as purveyors of luxury goods

[9] See the judicious comments of Simonsohn, "Communal Boundaries Reconsidered," 329–31.

[10] Jews used the term *madhhab* to refer to both the Rabbanites and Qaraites throughout the Fatimid, Ayyubid, and Mamluk periods. On the former, see Rustow, *Heresy and the Politics of Community,* index, s.v. *madhhab,* and idem, "Karaites Real and Imagined," 46–48; on the latter, see ibid., 51, 56.

[11] Only seven of these seventeen petitions have been preserved (some as decrees, others in copies or drafts, all but one in the Cairo Geniza); the other ten appear as references in Geniza letters or in other petitions. Details in Marina Rustow, "Fatimid Decrees and Jewish Communal Politics," in *Reason and Faith in Medieval Judaism and Islam,* ed. María Ángeles Gallego (Leiden, forthcoming). The one non-Geniza manuscript was preserved in the archives of the Qaraite synagogue in Cairo, on which see below, n. 61.

and achieved concrete posts only under al-Mustanṣir (1036–94); and David ben Yiṣḥaq served as an appointee in one of the most important ministries, the *dīwān al-kharāj*. All three helped to procure caliphal investitures for the *gaʾon* of the Jerusalem yeshiva, who was recognized as the head of the Rabbanite Jews in the realm.[12]

One additional example from beyond this corpus illustrates the paradoxes of communal autonomy in practice. In 1027, a certain Ibrāhīm bar Shemuʾel al-Andalusī approached the rabbinical court of the Palestinian-rite synagogue of Fustat for litigation in some matter. One of the court's three judges, having heard his case in a previous session, excused himself from the case with the claim that he was too busy to hear it again. But al-Andalusī dug in his heels, refusing to have his case heard by anyone else. His next step was to petition an unspecified high-ranking Fatimid bureaucrat to issue a decree *(tawqīʿ)* to the governor *(qāʾid)* of Fustat-Cairo, presumably either ordering the judge in question to attend the session or allowing al-Andalusī to have his case heard in an Islamic court. When he returned to the court, the judges questioned him about his temerity in going over the heads of the court's members. Al-Andalusī retorted that he did so only to obtain what was rightfully his. And it worked: the court resolved that if it did not attend to al-Andalusī's case by the end of the month, he was free to seek justice in an Islamic one.[13] It seems highly paradoxical that a petition to the government should have resulted in his case being heard in a Jewish court, as though he needed to go outside the Jewish community to seek redress within the Jewish community. But in fact, this was the standard pattern: Jews called upon authorities outside the Jewish legal and administrative apparatus in order to solve problems within it.

The case, then, provides a concrete statement of the paradoxes of communal autonomy as it was established under the Fatimids. *Dhimmī*s did not regard the exercise of their autonomy as entailing a vacuum seal between themselves and non-Jews, but rather saw the ways in which their legal and administrative system

[12] Rustow, *Heresy and the Politics of Community,* with references to numerous previous studies.

[13] The record is from the legal court itself and is dated 16 Ṭevet 1339 Seleucid (December 18, 1027). Cambridge University Library, Taylor-Schechter Collection (hereafter T-S), 13 J 5.1, in Judeo-Arabic; S. D. Goitein's unpublished edition is available online through the Princeton Geniza Project (http://www.princeton.edu/~geniza/). See also the edition and Hebrew translation (with facsimile of verso) in Elinoar Bareket, *Shafrir Mitsrayim: ha-hanhagah ha-Yehudit be-Fusṭaṭ ba-maḥatsit ha-rishonah shel ha-meʾah ha-aḥat-ʿeśreh* (Tel Aviv, 1995), 215–18; and S. D. Goitein, *A Mediterranean Society: The Jewish Communities of the Arab World as Portrayed in the Documents of the Cairo Geniza* (Berkeley, 1967–93), 2:321–22, where he mentions a similar case from 1016 (Bodleian MS Heb. B 13.42), a fragmentary court record about a merchant from Palermo who had waited a month for a Jewish court to hear his case. When he complained to the police about this, they apprehended one of the Jewish judges for a night.

was dependent on the state and the Islamic courts. It also shows that Jews did not regard judicial and administrative autonomy as identical, nor were they likely to conflate the two types of redress—appealing to the government and appealing to the Islamic courts. (The blanket condemnations of Jews appealing to non-Jewish authorities that one finds in rabbinic literature and in some modern historiography are misleading: medieval Jews recognized that judicial and administrative redress differed in significant ways.)

This pattern was sustained throughout the Middle Ages in Egypt and Syria. Jews lodged appeals to the government to do three sorts of things: to confirm the appointment of some communal leader or to strengthen his hand politically; to compel their own leaders to do things they might not wish to do; or to oppose some prior government decree, usually one brought about at the behest of another Jewish leader or faction. Sometimes those situations overlapped, as when the *gaʾon* of the Palestinian-rite academy (1025–51) and head of the Rabbanite Jews in the Fatimid realm, Shelomoh ben Yehudah, asked the caliph to repeal an appointment he had granted to a rival, Yūsuf al-Sijilmāsī, the chief of an Iraqi-rite community of Jews that sought to escape the *gaʾon*'s jurisdiction.[14] This pattern continued through the Ayyubid and Mamluk periods, with some important variations.

From Chancery to Qadi: the Ayyubid and Mamluk Periods

The importance of judicial and administrative appeal as political instruments continued throughout the Ayyubid period. While the Fatimids had been singularly unconcerned with the details of religious practices among their *dhimmī* subjects (on the reasoning, perhaps, that all non-Ismāʿīlīs were equally benighted), the Ayyubids styled themselves restorers of Sunni orthodoxy, and this changed the rules of the game. One might think that the self-styled Ayyubid restoration would have restricted the options for redress in Jewish factional conflicts, since notions of orthodoxy and heterodoxy now pervaded religious discourse, and there could be only one correct party. In fact, Jewish factions themselves now began to use the rhetoric of orthodoxy against one another.

Goitein, "Congregation versus Community: An Unknown Chapter in the Communal History of Jewish Palestine," *Jewish Quarterly Review* 44 (1954): 291–304, with facsimile between pages 291 and 292; see his revised interpretation in idem, "Petitions to the Fatimid Caliphs from the Cairo Geniza," *Jewish Quarterly Review* 45 (1954): 30–38; document republished in Moshe Gil, *Erets-Yiśraʾel ba-teḳufah ha-Muslemit ha-rishonah (634–1099)* [Palestine during the first Muslim period (634–1099)] (Tel Aviv, 1983), doc. 312.

A Maimonidean Controversy

The incident from this period that best exemplifies the new rules is a protracted battle between factions of the Palestinian-rite synagogue in Fustat during the first decades of the thirteenth century. At the center of the conflict stood Moses Maimonides' son Avraham, who had followed in his father's footsteps as *raʾīs al-yahūd* of Egypt and Syria (1205–37). Like his father, Avraham also served as physician at the court of the Ayyubid sultan; and like his father, he faced repeated opposition over his position in the Jewish community.[15] His main opponents were from the same family who had forced his father to abandon his post temporarily (Moses Maimonides served 1171–ca. 1177 and ca. 1195–1204).

The pretext Avraham's opponents used to undermine his power had to do with the fact that, in keeping with his Sufi piety and a significant Sufi movement among Jews, he had made changes in the choreography of the synagogue ritual, adopting full prostration during prayer (which Jews had practiced but abandoned at some point in late antiquity). To condemn Maimonides and his liturgical innovations, his opponents queried a qadi in the service of the Ayyubid court regarding the permissibility of the innovations.[16]

The first and second drafts of the query have survived in the Cairo Genizah. Its author was the cantor of the synagogue—possibly a member of the opposing family, but his name is not mentioned.[17] In addressing the qadi, he enthusiastically and opportunistically deploys the rhetoric of religious conservatism, betraying his assumption that the qadi, as an Ayyubid appointee charged with defending orthodoxy, would find any liturgical innovation *(bidʿah)* reprehensible and declare

[15] He served as physician to both al-Malik al-ʿĀdil (1200–18) and al-Malik al-Kāmil (1218–38); see Goitein, *Mediterranean Society,* 5:493; cf. ibid., 476–77, quoting Ibn Abī Uṣaybiʿah's entry, which notes only that he served al-Malik al-Kāmil, but also that the author met him only in 631 or 632 A.H. (1231–33).

[16] See the comments of Naphtali Wieder, *Hashpaʿot Islamiyot ʿal ha-pulḥan ha-Yehudi* [Islamic influences on the Jewish worship] (Oxford, 1947), 65–68; Goitein, "New Documents from the Cairo Geniza," 707–12; Paul Fenton, *The Treatise of the Pool: Al-Maqāla al-Ḥawḍiyya* (London, 1981), 4–25; Goitein, *Mediterranean Society,* 5:491–92; Stefan C. Reif, *Judaism and Hebrew Prayer* (Cambridge, 1993), chapter 6; and Geoffrey Khan, *Arabic Legal and Administrative Documents in the Cambridge Genizah Collections* (Cambridge and New York, 1993), 292 and 293–94.

[17] T-S Ar. 41.105 (first–second decade of the seventh century A.H.), in Arabic, published in Paul Fenton, "Tefillah beʿad ha-rashut u-rashut beʿad ha-tefillah: zutot min ha-genizah," *Mi-mizraḥ u-mim-maʿarav* 4 (1983): 20–21, and republished with emendations to both the reading and translation in Khan, *Arabic Legal and Administrative Documents,* doc. 65; and the document from the Consistoire Israélite de Paris (now at the Alliance Israélite Universelle; I have not been able to verify the current shelf-mark) published in Richard J. H. Gottheil, "Some Genizah Gleanings," in *Mélanges Hartwig Derenbourg (1844–1908): Recueil de travaux d'érudition à la mémoire d'Hartwig Derenbourg par ses amis et ses élèves* (Paris, 1909), 97–99. These drafts are undated; my attempt at inserting them within the chronological narrative must be regarded as tentative.

it contrary to law. His query culminates in a series of loaded questions about the permissibility of Maimonides' liturgical innovations. He writes:

> A group of Rabbanite Jews have had a synagogue for a long stretch of time and numerous years engaging in the conduct *(sīrah)* and customs *(minhāj)* with which its builders built it.[18] Until now, it has maintained the customs *(minhāj),* rituals *(rusūm),* traditions *(sunan),* and conduct *(sīrah)* of readings and prayer throughout the year, on weekdays, Sabbaths, and festivals. It has a prayer leader administering its affairs in the wake of his predecessors *(khalf salaf)* and the community is content with this.
>
> Now a faction has joined forces to change its customs, abrogate its traditions, alter its prayers, and coerce the prayer leader regarding them, and to adopt something that has never before been practiced regularly. The congregation and the prayer leader are holding fast to that to which they are accustomed.
>
> Is it permissible for [these things] to be changed in opposition to them, for it [the faction] to adopt something that has never before been practiced regularly, and for the prayer leader to be forced to abandon that to which he is accustomed? Is it permissible for change and innovation to be made in the days of Islam—may God cause them to endure—even if those who effect the change are pious? What action should be taken with regard to them?
>
> Grant us your opinion, may God have mercy upon you.[19]

That the cantor attempted to coerce the *nagid* by appealing to the state fits the Fatimid pattern of redress. The key difference is that rather than appealing to a member of the ruling dynasty directly, he appealed to a qadi. One wonders what, precisely, the cantor hoped to achieve with a fatwa. Upon finding that a government-appointed jurist condemned his innovations, would Avraham Maimonides have desisted from them? Or did the cantor simply want him to feel shaken by the condemnation? Either way, in contexts such as this one, Jews understood Islamic law to have more of a say in internal Jewish religious affairs than has hitherto been admitted.

The Islamic judiciary, for its part, did not share this perception, and the cantor's traditionalist rhetoric failed to win him the fatwa he wanted. We learn this from a letter written by one of Maimonides' opponents in Fustat, addressing another

[18] T-S Ar. 41.105, lines 3–4: *qawm al-yahūd rabbānīn lahum kanīsah min al-duhūr al-madīdah wa-al-sanīn al-ʿadīdah ʿalá al-sīrah wa-al-minhāj alladhī banāhā bānūhā ʿalayhi.*

[19] T-S Ar. 41.105, beginning from the end of line 2; the translation is my own.

member of his faction currently in Damascus. The letter also reveals details about the methods that both sides employed on their own behalf.[20]

The letter explains that leaders of the opposition first approached a government appointee referred to only as "the *faqīh,*" apparently the qadi to whom the drafts of the query were addressed. However, he declined to adjudicate, claiming that during the month of Ramaḍān he was in retreat and would not hear petitions.[21] The *faqīh* hardly comes across as eager to interfere in Jewish communal matters. Maimonides' opponents, for their part, were unwilling to wait until after Ramaḍān (or assumed that even if they did, the *faqīh* would find some other reason to decline). They therefore addressed a written petition *(qiṣṣah)* to al-Malik al-ʿĀdil himself.

But the sultan, too, refused to take part in a battle against one of his own appointees. Instead of acting on the *qiṣṣah,* he provided Maimonides with a copy of it (or else a courtier called Sharaf al-Dīn Yaʿqūb did so, as some of his followers claimed; or perhaps it was a minor government functionary, *aḥad al-khuddām,* in the opinion of the letter's author).[22] Again, the picture is hardly one of a government eager to intervene in the affairs of the Jewish community. On the contrary, everyone whom Maimonides' opponents approached seems to have attempted to find some way out of involvement in the affair.

The letter goes on to explain that Maimonides, for his part, now understood the level on which his opponents conducted battle and filed a brief *(maḥḍar)* in his own defense in which he claimed that he had adopted the liturgical innovations in the privacy of his own home but had never attempted to impose them on his congregation. He, too, detailed his pious motivations (at least according to his opponent): he described himself as having given himself over to the service of God *(tabarraʿtu bi-taʿabbud allāh)* and gone beyond the call of duty in practicing genuflection, full prostration, and prayer *(wa-tanaffal[tu] bi-rukūʿ wa-sujūd wa-ṣalāh)*.[23] Perhaps aware that piety might not suffice in his own defense, he also called upon two hundred witnesses to confirm that he had never insisted that others adopt his reforms.[24]

In the opinion of the letter's author, however, both Maimonides and his two hundred witnesses were lying blatantly. Everyone knew that he had enforced his innovations in the synagogue.[25] S. D. Goitein points out in Maimonides' defense

that one of his published responsa addresses a group of fellow pietists on whether prostration is permissible according to Jewish law; Maimonides states that it is permissible and he himself engaged in it, but he would never insist that his questioners adopt it, "for you are at liberty to do as you like."[26] But this hardly proves the case. Given that Avraham Maimonides was a charismatic and powerful leader, his opponents (and even his followers) may not have perceived such a clear difference between his permitting the changes and his mandating them.

But the use of sanctimonious rhetoric did not end there. In describing the controversy, the author of the letter accuses Maimonides and his supporters of "informing" on fellow Jews before the authorities (the word appears in Hebrew in the Judeo-Arabic letter, *masrut,* a variation of the standard Hebrew *mesirut*).[27] The insult was as ancient in Jewish tradition as its application was opportunistic in this instance: factions were often quick to brand their opponents *moserim,* informers, nearly demonic figures in rabbinic responsa, since they were thought to threaten the Jews' jealously guarded communal autonomy by collaborating with the government and disrupting the supposed unity of the Jewish community. In fact, like charges of heresy, charges of *mesirut* were leveled selectively against Jews whose enemies had some reason to object to their appeal to the government. After all, the same opponents who now called Maimonides a *moser* had approached the palace in Cairo first.

On the advice of his supporters, then, the *nagid* threatened to place his opponents under a ban of excommunication. Interestingly enough, however, the pretext he chose was not that they had approached the sultan's court against him, but that they had taken false oaths: apparently he would not have dared to excommunicate someone for seeking redress from the government, for the obvious reason that he himself had done so as well. Even Jewish leaders could not denounce the practice of petitioning the government—or perhaps especially Jewish leaders, who did so as a measure of frequent resort in sustaining their power over the community.

The letter ends *in medias res* and we do not know how this chapter of the dispute concluded. But in an undated Genizah letter, Maimonides' followers complain to him that their co-religionists—at the behest of an unnamed communal official,

[26] Goitein, "New Documents from the Cairo Geniza," 712, quoting Albert Freimann and S. D. Goitein, *Responsa Abraham Maimuni: ex codicibus librisque impressis* (Jerusalem, 1937), no. 62; see Goitein's further comments, 712–13; and cf. Avraham Maimonides' letter of reproof to a student in his yeshiva who was not sufficiently devoted to pietistic practices, T-S 10 J 13.8, in Judeo-Arabic, published in S. D. Goitein, "Documents on Abraham Maimonides and His Pietist Circle" [in Hebrew], *Tarbiẓ* 33 (1963): 187.

[27] T-S Ar. 51.111, line 17. On the form of the word, see Goitein's note, "New Documents from the Cairo Geniza," 711 n. 10. My interpretation of the pronouns in this sentence differs from his (ibid., 710–11).

again presumably a member of the opposing family—were persecuting them, preventing them from praying according to their preferred custom, and spreading malicious rumors about them.[28]

Nor did the controversy subside after Maimonides died (at age fifty-one, apparently in an epidemic). His son, David, now acceded to the office of *raʾīs al-yahūd,* but no sooner had he done so than the opposing family attempted once again to abolish his father's innovations. In retaliation, a supporter tried to place the innovations on firm legal ground. We learn this from a query, first identified and published by Geoffrey Khan, submitted to yet another qadi.[29] The supporter writes:

> A group of Jews whose word is authoritative, namely, the *raʾīs al-yahūd* and those of their sages who follow him, have established genuflection and prostration in their religious practice. They have stated that this was an ancient part of their revealed law, and that they have revived an aspect of religious practice that had fallen into desuetude. They established and practiced it over a long period, approximately twenty years.
>
> When their *raʾīs* died, a man who was not a sage rose up and spoke against their earlier sages and disapproved of genuflection and prostration. What action should be taken against him on account of his opposition, since he opposes [the practice]?
>
> Grant us your opinion, may God have mercy upon you.[30]

It is unclear whether a fatwa stating the permissibility of the practices might have convinced the chief opponent to cease and desist from harassing the pietists. But apparently the author of the query hoped for more. He attempted to sway the qadi to his side by claiming that the opponent was forbidding the practice of Judaism according to hoary tradition (much as the opponents had claimed to follow tradition in their own query), and he asked the qadi what kind of action should be taken against the perpetrator. Again, we are ignorant as to how this posthumous conflict was resolved, but a hint may lie in the fact that in 1237,

[28] T-S 10 J 13.14, published in Goitein, "Documents on Abraham Maimonides," 185. See also his comments in *Mediterranean Society,* 5:483.

[29] T-S AS 182.291, in Arabic, published in Khan, *Arabic Legal and Administrative Documents,* doc. 66, beginning from line 4.

[30] I have altered Khan's translation, especially at line 9 (*Arabic Legal and Administrative Documents,* 293), where Khan suggests that an opponent came to office on Avraham Maimonides' death. But as the letter of 1237 quoted below (T-S 10 J 16.12) indicates, his son David succeeded him without interruption.

Avraham Maimonides' son David succeeded his father and received the post by express permission of the government. The Jewish courtiers first cleared the matter with all the important palace officials; then one of those officials took the extra step of summoning ten elders of the Jewish community, to be sure that his decision represented the community's will.[31] With so much support for David's candidacy, it is likely that the instigator of the opposition was not heard from again. Indeed, the Maimonidean family continued to serve as *ruʾasāʾ al-yahūd* for several more generations.

The incident of Avraham Maimonides' liturgical innovations parallels the Fatimid appeals: in every instance, the initiative for government intervention came from the Jews themselves. There are, however, two significant differences between the documents from the Fatimid period and these. First, in the Fatimid period the conflicts were purely political and administrative, centering around political factions of the Jewish community, while here the authorities were invited to express their opinions on intimate matters of Jewish religious practice. Second, in the Fatimid period the Jews appealed to the state only, while here they appeal to the qadis as well.[32] This second difference was due in part to the nature of the Fatimid caliphate and its theopolitical claims: as implied in the Fatimid petition's standard closing formula, "to our master [the caliph] belongs the exalted decision," a Fatimid rescript had the force of a legal opinion.[33] It was also due to the expansion of the Sunni judiciary under the Ayyubids and Mamluks and those regimes' concomitant efforts to centralize it. One can, in fact,

sense the shift from the chancery alone to a combination of the chancery and the judiciary during the Maimonidean incident itself: finding the *faqīh* unwilling to consider their case, the opponents resorted to the old method of petitioning the ruler himself. Under the Mamluks, as we shall see, the number of Jewish queries to Muslim qadis only increased.

Cooperation between the Government and Jewish Authorities

The reluctance of the chancery and judiciary to involve themselves in the Jews' liturgical and political factionalism should not be understood as a general reluctance to regulate Jewish communal affairs. On the contrary, the late Ayyubid and early Mamluk chanceries also required regular reports from the Jewish community on the death of Jews. The state was, then, willing to intervene when it came to the disposition and taxation of *dhimmī* estates. Khan has identified six such reports dated 1224–98 among the Genizah papers, all of them testifying to the deaths of women who had appointed heirs, along with one formulary to aid in the composition of what must have been routine documents.[34] Indeed, al-Nuwayrī attests that the heads of *dhimmī* communities stood obligated to notify the government of deaths, and al-Qalqashandī affirms that the *dīwān al-mawārīth* kept a register of them. Other sources confirm that, at least in the early Mamluk period, the government taxed estates even when there were heirs.[35] The witnesses to these transactions are all Jews, suggesting that Jews participated in this aspect of the administration of their affairs even though it deprived heirs of part of their inheritance. Since the alternative—not reporting the deaths—was equally viable, we must assume that the practice represented at least some modicum of cooperation with the authorities. It may well be that the level of cooperation decreased markedly with an edict of al-Ṣāliḥ in 1354 decreeing that estates without heirs reverted not to the Jewish community (as they had done before) but to the state.[36]

However, this kind of intervention does not indicate that the government's purposes were always confiscatory or nefarious. On other occasions, the state was more than willing to cooperate with communal leaders in keeping funds within the Jewish community—even if it meant depriving the sultan's coffers of

revenue. Thus in 1203, the estate of a certain Jew named Avraham al-ʿAṭṭār ibn Abū al-Karam had fallen into the hands of the *dīwān al-mawārīth*. A deed drawn up in a Jewish court attests that the Jewish elders refused to abide by the *dīwān al-mawārīth*'s confiscation of the estate and petitioned the qadi appointed over *(mutawallī)* the *dīwān* to transfer the estate to the Jewish community for a fee of thirty dinars payable to the qadi from the estate. The request was granted.[37] The deceased had been close to government circles—or so I gather from the fact that he owed money to someone titled Amīn al-Dawlah, a clerk in the *dār al-wakālah* (the port bureau). This account suggests that the government claimed estates only when it knew they existed, and it was more likely to know of large ones belonging to friends of the palace.[38]

Ongoing relations between the government and the Jewish community are also suggested by the number of reused chancery documents preserved in the Genizah. Frédéric Bauden has recently demonstrated that al-Maqrīzī reused official documents from the Mamluk archives as writing paper, and that one such document—a deed of *iqṭāʿ* for a government official—came into al-Maqrīzī's hands after a raid on the palace that sent hundreds or perhaps thousands of official documents into circulation as scrap writing paper for sale on the open market.[39] Something similar to Bauden's reconstruction of events may hold true for a few of the reused chancery documents from the Cairo Genizah, such as a once luxuriant Ayyubid or Mamluk decree that was cut into pieces and now contains a Hebrew writing exercise in an awkward hand;[40] another Judeo-Arabic letter written on the

[37] Bodl. MS Heb c 28.54, in Judeo-Arabic. Goitein's unpublished edition is available online through the Princeton Geniza Project. He seems to have surmised the date from the receipts on verso for the payment of debts on the estate, which are dated 1203.

[38] The function of the *dār al-wakālah* was to store, sell, and otherwise assist merchants in disposing of their merchandise, and together with the *wakīl al-tujjār* (merchants' representative), it gained official standing and government backing under the Mamluks. See Goitein, *Mediterranean Society,* 1:186–92, and Roxani Eleni Margariti, *Aden and the Indian Ocean Trade: 150 Years in the Life of a Medieval Arabian Port* (Chapel Hill, 2007), chapter 6, and p. 299 n. 76.

[39] Frédéric Bauden, "Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of his Working Method: Description: Section 1," *Mamlūk Studies Review* 7 (2003): 21–68; idem, "The Recovery of Mamluk Chancery Documents in an Unsuspected Place," in *The Mamluks in Egyptian and Syrian Politics and Society,* ed. Michael Winter and Amalia Levanoni (Leiden and Boston, 2004), 59–78.

[40] Bodl. MS Heb d 74.38, in Judeo-Arabic and Arabic, unpublished, verso. My dating of the decree is based on paleography and must be regarded as tentative. The *ḥasbalah* in the last line (the fragment contains only the last five lines of the document) does not demonstrate without doubt that the document is a decree rather than an archival copy; cf. the discussion in Geoffrey Khan, "Copy of a Decree from the Archives of the Fatimid Chancery," *Bulletin of the School of Oriental and African Studies* 49 (1986): 451.

back of part of a chancery decree;[41] or a collection of Hebrew liturgical poems, two pages of which each contain two lines from separate Mamluk (?) decrees.[42] That both decrees were cut into pieces suggests that they may have passed through the hands of stationers.

However, routes other than the paper market could have granted Jews access to chancery documents. There were a great many Jewish courtiers under the Fatimids and Ayyubids (though admittedly fewer under the Mamluks), and circumstantial evidence suggests that they carried drafts of chancery documents, disused petitions, and other non-archival documents out of the palace to serve the Jewish community as models for official correspondence.[43] Avraham Maimonides' grandson Yehoshuaʿ, who inherited the post of *raʾīs al-yahūd* from his father, is the author of at least one letter rigorously adhering to the protocols of the *sulṭānīyāt* genre of administrative correspondence (decrees making the ruler's will known by his meting out of rewards, chastisements, titles, and honors to his subjects).[44] This suggests that Jews had access to the modes and manners

[41] Bodl. MS Heb c 28.10, in Judeo-Arabic and Arabic, unpublished. Eliyahu Ashtor makes two attempts to derive a date for the Judeo-Arabic side: late eleventh century (the mid-eleventh century date he proposes can be dismissed since the office of *nagid* did not yet exist), and (implicitly) fourteenth century; Goitein corrects him. See Eliyahu Ashtor, "Le coût de la vie dans la Syrie médiévale," *Arabica* 1 (1961): 61; idem, "La recherche des prix dans l'Orient médiéval: sources, méthodes et problèmes," *Studia Islamica* 21 (1964): 140 n. 4; and Goitein, *Mediterranean Society,* 2:34. Neither author discusses the Arabic side of the document.

[42] Budapest, Hungarian Academy of Sciences, David Kaufmann Collection (DK) 147, in Hebrew and Arabic, unpublished. My thanks to Ezra Chwat for sharing his notes on this collection, and to the Friedberg Genizah Project for making high-resolution digital photographs of the collection available.

[43] This is an argument that I plan to present in a fuller form in an article tentatively entitled "From the Palace in Cairo to the Synagogue in Fustat: Petitions to the Fatimid Chancery Preserved in the Geniza." I have counted roughly thirty Jewish courtiers who served the Fatimids in the tenth and eleventh centuries only (in both al-Mahdīyah and Cairo), but the count should be continued into the twelfth, thirteenth, fourteenth, and fifteenth centuries. See, e.g., a mid-thirteenth-century letter from Yehuda ibn al-ʿAmmānī, a court clerk, cantor, and schoolmaster in Alexandria, to a Jewish official in Cairo vouching for the character of a blind man from the Maghrib whom some tragedy (war? an earthquake?) forced to abandon his home and property. He arrived in Alexandria via Sicily and the writer now turned to wealthy potential benefactors to help him, including the government functionary addressed in the letter, who bears a series of exalted titles listed in the opening lines of the letter. T-S 16.287, in Judeo-Arabic, published in Eliyahu Ashtor, *Toldot ha-Yehudim be-Miṣrayim ve-Suryah taḥat shilṭon ha-Mamlukim* [History of the Jews in Egypt and Syria under the rule of the Mamluks], vol. 3, *Teʿudot min ha-genizah* [Geniza Documents] (Jerusalem, 1970), doc. 59, and incorrectly dated to 1408 C.E.; cf. Goitein, *Mediterranean Society,* 5:179, and idem, "Geniza Documents from the Mamluk Period" [in Hebrew], *Tarbiẓ* 41 (1971): 70.

[44] ENA 2559.11, in Judeo-Arabic, published in Mark R. Cohen, "Correspondence and Social Control in the Jewish Communities of the Islamic World: A Letter of the Nagid Joshua Maimonides,"

of official correspondence in use within government circles. Similarly, a decree issued by one of the four sultans titled al-Malik al-Nāṣir was preserved in its entirety in the Genizah, despite the fact that it has nothing to do with the Jews and was never reused for Hebrew writing exercises. That it found its way into the Genizah suggests that someone from the Jewish community carried it there from the palace.[45]

In sum, Jews had access to the chancery when they needed it, and one of the functions of the leaders of the Jewish community was to provide them with that access. No one could hope to lead the community without connections at court—a fact that Jews already understood well by the third decade of the eleventh century, and that continued to hold true throughout the Mamluk period.[46]

Cooperation with Jewish Individuals

This attitude of friendly cooperation between the Jews and the government extended from leaders of the community to individuals. This was the case when, for instance, Khaybarī Jews sought exemption from the *jizyah* via court-issued certificates. Since Muḥammad was said to have granted the Jews of Khaybar special privileges, their descendants claimed—and were granted—exemption from various *dhimmī* disabilities. Thus a fragmentary certificate dated Shawwāl 654 (October–November 1256) attests to the status of a certain Ibrāhīm ibn Ismāʿīl as a Khaybarī Jew—and to his proficiency in dealing with the government and the judiciary. That his certificate was preserved in the Genizah, despite its being written in Arabic characters, suggests that he deposited his entire archive there and this document along with it, and by extension that he was a regular,

Jewish History 1 (1986): 39–48. Cohen states that "it was doubtless from Arabic epistolographic manuals like this that Jews first became familiar with the forms and conventions of Arabic letter-writing which they subsequently incorporated into their own correspondence" (ibid., 40), but one might also imagine channels of transmission via courtiers with direct experience in *inshā*ʾ and other social contexts that lent themselves to the ongoing diffusion of epistolary style. On the *sulṭānīyāt* genre, see al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 8:233–303 (cited in Cohen, "Correspondence and Social Control," 47 n. 6).

[45] DK 228.1, in Arabic, unpublished. The possibilities include: al-Malik al-Nāṣir Muḥammad (ibn Qalāwūn, r. 1293–94, 1299–1309, 1310–41); al-Malik al-Nāṣir Aḥmad (ibn Muḥammad, r. 1342); al-Malik al-Nāṣir Ḥasan (r. 1347–51, 1354–61); and al-Malik al-Nāṣir Muḥammad IV ibn Qāytbāy (r. 1496–98). The form of the petition is consistent with these dates (but I have excluded the Ayyubid sultan Ṣalāḥ al-Dīn, who bore the same title). I am grateful to Geoffrey Khan for alerting me to the presence of this decree in the Kaufmann collection.

[46] Not every government functionary who appears in Genizah documents was regarded in a friendly way by Jews: see Bodl. MS Heb. B 11.27, in Judeo-Arabic, unpublished, in which Luʾluʾ, the freedman of the Zengids of Mosul (d. 1259; see Claude Cahen, "Luʾluʾ, Badr al-Dīn Abū al-Faḍāʾil al-Malik al-Raḥīm," *Encyclopaedia of Islam,* 2nd ed., 5:821), is cursed as one of the enemies of Israel (lines 2–3).

dues-paying member of the Jewish community of Fustat rather than a man on its margins; in this sense, he may be taken as broadly representative of the whole. Though avoiding paying the *jizyah* was not always difficult (in certain towns in the countryside the *jizyah* was not collected at all), instead of merely avoiding the tax collector, he sought official exemption. One can only speculate on what he presented as proof of his descent from the Jews of Khaybar, but his willingness to cooperate with the system and uphold its tenets was clear.[47]

Similarly, the Jewish physician Abū al-Ḥasan ibn Abī al-Sahl ibn Ibrāhīm was asked (by a prospective high-ranking patient?) for a certificate attesting to his professional qualifications and good conduct. Three separate drafts of the testimony have survived occupying the same sheet of paper (the drafts are undated and the witnesses are identified only as "free Muslim men"). Abū al-Ḥasan's attempt to procure the certificate suggests that he was adept at negotiating the channels of the Islamic judiciary, and the fact that the drafts survived in the Genizah suggests even more. Had a Muslim notary given Abū al-Ḥasan the drafts for some reason? Were witnesses not available the day he appeared in court, or was he traveling and had to take the texts to another jurisdiction? Abū al-Ḥasan may have written the drafts himself: physicians were literate; Jewish physicians were literate in Arabic; and many physicians served as scribes, courtiers, and court functionaries, all professions in which Abū al-Ḥasan may have learned to write such a document. Or he may have based the draft on a similar testimony that he had received previously.[48]

Physicians and courtiers at times, in fact, proved more capable of exercising power and more adept at negotiating the channels of government than the *raʾīs al-yahūd* himself. A Mamluk decree also preserved in the Genizah contains the story of a physician whom the *raʾīs* had prohibited from entering the synagogue of which he was a member. The physician got around the problem by seeking redress from the sultan. The *raʾīs* was forced to rescind his ban.[49]

Even individuals in the community knew how to navigate the channels of the government and judicial bureaucracy. While one of the functions of their leaders was to help them do this, some were capable of doing so without assistance. This

[47] T–S NS 327.2, in Arabic, published in Khan, *Arabic Legal and Administrative Documents,* doc. 49. On Khaybarī Jews and their exempt status, see his commentary there. On towns where the *jizyah* was not collected, see Mark R. Cohen, *Poverty and Charity in the Jewish Community of Medieval Egypt* (Princeton and Oxford, 2005), 138, citing evidence from the twelfth century.

[48] T-S NS 305.115, in Arabic, published in Khan, *Arabic Legal and Administrative Documents,* doc. 51. The document bears no date, since the sections with the dates in the first and third drafts are deliberately left blank; Khan dates it to the thirteenth century (for paleographic reasons?).

[49] T-S Ar. 38.131, in Arabic, unpublished (I am currently preparing an edition for publication). See also Goitein, *Mediterranean Society,* 2:168, 327.

corroborates El-Leithy's findings about Copts in the Mamluk period: many were perfectly capable of devising strategies for turning the apparent restrictions of *dhimmī* status to their advantage.[50]

Government Interference in the Late Mamluk Period

This brings us full circle to the affair of the blasphemous minbar of 1442. Mark R. Cohen has treated the incident and its literary and documentary sources exhaustively; here I wish to address only one lingering problem that the evidence presents.[51] The medieval Muslim chroniclers, including one eyewitness to the events, depicted the synagogue inspection (and the more general synagogue and church inspections that began in the wake of the minbar incident) as a routine round of government enforcement of discriminatory legislation against *dhimmīs*. But in fact, from a Genizah document discovered by Cohen, it emerges that the officials entered the Jewish synagogue in the first place in response to a complaint from its members, who had petitioned the chief qadis to depose their corrupt and incompetent *raʾīs al-yahūd,* a certain ʿAbd al-Laṭīf.[52] Why did the chroniclers record nothing of the Jewish initiative for the government's intervention?

The Silence of the Chroniclers

One of the synagogue inspectors was Ibn Ḥajar al-ʿAsqalānī (1372–1449), the chief Shafiʿi qadi, who recorded the incident in his history *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr*. The narrative also appears with variations in the chronicle of his student al-Sakhāwī (1427–97). Both chroniclers imply that the initiative for the inspections came from the government. Ibn Ḥajar writes: "On the fourth day [of Dhū al-Ḥijjah 845/15 April 1442], the Shafiʿi and Hanafi qadis and the *muḥtasib* and a group of people went to the synagogue of the Jews in Qaṣr al-Shamʿ in Fustat"—as though the inspections were in the routine order of business. Having found the blasphemous minbar, they explain, the Hanafi qadi, Amīn al-Aqṣarāʾī, went on to undertake a general inspection of synagogues and churches in Fustat and Cairo. Sure enough, he found evidence of repairs that contravened the Pact of ʿUmar, and he proceeded to close some of them.[53]

[50] El-Leithy, "Coptic Culture and Conversion."

[51] Cohen, "Jews in the Mamluk Environment."

[52] T-S AS 150.3, a Judeo-Arabic draft of the petition to Sultan Jaqmaq discussed below; published in Cohen, "Jews in the Mamluk Environment," 431–34, with English translation and facsimile between pages 434 and 435.

[53] Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr,* ed. Muḥammad ʿAbd al-Muʿīd Khān (Hyderabad, 1967–76), 9:169–70, 182–86; al-Sakhāwī, *Al-Tibr al-Masbūk,* 36. Cohen compares the two passages (as well as an unpublished manuscript of Ibn Ḥajar, Istanbul MS Yeni Cami 814, fols. 282r, 283v, and 284r) in "Jews in the Mamluk Environment," 426–30; Ibn Ḥajar tells the story

Ibn Iyās (1448–1524) is even more laconic in his description of events. "In that year [845 A.H.]," he writes, echoing Ibn Ḥajar, "the shaykh Amīn al-Dīn al-Aqṣarāʾī al-Ḥanafī undertook the destruction of some of the houses of worship of the Jews and the Christians." For some reason he renders Ibn Ḥajar's "inspection" *(kashf)* as "destruction" *(hadm),* while in Ibn Ḥajar's account the inspection resulted in the closure of only some of the synagogues *(ubṭilat ʿiddatu kanāʾis)*. Further down the page, Ibn Iyās corrects himself, adding in equally lapidary fashion, "In it [the year 845], the sultan ordered the four qadis to go to Qaṣr al-Shamʿ to inspect the houses of worship there. So they went there and inspected."[54] The distinct impression the chroniclers offer is of government initiative for the incident in the normal course of pious regulation of *dhimmī*s.

Given the fact that Ibn Ḥajar was the Shafiʿi chief qadi at the time these events took place, one might expect his account to cling scrupulously to details of the events. In fact, the inspection was merely a pretext for the qadis to enter the synagogue—which they actually did at the behest of some of its leading members, who wished to end ʿAbd al-Laṭīf's misrule over the community. As in the Maimonidean affair, the Jews had approached the qadis as the first resort in resolving a conflict within the community. And as in the Maimonidean incident, the qadis failed to bring about the changes the Jews requested: the qadis did not depose the *nagid*. The Hanafi qadi merely extracted his confessions and moved on to other *dhimmī* houses of worship; the best course of further action became a matter of dispute between him and Ibn Ḥajar.

Having watched the qadis intervene to no avail, the Jews were left no other recourse than to petition Sultan Jaqmaq (1438–53) himself. The document that Cohen discovered is a Judeo-Arabic draft of the petition, likely a near-final one, since it follows the standard form and format of the late Mamluk petition. It also includes copious details of ʿAbd al-Laṭīf's wrongdoings—details, the petitioners are quick to add, with which the sultan's chief qadis are already quite familiar since they had brought them to their attention before. These wrongdoings included fiscal malfeasance, extortion, fraud, ruining the synagogue financially, violating both Jewish law and the Islamic laws of *waqf,* and general unsuitedness to speak on behalf of the community (which I read to mean his lack of strong connections at the palace, a key qualification for the office of *raʾīs al-yahūd*).[55] In the wake of

---

twice, and his internal contradictions call for some explanation as well.

[54] Ibn Iyās, *Badāʾiʿ al-Ẓuhūr,* 2:22; cited in Cohen, "Jews in the Mamluk Environment," 427 n. 6.

[55] T-S AS 150.3. The references to the qadis appear on recto, lines 19–22 ("The lords the chief qadis, may God exalt and honor them, and the (other) qadis are well aware of his lack of ability and of the fact that he is un[fit] *(ghayr [ṣ]āl[iḥ])* to speak on behalf of a community of *ahl al-dhimmah*"); and verso, lines 18–21 ("Your slaves have informed you about this, intending that [the] qadi, may God honor him, would indicate to them wha[t] he would do, out of his bounty and for the sake of

the synagogue inspections—and the church inspections that followed them—the petitioners appended three additional accusations designed to place the blame for the entire affair squarely on their *raʾīs*. The first was "his defiance in proceeding with the matter of the synagogues"—that is, of their renovation—without the proper legal authority. The second was his responsibility for the blasphemies the inspector found on the minbar, "for which, at the very least, he should have been reproved and removed from office." That is not to say that ʿAbd al-Laṭīf himself really placed the inscriptions there; rather, they noted, "A group is prepared to testify against him that he was one of those who ascended the minbar." Apparently the petitioners were still undecided as to whether they wished to accuse him of having committed blasphemy wittingly or unwittingly. To this, they added the third complaint that "even the Christians have had wrongdoing perpetrated against them because of him," holding him responsible for the anti-*dhimmī* persecutions that followed the affair.[56]

Cohen characterizes these three added accusations as desperate measures inviting considerable risk, seeing government intervention as a threat to *dhimmī* communal autonomy. But the risks were apparently well past at the time of the petition: the qadis had already used the inspections for their own purposes, as an opportunity to exert tighter control over the *dhimmī* communities, and failed to deliver the result the Jews wanted. The qadis may even have begun their inspections at the behest of the Jewish community, who invited them there as an excuse to depose ʿAbd al-Laṭīf. The petitioners hint at this: "Your slaves have informed you about this, intending that [the] qadi, may God honor him, would indicate to them wha[t] he might do, out of his bounty and for the sake of God the exalted, so that this wrongdoing may be re[m]oved from them." I interpret this to mean that the Jews invited the qadis' intervention at some point in the affair. But when the qadis failed to deliver the results they wanted, they took their complaint to the sultan. They appear singularly untroubled by the prospect of risking their communal autonomy. In fact, at this point in the incident, by inviting government intervention they stood to lose nothing but their *raʾīs*.

Why do Ibn Ḥajar, al-Sakhāwī, and Ibn Iyās never mention the Jews' initiative in the denunciations? Al-Sakhāwī and Ibn Iyās can be excused the omission on the grounds that they may not have known the true cause of the events; they only inherited the narrative Ibn Ḥajar had bequeathed them. But Ibn Ḥajar, the Shafiʿi qadi whom the Jews approached, personally inspected the synagogue and was certainly aware that they had wanted to bring him there. Why is he silent on the

God the exalted, so that this wrongdoing may be re[m]oved from them"). For a detailed analysis of ʿAbd al-Laṭīf's misdeeds, see Cohen, "Jews in the Mamluk Environment," 437–44.

[56] T-S AS 150.3, recto, line 33 and margin; recto, line 15; verso, margin (added as an afterthought and meant to be inserted earlier in the petition?); and verso, lines 2–3.

matter?

Ibn Ḥajar's silence suggests that he had something to gain by implying that the events came about due to his own initiative and that of his colleagues. Indeed, making the inspections appear routine casts him and his Hanafi counterpart in the role of pious enforcers of the statutes regarding *ahl al-dhimmah*. At the end of his narrative, in fact, the qadis coax the Christians and Jews into supplicating them to reissue the Pact of ʿUmar, in a ritualized reenactment of the circumstances said to have produced the original pact when the Christians first drew it up as a petition to ʿUmar ibn al-Khaṭṭāb.[57] Thus were the qadis able to demonstrate their piety and effectiveness as defenders of the faith. Ibn Ḥajar also paints Amīn al-Dīn al-Aqṣarāʾī as the more zealous and uncompromising of the two, who when he heard of the minbar episode "wanted to cut off the feet of those who were involved in standing on that spot, as well as the hands of some others," while Ibn Ḥajar demurred. Thus Ibn Ḥajar appears as rigorous in his enforcement of the law but humane in its application, and thus both Ibn Ḥajar and al-Aqṣarāʾī appear as the enforcers of *dhimmī* subservience. But the petition demonstrates—in addition to the usual dangers of relying on literary evidence—that the Jews did not play the role of passive victims in this incident. Rather, they used the qadis' politics of piety to serve their own political aims.

Why All This Fuss over the *Dhimmī*s?

In his anatomy of the Jews and the "royal alliance," Yerushalmi asks why

> the highest authority not only tolerated the Jews and their alien faith, but allowed them such a wide latitude of autonomous privileges. Obviously it was not out of mere generosity. Among the many factors involved, certainly the most important was the overriding perception that on the whole the Jews were a useful element. Above all, they were an important source of revenue, paying for their privileges in the form of special taxes. Their internal self-government was convenient, for it relieved the ruler of many administrative and other burdens. They were potentially the most loyal element in the population since, especially after their loss of an independent state they were the most exposed and vulnerable, the most dependent on the ruler, those with the most to lose by betraying him. In short, the royal alliance was based on a reciprocity of interest.[58]

[57] Cohen, "Jews in the Mamluk Environment," 429 n. 8; and see idem, "What was the Pact of ʿUmar? A Literary-Historical Study," *Jerusalem Studies in Arabic and Islam* 23 (1999): 100–58.

[58] Yerushalmi, *"Servants of Kings,"* 10.

To this catalogue of reasons why rulers might find the Jews useful, one must add another item: selective intervention in their affairs could make a ruler appear more powerful.

Indeed, as Cohen points out, in 1438 the office of *raʾīs al-yahūd* itself became a point of intense conflict within the Mamluk court. Following the death of Barsbāy (1438), his son and the amir Jaqmaq struggled over the succession and the latter besieged the citadel. A temporary lull in the fighting came about when a different conflict between the rivals distracted them from physical combat: Jaqmaq, at the recommendation of one of his amirs, appointed as *raʾīs al-yahūd* an Alexandrian Jew who had previously held the office but had apparently been deposed. The Jews immediately protested to a second amir, who removed the Alexandrian from office, a move that did not please Jaqmaq at all. Thus did the conflict over the *riʾāsat al-yahūd* temporarily eclipse the struggle over the sultanate itself.[59]

The amirs themselves could not have been particularly concerned with who filled the office of *raʾīs al-yahūd*. Rather, the ability to appoint leaders over protected minority communities served them as a way of gaining power over the populace via power's corollary, patronage. The situation parallels the conflicts between the church and the state over the Jews in high medieval Europe, when both institutions issued protective or persecutory edicts concerning the Jews depending on the political advantage to be gained by one or the other.

While the Jews used the rulers and their qadis to serve their ends, then, both the qadis and the rulers used the Jews to serve theirs.

Aftershocks of the Affair

During the conflict of 1442, the petitioners had complained that the only result the *dhimmī*s achieved from the thousands of dinars in fines that they and the Christians had been forced to pay the government was that they were "exposed to public view." The allusion was apparently to the ongoing suspicion cast upon all *dhimmī* houses of worship and their continued inspection.[60] In fact, the atmosphere of suspicion continued as late as 1456. In that year, further church and synagogue inspections revealed that a church had exceeded the lawful limitations placed on repairs, and several Christians were beaten. Some Muslims demanded even harsher punishment and more sweeping action against *dhimmī*s, on the argument that they had violated the pact they had renewed only fourteen years earlier. In this atmosphere, the head of the Qaraite community brought a petition before the Hanafi chief qadi explaining that synagogue property had been damaged in

[59] Abū Muḥammad Maḥmūd ibn Aḥmad Al-ʿAynī (d. 1451), *ʿIqd al-Jumān fī Tārīkh Ahl al-Zamān,* cited in Cohen, "Jews in the Mamluk Environment," 444, from Istanbul MS Carullah 1591, fol. 817 b, *apud* Ashtor, *History of the Jews,* 2:86.

[60] As Cohen explains in "Jews in the Mamluk Environment," 444.

the recent riots and seeking permission for lawful repairs. In the course of his petition—whose wording is preserved in the *ḥukm tanfīdhī* that the Hanafi qadi wrote for him—the Qaraite had the good sense to mention the reconfirmation of the pact in 1442 along with the names of all the *dhimmī* chiefs who had agreed to it, the chief of the Qaraites among them. He also asked explicitly for reconfirmation of the royal covenant *(ʿahd sharīf)* of Sultan Īnāl regulating the mutual obligations of Muslims and *dhimmī*s, thus recapitulating the ritualized obeisance the Jews and Christians had made before the qadis in 1442.[61] That the Qaraite *raʾīs* had seen fit to petition the Hanafi qadi before undertaking repairs suggests the atmosphere of high tension that persisted in the wake of 1442 and 1456. But it also points to his resourcefulness in petitioning the chief qadi preemptively, even going so far as to supplicate the sultan for renewal of the Pact of ʿUmar before some officious qadi could coerce him to do so.

Such resourcefulness was hardly exceptional. In 1465, the Qaraites again exhibited their adroitness when a group of ex-conversos from Toledo arrived in Cairo and sent the Rabbanite and Qaraite *madhhab*s into a crisis of competition over which synagogue the newcomers would join. Rather than resolving the matter among themselves, the Qaraites helped the newcomers to query the chief qadis on the matter (one from each school plus a fifth, the Shafiʿi *qāḍī al-quḍāh*) as to whether the Toledans, who were Rabbanites on their arrival in Egypt, could become Qaraite—in other words, whether Rabbanite and Qaraite Judaism were to be considered one *dhimmī* religion or two. Though they had never been considered anything other than a single religion, the Qaraites, rather than running the risk of abetting an unlawful conversion, simply accepted Islamic legal regulation of internal Jewish religious affairs to the extent that they allowed the qadis to determine the matter for them. All the qadis but one ruled that the transfer was merely one of *madhhab;* but the second Shafiʿi caused them great consternation when he ruled that if members of each *madhhab* consider one another heretical, the only permissible change in religion was conversion to Islam. Paradoxically, this second Shafiʿi fatwa, which allowed the Qaraites the greatest degree of

[61] Cairo, archives of the Qaraite synagogue, document D 20, a Hanafi *ḥukm tanfīdhī* 598 centimeters long (!), published in Richard J. H. Gottheil, “Dhimmis and Moslems in Egypt,” in *Old Testament and Semitic Studies in Memory of William Rainey Harper,* ed. Robert Francis Harper, Francis Brown, and George Foot Moore (Chicago, 1908), 2:353–414 (Arabic text on 409; English on 384); reedited in D. S. Richards, “Dhimmi Problems in Fifteenth-Century Cairo: Reconsideration of a Court Document,” *Studies in Muslim-Jewish Relations* 1 (1993): 127–63. See also idem, “Arabic Documents from the Karaite Community in Cairo,” *Journal of the Economic and Social History of the Orient* 15 (1972): 120–21 (doc. 9). I have not seen the originals of these documents but studied the set of photographs on deposit at the Jewish National and University Library in Jerusalem (these can be consulted on request from the manuscript librarians). The shelf-mark I use is marked on the photographs; Richards (who saw the documents in Cairo in 1969) records it as 20.

religious autonomy, was precisely the one that least served their purposes in this instance.[62]

Religious, judicial, and administrative autonomy was not, then, what the Jews always wanted. True, in an atmosphere of systematic religious subordination, their courses of action may have become increasingly limited. But they themselves had laid the groundwork for this kind of government intervention—in the long term, by means of their ongoing relationship with the palace; and in the short term, by hoping that the qadis and the sultan would depose their *nagid*.

At the Confluence of Motives

To see the late Mamluk regime as oppressively denying Jews their communal autonomy may appear, superficially, to be an argument in defense of medieval Jews; however, what they require is not defense but historical analysis. Without understanding the degree to which they, too, brought about the events the chronicles record, one has not offered them this.

In Yerushalmi's anatomy of the "royal alliance" and why rulers might have afforded the Jews such a wide range of autonomous privileges, he also explains why, in their turn, the Jews chose to place their destiny in the hands of governments who acted unpredictably and entirely in their own interests:

> On their side, Jewish perceptions of their relation to their non-Jewish rulers were based not only on their actual historical experience, but on their own inner religious traditions, beginning with Scripture itself which, studied and interpreted from one generation to the next, became an equally potent historical force in shaping Jewish mentalities. The need to come to terms with the reality of exile is already present in the famous letter sent by the prophet Jeremiah (ch. 29) to the first exiles carried off to Babylon a decade before the destruction of the First Temple, arguing against the other prophets and soothsayers who were blithely forecasting an imminent return: "Thus says the Lord of Hosts . . . unto all the captivity whom I have caused to be carried away captive from

[62] This account is preserved in three parallel Judeo-Arabic manuscripts, all of them Ottoman copies, of which Tamer El-Leithy and I are currently preparing a critical edition and translation together with a historical and literary commentary. Meanwhile, see Hartwig Hirschfeld, "A Karaite Conversion Story," in *Jews' College Jubilee Volume* (London, 1906), 81–100; William M. Brinner, "A Fifteenth-Century Karaite-Rabbanite Dispute in Cairo," in *The Majlis: Interreligious Encounters in Medieval Islam,* ed. Mark R. Cohen, Hava Lazarus-Yafeh, Sasson Somekh, and Sidney H. Griffith (Wiesbaden, 1999), 184–96; El-Leithy, "Coptic Culture and Conversion," 412, 418–21; Rustow, "Karaites Real and Imagined," 49–57.

> Jerusalem to Babylon: Build houses and dwell in them, plant gardens and eat the fruit of them; take wives and beget sons and daughters . . . and multiply there and be not diminished. And seek the peace of the city to which I have caused you to be carried away captive, and pray unto the Lord for it; for in the peace thereof shall you have peace. . . . Let not the prophets that are in the midst of you, and your diviners, beguile you, for they prophesy falsely in my name. I have not sent them."[63]

Yerushalmi's discussion covers a stretch of history that includes the exile in Babylonia, the Jewish mission to Caligula, the charters negotiated with the bishops of medieval Germany (remembered in Jewish chronicles as having been granted by Charlemagne himself), and nineteenth- and-twentieth century nation-states.[64] From the medieval world, he presents examples from Christendom. But instances from the Islamic Near East are hardly lacking.

The office of *raʾīs al-yahūd* itself is one example. A group of Egyptian Jewish courtiers and other grandees built the office gradually; in the 1060s, they accumulated prerogatives of leadership over the Jewish community and only then petitioned the chancery for recognition. Thus did the *raʾīs al-yahūd* become an Egyptian Jewish institution until the Ottomans did away with it in the sixteenth century. But the Jewish chroniclers of the Mamluk and Ottoman periods recorded the office as having been founded by the Fatimids themselves, presumably since royal initiative lent it an aura of greater authority.

The latter, more romanticized version of events first appeared in a responsum by the Egyptian Jewish jurist David ibn Abī Zimra (1479–1573), and was lent more elaborate form in the chronicle of the historian Yosef al-Sambarī (1640–1703).[65] According to them, the office was founded in the year 366/976–77, when the Abbasid caliph al-Ṭāʾiʿ gave his daughter in marriage "to the king of Egypt"; she, in turn, called for the establishment of a Jewish leader in Egypt on the model of

Cohen, *Jewish Self-Government in Medieval Egypt: The Origins of the Office of Head of the Jews, ca. 1065–1126* (Princeton, 1980), 7–9.

the exilarch in Iraq.[66] The legendary account received its fullest elaboration only after the Ottomans had abolished the office—perhaps even as a polemic against its abolition, as if to protest to the sultan by comparing him implicitly with the more generous caliph.

A host of other Jewish foundation myths set after some dynastic change also depicted the old ruler personally granting the Jews the authority to run their own communal affairs. Flavius Josephus had Alexander of Macedon bow before the high priest of the Jerusalem temple (which in Josephus' day the Romans had just destroyed).[67] The epistle of a tenth-century Iraqi Jew in Qayrawān named Natan ha-Bavli lavishly described the ceremony appointing the Iraqi Jewish exilarch in order to impress the Jews of Ifrīqiyah with the pomp of an Abbasid court now steeply in decline.[68] Like these foundation myths, the Ibn Abī Zimra/al-Sambarī account drew heavily upon the topos of the royal alliance.[69]

Like the Mamluk chroniclers of the events of 1442, these Jewish authors had a vested interest in emphasizing the administrative authority of the ruler and his or her court. The Muslim chroniclers wished to portray the regimes they served as upholders of the faith; the Jewish ones wished to portray themselves as clients of powerful states. And thus did a confluence of interests eclipse the subaltern actors preserved in the documents of the Genizah, furthering the impression that Jews were the hapless victims of all-powerful rulers. In fact, actors less visible on the stage of history established the terms and the tenor of the performance.

[66] As David Neustadt (later Ayalon) pointed out, al-Ṭāʾiʿ himself (r. 974–91) married the daughter of the Buyid *amīr al-umarāʾ;* see David Neustadt (Ayalon), "Problems Concerning the Negidate in Egypt during the Middle Ages" [in Hebrew], *Zion* 4 (1938–39): 126–49; and Shtober, "Establishment of the Riʾasat al-Yahud," 40.

Book Reviews

MUḤAMMAD IBN AḤMAD AL-FARGHĀNĪ, *Muntahá al-Madārik fī Sharḥ Tāʾīyat Ibn al-Fāriḍ,* compiled by ʿĀṣim Ibrāhīm al-Kayyālī (Beirut: Dār al-Kutub al-ʿIlmīyah, 2007). Vol. 1, pp. 496; vol. 2, pp. 334.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

Saʿīd al-Dīn al-Farghānī (d. 699/1300) wrote what is believed to be the first commentary on ʿUmar Ibn al-Fāriḍ's famous Sufi poem the *Naẓm al-Sulūk,* also known as *Al-Tāʾīyah al-Kubrá* (Ode in T-major), since the poem rhymes in "t" and spans 760 verses. Al-Farghānī was a third-generation disciple of Ibn al-ʿArabī (d. 637/1240), having studied with the latter's student and stepson Ṣadr al-Dīn al-Qūnawī (d. 673/1274). Al-Qūnawī was a known admirer of Ibn al-Fāriḍ's verse, and he used to recite and comment on Ibn al-Fāriḍ's *Al-Tāʾīyah al-Kubrá*. His comments were then incorporated by his student al-Farghānī into the latter's commentary, *Muntahá al-Madārik* (The utmost perception), which al-Farghānī wrote first in Persian and then in an expanded Arabic version. The Persian edition, *Mashāriq al-Darārī* (The rising places of the shining stars), was edited and published by Jalāl al-Dīn Āshtiyānī,[1] while the Arabic version appeared as a lithograph in 1876.[2] Recently, ʿĀṣim Ibrāhīm al-Kayyālī has made a new Arabic edition of the work.

This new edition will be welcomed by scholars of Ibn al-Fāriḍ, and especially students of Ibn al-ʿArabī and his Sufi heirs. Scholars studying the religion of the Mamluk period will also appreciate this new printing of the commentary, as the *Muntahá al-Madārik* was read and admired by many scholars of the time, but denounced by others, including Ibn Taymīyah and Ibn Khaldūn. In fact, a public reading of the commentary sparked a major religious controversy in Cairo in 874–75/1469–70. However, al-Kayyālī's edition has several shortcomings. First, he does not provide any information on manuscript sources, and I suspect that he has only reformatted the 1876 litho edition. Al-Kayyālī provides little information about al-Farghānī's life or thought; he merely cites al-Farghānī's date of death, mentions that he was a follower of Ibn al-ʿArabī by way of al-Qūnawī and Rūmī, and that he

[1] Mashshad: Dānishghāh-i Firdawsī, 1980.

[2] Istanbul: Maktab al-Sanāʿī.

wrote several other works. Al-Kayyālī then lists latter commentators on the verse of Ibn al-Fāriḍ, some of whom were influenced by al-Farghānī's work (1:3–6). This scant introduction is then followed by a short "biography" of Ibn al-Fāriḍ, which al-Kayyālī drew from al-Munāwī's (d. 1031/1622) *Al-Kawākib al-Durrīyah fī Tarājim al-Sadāt al-Ṣūfīyah,* a hagiographical work on Sufi masters (1:7–12). While this account provides very few actual facts about the poet's life, it does offer a popular, reverential image of Ibn al-Fāriḍ, while mentioning and denouncing the controversies of the Mamluk period regarding his monistic views and those of others, including Ibn al-ʿArabī and al-Farghānī.

Al-Farghānī divides his commentary into two parts. First is a long introduction detailing his theosophy of emanation in four sections: (1) on the Divine Essence and the names and attributes engendered from It, with particular attention to the 99 Divine Names (1:18–69); (2) on the properties *(aḥkām)* of the Realm of Spirits and the World of Dominion *(ʿālam al-malakūt)* and how they are realized and engendered from the Presence of Invincibility *(ḥaḍrat al-jabarūt)* (1:70–78); (3) on the engendering of the World of Similitudes *(ʿālam al-mithāl),* the Realm of Corporeal Bodies, and the creation of Adam (1:79–101), and (4) on the origin of the human being, its phases and states, and how it returns by the path of mystical practice to its spiritual home and union in love (1:102–45).

Throughout this long introduction, al-Kayyālī identifies wherever possible the source of Quranic citations and those for hadith. Occasionally, he will define a Sufi technical term or an obscure word, or clarify an idea, but for the most part, he makes no attempt to present a systematic and analytical presentation of al-Farghānī's ontology, theology, or anthropology. For this the reader should consult the excellent article by Giuseppe Scattolin, "Al-Farghānī's Commentary on Ibn al-Fāriḍ's Mystical Poem *Al-Tāʾiyyat al-Kubrā.*"[3]

Turning to the commentary itself, we learn that al-Farghānī believed that Ibn al-Fāriḍ had attained the high mystical "Station of Muhammad" (*al-maqām al-Muḥammadī;* 1:145), which then served as the basis for *Al-Tāʾīyah al-Kubrá*. There, al-Farghānī observed, Ibn al-Fāriḍ explores aspects of mystical love and the Sufi path, offering guidance and instructions, and often speaking or "translating" from the Station of Muhammad. Proceeding to his verse by verse commentary, al-Farghānī first explains lexical and grammatical issues within each verse, and then provides an interpretation of the verse in terms of his mystical and theological ideas presented in his

[3] *Mélanges (Institut dominicain d'études orientales du Caire)* 21 (1993): 331–83.

introduction. He frequently suggests allusions to the Quran, hadith, and Sufi doctrines that may be present in a verse. At times, al-Farghānī will interrupt his commentary to clarify key points, such as on divine love or mystical annihilation, or to summarize what has occurred so far in the poem. Occasionally, al-Farghānī gives sub-headings to sections of the poem regarding their subject matter. Al-Farghānī also cites the "Saying of Willing Devotions," and this Divine Saying is, indeed, central to Ibn al-Fāriḍ's poem. However, to a large extent, al-Farghānī's interpretations of the verses in terms of his elaborate theosophy are not supported by the poem itself. Nevertheless, his *Muntahá al-Madārik* is an important Sufi work in its own right both for understanding developments in the "Ibn al-ʿArabī School" of Islamic mysticism, as well as important religious trends of the Mamluk period.

NŪR AL-DĪN ʿALĪ IBN ʿABD AL-RAḤĪM IBN AḤMAD AL-KĀTIB AL-MALAKĪ AL-MUẒAFFARĪ IBN AL-MUGHAYZIL, *Dhayl Mufarrij al-Kurūb fī Akhbār Banī Ayyūb,* edited by ʿUmar ʿAbd al-Sallām Tadmurī (Sidon and Beirut: Al-Maktabah al-ʿAsrīyah, 2004). Pp. 206.

REVIEWED BY PAUL M. COBB, University of Notre Dame

Appearances can be deceptive. As discrete forms of historical writing, Dhayls, or continuations, tend to be brief, even curt little things, and they give the impression that they merely offer scattered provincial afterthoughts to the "real" chronicles they claim to continue. But as the pioneering work of Li Guo has shown us, dhayls—perhaps especially Syrian dhayls—are not to be trifled with. Ibn al-Mughayzil's dhayl of Ibn Wāṣil's famous Ayyubid dynastic chronicle, the Mufarrij al-Kurūb, is a case in point. The edition under review here is a marvelous example of how this often misunderstood genre of historical writing can hold real treasures.

The editor of the text, ʿUmar Tadmurī, has done a very fine job of definitively identifying the author of the Dhayl, around whom a certain amount of confusion exists in the manuscript history and catalogues. Tadmurī has also fleshed out his portrait of the author with a sketch of the author's family, a task for which readers will thank him given the prominence that family gossip has in Ibn al-Mughayzil's work. As for the edition itself, it is based on two manuscripts of the work, attached to the two Paris manuscripts of Ibn Wāṣil's Mufarrij al-Kurūb (as one would expect), Bibliothèque Nationale fonds arabe 1702 and 1703. It is unclear from the introduction whether Tadmurī has examined the Cairo or Istanbul manuscripts of the Mufarrij to see if Ibn al-Mughayzil's Dhayl has been

appended there as well. In any case, the edition has left me with the unscientific impression of being a solid one: variants are reported, editorial readings seem sound, and the notes are filled with references to parallel accounts—this last feature a great boon to researchers.

Ibn al-Mughayzil (d. 701/1302) was born into a large notable family from Ḥamāh that included in their ranks a vizier, a qadi, a muftī, a muḥtasib, a khaṭīb, an imam, several traditionists, and a number of kuttāb, including our author. They provided their services to the Abbasid court in Baghdad, the Mamluk sultans in Cairo, and to various Ayyubid lords in Syria, especially that of Ḥamāh. In short, his family represents a cross-section of the medieval Syrian aʿyān. Ibn al-Mughayzil himself seems to have been raised in the household of his grandfather, the Maliki shaykh al-shuyūkh, and was sent on various missions with him or with other relatives. He was an eyewitness to Baybars' campaigns against Franks and Mongols in Syria, and so must have been part of the administrative corps attached to the army—he doesn't seem to be the warrior type himself. For the period 682–98/1283–99 he served as the kātib dīwān of al-Malik al-Muẓaffar, the Ayyubid lord of Ḥamāh. At al-Muẓaffar's death in 1299, Ḥamāh briefly fell under the direct control of Mamluk Cairo. During this period, nothing is known of Ibn al-Mughayzil's activities, though it is perhaps telling that when we next encounter him, it is away from Ḥamāh in 701/1302, by which time he had joined the entourage of a Mamluk amir sent to govern Tripoli, where he died later that year.

The work, as Tadmurī has determined, was written sometime between 696/1297 and 697/1298, or, to be precise, before the death of al-Muẓaffar on 22 Dhū al-Qaʿdah 697/31 August 1298, just a few years after the expulsion of the Franks from the Levant. It covers—in no way completely—the events of some thirty-four years, from 662 to 695/1263 to 1297, focusing on major political events. But the real importance of the work lies in the fact that the author provides both his own completely unique eyewitness accounts and transcripts of chancery documents related to such events as the conquest of Antioch in 666/1268, Ḥiṣn Marqab in 684/1285, and Tripoli in 688/189, and the defeat of the Mongols at Elbistan in 675/1277, as well as unique accounts on the life and conduct of the sultan Baybars and other battles such as the conquest of Acre in 690/1291. It also includes a great deal of information on Ibn al-Mughayzil's family and intellectual networks, as the author drops names like they were going out of style, and is always ready to quote samples of his own poetry for us.

Part chronicle, part autobiography, part inshāʾ collection, part dīwān: there's a little something for everyone in Ibn al-Mughayzil's Dhayl. Historians interested in Mamluk Syria, conflicts with the Franks, Mamluk-Mongol relations, and the world of the "civilian elite" of medieval Syria will be rewarded in ways belied by the small size of this svelte volume. I recommend a copy for every Mamlukist's bookshelf.

Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras III: Proceedings of the 6th, 7th and 8th International Colloquium Organized at the Katholieke Universiteit Leuven in May 1997, 1998 and 1999, Orientalia Lovaniensia Analecta 102, edited by U. Vermeulen and J. Van Steenbergen (Leuven: Peeters, 2001).

REVIEWED BY ALBRECHT FUESS, Universität Erfurt/Équipe Monde Arabe et Méditerranée, Centre national de la recherche scientifique, Université de Tours

This conference volume is the product of three international colloquia on Egypt and Syria in the Fatimid, Ayyubid, and Mamluk eras which were organized at the Catholic University Leuven in May 1997, 1998, and 1999. This annual conference series started in 1992 and has been organized since on a yearly basis by Urbain Vermeulen and Jo van Steenbergen. The seventeenth colloquium of this kind was held in May of 2008 at the University of Ghent. The continuity of this effort underlines the importance of Belgian scholars in current research on the Middle East in the medieval period. In this context, certainly Frédéric "Maqriziana" Bauden from the University of Liège with his innovative work on Mamluk historiography has to be named as well.

The third volume of proceedings of the series contains seventeen English, five French, and two German articles. The papers are arranged chronologically. You will find three articles concerning the Fatimids and five concerning the Ayyubids. The majority of the articles (fifteen) deal with the Mamluk era. The conference volume covers therefore a time period of over five hundred years (969–1517). Fortunately Egypt and Syria receive equal attention and the work is therefore not leaning solely towards Egyptian history.

There is no thematic restriction. This leads to a large variety of topics which allows the authors the utmost flexibility and elucidates the depth and diversity of contemporary research.

Two articles focus mainly on the role of women in Muslim medieval societies. Recently Carl Petry and Lucian Reinfandt have already shown the importance of women as supervisors of charitable trusts (awqāf) in the Mamluk era, but other aspects of the history of women in Muslim medieval societies receive increased interest as well. Yaacov Lev, for example, explains (pp. 1–31) the social life of common and royal women in the Fatimid period. He provides us with an insight into some aspects of the daily life of common women and shows how the Fatimid royal women tried to cope with the problem that the participation of women in political life was on the one hand restricted, but on the other hand there were the needs of dynastic politics, which also necessitated public involvement.

Amalia Levanoni (pp. 209–218) draws our attention to the most prominent woman of Mamluk times: Shajar al-Durr, the Mamluk sultana. As it is well known, she reigned as "queen of the Muslims" for three months in 1250 after the death of her husband al-Ṣāliḥ Ayyūb and the killing of the Ayyubid

heir al-Muʿaẓẓam Tūrān-Shāh. Although she had to leave the place of official ruler to a man after three months, the former Qipchaq slave girl played an extraordinary role in the ensuing power struggles until she was finally murdered in 1257. Amalia Levanoni explains this active role of Shajar al-Durr convincingly by the high status women were accorded in the Mongol regency of the Golden Horde, the homeland of the Qipchaq Turk Mamluks. Therefore the Mamluks accorded this prominent role to Shajar al-Durr in the formative period of the Mamluk Empire. Once they had found out that the Egyptian environment was fundamentally hostile to such experiments, the Mamluks never repeated it again.

Another important part of the conference volume deals with different forms of landownership, land taxes, and pious endowments. Stuart Borsch has recently worked out in his The Black Death in Egypt and England[4] that Egypt had an entirely agrarian economy in the Middle Ages and "derived almost all of its Gross National Product from agrarian revenue. . . . Long-distance trade played a subordinate role in the overall development of Egypt's economy."[5] When we take these findings into consideration than we can understand how important it was for Mamluk society to define the access to the revenues of agrarian income even in the provinces. Yehoshua Frenkel (pp. 193–208) explains therefore the different aspects of land tenure in Mamluk Palestine, especially as income for the military, and the same author (pp. 33–49) also draws attention to the ketubba (Jewish marriage document) as a source for the study of the economic history of the Fatimid period.

C. Morisot (pp. 309–28) explains that it was common practice for merchants to possess for pious foundations "waqf des commerçants" and he explains in detail the content of such waqf documents. Urbain Vermeulen reflects on the circumstances which led to the issue of a tax lowering document for fourteenth-century Damascus, while Johannes Pahlitzsch (329–44) elaborates on the more spiritual background of the endowment practice in Mamluk Jerusalem, thereby comparing it to contemporary Christian concepts.

Of course, such a conference volume broadens our knowledge about less-known manuscripts. Angelika Hartmann (pp. 89–100) does so with the Syrian chronicle Al-Tārīkh al-Manṣūrī of Ibn Naẓīf al-Ḥamawī from the thirteenth century, who is apparently one of best informed historiographers of the Ayyubid period, but the question remains if another copy of the manuscript is to be found in the future apart from the one in St. Petersburg. M. Aguiar Aguilar (pp. 163–70) discusses Arabic treatises on the sinical quadrant in the Mamluk period, which served to provide answers to problems of spherical trigonometry.

[4]Austin, 2005.

[5]Borsch, Black Death, 19.

Needless to say, aspects of archaeology and architecture form an integral part of the book. Lorenz Korn (pp. 123–37) demonstrates his broad expertise when explaining the attitude of contemporary historiography towards Ayyubid building activities, thereby stating that it was increasingly popular among authors of late Ayyubid and early Mamluk times to describe buildings, and that criticism from religious scholars for constructing profane buildings is hardly to be found. The same author (pp. 101–21) provides us with a detailed study of al-Ṣāliḥ Ayyūb's madrasah in Cairo.
The contributions of Hanisch (pp. 61–88) and Petersen (pp. 345–406) deal with the archaeological evidence for the planning of castles and towns in Ayyubid and Mamluk times. In these articles the military function of places and fortresses is explored as well.

There are three papers which deal mainly with military issues. P.-V. Claverie clarifies the role of the Templars of Catalonia in the final defense of the Frankish Crusader kingdoms up to the fall of the island of Arwād/Rouad opposite Tarṭūs in 1302 and the beginning of the juridical process against the Templars in Cyprus in 1310. The importance of the Templars in the diplomatic relations of Catalonia with the Mamluk Empire and the Persian Ilkhanate is explored as well.
David Nicolle's article (pp. 139–62) touches on a crucial point in the military history of the Near and Middle East, i.e., the scarcity of necessary raw materials from the tenth to the fourteenth century. He demonstrates how the especially vital iron had to be imported from Europe, Anatolia, and India. On the other hand, this scarcity of raw materials led to special forms of armament such as hardened leather. The article provides numerous further aspects dealing with the manufacture and storage of arms. Moreover it provides an excellent appendix of eleven pages for further reading on the topic.
Equally valuable is Dionisus Agius' (pp. 49–60) work on the Arab shalandī in the Fatimid era. Shalandī is the name given by the Arabs to a special type of Byzantine war vessel. Agius enlightens us here with a further insight into Arab shipbuilding, classifies the different types of ships used by Muslims, and discusses the scarcity of wood in the region. The shalandī seems to be originally a Byzantine warship and the name apparently derives from the Greek. It seems that the shalandī was decked and that we can see here a difference from other contemporary ship types. The Fatimids ordered the buildings of shalandīs in Egypt in order to be competitive with the Byzantines. However, it seems from my point of view that the shalandīs were as powerless as the rest of the Fatimid navy against the Crusaders. We do not hear of the shalandīs in later periods and especially not in Mamluk times. But the Mamluks did not have a navy worthy of the name anyhow.
The last cluster of themes which can be grouped together in the present conference volume deals with aspects of the civilian and military elites in

the Mamluk Empire. Bernadette Martel-Thoumian (pp. 271–308) reflects first on the role of the urban elites in the Circassian period, before describing in detail the life of Muḥibb al-Dīn Salāmah ibn Yūsuf al-Aslamī, a very prominent secretary in Damascus on the eve of the Ottoman conquest (pp. 219–70).

Another interesting double set of articles concerning members of the civilian elite in Mamluk Syria is provided by G. Schallenbergh, who explains the negative attitude of the famous Damascene scholar Ibn Taymīyah towards the Shiʿah (pp. 407–20), before elaborating on the most prominent disciple of Ibn Taymīyah, i.e., Ibn Qayyim al-Jawzīyah, and his spiritual way to healing "the diseases of the heart," in his second contribution (pp. 421–28).

Finally, Jo van Steenbergen (pp. 429–48) explains the functioning of the Mamluk governorship in Damascus from 1341 to 1382 and provides a list of all Mamluk governors of the period. In a second article (pp. 449–66) the same author examines the question of whether the powerful amir Qawṣūn was a statesman or a courtier. Van Steenbergen concludes that Qawṣūn was a pawn in the double policy of Sultan al-Nāṣir Muḥammad. Qawṣūn had been installed by the sultan to counterbalance other powerful Mamluk factions, but after the death of the sultan, Qawṣūn had not been capable of building enough alliances to hang on to power and therefore he was overthrown in 1342. (In this context I would like to point out the very good recent study of Henning Sievert, who has examined the structures behind Mamluk succession struggles in the Circassian period: Der Herrscherwechsel im Mamlukensultanat: Historische und historiographische Untersuchungen zu Abū Ḥāmid al-Qudsī und Ibn Taġrībirdī [Berlin, 2003]). Regarding the case of the succession of al-Nāṣir Muḥammad, van Steenbergen concludes, alluding to the ambiguous role of the sultan: "But as soon as the puppeteer left his play, the system collapsed and chaos seemed about to ensue" (p. 466). But as van Steenbergen knows all too well himself, there will be always "Order Out of Chaos."

To sum up: All contributions to this conference volume are of high scholarly standard and display thematic depth and intellectual sharpness. Moreover, the book provides starting points for further research. It has to be clearly acknowledged that the Belgian conference series with the accompanying proceedings in Leuven, and nowadays Ghent, are one of the few established and vital scientific platforms where scholars of medieval Egypt and Syria can present their current research and intensify international academic contacts.

TAMĪM MAʾMŪN MARDAM BEK, *Al-Malik Qānṣūh al-Ghawrī al-Ashraf wa-al-Wazīr Lālā Muṣṭafá Bāshā Dhī al-Sayf al-Aḥnaf* (Damascus: Maktabat Dār Ṭulās, 2007).

REVIEWED BY IGARASHI DAISUKE, Japan Society for the Promotion of Science, The Toyo Bunko

The title of this book is an arrangement of the names of Qānṣūh al-Ghawrī—the de facto last Mamluk sultan, who was killed in the Battle of Marj Dābiq, which was fought between the Mamluk Sultanate and the Ottoman Empire in 1516—and of Vizier Lālā Muṣṭafá Pasha, who held various governmental posts including the governorship of Damascus (1561–68) and took the command of the army in various campaigns such as the Ottoman conquest of Cyprus (1571) under the reign of the Ottoman sultan Suleyman I (r. 1520–66) and Selim II (r. 1566–74)—both of whom were prominent military rulers but appear to have no connection with each other. This title might sound strange until one studies the family tree of its author. The Mardam Bek family, one of Syria's most distinguished, traces its ancestry back to this very Lālā Muṣṭafá Pasha. Lālā Muṣṭafá Pasha was married to Fāṭimah, the daughter of al-Ghawrī's son al-Nāṣirī Muḥammad and his wife, the daughter of Amir Sībāy (the viceroy of Damascus under al-Ghawrī). This implies that the author of the book is a fifteenth-generation descendant of al-Ghawrī and, at the same time, a thirteenth-generation descendant of Lālā Muṣṭafá Pasha. In addition, the author's great-grandfather was married to a woman who was the eleventh-generation descendant of Sībāy. Therefore, this book is not so much an academic study as it is an introduction to the author's own great ancestors.

This book is comprised of the following six chapters: (1) The biography of Sultan al-Ghawrī, (2) the biography of Sībāy, (3) the biography of al-Nāṣirī Muḥammad al-Ghawrī, (4) the biography of Fāṭimah Khātūn al-Ghawrī (the wife of Lālā Muṣṭafá Pasha), (5) the biography of Vizier Lālā Muṣṭafá Pasha, and (6) the genealogical tree of the Mardam Bek family (an additional chapter).

Although this book contains some interesting information regarding these historical figures, unfortunately, we must state that it is inappropriate for academic use. This is because it disregards the basic principles of academic writing. For example, Chapter 1 includes al-Ghawrī's brief biography and the "edited" text of two Arabic sources—*Nafāʾis al-Majālis al-Sulṭānīyah fī Ḥaqāʾiq al-Asrār al-Qurʾānīyah* (by Ḥusayn ibn Muḥammad al-Ḥusaynī) and *Al-Kawkab al-Durrī fī Masāʾil al-Ghawrī*. Both of these sources include dozens of questions (most of which pertain to religious matters) submitted by al-Ghawrī to the sultanic council *(majlis)* along with the ulama's answers.

However, almost the entire chapter is copied word for word from ʿAbd al-Wahhāb ʿAzzām's *Majālis al-Sulṭān al-Ghawrī: Ṣafḥāt min Tārīkh Miṣr fī al-Qarn al-ʿĀshir al-Hijrī* (Cairo: Maṭbaʿat Lajnat al-Taʾlīf wa-al-Tarjamah wa-al-Nashr, 1941), probably without referring to the original manuscripts of the two Arabic sources. In addition, the author has added some trivial information, including excerpts from Wikipedia. This problem applies not only to this chapter but to entire sections within the book. Due to the defectiveness of his annotation, it is impossible to know exactly what information and details are being relied on for authority. Moreover, the author has not clearly demarcated which descriptions he has written himself and which descriptions are quoted from papers written by other researchers.

Thus, it is hard to say that this book meets the acceptable levels for academic study. Nonetheless, it does not diminish the value of research on this unique family that originated through the formation of marital relationships among members of the military elite of the destroyed old regime and of the new empire at its peak. It is expected that the book will inspire further research on this family by specialists in Mamluk and Ottoman history.

Muḥammad ʿAlī Ṣuwayrikī, *ʿĀʾishah al-Bāʿūnīyah: Fāḍilat al-Zamān (865–922 H = 1460–1516 M)* (Amman: Wizārat al-Thaqafah, 2006). Pp. 203.

Reviewed by Th. Emil Homerin, University of Rochester

This book was published to coincide with UNESCO's commemoration of ʿĀʾishah al-Bāʿūnīyah and her contributions to human knowledge and culture approximately five centuries after her death. The book was compiled by Muḥammad ʿAlī Ṣuwayrikī, who offers a concise biography of ʿĀʾishah al-Bāʿūnīyah and a list of her writings (pp. 11–50), followed by a small sampling of her poetry with little commentary (pp. 51–67). The third section of the book contains two works by ʿĀʾishah in praise of the prophet Muḥammad, her famous badīʿīyah, Al-Fatḥ al-Mubīn fī Madḥ al-Amīn, and one of her mawlids, Al-Mawrid al-Ahná fī al-Mawlid al-Asná (pp. 69–184). The final section of the book contains brief proclamations by various Jordanian ministries and writers in support of UNESCO's recognition of ʿĀʾishah al-Bāʿūnīyah (pp. 185–98).

The book is clearly a commemorative volume aimed at a literate Arab public. Ṣuwayrikī openly acknowledges that he drew all of his material from Arabic secondary sources; he seems unaware of Western scholarship

on ʿĀʾishah al-Bāʿūnīyah[1] For his biography, bibliography, and selection of poems, Ṣuwayrikī relied heavily on Ḥasan Rabābiʿah's ʿĀʾishah al-Bāʿūnīyah: Shāʿirah (1997)[2]; while reprinting editions of ʿĀʾishah's works from Fāris Aḥmad al-ʿAlāwī's ʿĀʾishah al-Bāʿūnīyah al-Dimashqīyah (1994),[3] complete with notes, minor omissions, and typographical errors. It is clear that Ṣuwayrikī is not a scholar of Mamluk literature, and that the book under review offers no new scholarship, though it is a readable general introduction to the life and work of ʿĀʾishah al-Bāʿūnīyah, a very gifted Sufi poet of the Mamluk period.

DANIELLA TALMON-HELLER, *Islamic Piety in Medieval Syria: Mosques, Cemeteries and Sermons under the Zangids and Ayyūbids (1146-1260),* Jerusalem Studies in Religion and Culture (Leiden: Brill, 2007). Pp. 332.

REVIEWED BY ZAYDE ANTRIM, Trinity College

This meticulously researched and lucid monograph is a valuable contribution to ongoing investigations into the religious culture of medieval Muslims. In it, Daniella Talmon-Heller tackles two thorny and persistent questions faced by scholars in this area of inquiry: first, did the experience of communal worship create actionable corporate solidarities for medieval Muslims at an intermediate level between the *ummah* on the one hand and the family on the other? And second, is it appropriate to speak of a "popular" culture of worship in tension with the "high" or "orthodox" religious authority of the ulama? The answer to both questions, Talmon-Heller convincingly argues, is "no," though more emphatically in the latter case than in the former.

Although her theoretical framework for the study is far-reaching and comparative, informed by anthropologists of religion and cultural historians as well as works on late antique and medieval Christianity and Judaism, Talmon-Heller sets herself in most direct dialogue with scholars of Ayyubid and Mamluk Egypt and Syria, such as Stephen Humphreys, Louis Pouzet, Michael Chamberlain, Jonathan Berkey, and Charles Taylor. Talmon-Heller makes clear the particular influence on her thinking of works by Berkey and Taylor, which "place at the center of their inquiry the religious experience of the individual rather than power relations" (p. 21), although she does not always find herself in agreement with their conclusions, partly because both of them focus primarily on Egypt in the Mamluk period while she focuses on Syria in the earlier Zangid and Ayyubid

[1] E.g., *MSR* 7, [no. 1] (2003): 211–34.

periods. By elucidating aspects of the overlapping, and often intimately linked, ritual practices of the ulama, the ruling elite, and the unlettered masses, Talmon-Heller's research on the "hybrid religious orientations" (p. 1) of medieval Syrian society adds an important layer to the aforementioned studies of the complex religious life of this period.

Islamic Piety in Medieval Syria is divided into three sections, all of which draw from an extensive and diverse body of sources, including narrative histories and geographies, religious treatises, administrative manuals, and inscriptions, to occupy the spaces and observe the practices of medieval Syrian religiosity. The first section deals with mosques, their physical structures, their personnel, and the activities associated with them; the second moves from the mosque to the cemetery and the shrine, addressing similar issues and generally interpreting them as extensions and/or alternate sites of the same religious sensibilities expressed in and around mosques; the third section subjects the same sources from which she extracts empirical data in the first two sections to discourse analysis in order to gain a better understanding of the meaning of piety and impiety in Syrian society of the twelfth and thirteenth centuries. In all three sections, Talmon-Heller demonstrates an impressive facility with her wide-ranging source base as well as an uncompromising critical eye: she is as ready to assert her findings from the sources as she is to remind us of their limitations. While there is insight to be gained from all three sections, the first section represents the most comprehensive and original contribution to the existing literature.

The achievement of Talmon-Heller's in-depth study of mosques in medieval Syria is the portrait it paints of "truly popular and vibrant institutions, accommodating a loosely organized body of faithful, men, women and children" (p. 145). Mosques in this period were public spaces par excellence, marked by extreme inclusivity. Despite the admonitions of some (but by no means all) members of the ulama against inappropriate uses of mosques (for women's prayer, sleeping, selling, emotive displays, political dissent, special devotions) they were enthusiastically and repeatedly put to all of these uses and more. As the sheer number of mosques in both urban and rural areas increased considerably during the Zangid and Ayyubid periods, the concomitant increase in the amount of space available for such activities made possible an increase in the activities themselves as well as the number of people participating. Moreover, although some members of the ulama looked askance at some mosque activities, at least an equal number joined right in and/or furnished the leadership in the role of preacher *(khaṭīb)* or prayer leader *(imām)* necessary to produce and reproduce the "culture of pluralism and heterogeneity" in Syrian mosques (p. 144). Talmon-Heller skillfully weaves together anecdotes about mosque building, biographies of preachers, transcripts of sermons, and descriptions of the ever-popular "assembly of exhortation" *(majlis al-waʿẓ)* to evoke a culture of mosque-going in which ulama, commoners, and princes mingled, perhaps to different ends but by shared means. In this culture

the ulama acted more as mediators between social groups than as arbiters of an orthodox Islam.

Did this culture produce corporate solidarity in the form of local self-regulating and self-conscious congregations? In general, Talmon-Heller answers in the negative—at least in terms of what the extant sources allow us to see—with one important exception: the Hanbali communities of Syria, and Damascus in particular, tended to coalesce around strong leaders who created a sense of belonging to a community of worship, usually coterminous with a neighborhood or suburb. Nevertheless, Talmon-Heller is not willing to go as far as Michael Chamberlain in downplaying the importance of associative identities above the level of the individual family but below the level of the *ummah*. She suggests—and argues her sources suggest—the presence of a culture, a mosque-going culture, or a culture of piety, in medieval Syria that had the capacity to bind a broad range of people together, even if only for the length of time (admittedly, sometimes quite epic) of one of the assemblies of exhortation led by the famous preacher Sibṭ ibn al-Jawzī in early thirteenth-century Damascus.

This sense of belonging to a culture of piety for which the mosque was the chief public space can also be extended to the spaces of the cemetery and the shrine. Just as the number of mosques in twelfth- and thirteenth-century Syria increased, so too did the number of shrines and cemeteries designated (whether officially or unofficially) as destinations for pious visitation *(ziyārah)*. In the second section of *Islamic Piety in Medieval Syria,* Talmon-Heller contributes to earlier studies of *ziyārah* in medieval Syria by including a discussion of the translation of relics in this process, by setting the visitation of tombs in the context of Crusade-era inter-faith encounter and conflict, and by observing the coexistence between, and occasional patronage of both, Shiʿi and Sunni sites of visitation. The invocation of blessing *(barakah)* and intercession *(shafāʿah)* on behalf of either the living or the dead, Talmon-Heller argues, was the primary goal of founding, preserving, and visiting cemeteries and shrines for people from across the social spectrum. In accordance with the book's overall argument, these sites should be seen as widely accessible and well-used "outlets for piety in a 'pious age'" (p. 207), rather than merely expressions of political propaganda or new doctrines of sainthood (though they could be these things as well).

In the final section of the book, Talmon-Heller turns to the meaning of piety in this period. She identifies two trends, moderate Sufism and moderate Hanbalism, converging in twelfth- and thirteenth-century Syria to produce an ecumenical understanding of piety that embraced both activism and asceticism. Particularly revealing of what constituted piety in this period, she argues, was the discourse on impiety that made up a good part of the scholarly production of the ulama. While Talmon-Heller does not dismiss interpretations of this discourse as a struggle over religious authority or power among elites, she insists that the *content* of the discourse was meaningful in and of itself to the individuals who participated in

the discourse and to those whom they led in worship at mosques, cemeteries, and shrines. "From the point of view of our medieval informants, correct belief, legitimate behavior, and the construction of boundaries between right and wrong indeed were at stake; not merely political benefits disguised as debates about religion" (p. 227). Thus, condemnations of astrology, philosophy, and antinomian Sufism should be seen as expressions of commitment to the shariʿah and the Quran as the most important moral standards for social and spiritual life. The Syria presented by Talmon-Heller was one in which the ulama, the ruling elite, and the unlettered masses shared a religiosity informed by this mainstream understanding of piety: "an outlook successfully disseminated in all echelons of society thanks to its highly inclusive character, and to the efficient activity of its agents in the central arenas of the mosque, the cemetery, the shrine, and the public assembly of exhortation" (p. 251).

In Islamic Piety in Medieval Syria, Daniella Talmon-Heller has given scholars of many fields, including cultural history, anthropology, and religion, a gift of meticulous research and lively prose. Reading the book is a delightful experience for the specialist, as the copious anecdotes Talmon-Heller relates from her sources (often with full Arabic transliteration) capture the sensibilities and senses of humor that pervade literary production from this period. Perhaps its greatest contribution is its presentation of an alternate vision of religious culture grounded in time and place that complicates assumptions about tensions between "high/elite" and "low/popular" versions of Islam.

Shams al-Dīn Muḥammad ibn Ḥasan ibn ʿAlī al-Nawājī, *Taʾhīl al-Gharīb, edited by Aḥmad Muḥammad ʿAṭāʾ* (Cairo: Maktabat al-Ādāb, 1425/2005). Pp. 1165.

Reviewed by Geert Jan van Gelder, University of Oxford

Taʾhīl al-Gharīb ("Familiarizing the Strange," or, if one prefers, "Making the Stranger Feel at Home") is a very large anthology, now edited for the first time, of longer poems on lyrical themes, mostly love, including introductory *nasīb* sections of panegyric poems. It was compiled by al-Nawājī (d. 859/1455), himself a poet but now better known as the author of the Bacchic anthology *Ḥalbat al-Kumayt*. The present collection, apparently made in emulation of an anthology with the same title by his friend (and later enemy) Ibn Ḥijjah al-Ḥamawī, contains more than one thousand pieces, some 12,000 verses in all, mostly from the seventh/thirteenth, eighth/fourteenth, and ninth/fifteenth centuries, arranged alphabetically

according to rhyme-letter, each section subdivided into rhymes ending in *–ū*, *–ā*, *–ī*, *sukūn*, and rhymes with a suffix. This, incidentally, enables us at times to see how poems are based on earlier models in emulation *(muʿāraḍah)* or parody (see, e.g., poems nos. 767–774, with quotations from Imruʾ al-Qays's *Muʿallaqah*). The poet most often quoted is Ibn Nubātah, with 141 pieces, followed at considerable distance by Ṣafī al-Dīn al-Ḥillī, Bahāʾ al-Dīn Zuhayr, Ibn Sanāʾ al-Mulk, Ibn al-Nabīh, al-Nawājī himself, and Ibn Ḥijjah al-Ḥamawī. The earliest periods are represented minimally: there is only one pre-Islamic poem (by Zuhayr) and seven from the Umayyad period. Abbasid times are better represented, but the great majority of poets and poems (727 of a total of 1068) date from the Mamluk period. Apart from the well-known poets mentioned above there are many others, including lesser known poets; 48 pieces are anonymous. The compiler has provided no commentary or context, apart from indicating, where appropriate, if the poem was made as a panegyric; in such cases the piece stops at the *takhalluṣ,* or transition from the lyrical introduction to the panegyric section. He set himself the task of including poems rhyming in every letter of the alphabet, even the less popular rhyme letters: there are only three pieces rhyming in *ẓ,* five in *gh,* and, as he tells us, he was forced to compose a poem in *kh* himself for the occasion, after searching for years in vain for a suitable piece in this rare rhyme (better suited to lampooning than to lyrical themes).

Perhaps surprisingly, no *muwashshaḥāt* or *azjāl* are included; the only strophic form represented is the *takhmīs,* with rhyming hemistichs of the pattern *a1a2a3a4a5 b1b2b3b4a6 c1c2c3c4a7 ,* etc., often embedding an earlier *qaṣīdah* (*a4a5 b4a6 c4a7* . . .); see nos. 198, 262, 264, 430, 555, 775, 1047. Love is the dominant theme, but there are wine poems too, such as the very first one, by Abū Nuwās (the famous *Daʿ ʿanka lawmī* . . .), one of the very few poems in the collection that could be classified as *mujūn* (see vs. 3). Wine and obscenity are also present in a sequence of poems (nos. 740 to 743) beginning with one by al-Nawājī inviting a friend to a party. Ibn al-Fāriḍ's famous wine poem *(Sharibnā ʿalá dhikri l-ḥabībi mudāmatan . . .)* is also quoted in its entirety, and one may justly wonder—as so often without arriving at an unambiguous answer—how many of the *ghazal* poems are to be taken in a mystical rather than (or in addition to) a profane sense. There is some descriptive poetry: Ibn Nubātah's depiction of a shooting trip with the crossbow (no. 430), Ibn al-Ṣāʾigh's description of Damascus (no. 662), Ṣafī al-Dīn al-Ḥillī on a candle (no. 1006). Twelve poems take the form of a riddle, e.g., nos. 38 (on a water-skin), 217 (a pigeon), 233 (a prayer mat), 975 (the sweetmeats *kunāfah* and *qaṭāʾif*). One poem, by al-Nawājī (no. 763), is an acrostic in which the initial

letters of the ten verses spell "ʿAlī al-Zarkashī," the name of the boy whose praises are sung, a form less usual in Arabic than in Western literatures.

The editor, who must be thanked for making this rich collection accessible, has provided useful appendices on the poets and, in his introduction, some statistics on the poets and the periods represented in the anthology. Although *Taʾhīl al-Gharīb* is preserved in several manuscripts, the editor says (pp. 40–41) that only one was available to him (Cairo, Maʿhad al-makhṭūṭāt, no. 2406); his written requests for microfilms from other libraries (Paris, Topkapı, British Museum) were, apparently, not honored with answers. This is deplorable, but collating the various manuscripts and adding variants to the apparatus would have added considerably to the editor's efforts as well as to the size of the already bulky paperback. The Cairo manuscript, according to the editor, is riddled with scribal errors and the order of its folios is in some disarray. In his annotation the editor points out obvious errors in the manuscript and variants offered by *dīwān*s or other sources. Since the manuscript is unvoweled he has also provided nearly full vocalization.

This does not mean, unfortunately, that the edited text is as free from error as could be desired. It does not matter much, perhaps, if the meter of a poem is wrongly identified by the editor (no. 256 is not *rajaz* but *kāmil,* no. 1002 is not *sarīʿ* but *munsariḥ,* no. 1068 is not *madīd* but *ramal*); but it is another matter when such misidentifications, ignorance of the meter, or general carelessness results in faulty readings and vocalizations. Thus the fifteen verses of poem no. 1068, by Abū al-Faḍl Ibn Abī al-Wafā, contain a rich sprinkling of errors: *muhjatuhū* read *muhjatun, fīya* read *fī* (twice), *bulītu* read *baliyat, āhin* read *āhi, al-ḥayyā* read *al-ḥayā, arwāḥuhum* read *arwāḥahumū*, *abʿada tamuwwuhā* (?) read *abʿadtumūhā, wa-hiya* read *wa-hya, qaḍaytu muddata* read *quḍiyat muddatu*. Poem 256, by Ḥusām al-Dīn al-Makhzūmī, fares little better: *ḥumran* read *ḥamrāʾu*, *awdat baʿḍa l-bānati* read perhaps *aw dhāti ghuṣni l-bānati, jīdan* read *jaydāʾa, aw in / anshadat ghannat* read *aw anshadat / ghannat, lā taḥfalanna* read *lā taḥfilan, ṣufratan lawnihī* read *ṣufrata lawnihī, ghīdan* read *ghaydāʾu, la-aḍḥā* read presumably *lā ṣaḥbī, wa-ẓaltu* read *wa-ẓalilitu, lākinna dhawāʾiba* read *lākin dhawāʾibu*). These poems may not be representative, but there are other pages with a similar density of mistakes. The first five lines of a poem in *ṭawīl* (no. 354) by Ibn Makānis are unmetrical and have been left uncorrected (*li-hawāhu* read *lahwihī, min al-mudāmi kumaytan* read *mudāma kumaytin, fa-innahā* read *fa-inna, wa-l-Iskandarā* read—to make it scan!—*wa-l-Issikandarā, wa-qaṣrin Qayṣarā* read *wa-qaṣrin tuṣuwwirā*).

Within its self-chosen thematic limitation, the collection shows off so-called post-classical Arabic poetry at its best, or perhaps one ought to say at its most accessible to a modern readership: lyrical verse, without extremes of difficulty, artifice, fulsome panegyric, tedious piety, or dreary didacticism: a kind of *Golden Treasury* of Arabic verse (but one that, unlike Palgrave's English anthology, will not easily fit into any pocket).

IBN AL-JĪʿĀN, *Al-Qawl al-Mustaẓraf fī Safar al-Malik al-Ashraf Qāytbāy,* and ANONYMOUS, *Tārīkh al-Malik al-Ashraf Qāytbāy,* edited by Muḥammad Zaynuhum (Cairo: al-Dār al-Thaqāfīyah lil-Nashr, 2006). Pp. 142.

REVIEWED BY LI GUO, University of Notre Dame

Two historical accounts of the reign of the Mamluk sultan al-Malik al-Ashraf Qāytbāy (r. 901–3/1496–98) are published here. The first, the title of which is translated by Carl Petry as "The elegant report recounting the voyage of . . . the esteemed monarch," is a log of the sultan's journey that "describes conditions of rural life as well as receptions accorded the royal guests by provincial officials."[4] The author, Abū al-Baqāʾ Muḥammad Ibn al-Jīʿān, served as deputy to Qāytbāy's privy sectretary Zayn al-Dīn Ibn Muzhir and participated in the sultan's trip through Syria to the Euphrates frontier in 882/1477.[5] The work was published once before, with a French translation, by H. Devonshire, in the IFAO *Bulletin* 20 (1922): 2–40.

None of the above is mentioned in the Introduction to the present "edition." Worse, it did not even get the author right, claiming the author to be Abū al-Barakāt Ibn al-Jīʿān, "the brother of Abū al-Baqāʾ" (p. 6), instead. Since I have not seen the manuscript upon which the present edition is based—a hand copy from the Maʿhad al-Makhṭūṭāt al-ʿArabīyah in Cairo of a manuscript attributed to one "Ibn al-Jīʿān" housed in the Dār al-Kutub (tārīkh 210)—I am not in a position to determine whether the error has to do with the substandard catalogue system in the Dār al-Kutub, or with the less-than-diligent homework on the part of the editor. Of the several Ibn al-Jīʿāns, Abū al-Barakāt, who is *not* the author, seems to be an easy choice: anecdotes about his blind loyalty to the sultan are well documented in the chronicles[6] and are quoted verbatim, without naming the sources, in lieu of an adequate biography (even for the wrong person) in the Introduction. The Introduction does not shed light on the manuscript situation of the work either; there is therefore no way of knowing whether the Cairo manuscript used for this edition is among the ones listed by Carl Brockelmann[7] and utilized by the Devonshire 1922 edition, or not.

The next text is perhaps more interesting. Despite the fact that scholars have long been aware of it,[8] it has remained in manuscript form—and there is a good reason for that. This "précis of Qāytbāy's reign," in Carl Petry's assessment, does

[4]Carl Petry, *Twilight of Majesty: The Reigns of the Mamlūk Sultans al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī in Egypt* (Seattle and London, 1993), 11–12; idem, *Protectors or Praetorians? The Last Mamlūk Sultans and Egypt's Waning as a Great Power* (Albany, 1994), 8.

not yield "any original information."[9] The present edition is based on a codex from the Maʿhad al-Makhṭūṭāt al-ʿArabīyah in Cairo, which in turn is a copy of a manuscript in the Dār al-Kutub (8554 ḥ). According to the Introduction (p. 5), the "manuscript" (of the Maʿhad or the DK?) consists of 82 folios *(waraqah)*. In the present edition the full text runs some 60 pages (pp. 41–117), with footnotes. The footnotes are very odd. They are too long on the things we already know, such as the hadith transmitters ranging from al-Bukhārī to Abū Hurayrah, but frustratingly short, or nearly absent, on the things we really want to know, namely persons and technical terms of the time in question. It seems that the editor tried hard to give the book a "scholarly" look: in addition to Introduction, text, and footnotes, which all turn out to be unscholarly, it includes several indexes and a bibliography. Upon closer examination, the seemingly scholastic apparatus again reveals its inadequacies. While some of the indexes are not totally unhelpful, some are inadequate. For example, the index of verses (p. 137) fails to cite the full *maṭlaʿ* (opening line) with the rhyme *(al-qāfiyah)* of any given poem; as a result, it is useless. The long bibliography (pp. 137–42) looks impressive for such a slim volume, but again, it lacks substance: the majority of it is made up of titles irrelevant to late Mamluk historiography, to say nothing of the recent publications on Sultan Qāytbāy.

Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	ʼ	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	ʻ				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
ـَا	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Avoid using apostrophes or single quotation marks for ʿ*ayn* and *hamzah*. Instead use the Unicode characters ʿ (02BF) and ʾ (02BE).

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before "sun" letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

PUBLISHED BY THE MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January. Beginning with volume XIII, no. 1, *Mamlūk Studies Review* no longer appears in conventional print format, but continues as an open-access online publication. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to The Chicago Manual of Style, 15th edition. Submissions should be composed with current word-processing software, and if possible should use a Unicode font, such as Charis SIL (see the website below for further information). Submissions may be made via email, but authors must also send a printed copy and a labeled CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://www.lib.uchicago.edu/e/su/mideast and http://mamluk.uchicago.edu. These sites provide links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, and The Chicago Online Encyclopedia of Mamluk Studies, as well as other resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the Review.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson, Gregg Reynolds, and Basil Salem are providing valuable technical and conceptual assistance in the journal's transition to online format.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA. The editor can be contacted by email at msaleh@uchicago.edu.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig
Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2010 Prize, dissertations must be defended by December 31, 2010, and submitted to the Prize Committee by January 31, 2011. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

Previous Prize Winners:

2004: Tamer el-Leithy, Princeton University, "Coptic Culture and Conversion in Medieval Cairo: 1293-1524."

2005: Zayde G. Antrim, Harvard University, "Place and Belonging in Medieval Syria, 6th/12th to 8th/14th Centuries."

2006: Nahyan A. G. Fancy, University of Notre Dame, "Pulmonary Transit and Bodily Resurrection: The Interaction of Medicine, Philosophy and Religion in the Works of Ibn al-Nafīs (d. 1288)."

2007: No prize was awarded.

2008: No prize was awarded.

2009: No prize was awarded.

Preface

I am honored to introduce this, my first issue as editor of *Mamlūk Studies Review*. I am excited to assume this role and will strive to maintain the high standards established by MSR's founding editor, Bruce Craig, who will continue as editor emeritus.

I am particularly pleased that this issue constitutes a Festschrift for the eminent Mamlukist (and member of MSR's editorial board), Carl F. Petry. For most readers of this journal, Carl needs no introduction. His groundbreaking studies on the social and political history of the Mamluk Sultanate have provided a foundation on which all subsequent work has been based. I join with his colleagues who have contributed to this issue in dedicating it to him with respect and affection.

Al-Subkī and His Women

The historiography of the Mamluk period has over the past four decades developed more thoroughly than that of most other eras of pre-modern Islamic history. There are a number of reasons for this, not least of which is the extraordinary literary legacy of the period. Chronicles, biographical dictionaries, and other sources relevant to the reconstruction of social, political, and cultural life survive from the Mamluk period in numbers that dwarf those of most earlier periods. No less important, perhaps, is the intrinsic interest of the Mamluks themselves. Several important Western historians have found themselves captivated by these slave soldiers who established a state in the middle of the thirteenth century that dominated much of the Middle East until they were eclipsed by the Ottoman Turks at the beginning of the sixteenth century. With the passing of David Ayalon and Ulrich Haarmann, no one has done more to advance our understanding of the Mamluk regime than Carl Petry, to whom this volume of the *Mamlūk Studies Review* is dedicated.

Of late, Petry's contributions have been devoted principally to political history. His studies of the Mamluk sultans Qaytbāy and Qanṣūh al-Ghawrī[1] are models for a type of book—that of the reigns of particular sultans—which now includes detailed investigations of Baybars, Qalāwūn, al-Nāṣir Muḥammad, and Barsbāy.[2] But his first book was arguably more influential because it contributed to and served to strengthen an important emerging field of historiography. *The Civilian Elite of Cairo in the Later Middle Ages*[3] was one of several monographs published in the wake of Ira Lapidus's ground-breaking study of *Muslim Cities in the Later Middle Ages*.[4] These were the first books to bring to pre-modern Islamic studies the

disciplines and conventions of social history as it was then developing, especially among historians of medieval and early modern Europe.

The Civilian Elite of Cairo concerned those individuals who represented and led the city's Muslim inhabitants in their religious and academic lives, and also those who administered the offices and institutions of the state under the rule of the mostly foreign-born Mamluk military caste. Essentially, the "civilian elite" represented the social group which Richard Bulliet, discussing a different medieval Islamic society, had earlier identified as the "patriciate." They included prayer leaders, preachers, and Quran readers in the mosques, professors and other functionaries in the city's many institutions of higher education, judges of the shariʿah courts, and leaders of the Sufi organizations which, by the later medieval period, played a dominant role in the spiritual lives of many if not most Muslims. They also included a cadre of men employed as scribes and administrators, both in the various offices of the government and also by the religious endowments *(awqāf,* sing. *waqf),* which supported religious and academic institutions and which proliferated throughout the Mamluk period.[5]

Obviously, this constituted a broad range of people, in terms of their background, training, wealth, status, and power. Indeed, the group is so varied that the term "elite" might be a little misleading. It is a fair question to ask whether the prayer leader of some minor mosque and the holder of a valuable and prestigious "chair" in, say, Shafiʿi jurisprudence at the grand madrasah established by Sultan Ḥasan below the Cairo citadel shared a sufficient community of interests that we can identify both as members of an analytically distinct social group. Beyond "vertical" social distinctions such as that separating the prayer leader and the professor lies an even more significant range of "horizontal" differences. Most importantly, the "civilian elite" included both those whose activities defined the religious and academic life of the city (i.e., those known in Arabic as the *ʿulamāʾ,* sing. *ʿālim*) and those whose careers focused on scribal and bureaucratic tracks.[6] Those two domains were not necessarily distinct; there was some overlap between them. But by the Mamluk period, there was a fair degree of specialization and

Loyalty and Leadership in an Early Islamic Society (Princeton, 1980).

[5] These endowments are not directly relevant to this essay, but it is worth pointing out that the fortuitous survival of several hundred of them from Mamluk Cairo has been in the last several decades a leading catalyst behind the flourishing of historical studies of the city, and also that Petry has both pioneered their investigation and championed the use of the *awqāf* by other historians. The present author is not the only one who has benefited tremendously from his knowledge of and experience in the archives in which the endowment deeds are preserved.

[6] Cf. Petry's comment about the term "civilian elite," which included all "the nonmilitary personnel whom the biographers regarded as notables, but who may not be classified solely as ʿulamaʾ." *Civilian Elite,* 4.

professionalization, so that a religious scholar and a bureaucrat, although they might share their initial training, would soon find their career paths diverging.[7] Indeed, in the Egyptian case, the distinction between ulama and bureaucrats might be especially sharp since many of the latter were from Coptic families, and although they were generally formally converted to Islam, their credentials as Muslims, let alone as students and scholars of the Islamic religious sciences, were often suspect.

Nonetheless, there are good reasons for thinking of the "civilian elite" as a meaningful category of historical analysis. Not the least is the fundamental social division between the Mamluks and the local population. Of course, even here the boundary was sometimes blurred. Some Mamluks became learned in the religious and legal sciences; others served as administrators of *awqāf*.[8] Some offices, especially that of *muḥtasib* or "market inspector," were held at different times by both religious scholars and high-ranking amirs.[9] And of course the Mamluks often married into local families, and their sons and descendants were eventually assimilated into local social groups. Still, the social and cultural gap between the foreign-born, mostly Turkish or Circassian ruling elite, who held a virtual monopoly on political power, and their Arabic-speaking subjects was real and fundamental. In the Mamluks' case it was widened by their slave origins, but in its essence the gap which separated rulers and ruled in Mamluk Egypt and Syria was paralleled by others which cut across most Middle Eastern societies in the Middle Ages. Leading social groups from the "ruled" side of the divide—ulama and scribes, for example—thus found themselves in structurally similar relationships to the wielders of political power.

A more positive reason for thinking of the civilian elite as an identifiable if not unified social group has to do with the centrality of education and the transmission of the Islamic religious sciences to social and cultural life in Cairo, and indeed in all medieval Islamic cities.[10] Participation in the informal networks through which religious knowledge was transmitted carried value as a pious activity and conveyed considerable social prestige. Consequently, it was not simply professional academics who engaged in it; ulama status was widely shared

[10] Cf. Petry, *Civilian Elite,* 312.

throughout the population.[11] As this last point might suggest, it was the ulama, broadly speaking, who constituted the central component of the "civilian elite" and to whom the indigenous Muslim population looked most naturally for local leadership. This point has been recognized for some time. To some degree, the importance of the ulama may be an optical illusion produced by the fact that the biographical dictionaries *(tarājim),* which constitute one of the major literary sources for medieval Islamic history, dwell principally on the lives and careers of the ulama. Indeed, as Roy Mottahedeh once observed, we had better appreciate the social history of the ulama, as it is "almost all the Islamic social history we will ever have for this [pre-modern] period."[12] But the central social role of the ulama, in Mamluk Egypt and elsewhere, can hardly be doubted. For this reason, the strain of social history to which *The Civilian Elite of Cairo* was such an important contribution has sometimes been (lovingly) called "ulamalogy."

As preparation for what follows, I wish to draw attention to two themes that have emerged from the literature on the "civilian elite" as it has developed over the last several decades. The first—what we might call a "major theme"—concerns the persistent informality of Islamic education. The proliferation of institutions devoted to the transmission of religious knowledge was one of the most important and widespread developments in the cities of the medieval Islamic world. Madrasahs and their cognate institutions, especially Sufi convents and mosques with endowments that made provisions for instruction in the religious sciences, became a ubiquitous feature of the medieval Islamic urban fabric.[13] Nonetheless, the standards by which an education was measured remained informal and personal. No system of institutional degrees was ever established; rather, the ulama sought to control the transmission of knowledge through the personal attestation that a person had acquired command of (or at least exposure to) a text or a body of knowledge. That attestation, usually in the form of an *ijāzah,* could only be given by an individual who was himself already recognized as an authority over the text.[14] Consequently, the regulation of the transmission of knowledge, and also of access to ulama status, depended on a variety of mechanisms by which those personal relationships linking one authority to another, and linking teacher to student, were identified, recorded, and published to the wider community.

[11] On this, see Berkey, *Transmission of Knowledge,* 210–18.

[12] Roy Mottahedeh, review of *The Patricians of Nishapur: A Study in Medieval Islamic Social History,* by Richard Bulliet, *Journal of the American Oriental Society* 95 (1975): 495.

[13] On the madrasah, see George Makdisi's ground-breaking work, *The Rise of Colleges: Institutions of Learning in Islam and the West* (Edinburgh, 1981).

[14] On the persistent informality of education and on the networks of relationships which characterized the ulama, see Berkey, *Transmission of Knowledge,* passim, and Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (Cambridge, 1994).

This was the public face of what was otherwise a very private matter (that is, the acquisition of knowledge), and its centrality to the system by which religious knowledge was preserved and handed on has enabled modern social historians to investigate the lives and experiences of the medieval ulama in some detail.

The second or "minor" theme has to do with the surprising importance of women in the social, institutional, and intellectual world of higher education. As with most other public activities, the transmission of religious knowledge was dominated by men. And in certain areas, women were excluded entirely: no woman, for example, was ever appointed *mudarris* in one of the many madrasahs in Cairo or, presumably, other medieval Islamic cities. Nonetheless, some women were able to carve out important roles for themselves. Women as well as men might possess wealth and develop the charitable instincts that led an individual to establish and endow a madrasah in the first place, and quite a few schools, in Cairo and elsewhere, owed their origins to acts of charity by women.[15] Perhaps more surprisingly, many women served as financial controllers of the endowments that supported the activities of madrasahs and other religious institutions.[16] But most importantly of all, women played an active and important role in the transmission of religious knowledge, especially of hadith. What made this possible was the persistent informality of the process, and the importance of those personal relationships by which authority over texts was transmitted. If a woman had, for example, acquired an *ijāzah* over a text from a particularly reputable individual, she as well as any man might become a valued link in the "chain" *(isnād)* of authorities stretching back to the original author of the text. Especially if the woman survived to become one of the last living people connected to that individual, she might acquire a reputation of her own and become someone with whom younger students sought to study.[17]

These two themes provide the framework for this minor contribution to the social history of the "civilian elite" of the Mamluk period. The fundamental importance of the networks between scholars and between teachers and pupils required that medieval Muslims, in various ways, preserve a memory of those networks and of the individuals who formed them. The most important mechanism for doing so was, of course, the biographical dictionary. These compilations

[17] Jonathan P. Berkey, "Women and Education in the Mamluk Period," in *Women in Middle Eastern History: Shifting Boundaries in Sex and Gender,* ed. Nikki Keddie and Beth Baron (New Haven, 1992), 143–57. For a fuller exploration of the careers of two prominent female scholars of the Mamluk period, see the splendid article by Asma Sayeed, "Women and Hadith Transmission: Two Case Studies from Mamluk Damascus," *Studia Islamica* 95 (2002): 71–94.

of short biographies of prominent men (and some women) have a long history in the Islamic world; they were not new to the Mamluk period, nor did they focus only on scholars.[18] But quite a few compilations were published during the Mamluk era, including major works by Ibn Ḥajar al-ʿAsqalānī,[19] ʿAbd al-Raḥmān al-Sakhāwī,[20] and Tāj al-Dīn al-Subkī,[21] who is the subject of this piece. Some recorded biographical data about many members of the ruling elites; that by Ibn Taghrībirdī is an essential source for the study of the Mamluks themselves. But by and large the authors of these books were scholars of hadith and jurisprudence, and so were interested especially in the interlocking lives of the ulama.

A related genre of works was the *muʿjam* or *mashyakhah.*[22] These were essentially lists of an individual's teachers or of those on whose authority he transmitted texts.[23] They were compiled by the individuals in question themselves, or by their students, or by some other interested party. Not every scholar compiled such a list, but many did; al-Sakhāwī, writing in the late fifteenth century, estimated that more than a thousand were extant.[24] These constitute a well-known but underutilized source for the social history of the ulama in the medieval period.[25] At first glance they seem to be somewhat superfluous as a source for social history. The biographical notices they contain tend to be fairly short and usually simply repeat or summarize accounts from the more comprehensive biographical dictionaries. There is, for example, little if any information about Ibn Ḥajar's teachers in his *muʿjam* that is not available in his better known account of academic and other luminaries of the eighth/fourteenth century, *Al-Durar al-Kāminah.*

Yet the very fact that scholars found it expedient not simply to write but to *publish* these collections—publish, that is, in the pre-printing sense of the term—is significant. They were not simply compiled for the personal use of the author, to record his own private account of his education. We know that the *muʿjam*s themselves were copied; even more, they were formally transmitted from the author

[25] Georges Vajda was their most enthusiastic student; his previously-published studies of several different *muʿjams* are collected in *La transmission du savoir en Islam (viie–xviii siècles),* ed. Nicole Cottart (London, 1983).

to others, from teacher to pupil, for many years after the original compilation.[26] Indeed, they continue to be read and studied; those compiled by Ibn Ḥajar al-ʿAsqalānī, for example, have recently been printed.[27] At a minimum, they are a compelling witness to the importance of those networks of personal relationships on which the authority of the ulama rested. For the modern social historian, they provide the most comprehensive account of the training, the intellectual development, and the social networking of prominent scholarly members of the civilian elite.

The Dār al-Kutub in Cairo preserves a copy of the *muʿjam* of Tāj al-Dīn ʿAbd al-Wahhāb al-Subkī (d. 771/1370), perhaps the most illustrious member of a well-known family of Shafiʿi ulama from the Mamluk period.[28] His father, Taqī al-Dīn ʿAlī ibn ʿAbd al-Kāfī al-Subkī (d. 756/1355), had been born in the family's ancestral village of Subk in the Nile Delta in Egypt but was raised in Cairo, where his own father taught hadith in a number of madrasahs. Taqī al-Dīn's teachers included some of the most prominent religious scholars of the day, such as the Shafiʿi qadi Ibn Bint al-Aʿazz, and the famous Shādhilī Sufi Ibn ʿAṭāʾ Allāh. Taqī al-Dīn acquired an impressive reputation in a number of fields, and held professorships in several institutions of higher learning in the Mamluk capital. His most lasting work, perhaps, was a collection of fatwas which has been reprinted several times in recent decades. In 739/1338–39, the sultan Nāṣir al-Dīn Muḥammad appointed Taqī al-Dīn Shafiʿi qadi in Damascus. During his service there over the next sixteen years, he also held teaching appointments as professor of *fiqh* and hadith in a number of the city's most prominent schools.[29]

The Subkī family was prominent in the intellectual life of Cairo and Damascus for six generations or more in the thirteenth and fourteenth centuries—a point of some relevance here. An academic career of course required an independent reputation. A scholar seeking preferment had to establish his bona fides through the usual channels: by publishing commentaries on legal and religious topics, and by acquiring status within the informal networks through which the ulama

[26] See, for example, Georges Vajda, "La transmission de la Mašyaḫa d'Ibn al-Buḫārī d'après le manuscrit Reisülküttab 262 de la Bibliothèque Süleymaniye d'Istanbul," *Rivista degli studi orientali* 18 (1974): 55–74. See also Fāṭimah bint Ibrāhīm (# 13), below.

[28] Compiled by Muḥammad ibn Yaḥyá ibn Muḥammad ibn Saʿd [or: Saʿīd] al-Maqdisī (on whom see Ibn Ḥajar, *Al-Durar al-Kāminah,* 5:54). Dār al-Kutub al-Miṣrīyah, Aḥmad Tīmūr Pāshā Collection, "Tārīkh" ms. 1446. I consulted a microfilm copy preserved at the Maʿhad al-Makhṭūṭāt al-ʿArabīyah, "Tārīkh" ms. 490.

[29] On Taqī al-Dīn ʿAlī, see Tāj al-Dīn al-Subkī, *Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* 2nd ed. (Beirut, 1992), 10:139–70; Ibn al-ʿImād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Cairo, 1931–32), 6:180–81.

supervised the transmission of religious knowledge. Nonetheless, having an *ʿālim* for a father or grandfather or other close relative could be of enormous advantage to an individual seeking to carve out an academic career, not least because it gave an individual a head start in constructing those networks of personal and intellectual relationships through which a reputation was established. The proliferation of endowed institutions of learning in the medieval period gave an especially sharp edge to the advantage held by the sons and grandsons of established scholars. It was frequently possible for a scholar who held a teaching appointment in a madrasah or mosque to ensure that his position—that is, the income he drew from the institution's endowment—be inherited by his sons or other chosen relations.[30] More generally, an accomplished scholar was naturally more likely to ensure that his sons received the sort of training on which an academic career depended. This training would include instruction in the Quran, hadith, jurisprudence, and the other disciplines relevant to scholarly and academic life.

Tāj al-Dīn al-Subkī was born in Cairo in 727/1327 or 728/1328, and like other sons of the ulama, he was educated at first by his father and then by some of the leading scholars of his day. When he was eleven, his father moved to Damascus, and Tāj al-Dīn naturally accompanied him there. It was principally in the Syrian capital that al-Subkī received the education that would establish him as one of the leading scholars of his age. His teachers included the great historian Shams al-Dīn Muḥammad al-Dhahabī and the jurist Shams al-Din Ibn al-Naqīb. Tāj al-Dīn was a precocious student. Already before the age of 18, he had begun to teach as a substitute for his shaykh Ibn al-Naqīb. In 754/1353, he began to assist his father as qadi of Damascus, and within two years he had been formally vested in the office. For most of the rest of his life, he served as chief qadi in the Syrian capital, although his tenure was controversial, and at one point he was dismissed and spent eighty days in jail, apparently on accusations that he had misappropriated funds intended for the support of orphans. He died at a relatively young age in 771/1370.

The education of Tāj al-Dīn is relatively familiar to historians of medieval Egypt and Syria, because in many resects it was typical of those of the leading ulama of the Mamluk period. But the survival of al-Subkī's *muʿjam* allows us to examine it in greater detail than most. One of the most striking things about the names recorded in that document is the number of women it includes, confirming the prominent position that female hadith scholars managed to carve out for themselves. Of the 172 names of shaykhs with whom al-Subkī had studied and on whose authority he transmitted texts, 20 belong to women. That proportion was

[30] See Berkey, *Transmission of Knowledge,* 119–27.

not, in fact, atypical for the leading scholars of the day.[31]

What follows is an inventory of the women listed in al-Subkī's *muʿjam*. The list includes their names, as they appear in the *muʿjam,* and basic biographical information drawn from the *muʿjam* or (as indicated) other sources. The entries in the *muʿjam* itself include considerably more information concerning the women's teachers and their own pupils than is recorded here. I have included only the names of especially prominent shaykhs, or others worthy of note for one reason or another, and other information requiring comment. The number in brackets at the beginning indicates the number of the page (the manuscript has been paginated by hand) on which the biographical entry appears.

[192]

(1) Asmāʾ bint Muḥammad ibn Sālim ibn al-Ḥasan ibn Hibbat Allāh ibn Maḥfūẓ ibn Ṣaṣrā al-Rabʿī al-Taghlibī, Umm Muḥammad, al-Dimashqīyah.[32] Born in 638/1240–41 or 639/1241–42, she died in Damascus in 733/1332–33. She issued an *ijāzah* to al-Subkī in 728/1327–28. She had begun to recite hadith already in the year 683/1284–85, and continued to do so until her death.

[197]

(2) Āminah bint Ibrāhīm ibn ʿAlī ibn Aḥmad ibn Faḍl ibn al-Wāsiṭī, al-Dimashqīyah, Umm Muḥammad.[33] She was born around the year 664, and died in 740/1340 in Damascus. She held a *samāʿ* (a certificate of audition) from her father dated 665. She heard hadith from a number of prominent scholars, including the Hanbali scholar Zayn al-Dīn Aḥmad ibn ʿAbd al-Dāʾim (d. 668/1270)[34] and Zaynab bint Makkī (d. 688/1289).[35] Among those who recited hadith on her authority were her contemporaries the prominent *muḥaddithūn* Shams al-Dīn Muḥammad ibn Aḥmad ibn ʿUthmān al-Dhahabī (d. 748/1348),[36] who was also among al-Subkī's teachers (and who was also the author of the monumental *Tārīkh al-Islām*),

and al-Qāsim ibn Muḥammad ibn Yūsuf al-Birzālī (d. 739/1339).[37]

[202]

(3) Ḥabībah bint ʿAbd al-Raḥmān ibn Muḥammad ibn Ibrāhīm ibn Aḥmad ibn ʿAbd al-Raḥmān ibn Ismāʿīl ibn Manṣūr al-Maqdisī, Umm ʿAbd al-Raḥmān.[38] Born around the year 650/1252–53,[39] she died in 733/1333. She heard Ibn ʿAbd al-Dāʾim and others recite hadith, and she received *ijāzah*s from scholars throughout the Muslim world, including Baghdad, Egypt, Mecca, and Medina, as well as from towns in Syria. Both al-Dhahabī and al-Birzālī heard her recite hadith. Al-Subkī received an *ijāzah* from her in 728/1327–28.

[210]

(4) Zāhidah bint Abī Bakr ibn Ḥamzah ibn Maḥfūẓ al-Ṣaḥrāwī, Umm Abī Bakr, al-Ṣāliḥīyah.[40] Born in 682/1283–84, she died during the plague in 749/1348–49. She also heard Zaynab bint Makkī recite hadith, and al-Dhahabī in turn heard her recite traditions.

[212 (in the margin)]

(5) Zahrah bint ʿUmar ibn Ḥusayn ibn Abī Bakr al-Khuthnī.[41] Al-Subkī heard her recite traditions in 729/1329.

[212]

(6) Zaynab bint Aḥmad ibn ʿAbd al-Raḥīm ibn ʿAbd al-Wāḥid ibn Aḥmad ibn ʿAbd al-Raḥmān ibn Ismāʿīl ibn Manṣūr al-Maqdisī, Umm ʿAbd Allāh, known as Bint al-Kamāl.[42] One of the most prominent female hadith scholars of the medieval period, she was born in 646/1249–50 and died in 740/1339. She heard hadith recitations from numerous scholars in Damascus, including Ibn ʿAbd al-Dāʾim, and received *ijāzah*s from "many people" *(khalq kathīr)* from Baghdad, Mosul, Mardin, Harran, Aleppo, and Egypt, as well as her home town of Damascus. Those

[37] Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:321–23.

38 Kaḥḥālah, *Aʿlām al-Nisāʾ,* 1:241; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:85–86.

[39] Ibn Ḥajar gives her year of birth as 654/1256–57.

[40] I have not been able to locate other biographical notices for Zaynab bint Abī Bakr.

[41] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 2:42; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:208.

[42] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 2:46–51; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:209–10.

who heard her recite included, again, al-Dhahabī and al-Birzālī. Al-Subkī himself transmitted many volumes *(ajzāʾ)* of hadith and other subjects, on her authority, *bi-al-samāʿ wa-al-ijāzah*. She distinguished herself as the last person to relate traditions from the prominent *muḥaddith* Sibṭ al-Silafī and others *bi-al-ijāzah*.

[222]

(7) Zaynab bint Ismāʿīl ibn Ibrāhīm ibn Sālim ibn Saʿd ibn Rikāb al-Anṣārīyah al-Dimashqīyah, Umm ʿAbd Allāh and Umm Muḥammad.[43] Born in 659/1261, she died in 749/1349. She heard Ibn ʿAbd al-Dāʾim and others recite hadith, and she herself recited on the authority of a large number of shaykhs; al-Birzālī was among those who heard her do so. Al-Subkī says that he heard her recite a "volume" *(juzʾ)* by al-Anṣārī,[44] which she recited on the authority of twenty-eight different shaykhs whose recitations of the text she had heard *(samāʿan)*.

[227]

(8) Zaynab bint Yaḥyá ibn ʿAbd al-ʿAzīz ibn ʿAbd al-Salām ibn Abī al-Qāsim ibn al-Ḥusayn ibn Muḥammad ibn al-Muhadhdhib al-Sulamī al-Dimashqī.[45] Born in 648/1250–51, she died in 635/1335. As a five-year-old girl, she attended hadith sessions with a number of shaykhs, and in 650/1252–53 she received *ijāzah*s from Egypt from Sibṭ al-Silafī *(ajāza la-hā . . . min al-diyār al-miṣrīyah)*—that is, apparently without her actually travelling to Egypt. Al-Birzālī heard her recite traditions, and al-Subkī received an *ijāzah* from her in 728/1327–28.

[231]

(9) Safrā bint Yaʿqūb ibn Ismāʿīl ibn ʿAbd Allāh ibn Muḥammad ibn ʿAbd Allāh al-Dimashqīyah, Umm Muḥammad, whose grandfather was known as Ibn Qāḍī al-Yaman.[46] Born sometime after 660/1261–62, she died in Damascus in 745/1245. Al-Birzālī heard her recite hadith. Al-Subkī heard her recite traditions on a chain of authority going back through her famous grandfather.

[236]

(10) Ṣafīyah bint Aḥmad ibn Aḥmad ibn ʿUbayd Allāh ibn Aḥmad ibn Muḥammad ibn Qudāmah al-Maqdisī, Umm Aḥmad, whose father was the grandson of the famous Hanbali jurist Muwaffaq al-Dīn ibn Qudāmah (d. 620/1223).[47] She died in 741/1341. She heard Ibn ʿAbd al-Dāʾim recite the entirety of the *Ṣaḥīḥ* of Muslim, one of the principal Sunni collections of hadith. She issued an *ijāzah* to al-Subkī in 728/1328–29.

[239]

(11) Ṣafīyah bint Abī Bakr ibn Ḥamzah ibn Maḥfūẓ al-Ṣaḥrāwī, Umm ʿAbd al-Raḥmān al-Ṣāliḥīyah.[48] She died of the plague in 749/1348–49, and was buried in the tomb of Muwaffaq al-Dīn ibn Qudāmah. She heard Zaynab bint Makkī and others recite traditions. Al-Subkī heard her recite a volume by al-Anṣārī.

[241]

(12) ʿĀʾishah bint Muḥammad ibn Musallam ibn Salāmah ibn al-Bahāʾ al-Ḥarrānī, Umm Muḥammad, al-Ṣāliḥīyah.[49] Born in 648/1250–51,[50] she died in 736/1336. She heard hadith from a number of scholars and recited them herself; al-Dhahabī and al-Birzālī were among those who heard her. Ibn Saʿd[51] compiled her *mashyakhah*. She issued an *ijāzah* to al-Subkī in 728/1328–9.

[245]

(13) Fāṭimah bint Ibrāhīm ibn ʿAbd Allāh ibn Muḥammad ibn Aḥmad ibn Muḥammad ibn Qudāmah al-Maqdisī al-Ṣāliḥī, Umm Ibrāhīm[52]—like Ṣafīyah bint Aḥmad above, from the famed Banū Qudāmah dynasty of Hanbali scholars. Born in 654/1256–57, she died in 729/1329. She heard hadith from Ibn ʿAbd al-Dāʾim and others; both al-Dhahabī and al-Birzālī heard her recite in turn. She received *ijāzah*s from her relation Muḥammad ibn ʿAbd al-Hādī (d. 658/1260).[53] As she aged, she became known as the last surviving individual to transmit hadith from several of those on whose authority she relied, including Ibn ʿAbd al-Hādī

[47] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 2:230–31; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:306–7.

[48] I have not been able to locate other biographical notices for Ṣafīyah bint Abī Bakr.

[49] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 3:189; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:342.

[50] According to Ibn Ḥajar, 647/1249–50.

[51] The same Ibn Saʿd who compiled al-Subkī's *muʿjam*? See note 28.

[52] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 4:23–24; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:300.

[53] Muḥammad ibn ʿAbd al-Hādī ibn Qudāmah al-Maqdisī, also from the Banū Qudāmah. Ibn al-ʿImād, *Shadharāt al-Dhahab,* 5:295.

"by *ijāzah*." According to al-Subkī, "she recited frequently, and many benefited from her." Al-Subkī read to her the *mashyakhah* of Shahdah bint Aḥmad ibn al-Faraj al-Dīnawarīyah (d. 574/1178),[54] a female Baghdadi hadith scholar of such prominence that she was known as "the support of Iraq" *(masnadat al-ʿirāq),* with Fāṭimah's *ijāzah* from Muḥammad ibn ʿAbd al-Hādī, who was himself the last person to transmit "by *ijāzah*" from Shahdah.

[251]

(14) Fāṭimah bint Abī Bakr ibn Muḥammad ibn Turkhān ibn Abī al-Ḥasan ibn Raddād al-Dimashqī al-Ṣāliḥī, Umm Aḥmad.[55] Born around the year 653/1255–56, she died in 729/1329. She attended classes lead by Ibn ʿAbd al-Dāʾim, and received *ijāzah*s from Muḥammad ibn ʿAbd al-Hādī, among other scholars. She recited hadith, and al-Dhahabī and al-Birzālī both heard her do so. In his own *mashyakhah,* al-Birzālī noted that he heard from and recited hadith on the authority of this woman, and also her brothers, as well as their father and mother. She apparently distinguished herself by writing *ijāzah*s "in her own hand" *(bi-khaṭṭihā)*. Al-Subkī received an *ijāzah* from her in 728/1328–29.

[253]

(15) Fāṭimah bint ʿAbd Allāh ibn ʿUmar ibn ʿIwaḍ ibn Rājiḥ ibn Bilāl al-Maqdisī, Umm ʿAlī al-Ṣāliḥīyah.[56] Born in 650/1252–53, she died in 729/1328[57] after returning from the hajj. She heard traditions from Ibn ʿAbd al-Dāʾim, and she recited them in turn to al-Dhahabī and al-Birzālī, among others. Al-Subkī received an *ijāzah* from her in 728/1328–29.

[255]

(16) Fāṭimah bint ʿAbd al-Raḥmān ibn ʿĪsá ibn al-Musallam ibn Kathīr al-Dimashqī, Umm Muḥammad, al-Ṣāliḥīyah.[58] Born in the 650s,[59] she died in 740/1339 and was buried in the tomb of Muwaffaq al-Dīn ibn Qudāmah. Ibn ʿAbd al-Dāʾim was among those from whom she heard traditions, and she received

[55] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 4:36–37; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:303–4.

[56] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 4:69; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:305.

[57] Ibn Ḥajar gives a date of death of 734/1333.

[58] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 4:72; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:304–5.

[59] According to Ibn Ḥajar, 656/1258.

ijāzahs from Muḥammad ibn ʿAbd al-Hādī as well as his brother ʿAbd al-Ḥamīd. Al-Birzālī heard her recite hadith, and al-Dhahabī mentioned her in his *muʿjam*.

[260]

(17) Fāṭimah bint Fakhrāwar ibn Muḥammad ibn Fakhrāwar ibn Hindawīyah *[sic]* al-Kunjī al-Ṣūfī, Umm Maḥmūd.[60] Born in 659/1261,[61] she died in 733/1333 outside Cairo. Unlike most of the other women cited by al-Subkī, she lived in the Egyptian capital, where her father was a pious ascetic. She received *ijāzahs* from a number of scholars in the year 663—that is, when she was a young girl. She recited hadith, and also had a reputation for preaching to women. In Cairo in 731/1331, that is when he was four, al-Subkī heard her recite the *Kitāb al-Jumʿah* from the hadith collection of al-Nasāʾī (author of one of the six "canonical" collections of hadith) according to an *isnād* going back through al-Muʿīn [Aḥmad ibn ʿAlī ibn Yūsuf] al-Dimashqī[62] and Ismāʿīl [ibn ʿAbd al-Qawī ibn Abī al-ʿIzz] ibn ʿUzūn [?] (d. 667/1268)[63] to [Hibbat Allāh ibn ʿAlī ibn Masʿūd] al-Būṣīrī (d. 598/1201).[64]

[262]

(18) Fāṭimah bint Muḥammad ibn Jamīl ibn Ḥamīd ibn Aḥmad ibn Abī ʿAṭṭāf ibn Aḥmad al-Baghdādīyah al-Ṣāliḥīyah, Umm Muḥammad.[65] Born in 646/1248–49,[66] she died in 730/1330. She attended recitations given by her father in Baghdad when she was just a year old. She received *ijāzahs* from a number of prominent Iraqi scholars and later recited hadith to al-Dhahabī and al-Birzālī among others.

[266]

(19) Fāṭimah bint Muḥammad ibn Muḥammad ibn Jibrīl ibn Abī al-Fawāris ibn Jibrīl ibn Aḥmad ibn ʿAlī al-Darbandī, Umm al-Ḥasan, known as Sitt al-ʿAjam.[67] Born in 661/1263, she died in Cairo in 737/1337. She heard hadith from numerous scholars and received *ijāzahs* from Ibn ʿAbd al-Dāʾim and others "from Damascus"—she herself lived in Cairo. In turn, she recited hadith to many people.

[60] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 4:89–90; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:308.

[61] According to Ibn Ḥajar, 658/1260.

[62] See Ibn al-ʿImād, *Shadharāt al-Dhahab,* 5:331.

[63] Ibid., 5:324.

[64] Ibid., 4:338.

[65] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 4:100; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:308–9.

[66] 656/1258, according to Ibn Ḥajar.

[67] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 4:128; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:309.

When he was four, al-Subkī heard her recite al-Nasāʾī's *Kitāb al-Jumʿah* according to the same *isnād* held by Fāṭimah bint Fakhrāwar, above.

[270]

(20) Nāranj bint ʿAbd Allāh al-Rūmīyah, the *ʿatīqah* of al-Ḥājj Mufliḥ, the *ʿatīq* of al-Ḥājj ʿAlī ibn Ḥusayn ibn Manāʿ al-Takrītī al-Tājir, Umm ʿĀʾishah.[68] She died in 741/1340. She heard recitations by Ibn ʿAbd al-Dāʾim in 659/1261; al-Subkī received an *ijāzah* from her in 728/1328–29.

In many respects, much of the information contained in these short biographical notices in al-Subkī's *muʿjam* is unremarkable. That is, it parallels accounts of the lives of other (male) scholars, not just in this text, but in the biographical dictionaries more generally. This in itself is worthy of note, for it reaffirms just how thoroughly integrated women were into the world of textual, and especially hadith, transmission, both as teachers and as pupils.[69] A fuller reading of these notices in the context of a larger analysis of the entire *muʿjam* would provide the basis for a comprehensive intellectual biography of this major Mamluk-era scholar and jurist. But even a preliminary analysis confirms several important points.

The standards of hadith transmission recognized several different methods by which a pupil could acquire authority over a text. Close reading and analysis of the text in the presence of the shaykh was obviously preferred, but one could receive an *ijāzah* with less intimate contact. It was even possible to request and receive an *ijāzah* without actually encountering the individual issuing the certification, and when Zaynab bint Yaḥyá received an *ijāzah* from Sibṭ al-Silafī "*min al-diyār al-miṣrīyah,*" it is possible that she had not left her Damascene home.[70] Al-Subkī himself appears to have included the names of several women from whom he received *ijāzahs* in a similar way, the Damascene Asmāʾ bint Muḥammad, for example, who issued him an *ijāzah* in 728/1327–28, when he was an infant in Cairo.[71] This does not mean, however, that all transmission between women and men was accomplished at a distance, and it is clear from al-Subkī's *muʿjam* that many of his *shaykhahs* transmitted from their teachers *bi-al-samāʿ,* that is,

[68] Kaḥḥālah, *Aʿlām al-Nisāʾ,* 5:158; Ibn Ḥajar, *Al-Durar al-Kāminah,* 5:129.

[69] At least one of the women listed in al-Subkī's *muʿjam* had a *mashyakhah* of her own compiled; see ʿĀʾishah bint Muḥammad (# 12).

[70] # 8. Cf. Ḥabībah bint ʿAbd al-Raḥmān (#3) and others, who received *ijāzahs* from scholars in cities throughout the Muslim world.

[71] #1. Cf. Zaynab bint Yaḥyá (# 8), Ṣafīyah bint Aḥmad (# 10), ʿĀʾishah bint Muḥammad (# 12), Fāṭimah bint Abī Bakr (# 14), Fāṭimah bint ʿAbd Allāh (# 15), and Nāranj bint ʿAbd Allāh (# 20).

having themselves "heard" texts from male transmitters, and that al-Subkī himself physically encountered many of his female teachers and heard them recite texts. But virtually all of the women listed here were elderly at the point of contact, and al-Subkī himself was quite young—sometimes, as in the case of Asmāʾ bint Muḥammad, an infant. The advantage of hearing the recitation of hadith or receiving an *ijāzah* at such a tender age is that, all things being equal, it shortened the *isnād*—i.e., it reduced the number of links in the chain of transmission. Several of the women listed here died shortly after the young al-Subkī arrived in Damascus, meaning that he would be among the last individuals to recite texts on their authority.[72] In a similar vein, several of al-Subkī's *shaykhah*s distinguished themselves by aging until they became the last surviving transmitter from a particular shaykh of an earlier generation.[73] It is partly for this reason that, in general, older teachers were preferred. In the case of a superannuated woman transmitting a text to a very young male pupil, an added advantage was that the sexual tension implicit in an encounter between non-*maḥram* individuals was lessened.

A second point reaffirmed by al-Subkī's *muʿjam* is the advantage that birth into an academic family gave an individual seeking to establish a scholarly career. The infant al-Subkī did not think to request an *ijāzah* from Asmāʾ bint Muḥammad and others; it was his father's foresight which took the steps to lay the foundation for his son's later reputation. The young al-Subkī was also able to take advantage of his father's posting as qadi in Damascus in 739/1338–39 to make more direct contact with scholars, both male and female, in that city. On the "supply" side, it is striking how many of the women whom al-Subkī listed as *shaykhah*s themselves came from established and reputable scholarly families: those, for example, from the famous Banū Qudāmah dynasty of Hanbali scholars.[74]

It is clear, finally, that in a certain sense the community of scholars actively engaged in the transmission of hadith was a small world: small, that is, in the sense that the individuals who populated it formed a close-knit group. It is striking how frequently certain data replicates itself in most of the biographical notices: for example, that al-Dhahabī and al-Birzālī listed the *shaykhah* in question among those on whose authority they related traditions. Similarly, a high proportion of the women listed here included particular shaykhs of an earlier generation—especially Ibn ʿAbd al-Dāʾim and Muḥammad ibn ʿAbd al-Hādī—among their teachers. At their base, the networks through which the educated class established its reputation were broad and inclusive: they were broad and inclusive enough to

[72] See for example Āminah bint Ibrāhīm (#2), Bint al-Kamāl (#6), and Fāṭimah bint ʿAbd al-Raḥmān (#16).

[73] See, for example, Fāṭimah bint Aḥmad (# 13).

[74] For example, Ṣafīyah bint Aḥmad (# 10) and Fāṭimah bint Ibrāhīm (#13).

include members of social groups that might otherwise be marginalized, such as women. But the values and principles that governed the transmission of religious knowledge also brought certain individuals to the fore. The women listed in the *muʿjam* of al-Subkī had reached that exalted place, and in the process made an important contribution to the shaping of the "civilian elite."

"Our Sorry State!" Al-Būṣīrī's Lamentations on Life and an Appeal for Cash

Sharaf al-Dīn Muḥammad al-Būṣīrī is the most celebrated poet of the Mamluk period, having composed *Al-Burdah,* the "mantle ode" to the prophet Muḥammad. The *Burdah* has been the focus of many commentaries, imitations, and translations, and it is arguably the most famous poem in the Arabic language today.[1] Its author was born on 1 Shawwāl 608/7 March 1212 in Upper Egypt, at either Abū Ṣīr or Dalāṣ. As a young man, al-Būṣīrī studied Arabic and some religious sciences in Cairo, while following the Sufi teachings of Abū al-ʿAbbās Aḥmad al-Murṣī (d. 686/1287) and the Shādhilīyah order. He settled for a time in the Delta city of Bilbays, where he was a minor administrator, serving as a steward *(mubāshir)*.[2] Al-Būṣīrī later returned to Cairo, where he composed poems in praise of the prophet Muḥammad, al-Murṣī, and various Mamluk officials. He died there sometime between 694/1294 and 696/1297.[3]

Al-Būṣīrī was regarded as a fine poet by several of his contemporaries, and his poems were collected in his *Dīwān*. This work contains over fifty poems employing a range of rhymes and meters as well as various literary devices *(badīʿ)* for clever word-plays. The influence of earlier poets, particularly the Egyptian Sufi poet Ibn al-Fāriḍ (d. 632/1235), is apparent in several poems, including the *Burdah* in praise of the prophet Muḥammad.[4] In this poem's 160 verses, al-Būṣīrī recounts events in the life of Muḥammad including his birth, the washing of his heart by

[1]Over the years, Professor Carl Petry has conveyed his high scholarly standards and enthusiasm for the Mamluks to his students at Northwestern University and at the University of Chicago, where I had the privilege of studying with him. His studies are always insightful and stimulating, and I dedicate the following essay and translation to him with gratitude.
For an English translation of the *Burdah* and brief analysis see that by Stefan Sperl in *Qasida Poetry in Islamic Asia and Africa,* ed. S. Sperl and Christopher Shackle (Leiden, 1996), 2:388–411, 470–76.

[2] Concerning the profession of *mubāshir* in the Mamluk domains see Carl Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981), 209–11.

[3] Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* ed. Sven Dedering (Wiesbaden, 1981), 3:105–13; al-Maqrīzī, *Al-Muqaffá al-Kabīr,* ed. Muḥammad al-Yaʿlāwī (Beirut, 1991), 5:661–69; and also see Muḥammad Sayyid Kīlānī's useful introduction to al-Būṣīrī's *Dīwān,* 2nd ed. (Cairo, 1973), 5–24.

[4] Al-Ṣafadī, *Al-Wāfī,* 3:107, and al-Būṣīrī, *Dīwān,* 238–48. Regarding al-Būṣīrī's poems in praise of Muḥammad see Zakī Mubārak, *Al-Madāʾiḥ al-Nabawīyah fī al-Adab al-ʿArabī* (Cairo, 1935), and Kīlānī's introduction to al-Būṣīrī, *Dīwān,* 24–48.

angels, his receiving revelation from God, his ascension to heaven on the mythical steed al-Burāq, and his struggles with the infidel Meccans. Al-Būṣīrī also relates many of the Prophet's miracles and blessed virtues and then ends his poem by praising the Prophet's family and companions, while praying for Muḥammad's intercession on Judgment Day. As Suzanne Stetkevych has argued persuasively, al-Būṣīrī's *Burdah* lauds the eternal triumph of Islam over unbelief as manifest destiny.[5] More significantly for believers, perhaps, is that the poem also presents a ritual spiritual exchange, as the poet offers his prayers and praise to the Prophet, who in turn may grant his intercession on Judgment Day. The intercession invoked by the *Burdah* was extended to others in a frame story that came to accompany the poem within a century of its composition, no doubt enhancing the poem's popularity.[6]

According to this story, al-Būṣīrī once suffered a debilitating stroke. He prayed and cried out to God for help, and composed a new ode praising Muḥammad. Then he fell asleep and dreamed of the Prophet Muḥammad, who touched his face and wrapped him in his cloak *(burdah)*. Upon waking, al-Būṣīrī found that the effects of the stroke had vanished, and he had been restored to health. As he walked out of his house for the first time after his dream, he was met by a Sufi who asked him for a copy of his poem in praise of Muḥammad. Al-Būṣīrī had composed several such odes, so he asked the man which poem he meant. The Sufi replied that he wanted the poem that al-Būṣīrī had composed during his recent illness. Al-Būṣīrī was stunned because he had told no one about the new ode or the miracle. The Sufi replied that the night before he had dreamed of the Prophet and saw him listening to and enjoying the poem. After the recitation, the Prophet threw his cloak over its author. Al-Būṣīrī gave the man a copy of his new ode, and as word spread of this miracle, others made copies and recited the poem. Soon, more instances of prophetic intercession occurred after the poem's recitation; copies of al-Būṣīrī's ode, now named the *Burdah,* were believed to possess miraculous healing powers. As a result, this poem has been copied many times, and its verses have been used in amulets and inscribed on walls to ward off misfortune.[7]

In one of the earliest biographies of al-Būṣīrī, the biographer and litterateur Ṣalāḥ al-Dīn al-Ṣafadī (696–764/1297–1363) cited the frame story of the *Burdah* in which al-Būṣīrī speaks in the first person. Unfortunately, al-Ṣafadī did not give a source for the story, though he did note that he had learned all of al-Būṣīrī's

poetry from his teacher Athīr al-Dīn Abū Ḥayyān (654–745/1256–1354), who had received the poems directly from al-Būṣīrī. Abū Ḥayyān also related that al-Būṣīrī was of Berber ancestry and was "short in stature, but of great nobility."[8] Al-Ṣafadī and most later biographers present al-Būṣīrī as an accomplished poet and pious supplicant blessed by the Prophet, but some sources also reveal another side to the man. The historian and biographer al-Maqrīzī depicted al-Būṣīrī as a frustrated poet who was forced to work as a scribe because he could not find sufficient patronage for his verse.[9] Significantly, al-Būṣīrī does not appear to have ever held one of the many teaching positions in the various educational establishments in Cairo or elsewhere in Egypt, suggesting that he either lacked an extensive training in the religious sciences or the proper contacts to secure a position as a religious scholar. As a result, he was forced to adapt his extensive Arabic poetic skills to menial secretarial work, which he hated. Supporting this view is one of al-Būṣīrī's poems in which he declared that he served as an administrator only to support his family. He then offered a scathing critique of minor bureaucrats, particularly Christians and Jews who, he claimed, were rapacious in order to support their opulent lifestyles replete with wine and fine clothes.[10]

Al-Būṣīrī harshly criticized the beliefs and practices of Jews and Christians in other verse as well, and perhaps this was due to a professional rivalry with Christian and Jewish scribes. But al-Būṣīrī's polemics may also reflect the religious tensions in Syria and Egypt during his lifetime, resulting from on-going Crusades and the Mongol invasion of Iraq and Syria.[11] Nevertheless, Muslims, too, felt the wrath of this misanthrope. Invective poetry was among al-Būṣīrī's specialties, and al-Maqrīzī quoted one of al-Būṣīrī's contemporaries, Shihāb al-Dīn Abū al-Thanāʾ Maḥmūd,[12] as saying: "Despite (al-Būṣīrī's) many virtues, he was loathed for loosing his tongue against people with any insult, and he would say

[12] This may be the poet and scholar Abū al-Thanāʾ Maḥmūd ibn ʿUmar al-Shaybānī, known as Ibn Daqīqah (564–635/1169–1238). See Ibn al-ʿImād, *Shadharāt al-Dhahab* (Cairo, 1931), 5:177, and ʿUmar Kaḥḥālah, *Muʿjam al-Muʾallifīn* (Damascus, 1957), 12:185.

bad things about them in the company of amirs and viziers."[13] Moreover, when Abū al-Thanāʾ Maḥmūd visited al-Būṣīrī, the latter complained bitterly about his poverty and many needs, and how one of his patrons was haughty and thought little of the scribal class.[14] In line with his account, al-Būṣīrī depicted himself in some of his poems as penniless and hen-pecked, with hungry children to feed and a nagging wife who gave him little respect:[15]

in zurtuhā fī-l-ʿāmi yawman antajat
wa-atat li-sittati ashhurin bi-ghulāmi

If I visit her for only a day per year, she gets pregnant
and brings forth a boy in six months!

Not surprisingly, al-Būṣīrī directed such poems and their complaints to perspective patrons among the Mamluk ruling elite, including Bahāʾ al-Dīn ʿAlī ibn Muḥammad, known as al-Ṣāḥib Ibn Ḥannā. He had served as a vizier to the Ayyubids and was reappointed to that position by the Mamluk sultan Baybars I in 659/1261; Ibn Ḥannā held the position until his death in 677/1278.[16] Ibn Ḥannā was said to have been quite wealthy and generous, and this, together with his position and power, undoubtedly drew al-Būṣīrī to him. According to the frame story of the *Burdah*, al-Būṣīrī would compose poems in praise of the prophet Muḥammad for Ibn Ḥannā, who greatly admired the *Burdah.*[17] Moreover, al-Būṣīrī addressed several poems to him and recited a short elegy at the funeral of one of Ibn Ḥannā's sons.[18] In the following poem to Ibn Ḥannā, al-Būṣīrī describes his troubled family life and his desperate need for support, for which he begs the vizier:[19]

yā ayyuhā-l-mawlá-l-wazīru-lla-dhī
ayyāmuhu ṭāīʿatun amrah[20]

[20] I follow al-Ṣafadī's reading of *ṭāīʿatun* for *ṭāʾiʿatun* to fit the meter *sarīʿ*. For the Arabic text, see

O my lord, the vizier,
 whose days obey his command,

Whose rank on high
 exhausts the mind to describe!

Your spotless character called us
 to make a plea unexpectedly,

For you still pardon those who offend
 and deem forgiveness with power to be wise.

So, perhaps, people do not know
 what it is you love and what you despise.

To you we appeal about our state:
 we are a family big as can be.[21]

I will speak to my lord in pen and ink
 telling the tale of what came to pass.

They fasted like others,
 but they are a warning for all who see.

When they drink, their well remains
 earthen jugs and jars of clay.

Everyday they eat boiled bread
 like dead grass revived by rain.

Whenever they gather round it, I say:
 "Tarry awhile amid the water on the green!"

The holiday drew near, and they had
 no pastry, no bread, no wheat.

the appendix.

[21] I follow al-Ṣafadī's reading of *ʿāilatun* for *ʿāʾilatun* to fit the meter.

Have mercy on them, for when they spy a child
with a little cake in hand, or see a date,

Their eyes fix on it, gasping,
followed by a sigh.

How oft I have suffered their torment;
how often I have felt their grief.

How often they have said: “Daddy,
You’ve cut off our bread again!

“You never give us money,
not a dollar, not a dime, not a cent.

“And you’re in service to the folk, daddy.
How can you serve them? You’re a joke!

“O, what a waste it is if we never get
your wages or the rent.”

I am amazed how sharp this boy is;
it comes to him so naturally.

Yet why shouldn’t he be clever,
for everyone born has their nature.

One day their mother called on her sister,
who is as jealous as a second wife,

And she came in complaining of her state
and her patience with me in our poverty.

Her sister said: “Why do women act with their husbands so?
O, such a disgrace![22]

“Get up and demand your rights from him.
Do it now; don’t wait,

[22] Following al-Ṣafadī who gives *yā ʿurrah* in place of *yā ghirrah*.

"And if he says no, then grab his beard,
and hair by hair jerk it out!"

Their mother said: "That's not my way;
my husband gets annoyed.

"I fear if I say a word, he'll divorce me."
"Bullshit!" her sister said.

So my wife thought less and less of me,
and when she came home was she ticked,

When she got in my face, I threatened her,
so she bashed my head with a brick.

Then from early eve till morning light,
we went round and round in a fight.

The slave never sees his salvation
until he cries himself dry,

So on one whose sorry state is this,
O, my lord, please cast your eye!

Al-Būṣīrī begins his poem in praise of the vizier whose authority is so grand that time itself submits to his decree.[23] Though powerful, the vizier rules with forbearance and forgiveness, and so the poet takes the liberty to plead his case to him (vv. 1–7). Al-Būṣīrī depicts his large family as destitute, lacking even fresh water, and forced to eat stale, moldy bread. Though they fast during Ramaḍān, this is due more to poverty than piety, and when the ʿĪd al-Fiṭr occurs, his family cannot enjoy the festivities and sweets because they have no flour; they can only look on in envy of others (vv. 8–14). Al-Būṣīrī concludes this section and moves to the next with his lamentations on their dire condition (vv. 15–17). Then one of his young children complains of their plight and their penniless father. His son points out that al-Būṣīrī is poorer than the Sufi ascetics *(qawm)* whom he claims

[23] Cf. a verse by Abū Tammām cited in S. Stetkevych, *Abū Tammām & the Poetics of the ʿAbbāsid Age* (Leiden, 1991), 24, from Ibn al-Muʿtazz, *Kitāb al-Badīʿ,* ed. I. Kratchkovsky (London, 1935), 23, and also see Stefan Sperl, *Mannerism in Arabic Poetry* (Cambridge, 1989), 9–27.

to serve, making him a laughingstock (***sukhrah;*** vv. 17–19). Al-Būṣīrī marvels at how perceptive his son is at such a young age, and then he ends this section with an allusion to the hadith that all children are born with a natural disposition (***fiṭrah;*** vv. 20–21).[24]

Al-Būṣīrī next moves from his children to their mother, who visits her sister and bemoans her impoverished life with her husband. Her sister denounces such ne'er-do-well men in general and tells his wife to stand up and demand her rights. When his wife frets that he may then divorce her, her sister rebukes her and urges her to disgrace al-Būṣīrī publicly by pulling out his beard (vv. 22–28). Buoyed by her sister, al-Būṣīrī's wife returns home angry and fired up, and when al-Būṣīrī does indeed threaten her with a divorce, she clobbers him with a brick, and they fight throughout the night (vv. 29–30). Al-Būṣīrī then concludes his poem, citing another maxim—that the slave is never set free until he has suffered greatly, perhaps unto death—and he begs the vizier to look upon him with mercy (vv. 32–33).

Although al-Būṣīrī's begins this poem as an ode of praise and supplication, his focus quickly shifts from the vizier and his exalted rank to al-Būṣīrī's own debased and desperate condition. The editor of al-Būṣīrī's *Dīwān,* Muḥammad Sayyid Kīlānī, cites this poem as evidence that al-Būṣīrī's home life was a living hell.[25] While that is always a possibility, al-Būṣīrī clearly intended the poem to be a humorous parody, as he reverses various family roles and relationships. Ideally, fathers should be wealthy and wise, and children happy and innocent; yet here the poet is poor and powerless, as his young son sagaciously discerns when he worries about the family's lack of food and rent. Traditionally, husbands are to be in charge of obedient wives and family members; yet here al-Būṣīrī is demeaned by his sister-in-law, who riles up his wife, leading to a nasty fight that leaves the poet reeling and feeling not like a king in his castle, but like a suffering servant desperately in need of the vizier's beneficence. The poem, then, is not so much a panegyric ***(madīḥ)*** as it is an example of a witty poem ***(mulḥah),*** which tells of a disagreeable wife and harried husband.[26] Given the references to fasting and the ʿĪd, perhaps al-Būṣīrī offered Ibn Ḥannā this poem as an amusing tale at the end of Ramaḍān, when Muslims are to give alms and be generous to the less fortunate. While the *Burdah* sought prophetic intercession on the Judgment Day, this poem on al-Būṣīrī's sorry state aimed for intercession of a more material sort. For al-Būṣīrī's sake, I hope he received it.

APPENDIX

يا أَيُّها المَولَى الوَزِيرُ ٱلذى   أَيَّامُهُ طايعَةٌ أَمْرَهْ
وَمَن لَهُ مَنْزِلَةٌ في العُلَى   تَكِلُّ عَنْ أَوْصافِها الفِكْرَهْ
أَخْلاقُكَ الغُرُّ دَعَتْنَا إِلَى ٱلـــــــإِدْلاءِ في القَولِ عَلَى غِرَّهْ
إِذْ لَمْ تَزَلْ تَصْفَحُ عَمَّنْ جَنَى   وَتُؤْثِرُ العَفْوَ مَعَ القُدْرَه
حَتَّى لَقَد يَخْفَى عَلَى النّاسِ ما   تُحِبُّ مِن أَمْرٍ وَما تَكْرَه
إِلَيكَ نَشْكُو حالَنا إِنَّنا   عايلةٌ في غايَةِ الكَثْرَه
أُحَدِّثُ المَوْلَى ٱلحَدِيثَ الذى   جَرَى لَهُم بِالخَيْطِ وَالإِبْرَه
صامُوا مَعَ النّاسِ وَلَكِنَّهُمْ   كانوا لِمَن يُبْصِرُهُم عِبْرَه
إِن شَرِبُوا فَالبِئْرُ زِيرٌ لَهُمْ   ما بَرِحَتْ وَالشَّرْبَةُ الجَرَّه
لَهُمْ مِنَ الخُبَّيْزِ مَسْلوقَةٌ   في كَلِّ يَومٍ تُشْبِهُ النَّشْرَه
أَقُولُ مَهما ٱجْتَمَعُوا حَولَها   تَنَزَّهُوا في الماءِ وَالخُضْرَه
وَأقبلَ العِيدُ وَما عِندَهُم   قَمْحٌ وَلا خُبْزٌ وَلا فَطْرَه
فَأَرْحَمْهُمُ إن أَبْصروا كَعْكَةً   في يَدِ طِفْلٍ أَوْ رَأَوْا تَمْرَه
تَشْخَصُ أَبْصارُهُمْ نَحْوَها   بِشَهْقَةٍ تَتْبَعُها زَفْرَه
فَكم أُقاسِي مِنهُمُ لَوْعَةً   وَكم أُقاسِي مِنهُمُ حَسْرَه
كَم قائلٍ يا أَبَتا مِنهُمُ   قَطَعْتَ عَنَّا الخُبْزَ في كَرَّه
ما صِرْتَ تَأْتِينا بِفَلْسٍ وَلا   بِدِرْهَمٍ وَرِقٍ وَلا نُقْرَه
وَأنتَ في خِدْمَةِ قَومٍ فَهَلْ   تَخْدُمُهُمْ يا أَبَتا سُخْرَه
يا خَيْبَةَ المَسْعَى إذا لم يَكُنْ   يَجْرِي لَنا أَجْرٍ وَلا أُجْرَه
لَقَد تَعَجَّبْتُ لَها فِطْنَةً   أَتى بِها الطِّفْلُ بِلا جَرَّه

وَكَيفَ يَخلُو الطِّفْلُ مِن فِطْنَةٍ   وَكُلُّ مَولُودٍ عَلَى الفِطْرَه
وَيَومَ زارَتْ أُمُّهُمْ أُخْتَها   وَالأُخْتُ فِي الغَيرَةِ كالضَرَّه
وَأَقْبَلَتْ تَشْكو لَها حالَها   وَصَبْرَها مِنِّي عَلَى العُسرَه
قالتْ لَها كيفَ تَكونُ النِّسا   كذا مَعَ الأزواجِ يا غُرَّه
قُومِي اُطْلُبِي حَقَّكِ مِنهُ بِلا   تَخَلُّفٍ مِنكِ وَلا فَتْرَه
وَإِنْ تَأَبَّى فَخُذِي ذَقْنَهُ   ثُمَّ اُنْتِفيها شَعْرَةً شَعْرَه
قالتْ لَها ما عادَتِي هكذا   فَإِنَّ زَوجِي عِندَهُ ضُجْرَه
أَخافُ إِنْ كَلَّمْتُهُ كِلْمَةً   طَلَّقَنِي قالتْ لَها بَعْرَه
فَهَوَّنَتْ قَدْرِيَ فِي نَفْسِها   فَجاءَتْ الزَّوْجَةُ مُحْتَرَّه
فَقابَلَتْنِي فَتَهَدَّدْتُها   فَاَسْتَقْبَلَتْ رَأْسِي بِآجُرَّه
وَباتَتْ الفِتْنَةُ ما بَينَنا   مِن أَوَّلِ اللَّيلِ إِلى بُكْرَه
وَما رَأى العَبْدُ لهُ مَخْلَصاً   إِلا وَما فِي عَينِهِ قَطْرَه
فَحَقَّ مَن حالتُهُ هذهِ   أَنْ يَنْظُرَ المَولَى لهُ نَظْرَه

Spy or Rebel? The Curious Incident of the Temürid Sulṭān-Ḥusayn's Defection to the Mamluks at Damascus in 803/1400–1

The warlord Temür (d. 807/1405) is a figure who inspires not only great interest among historians, but usually a host of additional reactions ranging from admiration to revulsion. Reasons for these reactions include his ability to fuse the disparate political elements of late fourteenth-century Transoxanian society into an effective whole, the decades he spent and thousands of miles he covered in pursuit of military goals, and his complicated, charismatic, and probably magnetic character with its odd mix of contrary traits. Among these were the ability to express both great affection to his family and great cruelty to his enemies. Equally important was Temür's endless obsession with the history, legacy, and ideological challenge posed by the family of the Mongol conqueror Chingiz Khan (d. 1227), which occupied many of Temür's waking thoughts even though—or perhaps because—he did not rank among their number. It is no surprise, therefore, that much has been written about Temür's life and exploits, and scholarship on these topics will surely continue. Far less work, however, has been done on Temür's sons and grandsons, to say nothing of his wives, concubines, and daughters, who have been virtually ignored by historians so far. Yet these family members deserve attention too, both for their own activities and lives, and for the fact that they were often on the receiving end of Temür's complex interests, prejudices, and desires. This article will therefore present some ruminations on the life and stunted career of one of Temür's grandsons, Sulṭān-Ḥusayn, in an effort to demonstrate the effect Temür may have had on the people closest to him.

In the winter of 803/1400–1, a curious incident happened in the Mamluk city of Damascus. At the time, the city lay caught between the fearsome attacking armies of Temür on one side and the defending armies of the Mamluk sultan al-Nāṣir Faraj (first r. 801–8/1399–1405) on the other.[1] Temür had arrived in Syria in the autumn, and in a bold and startlingly successful strike, had captured both Aleppo and all the Syrian Mamluk commanders who had gathered in the city to defend it. Temür had then worked his way south towards Damascus, acquiring the now helpless smaller Syrian cities along the way. Although Faraj and his advisors and

[1] For the locations of the respective forces see Walter J. Fischel, *Ibn Khaldūn and Tamerlane: Their Historic Meeting in Damascus, 1401 A.D. (803 A.H.): A Study Based on Arabic Manuscripts of Ibn Khaldūn's "Autobiography," with a Translation into English, and a Commentary* (Berkeley and Los Angeles, 1962), 57, notes 18, 19.

armies had set out from Cairo too late to help Aleppo, they at least managed to arrive in Damascus first on 6 Jumādá I 803/23 December 1400, followed shortly thereafter by Temür's forces.[2] Once there, the two armies observed one another warily, exchanging messengers and demands and skirmishing periodically.

Many of the commanders in Temür's army were his sons and grandsons, whom he liked to provide with military opportunities. It is therefore no surprise that the Temürid forces in one skirmish on 25 December/8 Jumādá I were led by Temür's grandson through his daughter Agha Beki, Sulṭān-Ḥusayn.[3] The curious incident mentioned above took place a few days after the skirmish, possibly on 13 Jumādá I/30 December, when Sulṭān-Ḥusayn suddenly defected to Mamluk Damascus. Unfortunately, the details of his flight are completely unknown: did he leave his grandfather's camp openly or in secret? During the day or at night? Alone or accompanied, and if the latter, by whom? The histories do not reveal how Sulṭān-Ḥusayn made his way from his grandfather's camp into the city. What we do know, however, is that once in Damascus he was swiftly brought to meet with Sultan Faraj.[4]

It is not surprising that the sources present disparate views of this event. Temürid authors suggest variously that Sulṭān-Ḥusayn engaged in this strange behavior because he was drunk, misled by poor advisors, or simply reckless and foolish.[5] By contrast, Mamluk sources make no mention of alcohol, bad advice or stupidity, but they unfortunately do not attribute any other motive to Sulṭān-Ḥusayn, either. But both sides can agree that the Mamluks were thrilled to see their unexpected guest, perhaps not only because of his identity, but also because

of his reportedly favorable appearance—he was tall, handsome, and, according to some, even wearing a jeweled crown (?).[6] At any rate, the Mamluks welcomed Sulṭān-Ḥusayn with high honors and gave him a glorious ceremonial robe, as well as a horse with a golden saddle and other impressive trappings.[7] Such gifts, especially the bedecked animal, were typically reserved for elevated members of the Mamluk aristocracy or extremely important foreign diplomats. In this context they demonstrated the great enthusiasm the Mamluk commanders felt about Sulṭān-Ḥusayn's arrival.[8] Then, in an unusual step during or perhaps after the gift-giving ceremony, the Mamluks cut off Sulṭān-Ḥusayn's hair, thereby making him conform to Mamluk norms. They may also have hoped to dissuade him from going back to his grandfather by providing visible evidence of his change of sides.[9] While meeting with Faraj and his commanders, Sulṭān-Ḥusayn provided them with intelligence about Temür's army—its numbers, its morale, and whether it might be defeated.[10] We may assume the Mamluks were very interested in this information, although they ultimately made poor use of it.

Meanwhile, messengers continued to pass back and forth between Faraj and Temür. Shortly after Sulṭān-Ḥusayn's defection (according to the Persian sources) or before it (according to the Mamluks), Temür wrote demanding the return of a prisoner the Mamluks had held in Cairo for several years, but the letter does not appear to mention Sulṭān-Ḥusayn.[11] At any rate, Sulṭān-Ḥusayn himself continued to live under Mamluk patronage during these few days.[12] The skirmishes between the two armies also continued until one larger battle took place on 19 Jumādá I 803/5 January 1401, during which Sulṭān-Ḥusayn fought for the Mamluks. On the Temürid side were none other than his own uncles, Temür's sons Mīrānshāh and Shāh Rukh. During the skirmish the Temürid forces encountered the runaway among the Mamluk soldiers. Sulṭān-Ḥusayn may have been unusually visible because of his height and because he was using his own standard; just in case,

however, he identified himself to them once the fighting grew hot.[13] Eventually, a Temürid commander maneuvered close enough to seize the reins of Sulṭān-Ḥusayn's horse and drag it and the prince over to the Temürid side.[14]

Sulṭān-Ḥusayn was swiftly sent back to Temür, who had him and some of his advisors chained and imprisoned.[15] It is unclear whether Agha Beki tried to help her son, but a few days after Sulṭān-Ḥusayn's capture Shāh Rukh interceded on behalf of his nephew. Temür accepted the intercession, pardoned Sulṭān-Ḥusayn, and reinstated him in the Temürid armies. Temür does not appear to have shown similar leniency to Sulṭān-Ḥusayn's advisors, although their ultimate fate is unclear.[16] This is consistent with the scholarly claim that when Temürid princes behaved badly, Temür preferred to punish advisors, particularly bureaucratic ones, more harshly than the Temürids themselves.[17] Later Sulṭān-Ḥusayn was permitted to take part in campaigns on his grandfather's behalf throughout Iraq and Anatolia, although he was always accompanied by other Temürid princes.

Meanwhile, after Sulṭān-Ḥusayn's return to the Temürid side, the Mamluk leadership unexpectedly fled for Cairo on the eve of 21 Jumādá I 803/7 January 1401 to avert a potential coup there.[18] This forced the Mamluk armies to follow the next morning in great haste and disarray, while the helpless city of Damascus surrendered to Temür and thereafter suffered his detailed, painful and systematic methods of plunder.[19]

The curious incident of Sulṭān-Ḥusayn's defection is no more than a tiny subplot in the larger narrative of Temür's devastation of Damascus and the complete Mamluk failure to defend the city. Small wonder, then, that the story earned no more than a few lines at most, and often considerably less, in the Persian and Arabic historical works. And yet the incident deserves more attention than this from modern historians, since it illuminates not only the ways in which Temür

asserted and maintained control over his offspring, but also the way in which the question of succession to Temür as ruler of his empire—and especially the role played by women in determining that succession—affected the Temürid princes' opportunities for meaningful career advancement.

Before we examine these issues, however, we must first determine what Sulṭān-Ḥusayn was doing. It is possible that he was sent either to spy on the Mamluks or to spread falsehoods in order to demoralize and weaken them, since Temür routinely used such techniques to enhance the effectiveness of his military campaigns. This hypothesis, however, soon proves to be untenable. Temür preferred to employ religious men for this purpose, especially mystics, who could be highly mobile and whose frequent wanderings therefore were unlikely to seem unusual.[20] They were also generally not Temür's own relatives. In addition, the Mamluks were convinced that Temür had previously sent agents to Mamluk lands, and they thus had executed an entire embassy from Temür in 796/1394 on the suspicion that it was composed of spies. Mamluk territory was therefore a particularly dangerous place to anyone working for Temür.[21] It is out of the question that Temür would assign such a risky task to his grandson in this perilous region, especially when there were more expendable persons to do it.

Furthermore, if Sulṭān-Ḥusayn had gone to the Mamluks as Temür's agent of confusion, this would have rendered Temür's punishment of him after his return inexplicable, to say nothing of the disapproving tone used by the Temürid chroniclers when they described the incident: Niẓām al-Dīn Shāmī (fl. 806/1404), author of an official history of Temür's career, pointed out how strange Sulṭān-Ḥusayn's behavior was and explained that it had been brought on by the bad counsel of corrupt advisors *(mufassidān)*.[22] Sharaf al-Dīn ʿAlī Yazdī (d. 858/1454), writing for Temür's grandson Ibrāhīm-Sulṭān ibn Shāh Rukh (d. 838/1435), echoed Shāmī regarding the advisors but added that Sulṭān-Ḥusayn was drunk, while Muʿīn al-Dīn Naṭanzī (fl. 816–17/1413–14), employed by Temür's grandson Iskandar ibn ʿUmar Shaykh (d. 818/1415), ignored the bad advisors and attributed Sulṭān-Ḥusayn's rash behavior entirely to drunkenness.[23] Given that these authors worked either for Temür or for his grandsons, it seems unlikely that they would have criticized Sulṭān-Ḥusayn so clearly if he had gone to Damascus on Temür's orders. Even a Temürid-era author who was hostile to the warlord, Ibn ʿArabshāh (d. 854/1450), attributed Sulṭān-Ḥusayn's defection not to any subterfuge from

Temür, but to Sulṭān-Ḥusayn's own foolish and reckless personality.[24] It is therefore more likely that Sulṭān-Ḥusayn went to Damascus of his own volition. If so, then a better hypothesis is that he was seeking the patronage of the Mamluk sultan in hopes of improving his opportunities for career advancement. But why might one of Temür's grandsons do such a thing? The answer lies in the complex ways in which Temür related to his family, especially the men in it, and the way Temür tended to squash the career opportunities of his offspring.

Like many of the other Temürids, Sulṭān-Ḥusayn was an ambitious young man. The clearest proof of this appeared in 807/1405, that is, a few years after his defection at Damascus, when he tried to take over Samarqand soon after his grandfather's death. But Sulṭān-Ḥusayn failed to capture the city, which became the possession of his cousin Khalīl-Sulṭān instead. Nevertheless Sulṭān-Ḥusayn remained undaunted, arranged to work for Khalīl-Sulṭān, and then later tried to use an army that Khalīl-Sulṭān gave him, not for Khalīl-Sulṭān's business but for his own purposes. Unfortunately for Sulṭān-Ḥusayn, he failed here, too, and fled to his uncle Shāh Rukh, who put a definitive end to his nephew's hopes by having him killed.[25] Sulṭān-Ḥusayn's ambitions were therefore unmistakable, although his ability to achieve them was low. It is reasonable to assume that he had been similarly ambitious those few years earlier when he found himself outside Damascus with his grandfather's armies.

In Sulṭān-Ḥusayn's case, however, the opportunity to pursue ambition was just as important as the mere presence of ambition itself. It is in this realm of opportunity that Temür's personality may have helped spur Sulṭān-Ḥusayn to his rebellious behavior. Temür appears to have loved his children and grandchildren, but does not seem to have trusted them. As a result, opportunities for the Temürids in general, and for Sulṭān-Ḥusayn in particular, were constrained because Temür liked to control his family members just as he controlled his followers and his forces.

Beatrice Forbes Manz has discussed this phenomenon at some length. Temür frequently gave his sons and grandsons important administrative and military positions, but while doing so he always took pains to limit their independence so that none could establish a base of support to rival his own. Thus, although he appointed some of his offspring as governors to rule particular regions in his absence, he also transferred them periodically to keep them from establishing themselves in any one place. Similarly, he furnished all the Temürids with appropriate entourages, including advisors, but then always ensured that some of

[24] Ibn ʿArabshāh/Sanders, *ʿAjāʾib/Tamerlane,* 243/140.

[25] Manz, *Rise and Rule,* 132; see also H. R. Roemer, "The Successors of Tīmūr," *The Cambridge History of Iran,* volume 6, *The Timurid and Safavid Periods,* ed. Peter Jackson (Cambridge, 1986), 100.

these advisors were his own followers, often related to him by marriage, whose status and authority rivaled that of the princes themselves. This allowed the advisors to keep the princes in line. Temür also gave armies to some of his sons or grandsons, especially those whom he made governors, but he then borrowed these armies to use on campaign and left temporary forces in their place. This limited the princes' ability to establish durable ties with the fighting men who worked for them, but strengthened the connections between the fighting men and Temür himself.[26] Likewise, when Temür sent out a military campaign under the leadership of his offspring, he usually appointed several different Temürid princes, each of whom was accompanied by advisors, which created a system of checks and balances not only on each prince, but among them as well. In this context of balanced opportunity and control, therefore, a Temürid like Sulṭān-Ḥusayn could win appointments or fight in campaigns, but only with other Temürids and advisors present to keep him in line. Surely Sulṭān-Ḥusayn knew that he, along with his cousins and uncles, was unlikely to realize any greater ambitions while his grandfather kept such a grip on them all.

To make matters worse, the limitations the Temürids felt were not merely a problem during their grandfather's lifetime, for the larger challenge they faced was the way they would still be restricted even after his death. But how could Temür control his relatives from beyond the grave? The answer lies in the question of succession to Temür as ruler of his empire. Succession was a thorny problem in Central and East Asian nomadic society, since an unusually wide range of factors made a man eligible for consideration as the next ruler when a beg or khan died. One important element of succession was the concept of seniority within a family, which meant that a dying or dead ruler's brothers, uncles, or cousins could legitimately assert their right to rule.[27] (In some cases a senior woman might also enter the fray, albeit not for herself but only acting as regent for a son.) This elder generation could therefore be pitted against the deceased ruler's sons, and the elders' superior experience and resources could give them an advantage over the ruler's younger, less practiced, and less powerful offspring. It was this principle of seniority that Temür's own role model and idol, Chingiz Khan, avoided by choosing to limit succession to his sons, which he did at a gathering of Mongol notables *(quriltay)* in 1218, and which effectively excluded the conqueror's brothers from consideration. Although Chingiz Khan's heir, his third son, Ögedei (r. 1229–41), ruled without challenge, it is not surprising that when Ögedei died, Chingiz Khan's brother Temüge-Otchigin sought to reestablish the principle of seniority and override the claims of Ögedei's sons and grandsons

---

[26] For details see Manz, *Rise and Rule,* 84–88.

[27] Paul Ratchnevsky, *Genghis Khan: His Life and Legacy,* trans. T. N. Haining (Oxford, 1991), 125.

in favor of his own right to rule. Although Temüge-Otchigin's claim fit squarely within the structure of nomadic inheritance by following the principle of seniority, however, he failed to achieve his goal for military reasons, and this failure led to his censure, trial, and ultimate death.[28] Similarly, Chingiz Khan's grandson Batu (d. 1255), ruler of Central Asia and Russia, was seen as the senior member of his generation among Chingiz Khan's grandsons, and his word therefore carried great weight in struggles over succession in the 1240s. Batu helped delay the coronation of his cousin Güyük (r. 1246–48) for years, then allowed another cousin, Möngke, to become Great Khan (r. 1251–59) even though Möngke was from the weakest branch of the family and should not have had a chance.[29] Batu's seniority therefore helped him control the politics of the empire, although Batu never proposed himself as a candidate for Great Khan.

But even when succession deviated from the principle of seniority and was limited to a ruler's sons and grandsons, the wealth of possibilities here, too, made selection difficult. Khans could invoke primogeniture, ultimogeniture, or simply their own choice to determine their heir. Chingiz Khan used this last option, ruler's choice, in 1218 when designating Ögedei to be the next Great Khan, and Ögedei followed suit in selecting his grandson Shiremün (although Shiremün never actually managed to hold the position).

To complicate matters still further, one additional requirement for a man's sons to succeed him, which modern scholars sometimes fail to enumerate, was the identity of a son's mother. In nomadic ideology not all mothers were created equal, and thus the sons of some mothers enjoyed opportunities that the sons of other mothers did not, even when all the sons shared the same father. In general, the children of a principal wife (or principal wives) held greater status than the sons of secondary wives or concubines, and therefore enjoyed better career opportunities.[30] Thus, at the meeting of 1218, Chingiz Khan was not in fact choosing a new Great Khan from among all his sons, but was rather limiting his choice to those sons borne by his principal wife, Börte—his sons with other women did not enter into consideration. It was thus Börte's identity as Chingiz

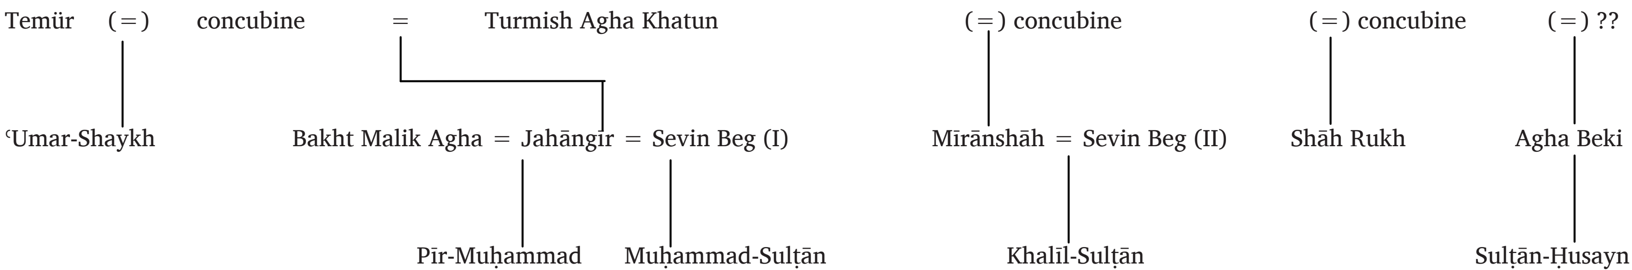
Khan's most important wife that determined which of his progeny were eligible to inherit the empire; the choice did not extend to all of Chingiz Khan's sons unilaterally.[31] At the other end of the spectrum, the Ottomans also recognized the importance of a mother's status in the politics of succession, but they responded by working to eliminate the question entirely. This they did by stipulating that the reproductive partners of the sultans be concubines, not wives, which meant that the status of these "royal mothers" depended entirely on their ability to bear sons of the Ottoman house, and not either on their marital positions or on their links to outside families. In fact, after the early years of the dynasty the Ottoman sultans stopped marrying anyone, since the presence of wives in the Ottoman family might have complicated succession by subjecting the imperial house to unwanted stresses from outside powers.[32]

It is this final principle, that of mother's identity, that seems to have most strongly affected Temürid succession, and through it, the opportunities available to individual Temürid princes like Sulṭān-Ḥusayn. Unlike the Ottomans, who required that the mothers of heirs be concubines, Temür appears to have required the opposite, namely that the mothers of heirs be wives (and therefore free). Although Temür had four sons who survived to adulthood—ʿUmar-Shaykh (d. 796/1394), Jahāngīr (d. 777/1376), Mīrānshāh (d. 810/1408), and Shāh Rukh (d. 850/1447)—only Jahāngīr's mother, Turmish Agha Khatun, was Temür's wife; the mothers of the other three sons were concubines. But Jahāngīr could not succeed his father as ruler, since he died during Temür's lifetime (as did Temür's oldest son, ʿUmar-Shaykh). This meant that when Temür came to choosing an heir he was left with only two sons, Mīrānshāh and Shāh Rukh, and numerous grandsons. Unfortunately for Mīrānshāh and Shāh Rukh, however, the fact that both of their mothers had been Temür's concubines appears to have eliminated them from consideration. Instead, Temür seems to have combined the principles of mother's identity and ruler's choice to skip over Mīrānshāh and Shāh Rukh entirely and designate a grandson as heir: Jahāngīr's son Muḥammad-Sulṭān.



Temür seems to have decided that Muḥammad-Sulṭān was the best candidate to succeed him for two reasons. First, as explained above, his father Jahāngīr was the only one of Temür's sons whose mother was free and an actual wife to Temür. Second, Muḥammad-Sulṭān's own mother, Sevin Beg, was herself a free woman and lawful wife to Jahāngīr, and as an added attraction, she was

[31] Juvaynī, *World-Conqueror,* 40, claims that Chingiz Khan had many sons and daughters from Börte and from other wives and concubines, but specifies that only Börte's sons were eligible to succeed their father. On two sons of concubines who were never even considered for succession see Allsen, *Mongol Imperialism,* 18, note 1.

Partial Temürid Family Tree(s)

Traditional View

Revised View

maternally descended from the Jochid line of the Chingizid family, which Temür revered.[33] After Jahāngīr died, Sevin Beg married his brother Mīrānshāh and with him had another son, Khalīl-Sulṭān. Unfortunately for Temür, however, the heir Muḥammad-Sulṭān died in 805/1403, and he was forced to look for another candidate. When he did so, Temür did not choose Sevin Beg's second son Khalīl-Sulṭān (i.e., the deceased heir's uterine half-brother). Rather he settled on Pīr-Muḥammad, Jahāngīr's other son by a different wife who was also, of course, free, but who was not a Chingizid.[34] By limiting his choices to Jahāngīr's line, Temür demonstrated the importance of Jahāngīr's mother's status as a free and married woman; by choosing Muḥammad-Sulṭān before Pīr-Muḥammad, Temür demonstrated the importance of a Chingizid wife over a non-Chingizid. We may assume that Temür skipped over Khalīl-Sulṭān entirely, even though his mother was Muḥammad-Sulṭān's mother and a Chingizid, because Khalīl-Sulṭān's father, Mīrānshāh, had already been disqualified from succession as a result of his concubine mother's slave status.[35]

Clearly, therefore, the status of a son's mother in the question of succession was just as much a problem for the Temürids as for the Chingizids and other nomadic dynasties. Even though Temür had two experienced, full-grown sons, to say nothing of his numerous grandsons, the succession ideology to which he subscribed meant that very few members of the family actually qualified as contenders for rule. Since this was true for those Temürids who were connected to the conqueror in a direct paternal line, i.e., his sons and their sons, then how much more true was it for Sulṭān-Ḥusayn, whose relatively low status as the son of Temür's daughter Agha Beki surely disqualified him even more? Certainly Sulṭān-Ḥusayn himself felt he was a worthy candidate to rule his grandfather's empire, as his first major act after Temür's death was to try to take over the capital city, Samarqand. But it is likely that during Temür's lifetime Sulṭān-Ḥusayn understood that Temür's ideas about succession meant he had no real opportunity for overall rule. This hard truth must have been clear by 800–1/1398, at which point Temür had chosen Muḥammad-Sulṭān to succeed him, and which was at least two years before Sulṭān-Ḥusayn saw his opportunity to escape the system by running away at Damascus.[36]

Supporting the idea that Sulṭān-Ḥusayn was trying to defect to the Mamluks to

[33] Her own mother was Shakar Beg, daughter of the Jochid Janibeg Khan. See Woods, "Genealogy," 112.

[35] The details come from Woods, "Genealogy," 112–14; the concepts about the role of the mother in succession come from John Woods himself during class discussions in 1997 at the University of Chicago.

[36] Woods, "Genealogy," 113.

gain greater career opportunities is the fact that he was not the first or only prince to seek to elude Temür's control. A slightly earlier and more famous example of a rebellious Temürid had been Sulṭān-Ḥusayn's uncle Mīrānshāh, whose suddenly erratic behavior as governor of Azerbaijan around 801–2/1399 was characterized by official Temürid sources as a form of temporary insanity resulting from a fall from his horse.[37] The reality, however, was probably that Mīrānshāh was trying to establish himself as an independent ruler.[38] At the time of this episode Mīrānshāh was in his early thirties, and like Sulṭān-Ḥusayn, he already knew that Temür was passing over him as an heir to rule the entire empire. But Temür heard of his son's behavior from the advisors whom he had set to check the prince, as well as from Mīrānshāh's wife, and returned to Azerbaijan from campaigning in northern India to replace Mīrānshāh as governor and take him along on his final campaign in Iran, the better to keep an eye on him.[39] Similarly, Temür's grandson Pīr-Muḥammad ibn ʿUmar Shaykh avoided going on a campaign in 802/1399–1400, even though Temür had directly ordered him to do so; he, too, was punished for this insubordination.[40] Like Mīrānshāh and Sulṭān-Ḥusayn, Pīr-Muḥammad may have felt his opportunities under Temür to be limited because of the slave status of his grandmother, ʿUmar-Shaykh's mother, who had been Temür's concubine, not wife. And even Shāh Rukh, also passed over for rule because of his concubine mother, but who became Temür's unintended heir by defeating the other princes and taking control of a smaller version of the empire (r. 1411–47), deliberately rejected many of Temür's Turko-Mongol pretensions in favor of Islamic ideas in a sort of quiet rebellion against his father after his death.[41]

When we set Sulṭān-Ḥusayn's defection to the Mamluks at Damascus in the proper context of Temürid family ideology, therefore, it becomes clear that the opportunities for Sulṭān-Ḥusayn under the Mamluk sultan may have looked far more promising than they did under his own grandfather. Surely the situation must have seemed particularly appealing during the reigns of Faraj's father, al-Ẓāhir Barqūq (r. 784–91/1382–89, 792–801/1390–99), who was a strong sultan and ruled for nearly seventeen years. Those of Barqūq's exploits that arose from his interactions with Temür were hardly secret, and it can therefore be reasonably assumed that Sulṭān-Ḥusayn knew about them. For example, during

[41] For Shāh Rukh's preference for Islamic norms and deliberate rejection of the Turko-Mongol ideas that Temür favored see Woods, "Genealogy," 115–16.

Barqūq's sultanate Temür had threatened to approach the northern Mamluk city of Aleppo, but had not actually done so because Barqūq demonstrated his own warlike qualities by leading out a sizable army and spending part of the summer of 796/1394 in Syria, simply waiting for Temür to appear. Barqūq also opposed Temür by being the single most important patron of other regional rulers; he counted among his protégés Qara Yusuf, leader of the Qara Qoyunlu Turkmen in northern Iraq, whom Temür fought multiple times during his second major Iran campaign (794–98/1392–96) without ever capturing him or permanently defeating his men. To add insult to this injury, Qara Yusuf later seized Temür's man Atlamish, commander of a fort near Tabriz, and sent him to Barqūq to show the Mamluk sultan his loyalty. Barqūq kept Atlamish in Cairo for years and refused to return him to Temür, despite Temür's repeated demands.[42] Another of Barqūq's protégés was the Jalayirid Sulṭān-Aḥmad, who fled from Temür at Baghdad in 795/1393 and ran directly to Cairo for help, where Barqūq welcomed him lavishly, housed him in style, showered him with gifts and honors, married his niece, and sent him off with an army to reinstate himself in Baghdad.[43] Barqūq also extended his patronage to other regional rulers like the Artuqids at Mardin, Qāḍī Burhān al-Dīn at Sivas, and the Ottoman ruler Beyazid in Anatolia, although with less dramatic results.[44] It was therefore clear that Barqūq was a sovereign of significant stature, enough to oppose Temür successfully when many others failed. Furthermore, the Mamluk Sultanate had a long history of welcoming refugees and immigrants, especially Turko-Mongol military men, who were generally incorporated into some level of the military forces. Certainly, many of these refugees to Mamluk territory had belonged to an earlier time period, that of Ilkhanid rule in Iran (1258–1335).[45] Nevertheless, if Sulṭān-Ḥusayn's knowledge of Mongol history was similar to Temür's, he is likely to have known something about these men and the fact that they were almost always welcomed into Mamluk society. It is understandable that Sulṭān-Ḥusayn may have rightly deduced that Mamluk territory was a place that held some promise, and Barqūq was surely a man who could protect and promote him, if only he could reach him.

Unfortunately for Sulṭān-Ḥusayn, however, by the time the opportunity for flight presented itself at Damascus, the situation had changed dramatically. Barqūq was dead, his son Faraj was not yet a teenager, and Faraj's advisors were of a far

lesser caliber than Barqūq had been. At the time of Sulṭān-Ḥusayn's defection, the Mamluk leadership's sorry decision to run back to Cairo to forestall a coup was still a few days away, but certainly the Mamluks had already demonstrated a significant lack of decisiveness by waiting so long to respond to rumors of Temür's advance that their delay had contributed to the loss of Aleppo and all the Syrian Mamluk commanders with it. For all we know, therefore, Sulṭān-Ḥusayn may indeed have been drunk, as Naṭanzī and Yazdī suggest, if only to give himself the courage to take such a drastic step when the rewards were suddenly so uncertain. And he was fortunate that Temür preferred to punish his family members only lightly when they disobeyed him, since otherwise the consequences of his flight and recapture might have been much more severe.

In sum, then, Sulṭān-Ḥusayn's curious defection earned little attention in either the Persian or Arabic histories, especially when considered against the dramatic backdrop of events at Damascus. Nevertheless, this tiny sub-plot in the larger narrative is important for what it can illuminate about the dynamics of the Temürid family. In particular it suggests that Sulṭān-Ḥusayn may have been seeking career advancement among the Mamluks, that is, outside the confines of his grandfather's system. This could have been a result not only of Temür's general policies of control, but also of his rigid and limited views on the question of legitimacy, rule, and succession. Nor was Sulṭān-Ḥusayn the only Temürid who chafed under the warlord's policies: Mīrānshāh, Pīr-Muḥammad ibn ʿUmar-Shaykh and, much later, Shāh Rukh all made attempts to resist Temür's dominance. Unfortunately for Sulṭān-Ḥusayn, his opportunity for flight came too late, after his would-be patron had died. His recapture sent him back to his grandfather for punishment, but he emerged relatively unscathed, only to wait until Temür's death to make yet another unsuccessful bid for power.

The incident also raises a question: why was Temür so lenient with his rebellious offspring? The repercussions for Mīrānshāh's attempt to establish himself independently were mild, as he was merely removed from office and forced to accompany Temür on campaign. This may have posed an emotional challenge—was it galling? Infuriating? Something to accept with resignation?—but Mīrānshāh's life and physical health do not appear to have been in danger from his grandfather. Sulṭān-Ḥusayn's defection at Damascus may even have been colored by his knowledge of this leniency, and his hope that if his attempt failed, his grandfather might not punish him too much. The reasons for Temür's complicated treatment of his sons and grandsons—encouraging them with jobs and opportunities, limiting them with watchdog advisors, and refusing to punish them seriously when they misbehaved—also deserve further study.

Mamluk Historical *Rajaz* Poetry: Ibn Dāniyāl's Judge List and Its Later Adaptations

It is commonly held that one of the major sources for the study of the institution of judgeship in medieval Islam is Ibn Ḥajar al-ʿAsqalānī's (d. 1449) biographical dictionary *Rafʿ al-Iṣr ʿan Quḍāt Miṣr*.[1] Little attention, however, has been paid to the fact that it was inspired by, and based on, a poem: Ibn Dāniyāl's (d. 1311) "The Ode on the Judges of Egypt,"[2] which consists of a roster of judges from the Muslim conquest of Egypt to his own time. "Commissioned" by Badr al-Dīn Muḥammad Ibn Jamāʿah (d. 1333), the Shafiʿi chief judge in Mamluk Egypt and Syria,[3] the poem became hugely popular among later historians writing on the subject. Ibn al-Mulaqqin (d. 1401), for example, in his *Nuzhat al-Nuẓẓār fī Quḍāt al-Amṣār,* and al-Suyūṭī (d. 1505), in his *Ḥusn al-Muḥāḍarah fī Akhbār Miṣr wa-al-Qāhirah,* all made direct use of it as a source and, more importantly, as a model of presentation. It is no surprise to have a chief judge commission an homage to law enforcement, and by extension, to his own legacy. But Ibn Dāniyāl's *urjūzah* is not a typical panegyric: with little verbal fanfare, it is basically a list of names in strict chronological order. Moreover, its success among historians of no less stature than Ibn Ḥajar and al-Suyūṭī is not the kind of reception a normal panegyric would usually command. To the modern student, the *urjūzah* in question amounts to no more than a laundry list wrought in formulaic, and mostly dull, verses. But the reception of Ibn Dāniyāl's poem in its own time must have been quite different.[4] So it boils down to two related questions: why did Ibn Dāniyāl's *rajaz*

[1] Joseph Escovitz, *The Office of Qâḍî al-Quḍât in Cairo under the Baḥrî Mamlûks* (Berlin, 1984), especially 5–7, 17–19; Rhuvon Guest, *The Governors and Judges of Egypt; or, Kitâb el ʾumarâʾ (el wulâh) wa Kitâb el qudâh of el Kindî, together with an appendix derived mostly from Rafʿ el iṣr by Ibn Ḥajar* (Leiden, 1912); Mathieu Tillier, *Vies des cadies de Miṣr 237/851–366/976: Extrait du* Rafʿ al-ʿiṣr ʿan quḍāt Miṣr *d'Ibn Ḥağar al-ʿAsqalānī,* edition with annotated translation (Cairo, 2002).

[2] Various "titles" are given: *Rajaz fī Dhikr Man Waliya al-Qaḍāʾ bi-al-Diyār al-Miṣrīyah* (Ibn Ḥajar), *Urjūzah fī Man Waliya Qaḍāʾ Miṣr* (al-Suyūṭī), and *Jawharat al-Niẓām (al-naẓẓām) fī Man Waliya Miṣr min al-Ḥukkām* (Ibn al-Mulaqqin).

[3] For his career and the prominent Ibn Jamāʿah "dynasty" of jurists, including his son ʿIzz al-Dīn ʿAbd al-ʿAzīz (d. 1366) and grandson Burhān al-Dīn Ibrāhīm (d. 1388), see "Ibn Djamāʿa" (K. S. Salibi), in *Encyclopaedia of Islam,* 2nd ed.; also Escovitz, passim.

[4] In some ways, our poet's legacy became the victim of his own success: he was erroneously identified as a "prominent judge" by medieval scribes; see Istanbul, Ayasofya MS 4880, fol. 131a, a *dīwān* attributed to "*al-qāḍī al-ajall* Muḥammad Ibn Dāniyāl." I thank Alidost Numan and Bruce

become popular among historians, and what do we know about historical *rajaz* poetry produced during the time? In the following pages an attempt will be made to answer these questions in the context of Mamluk historiography and literary culture. We will examine the historians' experimentations with new forms of presentation and trace possible traits, or trends, in the development of *rajaz* poetry as a narrative tool for historical discourse.

Name-Dropping in Style: Ibn Dāniyāl's *Urjūzah:*

The poem opens with a prologue (verses 1–15) in praise of the patron, Badr al-Dīn Ibn Jamāʿah, and concludes with more praise of him (verses 105–112). The main content, the judge list, begins as follows:

> 16. The first man to preside over the judgeship was
> Qays, the servant of ʿAdī ibn Sahm.
>
> 17. It was then passed on to Kaʿb ʿAbs,
> then to ʿUthmān, without any doubt.[5]

The roster runs up to Badr al-Dīn Ibn Jamāʿah, who rose to become Shafiʿi chief judge of Egypt for three terms, starting from the year 1291, under the Mamluk sultan Khalīl Ashraf, for whom Ibn Dāniyāl served as a court panegyrist.[6] The poem in question was, therefore, most likely composed during this time. Altogether, one hundred fifty names—some with multiple appearances—are enumerated in one hundred twelve verses. Overall, the list is straightforward. As a panegyric, its functionality is accompanied by some, albeit minimal, rhetorical embellishments. Some textual devices are employed, and they involve some kind of wordplay between personal names and laudatory descriptions. Typical is the following:

> 93. Then Muḥyī al-Dīn held the office,
> and then Ibn Razīn, with a judicious mind *(dhū al-ḥijā al-razīn)*.[7]

Craig, of the University of Chicago, for helping me obtain a digitized version of the manuscript.

[5] Qays: Ibn Abī al-ʿĀṣī; Kaʿb ʿAbs: Ibn Yasār ibn Ḍabbah; ʿUthmān: Ibn Qays ibn Abī al-ʿĀṣī. The focus here is on artistic features of the poem; therefore references to the persons, especially those prior to the Mamluk era, will be kept to a minimum. Brief biographical information for the Mamluk judges will be supplied when necessary. Verse numbers have not been given in the editions.

[6] For Ibn Dāniyāl's association with Khalīl, see Li Guo, "Reading *Adab* in Historical Light: Factuality and Ambiguity in Ibn Dāniyāl's 'Occasional Verses' on Mamluk Society and Politics," in *History and Historiography of Post-Mongol Central Asia and the Middle East,* ed. Judith Pfeiffer and Sholeh A. Quinn (Wiesbaden, 2006), 387–89.

[7] Muḥyī al-Dīn: ʿAbd Allāh ibn Muḥammad ibn ʿAbd Allāh ibn al-Ḥasan Ibn ʿAyn al-Dawlah (Fusṭāṭ

The name Ibn Razīn is paired with the adjective *razīn,* "judicious." More often, one finds the following:

> 59. Qāsim, then Abū al-Fatḥ, held the office;
> he was by no means isolated, even without the divider *(bi-ghayr qāsim)*.[8]

The name Qāsim and the word *qāsim,* "divider," are punned, but with a twist. Oftentimes one verse contains more than one name, and the adjectives then end up being applicable to other persons who happen to be "close by." In this case, the praise is actually for Abū al-Fatḥ, but the pun is on Qāsim. Again, consider the following:

> 23. After him, the office was held by ʿAbd al-Aʿlá,
> then Ibn Ḥudayj, who commanded the highest esteem *(dhī al-fakhr al-aʿlá)*.[9]

The reason for the use of *aʿlá,* "the highest esteem," for Ibn Ḥudayj seems only to be that it rhymes with the name of ʿAbd al-Aʿlá, who appears earlier. In a similar vein, we read the following:

> 32. Then the post went to Ismāʿīl, the son of al-Yasaʿ,
> succeeding him was Ghawth, again, the best successor *(khayr tabaʿ)*.
>
> 33. After that he who occupied the office was al-Mufaḍḍal,
> then it was Abū al-Ṭāhir; he was the best *(al-afḍal)!*
>
> 34. After him it was al-Tujībī,
> and then al-ʿUmarī; how excellent he was *(najīb)!*
>
> 35. Succeeding him was al-Bakrī, and Ibn al-Bakkā,
> then Ibn ʿĪsá; he was the most pious *(azká nuská)!*[10]

---

only, 665–76 A.H.); Ibn Razīn: Taqī al-Dīn Muḥammad ibn al-Ḥasan (al-Qāhirah only, 665–76 A.H., then Egypt, 676–78 A.H.); see Escovitz, *The Office of Qâḍî al-Quḍât,* 62, 121.

[8] Qāsim: Ibn ʿAbd al-ʿAzīz ibn al-Nuʿmān; Abū al-Fatḥ: ʿAbd al-Ḥākim ibn Saʿīd al-Fāriqī.

[9] ʿAbd al-Aʿlá: Ibn Khālid al-Fahmī; Ibn Ḥudayj: ʿAbd al-Wāḥid ibn ʿAbd al-Raḥmān Ibn Muʿāwiyah.

[10] Ismāʿīl ibn al-Yasaʿ ibn al-Rabīʿ; Ghawth: Ibn Sulaymān al-Ḥaḍramī; al-Mufaḍḍal: Ibn Faḍālah;

Even someone who does not read Arabic can see the rhyme pattern here. Of the *urjūzah muzdawijah* type, the poem consists of rhyming couplets;[11] as a result, a concluding adjective is often used to describe any person's name that rhymes with it, no matter what. This kind of randomly-generated praise abounds.[12] All sorts of additional phrases and words are inserted to fill in the space with the rhyming scheme. An example can be seen in line 17, cited above, between the name ʿAbs and the word *labs,* "[without any] doubt." The following are also typical:

19. His successor was ʿĀbis al-Murādī,
and then Ibn al-Naḍr, in the country *(fī al-bilādi)*.[13]

29. During the time of the Abbasids *(banī ʿabbās),*
Naʿīm[14] returned to enforce law and order *(al-asās)*.

75. Then it was Ibn Badr; and Abū al-Faḍl ruled *(qaḍá),*
prior to al-Ṣiqillī. This Abū al-Faḍl did a satisfactory job *(al-riḍā)*.
76. After him Ibn Ẓāfir was in charge of the office *(tawallá),*
and Ibn al-Ḥusayn, who enjoyed the highest esteem *(al-aʿlá)*.[15]

87. Then Ibn ʿAṣrūn took over *(tawallá al-ḥukmā),*
then Ṣadr al-Dīn was re-appointed; he was the most superb *(al-asmá)*.[16]

95. Then Ibn Razīn was re-appointed to the office *(fa-ḥakam),*

Abū al-Ṭāhir: ʿAbd al-Malik ibn Muḥammad ibn Abī Bakr Ibn Ḥazm; al-Tujībī: Muḥammad ibn Masrūq; al-ʿUmarī: ʿAbd al-Raḥmān ibn ʿAbd Allāh; al-Bakrī: Hāshim ibn Abī Bakr ibn ʿAbd al-Raḥmān al-Bakrī; Ibn al-Bakkā: Ibrāhīm ibn Muḥammad al-Bajalī; Ibn ʿĪsá: Lahīʿah ibn ʿĪsá ibn Lahīʿah.

[11] With regard to rhyme requirement, the *rajaz* comes in two types: conventional monorhyme (*a a a . . .*) and rhyming couplet (*muzdawij, a a b b c c . . .*); see "Radjaz" (M. Ullmann and W. Heinrichs), in *EI*[2]; "Rajaz" (W. Stoetzer) in *Encyclopedia of Arabic Literature,* ed. Julie Meisami and Paul Starkey (New York, 1988).

[12] For examples, lines 28 (Khayr / *khayr*), 38 (Shaddād / *jād*), 65 (Asad / *dhū al-ḥukm al-asad*), 70 (al-Yāzūrī / *bi-ghayr zūri*), 72 (al-Qāsim / *khayr ḥākim*), 74 (Dhakā / *dhū dhakā*), 80 (al-Ruʿaynī / *bi-lā mayni*).

[13] Ibn Rabīʿah al-Murādī; Ibn al-Naḍr: Bashshār ibn al-Naḍr al-Muzanī.

[14] Khayr ibn Naʿīm.

[15] Ibn Badr: Muḥammad al-Ḥurrānī; Abū al-Faḍl: Niʿmah ibn Bashīr al-Nābulsī; al-Ṣiqillī: Aḥmad ibn Qāsim ibn Yazīd; Ibn Ẓāfir Muẓaffar.

[16] Ibn ʿAṣrūn: Muḥyī al-Dīn Muḥammad ibn Saʿd ibn ʿAbd Allāh ibn ʿAlī ibn Muẓhir; Ṣadr al-Dīn: ʿAbd al-Malik.

after Ṣadr al-Dīn; both did a superb job for the state *(al-umam)*.[17]

Taken together, it is hard to judge whether this kind of "commentary" bears any significant weight. Occasionally, though, statements like the following seem to reveal something substantial:

21. Yūnus was then put in charge *(waliya al-qaḍā),*
and then it was Aws, with a relentless grip *(bi-ʿazmin muntaḍá)*.[18]

26. Then ʿIyāḍ had a second go *(thāniya),*
then it was ʿAbd Allāh, in a tireless fashion *(ghayr wāniya)*.[19]

60. They replaced him with Abū Muḥammad,
and, prior to him, with Abū ʿAlī, the Fixer *(al-musaddid)*.[20]

88. Al-Sukkarī, to be followed by Abū Muḥammad,
before Ibn ʿAyn al-Dawlah, the Glorious One *(al-mumajjad)*. [21]

91. Then they brought back Yūsuf al-Sanjārī;
succeeding him was Tāj al-Dīn, the Magnificent *(dhū al-fakhāri)*.[22]

The glowing adjectives and flattering nicknames seem to suggest some kind of appraisal and judgment, but in light of the overall tendency of putting prosodic needs over narrative functionality, it is safe to say that they are more collective, formulaic, and generic than individual, genuine, and personal. In this connection, it is noted that the last part of the poem, covering the Mamluk period, is more "chatty" in that some details about the circumstances surrounding the judges' appointments and dismissals are provided (for example, verses 97–101; see Appendix). But overall, the historical value of the poem is, by today's standards,

---

[17] Ibn Razīn, see note 6 above (reappointed for the third time, 679–80 A.H.); Ṣadr al-Dīn: Ibn Bint al-Aʿazz (678–79 A.H.).

[18] Yūnus: ibn ʿAṭīyah; Aws: ibn ʿAbd Allāh ibn ʿAṭīyah.

[19] ʿIyāḍ: ibn ʿAbd Allāh al-Azdī; ʿAbd Allāh: ibn Yazīd ibn Khudhāmir.

[20] Abū Muḥammad: al-Ḥasan ibn ʿAlī ibn ʿAbd al-Raḥīm al-Yāzūrī; Abū ʿAlī: Aḥmad ibn ʿAbd al-Ḥākim Ibn Saʿīd al-Fāriqī.

[21] ʿImād al-Dīn: ʿAbd al-Raḥmān ibn Muḥammad ibn ʿAbd al-ʿAlī Ibn al-Sukkarī; Abū Muḥammad: uncertain; Ibn ʿAyn al-Dawlah: Sirr al-Dīn Muḥammad ibn ʿAbd Allāh ibn al-Ḥasan al-Iskandarānī.

[22] Badr al-Dīn Yūsuf ibn Ḥasan al-Sanjārī; Tāj al-Dīn ʿAbd al-Wahhāb Ibn Bint al-Aʿazz (663–65 A.H.).

questionable. What, then, was the use of such a text?

Why *Rajaz?*

In general terms, the goal of Ibn Jamāʿah's "commission" of the poem is obvious: a tribute to the institution of the Muslim judicial system, the evolution of the office of the qadi, reaching a milestone upon his own arrival. With regard to its particular contents, name-dropping *was* important. In an era of no government publications and archives, the record of appointments and dismissals constitutes an integral part of the written history. Considering that these names were associated with the court decisions tendered by the judges involved, the list is, in a way, part and parcel of the medieval Muslim legal tradition.

But why poetry, and why *rajaz* in particular? Our poet, Ibn Dāniyāl, had this to say:

> 5. I hereby present this poem, to recount
> the careers of all who have ruled the court in Egypt;
>
> 6. Of all the judges and magistrates *(al-quḍāh wa-al-ḥukkām)*
> since the Islamic era;
>
> 7. I mean, from the Muslim conquest,
> led by ʿAmr Ibn al-ʿĀṣ, onwards to this day.
>
> 8. I have chosen the form of *rajaz,*
> making the accounts short and concise *(lafẓan mūjazan)*.

"Short and concise," *lafẓan mūjazan,* says it all. Information contained in rhyming verses is easy to memorize, and the *rajaz* is an ideal vehicle for such purposes, due to its short meter and flexible rhyme requirements. Ibn Dāniyāl's *urjūzah* went on to become a model of presentation for later Mamluk historians. It has all the trimmings of a panegyric, but with more substance; it is informative, yet compact. Herein lies its popularity, which is attested by at least three later adaptations known so far. While overall the functionality of the *urjūzah* as a genre should be acknowledged, Ibn Dāniyāl's Shafiʿi-centric model of presentation must be seen here as the key to its appeal to later historians.

Among these historians is Ibn al-Mulaqqin, who, in concluding his biographical dictionary of Egyptian judges, remarked that when he was finishing up this book, he became aware *(raʾaytu)* that someone had put together materials about judges

of Egypt in the form of an *urjūzah*. He then went on to quote its full text.[23] Ibn al-Mulaqqin, nevertheless, did nothing with the material itself: he simply quoted it on the authority of ʿIzz al-Dīn Ibn Jamāʿah (in office 1340–65), the son of Badr al-Dīn, Ibn Dāniyāl's patron, who in turn quoted on the authority of Ibn Dāniyāl himself *(anbaʾnā)*. Ibn al-Mulaqqin's decision to cite the poem is a testimony to its attractiveness, in spite of his candid admission that the poem had come to his attention too late to be incorporated into the main narrative of his work and that its account differs somewhat from his own.[24] The appeal of the *rajaz* form, "short and concise," was good enough for the seasoned historian-cum-hadith scholar.

Ibn Ḥajar's and al-Suyūṭī's Adaptations

The other two historians involved in the business of adopting the *urjūzah,* namely Ibn Ḥajar and al-Suyūṭī, apparently intended to do something more with it. Instead of being merely an afterthought, as in the case of Ibn al-Mulaqqin, the poem takes center stage.

Ibn Ḥajar, himself a long time Shafiʿi chief judge, revealed that he once had come across *(waqaftu ʿalá)* a copy of the *rajaz* by Ibn Dāniyāl and was asked to supply biographical sketches *(suʾiltu an utarjima)* of the judges mentioned therein, hence his work.[25] In other words, Ibn Ḥajar, the consummate historian, was convinced that the widely circulated poem was a perfect springboard upon which to launch a grand program.

After a brief statement on structure and method, Ibn Ḥajar, a onetime student of Ibn al-Mulaqqin, goes on to list his sources. The bibliography further sheds light on why he decided to embark upon the project: the need to update monographs devoted to the lives and careers of judges. The "classics" of the genre, al-Kindī's (d. 961) *Kitāb al-Quḍāh* and Ibn Zūlāq's (d. 997) *Akhbār Quḍāt Miṣr,* a *dhayl,* were all written prior to the fourth/twelfth century. Of the Mamluk authors, only Ibn al-Mulaqqin's work, arranged in the *ṭabaqāt* fashion, followed the old genre of topical biographical presentation, but with unsatisfactory results in Ibn Ḥajar's

[23] *Nuzhat al-Nuẓẓār fī Quḍāt al-Amṣār,* ed. Madīḥah M. al-Sharqāwī (Cairo, 1996), 211–17. It is arranged in eight *ṭabaqah*s in chronological order, ending at the year 1384.

[24] *Nuzhat al-Nuẓẓār,* 211.

[25] I use the edition of *Rafʿ al-Iṣr ʿan Quḍāt Miṣr* by Ḥāmid ʿAbd al-Majīd et al. (Cairo, 1957). The more recent edition by ʿAlī Muḥammad ʿUmar (Cairo, 1998) was based on different manuscripts and did not fully consult the Fayzullah MS, Istanbul, the only manuscript that contains line-by-line prose gloss of the verse. The poem is not found in Ibn Dāniyāl's anthology, edited by al-Ṣafadī in his *Al-Tadhkirah al-Ṣafadīyah*. The modern edition of the anthology, titled *Al-Mukhtār min Shiʿr Ibn Dāniyāl,* ed. al-Dulaymī (Mosul, 1979), included the poem, based on *Rafʿ al-Iṣr* and collated with the *Ḥusn al-Muḥāḍarah* as a supplement, 289–99. Al-Dulaymī's "edition" contains several printing errors, while the biographical notes were largely taken from al-Majīd's edition.

view.[26] The remaining sources utilized by Ibn Ḥajar are all of the regional history type, namely the history of Islamic Egypt with bibliographical materials on the side, the likes of Ibn Muyassar (d. 1278), al-Ḥalabī (d. 1334–35), and al-Maqrīzī (d. 1442).[27]

The appeal of Ibn Dāniyāl's *urjūzah* can be noted at various levels. As far as the roster is concerned, it is far more accurate and complete than others. It fills the huge gap between the Ayyubid historian Ibn Muyassar and later Mamluk authors such as al-Ḥalabī and al-Maqrīzī. For the early Mamluk period, it is *the* most authentic, given Ibn Dāniyāl's personal involvement with the court. Then there is its form: the "short and concise," memorable, and hymn-like *rajaz*. Ibn Ḥajar liked it so much that not only did he quote the text verbatim, but also cited a *dhayl,* or continuation, modeled after it *(ʿalá minwāl)*.[28] Picking up where Ibn Dāniyāl left off and running all the way to Ibn Ḥajar's time, the end of the eighth/fifteenth century, the *dhayl* attests to the continuing enthusiasm for Ibn Dāniyāl's model. However, if Ibn Dāniyāl's poem is, as the analysis above reveals, mediocre artistically, the continuation is, in my opinion, quite bad. Its author was one Aḥmad ibn Ibrāhīm al-ʿAsqalānī (d. 1471), of whom little is known. It retains Ibn Dāniyāl's laundry list format, but is even plainer and simpler. Stripped of any embellishments, it is more functional than flowery.

But there is one remarkable development in the *dhayl,* insofar as the verses are divided into four segments, according to the four branches of the judgeship, which had become official during Baybars' time. We may recall that in Ibn Dāniyāl's poem, the representation of the four law schools did not seem to be an issue at all: only the Shafiʿi chief judges are listed. One may argue that perhaps this was because it was too soon after the establishment of the four-part judiciary for the poet to have time to observe and reflect upon this new reality. Joseph Escovitz's thesis of an "evolutionary process" of the establishment of the four-judge system is tested here.[29] An alternate argument would be that Ibn Dāniyāl wrote the poem this way on purpose, if only because his project was a holistic overview of Egypt's judicial history, crowned at the Shafiʿi triumph with the blessing of Baybars. As far as his Shafiʿi patron is concerned, there was no need to share the spotlight with others. Given our poet's consistent critical stands regarding Baybars,[30] this Shafiʿi-centric homage can be read, in my opinion, as yet another indirect critique

[26] *Rafʿ al-Iṣr,* 3.

of the sultan's policy and legacy.

But with Ibn Ḥajar, this must have been a trickier endeavor. Despite his own Shafiʿi favoritism, there was the savvy side of Ibn Ḥajar when it came to preserving his own legacy: his self-projection as a "consensus builder" among all the Sunni legal scholars.[31] The *dhayl* starts with the Shafiʿis and proceeds to deal with each group separately. Altogether, thirty-eight names—some with multiple appearances—of the Shafiʿis are listed in nine verses, thirty-five Hanafis in eight, thirty-eight Malikis in nine, and eighteen Hanbalis in merely four. And, lo and behold, after the list in verse come the biographies in prose.

Ibn Ḥajar wrote that he had arranged the material in the *ṭabaqāt* fashion, "dividing them according to annals *(ʿalá al-sinīn),*"[32] in accordance with the poem. A quick check, however, reveals that the organization of the biographical material is actually alphabetical. This obvious discrepancy was so scandalous that al-Sakhāwī (d. 1497) found it necessary to attach a note to the colophon of several manuscripts, which he personally copied (or supervised their copying).[33] According to the note, one of Ibn Ḥajar's students named ʿIzz [al-Dīn] al-Ḥanbalī was responsible for rearranging the entries from an earlier draft *(musawwadah)* by the author—who was too ill to revise it—into the current form, with Ibn Ḥajar's approval.[34] If this episode tells us anything, it is the fact that the *Rafʿ al-Iṣr* was completed near the end of Ibn Ḥajar's career, before his sudden death.

The *Rafʿ al-Iṣr* itself is a well-known and often-cited work that needs no introduction. It is the little-studied verse portion that interests us here. The first *dhayl* begins where Ibn Dāniyāl left off, that is, at Ibn Jamāʿah:

1. Al-Zarʿī and al-Badr and al-Qazwīnī
and al-ʿIzz and al-Bahā and ʿIzz al-Dīn.

The verse reads like a riddle, with nothing but a barrage of shorthanded honorifics. Even for those who might have some familiarity with the first-name-only celebrity status of the judges, this verse may prove to be a little too enigmatic.

---

[31] To this day we still do not have a monograph treatment of Ibn Ḥajar's life and work in a Western language. The most detailed account remains "Ibn Ḥadjar" (F. Rosenthal), in *EI²*.

[32] *Rafʿ al-Iṣr,* 1.

[33] The 1998 Cairo edition, by ʿAlī Muḥammad ʿUmar, is based on, among others, a manuscript hand-copied by al-Sakhāwī; see the editor's introduction, 22.

[34] Al-Sakhāwī's explanation should be viewed as credible insofar as not only was he a protégé of Ibn Ḥajar, but also, more importantly, the author of a continuation of *Rafʿ al-Iṣr* entitled *Bughyat al-ʿUlamāʾ wa-al-Ruwāh.* Judging from the title alone, al-Sakhāwī's continuation, in prose only, expanded Ibn Ḥajar's original scope to a much broader canvas. The question of sources and the "incompleteness" of *Rafʿ al-Iṣr* was discussed in Guest, 42–44.

Ibn Ḥajar was therefore compelled to supply, in at least one manuscript, a parallel text in prose underneath each verse. For the above verse, we have the following explanation:

> Sulaymān *al-Zarʿī* was put in charge [of judgeship], replacing Badr al-Dīn Ibn Jamāʿah, for a year. Then he resigned, and *Badr* [al-Dīn] returned. Then Jalāl al-Dīn *al-Qazwīnī* ruled, then he was dismissed and *ʿIzz* al-Dīn Ibn Jamāʿah ruled instead. Then he, too, was dismissed, and *Bahāʾ* al-Dīn Ibn ʿAqīl decided [the cases] for eighty days, then *ʿIzz al-Dīn* Ibn Jamāʿah was brought back.[35]

Things got much worse later on. The revolving-door turnovers in the office of chief judge, which had intensified during this period, play out right in front of us,[36] in a repetitive verbal tango:

> 5. Then al-Ṣāliḥī with Jalāl al-Dīn,
> And al-Ṣāliḥī with Shams al-Dīn.
>
> 6. Then Jalāl al-Dīn and al-Ikhnāʾī,
> Then Jalāl al-Dīn and al-Ikhnāʾī.
>
> 7. Then Jalāl al-Dīn and al-Shams.
> Then Jalāl al-Dīn and al-Shams.

Only four men, in fact, are involved here: (1) Nāṣir al-Dīn Muḥammad al-Ṣāliḥī (d. 1403), who was replaced by (2) Jalāl al-Dīn ʿAbd al-Raḥmān al-Bulqīnī (d. 1421), of the famous al-Bulqīnī clan,[37] who was replaced, for the second time, by the same al-Ṣāliḥī, who suddenly died and was succeeded by (3) Shams al-Dīn Muḥammad al-Ikhnāʾī (b. 1356), who was replaced by Jalāl al-Dīn al-Bulqīnī, and made it back again, for the second, third, and fourth time, each time against

[35] *Rafʿ al-Iṣr,* 14. The manuscript is MS Istanbul, Feyzullah. The years these judges occupied the office are as follows (after Escovitz, *The Office of Qâḍî al-Quḍât,* 62): Jamāl al-Dīn al-Zarʿī (710–11 A.H.), Badr al-Dīn Ibn Jamāʿah (711–27 A.H.), Jalāl al-Dīn al-Qazwīnī (727–38 A.H.), ʿIzz al-Dīn Ibn Jamāʿah (738–59 A.H.), Bahāʾ al-Dīn Ibn ʿAqīl (759 A.H.), ʿIzz al-Dīn Ibn Jamāʿah (759–66 A.H.).

[36] Escovitz has identified nepotism, *nāʾib* succession, patronage, and merit as the four main factors in a judge's appointment; among the reasons for end of tenure are death, retirement, resignation, and dismissal through political intrigue (*The Office of Qâḍî al-Quḍât,* 250, 259–60). His study deals with the early period (ending with Burhān al-Dīn Ibn Jamāʿah, 781–84 A.H.), but his findings should apply here as well.

[37] See "al-Bulḳīnī," (H. A. R. Gibb), in *EI*^{2}.

the same al-Jalāl, who in turn was eventually replaced by yet another Shams al-Dīn, namely (4) Muḥammad ibn ʿAṭāʾ al-Harawī (d. 1426). Perhaps the author of the *dhayl* was enjoying doing this; and one can almost detect a playful grin lurking behind the tedious repetitions. In this regard, he may have had too much fun in this entangling "Jalāl vs. Shams" wordplay, such that he left a factual flaw in the list: he dropped Shihāb al-Dīn Aḥmad al-Bāʿūnī (d. 1413), who was appointed but did not actually rule between the last round of this never-ending saga.[38] Al-Bāʿūnī's name is mentioned in the prose text, presumably by Ibn Ḥajar who, probably having realized the nearly incoherent nature of the verse, supplied some intelligible background information.

After nearly thirty rounds of the ups and downs of the Badrs, Jalāls, Shamses, and Walīs, this portion of the poem ends with Shihāb al-Dīn, a.k.a. Ibn Ḥajar. In the manner of Ibn Dāniyāl, the author of the *dhayl* also attempted to pay homage to the master. Thus one reads at the end of the very dry and stoic poem a flowery panegyric in which Ibn Ḥajar is described as "the essence of being *(ʿayn al-wujūd),*" "he who consoles the weak heart *(muwāsī al-qalb al-ḍaʿīf),*" one who "offers rescue at crises *(awṣala al-ijdāʾ fī al-ijdāb)*" and "shows forbearance for annoyance *(istaʿmala al-ighḍāʾ fī al-ighḍāb),*" and "the persistent [star] rising high in the sky of bliss / as long as thunderstorms may bring pouring rains." (Ibn Ḥajar might have felt a little uncomfortable about these glowing paeans, insofar as some manuscripts of the *Rafʿ al-Iṣr* do not contain the panegyric. Or perhaps al-Sakhāwī, who was responsible for handling some of the surviving manuscripts of the text, deleted it.) The remaining three segments on the Hanafi, Maliki, and Hanbali judges proceed more or less in the same fashion, but without panegyric. The author of the *dhayl* also made a remarkable omission here, in that he downplayed Ibn Ḥajar's own saga of being repeatedly in and out of the office, which, as we will see later, was quite dramatic. In al-Suyūṭī's version, the story is given a whole new about-face, with many more details. It is to this version we turn now.

Al-Suyūṭī's project is different from Ibn Ḥajar's in many ways.[39] While both were inspired by Ibn Dāniyāl's *urjūzah,* their final products differ in genre: Ibn Ḥajar's monograph is a biographical dictionary dedicated to the lives and careers of Egyptian judges, whereas al-Suyūṭī's treatment of the subject represents only a chapter of his encyclopedic history of Egypt. The chapter, entitled *Dhikr Quḍāt Miṣr,* constitutes one segment of his topical descriptive presentations of all things Egyptian: from climate, geography, and flora and fauna, to maliks, sultans, viziers, amirs, judges, madrasahs, and shaykhs.[40] While Ibn Ḥajar gives

[38] For his career, see "al-Bāʿūnī" (W. A. S. Khalidi), in *EI*².

[39] I am using Khalīl al-Manṣūr's edition of *Ḥusn al-Muḥāḍarah fī Akhbār Miṣr wa-al-Qāhirah,* 2 vols. (Beirut, 1997).

[40] *Ḥusn al-Muḥāḍarah,* 2:133–74.

detailed biographical information on each person, al-Suyūṭī's chapter consists of a slightly annotated checklist of names. The two also differ in their use of Ibn Dāniyāl's *urjūzah*. Instead of the *urjūzah* being a starting point of the discourse, as in Ibn Ḥajar's case, it is, quoted in full by al-Suyūṭī, sandwiched between the two blocks of the narrative: (1) a holistic overview of Egypt's judges from the Muslim conquest to the last Shafiʿi chief judge in al-Suyūṭī's lifetime and (2) a separate presentation of the judges from the other schools of law since Baybars' time to al-Suyūṭī's days. In other words, in al-Suyūṭī's presentation, Ibn Dāniyāl's poem sums up the mainstream narrative and ushers in a new era in which the four Sunni legal schools shared the spotlight, along with supplementary materials.

As far as the original *urjūzah* is concerned, al-Suyūṭī's version, compared with that of Ibn al-Mulaqqin and Ibn Ḥajar, shows heavy-handed editing. Entire lines were omitted (the panegyric to Ibn Jamāʿah, for example) and others added (lines 34, 75). Slight variants appeared in names as well (for which scribes might take the blame): Ibn Jurayḥ for Ibn Hudayj (line 23), Ibn al-Jalīs for Ibn al-Ḥusayn (line 76), and ʿUmar for ʿUthmān Ibn Bint al-Aʿazz (line 95).[41] In this connection, as far as the history of the transmission of the text goes, there are at least two recensions: one shared by Ibn al-Mulaqqin and Ibn Ḥajar, and another handed down by al-Suyūṭī. Ibn al-Mulaqqin's pedigree is solid, himself having been a student of ʿIzz al-Dīn, the son of Badr al-Dīn Ibn Jamāʿah. Ibn Ḥajar's source of the *urjūzah* is a *ḥāfiẓ* named ʿAlī ibn Abī Bakr ibn Sulaymān, who received the orally transmitted *(mushāfahatan)* material from one Abū ʿUmar ibn Abī ʿAbd Allāh al-Kinānī, who, in turn, had heard the verses from Ibn Dāniyāl in person. Despite the variety in chains of transmission, a collation reveals that the texts of Ibn al-Mulaqqin and Ibn Ḥajar are virtually the same, with a few variants that might well be attributed to scribal errors.[42] In contrast, al-Suyūṭī's version must have taken a somehow different trajectory, coming from a very different codex tradition, as our analysis above has demonstrated.

Al-Suyūṭī did not care very much for Ibn Ḥajar's verse sequel to Ibn Dāniyāl's original, either, and decided to write his own instead.[43] There are a couple of things noticeable about al-Suyūṭī's verse *dhayl*. First, it deals only with the Shafiʿi chief judges, as judges from the other three legal schools are treated in prose only. Second, as far as the Shafiʿi list goes, it is much longer and more elaborate than

[41] *Ḥusn al-Muḥāḍarah* has ʿUmar ibn Tāj al-Dīn Ibn Bint al-Aʿazz, but Tāj al-Dīn's son's name was ʿUthmān according to *Rafʿ al-Iṣr;* the surname al-ʿAllāmī was attributed in *Rafʿ al-Iṣr* to ʿAbd al-Wahhāb Ibn Khalaf.

[42] *Nuzhat al-Nuẓẓār* lists the *Rafʿ al-Iṣr* (1957 edition) as a main reference; therefore it's hard to say whether it has been "corrected." (The only significant variant is the verb *yanfaʿuhu* for *yunfiṣuhu,* line 9.)

[43] *Ḥusn al-Muḥāḍarah,* 2:166–67.

Ibn Ḥajar's. A total of twenty-five lines (vs. Ibn Ḥajar's nine) cover all the Shafiʿi chief judges up to his time. Since Ibn Ḥajar and al-Suyūṭī lived not far apart, the two lists overlap for the most part; but al-Suyūṭī's longer version is much more interesting. Among his additions are some names that are missing from Ibn Ḥajar's list, such as al-Bāʿūnī, but also a more elaborate version of the Ibn Ḥajar vs. al-Bulqīnī saga, this time ʿAlam al-Dīn al-Bulqīnī, the younger brother of the aforementioned Jalāl al-Dīn; this saga was perhaps a little embarrassing for Ibn Ḥajar, who gave a much watered-down version in his own telling. Here, in al-Suyūṭī's pen, it becomes the epitome of revolving-door high dramas of the hiring and firing of Egyptian judges; Ibn Ḥajar becomes a main, and somehow burlesque, character:

16. Then al-ʿAlam al-Bulqīnī was appointed;
then the *ḥāfiẓ* of the age, Shihāb al-Dīn [Ibn Ḥajar].

17. al-Harawī was then brought back and stayed on;
after his dismissal, it was al-Shihāb Ibn Ḥajar.

18. Then our shaykh [ʿAlam al-Dīn al-Bulqīnī], then Ibn Ḥajar;
then our shaykh was back, and then Ibn Ḥajar.

19. Appointed after him was al-Qāyātī;
then the *ḥāfiẓ* of the *Sunnah* [Ibn Ḥajar] was reappointed.

20. Then our shaykh al-Bulqīnī was back again;
following him came Walī al-Dīn al-Safaṭī.

21. Ibn Ḥajar was called back again;
then our shaykh [al-Bulqīnī] made it back and stayed on.

Except for short intervals of al-Qāyātī and al-Safaṭī, here again we witness the playful rendering of the repeated dismissal from, and restoration to, office of Ibn Ḥajar and ʿAlam al-Dīn al-Bulqīnī (d. 1464), al-Suyūṭī's own teacher.[44] In this episode, the prose narrative precedes the verse and contains the dates of each round of hiring and firing.[45] In contrast to the version in verse, its utilitarian

[44] See "al-Bulḳīnī" (H. A. R. Gibb), in *EI²; *ʿAlam al-Dīn (d. 1464) was the brother of Jalāl al-Dīn al-Bulqīnī (d. 1421), also a Shafiʿi chief judge. ʿAlam al-Dīn's own record of appointment and dismissal was eight times. As for Ibn Ḥajar's saga, see Franz Rosenthal's amusing recounting in "Ibn Ḥadjar," in *EI²*.

[45] *Ḥusn al-Muḥāḍarah,* 2:162–63.

blandness appears even more dull and tedious. It is the verse version that makes an impression on the reader, hence the special function of the *urjūzah* narrative: it sings. The high drama is perhaps always better when played out loud, in verse. Al-Suyūṭī continued Ibn Dāniyāl's, and Ibn al-Mulaqqin's, Shafiʿi-centric approach in presentation: his quotation of Ibn Dāniyāl's *urjūzah* and his own *dhayl* of it serve as the grand finale of the historical survey, while treating the three schools of law as lesser appendages. In doing so, al-Suyūṭī reaffirmed his long-held position of reproaching Baybars' four-chief-judge policy, considering it as a factor that had weakened the Shafiʿi rite, and ultimately, Islam.[46]

There is another element that makes al-Suyūṭī's project remarkable for our present investigation. Ibn Dāniyāl's is not the only *urjūzah* that was incorporated into al-Suyūṭī's work. One also finds there other similar texts, such as the *urjūzah* by al-Jazzār (d. 1280) on military generals.[47] Like Ibn Dāniyāl's paradigm, al-Jazzār's amir list starts with the Muslim conquest of Egypt led by ʿAmr Ibn al-ʿĀṣ and runs all the way to Baybars al-Jashnakīr (a.k.a. Sultan al-Malik al-Muẓaffar, r. 1309). The *urjūzah*, again, was utilized effectively by al-Suyūṭī as a narrative tool for his manual-like project, in which name-dropping was a key exercise.

Concluding Remarks: *Rajaz* as Historical Narrative

In concluding, now it is time to answer the two questions posed at the beginning of this study. Although our discussion is confined to one single case, some general observations still may be drawn, given the proliferation of the sample text, Ibn Dāniyāl's *urjūzah,* through multiple adaptations by major Mamluk historians.

Scholars have long observed the special features of the simple, rhythmical *rajaz* poetry as a vehicle for composing didactic and descriptive narratives. Up until recently, however, research has almost exclusively focused on the "classical period."[48] With regard to themes of the genre, the didactic *urjūzah*s (on astrology and astronomy, divination, music, alchemy, and medicine) and the descriptive

[46] See "al-Suyūṭī" (E. Geoffroy), in *EI*²; also Elizabeth Sartain, *Jalāl al-Dīn al-Suyūṭī: Biography and Background* (Cambridge, 1975).

[47] *Ḥusn al-Muḥāḍarah,* 2:60–64. For Abū al-Ḥusayn Yaḥyá ibn ʿAbd al-ʿAẓīm, known as al-Jazzār, "The butcher," see Aḥmad al-Ṣādiq al-Jammāl, *Al-Adab al-ʿĀmmī fī Miṣr fī al-ʿAṣr al-Mamlūkī* (Cairo, 1966), 191–200. He is known to have written panegyrics to Mamluk amirs and viziers but returned to his original career as a butcher (hence his nickname), having realized that writing poetry could not sustain his livelihood. Al-Jammāl lists al-Jazzār, along with Ibn Dāniyāl and ʿAlī Ibn Sūdūn, as the representatives of the school of "self-mocking" *(al-mutaḥāmiqūn)* in Mamluk popular literature.

[48] The recent *Encyclopedia of Arabic Literature* entry stops at the Abbasid period before jumping to the modern era, whereas the more extensive treatment of the subject to-date, the *EI*² entry (with extensive bibliography), mentions only one Mamluk poet, Ṣafī al-Dīn al-Ḥillī (d. 1349), for his *ṭardīyah*-hunting poems in the *rajaz* meter.

*urjūzah*s (such as the *ṭardīyah*-hunting poems) have received the most scrutiny,[49] whereas historical *rajaz* poetry has, to my knowledge, largely been overlooked.

It is true that the literary techniques of *naẓm* (versification) and *ḥall* (prosification), often used in popular religious manuals and dream manuals, had been deeply rooted in Arabo-Islamic culture from early on. But it is also safe to say that the Mamluk era saw a surge, or perhaps a proliferation, of such techniques. In this regard, one may argue that the period witnessed a flourishing of versified historical narratives, in both the *qarīḍ* and *rajaz* forms. Of the former, al-Buṣīrī's (d. 1296?) classic *al-Burdah* comes to mind immediately;[50] and of the latter, Ibn Dāniyāl's *urjūzah* sheds light on the influence of this lesser verse genre on mainstream historiography. Ibn Dāniyāl's historical *urjūzah* and its adaptations must have had a wide audience, given the numerous copies known to exist—a testimony to the demand, and perhaps market, for such material. For some reason, Who's Who in the *rajaz* form seems to be particularly popular. With regard to judges, we may add the *urjūzah* titled *Dhikr Quḍāt al-Diyār al-Miṣrīyah* by Aḥmad al-Kinānī (d. 1471), a Hanbali jurist,[51] among others. And the versified list is by no means confined to judges: al-Jazzār's aforementioned *urjūzah* on amirs aside, Ibn Ḥajar's father was the author of a hagiographical account of the saintly al-Ṣanāfirī (d. 1371) in the *rajaz* form.[52] Our case study demonstrates Mamluk historians' efforts to try new forms of presentation in order to reach out to a larger audience, or perhaps catering to the mass consumption of their products. In a sense, this is Mamluk Cairo's counterpart to today's paperback history-for-dummies. Mamluk historical *urjūzah*s emerged to meet the need of new changing cultural landscapes.

[49] For didactic *rajaz*, see Charles Burnett, "Learned Knowledge of Arabic Poetry, Rhymed Prose, and Didactic Verse from Petrus Alfonsi to Petrarch," in *Poetry and Philosophy in the Middle Ages: A Festschrift for Peter Dronke,* ed. John Marenbon (Leiden, 2001), 29–62, especially 42–47; for hunting *rajaz,* see Rex Smith, "Hunting Poetry," *Cambridge History of Arabic Literature: ʿAbbasid Belles-Lettres* (Cambridge, 1990), 167–84 (primarily on Abū Nuwās's hunting *urjūzah*s); Philip Kennedy, in his *Abu Nuwas: A Genius of Poetry* ([Oxford, 2007], 109–20), mentions the hunting *urjūzah* by the Mamluk poet Ibn Nubātah (d. 1366); for "the *urjūza* miniatures," namely illustrated manuscripts with didactic *urjūzah*s as the main texts, see Anna Contadini, "A Question in Arab Painting: The Ibn al-Sufi Manuscript in Tehran and its Art-historical Connections," *Muqarnas* 23 (2006): 47–84. I have yet to see Livnat Holtzman's conference paper, "The Literary Value of Didactic Verses in the Islamic Scholarly Circles of the Mamluk Era," Arabic and Islam—Language, Culture, History—Conference, Bar-Ilan University, 21 June 2006.

[50] The poem is much studied in both Arab and Western scholarship; for the most recent attempt, see Suzanne Stetkevych, "From Text to Talisman: al-Busiri's *Qasidat al-Burdah* (*Mantle Ode*) and the Supplicatory Ode," *Journal of Arabic Literature* 37, no. 2 (2006): 145–89; idem, "From *Sirah* to *Qasidah*: Poetics and Polemics in al-Busiri's *Qasidat al-Burdah* (*Mantle Ode*)," *Journal of Arabic Literature* 38, no. 1 (2007): 1–52, especially 17–45 (versified historical narrative).

[51] Carl Brockelmann, *Geschichte der arabischen Litteratur* (Weimar and Leiden, 1989–1949), S2:57.

[52] See "Ibn Ḥadjar" (F. Rosenthal), in *EI*[2].

In this respect, the rising status of the profession of the historian and the growing demand for teaching material might well be viewed as yet another driving force behind the efforts. The Mamluk era is renowned for producing major historical-administrative manuals catering to the practical needs of the ever-expanding state bureaucratic apparatus. Within this context, the historical *urjūzah*s might have been designed as textbook material, similar to the *urjūzah*s produced at the time on Arabic grammar, *fiqh,* and medicine,[53] among other subjects.

More research is needed with regard to Mamluk patronage of literary activities. In our case, the circumstances under which Ibn Jamāʿah "commissioned" Ibn Dāniyāl to write the *urjūzah* remain unclear; the verb used here, *saʾala*, does not reveal much, if anything. But it is curious that he was the person responsible for putting *rajaz* as a historical/educational tool on the map, insofar as several historical *urjūzah*s known to have existed are associated with him: in addition to the poem in question, Ibn Jamāʿah also "commissioned" an *urjūzah* on Damascene judges (reported, again, by Ibn al-Mulaqqin), and another one on caliphs.[54] To think of the Shafiʿi chief judge as a history buff might be a stretch, but there is good reason to believe that the practical purposes of such a demand or request, other than the need for some ceremonial panegyric, could not be ruled out. Among these, his Shafiʿi-centric presentation of historical facts was apparently one major draw. After all, knowledge of, and schooling in, history was becoming essential for one's bureaucratic career advancement as far as the Mamluk era is concerned. Al-Nuwayrī (d. 1332?), a contemporary of Ibn Dāniyāl, names five "arts" *(funūn),* or expertise in five areas, as the qualifying requirements for a candidate applying for lucrative state job such as the *kātib*-clerk. Among the five, history tops all as the crown jewel. "The *kātib* [needs to know history]," al-Nuwayrī writes, "because he draws from it precedents and examples (*yastashhidu bihi*) in drafting communiqués and correspondence; also, he expands the scope of his writing by using it as a narrative tool."[55] Going through al-Nuwayrī's job description for a *kātib,*[56] one thing becomes clear: all the five "arts" were technical in nature; thus the *rajaz* was an ideal, and proven effective, narrative tool for transmitting knowledge in these fields.

However, as our analysis has amply shown, the *urjūzah* as a historical narrative mode has serious limits. It is evidently more effective and functional in displaying

[53] For example, Ibn Dāniyāl's own *urjūzah* on medicine: Istanbul MS Ayasofya 3645, fols. 84b–114a.

[54] *GAL* S2:80–81.

[55] *Nihāyat al-Arab fī Funūn al-Adab* (Cairo, 1964–98), 13:1.

[56] The other four "arts" are: geography (*fī al-samāʾ wa-al-āthār al-ʿalawīyah wa-al-arḍ wa-al-maʿālim al-suflīyah,* namely astrology and astronomy, climate, seasons, etc.), humanities (*fī al-insān,* including language, physiology, etc.), zoology *(fī al-ḥayawān al-ṣāmit),* and botany *(fī al-nabāt)*.

simple facts, such as names, but less so in in-depth discourse. Perhaps this is why the *rajaz* as a didactic narrative tool was largely confined to fields other than "history." In other words, the *rajaz* verse alone never really took off to rival prose historical narrative. Of the more than one hundred *urjūzahs* listed by Carl Brockelmann,[57] only a handful can be perhaps categorized as of a historical nature. Among these, three were associated with Ibn Jamāʿah, whereas the others were all written in the pre-Mamluk era: one is a versified history of the Abbasids,[58] one a biography of the Prophet Muḥammad,[59] and one a list of the prophets.[60] Our present case study has proved that it is Ibn Dāniyāl, through the patronage of Ibn Jamāʿah, who revived the interest in using the *rajaz* form for historical narrative purposes, and that the later hybrid mode inspired by it, combining *rajaz* and prose—as seen in Ibn Ḥajar's and al-Suyūṭī's adaptations—became a popular form for "name dropping," a continuation of the thematic preoccupation of the lives and careers of the notables in medieval Muslim historiography.

[57] The sampling is based on the index entry *urjūzah* in *GAL*. It is by no means conclusive, insofar as some poems might bear titles other than *urjūzah*. But the sampling should be seen as representative of the trend and tendency of the narrative *rajaz*. Understandably, of the twenty *urjūzahs* listed in Sezgin's *Geschichte des arabischen Schrifttums*—on astrology and astronomy, medicine, *fiqh,* grammar and language, and music—only two, *Urjūzah fī Ahl Badr* by al-Tirmidhī and *Urjūzah fī Tārīkh al-Muʿtaḍid* by Ibn al-Muʿtazz, are remotely "historical."

[58] *Urjūzah fī al-Tārīkh,* by Taqī al-Dīn Aḥmad al-Naṣībī (d. 1265); see *GAL* S1:590.

[59] *Urjūzah fī Sīrat al-Nabī,* by ʿAlam al-Dīn ʿAlī al-Hamadhānī (d. 1243); see *GAL* 1:410.

Appendix: Translation of the Part of Ibn Dāniyāl's *Urjūzah* that Covers the Mamluk Period[61]

91. Then Yūsuf al-Sanjārī was brought back,
succeeding him was Tāj al-Dīn, the magnificent.

92. He was followed by Burhān al-Dīn, namely, al-Khaḍr,[62]
then Tāj al-Dīn made a comeback.

93. Then Muḥyī al-Dīn held the office,
and then Ibn Razīn, with a judicious mind.

94. After his dismissal, ʿUmar,
I mean al-ʿAllāmī, took over. He ruled for justice.

95. Then Ibn Razīn was re-appointed,
after Ṣadr al-Dīn [ʿUmar]; both men did a super job for the state.

96. Then Wajīh al-Dīn al-Bahnasī[63] presided over the court,
having been put in charge to succeed Taqī al-Dīn.[64]

97. When he [the former] resigned, claiming that Cairo was too far
from his hometown, he [the latter] presided over in his stead.

98. Then Shihāb al-Dīn[65] was promoted,
and was summoned from his post in al-Maḥallah.

99. He stayed on until his death;
[Shihāb al-Dīn] Ibn Aḥmad had been a judge of Syria when young.

100. Taqī al-Dīn Ibn Khalaf[66] then held the office,
succeeding the by-now-gone Wajīh al-Dīn and Shihāb al-Dīn.

[61] Cf. Escovitz, *The Office of Qâḍî al-Quḍât,* 62.
[62] Al-Khaḍr ibn al-Ḥasan al-Sanjārī.
[63] ʿAbd al-Wahhāb ibn al-Ḥusayn.
[64] ʿAbd al-Raḥmān ibn ʿAbd al-Wahhāb ibn Abī al-Qāsim Ibn Bint al-Aʿazz.
[65] Muḥammad ibn Aḥmad ibn Khalīl ibn Saʿādah al-Khūbī.
[66] ʿAbd al-Wahhāb.

101. He was fired from the post in Cairo,
and replaced by the gentleman from al-Sanjār.[67]

102. Then Taqī al-Dīn ʿAbd al-Raḥmān took over,
and it was time for Badr al-Dīn, the full moon, to shine!

103. Badr al-Dīn returned back to Syria,
the young al-ʿAllāmī[68] then presided over the judgeship.

104. He stayed on until his death,
and was succeeded by Taqī al-Dīn Abū al-Fatḥ.[69]

105. Then all of a sudden he passed way,
Badr al-Dīn rose [again].

* * *

106. A luminous full moon,
a spring of fresh, pure water.

107. The judges' judge, and magistrates' magistrate,
the mediator of contracts for the legal system.

108. The window of his rulings remains open.
The flowering days during his tenure will be everlasting.

109. The full moon will never go away,
its crescent will never vanish from sight.

110. Praise be to God for His grace,
for His blessings manifested in just rulings.

111. The best prayers and greetings,
go to the Prophet, the Master of the mankind,

---

[67] Burhān al-Dīn al-Khaḍr ibn al-Ḥusayn al-Sanjārī.

[68] ʿAbd al-Wahhāb Maḥmūd Ibn Badr.

[69] Muḥammad ibn ʿAlī, known as Ibn Daqīq al-ʿĪd.

112. To his household, his companions, and his clan,
to everyone who loves him!

Who Were the "Salt of the Earth" in Fifteenth-Century Egypt?

I

The ulama class, the religious scholars, in Mamluk Egypt and Syria, as in other medieval Muslim communities, was not monolithic. Professionally it was a ramified class comprising numerous subgroups such as jurists, theologians, grammarians, and Quran commentators.[1] Rivalry and competition among the ulama over positions in the judicial system and academe, and their patronage relations with the Mamluk elite, fueled schisms and increased this sector's vulnerability to Mamluk oligarchic rule and its great political, military, and economic power, as the studies by Carl Petry, Jonathan Berkey, and Michael Chamberlain have shown.[2] In theory, however, the jurists continued to adhere to the fictive model of polarization in government between religion and power, or between ulama and *umarāʾ*. According to the traditional model of rulership, the ulama were granted the role of guardians of the Sacred Law and qualified guides for both the rulers and the population at large.

Prose narratives and archival materials have been the main source for the study of Mamluk society and culture, but only a scant part of the huge corpus of other literary texts, among them the *taqārīẓ* (s. *taqrīẓ*),[3]

I am most grateful to my colleague Professor Li Guo for reading this article and for his valuable comments on it. Thanks are also due to my assistant Miss Noam Jolles for her assistance in the preparation of the article.

The Last Mamluk Sultans and Egypt's Waning as a Great Power* (Albany, 1994), chapters 5–6; Jonathan Berkey, *The Transmission of Knowledge in Medieval Cairo* (Princeton, 1992); Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (Cambridge, 1994).

[3] *Taqrīẓ* (pl. *taqārīẓ*) was a statement praising a literary work. Works of this kind were generally written by obliged scholars of high reputation of the time in praise of their friends' newly published works. The purpose of the *taqārīẓ*, much like today's blurbs, was to promote the publication of the new work and its author. Franz Rosenthal, "'Blurbs' *(taqrīẓ)* from Fourteenth-Century Egypt," *Oriens* 27–28 (1981): 177–78.

has been utilized for this purpose.[4] The *taqārīẓ* are literary texts that can provide valuable information about the dynamics within the ulama social and educational networks.[5] In some cases, the *taqārīẓ* contain details that, together with others gleaned from the historical narrative sources, enable us to reconstruct events from which we can learn more about the strategies the ulama employed in their struggles for social survival. Such are the *taqārīẓ* written in praise of a panegyric biography composed by Shams al-Dīn Muḥammad Ibn Nāhiḍ (757–841/1356–1438) in 819/1416 for the Mamluk sultan al-Muʾayyad Shaykh (815–21/1412–21) entitled *Al-Sīrah al-Sharīfah al-Muʾayyadīyah.*[6] Thus far we know of twenty one *taqārīẓ* composed for Ibn Nāhiḍ's *Al-Sīrah al-Muʾayyadīyah* and this number is not exhaustive.[7] Ibn Nāhiḍ's case is intriguing because of the unusually large

[4] Li Guo has impressively explored the dynamics between literary texts, poetry in particular, and historical reality, through the inquiry of the relevance of Ibn Dāniyāl's verses to specific historical events: "Reading Adab in Historical Light: Factuality and Ambiguity in Ibn Daniyal's 'Occasional Verses' on Mamluk Society and Politics," in *History and Historiography of Post-Mongol Central Asia and the Middle East,* ed. Judith Pfeiffer and Sholeh A. Quinn (Wiesbaden, 2006), 383–403.

[6] Two copies exist of *Al-Sīrah al-Sharīfah al-Muʾayyadīyah;* one is included in the manuscript of *Kitāb Qahwat al-Inshāʾ* housed in Tubingen Library (Handschrift Ma VI 70) and was therefore mistakenly attributed by C. Brockelmann to Ibn Ḥijjah. See edited version: Abū Bakr ibn ʿAlī Ibn Ḥijjah al-Ḥamawī, *Kitāb Qahwat al-Inshāʾ,* ed. Rudolf Vesely (Berlin and Beirut, 2005). The second copy of *Al-Sīrah al-Muʾayyadīyah,* together with a collection of the *taqārīẓ* written for it, is found in the Raza Library in Rampur under the title *Kitāb al-Dhakhīrah fī Taqārīẓ al-Sīrah,* a microfilm of which is housed in the Institute of Arabic Manuscripts of the Arab League in Cairo: *Fihris al-Makhṭūṭāt al-Muṣawwarah, Tārīkh, al-Qism al-Thālith* (Cairo, 1959), S. 151. For the edited version of Ibn Nāhiḍ's *Al-Sīrah al-Muʾayyadīyah* see: Rudolf Vesely, "Ibn Nāhiḍ's As-Sīra aš-Šaykhīya (Eine Lebensgeschichte des Sultans al-Muʾayyad Šaykh): Ein Beitrag zur *Sīra*-Literatur," *Archiv Orientalni* 67 (1999): 149–220. For the discussion on *Al-Sīrah al-Muʾayyadīyah,* see: idem, "Eine verkannte Sultansbiographie, As-Sīra aš-Šaykhīya," in *Zafar nāme, Memorial Volume of Felix Tauer,* ed. Rudolf Vesely and Eduard Gombar (Prague, 1996), 271–80; idem, "Ein Skandal in Kairo," *Ex Oriente: Collected Papers in Honour of Jiří Bečka (*Prague, 1995), 182–90.

[7] Sixteen of the *taqārīẓ* written for Ibn Nāhiḍ's *Al-Sīrah al-Muʾayyadīyah* are gathered in yet another manuscript by an anonymous author housed in the National Library in Berlin under no. 8645 (it was formerly included in the Imperial Museum under MS no. 1473). The manuscript bears the cumbersome title of "Al-Ajwibah al-Muʿtabarah ʿan al-Fatāyā al-Muʿtabirah allatī Anshaʾahā ʿAllāmat ʿAṣrihi wa-Farīd Shāmihi wa-Miṣrihi Jalāl al-Dīn Abū Bakr Muḥammad ibn Muḥammad Ibn Nubātah al-Miṣrī." See: W. Ahlwardt, *Verzeichniss der Arabischen Handschriften der Königlichen Bibliothek zu Berlin* (Berlin, 1883), 9:580–81 (hereafter *Al-Ajwibah al-Muʿtabarah*). The manuscript of *Al-Ajwibah al-Muʿtabarah* generally deals with the famous polemics between Mamluk period authors, the majority of whom were religious scholars, who opposed or supported the writing of rhymed prose or panegyrics and in particular their inclusion in the historical narrative. Each of the

number of *taqārīẓ* composed by well-known ulama for an unsophisticated and unimportant work composed by a lower-ranked peer, and even more so because they united to mock him instead of to praise his work, as was the norm in their circles. The purpose of this article is to investigate the reasons for such unfair mockery by an elitist groups of scholars, especially the indigenous Shafiʿi leading class of scholars, who were partisans of Arabo-Islamic culture, against those they ranked as their lower-class peers like Ibn Nāhiḍ. An attempt will be made to place this case in the general context of the ulama rivalry over the hegemony of knowledge and religious power in the state and their struggle for social hierarchy and status.

II

Ibn Nāhiḍ was born in Aleppo in 757/1356 or thereabouts to an Arabized family of Kurdish origin. He became a passionate devotee of belles-lettres *(adab)* and attained adequacy in writing poetry and prose *(fa-balagha naẓman wa-nathran)*.[8] Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī (d. 902/1497) mentions in Ibn Nāhiḍ's entry that at a certain point in his life, he moved to Cairo where he joined (*tanazzala,* which also means to humble oneself) the Sufi order, or *khānqāh,* of al-Jamālīyah. He wrote panegyrics to the *khānqāh* leaders and composed *Al-Sīrah al-Sharīfah al-Muʾayyadīyah,* for which he received *taqārīẓ* from a number of his colleagues.[9] Quoting the historian ʿAlī ibn Aḥmad al-Maqrīzī (d. 845/1441), al-Sakhāwī relates that Ibn Nāhiḍ also lived for some time in Damascus where he made a living selling

three polemics included in our manuscript is constructed from a collection of short essays, mainly written in rhymed prose, that touch upon a specific controversial event. The manuscript title is drawn from the first collection of polemic between the famous poet and scholar Muḥammad ibn Muḥammad Ibn Nubātah (686–768/1287–1366) and Muḥyī al-Dīn ʿAbd Allāh (686–768/1287–1366), nephew of the historian Ibn ʿAbd al-Ẓāhir (620–92/1223–92), who like his uncle was in charge of *dīwān al-inshāʾ,* the correspondence bureau. The third collection of polemics was written in Egypt in 795/1393 and dedicated to the work *Nuzūl al-Ghayth* by Badr al-Dīn Muḥammad ibn Abī Bakr al-Qurashī al-Makhzūmī al-Iskandarī al-Mālikī, known as Ibn al-Damāmīnī. The second collection, the most interesting for my part, deals with Ibn Nāhiḍ's *Al-Sīrah al-Sharīfah al-Muʾayyadīyah* and covers seventeen folios of the manuscript (Nos. 9–25). The author of *Al-Ajwibah al-Muʿtabarah* mentions two other *taqārīẓ* that he knew of but could not find. Three *taqārīẓ* appear also in *Kitāb Qahwat al-Inshāʾ* by Ibn Ḥijjah (Ibn Ḥijjah, *Qahwat al-Inshāʾ,* 137–45). One of them, Ibn Ḥijjah's, does not appear in the Berlin Manuscript. Four of the *taqārīẓ* included in *Kitāb al-Dhakhīrah fī Taqārīẓ al-Sīrah,* those of Burhān al-Dīn Ibrāhīm al-Baʿūnī, Muḥammad ibn Aḥmad al-Rabbānī, and Aḥmad ibn Yūsuf al-Zuʿayfrānī, do not appear in *Al-Ajwibah al-Muʿtabarah* nor in *Kitāb al-Dhakhīrah fī Taqārīẓ al-Sīrah* (Vesely, "Ibn Nāhiḍ's As-Sīra aš-Šaykhīya," 150–51).

[8] Shams al-Dīn Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Beirut, n.d.), 10:67.

[9] Ibid.

pottery. On his return to Cairo, he subsisted on donations he received for the panegyrics he composed for local dignitaries, until his death on 11 Shaʿbān 841/31 January 1438.[10] Al-Sakhāwī mentions neither the names of the religious scholars who wrote *taqārīẓ* for Ibn Nāhiḍ nor the fact that they had organized to mock him. Al-Sakhāwī does provide a comment about the *Sīrah* in one brief sentence: "he composed al-Muʾayyad Shaykh's biography and excelled in what he wanted" *(ʿamala Sīrat al-Muʾayyad Shaykh fa-ajāda mā shāʾa),*[11] probably implying Ibn Nāhiḍ's lack of competence in the art of history and his exaggerated flattery for Sultan al-Muʾayyad Shaykh. Taqī al-Dīn Abū Bakr ibn ʿAlī Ibn Ḥijjah (d. 837/1434), the fifteenth-century writer, poet, and historian, relates that in 818/1415 Ibn Nāhiḍ composed a book written in a "strange manner" *(namṭ gharīb)* in which he included the events related to the Victorious al-Muʾayyad in unprecedented (*abdaʿa* means also to invent, implying heresy) prose and verse.[12] Upon completion of the book, Ibn Nāhiḍ approached Badr al-Dīn Muḥammad al-Damāmīnī, who was a prominent figure among the scholars and intellectuals surrounding al-Muʾayyad, for a panegyric. With the purpose of keeping him away, al-Damāmīnī swore that he would not write a word for him unless Ibn Ḥijjah wrote first. However, al-Damāmīnī, who was a man of his word, could not evade writing the *taqrīẓ* for Ibn Nāhiḍ because the latter went to Ibn Ḥijjah with a number of scholars to intercede for him, leaving him no choice but to grant them their request.[13]

Let us now see who were the learned scholars who took part in the practical joke against Ibn Nāhiḍ. No distinction has been made between persons who held administrative or bureaucratic offices *(al-waẓāʾif al-dīwānīyah)* and religious offices *(al-waẓāʾif al-dīnīyah),* because all persons involved were trained, at least to a certain level, in the Islamic religious sciences and because it was quite normal during the Mamluk period to shift about among offices in search of advancement in any branch of the government bureaucracy.[14]

1. Nāṣir al-Dīn Muḥammad ibn Muḥammad ibn ʿUthmān Ibn al-Bārizī (769–832/1367–1428) was born in Ḥamāh to a Shafiʿi family of well-known scholars going back several generations. He received a traditional education in his native city and excelled in belles-lettres and composition. In

[10] Ibn Ḥijjah, *Qahwat al-Inshāʾ,* 137–45.

[11] Al-Sakhāwī, *Ḍawʾ,* 10:67.

[12] Ibn Ḥijjah, *Qahwat al-Inshāʾ,* 137.

[13] Ibid., 137–38.

[14] J. H. Escovitz, "Vocational Patterns of the Scribes of the Mamlūk Chancery," *Arabica* 23, no. 1 (1976): 59–62.

796/1393 he was appointed as qadi of Ḥamāh and later as the secretary of its governor, Yashbak min Uzdamur. He became part of the coterie of Sultan al-Muʾayyad Shaykh when the latter was still governor of the province of Tripoli. Al-Muʾayyad extricated Ibn al-Bārizī from Yashbak who dismissed him from his posts and confiscated his property. Upon al-Muʾayyad's rise to power, Ibn al-Bārizī was appointed to the office of secretary to the sultan and became his close confidant. This relationship yielded much property to Ibn al-Bārizī and accorded him "reverence and prestige that no one of his kind [i.e., ulama or *fuqahāʾ*] had attained *(wa-nāla min al-ḥurmah wa-al-wajāhah mā lam yanalhu ghayruhu min abnāʾ jinsihi)*." Up to his death he held the office of preacher, *khaṭīb,* in the mosque built by al-Muʾayyad Shaykh, and was the curator of his library. Upon Ibn al-Bārizī's death, al-Muʾayyad nominated his son Kamāl al-Dīn Muḥammad al-Bārizī in his place as the Shafiʿi chief qadi. Al-Sakhāwī mentions among Ibn al-Bārizī's intellectual talents his being a man of belles-lettres and a special talent in prose and poetry *(bāriʿan naẓman wa-nathran)*.[15]

2. Kamāl al-Dīn Muḥammad ibn Muḥammad al-Bārizī (796–856/1394–1452) was the son of Ibn al-Bārizī mentioned earlier. He was born in Ḥamāh and started his education with his father. He emigrated with his father to Egypt where he studied *fiqh* from the famous ulama of the age such as Aḥmad al-ʿIrāqī (see no. 5 below) and al-Bisāṭī (see no. 7 below). He served as chief officer *(kātib al-sirr)* of the correspondence bureau *(dīwān al-inshāʾ),* apparently thanks to his father.[16]

3. ʿAbd al-Raḥmān ibn ʿUmar ibn Raslān al-Bulqīnī (783–824/1361–1421), who was also a Shafiʿi scholar, was born in Cairo to an Egyptian family from Bulqīnah. His father, ʿUmar, had held numerous high religious offices, and his close relations to men of power paved the way for his sons to attain high office as well. ʿAbd al-Raḥmān belonged to the close circle of al-Muʾayyad's confidants. ʿAbd al-Raḥmān served as an official in the bureau of correspondence and later as *qāḍī al-ʿaskar*. After his father's death he was appointed chief *muftī,* the jurist authorized to hand down opinions in matters of religious law. He gained fame for his erudition in the various branches of religious law, his writing skills, and fluent style in prose and poetry.[17]

4. Muḥammad ibn Abī Bakr Ibn Jamāʿah al-Shāfiʿī (749–819/1348–

[15] Al-Sakhāwī, *Ḍawʾ,* 9:137–39.

[16] Ibid., 9:236–39.

[17] Ibid., 4:106–13; Jamāl al-Dīn Abū al-Maḥāsin Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʿda al-Wāfī* (Cairo, 1984–99), 7:197; Aḥmad ibn ʿAlī al-Maqrīzī, *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk* (Cairo, 1943–72), 4:600.

1416) was born in Cairo. He was among a third generation of religious scholars in a Kinānī family from Ḥamāh. Among his teachers was ʿUmar al-Bulqīnī, father of the above-mentioned ʿAbd al-Raḥmān. His education was broad-ranged to the extreme; apart from the various fields of traditional Muslim law, it included medicine, astrology, philosophy, literature, and arts such as fencing, archery, and juggling *(shaʿūdhah)*. As a result of his encyclopedic education and tranquil disposition, he gained the admiration of his contemporaries. He was among Sultan al-Muʾayyad Shaykh's confidants and took part in the social gatherings he used to hold. Although he wrote excellent prose and poetry, he concealed this talent, and this is perhaps the reason the panegyric he wrote for Ibn Nāhiḍ does not appear in the manuscript, despite the fact that both the manuscript's author and al-Sakhāwī note its existence.[18]

5. Aḥmad ibn ʿAbd al-Raḥīm Ibn al-ʿIrāqī Abū Zurʿah, known as Ibn al-ʿIrāqī (762–826/1361–1423), was born in Cairo in a Kurdish family of religious scholars. His father insisted that his son be educated by the best of the contemporary religious scholars. His father used to take him to his academic and social gatherings, and it was in his early childhood that he was exposed to prominent and outstanding intellectuals in Cairo such as the above-mentioned jurist al-Bulqīnī, the father of the aforementioned ʿAbd al-Raḥmān, and Ibn Jamāʿah and the famous poets Ibn al-ʿAṭṭār and Ibn Nubātah. At the age of three, his father took him to Damascus and then to Jerusalem to study with the best Quran reciters and other renowned teachers in the various branches of the religious sciences. He also stayed several times with his father in Mecca and Medina, where he benefited from famous teachers residing there at the time. Like the scholars mentioned earlier, his father ensured his advancement in various offices through his friend ʿUmar al-Bulqīnī. When the young Abū Zurʿah was left in Cairo to replace his father, who was nominated as the qadi and preacher of Medina, in all his teaching posts, ʿUmar al-Bulqīnī came to his aid against one of his father's opponents, who tried to extract the prestigious post of hadith teacher in al-Kāmilīyah. Abū Zurʿah's assertive struggle to retain this post brought him great prestige and consolidated his authority within the academe.[19] After his father's death, he was given his teaching posts in several colleges *(madāris)* in Cairo and became an authority on religious matters and an object of admiration for his knowledge and noble bearing. He was considered one of the best jurists and teachers in Cairo,

[18] Al-Sakhāwī, *Ḍawʾ,* 7:171–74.

[19] Ibid., 1:338.

so much so that students from all schools of law gathered to learn from him. In 824/1421, he was appointed the Shafiʿi chief qadi in Egypt. His works cover religious issues and history. As was the norm in contemporary literary circles, he wrote poetry as well. It is worthy of mention that he was very offended when he was dismissed from his post as a Shafiʿi chief qadi and replaced by one of his students. Al-Sakhāwī relates that Abū Zurʿah said that he would have been much less offended had another scholar of his stature taken his post.[20] This case shows the importance attributed to hierarchy within scholarly circles.

6. Shihāb al-Dīn Aḥmad ibn ʿAlī al-Qalqashandī (756–821/1355–1418) was born in the small town of Qalqashandah, in the eastern Delta. It is unclear when he settled in Cairo. He was a Shafiʿi scholar who excelled in *fiqh,* and Arabic literature and language. He served as a qadi and a clerk in the correspondence bureau. He is best known as the author of *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ,* the vast encyclopedia on the art of clerkship in the Mamluk administration. Like the other scholars mentioned earlier, he was also outstanding in writing prose and poetry.[21]

7. Muḥammad ibn Aḥmad ibn ʿUthmān al-Bisāṭī (760–842/1358–1438) was a Maliki scholar, born in the town of Bisāṭ in the Gharbīyah district located in the west Nile Delta. With the help of his uncle, he received education from the best scholars in Cairo, among them ʿAbd al-Raḥmān Ibn Khaldūn and the above-mentioned Ibn Jamāʿah, who was his admired teacher. He was considered unique in his generation *(farīd dahrihi)* and as one "who had no peers." He specialized in Muslim law, linguistics, logic, medicine, mathematics, and architecture. His teacher in architecture was the Mamluk amir Jamāl al-Dīn al-Māridānī, who nominated him in 811/1408 as *fiqh* lecturer in the college he established in Cairo. With the mediation of Amir Ṭaṭar, who served at the time as vicegerent for the absent sultan, al-Bisāṭī was nominated as shaykh of the *khānqāh-turbah* al-Nāṣirīyah, established by Sultan al-Nāṣir Faraj and in 823/1420 as the Maliki chief qadi in Egypt. He served at the same time as head of the *madāris* of al-Barqūqīyah, al-Fakhrīyah, and al-Qamḥīyah.[22]

8. ʿAbd al-Raḥmān Ibn al-Ṣāʾigh. The identity of this scholar is unclear. A certain Shams al-Dīn Ibn al-Ṣāʾigh al-Ḥanafī is mentioned as one of Ibn Jamāʿah's venerated teachers.[23]

[20] Ibid., 1:336–44; Aḥmad ibn ʿAlī al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah fī al-Tarājim al-Mufīdah* (Beirut, 1992), 1:356–57.

[22] Al-Sakhāwī, *Ḍawʾ,* 7:5–8.

[23] Ibid., 7:172.

9. Aḥmad ibn Maḥmūd al-ʿAjmī (777–833/1375–1429) was a Hanafi scholar with origins in Qaysarī in Anatolia. Like the others in our group of scholars, he was given the best traditional education. He was educated first by his father and later by teachers and educators, Persian *(ʿajam)* and others, brought in especially for this purpose. In his youth he was employed as, among other things, an official in the bureau of correspondence, an inspector of the army in Syria, and as a *muḥtasib* (market inspector) in Cairo; he was dismissed from the majority of his posts for embezzlement. Apart from these flaws in his character, he was a talented, eloquent literary person who stood out at the gatherings of intellectuals convened by Sultan al-Muʾayyad Shaykh. He was the sultan's drinking partner *(nadīm)* until his star waned because of a conflict with Ibn al-Bārizī. He was forced to go into hiding until al-Ashraf Barsbāy rose to power.[24]

10. Faḍl Allāh ibn ʿAbd al-Raḥmān Ibn Makānis (769–822/1367–1419) was a Hanafi scholar. He grew up in a wealthy and intellectual atmosphere in a family of Coptic origin. His father was vizier of Damascus and "one of the excellent poets (*aḥad fuḥūl al-shuʿarāʾ*)."[25] His father and his friend Badr al-Dīn al-Bashtakī,[26] who was a renowned poet and belonged to the extreme *ẓāhirī* school of law, were his teachers, and thus from a tender age he excelled in prose and poetry. In Cairo, after his father's death, his financial situation deteriorated, and he resorted to making a living as a junior clerk in the bureau of correspondence. However, Ibn al-Bārizī (mentioned above), his long-standing friend, assisted him, and it was through his mediation that he became one of Sultan al-Muʾayyad's circle of confidants. He gained the sultan's special interest thanks to the panegyrics he wrote in his honor.[27] It is noteworthy that he had an enduring friendship *(mawaddah akīdah)*[28] with Ibn Ḥajar al-ʿAsqalānī, the renowned historian and jurist of the time who also belonged to this group (see below).

11. Muḥammad ibn Abī Bakr al-Makhzūmī, known as Ibn al-Damāmīnī (763–827/1361–1424), was born in Alexandria to a Maliki family with origins going back to the Makhzūm clan of Quraysh. His education began in his family, and later he was among the pupils of well-known teachers in Alexandria and Cairo. He specialized in law, Arabic, and belles-lettres.

---

[27] Al-Sakhāwī, *Ḍaw*ʾ, 6:172; Aḥmad ibn ʿAlī Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr*, (Haydarabad, 1974), 7:368.

[28] Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ,* 7:368.

He taught syntax at al-Azhar and on his return to Alexandria tried to make a living as a weaver and preacher. Following a fire that broke out in his home, destroying his looms, he was forced to flee his creditors to Upper Egypt. He was the only member of this group of scholars who tried his hand at manual labor in addition to his intellectual pursuits, but without success. When he returned to Cairo in 819/1416, like Ibn Makānis he was assisted by the mediation of Ibn al-Bārizī in obtaining the post of chief judge of the Maliki school of law in Egypt. In this way he became one of Sultan al-Muʾayyad's confidants and took part in the literary gatherings he held. It was in the same year that he wrote the derisory essay on the biography written by Ibn Nāhiḍ. It appears that he did not find much success in Cairo, and a short time later he went on the hajj. From Mecca he traveled to Yemen and on to India, where he taught and dabbled in commerce. He fell into debt there, but his death saved him from his creditors.[29]

12. Muḥammad ibn Aḥmad ibn Muḥammad Ibn Abī al-Wafāʾ (790–852/1388–1448) was the most famous member of the al-Wafāʾ family of noted Maliki religious scholars. He was also a member of the Shādhilī Sufi order. He was born in Cairo, where he received a traditional education with the most notable ulama of the time, among them Ibn Jamāʿah and al-Bisāṭī who, as noted above, belonged to the same social circle. He gained particular fame as a poet, and many, including these two scholars, came to hear his poetry at the literary gatherings he held.[30]

13. Aḥmad ibn ʿAlī Ibn Ḥajar al-ʿAsqalānī (773–852/1371–1448) was born in an Arab Kinānī family in Cairo. He was considered the greatest scholar of the fifteenth century in every field of Muslim law. Like other scholars in this group, he too was born into an educated family, which despite his being orphaned at a young age, ensured that he was educated by the best scholars in Egypt, Syria, and al-Ḥijāz. His principal teacher was Ibn Jamāʿah, who was his long-standing tutor in most sciences. He was also a student of Abū Zurʿah and the Mamluk amir Jamāl al-Dīn al-Māridānī, who taught him arithmetic and time keeping. He quickly gained prominence among his colleagues and became the guide and mentor of generations of students, among whom were prominent ulama from all schools of law and famous historians such as al-Sakhāwī and Yūsuf Abū al-Maḥāsin Ibn Taghrībirdī (d. 874/1469). Thanks to his eloquence, he served as preacher in the central mosques of al-Azhar and ʿAmr and served as lecturer in most of the important colleges in Cairo. He refused nominations for the post

[29] Al- Sakhāwī, *Ḍawʾ,* 7:184–87.

[30] Ibid., 7:92–93.

of chief Shafiʿi qadi until he finally relented in 827/1423. He held this post alternately for about twenty-one years.[31] Among his historical works are *Rafʿ al-Iṣr ʿan Quḍāt Miṣr, Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr,* and *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah.*[32]

14. Yaḥyá ibn Aḥmad Ibn al-ʿAṭṭār (789–853/1387–1449) is the famous Shafiʿi jurist and poet whose family origins allegedly go back to the old tribe of Tanūkh. He was born in al-Karak, southeast of the Dead Sea, to a father who held an administrative office in the household of the Mamluk amir Maʾmūr al-Qalamṭāwī (d. 792/1389), who served as governor of the provinces of Ḥamāh and then al-Karak. Orphaned at the age of three, he moved to Cairo where he received his education in the same circles mentioned above, and among his teachers were Ibn Jamāʿah and Kamāl al-Dīn Ibn al-Bārizī. He made no special achievements in his religious studies, but he did gain prestige because of his connection through marriage to Ibn al-Bārizī (the latter's two sons, Kamāl al-Dīn and Aḥmad, were married to his brother's two sisters), who treated him like a son and worked towards his advancement. At first he tried to gain an entrée into the military service, and when that failed he took on, without much success, bureaucratic and teaching posts at various colleges that taught Muslim law in Cairo. Thus, he needed the al-Bārizī family's support for a long time. On the other hand, his fame rests on his literary merits, for he was renowned as "one of the most perfect in poetry, prose, and calligraphy *(wa-huwa aḥad al-kamalah fī al-naẓm wa-al-nathr wa-al-khaṭṭ).*" He was considered to be the successor of the poet Jalāl al-Dīn Abū Bakr Muḥammad ibn Muḥammad Ibn Nubātah (686–768/1287–1366).[33]

15. Aṣīl Muḥammad ibn Ibrāhīm ibn ʿAlī al-Khaḍrī al-Mālikī. His biography is not found in the sources, but he is mentioned in Muḥammad Ibn Jamāʿah's biography as one of his teachers.[34]

16. Taqī al-Dīn Aḥmad ibn ʿAlī al-Maqrīzī (760–845/1359–1441) was born in Cairo to a prestigious family of intellectuals on both his father's and his mother's side. His paternal grandfather, ʿAbd al-Qādir ibn Muḥammad (d. 732/1331), whose origins allegedly go back to the Fatimids and the tribe of Tamīm, was a Hanbali religious scholar from Syria, and his maternal grandfather, Ibn al-Ṣāʾigh (d. 776/1375), was a wealthy philologist and traditionist who served as a Hanafi judge. From an early age al-Maqrīzī was

[34] Al-Sakhāwī, *Ḍawʾ,* 7:172.

groomed to be a religious scholar, as befitted a wealthy, educated family, but he gained the lion's share of his fame and achievements from his work in history, to which he devoted all his time after withdrawing from public life in his last years. Al-Sakhāwī cites him as saying that his writings reached a hundred volumes that included history works, describing contemporary and preceding events, relying on first-hand evidence and earlier compilations. He held several religious posts in Cairo and Damascus such as *muḥtasib,* preacher in the ʿAmr mosque, the imam of the Ḥasan Madrasah, inspector of the al-Ḥākim mosque, and as lecturer of the Hanbali school of law in al-Muʾayyadīyah.[35]

17. Zayn al-Dīn ʿAbd al-Malik ibn Abī Bakr al-Mawṣilī al-Shāfiʿī (d. 844/1440). His father was a Shafiʿi scholar from Mosul who settled in Damascus, where ʿAbd al-Malik was born. ʿAbd al-Malik became a Sufi scholar, and many people came to believe in his holiness and visited him to receive his blessing *(al-istishfāʿ bi-hi)*.[36]

18. ʿAlāʾ al-Dīn ʿAlī al-Sindī. No information on this writer was found in the sources.

19. Taqī al-Dīn Abū Bakr ibn ʿAlī Ibn Ḥijjah (d. 767–837/1366–1434) was a Hanafi jurist and poet who was born in Ḥamāh and grew up as an apprentice of a silk and button maker. On reaching adolescence he started his religious education with the famous ulama in Ḥamāh, and soon he excelled in poetry, prose, and composition. He gained fame for his poems in *zajal* (pl. *azjāl*—popular Arabic poem in strophic form) and *mawwāl* (pl. *mawāwīl*—poem in colloquial language) and the panegyric he wrote for local dignitaries. Later he moved to Damascus, where he entered the circle of the qadi Burhān al-Dīn Ibrāhīm Ibn Jamāʿah and composed a panegyric for him for which he received excellent *taqārīẓ.* Equipped with the panegyric and the *taqārīẓ,* he went to Cairo to the above-mentioned ʿAbd al-Raḥmān Ibn Makānis and his son Majd al-Dīn, who approved of his work and made him a member of their literary circle. During his stay in Cairo he composed a *qaṣīdah* (pl. *qaṣāʾid*—an Arabic poem having, as a rule, a tripartite structure) in praise of Ibn Makānis and his son. The sources show that he also had good relations with Muḥammad Ibn al-Damāmīnī. In 791/1389 he left Cairo for Ḥamāh, where he served as a clerk in the correspondence bureau through the good offices of the above-mentioned Muḥammad Ibn al-Bārizī, who served as the head of the bureau. He returned to Cairo during al-Muʾayyad Shaykh's reign, and it was through Ibn al-Bārizī's mediation that

[35] Ibid., 2:21–25; Ibn Taghrībirdī, *Nujūm,* 15:490; idem, *Manhal,* 1:415–20.

[36] Al-Sakhāwī, *Ḍawʾ,* 5:84.

he was nominated as a scribe in the Egyptian correspondence bureau and introduced into the sultan's close circle of confidants. He became one of the well-known poets and writers of his time, but his star set when Dāwud Ibn al-Kuwayz was nominated as the new head of the correspondence bureau after al-Muʾayyad's and Ibn al-Bārizī's deaths. He returned to Ḥamāh in 830/1427 and died there in 837/1434.[37]

20. Burhān al-Dīn Ibrāhīm al-Bāʿūnī (777–870/1375–1465) was a Shafiʿi scholar and poet who was born in Safad. He started his religious education with local scholars and then moved with his father to Syria, where he was educated by well-known scholars. He served as a preacher in the Umayyad Mosque and head of the Sufi al-Basiṭīyah in Damascus, and as inspector of the Holy Places in Mecca and Medina (al-Ḥaramayn). He adamantly refused the chief qadiship in Egypt in 812/1409 and dedicated his life to scholarship.[38]

21. Aḥmad ibn Yūsuf al-Zuʿayfrānī (767–830/1365–1426) was a talented poet and a Shafiʿi scholar. He won the favor of the Mamluk amirs in Cairo by pretending to have the ability to foresee their future through the divine secrets hidden in the Quran, sought by the science of numerology *(ʿilm al-ḥurūf)*. He fell out of favor in Cairo in 812/1409 after he deceived the majordomo Jamāl al-Dīn into believing that the heroic poem *(malḥamah,* pl. *malāḥim)* he offered him was an ancient one forecasting his ascent, and that of his son after him, to rule in Egypt.[39] His misconduct with the amirs demonstrates how ulama often took advantage of the great reliance of the Mamluks on them in matters related to religious literature.

As we can learn from this list of ulama, the majority belonged to the Shafiʿi and Maliki schools of law, the dominant schools in Lower and Upper Egypt. Most of them were of Arab origin in Syria and Egypt, going back to pre- and early Islamic times. Thus, Ibn Jamāʿah's origin goes back to the Kinānah tribe and al-Damāmīnī's to the Makhzūm clan of Quraysh. Al-Maqrīzī claimed to be a descendant of the Fatimids, and Ibn al-ʿAṭṭār of the Tanūkhīs, the Yemeni tribe who dominated the area along the Euphrates in pre-Islamic and Umayyad times. There were only three Hanafis in this group of scholars, Ibn Makānis, al-ʿAjmī, and Ibn Ḥijjah, two of them of non-Arab origin, but their command of Arabic reached such a degree that they were considered among the best poets of their time, and their broad education and connections, so it seems, brought them into this elitist

[37] Ibid., 11:53–56; Ibn Taghrībirdī, *Nujūm,* 15:189–92.

[38] Al-Sakhāwī, *Ḍawʾ,* 1:26–29.

[39] Ibid., 2:250–51.

circle of intellectuals. Most of these scholars were connected to one of two prominent ulama, Nāṣir al-Dīn Muḥammad Ibn al-Bārizī and ʿAbd al-Raḥmān al-Bulqīnī, and it was through their connections that they were brought to al-Muʾayyad Shaykh's close circle of confidants and associates. Thus, Kamāl al-Dīn (Ibn al-Bārizī's son), Ibn Makānis, Ibn al-ʿAṭṭār, al-Damāmīnī, and Ibn Ḥijjah were identified with Ibn al-Bārizī. Al-Bulqīnī's group cohered around their acquaintanceship in academe. Al-Bulqīnī, Ibn Jamāʿah, and Abū Zurʿah all were students of al-Bulqīnī's father, ʿUmar ibn Raslān al-Bulqīnī, who was a close friend of Abū Zurʿah's father. ʿUmar was a close confidant of al-Muʾayyad, and it was through his mediation that all three became his close associates. Al-Maqrīzī was a student of ʿUmar ibn Raslān al-Bulqīnī and Abū Zurʿah's father. Al-Bisāṭī, Ibn Ḥajar, and al-Khaḍrī were all students of Ibn Jamāʿah and Ibn Abī al-Wafāʾ was al-Bisāṭī's student. Ibn Ḥajar was also a student of Abū Zurʿah. Besides his connections with al-Muʾayyad, al-Bisāṭī had close connections with the Mamluk amirs Ṭaṭar and al-Mārīdānī. It was through these connections inside academe and with the Mamluk elite that these ulama and *fuqahāʾ* attained academic posts and judicial and bureaucratic appointments. Some of these families, such as al-Bulqīnī, Ibn Jamāʿah, and Ibn Makānis, amassed great fortunes while holding key positions in the *qaḍāʾ* and *awqāf* management. Al-Bulqīnī owned one of the most splendid houses in Cairo.[40]

It would appear that all members involved in Ibn Nāhiḍ's case were born into educated, competitive families who gave them a broad education of the highest standard. Indeed, they were tuned into their unique position as a leading class among the local intellectuals. In a way their *taqārīẓ* are a bombastic declaration on the breadth of their education, literary skills, and refinement. Their style is replete with florid language and allusions to the Quran, hadith, and the vast body of Arabic literature through the generations. From the dates of most of the panegyrics noted in the manuscript, it is also evident that the writers responded to one another's words with no small measure of competitiveness. The *taqārīẓ* convey, to a certain measure, a statement of what they considered the true model of knowledge a Muslim scholar should possess. Obviously, scholars with education of a lower standard, certainly including foreigners, or *aʿjām,* could hardly measure up to this model. It was the domain preserved for the elitist Arab ulama, the true agents of the indigenous Muslim culture, or to use Haarmann's words, "the salt of the country."[41] It is in this context that

[40] Aḥmad ibn ʿAlī al-Maqrīzī, *Kitāb al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Cairo, 1987), 2:54.

[41] Haarmann, "Rather the Injustice of the Turks than the Righteousness of the Arabs," 65.

the Syrian and Egyptian ulama's obsession with digging into their peers' works for faults in grammar, style, and content can be explained. Thus, for example, Ibn Ḥajar mentions that in spite of the fine poetry of Ibn Makānis, who was of Coptic origin, minor and grave grammatical faults *(alḥān,* s. *laḥn)* slipped into it.[42]

The case of al-Muʾayyad's peace agreement with Nawrūz al-Ḥāfiẓī (d. 815/1412), the governor of Damascus and his enemy and protagonist in the civil war of 815/1412, confirms the disrespect the Arab scholars felt towards their non-Arab peers, especially the Turks.[43] Ibn Taghrībirdī presents the case as first-hand information he heard from Kamāl al-Dīn al-Bārizī, the son of the above-mentioned Muḥammad Ibn al-Bārizī. This ceremony was held to confirm with an oath Nawrūz's surrender and al-Muʾayyad's commitment to restore him to his position as governor of Damascus. Ibn Taghrībirdī reports that Muḥammad Ibn al-Bārizī administered the oath of allegiance, deliberately inserting linguistic errors that twisted its meaning and impaired its validity. When the Hanafi qadi turned to the Shafiʿi qadi al-Bulqīnī, who is also one of our *taqārīẓ* authors, and commented on al-Bārizī's mistakes in Arabic language and style, he was silenced immediately. Ibn Taghrībirdī clarifies that the Mamluk messengers and Turkish qadis who acted as Nawrūz's representatives at the ceremony did not catch on to the trick because of their lack of practice in Arabic. They brought the oath of allegiance to Nawrūz, confident of its validity. In this context, Ibn Taghrībirdī complains about the meager knowledge the Turkish jurists had in the various branches of Islamic science, not to speak of jurisprudence *(fiqh).* This story clearly reveals the idea the Arab ulama sought to convey about their position compared with the ruling Mamluks and the foreign ulama they employed. No matter how powerful the Mamluk *umarāʾ* were, the validity of their rule depended on the Arab ulama, who held the powerful key to knowledge.

III

Ibn Nāhiḍ was clearly not a member of that exclusive group of scholars. He did, after all, make a living only by writing panegyrics for local dignitaries. We do not know of any salaried position he held in the religious bureaucracy. Ibn Nāhiḍ's panegyric biography for al-Muʾayyad Shaykh is written with quite a simple vocabulary but in a manneristic style. It is written in rhymed prose, particularly florid language, rhetorical expressions from the sources,

[42] Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ,* 7:368.

[43] Ibn Taghrībirdī, *Nujūm,* 14:20–21.

and exaggerated flattery of Sultan al-Muʾayyad Shaykh, to the level of using the most sacred metaphors in Islam such as the Kaʿbah to describe his character and deeds or calling him the imam of the community, a role normally reserved for the ulama.[44] Important for the present discussion is that rhymed prose was rejected by the Arabs and continued to be considered as a typical Persian literary genre. The compiler of *Al-Ajwibah al-Muʿtabarah* does not leave room for guesswork and mentions clearly that Ibn Nāhiḍ's *Sīrah* offended "the kings among the distinguished scholars" *(mulūk al-ʿulamāʾ al-aʿlām)*. Lacking the self-criticism to realize his fault and tongue slips *(wa-lam yashʿur bi-khaṭʾihi wa-zalalihi),*[45] he requested "every religious scholar, litterateur, historian, and friend" *(kull ʿālim wa-adīb wa-muʾarrikh wa-ḥabīb)*[46] to write its praises. Moreover, when they "used double-edged language" *(istaʿmalū al-ibhām)*[47] that only appeared to praise his work, he accepted their words at face value. However, in spite of his recognition of Ibn Nāhiḍ's lack of sagacity, the manuscript's author criticizes the *taqārīẓ* as treatises of "low poetry and mean prose and poor and disgraceful style" *(naẓam sāfil nāzil wa-ʿibārah rakīkah mustahjanah)* written in "a respite from the pens" *(ʿalá ḥīn fatrah min al-aqlām),* i.e., *taqārīẓ* written while their pens rested from their truly worthy writing.[48] The question is: what caused so many distinguished scholars of the time to unite and attack Ibn Nāhiḍ so meanly and mercilessly? In other words, what they were actually defending?

Rivalry over leadership and hegemony over the judicial system and resources of pious endowments arose between the Mamluk elite and the local ulama and *fuqahāʾ,* especially the Shafiʿis, as early as the establishment of the Mamluk regime. The Shafiʿi *madhhab* (school of law) that had enjoyed absolute dominance in the Egyptian judicial system became, with the introduction of Baybars' reform of 665/1265, one of the four schools of law.[49] Baybars' reform was designed to increase the prestige of the Hanafi school of law, to which the Mamluks belonged, and to enhance approval

of their policies and alien life style. This reform did not stop in Egypt and Aleppo: Tripoli, Ḥamāh, and Safad followed suit.[50] In 749/1348 a Hanafi qadi was nominated next to the Shafiʿi in the army too.[51] Upon his ascension to power, Sultan al-Ẓāhir Barqūq (784–801/1382–99) initiated the post of Hanafi chief qadi in Jerusalem and Gaza. To these posts he appointed two foreign Sufis residing in the Shaykhūnīyah in Cairo.[52] We learn that in 812/1409, four chief qadis also stood at the head of the judicial system in Damascus.[53] Further erosion in the jurists' situation came when the social leveling of the religious and judicial institutions brought persons from the lower classes to prominent positions, such as the vizierate, *ḥisbah* inspection,[54] and qadiships, through patronage relations and the practice of payment for appointments.[55] The sources reveal that "people from respectable families *(dhūwī al-buyūtāt)*"[56] felt that they were discriminated against during Barqūq's reign, for he conducted a deliberate policy of advancing persons of lowly position to high offices that had been previously their privilege. The position of the qadis was also impinged upon when the jurisdiction of the *ḥujjāb* was extended to deal with matters beyond the military elite and the *dīwāns,* to matters traditionally dealt with according to the shariʿah. For this reason the number of *ḥujjāb* consistently increased during the fifteenth century, and by the middle of the century, senior amirs holding high posts such as *dawādār* acquired judicial knowledge and acted as judges among the civilian population. Even the *julbān,* the non-commissioned Mamluks, also accumulated judicial power and acted as arbiters in disputes between civilians who eschewed the *sharʿī* courts. Qānṣūh al-Ghawrī's (r. 906–22/1501–16) attempts to recentralize the judicial system and ban all courts but the *sharʿī* failed due to the amirs' pressure.[57] These processes

of popularization and privatization in the academe and judicial systems obviously eroded the local *fuqahā*'s position. It is not a coincidence that the local Shafiʿi ulama were the sharpest critics of the Circassian regime.

When Baybars tried to include in his reform the division of the supervision over the *awqāf* in Egypt and Syria among the four *madhāhib,* he met stiff opposition from the Shafiʿi legists. Henceforth the Mamluk sultans and other figures of authority would repeatedly try to lay their hands on the great fortunes amassed in the *awqāf*.[58] In 775/1373 the supervision of the *aḥbās* (*awqāf* lands) [59] and *awqāf* in Egypt was given to the amir Manjak al-Yūsufī, one of the prominent Mamluk amirs of the time.[60] By Jaqmaq's reign (842–57/1438–53), the *aḥbās* lands and *waqf* institutions such as the colleges al-Muʾayyadīyah and al-Ashrafīyah were regularly put under the *dawādār*'s supervision.[61] In 844/1440 the inspection of the Ḥākimī Mosque and the *awqāf* donated for its maintenance, which were by long tradition in Shafiʿi hands, were given to the *dawādār* Dūlāt Bey.[62] During the fifteenth century, the inspection of the prestigious *waqf* of the Bīmāristān al-Manṣūrī, the hospital constructed in Cairo by al-Manṣūr Qalāwūn in 682–83/1283–84, was given regularly to the *atābak al-ʿasākir*. Furthermore, lands of pious endowments were increasingly transferred to the sultan's treasury. From Barsbāy's reign (825–42/1422–38) onward, legal techniques were used to transfer state lands, *iqṭāʿ,* into private hands and turn them into *awqāf*. The sultans benefited from these transactions because it was through *awqāf* manipulation that they channelled public funds to their families and gained covert incomes for their extra expenses in the army and maintenance of the important civilian sectors' support, as Carl Petry has shown in his seminal works on the reigns of Qāytbāy (873–901/1468–95) and Qānṣūh al-Ghawrī.[63]

[58] Morimoto, "What Ibn Khaldūn Saw," 117–19; Nicolas Michel, "Les rizaq iḥbāsiyya, terres agricoles en mainmorte dans l'Egypte mamelouke et ottomane: Etude sur les Dafātir al-Aḥbās ottomans," *Annales islamologiques* 30 (1996): 114–17; Lev, "Symbiotic Relations," 22–26.

[59] *Rizaq* (s. *rizqah*) were the lands donated by sultans to prominent figures in their regime only for their lifetime. After their death the land returned to the sultan's treasury. Part of these lands were turned into *aḥbās* or *waqf* lands dedicated for the maintenance of urban religious and charitable foundations established by the Mamluks. See: Ibn Taghrībirdī, *Nujūm,* 11:166; Michel, "Les rizaq iḥbāsiyya," 107–8.

It should be noted that the ulama and *fuqahāʾ* laid their hands on the *awqāf* to a no lesser extent than the Mamluk ruling class, for in addition to their formal remuneration, they embezzled great fortunes from the incomes of public charitable endowments. An indication of the wealth they amassed is the large sums of money confiscated from them upon their dismissal. The sources are replete with such confiscation cases. Furthermore, the ulama often neglected the upkeep of the *awqāf* under their responsibility, and when the estates were priced much below their true value, they would lay their hands on them and buy them cheaply.[64] In 838/1434 Ibn Ḥajar, who it should be remembered served as the chief Shafiʿi judge and is the author of one of the *taqārīẓ* for Ibn Nāhiḍ, was summoned by Sultan al-Ashraf Barsbāy (825–42/1422–38) and ordered to check the *waqf* stipulations of *madāris* and *khānqāhs* in Cairo and see how they were carried out in practice, with the intention to dismiss the unnecessary office-holders. Accompanied by the other three chief judges, Ibn Ḥajar began investigating the *awqāf* and found that the office-holders took possession of their incomes and disposed of them as they wished. Obviously, part of the incomes disappeared into their own pockets and most probably into their patrons'. Under pressure exerted by the office-holders and their patrons, the sultan had to back down and leave the *awqāf* untouched. Ibn Taghrībirdī complains that if Barsbāy had sent one of the *fuqahāʾ* serving in the *umarāʾ* administration (he is probably implying the foreign Hanafi jurists) for this task instead of Ibn Ḥajar, his favor to the public would have measured up to his conquest of Cyprus.[65] However, al-Maqrīzī's comment on this case is positive. He mentions that the sultan did not like the way Ibn Ḥajar inspected the *awqāf,* but had to give up his plan. The people rejoiced when they learned that the sultan abolished his order of the *awqāf* inspection, for they anticipated "great changes" *(taghayyurāt kabīrah)* in them had it been carried out.[66] The increasing scrutiny of the informal *awqāf* management on the part of the sultans put the ulama under continuous risk of confiscation of their wealth and dismissal from their positions.

The Mamluks, as aliens, were generally interested in the moderation of orthodox Islam and the introduction of Sufism as an alternative to the indigenous Shafiʿi school of law. They invested particularly in the instruction of the Hanafi *madhhab* in the colleges they established for

[64] See, for example, al-Maqrīzī, *Khiṭaṭ,* 2:82.

the teaching of Muslim law, or *madāris,*[67] and in Sufi orders, due to their reverence for the Sufi shaykhs and also because they sought the support of the masses who preferred the practice of popular (Sufism) over orthodox Islam. Nevertheless, the Mamluks could not ignore the position held by the Shafiʿi *fuqahāʾ* and ulama as the leading upper class. Therefore, while the Mamluks dedicated *khānqāh*s for the instruction and rituals of Sufism, they stipulated their desire for an orthodox curriculum and invited mostly foreign ulama, generally Hanafis, to teach in them, and Sufis to instruct in the *madāris,* as Leonor Fernandes has shown.[68] Consequently, both orthodox and Sufi institutions underwent a process of moderation, and by the end of the fourteenth century the differences between them were blurred. Local *fuqahāʾ* and ulama were obviously the victims of this trend of popularization in academe, as increasing numbers of newcomers, especially Turkish and Persian Sufis from Anatolia and Iraq who had not mastered Arabic, were brought in by the Mamluks to take their place. Furthermore, interest in Turkish literature, both translated from Arabic or originally written in Oghuz Turkish, grew among the Mamluks during the Circassian period because of the increasing literary and intellectual influence from Turkish Anatolia.[69] Thus, for example, Muṣṭafá ibn ʿUmar al-Ḍarīr, the blind Mawlawi from Anatolia, was accepted in Cairo as a religious writer, irrespective of his confessed deficiency in learning. He composed for al-Ẓāhir Barqūq the Turkish biography of the Prophet Muhammad which is still appreciated in today's Turkey.[70] The Hanafi shaykh ʿAlāʾ al-Dīn al-Sīrāmī was invited from the east (probably from Iraq) to serve as the head of the newly established Sufi order and college of the same sultan.[71] Yaʿqūb Shāh of Arzenjān, who studied in Ṭabrīz and held the post of chief of the chancellery of the Qaraqoyunlu ruler, was nominated as the director of the foreign chancellery in Egypt through the mediation of the grand *dawādār* Yashbak min Mahdī. Another Turk, Ḥusayn ibn Pīr Ḥājjī Abū Bakr from Shirāz, gained favor with Yashbak through his musical accomplishments and was nominated as administrator of his *qubbah* in Cairo. As a reward for composing the Turkish version of the *Shāhnāmah* for Sultan al-Ghawrī,

Sharīf Ḥusayn ibn Ḥasan was appointed, over the heads of the Dayrī family, as the shaykh of the al-Muʾayyad Mosque.[72] Among the Arab ulama, the Mamluks held in high esteem those who were bilingual. Badr al-Dīn al-ʿAynī, the fifteenth-century historian who was the Hanafi chief qadi and drinking companion of Sultan al-Ashraf Barsbāy, mastered Arabic and Turkish. During their gatherings, he used to read to the sultan the history of Islam in Arabic and translate it into Turkish and answer Barsbāy's many questions on matters of religion "in words close to his understanding" *(bi-ʿibārah taqrubu min fahmihi)*.[73] Barsbāy admitted, Ibn Taghrībirdī contends, that without al-ʿAynī's guidance his knowledge of Islam would have been imperfect. Against this background, it is unsurprising that extremist Shafiʿi ulama opposed the Hanafis and the low Sufi orders that the Mamluks supported and were zealous to introduce their adherents to the judicial system and academe. Al-Maqrīzī was renowned for his fanatic opposition to the Mamluks, Sufis, and Hanafis in general.[74] Muḥammad Ibn al-Bārizī was known for being extremely hard on his enemies and a zealous benefactor to his friends and adherents.[75]

To cling to their continuously diminishing share in the power structure and the division of the country's resources, the upper class ulama thus had to navigate between contradicting tendencies: between cooperation with the Mamluks and criticism of their moderate and popular understanding of Islam and their rejection of the inequity of the division of the country's wealth. Ibn Ḥajar al-ʿAsqalānī, a scholar highly esteemed for his knowledge and piety, encapsulates the embarrassing experience these ulama had in the *sharʿī* judicial system. He testifies that he had much regret at his decision to accept the position of chief Shafiʿi qadi and felt he had denied his conscience *(janá ʿalá nafsihi)*. Among the reasons he mentions for his discomfort, he refers in the first place to the lack of distinction *(farq)* between the ulama and others. In the second and third place he mentions the Mamluks' interference in his judicial decisions and the necessity to treat them with flattery *(mudārāh)*. To soften the dissonance in his conduct, Ibn Ḥajar would apologetically announce that "there was not one hair on his body that approved his name" *(lam tabqá shaʿrah fī badanihi taqbal ismahu)*.[76] It is worthy of mention that in spite of these declarations, Ibn Ḥajar served

for over twenty-one years as a Shafiʿi chief qadi, and at least one example of the compromises he had to make during his service has already been mentioned.

IV

Some of the scholars who criticized Ibn Nāhiḍ for his exaggerated flattery of those in power were guilty of the same sin. Ibn Makānis wrote poems of praise *(qaṣāʾid)* to Sultan al-Muʾayyad Shaykh[77] without incurring the censure given to Ibn Nāhiḍ. Badr al-Dīn al-ʿAynī wrote the biography of al-Muʾayyad under the title *Al-Sayf al-Muhannad fī Sīrat al-Malik al-Muʾayyad.* Moreover, writing biographical pieces of a clearly literary nature was an accepted norm, and works of this kind were written under the aegis of the sultan and those in positions of power throughout the Mamluk period. P. M. Holt has noted the literary characteristics of works of this kind, defining them as a "genre of courtly literature."[78] Contemporary historians found no flaw in the words of praise for the heroes of such biographies, nor in the selectivity employed in the presentation of the events recounted in them. What made the difference between a praiseworthy and disgraceful panegyric then? It was a matter of the right measure of flattery disguised as historical fact by a good knowledge of history, and above all proficiency in Arabic language and literature and religious sciences. These intellectual skills were the symbols of the upper class ulama's social distinction and certainly part and parcel of the code of conduct they adopted and used as a self-regulating standard that was so necessary for their social survival.[79] It fostered their image as independent religious scholars and men of letters and conveyed their ethical principles, and at the same time it left room for them to enjoy the privileges that close relations with the ruling Mamluks brought them.[80] They could not allow others, especially lower-grade peers like Ibn Nāhiḍ, who were not as fluent and eloquent in Arabic as they were, to use their distinctive symbols without compromising their already weakened sociopolitical status.

IGARASHI DAISUKE
UNIVERSITY OF TOKYO

The Evolution of the Sultanic Fisc and *al-Dhakhīrah* during the Circassian Mamluk Period

I have shown in a previous article that al-Ẓāhir Barqūq, the first sultan of the Circassian Mamluks (r. 784–91, 792–801/1382–89, 1390–99), possessed several private properties, especially landed estates, in such forms as *milk* (pl. *amlāk;* privately-owned land) or *waqf* (pl. *awqāf;* Islamic endowment) land, and that he organized their management through the establishment of a new bureau, the *Dīwān al-Amlāk wa-al-Awqāf wa-al-Dhakhīrah.*[1] Although it is unsurprising that the Mamluk sultans possessed private assets that were independent of the state purse, their inclination to hold private property—especially in the shape of agricultural lands—only became popular in the late fourteenth century. From Barqūq's reign onwards, successive sultans developed a variety of ways to increase the financial resources of the sultanic fisc. Eventually, the scale of the sultanic fisc would reach its apogee under the reigns of al-Ashraf Qāytbāy (r. 872–901/1468–96) and al-Ashraf Qānṣūh al-Ghawrī (r. 906–22/1501–16), two prominent sultans from the late Mamluk period.[2]

Al-Dhakhīrah, a term that is frequently found in the sources from the Circassian Mamluk period, is key for understanding the sultanic fisc. *Al-Dhakhīrah,* which originally meant "treasure" in Arabic,[3] was a technical term that related to the sultan's finances during the Circassian Mamluk period, and which accrued new meanings over time. However, because little attention has been given to the term, the meaning of the term and its transformation are not clear. I believe that a more detailed investigation of *al-Dhakhīrah* is essential if we are to arrive at a proper understanding of the fiscal system of the Circassian Mamluk sultanate.

To this end, this article considers the state, role, and development of the sultanic fisc under the Circassian sultans, as well as the background that necessitated its establishment and development. Throughout the course of the article, I will

demonstrate that significant changes occurred in the financial system during the Circassian Mamluk period. I will make clear that the difficulties, restructuring, and eventual bankruptcy of the state's finances arose against the same background as the expansion and increasing role of the sultanic fisc—both phenomena were organically united and mutually influential. In addition, I will also outline the overall historical development that occurred in the structure of the Mamluk sultanate.

What is *al-Dhakhīrah?*

To begin, I will investigate how the term *al-Dhakhīrah* has been interpreted by contemporary scholars, and how it is explained in the chancery manual sources of the Mamluk period. As I indicated above, little attention has been given to the term; what is agreed upon is that some members of the sultan's financial staff bore *al-Dhakhīrah* in their titles (such as *nāẓir al-dhakhīrah*), and they have been regarded, somewhat obscurely, as managers of the sultan's own treasures.[4] However, beyond this rather vague common ground, scholars have presented differing interpretations of the meaning and role of *al-Dhakhīrah*. For instance, A. N. Poliak says, "The vacant fief (i.e., *iqṭāʿ*) was managed and exploited by the department designated as *dīwān al-dhakhīrah* until its grant by the sultan to another feudatory."[5] ʿĀmir Nāṣir has a different interpretation of this *dīwān* and suggests that it was a department responsible for managing the sultan's *iqṭāʿ* lands—all the revenues from which were designated to the sultan himself.[6] In addition, several studies that have been conducted on the spice trade between Mamluk Egypt and Venice have identified the "dacchieri"—the Mamluk governmental office that was in charge of the trade and that appears several times in the Venetian documentary sources—as cognate with the Arabic term *al-Dhakhīrah.*[7]

Disparate descriptions of *al-Dhakhīrah* also occur in the chancery manual sources from the Mamluk era. Judging from the fact that al-ʿUmarī's *Masālik* (written in

the middle of the eighth/fourteenth century)[8] and al-Qalqashandī's *Ṣubḥ* (written in 814/1412)[9]—two of the most important chancery manual sources—do not mention any offices or works that related to *al-Dhakhīrah,* it seems that, in the period of the late Bahri Mamluks and the beginning of the Circassian Mamluks, when these two sources were composed, *al-Dhakhīrah* had not yet been established as an organization or an office. Thereafter, there is an abridged description of the *Dīwān al-Dhakhīrah* which is found in al-Ẓāhirī's *Zubdah* (written in 846/1422),[10] as follows: "The *Dīwān al-Dhakhīrah.* This is one of the most important bureaus *(dawāwīn)*. The money *(māl)* of *al-Dhakhīrah* was collected from various resources *(jihāt)* to it. It has a *nāẓir* (manager) and members of staff *(mubāshirūn)*."[11] We are given no specific information about the institution in this simple explanation. However, another source—known as al-Khālidī's "Al-Maqṣad al-Rafīʿ" (hereafter cited as *Dīwān al-Inshāʾ*)—provides a more detailed description, as follows:

> The *naẓar al-amlāk wa-al-dhakhīrah*. These two (i.e., *amlāk* and *dhakhīrah*) are income sources bound together *(humā jihatāni mutaqāranatāni)*. *Al-amlāk* means [the assets] that are purchased for the sultan or his relatives *(aqāribhu),* such as arable lands *(ḍiyāʿ),* houses *(ribāʿ),* and others relating to them. *Al-Dhakhīrah* means [the assets] that are rented *(mā yustaʾjar)* for the sultan such as tax districts *(nawāḥī),* agricultural lands *(mazāriʿ),* water wheels *(dawālīb),* and others. A person appointed to this office takes charge of incomes such as [those from the assets that were] purchased for the sultan and [were] sold from [his hand], and those rented for him and leased out from him. He is an administrator *(mutaṣarrif)* who disburses [the money for] that which should be disbursed, and conveys [the money for] that which should be conveyed to the treasury *(khazāʾin)*. A military man sometimes holds the office.[12]

According to this description, *al-amlāk* referred to "the sultan's private real

estates" and *al-Dhakhīrah* referred to "the sultan's leasehold lands."

To sum up, there are discrepancies in the interpretation of *al-Dhakhīrah* among scholars and among sources. However, if we accept that *al-Dhakhīrah* underwent a transformation, then most of the interpretations presented above may be regarded as true. I will show in this article that, as the sultanic fisc evolved throughout the Circassian Mamluk period, so too did the term *al-Dhakhīrah,* taking on new meanings with time. I will start by examining instances where the word appears in the sources from the period between the late eighth/fourteenth century and the beginning of the ninth/fifteenth century.

During the period under consideration, the term *dhakhīrah* (pl. *dhakhāʾir*) usually connoted "movable property," in the ordinary sense of the word—cash, gold, silver, jewels, luxurious textiles, and other luxury items—and especially referred to the movable property held by sultans and amirs. On the other hand, private real estate such as lands and houses were distinguished from these goods and were referred to as *amlāk*. As for the sultan's *dhakhīrah,* the descriptions of the *nāẓir al-dhakhīrah,* i.e., the controller of the sultan's *dhakhīrah,* emerged during Sultan al-Ashraf Shaʿbān's reign (764–78/1363–77). After this, al-Ẓāhir Barqūq, who was enthroned in 784/1382, strived to increase his private wealth through the acquisition of private lands and the transformation of these into *waqf,* and then set up an organization for the management of the properties. Following the establishment of *Dīwān al-Amlāk*—a bureau responsible for administering his private lands—in 797/1395, he established the office of *ustādār al-amlāk wa-al-awqāf wa-al-dhakhīrah* in 799/1397. Consequently, his movable, unmovable, and *waqf* properties were regarded as "the sultan's private property" and thus came to be managed exclusively within this office.[13]

Judging from these examples, we may say that, during this period, the term *dhakhīrah* was used to refer to the private movable goods of powerful figures, especially the sultans. However, according to the description of *Dīwān al-Inshāʾ* mentioned above, after this time, the term came to be applied to "the sultan's leasehold lands." We shall now examine the circumstances under which the meaning of the word changed, by considering the problem of the land system in this period.

Starting in the late Bahri Mamluk period, the governmental domains—lands from which the Mamluk government collected land tax *(kharāj)*—came to be leased by powerful amirs for negligible amounts. This issue was seen as one of the main causes of the financial difficulties that the government of the time was experiencing. These leased lands *(mustaʾjarāt)* are often identified in the sources as one of the financial resources of powerful figures. For example, Shaykhū al-

[13] Igarashi, "The Private Property and *Awqāf,*" 171–75.

Nāṣirī (d. 758/1357), the *atābak al-ʿasākir* (commander-in-chief) of the late Bahri Mamluks, earned an income of over 200,000 dirhams per day from his *iqṭāʿ, amlāk,* and *mustaʾjarāt.*[14] The leasing of governmental domains seems to have become popular during the unstable political and economic circumstances that occurred during the reign of the late Bahri Mamluks, in the wake of changes such as the weakening of the sultan's power and the decrease of agricultural production caused by the Black Death and its adverse effect on the *iqṭāʿ* system.[15] If we consider that the lease of the governmental domain was popularly adapted by amirs as a way of supplementing their personal income, it is no wonder that the sultan—who himself was originally a Mamluk amir—held lands by lease just as other amirs did. Actually, Barqūq seems to have acquired leasehold land both before and after his enthronement as sultan.[16] His son Sultan al-Nāṣir Faraj (r. 801–8, 808–15/1399–1405, 1405–12) also had a special *dīwān* administering his *mustaʾjarāt* and *ḥimāyah* (protection fee; this will be discussed latter) "in the same way as other amirs do."[17]

How then did the term *al-Dhakhīrah* come to mean "the sultan's leasehold land"? The first instance where it clearly relates to agricultural land can be seen in the following description, which concerns the land survey that was carried out in 799/1397, late in Barqūq's reign: "On 2 Jumādá I 799 (1 February 1397), the sultan (Barqūq) ordered Amir Ḥusām al-Dīn Ḥusayn al-Gharsī, the *shādd al-dawāwīn* (superintendent of bureaus), to go to Upper Egypt and to survey *(miṣāḥah)* the state lands *(bilād al-dawlah al-sharīfah),* privately-owned lands *(amlāk),* and [lands of] *al-Dhakhīrah* [of the area]."[18]

It is clear that the term *al-Dhakhīrah* in this description does not refer to "the sultan's movables," the general meaning of this term in this period; however, it is unclear what the term actually does refer to here. While it is possible that it referred to "the sultan's leasehold land," this must be regarded as unlikely as the evidence suggests that it had not acquired such a meaning around this time. Table 1 lists those people who held the post of *ustādār* (director) or *nāẓir* (vice-director) in the *dīwān,* who were responsible for administering the sultan's private financial resources, such as *amlāk, awqāf,* and *dhakhīrah* during the period between Ibn al-Ṭablāwī's first appointment as *ustādār al-amlāk wa-al-awqāf wa-al-dhakhīrah* in

[17] Al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (London, 2002–4), 1: 299.

[18] Ibn al-Furāt, *Duwal,* 9:461.

799/1397 (mentioned above) and 844/1441, the beginning of the reign of Sultan al-Ẓāhir Jaqmaq. However, as the table indicates, the historical sources written by roughly contemporary authors, such as Ibn al-Furāt, Ibn Ḥijjī, al-Maqrīzī, Ibn Qāḍī Shuhbah, Ibn Ḥajar, and al-ʿAynī, as well as those written by historians of a later generation, such as Ibn Taghrībirdī, al-Ṣayrafī, and al-Sakhāwī, disagree with each other over the title of their posts. Moreover, inconsistencies are found within different sources written by the same author, and sometimes even within a single source. In addition to *dhakhīrah,* this post was also associated with one or more of the types of agricultural property, such as *amlāk, awqāf, mustaʾjarāt,* and *ḥimāyah*. In a few cases, the post is simply referred to as "*ustādār al-khāṣṣ al-sulṭānī,*" i.e., the director of the sultan's private property. By way of example, Ibn al-Ṭablāwī, the first appointee of the post, is described as "*ustādār al-amlāk wa-al-awqāf wa-al-dhakhīrah*" by Ibn al-Furāt and Ibn Qāḍī Shuhbah; in contrast, he is described as "*ustādār al-amlāk wa-al-awqāf*" by al-Maqrīzī, as "*ustādār al-dhakhīrah wa-al-amlāk*" by Ibn Ḥajar and al-Sakhāwī, and simply as "*ustādār al-dhakhīrah*" by al-ʿAynī and al-Ṣayrafī. He is also described as "*ustādār al-khāṣṣ*" by Ibn Qāḍī Shuhbah, as "*ustādār al-khāṣṣ al-sulṭānī*" by Ibn Ḥajar, and as "*ustādār khāṣṣ lil-sulṭān*" by al-Sakhāwī. To prevent confusion of the titles of the post, hereafter I will designate this office as "the sultan's private financier." Judging from the fact that this office was sometimes designated "*ustādār al-amlāk wa-al-dhakhīrah wa-al-mustaʾjarāt wa-al-awqāf al-sulṭānīyah,*" writing both *dhakhīrah* and *mustaʾjarāt* (Nos. 4, 7, 8) together, we cannot say that the term *dhakhīrah* was always used according to the particular sense of "leasehold land."

Among the 57 instances in which the sultan's private financiers are mentioned in the sources, most frequent are the cases in which only the two terms *amlāk* and *dhakhīrah* are attached to the title of office, such as *ustādār* or *nāẓir al-amlāk wa-al-dhakhīrah* (27 cases); the next most frequent are the cases in which only the term—*dhakhīrah*—is attached (8 cases). Among the 9 cases in which only one type of term is attached to the title of office, 8 cases include *dhakhīrah*. In contrast, there are rare cases in which the *dhakhīrah* is not mentioned in reference to the office (9 of 57). Such trends seem to be clearer in the sources that were written in the later period. From these examples, it seems reasonable to suppose that during the process through which various types of properties and resources were being administered under the sole control of the sultan's private financier, the term *dhakhīrah* lost its original sense of treasure (movables) and came to be used as a term that represented the sultan's properties, especially agricultural lands that were held in various ways and forms. We shall see each type of the sultan's financial resources in the following section.

THE SULTAN'S PRIVATE PROPERTY AND ITS ADMINISTRATION

As my previous article made clear, Barqūq held a large amount of real estate in the shape of *amlāk* and *awqāf*. This way of holding private assets became popular for those sultans who succeeded him, too. Table 2 lists the *milk* and *waqf* assets that were held by Barqūq, al-Muʾayyad Shaykh (r. 815–24/1412–21), and al-Ashraf Barsbāy (r. 825–42/1422–38), three sultans of the early Circassian period, on the basis of the archival sources. As the table shows, the number of each sultan's assets steadily increased (Barqūq: 33 → Shaykh: 43 → Barsbāy: 81). The list shows that all of these early Circassian Mamluk sultans held farm lands, urban estates, and other assets such as water-use facilities in villages throughout Egypt and Syria. The proportion of farm lands that each successive sultan held increased particularly sharply (Barqūq: 30.3% → Shaykh: 46.5% → Barsbāy: 50.6%). This is especially the case for farm land in Egypt; Barqūq held only three tracts (9.1%); however, Barsbāy's farm land accounted for about half the number of his total assets (39; 48.1%). It is possible that these assets included some that had been acquired personally in the period when they were amirs, before their enthronements, or that were acquired through fair transactions; however, I believe that their status as sultan facilitated their acquisition of assets on such a large scale, especially in the case of farm lands. As I described in my previous article, Barqūq acquired state lands *(amlāk bayt al-māl),* including governmental domains and *iqṭāʿ* lands, as his private property, or he converted them into his *waqf* properties.[19] The fact that the proportion of assets that were farm land continuously rose under the reigns of Shaykh and Barsbāy indicates that the conversion of state land into *amlāk* and *awqāf* steadily continued. In Rabīʿ II 835/December 1431 under Barsbāy's reign, some ulama (Islamic intellectuals) objected to the legality of Barsbāy's purchase of state lands through the *wakīl bayt al-māl* (the agent of the state treasury), who was appointed by Barsbāy himself, and the successive conversion of these lands to his *waqf* property. As the *waqf* deeds indicate, this episode also shows that the scale of state land privatization and transformation into *waqf* undertaken by Barsbāy was on a larger scale than any of his predecessors had engaged in. Indeed, it seems that it was on such an unprecedented scale that the ulama could not overlook it, despite the fact that they were dependent on the income generated from *awqāf* and usually tended to protect the *waqf* system. However, the objection was rejected and the legality of the sultan's establishment of *awqāf* through such means was confirmed.[20] The sultans' holding of property through *waqf* endowment would continue after him until the end of the Mamluk sultanate.

In common with other powerful figures of the government, such as amirs and

[19] Igarashi, "The Private Property and *Awqāf,*" 172–79.

[20] Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr* (Cairo, 1969–98), 3:477–79.

civilians, the sultans leased the governmental domains for themselves. A large proportion of the sultan's *mustaʾjarāt* had existed in al-Ghawr, a fertile agricultural region in Syria, since the beginning of the Circassian period, although it seems likely that there were probably many leasehold lands in various regions across Egypt and Syria.[21] In addition, the *nāẓir al-mustaʾjarāt al-sulṭānīyah bi-al-Shām*—the controller of the sultan's leasehold lands in Syria—was appointed in 824/1421.[22] *Dīwān al-Inshāʾ,* which identified the *dhakhīrah* as the sultan's leasehold land, is likely to have been written around the reign of Barsbāy,[23] at the same time as the controversy about the legitimacy of the sultan's purchase of state lands and transformation of them into *waqf* arose. It is likely that, under such circumstances, the land that was accumulated through the lease of the state lands—the legality of which was unchallenged on the whole—constituted an increasingly large proportion of the sultan's private property. This seems to be an underlying cause of the transformation of these personally-held lands into "the sultanic domain," as will be discussed later. However, it is unlikely that the sultan actually paid the relevant rental fees or the cost of purchase to the financial bureaus of the Egyptian or Syrian government, even for land that was ostensibly "*mustaʾjarāt*" or "*amlāk.*"

The *ḥimāyah* was another important source of revenue connected with agricultural land. The sultan's private financier was also in charge of the sultan's *ḥimāyah*. The *ḥimāyah* represented powerful figures' private protection over local areas, and it involved their collecting protection fees in exchange for protecting the village against the "exploitation" of local governors *(wālī, kāshif),*[24] resulting in the exclusion of the governmental supervision by the local governors from the protected areas.[25] This was one of the private income sources of powerful figures

[21] Al-Qalqashandī*, Ṣubḥ,* 4:190. It is reasonable to suppose that special financial agents and civilians appointed to al-Ghawr were in charge of the sultan's *mustaʾjarāt* in the region. Ibn Qāḍī Shuhbah, *Tārīkh,* 1:268, 462, 603, 608; 4:150, 266; al-Maqrīzī, *Sulūk,* 4:1008; al-Ṣayrafī, *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān* (Cairo, 1970–94), 3:390; Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. Fahīm Muḥammad Shaltūt, vol. 1 (Cairo, 1990) (hereafter cited as *Ḥawādith*[1]), 1:224.

[22] Ibn Ḥajar, *Inbāʾ al-Ghumr,* 3:249–50. Barqūq also assigned a person to take charge of his own *mustaʾjarāt* and *matjar* (mentioned later) to Damascus (Ibn al-Furāt, *Duwal,* 9:438; al-Maqrīzī, *Sulūk,* 3:858–59; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:580).

[23] Martel-Thoumian, *Les civils et l'administration,* 16.

[24] The *ḥimāyah* also represented powerful figures' personal protection over commercial activities. As for the *ḥimāyah,* see al-Asadī, *Al-Taysīr wa-al-Iʿtibār wa-al-Taḥrīr wa-al-Ikhtibār fīmā Yajib min Ḥusn al-Tadbīr wa-al-Taṣarruf wa-al-Ikhtiyār* (Cairo, 1968), 95–96, 135–36; John L. Meloy, "The Privatization of Protection: Extortion and the State in the Circassian Mamluk Period," *Journal of the Economic and Social History of the Orient* 47, no. 2 (2004).

[25] Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. William Popper (Berkeley,

such as amirs and high-ranking civilians that increased after Shaykh's reign.[26] This indicates the sultan's conflicting positions; while he dominated the Mamluk state through the governmental machinery in his official capacity, he himself gave private protection to the specific areas in his private capacity, interrupting the governmental supervision over the area.

We are now able to see that the Circassian sultans strove to accumulate agricultural land in various ways for their private income sources, and the scale of this accumulation grew steadily. The circumstances that led to their acquisition of private income sources were the chronic financial difficulties of the times, which were mainly caused by the alienation of the state lands since the late Bahri Mamluk period.[27] Despite this, the sultans took countermeasures against this alienation of state lands in their capacity as the head of the government, while simultaneously trying to acquire state land personally and transform it to *amlāk, awqāf, mustaʾjarāt,* and *ḥimāyah,* just as other amirs were doing, thereby contributing to the alienation of state land. How can we explain this baffling and contradictory behavior? It is hardly surprising that the sultans, who were originally amirs, continued to pursue the holding of private property, as the other amirs did. More noteworthy is the reorganization of the financial system of the government that occurred in the beginning of the Circassian Mamluk period. With the establishment of al-Dīwān al-Mufrad, the state's finances began to be administered by three independent *dīwān*s, namely, the Dīwān al-Wizārah, the Dīwān al-Khāṣṣ, and al-Dīwān al-Mufrad, each of which was responsible for providing certain allowances from its own resources.[28] Although in theory, after paying expenses, the remainder of each *dīwān*'s income should have been delivered to the sultan, in practice this was actually impossible, due to the chronic financial difficulties of the times. Inevitably, in order to raise money that they needed for themselves for things such as purchasing slaves to increase the Royal Mamluk corps *(al-mamālīk al-sulṭānīyah),* paying bonuses, and granting rewards to political supporters, the sultans needed to generate their own revenue sources independently of the state's finances.

Next, we will examine the office that held control over the sultan's private properties. The *Dīwān al-Amlāk wa-al-Awqāf wa-al-Dhakhīrah* was the special financial bureau that was established under Barqūq's reign for this purpose. However, as Table 1 indicates, the *ustādār*s or *nāẓir*s of this *dīwān* were not mentioned in the sources until over twenty years after the death of Taqī al-Dīn

1930–42) (hereafter cited as *Ḥawādith*²), 458.

[26] Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963–72), 16:160.

[28] Ibid., 127–28.

ʿAbd al-Wahhāb ibn Abī Shākir in 819/1417; in fact, they do not occur until late in Barsbāy's reign. I suggest that this was due to the fact that the sultanic treasury *(al-khizānah al-sharīfah/khizānat al-sulṭān;* pl. *khazāʾin),* which kept the incomes in custody, only gradually became organized into its final form as its role expanded into the sphere of financial affairs and it came to supervise the sultan's private property directly. Although the term *khizānah*—meaning "treasury" in Arabic—occurs frequently in the sources throughout the Mamluk period, that to which the term actually referred transformed over time. In the Bahri Mamluk period, the state's income was delivered to the public coffers *(Bayt al-Māl/al-Khizānah [al-Kubrá])* in the Citadel *(Qalʿat al-Jabal)* in Cairo. Then, with the establishment of Dīwān al-Khāṣṣ in the third reign of Sultan al-Nāṣir Muḥammad ibn Qalāwūn (709–41/1310–41), a large amount of tax revenue flowed into the private coffers *(Khizānat al-Khāṣṣ),* which were under the jurisdiction of *nāẓir al-khāṣṣ*, the director of the *dīwān*. As the result, the public coffers became redundant and were finally converted into a warehouse for the robes of honor *(khilʿah)* that the *nāẓir al-khāṣṣ* was responsible for procuring and providing.[29] However, when the *majlis al-mashūrah* (the Supreme Council), consisting of seven high-ranking amirs, assumed the reins of government in 748/1347 in the wake of the sultan's loss of real political power, the private coffers were put under the jurisdiction of the *raʾs nawbat al-umarāʾ* (the head of guards of amirs).[30] Consequently, the Dīwān al-Khāṣṣ lost its original role as the special organization that was responsible for administrating the sultan's "private property," as the name indicated; hereafter, it became one of the official financial bureaus of the government.

Conversely, in the Circassian Mamluk period, the sultanic treasury was put under the direct control of the sultan, holding its own revenue sources independently of the financial bureaus of the government. This sultanic *khizānah* was located inside the sultan's private area in the Citadel and was superintended by a *khāzindār* (treasurer), a eunuch who had been appointed to the role, which acquired further importance as the treasury came increasingly under the sultan's direct control.[31] This office of *khāzindār* originated from the office of *khāzindār al-dhakhīrah,* which had been occupied by a eunuch, Sandal al-Manjakī, under

[29] Al-ʿUmarī, *Masālik,* 61; al-Maqrīzī, *Khiṭaṭ,* 3:734; Hassanein Rabie, *The Financial System of Egypt A.H. 564–741/A.D. 1169–1341* (London, 1972), 144. After its conversion to the warehouse for *khilʿahs,* the public coffers came to be called "the supreme coffers *(al-Khizānah al-Kubrá),*" then "the coffers of the *Khāṣṣ (Khizānat al-Khāṣṣ)*" because it was under the jurisdiction of the *nāẓir al-khāṣṣ* (al-Qalqashandī, *Ṣubḥ,* 3:472). The coffers disappeared, being converted into a prison by Amīr Minṭāsh in 791/1389 (al-Maqrīzī, *Sulūk,* 3:674; idem, *Khiṭaṭ,* 3:734–35).

[30] Al-Maqrīzī, *Sulūk,* 2:750–51.

[31] Ibid., 3:1067–68; *Dīwān al-Inshāʾ,* fol. 127r.

Barqūq;[32] we must discriminate between this office and that of the *amīr khāzindār* (it is also usually referred to in the sources simply as *khāzindār*), a position which was filled by an amir of ten *(amīr ʿasharah)* or amir of forty *(amīr al-ṭablkhānah)* and was included among the military functionaries.[33] Thus, the sultanic treasury of the Circassian sultans was a new treasury in which the sultan's personal money and property, which had increased through Barqūq's establishment of the *Dīwān al-Amlāk,* were deposited, independent of the financial bureaus of the state.

Incidentally, with the enlargement of the sultan's private property in the period during and after Barqūq, the eunuch *khāzindār* in charge of the sultanic treasury gained importance and became influential over the government; this was especially the case when Zayn al-Dīn Marjān al-Hindī assumed the office of the *khāzindār* under Sultan Shaykh.[34] During his term of office, the sultanic treasury gained exclusive income sources and assumed new roles.[35] Around this time, the sources frequently mention the office of *nāẓir al-khizānah,* the accountant of the sultanic treasury.[36] In particular, members of the Jīʿān family (Banū al-Jīʿān) were employed in this area until the very end of the Mamluk sultanate.[37] The fact that the post of *nāẓir al-mustaʾjarāt al-sulṭānīyah bi-al-Shām* was concurrently held by

---

[32] Ibn al-Furāt, *Duwal,* 9:128, 429; al-Ṣayrafī, *Nuzhah,* 2:28; Ibn Qāḍī Shuhbah, *Tārīkh,* 4:48; Igarashi, "The Private Property and *Awqāf*," 173.

[33] Whereas a eunuch held the post of *khāzindār,* at the same time another person was at the post as *amīr khāzindār*. For example, see Ibn Taghrībirdī, *Ḥawādith¹,* 1:29–30, 106, 195, 333–34, 409–10.

[34] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, 1934–37), 10:153–54.

[35] In 816/1413, the Dīwān al-Mawārīth (the bureau of inheritances) was separated from the jurisdiction of the Dīwān al-Wizārah and the Dīwān al-Khāṣṣ; henceforth heirless estates came to be delivered directly to the sultanic treasury (al-ʿAynī, *ʿIqd al-Jumān fī Tārīkh Ahl al-Zamān,* ed. ʿAbd al-Rāziq al-Ṭanṭāwī al-Qarmūṭ [Cairo, 1985], 164; al-Maqrīzī, *Sulūk,* 4:257; Ibn Ḥajar, *Inbāʾ al-Ghumr,* 3:8; al-Ṣayrafī, *Nuzhah,* 2:325). In 818/1415–16, the *nāẓir* of the sultanic treasury assumed the role of providing the *kiswah* for the Kaʿbah (al-Maqrīzī, *Sulūk,* 4:382). In 823/1419, the Dīwān al-Khāṣṣ was put under the jurisdiction of Marjān (Ibn Ḥajar, *Inbāʾ al-Ghumr,* 3:224, 238; al-Sakhāwī, *Ḍawʾ,* 10:153–54). The first obvious instance wherein the sultanic treasury held its own revenue source was seen in 803/1401 under Sultan Faraj. At this time, a vacant *iqṭāʿ* piece of land was converted into an income source of the sultanic treasury. Al-Maqrīzī, *Sulūk,* 3:1067–68.

[36] With the assumption of the post of *nāẓir al-khizānah* under Sultan Shaykh as a beginning, Zayn al-Dīn ʿAbd al-Bāsiṭ henceforth held many offices such as *nāẓir al-jaysh* and became the most influential civilian under the reign of Sultan Barsbāy (Ibn Taghrībirdī, *Manhal,* 7:137–39). We must discriminate between this office and the different office with the same name mentioned in the sources such as *Khiṭaṭ* and *Masālik al-Abṣār,* which had taken charge of the public coffers (mentioned earlier) but lost its role after the establishment of the office of *nāẓir al-khāṣṣ* (al-Maqrīzī, *Khiṭaṭ,* 3:734; al-ʿUmarī, *Masālik,* 61; cf. Rabie, *Financial System,* 143–44).

[37] As for the Jīʿān family, see Martel-Thoumian, *Les civils et l'administration,* 295–319.

the *khāzindār* under Sultan Shaykh indicates that this sultanic treasury became actively involved in the administration of its sources of revenue, in addition to the work of keeping the sultan's money in custody.[38] Under Sultan Barsbāy, who strove to accumulate private assets in various ways, the sultanic treasury acquired additional income sources, and the *khāzindār* exerted increasing influence over the government. A eunuch, Jawhar al-Qunuqbāʾī (d. 844/1440),[39] who served as *khāzindār* throughout Barsbāy's long reign, advised the sultan to establish a monopoly over the spice trade, in order to increase the flow of money into the sultanic treasury.[40] During Jawhar al-Qunuqbāʾī's term of office, the sultanic treasury assumed responsibility for the Mint Bureau *(Dār al-Ḍarb),* which originally belonged to the Dīwān al-Khāṣṣ.[41] Finally, he also assumed responsibility for *al-Dhakhīrah* and collected the money that was generated from it.[42] He acquired an additional post, known as *zimām* (the chief-eunuch), under Sultan Jaqmaq (r. 842–57/1438–53), and he held these two posts until his death in 844/1440. Apart from the short time after his death when the sultan's private financier was appointed once again (Table 1, No. 9), the *khāzindār* serving concurrently as *zimām* continued to be in charge of *al-Dhakhīrah* and to assume the responsibility over the sultanic fisc throughout the greater part of Jaqmaq's reign.[43]

The Establishment of the Sultanic Finances

As we have seen above, the meaning of the term *al-Dhakhīrah* changed over time, from "treasure," to the sultan's sources of income—especially those relating to agricultural land during the reign of Sultan Barsbāy. However, the sultan's categorization of these properties as his "private property" gradually became obscured, as a large proportion of these properties were originally the state's property. After 844/1441 when Zayn al-Dīn ʿAbd al-Raḥmān ibn al-Kuwayz was appointed as the sultan's private financier (Table 1, No. 9), the sources came to refer to *al-Dhakhīrah* independently, without referring to it together with *awqāf,*

[42] Al-Maqrīzī, *Sulūk,* 4:1234; Ibn Taghrībirdī, *Manhal,* 5:40; al-Ṣayrafī, *Nuzhah,* 4:225–26; ʿAbd al-Bāsiṭ, "Rawḍ," 1: fol. 14v. I interpret *al-Dhakhīrah* here to represent the sultan's lands privately held in the various shapes as we have seen above.

[43] Fayrūz al-Nūrūzī, who was the *zimām-khāzindār* during the period between the reigns of Jaqmaq and al-Ẓāhir Khushqadam (r. 865–72/1461–67), entrusted the work of *al-Dhakhīrah,* which was within his jurisdiction, to Yūnus ibn ʿUmar ibn Jarabughā, his private *dawādār,* as its *mutakallim* (the staff in charge of the work) (al-Ṣayrafī, *Inbāʾ al-Haṣr bi-Abnāʾ al-ʿAṣr* [Cairo, 1970], 467).

amlāk, or others. This is because it became the generic term for various kinds of official financial resources that were under the direct control of the sultan. In the period of Jaqmaq's reign in the middle of the ninth/fifteenth century, the lands of *al-Dhakhīrah (bilād al-dhakhīrah)* referred to the sultanic domains, i.e., lands officially designated as the sultan's exclusive financial resources, independent of the state's finances. According to Ibn al-Jīʿān's *Tuḥfah,* the lands of *al-Dhakhīrah* in Egypt were composed of forty-eight districts *(nāḥiyah)* around 885/1480, under Sultan Qāytbāy.[44] We have no definite information about how and when this development occurred. However, in view of the fact that the vast private holdings of the sultan consisted of *amlāk, mustaʾjarāt,* and other lands that had originally been diverted from the state domains, it seems reasonable to suppose that these lands gradually came to be recognized as under the sultan's direct control and for his exclusive use. That is, as the sultan collected ever more state lands for his own use, eventually all pretence was dropped, and these lands were acknowledged as belonging to the sultan himself rather than the state.

The sultans added various kinds of land (such as *milk, waqf,* and *mustaʾjarāt*) to *al-Dhakhīrah* at opportune times to increase their income sources.[45] The *iqṭāʿ* land was also targeted for this purpose.[46] However, some *iqṭāʿ*s were occasionally granted to amirs and mamluks from the land of *al-Dhakhīrah*. The first instance of this that appears in the sources involves al-Manṣūr ʿUthmān, who succeeded his father Jaqmaq as the sultan in 857/1453. He granted three of the *iqṭāʿ*s of the amirs of ten derived from the lands of *al-Dhakhīrah* to military men.[47] Henceforth, especially during the distribution of honors and reshufflings of personnel, or when the new sultan was enthroned, *iqṭāʿ*s were often distributed from the lands of *al-Dhakhīrah.*[48] When al-Nāṣir Muḥammad ibn Qāytbāy (r. 901–4/1495–98) was enthroned after the death of his father Qāytbāy in 901/1495, he distributed about one thousand *iqṭāʿ*s to amirs and mamluks—these were all the *iqṭāʿ*s which had been included in the lands of *al-Dhakhīrah* under his father's reign. He did

not keep any of them in reserve.[49] Furthermore, if the sultan's power became unsettled, then he became obliged to distribute some of the land of *al-Dhakhīrah* as *iqṭāʿ*s among the troops to placate them.[50] These examples, in which *iqṭāʿ*s were included in *al-Dhakhīrah* and distributed from it, provide the basis for Poliak's interpretation of the *Dīwān al-Dhakhīrah* as a department that was responsible for managing and exploiting the vacant *iqṭāʿ*s, as is mentioned above. However, these phenomena arose from circumstances wherein on the one hand, the sultan strove to add *iqṭāʿ*s into *al-Dhakhīrah* in order to increase his financial resources, yet on the other hand he was forced to use it as a pool from which he could distribute land depending on the political situation. In short, these phenomena resulted from the competition between the sultans and other ruling elites regarding the acquisition of land and the balance of power between them. To put it another way, the strength of the sultan's power base and the relationship between the sultan and other ruling elites, such as amirs and mamluks, decided the scale of *al-Dhakhīrah*'s land and whether the sultan was able to establish a firm source of revenue.

Because of the diversification that was occurring in the land held by Circassian Mamluks, *al-Dhakhīrah*'s land included many types of land. For example, many *rizqah*s (pl. *rizaq*) were added to *al-Dhakhīrah*[51] in addition to water wheels *(dūlāb,* pl. *dawālīb),* which were indispensable to agriculture.[52] Furthermore, when powerful figures who held a large amount of land in various forms, such as *iqṭāʿ, amlāk, awqāf, mustaʾjarāt,* and *ḥimāyah,* died or fell from power, these lands were often added to *al-Dhakhīrah*. Without returning these "leased" or "protected" lands to the governmental domain, these lands were continuously administered en bloc by an independent *nāẓir* who was newly appointed by the sultan, and the income generated from them was delivered to *al-Dhakhīrah.*[53] Moreover, the posts of the *nāẓir*s of various *awqāf* were often added to *al-Dhakhīrah*. For example, when two prominent amirs, Jānībak Nāʾib Juddah, the *dawādār kabīr,* and Tanam Ruṣāṣ, the

The case of the *dawādār kabīr* Jānībak Nāʾib al-Juddah, the amir of a hundred *(amīr miʾah muqaddam alf),* and the *muḥtasib* Tanam Ruṣāṣ, the amir of forty (in 867/1463): Ibn Taghrībirdī, *Ḥawādith²,* 770.

muḥtasib, were killed during a political struggle in 867/1463, their *awqāf* were added to *al-Dhakhīrah* along with their *iqṭāʿ*s and other properties.[54] The post of the *nāẓir* of Nuri hospital *(al-Bīmāristān al-Nūrī)* in Damascus, which had been in the hands of the Shafiʿi judge of Damascus, was also included in *al-Dhakhīrah* before 917/1511.[55] *Al-awqāf al-zimāmīyah,* i.e., the *awqāf* established by the successive *zimām-khāzindār*s, were administered by the *nāẓir al-dhakhīrah.*[56] In these cases, these *waqf* properties were not "confiscated" and transferred to *al-Dhakhīrah;* on the contrary, by keeping their status as *waqf,* the posts of their *nāẓir*s, having the authority to collect fees from the *waqf*-endowed properties and to manage their own income, were put under the control of *al-Dhakhīrah* with regard to their financial interests. These posts were not permanently included in *al-Dhakhīrah,* but were given to other people according to their specific circumstances. At this stage, we should pay attention to one case when Sultan Muḥammad ibn Qāytbāy was enthroned in 901/1495. As we have seen above, as soon as he ascended to the sultanate, he allocated a large amount of *iqṭāʿ* lands that had been included in *al-Dhakhīrah* to amirs and mamluks, for the purpose of gathering support from them. At the same time, he also allocated to them the posts of the *nāẓir*s of various *awqāf* that had been included in *al-Dhakhīrah,* as they were similar to *iqṭāʿ*s.[57] This fact implies that the posts of the *nāẓir*s of *awqāf* were treated as a kind of income source, which was freely transferred among people.

The financial interests concerning commercial activities were also included in *al-Dhakhīrah*. We will begin by considering the spice trade, one of the most important income sources for the Circassian Mamluk sultans. As soon as Sultan Shaykh was enthroned in 815/1412, he started forcing Venetian merchants, who were visiting Alexandria to trade in spices, to purchase a fixed amount of spice from the sultan's private stock at a higher price than the market price.[58] Then, Sultan Barsbāy advanced this policy and set up a spice monopoly, excluding ordinary merchants from the spice trade. Although this monopoly did not continue to work long term, this way of forcing Venetian merchants to purchase the sultan's spices continued until the very end of the Mamluk sultanate, and the spice trade became one of the most important income sources for subsequent sultans.[59] In

[59] As for the commercial policy of Sultan Barsbāy, see Aḥmad Darrāj, *L'Égypte sous le règne de Barsbāy* (Damascus, 1961), chap. 6; John L. Meloy, "Imperial Strategy and Political Exigency: The

the late Mamluk period, after the enthronement of Sultan Qāytbāy, the sultan's merchants *(tājir al-sulṭān),* who were involved in spice dealing on behalf of the sultan, were also called "the *Dhakhīrah*'s merchants" *(tājir al-dhakhīrah al-sharīfah)*.[60] Moreover, as is noted above, the term "dacchieri" (i.e., *al-Dhakhīrah*) was often used in the documents when describing the commercial agreements that were concluded between Venice and the Mamluk government. According to studies using the documentary sources, Venetian merchants who were permitted to stay in Alexandria during a fixed period of time every autumn were obliged to purchase 210 sporte[61] of pepper from *al-Dhakhīrah* and to pay the price that had been allotted to it.[62] The price of *al-Dhakhīrah*'s pepper was decided after a consultation undertaken between four merchants, who were appointed by the Venetian consul in Alexandria, and the staff of *al-Dhakhīrah.* This committee then discussed the matter with the *tājir al-dhakhīrah.*[63] In exchange, precious metals that had been brought by the Venetians were exclusively bought by *al-Dhakhīrah.*[64] In addition to these agreements, *al-Dhakhīrah* also laid claim to a part of the customs that had been levied on imported and exported goods, the additional fees that had been levied for the extension of Venetians' permitted stay in Alexandria, and the confiscated property of offenders who overstayed the period of their resident permit.[65] The *nāẓir al-dhakhīrah* stayed in Alexandria to supervise the trade during the period,[66] and the keys of the coffers in which quality-checked

[65] Ibid., 26–27, 41, 42.

[66] Wansbrough, "A Mamluk Ambassador," 528 (art. 12). There was a secretary for *al-Dhakhīrah (kātib al-dhakhīrah)* in Alexandria regularly (Cairo, Wizārat al-Awqāf [WA], j483, v. [document

peppercorns were stored were kept by him and the Venetian consul.[67] These facts indicate that it was not only the revenues from the sultan's transactions in spice that came to be included in *al-Dhakhīrah,* but also some of taxes on commercial activities,[68] despite the fact that tax revenues collected from foreign merchants in Alexandria were originally a part of the income sources of the Dīwān al-Khāṣṣ.[69] In addition to spice, the sultans earned a high income from commercial activities such as speculation in grain, and by participating in trade in sugar, timber, etc. The sultan's warehouses *(al-ḥawāṣil al-sulṭānīyah)* and the granaries *(shuwan, ahrāʾ)* in which these goods were stored[70] came to be called "*Ḥawāṣil al-Dhakhīrah*" and "*Shuwan al-Dhakhīrah*" in the late Mamluk period, and special staff members were appointed for their administration.[71] The monthly tax *(mushāharah)* and the weekly tax *(mujāmaʿah)* that were collected from the markets *(sūq)* in Cairo also contributed to the revenue of *al-Dhakhīrah.*[72] Although the first obvious instance of a payment of these taxes to *al-Dhakhīrah* occurred in a case in 907/1502,[73] it is clear that merchants had been obliged to pay some taxes to *al-Dhakhīrah* regularly prior to that.[74]

Incidentally, although successive sultans intervened actively in commercial activities throughout the Circassian Mamluk period,[75] the term *al-Dhakhīrah*

on 15 Ramaḍān 899]).

[67] Wansbrough, "A Mamluk Ambassador," 528–29 (art. 15).

[68] In addition, "*al-Dhakhīrah*'s pepper *(filfil dhakhīratnā al-sharīfah)*" was mentioned in Qāytbāy's letter sent to Venice in 877/1473 (Wansbrough, "A Mamluk Letter," 206, 211). These spices were procured from merchants visiting Jiddah, a Red Sea port, through various ways such as the compulsory purchase of a third of their load of spice at their buying cost in Calcutta in India (Gabriel Ferrand, "Les Poids, Mesures et Monnaies des du Sud aux XVe et XVIIe siècle," *Journal Asiatique,* série 11, tome 16 [1920]: 19). Three decrees dated in 891/1486 and 892/1487, included in the documents of the monastery of St. Catherine, mention Sultan Qāytbāy's orders to his staff in al-Ṭūr, a coastal port at the Red Sea, to store "*al-Dhakhīrah*'s spice *(bahār al-dhakhīrah al-sharīfah)*" in warehouses *(ḥawāṣil)* (Hans Ernst, *Die mamlukischen Sultansurkunden des Sinai-Klosters* [Wiesbaden, 1960], 182, 184, 188).

[75] The latest study on Barsbāy's intervention in transactions in wheat and sugar is John L. Meloy's "Economic Intervention and the Political Economy of the Mamluk State under al-Ashraf Barsbāy,"

rarely appears in the contemporary sources in relation to the sultans' commercial activities before Qāytbāy's reign.[76] The first instance where the term *al-Dhakhīrah* was used in this way is, to my knowledge, Ibn ʿUraybah's assumption of the office of *tājir al-sulṭān* and *nāẓir al-dhakhīrah* in 877/1472 under Qāytbāy.[77] On the contrary, *al-Matjar al-Sulṭānī,*[78] an office that had been in charge of the sultan's private commercial activities beforehand, is rarely mentioned in the sources after Qāytbāy's enthronement. Therefore, it seems reasonable to suppose that the function and role of *al-Matjar* was included in *al-Dhakhīrah,* and that, as a result, *al-Dhakhīrah* became the generic term for all the sultanic financial resources. Moreover, the payment for the sale of governmental offices, and the confiscation of the property of officials who had died or lost their office, are usually expressed in the sources as money or property that had been "paid to the sultanic treasury." However, sometimes, especially in the sources written after the middle of the ninth/fifteenth century, they are referred to as being "paid to *al-Dhakhīrah,*"[79] where the term *al-Dhakhīrah* is used in the same way as *khizānah*. It seems that the sultanic treasury was regarded as a part of *al-Dhakhīrah*. Sometimes, other financial interests belonging to the government or officials, such as the rights and interests of the Mint Bureau, were added to *al-Dhakhīrah.*[80] Moreover, *al-Dhakhīrah* had many sources of income from various regions in Syria. For instance, in Ṣafar 857/February 1453, 95,000 dinars that had been collected from *al-Dhakhīrah*'s income sources in Syria were delivered to Cairo.[81] *Al-Dhakhīrah* had many financial interests, especially in the Nabulus region.[82] Yūnus ibn ʿUmar ibn Jarabughā, who was responsible for *al-Dhakhīrah* as *mutakallim* under the supervision of the *zimām-khāzindār* Fayrūz al-Nūrūzī during Jaqmaq's reign, and then officially assumed the office of *nāẓir al-dhakhīrah* at a certain time during al-Ashraf Īnāl's reign, took a tour of the Syrian regions and appointed a financial

agent *(ustādār)* for *al-Dhakhīrah* in every region.[83]

Al-Dhakhīrah was usually administered by the *zimām-khāzindār,*[84] but the sultans sometimes entrusted it to an independent official[85] or a powerful figure in the government.[86] This was probably to consolidate its operation. After Qāytbāy's enthronement and the introduction of his policies on the expansion of the sultanic fisc, the responsibility for the sultanic finances was divided among people who were of a relatively low rank in the government but who had personal connections with the sultan.[87]

Ever since the sultans began accumulating land as their own private property, the main purpose in establishing the sultanic fisc had been to secure and increase independent revenue sources for the sultanate. Therefore, the income was basically distributed at the sultan's own discretion.[88] Although the specific details of its distribution are rarely mentioned in the sources, it seems reasonable to suppose that the income was used to award bonuses (*nafaqah*) for personnel involved in the ongoing military expeditions (which used to be distributed directly from the sultanic treasury),[89] for the purchase of slaves in order to organize the *mushtarawāt* (mamluks who were trained by the present ruling sultan), and for political funds to help secure and exercise his political power, etc.[90] However, under the deteriorating financial circumstances that occurred after the middle of the ninth/fifteenth century, the sultanic fisc extended its role in the administration and finance of the state; I believe that it was this that prompted the development

[83] Al-Ṣayrafī, *Inbāʾ al-Haṣr,* 431–32, 467–68. See note 43.

[84] For example, Fayrūz al-Nūrūzī, who took the two posts of *zimām* and *khāzindār* in 846/1442 and kept them under the five sultans until his death in 865/1461 (Ibn Taghrībirdī, *Nujūm,* 16:29; idem, *Ḥawādith¹,* 1:340; al-Sakhāwī, *Tibr,* 428; al-Biqāʿī, *Iẓhār,* 1:300).

[89] Cf. al-Ṣayrafī, *Nuzhah,* 3:266.

[90] According to *Sulūk, nafaqahs* for the Royal Mamluk corps, presents *(silāt)* for amirs and Turkmen, and the expenses of the purchase of mamluk slaves and of military expeditions were referred to as "the sultan's expenditures *(nafaqāt al-sulṭān)*" paid by Sultan Jaqmaq (al-Maqrīzī, *Sulūk,* 4:1228–29). According to another source, the expenses of military expeditions, the purchase of mamluk slaves, arms, horses, arrows, and lancers, constructions and repairs of buildings, rewards *(inʿām),* presents, charities *(birr),* and *ṣadaqah* were derived directly from the sultanic treasury (anon. "Tārīkh al-Malik al-Ashraf Qāytbāy," British Library MS Or 3028, fol. 15r–v).

of the sultanic fisc—the change in its character from the sultan's private property to the official revenue sources that were directly assigned to the sultanate. Compensation for the deficits of the financial bureaus of the government, such as the Dīwān al-Wizārah and al-Dīwān al-Mufrad, came from *al-Dhakhīrah*. The first instance of this can be seen in a case in Ṣafar 860/January 1456, under Īnāl. At this time, the vizier (*wazīr;* the chief of the Dīwān al-Wizārah) Faraj ibn al-Naḥḥāl had disappeared because of his failure, due to insufficient funds, to pay for the daily meat supplies that were required by the Royal Mamluk corps, for which the Dīwān al-Wizārah had responsibility. After returning, Īnāl requested that he stay in office on the condition that 40,000 dirhams per day were supplied to the Dīwān al-Wizārah from *al-Dhakhīrah*'s fund.[91] As the result of further cash injections from *al-Dhakhīrah*'s fund, the amount per day reached 70,000 dirhams.[92] The injection of *al-Dhakhīrah's* money into al-Dīwān al-Mufrad, which was responsible for the monthly stipends and other essentials required by the Royal Mamluk corps, had been carried out since before 863/1459.[93] In addition to this, in 867/1463, Sultan al-Ẓāhir Khushqadam agreed that 10,000 dinars per month would be injected from *al-Dhakhīrah*'s fund into al-Dīwān al-Mufrad.[94] Although this agreement was not fulfilled in the end, the injection of 8,000 dinars per month was maintained, as it had been before.[95] In 888/1484, Sultan Qāytbāy covered the deficit of the Dīwān al-Khāṣṣ that had been accrued by distributing sheep for sacrifice on the occasion of ʿĪd al-Aḍḥá.[96] While previous sultans had sometimes made temporary compensation for the deficits of these financial bureaus of the government,[97] it became far more commonplace during and after the reign of Īnāl.[98] This shows that *al-Dhakhīrah* had become indispensable for the management of the financial bureaus, especially as financial difficulties had reached their limit by this time.

Furthermore, *al-Dhakhīrah* undertook the responsibility of paying regular salaries and stipends. For instance, around 850/1446–47, a qadi regularly

[91] Ibn Taghrībirdī, *Ḥawādith¹,* 1:492–93; ʿAbd al-Bāsiṭ, *Nayl,* 5:455. The next month, from the earnings from ex-*iqṭāʿ*s of amirs, 35,000 dirhams per day were added to the amount of money being injected into the Dīwān al-Wizārah. See Ibn Taghrībirdī, *Ḥawādith¹,* 1:494–95. Cf. ʿAbd al-Bāsiṭ, *Nayl,* 5:456–57.

received 3,000 dirhams per month from *al-Dhakhīrah.*[99] During Qāytbāy's reign, *al-Dhakhīrah* was responsible for granting pensions to retired amirs *(ṭarkhān)* and was partly responsible for providing the meat supplies to the military, civilians, and scholars during ʿĪd al-Aḍḥá. Moreover, many amirs, including some amirs of a hundred, regularly came to receive monthly stipends and wheat rations from *al-Dhakhīrah* instead of holding *iqṭāʿ*s.[100] Such an expansion of the role of *al-Dhakhīrah* in the spheres of administration, finance, and military affairs shows the limitations of the traditional structure of the Mamluk state, which was based on the *iqṭāʿ* system and the state's landholding. Although the various endeavors of successive sultans to reconstruct state finances throughout the Circassian Mamluk period were successful to a certain degree, they tended to lack a long-term outlook and clearly never solved the fundamental financial difficulties, i.e., the weakening of the state's control over land management and the alienation of the state land. Under these circumstances, the sultanic fisc, which covered the revenue shortage of the government's purse, gradually came to be indispensable for the smooth management of the administration. Consequently, the financial burden placed on *al-Dhakhīrah* was growing,[101] and its financial troubles directly affected the state's finances,[102] inducing the expansion of the financial resources of *al-Dhakhīrah*. Finally, especially after the succession of Qāytbāy, and with the state's finances becoming increasingly subordinate to the sultanic finances, the latter came to play a pivotal role in the administrative, financial, and military affairs of the Mamluk state.[103]

However, it must be noted again that these phenomena occurred in parallel with the accumulation of properties by powerful amirs, who were anxious to hold onto their personal revenue sources, in addition to their *iqṭāʿ*s; they did this in various ways including holding *amlāk, awqāf, mustaʾjarāt, ḥimāyah,* and commercial activities, just as the sultans did. There was no essential difference between the form and character of the sultanic fisc and that of the amirs' private resources, aside from their scale. In other words, the expansion of the sultanic fisc that we have investigated in this article did not reflect a unilateral strengthening of the sultan's power, or a radical change of its character. Rather, it may be assumed that these trends were advancing in the wake of a situation wherein the ruling elite of the Mamluk state—the amirs, and the sultan as the principal among them—were personally accumulating various rights and interests and

were forming their power bases outside the framework of the traditional state structure. The evolution of the sultanic finance system and *al-Dhakhīrah* resulted in the weakening of the ruling system of the government machinery; as the process developed, *al-Dhakhīrah* functioned as a means of maintaining the rule of the Mamluk regime.

From Ceramics to Social Theory: Reflections on Mamluk Archaeology Today

Nearly seventy publications by Carl Petry appear in the Chicago Online Bibliography of Mamluk Studies, covering themes as diverse as gender and economic reform.[1] Anyone with some anthropological or sociological training will immediately recognize and appreciate the degree to which a curiosity about all things "social" permeates his work. From *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981) to his more recent studies on crime and punishment,[2] Petry has sought to describe the structure of Mamluk-era societies, and the functions of and relations among their components, by using a range of textual sources. It is in the spirit of his contributions to Mamluk social history that the following review article is presented. The value of archaeology today in Mamluk studies lies clearly in the realm of socio-economic history and social theory. Decade-long efforts at developing field methods and interpretive theory are resulting in a kind of archaeology that is meaningful to text-based historians and is fostering

I am grateful to Bruce Craig for the invitation to contribute to this festschrift. I would also like to thank Drs. Katia Cytryn-Silverman, Tali Erickson-Gini, Basema Hamarneh, Khaled Nashef, Mouʿin Sadeq, Hamed Salem, and Edna Stern, who discussed their projects with me and provided photos and references. This review would not have been possible without this kind of collaborative spirit and generosity.

[1] For the former, note his "Class Solidarity versus Gender Gain: Women as Custodians of Property in Later Medieval Egypt," in *Women in Middle Eastern History,* ed. Nikki R. Keddie and Beth Baron (New Haven, 1991), 122–42, and "Conjugal Rights Versus Class Prerogatives: A Divorce Case in Mamluk Cairo," in *Women in the Medieval Islamic World: Power, Patronage, and Piety,* ed. Gavin R. G. Hambly (New York, 1998), 227–40. For the latter see "Fractionalized Estates in a Centralized Regime: The Holdings of al-Ashraf Qaytbay and Qansuh al-Ghawri According to their Waqf Deeds," *Journal of the Economic and Social History of the Orient* 41, no. 1 (1998): 96–117, and "Waqf as an Instrument of Investment in the Mamluk Sultanate: Security or Profit?" in *Slave Elites in the Middle East and Africa: A Comparative Study,* ed. Toru Miura and John Edwards Philips (New York, 2000), 99–115.

[2] For example, his "'Quis Custodiet Custodes?' Revisited: The Prosecution of Crime in the Late Mamluk Sultanate," *Mamlūk Studies Review* 3 (1999): 13–30; "Crime in Mamluk Historiography: A Fraud Case Depicted by Ibn Taghrībirdī," *Mamlūk Studies Review* 10, no. 2 (2006): 141–51; and "The Hoax of the Miraculous Speaking Wall: Criminal Investigation in Mamluk Cairo," in *Mamluks and Ottomans: Studies in Honour of Michael Winter,* ed. David J. Wasserstein and Ami Ayalon (New York, 2006), 86–95.

dialogue between the two disciplines.

Islamic archaeology as a whole has undergone a process of self-critique and growth. Insoll's *The Archaeology of Islam,* published ten years ago, was appropriately critical of the narrow focus and theoretical weaknesses of the discipline at the time, too often producing technical reports that failed to engage the theoretical debates of the day and ceramic studies that rarely went beyond the technical issues of chronology and provenance.[3] Insoll was particularly concerned about the following, which in his mind threatened to marginalize Islamic archaeology within its own discipline and render it irrelevant to area studies and history:

> 1. the narrow, one-dimensional emphasis of contemporary research (p. 4);
>
> 2. its near obsession with monuments and elite art, which led it to neglect entire categories of data that did not service the study of art (p. 5);
>
> 3. the general lack of interest by the archaeologists themselves in the environment and land use (p. 5).

In order to address these problems, Insoll called for multi-disciplinary research projects (with deliberate attempts to incorporate the methods, models, and paradigms of anthropology, history, and sociology); development of an archaeologically sound social theory; expanding data sets to include such things as botanical and faunal remains and coarse wares relevant to analyses of climate, diet, and consumption; and expanding research agendas to include economic, demographic, landscape, and environmental studies. Moreover, Insoll expressed concern about "a perceived inferiority of archaeological evidence to the written word,"[4] referring to attitudes towards archaeological research among many text-based historians of the medieval periods. This latter point is an important one, as it reflected not only on the inability of archaeologists to articulate the relevance of their research but also on their circumvention of textual data. Their preference for cultural theory over textual analysis stems from differences in scholarly training between historians and archaeologists in the U.S., who usually receive their

[3] Timothy Insoll, *The Archaeology of Islam* (Oxford, 1999). For similar critiques, see Donald Whitcomb, "Mamluk Archaeological Studies: A Review," *Mamlūk Studies Review* 1 (1997): 97, 105, and Marcus Milwright, *An Introduction to Islamic Archaeology* (Edinburgh, 2010).

[4] Insoll, *The Archaeology of Islam,* 4, referring to Timothy Champion, "Medieval Archaeology and the Tyranny of the Historical Record," in *From the Baltic to the Black Sea: Studies in Medieval Archaeology,* ed. David Austin and Leslie Alcock (London, 1990), 79–95.

training in anthropology and art history programs, rather than history, although this is changing.

Ten years later a different picture of the field is developing, one that is especially promising for new directions of research in Mamluk studies. Something that we may call a bona fide "Mamluk archaeology" has emerged: it more actively engages written sources; encourages cross-disciplinary and collaborative research; is genuinely concerned with issues related to the environment and resource management (reflecting the personal interest of many project directors in the contemporary issues of development and sustainability); is committed to developing theory; and is actively exploring the complex dynamics of local societies. In doing so, the archaeology of today is better equipped to make the written record more "human" by giving voice to the silent masses that are largely invisible in narrative and documentary sources. In combination with ethnographic analogy and anthropological theory, archaeological fieldwork can produce a more intimate picture of local (and particularly rural) society than ever before. Moreover, it has the potential of exploring, on a very human level, how poor the poor really were; what "luxury" meant to most people; what the common man ate and how he lived and died; what a drought could do to a settlement physically, economically, socially; and how people were impacted, in very tangible ways, by political turmoil. On the level of social theory, archaeology can document long-term developments (the *longue durée* of the Annalistes) in a way that written sources alone cannot. An archaeology of Mamluk society also delivers a spatial dimension for studying social structures and change. Most of the field projects described below are concerned not only with chronological depth but also spatial breadth, exploring the physical landscape of rural societies and their management of natural resources. Such issues as the degree to which the state invested in rural areas, the physical and functional relationships of centers of officialdom (forts, large mosques and shrines, aqueducts, roads, agricultural factories) with villages and towns, and what physically happened to settlements during periods of imperial collapse are best explored through landscape archaeology. As for economic history, new trends in Mamluk archaeology prioritize identifying producers and consumers and describing more clearly their complex relationships with one another, defining market structures and the local and regional networks that supported them, and highlighting ways in which local communities were economically dependent on the state and under what conditions they were most self-sufficient. Archaeology is, in essence, a history of "the social" that provides cumulative, deep-time, and spatial evidence, raising issues about the societies of the day that may not emerge from the written record. Ultimately, it has the potential to offer a very local perspective on the Mamluk state.

Some of the most innovative research along these lines is coming out of

projects based in the southern Bilād al-Shām. This is especially true for Jordan, which offers a particularly interesting and valuable environment for exploring the Islamic eras. Since the Transjordan was never the political center of a medieval Islamic state, scholars working here have naturally gravitated towards the study of local society—indigenous culture, the history of local villages and families, provincial and "frontier" studies—that is, micro-history at its best. And certainly in this sense, the archaeology of Jordan can deepen our understanding of Mamluk societies by providing this uniquely local perspective on social and political change. In recent years a renewed appreciation for written sources has enabled projects operating throughout southern Syria to incorporate Arabic sources into their research in more meaningful and creative ways, transforming their fieldwork into historically sound anthropology. Crossing disciplinary boundaries is, in my mind, quite healthy, and I believe the best field projects have taken this discipline in exciting new directions by doing "good history."

The following is a critical review of today's Mamluk archaeology, and it builds on the efforts of Whitcomb in his initial "state of the art" article of 1999.[5] This is not meant to be comprehensive in any sense; rather, it highlights research themes that illustrate the trends towards social and economic history described above. All of the projects described here make use of medieval Arabic sources, though to different degrees and to different purpose. They are collaborative and cross-disciplinary and have contributed new information on the rural societies of the Mamluk Levant.[6] My focus on the southern Bilād al-Shām is deliberate: archaeologists working today in Jordan, Palestine, and Israel, precisely because of their location on the "Mamluk frontier," are largely concerned with rural settlements and the cultures of the non-elite. Their work represents recent

[5] Whitcomb, "Mamluk Archaeological Studies."

[6] Several recent conferences have fostered collaborations between archaeologists and historians, with a special emphasis on the "Middle Islamic" (or Ayyubid-Mamluk) period. Noteworthy among these are the 3-year "Exercising Power in the Age of the Sultanates" project, jointly sponsored by the French and American research centers in Cairo. The Amman conference of 2005 (http://www.caorc.org/highlights/acor/acor-2005-05-16b.htm) tied to this initiative has been recently published as Bethany J. Walker and Jean-François Salles, ed., *Le pouvoir à l'âge des sultanats dans le Bilâd al-Shâm*, as *Bulletin d'Études Orientales* 57 (2008), supplément. In a similar vein, volume 11, no. 1, of *Mamlūk Studies Review* (2007), the "Syria issue," highlighted cross-disciplinary work on Mamluk Syria. More recent international projects in this vein include the November, 2008, conference "La Transgiordania nei Secoli XII–XIII e le 'Frontiere' del Mediterraneo Medievale," sponsored by the University of Florence (http://www.frontierarchaeology.eu/); and the June–July, 2009 workshop on "Material Evidence and Narrative Sources: Interdisciplinary Studies of the History of Islamic Societies," under the sponsorship of Ben-Gurion University of the Negev.

research; many of the field projects are ongoing, and their publications largely span the last decade.

On "Text and Tell": Methods and Theory (Fig. 1)

The archaeology of the Mamluk period, as practiced today, is a form of historical archaeology heavily informed by anthropological models. One methodological development of the last decade has been in the engagement with the written record. The combination of written and material sources is the greatest challenge of any archaeology of historical periods, particularly so with the Mamluk period, which produced a wealth of texts. Many excavation and survey reports now include an explanation, however brief, of how historical sources are used. There has been a very gradual shift from dependence on texts for interpreting archaeological data to creating a dialogue between the two in ways that inform project design. Because written sources and archaeological data answer different sets of questions about human behavior and can differ in chronological scale of inquiry, they can and should be used in tandem to write a multi-faceted history of Mamluk societies. In short, one data set can inform the other. The challenge is to decide which kinds of sources are most appropriate to the subject at hand and to write a coherent, analytical narrative that uses them in complement with one another.

Archaeologists of the Mamluk period ("Middle Islamic" period in archaeological terminology)[7] have generally relied on written sources that are geographically and chronologically useful and readily available in print form (and frequently translated into European languages): narrative sources (primarily chronicles and geographies) and administrative manuals that help identify sites and provide a historical framework for their physical development. When used responsibly, such sources, in combination with archaeological evidence, can produce a rich narrative of Mamluk history.[8] What has been largely missing is an engagement

---

[7] The terminology was first suggested by Whitcomb, who advocated an archaeological periodization over a political one in describing material culture (Donald Whitcomb, "Reassessing the Archaeology of Jordan of the Abbasid Period," *Studies in the History and Archaeology of Jordan* 4 (1992): 386–87).

[8] Some very readable surveys of the Mamluk period in this line for southern Syria include Jeremy Johns, "The *Longue Durée:* State and Settlement Strategies in Southern Transjordan across the Islamic Centuries," in *Village, Steppe and State: The Social Origins of Modern Jordan,* ed. Eugene Rogan and Tariq Tell (New York, 1994), 1–31; Myriam Rosen-Ayalon, "Between Cairo and Damascus: Rural Life and Urban Economics in the Holy Land During the Ayyubid, Mamluk, and Ottoman Periods," in *The Archaeology of Society in the Holy Land,* ed. Thomas Levy (New York, 1994), 512–23; Bethany J. Walker, "Militarization to Nomadization: The Middle and Late Islamic Periods," *Near Eastern Archaeology* 62, no. 4 (1999): 202–32; Alan Walmsley, "Fatimid, Ayyubid, and Mamluk Jordan and the Frankish Interlude," in *The Archaeology of Jordan,* ed. Burton MacDonald, Russell Adams, and Piotr

with contemporary documentary sources. One notable exception is the early Ottoman tax registers (singular, *daftar-i mufassal*) of the ninth/sixteenth century.[9] During the first century of Ottoman rule in Syria, many elements of the Mamluks' administration in the region were retained, including the general administrative structure, some personnel, and many of the larger landed endowments *(awqāf)*.[10] The registers document anticipated income from taxable commodities, though not actual taxes collected, and describe in some detail the status of rural property, whether a settled village *(qaryah),* a village formerly settled but now abandoned *(kharāb),* a piece of cultivated land (such as a garden, *qiṭʿah*), or a tract of cultivated land not associated with a village *(mazraʿah)*. Tax-liable commodities (summer crops, winter crops, livestock, processed agricultural goods and animal by-products such as honey, endowments) are listed along with their estimated revenues. Specific references to land tenure and use, along with incidental information, such as how a plot of land was acquired and what its access was to water, are occasionally included. The registers, moreover, are organized according by tax districts, yielding important details on the administrative structure of the region. The registers of 940/1534, 945/1538–39, 958/1551–52, and 1005/1596–97 are preserved in manuscript form, and from these several segments have been published for Palestine and Jordan. The majority of the publications are in Turkish with Arabic summary and commentary;[11] the most widely cited one, though, is in

Bienkowski (Sheffield, 2001), 515–59; Jumʿa Mahmoud H. Kareem, *The Settlement Patterns in the Jordan Valley in the Mid- to Late Islamic Period* (Oxford, 2000), 11–17, 294–95; and Marcus Milwright, *The Fortress of the Raven: Karak in the Middle Islamic Period (1100–1650)* (Leiden, 2008), 42–48. Such surveys are convenient entrées into the archaeological literature and should be consulted by text-based historians for accessible archaeological narratives on Mamluk history.

[9] Among the earliest registers relevant to southern Syria is *daftar* #340 of ca. 930/1523 in Istanbul (Muḥammad ʿAdnān al-Bakhīt, *Nāḥiyat Banī Kinānah [Shamālī al-Urdunn] fī al-Qarn al-ʿĀshir al-Hijrī/al-Sādis ʿĀshir al-Mīlādī* [Amman, 1989], 6).

[10] It is possible that part of the tax structure was retained as well, but until written documentation of the late Mamluk tax system is identified, this cannot be verified. Certainly what were taxable commodities did not change from the end of the Mamluk to the beginning of Ottoman rule, so one can assume some degree of continuity in the kind of taxes collected and the method of collection.

[11] Those specific to Jordan (Liwa ʿAjlun) include Muḥammad ʿAdnān al-Bakhīt, *Tapu Defteri No. 275, Detailed Register of the Private-Khass of the Governor of the Province of Damascus 958 A.H./1551–2 A.D.* (Amman, 1989); Muḥammad ʿAdnān al-Bakhīt and Noufan Raja Hmoud, *The Detailed Defter of Liwaʾ ʿAjlun (The District of Ajlun) Tapu Defteri No. 970, Istanbul* (Amman, 1989); and idem, *The Detailed Defter of Liwaʾ ʿAjlun (The District of Ajlun) Tapu Defteri No. 185, Ankara 1005 A.H./1596 A.D.* (Amman, 1991). For the Hawran, see al-Bakhīt, *Nāḥiyat Banī Kinānah;* idem, "Nāḥiyat Banī al-ʿAṣr fī al-Qarn al-ʿĀshir al-Hijrī/al-Sādis ʿĀshir al-Mīlādī," *Al-ʿUlūm wa-al-Insānīyah* 15, no. 4 (1988): 149–266; and idem,

English.[12]

Unfortunately, these sources have not been used as fully as they could be: the general trend has been to look up an individual site name and determine whether the place was inhabited and its land continued to be cultivated after Ottoman annexation. The registers, however, yield much more important place-specific data than this. The estimated number of households in each location is included and the *dhimmī*s liable for the *jizyah* are mentioned in each entry of a *qaryah*. Although the numbers are not reliable for population statistics,[13] they do reflect the religious composition of villages, a demographic characteristic that is not readily recognizable in the archaeological record. The registers note, though inconsistently, abandoned villages, the location of roads and waterways, and the existence of facilities such as mills. In spite of this, their potential for studying environmental and land use changes has not been realized. Furthermore, because the Ottomans taxed many landed *awqāf* at a rate of 10%, endowments made during Mamluk rule that were retained as such by the Ottoman state are also named in the registers. In many cases these are the only references we have to these local endowments of grain fields, orchards, and gardens, as they have not been thus far identified in Mamluk-era *waqfīyāt* or chronicles. They attest to the continued economic viability of agricultural land in the region and provide invaluable data on cropping patterns during the transition from Mamluk to Ottoman rule; the value of this data has been largely overlooked.[14] The archaeological use of these

[13] For critiques on calculating population size on the basis of Ottoman tax surveys, see Bekir Kemal Ataman, "Ottoman Demographic History (14th–17th Centuries): Some Considerations," *Journal of the Economic and Social History of the Orient* 35 (1992): 187–98, and Heath W. Lowry, "The Ottoman *Tahrir Defterleri* as a Source for Social and Economic History: Pitfalls and Limitations," in *Studies in Defterology: Ottoman Society in the Fifteenth and Sixteenth Centuries* (Istanbul, 1992), 3–18.

[14] I have pulled heavily from the registers' endowment data for my own fieldwork, which is described later in this article. Some key publications in this regard include Bethany J. Walker, "Mamluk Investment in Southern Bilad al-Sham in the Eighth/Fourteenth Century: The Case of Hisban," *Journal of Near Eastern Studies* 62, no. 4 (2003): 241–61; idem, "Mamluk Investment in Transjordan: A 'Boom and Bust' Economy," *Mamlūk Studies Review* 8, no. 2 (2004): 119–47; idem, "Sowing the Seeds of Rural Decline?: Agriculture as an Economic Barometer for Late Mamluk Jordan," *Mamlūk Studies Review* 11, no. 1 (2007):

registers is challenged by two other trends: site-specific focus and overreliance on a single published register in English. Identifying the tax status of a single site is less meaningful for a regional study, where one would trace the development of the larger geographical region or compare sites. Johns appropriately warns against expecting the registers, which describe a fiscal landscape, to reproduce a physical landscape recognizable archaeologically.[15] They are nonetheless useful in reconstructing that very fiscal landscape on a regional level in a way that reflects the economic life of sixteenth-century rural Syria. In short, such financial data can help refine the interpretation of the archaeological record and make site-specific studies much more relevant for regional history. On a final note, dependence on the English translation of the register of 1005/1596–97[16] is an issue of accessibility: the 1977 edition is in English, its data conveniently transformed into charts and maps by historical geographers. Nonetheless, reliance on a single register robs one of the opportunity to trace the development of a place or region over time (a full century, to be precise, is covered by these registers), the *longue durée* perspective most valued by archaeologists. One should also note that the reliability of this register has been questioned for Transjordan, at least, as it was not under direct government control after mid-century and may have pulled much of its data from an earlier register.[17]

These critiques aside, archaeological scholarship today is looking to Mamluk-era texts to answer broader questions than ever before about contemporary societies. Rural settlement history, which considers when and under what conditions villages emerge and disappear, is a case in point. Survey data suggests cycles of growth and abatement in settlement in the Islamic period as a whole (seventh through early twentieth centuries C.E.), with pronounced "gaps" in the archaeological record when there is no (generally ceramic) evidence for occupation. The Mamluk period, in this sense, is largely characterized by a spike in the number and size of villages in the thirteenth and fourteenth centuries, followed by a marked demographic decline by the fifteenth. Contemporary texts do not fully support this scenario, and instead suggest continued agricultural productivity in some regions. Reconciling the textual and archaeological records on this point has been

173–99; and idem, "The Role of Agriculture in Mamluk-Jordanian Power Relations," in *Le pouvoir à l'âge des sultanats,* 77–96. For a non-archaeological study of the same data for Palestine, see Mehmed İpşirli and Muḥammad Dāwūd al-Tamīmī, *Awqāf wa-Amlāk al-Muslimīn fī Filasṭīn* (Istanbul, 1982).

a goal of many field projects in Jordan. In his review of survey data for the Kerak Plateau, Johns offers reinterpretations of the ceramic data on which this history is based that bring the archaeological record more in line with the picture painted by literary sources. What had been seen previously as "gaps" in the record of settlement after the Islamic conquest, at the end of the Mamluk period, and during the seventeenth–nineteenth centuries (when the region was nominally under Ottoman control) have been accounted for by: (1) inadequate knowledge of the ceramics of these periods (suggesting "gaps" in occupation where none exist), (2) a dispersal of population rather than merely demographic decline, and (3) different models of settlement that describe a range of options from sedentarism to nomadism (his "pre-settlement," "proto-settlement," and "full settlement"), respectively.[18] The result suggests agricultural productivity through the sixteenth century, and a generally prosperous rural economy, with episodes of disruption.[19] In this case, the literary sources are taken at face value, while the archaeological record is refined by anthropological models and new ceramic typologies.

Accounting for the marked and relatively rapid growth of villages in the Mamluk period is equally challenging. In her analysis of the settlement of southern Jordan in this period, Hamarneh draws on literary sources, pre-Islamic settlement data, and survey and excavation reports relevant to the Middle Islamic period to describe the settlement morphology of rural Mamluk Jordan and its transformation from Late Antiquity to the later medieval eras.[20] In her interpretation of both written and archaeological sources, she suggests that the Mamluks' settlement strategy in southern Jordan was initially economically motivated and primarily geared towards control of agricultural resources. She further analyses the use of legal terms in Arabic texts related to landed property to describe the function, administration, and tenure of rural land, with the ultimate goal of assessing to what degree the state adapted pre-existing land use structures and to what extent they introduced something new. Future research in this vein will address to what

[18] Johns, "Islamic Settlement." His work pulls on the work of many earlier archaeological projects in Jordan. The Mamluk sources that he consults directly include al-ʿUmarī *(Al-Taʿrīf bi-al-Muṣṭalaḥ al-Sharīf),* al-Ẓāhirī *(Zubdat Kashf al-Mamālik),* and Ibn Taghrībirdī (Popper's notes to *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah*).

[19] This is an idea developed more fully in Johns' "The *Longue Durée."*

As the excavation of Nakhl near Kerak is a new project, the results have not yet been published. I am grateful to Dr. Hamarneh for sharing with me information regarding her project. (For a similar approach to urban development in Mamluk Palestine, with different results, see Andrew Petersen, *The Towns of Palestine under Muslim Rule, AD 600–1600* [Oxford, 2005], 379–89.)

degree a combination of factors—state-imposed and uniquely local—was behind the rise in the number and size of villages in the Mamluk period.

The archaeological record can, alternatively, breathe new life into the texts themselves. In their study of the northern Jordan Valley, Walmsley and McPhillips considered the socio-cultural context of the administrative structure imposed by the Mamluks on this region.[21] The map of provinces and districts described by al-Dimashqī and al-Qalqashandī is explored from the perspective of Ṭabaqat Faḥl (Pella), one of the districts *(iqlīm)* of the Sawad in the Province of Syria (Mamlakat Dimashq). Excavations here revealed an important rural center with an extensive village, mosque, and cemetery and a material culture that reflected the town's position as the "gateway" between coastal Palestine and the Jordanian highlands. The excavations, in my mind, reveal an administrative structure that was founded on communal structures predating the Mamluk period; the districts and their centers of administration reflect local identities, localized social and economic networks, and their own distinctive cultures (reflected in architecture and ceramics) that cannot be reconstructed from the written record alone. Mamluk administration in the region did grow out of the Ayyubid one, but both systems reveal a deeper cultural cohesiveness that could serve state interests. For the function(s) of smaller centers such as Faḥl, one must go beyond the literary sources and study the site itself, its physical relationship to the landscape and other sites around it. Its hot climate and good soil, ample water supplies, and easy access to transport corridors connecting the Jordanian interior with Mediterranean ports, in addition to a long history of village and urban development rooted in Antiquity, suggest the multiple strategic and economic functions of this rural center for the Mamluk state. Much can be learned about the structure and function of the Mamluks' rural administration in this manner.

Ultimately, a dialectical relationship exists between textual and archaeological sources in this kind of social history, with a critical "reading" of one source frequently resulting in a "re-reading" of the other. This kind of give-and-take can allow us to explore new themes not readily accessible from one source used alone. The Northern Jordan Project (hereafter the NJP), based in the hill country between Irbid and the Syrian border, has demonstrated ways in which the dialogue between "text and tell" refines our understanding of Mamluk social history. In order to more fully explore the nature and long-term impact of Mamluk rule in Jordan, the NJP has adopted a methodology that is rather new to Mamluk archaeology: research on contemporary documents in archives, done simultaneously with

[21] Alan Walmsley, "Settled Life in Mamluk Jordan: Views of the Jordan Valley from Fahl (Pella)," *ARAM* 9 (1997): 129–43; Stephen McPhillips and Alan Walmsley, "Faḥl during the Early Mamluk Period: Archaeological Perspectives," *Mamlūk Studies Review* 11, no. 1 (2007): 119–56.

archaeological fieldwork and environmental studies. In addition to the regular mix of narrative (chronologies, geographies, and travelers' accounts, along with biographical dictionaries and legal treatises) and administrative (secretaries' manuals) sources, research designs aim at identifying and analyzing documentary sources (Mamluk-era *waqfīyāt*[22] and court documents related to property exchange and inheritance, as well as Ottoman-era shariʿah court documents, tax registers, and land settlement registers) to address a range of questions related to land use and local society that emerge from a critical "reading" of both texts and archaeological remains.

One focal research problem of the project has been identifying factors behind the settlement shifts of the fifteenth century. Outside of political events, climatic change (identified by long episodes of drought) has frequently been cited in archaeological literature as a catalyst behind the abandonment of villages and fields in this period. Fieldwork has aimed, in part, at determining whether climatic changes coincided with any decline in settlement and agricultural productivity on the village and regional levels and whether land use changed with the collapse of the Mamluk state.[23] The preliminary results have presented a different settlement history for the late Mamluk period than that which pervades the archaeological

[22] Endowment documents for rural land can be rich sources on village and agricultural history, as they frequently describe the physical limits of the village, location of roads that serviced it, sources of water, crops grown, local industries and public buildings, and buildings and fields that have fallen into neglect. Identifying Jordanian locales in these *waqfīyāt* is extremely difficult, a veritable "finding a needle in the haystack" experience. These documents do exist, however, and are already yielding important data relevant to village, economic, and agricultural history in the region. For published studies, see my "Sowing the Seeds" (and references therein) and my forthcoming *Transformation of the Mamluk Frontier*.

[23] The archaeological reports can be found in: Bethany J. Walker, "The Northern Jordan Survey 2003–Agriculture in Late Islamic Malka and Hubras Villages: A Preliminary Report of the First Season," *Bulletin of the American Schools of Oriental Studies* 339 (2005): 67–111; Bethany J. Walker, Ellen Kenney, Laura Holzweg, Lynda Carroll, Stéphanie Boulogne, and Bernhard Lucke, "Village Life in Mamluk and Ottoman Hubras and Saham: Northern Jordan Project, Report on the 2006 Season," *Annual of the Department of Antiquities of Jordan* 51 (2007): 429–70. For the specifically textual studies, which include analyses of other Jordanian *waqfīyāt* in manuscript form, see Bethany Walker, "The Politics of Land Management in Medieval Islam: The Village of Malka in Northern Jordan," *Studies in the History and Archaeology of Jordan* 9 (2007): 253–61; idem, "Sowing the Seeds"; idem, "Boom and Bust"; and idem, "The Role of Agriculture." A project summary and list of project publications can also be found in my "Peasants, Pilgrims, and the Body Politic: The Northern Jordan Project and the Landscapes of the Islamic Periods," in *Crossing Jordan: North American Contributions to the Archaeology of Jordan*, ed. Thomas E. Levy, P. M. Michèle Daviau, Randall W. Younker, and May Shaer (London/Oakville, CT, 2007), 473–80.

and historical literature. Rather than the disruption of settlement viewed in other parts of Jordan, the villages of the northern hill country continued to be occupied and generally productive. Climatic conditions did change in the late Mamluk period, with dryer conditions than before, and some fields were abandoned for cultivation. Nonetheless, local villages appear to have adjusted by transforming their agricultural regime, through diversification of crops and smaller scale of production. (This latter point will be examined below.) In short, the collapse of the Mamluk state may have disrupted village life in some districts, but it certainly did not lead to the widespread decline of rural society or general dispersal of population, as suggested by archaeological surveys elsewhere. There is, in fact, evidence for a change in climatic conditions less conducive to export-oriented agriculture, but local communities in some areas were able to adapt effectively.

What, then, are the implications of such results for the use of Mamluk-era texts in local studies? The chronicles weave beautiful, heart-rending narratives about the immediate impact of drought and war. However, they seldom describe the recovery. They describe abandonment of villages, for example, but more often than not do not explain that the residents returned to them when conditions returned to normal. Documents such as *waqfīyāt* and tax registers describe land use and productivity at a moment in time but cannot trace, on their own, change or continuity on the long term. They do not account for the "whys" of land use. The benefit of the archaeological narrative, in this case combined with historical environmental studies, is in its potential to contextualize events and document their long-term impact. Together the written and archaeological narratives suggest that no single history of settlement can be written for southern Bilād al-Shām as a whole; rather there were distinctly regional patterns of growth and decline, adaption and dispersal.

A research theme intimately tied to that of settlement is agricultural history. Agricultural studies have recently taken two approaches. The first is concerned with the spottiness of the settlement record indicated by archaeological surveys and its disconnect with the written record. The inability to recognize different kinds of food systems (pastoralism, for example)[24] and diverse agricultural regimes (outside of village-based agriculture) has created a settlement map for the Mamluk period with geographical and temporal voids. McQuitty's study of vernacular architecture in Mamluk and Ottoman Jordan is one attempt to identify architecturally the various econo-residential strategies adopted by rural peoples, addressing these "voids" in the process.[25] Her work highlights the ambiguity

[24] For more on food systems, see Øystein S. LaBianca, *Sedentarization and Nomadization: Food System Cycles at Hesban and Vicinity in Transjordan* (Berrien Springs, MI, 1990).

[25] See, for example, Alison McQuitty, "The Rural Landscape of Jordan in the Seventh–Nineteenth Centuries AD: the Kerak Plateau," *Antiquity* 69 (2005): 327–38.

of medieval architecture in this region: not every stone building in the rural landscape is a farmhouse, and peasants do not always require a built environment. Agricultural communities in southern Syria have relied as much on caves, tents, and cisterns—which leave little trace on surveys—for residence and storage as stone buildings. Identifying cultivated fields is more problematic, as they leave an even fainter footprint in the landscape of the region. Nonetheless, documenting the more ephemeral remnants of settlement and farming will provide a more comprehensive picture of the rural landscape than is currently available from traditional archaeological surveys and most narrative sources.

In a second approach, the struggle for control over natural resources becomes an object of study in itself, as this struggle was a key factor in molding society and determined the destiny of settlements. Land was a mediator between village communities and the state, thus the study of land tenure and use sheds light on rural-imperial relations and Mamluk objectives in the region. It is an approach to agricultural history and settlement studies that necessitates the combination of texts and archaeological data. Political ecology—a research orientation that considers the political, social, and environmental factors in this struggle—provides one way of exploring the complexities of Jordanian-Mamluk relations. The NJP has adopted political ecology to frame several lines of inquiry related to the history of land use in northern Jordan, including such issues as evaluating the effectiveness of imperial administration and land use policies in the region;[26] assessing the local impact of *iqṭāʿāt* and *awqāf* and the extent of peasant prerogatives in land use;[27] and determining to what degree agricultural markets, and the financial incentives promised by them, impacted cropping and ultimately settlement in Mamluk Jordan.[28] For the latter, published studies on sustainable agriculture by NGOs in Jordan provided the intellectual and methodological framework for the project's focus on peasants' subsistence and marketing strategies during the Mamluk period. The preliminary results of this kind of research suggest that Jordanian peasants retained a large degree of autonomy in the management of their land throughout Mamluk rule (outside of the large "estates" in the Jordan Valley and *waqf* land), shifted to more traditional land use patterns with the collapse of the Mamluk state (diversified production for local markets; emergence of modest-sized privately held land, on the one hand, and the possible return to communally-held land, on the other), and were relatively self-sufficient in most periods. To what extent this

[28] Bethany J. Walker, "Regional Markets and their Impact on Agriculture in Mamluk and Ottoman Transjordan," in *On the Fringe of Society: Archaeological and Ethnoarchaeological Perspectives on Pastoral and Agricultural Societies,* ed. Benjamin Saidel and Evelyn van der Steen (Oxford, 2007), 117–25.

is true for the rest of Bilād al-Shām has yet to be determined.

Exploring how the state controlled rural lands and peoples is another promising venue of archaeological research requiring careful use of texts. Excavations at Faḥl, described above, suggested ways in which fieldwork can give meaning to Mamluk administrative structures. Ongoing excavations at another rural administrative center, Tall Ḥisbān in central Jordan, have demonstrated ways in which "text and tell" can provide a history of place that makes imperial administration come alive. I cite a single example from a recent field season.[29] Ḥisbān was the capital of the Balqāʾ region of the southernmost district of Mamlakat Dimashq during the first half of the eighth/fourteenth century. In 757/1356 the governorship of the district passed to Amman, along with its courts and bureaucracy. What is not clear from the chroniclers' brief accounts is why Ḥisbān lost its special administrative status, though they hint at financial reasons. Excavations present another possible scenario. The summit of the tell is dominated by the remains of a fourteenth-century complex, which has been identified as the residence of the governor of the Balqāʾ *(wālī al-Balqāʾ)*. This complex was destroyed in what appears to have been a mid-century earthquake, the contents of its storeroom abandoned in the rubble. There was no attempt to rebuild it, although the village below continued to be occupied and many homes were subsequently repaired. The fluidity of the Mamluks' provincial administration, with borders of provinces and districts changing and their capitals frequently transferred to other places, may, in part, be explained by local circumstances such as these, not retrievable from the written record.

How did Ḥisbān function as a rural "county seat"? Again, the written sources are silent on the matter; while narrative sources describe the multiple functions of large castles like Kerak and ʿAjlūn, smaller centers do not capture the attention of the chroniclers. The medieval site of Ḥisbān consists of a village at the base of the tell and the citadel at its summit. The tell in the thirteenth–fourteenth centuries took the form of a fortified hilltop with four corner towers and two gates. Inside the walled compound were domestic quarters, storerooms, a bathhouse, kitchen, and a raised *īwān* that may have served as an official meeting room. The storeroom is of particular interest for its contents: everyday kitchen ware, monumental-

[29] For detailed textual and archaeological analyses of the Ḥisbān citadel, see my "Mamluk Administration of Transjordan: Recent Findings from Tall Hisban," *Al-ʿUṣūr al-Wusṭá* 13, no. 2 (2001): 29–33; "Mamluk Investment in Southern Bilad al-Sham," 249–51; and "The Tribal Dimension in Mamluk-Jordanian Relations," *Mamlūk Studies Review* 13, no. 1 (2009): 13–14, as well as Bethany J. Walker and Øystein S. LaBianca, "The Islamic *Quṣūr* of Tall Ḥisbān: Preliminary Report on the 1998 and 2001 Seasons," *Annual of the Department of Antiquities of Jordan* 47 (2004): 447–53. The conclusions that follow pull from these studies.

sized bowls with militarized inscriptions and blazons, fragments of a bronze bowl with the fragmentary name of an amir, bits and pieces of spear points and ballistas, and dozens of sugar storage/transport jars. Structurally, the complex and its constituent storeroom combine the characteristics of a fortification and a public administrative building. It appears to have served as a garrison, tribal meeting place (in the fashion of the traditional Early Islamic *quṣūr* of the region), and distribution point for sugar and sugar by-products. The Ḥisbān citadel illustrates the multiple functions administrative centers played in the control and development of rural areas of Bilād al-Shām. Current scholarship on the function of "castles" in the medieval Mediterranean is coming to appreciate the role of such rural fortifications in the administration of the imperial frontier.[30]

Making Pottery Relevant: Potentials for Refining Social and Economic History

Research on settlement, administrative centers, and land use is not only served by critical use of texts. Ceramics analysis, while still occupied with the meat-and-potato concerns of typology, chronology, trade, and provenance, is today expanding to investigate topics of relevance to non-specialists, such as networks of production and exchange, site function, and standards of living and diet. Because pottery played such an important role in food preparation, domestic storage, and certain agricultural industries in the pre-modern Middle East, it is uniquely positioned to describe the distribution of settlements, the operation of households, the workings of village industries, and the rural economy in general.

Debates over one ware in particular are impacting the way we understand settlement history: the Handmade Geometric Painted Ware (referred to as HMGP in most ceramic reports) that has come to be associated with rural Mamluk Syria. Wheel-thrown pottery throughout Bilād al-Shām was largely supplanted in the twelfth century by handmade jars and bowls with painted basket-weave patterns. The production and distribution of this pottery peaked in the thirteenth and fourteenth centuries at a time of demographic and economic growth, a phenomenon likely tied to a thriving rural economy, safe roads, and expanding local and regional markets—all beneficiaries, in one way or another, of state initiative. On archaeological surveys, the ware is the most readily recognizable marker of Mamluk occupation, so that the distribution of HMGP ware has come to be more or less synonymous with Middle Islamic settlement. The growing prominence of this kind of pottery, which happened at a rapid pace during the Mamluk period, is considered by Johns to be "of potentially the greatest significance for the social

[30] The Florence conference on Transjordan and the Mediterranean frontier mentioned earlier addressed this theme. For published works on this topic see Roni Ellenblum, *Crusader Castles and Modern Histories* (Cambridge, 2007).

and economic history of the region."[31] Debates over the reason(s) for its sudden and widespread popularity, the mechanisms by which it was distributed (through trade, imitation of a trade item in another medium, or itinerant potters), and its specific chronology (did it disappear, and when, or did it simply evolve into other handmade wares of the modern era, as Johns has argued) are relevant to furthering our understanding of village consumption, local and regional trade networks, and the factors behind settlement location and longevity.

As for its chronology, there is a general consensus today that HMGP ware (of the variety associated with the Mamluk period) likely continued to be produced into the sixteenth century, although stratigraphic evidence is largely lacking.[32] A notable exception, and one frequently cited in the archaeological literature, is the medieval village of Tiʿinnik, located 13 km west of Jenin. The excavations of Birzeit University in 1985–87 produced a stratified sequence of HMGP ware spanning the Mamluk and Ottoman periods and dated by smoking pipes (introduced into Palestine in the early seventeenth century) and thermoluminescence.[33] The pottery demonstrated continued occupation of the site from the fourteenth and fifteenth to the early twentieth centuries. Recent studies such as those on HMGP ware are relevant to Mamluk studies, as they suggest new avenues of inquiry on settlement history and the rural economy.

Moving from the scale of regional settlement to the individual village, a ceramic assemblage can illustrate site function and how it changed over time. Some of the most interesting work on Mamluk pottery in recent years has addressed this subject. A comparison of three sites in Syria, Jordan, and Israel and the pottery associated with them is informative in this regard. Recent French excavations inside the Damascus Citadel have identified stratified contexts for Ayyubid, Mamluk, and Ottoman ceramics.[34] François' analysis of the later Islamic wares is sophisticated, pulling from typological studies of the ceramic remains and a range of medieval Middle Eastern and European texts describing contemporary

[34] Preliminary reports can be found in Sophie Berthier and Edmond El-Ajji, ed., *Études et travaux à la citadelle de Damas 2000–2001: Un premier bilan,* as *Bulletin d'Études Orientales* 53–54 (2000), supplement. The final field reports on the French excavations in the Citadel, including analyses of the Mamluk pottery, are forthcoming.

pottery to raise important questions about the nature of ceramic assemblages.[35] In a recent study on ceramic exchange in the Frankish through Ottoman periods, she attributes the appearance of Italian imports in the Citadel after the fifteenth century to political networks, but the presence of Chinese imports to cultural factors.[36] The presence of imports, thus, is more than the mere measure of wealth; it has political and cultural/aesthetic meaning. The same could be said of the much smaller provincial capital of Kerak. In his analysis of the unstratified pottery from the Citadel and the Kerak survey, Milwright suggests multiple functions of the town, indicated by the wares themselves. Taking ceramics as "indicators of levels of economic activity and social complexity," he categorizes the Kerak assemblage by those wares with local (within southern Jordan), inter-regional (in Palestine and Jordan), and international distribution.[37] These, in turn, reflect the different economic roles of Kerak during the Middle Islamic period: as an economic center for rural communities in southern Jordan, as one of many regional markets servicing Palestine and Jordan in raw materials and manufactured goods, and a minor node in the larger exchange networks of the eastern Mediterranean, respectively.

How do these compare to rural assemblages? One expects in villages fewer imports and less diversity in wares and forms. This appears to be the case at several village sites excavated by the Israeli Antiquities Authority. Stern's systematic study of assemblages combines quantitative (comparing percentages of different wares in the assemblages, based on rim counts) and petrographic analyses (to determine provenance and thereby trace exchange networks) in describing the socio-economic networks of individual villages and changes in diet and cooking customs with Mamluk annexation. Khirbat Dinʿila is considered a "typical" Galilean village of the fourteenth and fifteenth centuries.[38] The assemblage as a whole consisted largely of locally made pottery (both hand-made and wheel-thrown, the latter more expensive to produce), although many shapes of the latter were inspired by foreign wares. Imports are rare and limited to a few Syrian (underglaze-painted "frit") and Italian (miscellaneous glazed) wares. The locally produced tablewares, interestingly enough, came from different workshops. Stern

[36] The assemblage thus raises issues not apparent before that must be addressed by an analysis of the texts themselves. She suggests: "L'archéologue, à travers la présence ou l'absence de ces objets, pose alors des questions nouvelles aux historiens" (ibid., 249).

[37] Milwright, *Fortress of the Raven,* 20.

[38] The following pulls from Edna J. Stern, "Khirbat Dinʿila: The Crusader and Mamluk-Period Pottery," forthcoming in *ʿAtiqot* (2009). This is the first petrographic study of Mamluk pottery in the Galilee and one of only a handful of such studies for the southern Levant. I am grateful to Dr. Stern for sharing her manuscript with me.

highlights in her study decentralized production, the scarcity of imports, and the preference for wheel-thrown jugs and jars (22% of the assemblage, apparently manufactured at inland sites in the region). In comparing the pottery of the later Mamluk period with that of the earlier Frankish-era occupation, she notes that Mamluk-era bowls got bigger, cooking pots were of a different fabric and form, and jugs were also of a different form. These indicate important changes in dining customs, namely communal meals that required larger bowls and spouted jugs (for "cleaner" group use). The rural Mamluk assemblage, then, suggests active local ceramic industry, the introduction of new foods, and communal dining.

She makes similar conclusions about the assemblage at Khirbat Burin, a slightly earlier village (thirteenth–fourteenth centuries) in the eastern Sharon.[39] Here pottery was largely of local production, with the few imports at the site of an earlier (thirteenth-century Cypriot, Aegean, Syrian, and Italian—typical Frankish wares) or later (fourteenth–fifteenth century Italian wares) period. 42.2% of the pottery was handmade, but wheel-thrown jars and jugs were an important component (24%). 22% of the assemblage consisted of locally made glazed wares. The greater presence of imports, however, indicates that Burin had access to larger exchange networks than the residents of Dinʿila did. A comparison of the assemblages of several Mamluk-era villages in Israel (sites discussed in more detail below) reflects different scales and kinds of exchanges. Stern ranks rural sites accordingly: (1) rural sites with international connections (Givʿat Yasaf, near the port of Acre), (2) more isolated rural sites (largely inland) without international connections (Givʿat Dani, near Lod), and (3) rural sites that are somewhere in between, with limited international and intra-regional connections (such as Khirbat Burin). The typological scheme parallels that projected for Kerak and is a useful way to conceptualize village networks in the region.

At rural sites that contain both fortifications and "civilian" neighborhoods, a comparison of the ceramic assemblages associated with each can be informative about the relationship between the two communities, Mamluk and indigenous, or site transformations from defensive to domestic. Yoqneʿam (Frankish "Caymont"), located in northern Israel at a roughly equal distance between Haifa and Tiʿinnik, illustrates the latter. The Frankish fort here was abandoned by the time of Mamluk annexation in 1268. Mamluk occupation of the site began with the reuse of the old Frankish fort in the thirteenth century (Stratum IIb) with subsequent new construction in the fourteenth century (Stratum IIa) and abandonment, once again, in the fifteenth century. The Mamluk-era constructions transformed the former military structures into a farmhouse with mangers, silos, and tabuns. Avissar's ceramic evidence supports this scenario: the HMGP ware bowls and jars,

[39] Raz Kletter and Edna J. Stern, "A Mamluk-Period Site at Khirbat Burin in the Eastern Sharon," *ʿAtiqot* 51 (2006): 173–214.

Syrian fritwares, wheel-thrown and handmade cooking pots, and lamps are all appropriate to a domestic assemblage in a rural settlement within the Damascus exchange network.[40] Ḥisbān, on the other hand, presents a very different case. The pottery excavated in the Mamluk-era village below the tell and that recovered from the regional survey of the village's hinterland did not differ significantly from that in the Citadel storeroom, except in the relative percentages of glazed imports to locally produced wares. HMGP ware jars (normally associated with Syrian village life) were stored in the Citadel; small glazed relief ware bowls (considered "army issue") were identified in village homes. Only the most expensive luxury goods were restricted to the Citadel, such as pseudo-celadons and inscribed bowls of monumental size. Overall, the division between officialdom and the village is not so clear cut at Ḥisbān, the "military" and "civilian" assemblages suggesting participation in the same exchange networks and comparable consumption. From this observation, we might gather that the kind of relationship that existed in Ḥisbān between the local community and the state officials stationed in the Citadel was different than the community-state relationship at larger administrative centers, but at this preliminary stage of ceramic analysis such a notion remains conjectural.

Perhaps the greatest contribution of ceramics analysis is in the evidence it can provide for lifestyle on the household level. This is a relatively new area of inquiry in Mamluk ceramics research. Much can be learned in this regard from contemporary work on Ottoman pottery, where consumerism has been a focus of scholarship for many years.[41] Little is known about the diet and general standard of living of rural communities in the Mamluk Empire, so this is a promising direction of future research. In differentiating between Ottoman and Mamluk assemblages in Damascus, François notes the change in form and decoration in monochrome-glazed and underglazed-painted fritwares.[42] A change in form frequently indicates changes in diet, and the shift from deep bowls (a Mamluk form) to wider but shallower serving bowls (an Ottoman form) may reflect new dining/serving

customs or new foods (more soups, fewer stews).[43] Another way to approach the study of ceramics and consumerism is to comb literary sources for descriptions of vessels purchased in the markets and used in cooking and serving, as well as depictions of the same in illuminated manuscripts. Initial steps have been taken in this direction for Mamluk Egypt[44] and Syria.[45] The study of diet from non-ceramic sources, such as floral (pollen and microbotanical remains) and faunal (animal bones) evidence, combined with analysis of pottery from archaeological contexts, also holds promise, but this kind of data collection has been under-utilized to this point.[46]

Surveys and Settlement: Where Did All the People Go?

No narrative dominates the archaeological history of Mamluk Syria more than the decline of the countryside in the fifteenth century. There is a general consensus, based largely on contemporary chronicles and later tax registers (both selectively cited) and survey data (most of it generated by fieldwork done in central and southern Jordan),[47] that there was general demographic decline and abandonment of many (though not all) villages for full-time occupation, most pronounced in the

Transjordan.[48] However, there has been little systematic study of the issue in order to determine to what degree population levels dropped from the fourteenth century and how many settlements "disappeared." We have no population estimates at all, in fact, for rural regions, and no site numbers from different periods to compare. Statistics on settlement are impossible to obtain without thorough surveys in other regions of Syria; in Jordan, at least, the projection of survey data from the south to other parts of the country presents a picture of demographic decline that simply cannot be sustained there by either the historical or archaeological records. Another challenge has been the chronology of the HMGP ware described above, which is the most important dating criteria on surveys; it is likely that some of this pottery, previously dated to the Mamluk period, may be early Ottoman in date, in which case villages once thought to have been abandoned from the fifteenth and sixteenth centuries would have continued to be occupied.

Much of the debate on this issue among archaeologists working in Jordan centers on how to characterize the reconfiguration of settlement indicated by surveys and what exactly the factors were behind it. Pulling on data from the Central Moab and Kerak Plateau surveys, Brown in her M.A. and doctoral theses argued for a dispersal of settlement, rather than disappearance of villages.[49] The surveys indicated that sites dating between 1400 and 1600 C.E. (dated on the basis of ceramics) fell into two categories: those continuously occupied from the early Mamluk period and new settlements, the latter largely distinguished by rudimentary architecture (or none at all) and fewer ceramic remains. She interpreted these patterns as evidence of population dispersal, or a move towards pastoralism, at the end of the Mamluk and beginning of the Ottoman eras.[50] She cites a concern for security as one reason for the marked shift in settlement in the fifteenth century from the central Kerak Plateau to its southwest rim, as this region was less vulnerable to attacks by Bedouin tribes.[51] Situating such a scenario in the larger history of the Mamluk state, one could argue today that with the breakdown of the state politically and militarily, and the withdrawal of important resources from the provinces, rural security and prosperity could not be maintained on the open plateaus and in large villages. Dispersal of larger

[48] There appears to have been less disruption of settlement in Palestine during this period. A systematic comparison of settlement on both sides of the Jordan River has yet to be done.

villages, with migration to less favorable environmental zones, was one response of local peoples to imperial collapse.

Movement of peoples into such less desirable lands could, alternatively, reflect demographic growth, economic development, favorable climatic cycles, and security. Fieldwork by Israeli archaeologists is bringing to light possible evidence for the expansion of villages into environmentally peripheral zones during the Mamluk period. Mamluk occupation in the Negev, as limited as the material evidence is, seems to have been concentrated in the west, where there was a general hiatus of occupation between the Early and Middle Islamic periods.[52] Recent excavations at Horbat Maʿon have investigated Mamluk-era reoccupation of a Byzantine-era village, where the old water systems and one mudbrick farmhouse were reused and many new constructions erected in stone.[53] In a similar fashion, a Mamluk village at Tall Jammah, in the northwestern Negev Desert, recycled ruins of the preexisting village dated to the Byzantine period.[54] Other sites were reoccupied in this period: at Ein Gedi a Mamluk village was built over the Roman ruins[55] and at Mezad Zohar the Frankish fort was reused for domestic use.[56] This does not, however, appear to have been a concerted, state-led effort to resettle this region. The cities that once flourished here in the Byzantine and early Islamic periods appear to have been largely abandoned by the eleventh century. Outside of a single site south of Gaza,[57] there is no settlement yet identified large enough to be considered a "town" in the Negev in the Middle Islamic period. This has led Petersen, in his study of medieval Muslim towns of Palestine, to suggest that the Mamluk state may have discouraged permanent settlement here, using the Negev instead as a political buffer zone and channeling traffic along its margins.[58]

For the purposes of comparison, the neighboring northern Sinai experienced continuous but uneven occupation from the Islamic conquest through the Ottoman era. Surveys there have documented an intensification of settlement

in the fourteenth and fifteenth centuries that, though not reaching the levels of the early Islamic period, may be related to the reorganization of the *barīd* route running parallel to the coast.[59] Characteristic of this region in the later Mamluk period was the dispersal of settlements from a handful of large centers to numerous smaller settlements, clustered together and many in the vicinity of *barīd* stops and contemporary fortresses. Qalʿat al-Tina represents the latter and was excavated by Ben Gurion University in 1974 and more recently by the Supreme Council of Antiquities in Egypt.[60] An expansion in settlement is further attested by the hundreds of constructed tombs from the Mamluk period identified near Tall al-Muḥammadīyah, on the western end of Lake Bardawil. As expected, the ceramic record for all of these sites suggests strong ties to Egypt, with the notable presence of pilgrims' flasks, semi-luxury wares (such as pseudo celadons), and emblazed sgraffito wares (normally associated with garrisons).[61] The distribution of settlements, the diversity of site types, and the Egyptian character of the material culture indicate a settlement history that contrasts with that of the Negev and suggests state initiative.

As many of the relevant projects are as yet unpublished and period-specific research in this region is relatively new, it is premature to deduce from the limited data at hand anything concrete about Mamluk settlement in the southernmost areas of Bilād al-Shām. If the data does, indeed, reflect a deliberate attempt by local peoples to (re)settle parts of the Negev and cultivate lands there once again, one determining factor may be sought in climate change. A recent study of climate and culture in the Levant has documented recurring patterns of agricultural expansion into the Negev, and other marginal farming zones, when several factors coincided: years of dependable rainfall, population growth, political stability, and security of travel and trade.[62] This happened in the Byzantine period and then again in the Mamluk. Rosen here looks beyond the very real challenges presented by limited rainfall to consider the benefits that imperial systems offer peasants seeking opportunities in new lands: new technologies of production

[59] The Northern Sinai Survey was conducted by Ben Gurion University in 1972–78; many project-related reports have only recently been published. For the study of the Islamic-era ceramics, see Katia Cytryn-Silverman, "The Settlement in Northern Sinai during the Islamic Period," in *Le Sinaï–de la conquête arabe à nos jours,* ed. J.-M. Mouton (Cairo, 2001), 3–36. My comments regarding the survey pull from this publication. The more complete ceramic study on which this article is based can be found in her "The Islamic Period in North Sinai: The Pottery Evidence," (M.A. thesis, Hebrew University, 1996).

[60] Reports related to both projects are being prepared for publication.

[62] Arlene Miller Rosen, *Civilizing Climate: Social Responses to Climate Change in the Ancient Near East* (Lanham, MD, 2007).

and transport, access to international markets, extensive trade networks, and an infrastructure that facilitates "the transfer of subsistence resources from areas with more abundant surpluses to regions suffering failed crops."[63] Shaefer, in his field report on Tell Jemmeh, echoes the same sentiment: "political and economic conditions, rather than specific ecological determinant, permit(ted) the growth of a settled population" in the Negev.[64] Climate studies have documented a general trend towards wetter conditions more favorable for intensive agriculture in the thirteenth and fourteenth centuries. This coincided with political and economic conditions that encouraged the expansion of settlement into formerly marginal zones.[65] The fifteenth century, on the other hand, is marked climatically by much drier conditions, punctuated by many years of drought (confirmed by written sources, as well).[66] The problems created by lack of rainfall were exacerbated by the political problems of the time. The emergence and disappearance of villages reflect these trends. Communities dissolve and individuals migrate for a variety of reasons. The settlement fluctuations of the Mamluk period were the result of many factors—political, socio-economic, climatic—that coincided in unpredictable ways.

Rural settlement, of course, was not limited to large villages occupied on a year-round basis. A range of residence strategies has been traditionally used by the populations of southern Syria, from seasonal campsites to residence in caves, permanently settled villages, and towns. Cemeteries, and most specifically those not found in association with village sites or any permanent structures, can act as windows on settlement in its various forms. Cemeteries were frequently used by tribes long after the local village was abandoned and may indicate not only that a settlement once existed nearby, but that the tribe maintained its associations with the locale, even if it had moved away or no longer cultivated the land.[67] The so-called Ottoman-era "Bedouin" graves fall into this category.[68] Recent

[65] Future research on this interesting phenomenon should include a systematic comparison of the data from the Negev with that from ongoing surveys in the southern and eastern deserts of Jordan, along with careful study of narrative and documentary sources.

[66] For a summary of this topic on the basis of historical sources, see Yūsuf Ghawānimah, "Al-Ṭāʿūn wa-al-Jafāf wa-Atharuhumā ʿalá al-Bīʾah fī Junūb al-Shām (al-Urdunn wa-Filasṭīn) fī al-ʿAṣr al-Mamlūkī," *Studies in the History and Archaeology of Jordan* 2 (1995): 315–22.

[67] Schaefer, "Archaeological Remains," 55.

[68] On the difficulty of differentiating village cemeteries from those used seasonally by transhumant populations, see St. John Simpson, "Death and Burial in the Late Islamic Near East: Some Insights from Archaeology and Ethnography," in *The Archaeology of Death in the Ancient Near East,* ed. Stuart Campbell and Anthony Green (Oxford 1995), 240–51.

excavations by the Israeli Antiquities Authority have identified several Mamluk-period cemeteries on and near the southern coast and in the interior that are not physically associated with village ruins. The burials, according to the published reports, belong to two types: simple, individual cist graves, many of which were covered by beehive vessels (discussed below),[69] and built tombs lined and covered with clay bricks.[70] (There are no burial goods in either case.) Cemeteries such as these not only provide information on burial practices of the period, but they also may indicate settlement in regions where archaeological surveys have not identified villages, farmsteads, or pastoral presence.

Contemporary Archaeology and Alternative Narratives of Mamluk Society

Fieldwork at Mamluk sites in Syria has advanced in fits and spurts, mainly because the Middle Islamic period has not traditionally been a focus of research in the region. A specifically Mamluk archaeology has largely, and only recently, grown out of an interest in the Frankish era among Israeli scholars and in Ottoman societies among Palestinian archaeologists. In this regard, Jordan differs significantly from Syria. Targeted archaeological investigations on the Mamluk period have a twenty-year history in Jordan, and those of us in the field today certainly benefit from the important and pioneering work of a previous generation. These differences aside, archaeologists throughout southern Syria are exploring many of the same issues; interest in village life, industry and technology, and the impact of traditional and state-imposed agricultural practices on the land have generated much fieldwork in the last few years. Out of this research have emerged alternative narratives of Mamluk social history that challenge our traditional understanding of the state and its Syrian populations. We briefly consider four of these in what follows, citing examples from Jordanian, Palestinian, and Israeli excavations.

Narrative One: There was a dialectical and fluid relationship between the Mamluk state and local communities.

Scholarship on the Mamluk administration of Syria, aided by descriptions in contemporary chronicles and secretarial manuals, has been extensive.[71]

[69] For the use of beehive vessels at Azor and Kafr ʿAna, both near Jaffa, see Itama Taxel, "Ceramic Evidence for Beekeeping in Palestine in the Mamluk and Ottoman Periods," *Levant* 38 (2006): 208. For an example without the ceramic vessels, and dated by a single *fals* of Sultan Barqūq, consult Amir Gorzalczany, "Qanat Bint el-Kafir," *Hadashot Arkheologiyot* 116 (2004). [71] They include Maurice Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*

Archaeologists continue to cite such work, situating their individual sites within the larger administrative structure of Bilād al-Shām. While it has long been recognized that this structure developed over time, it has not been fully appreciated just how fluid it was and what accounts for the relatively frequent (and unexpected) changes of provincial and district borders and capitals. Recently, however, attention has been drawn to the possible factors behind and rationale for such fluidity.[72] Imperial administration reflects both state objectives in a region, which were more often than not captive to the vagaries of the Mamluk political scene, and relations between the state and local communities that ebbed and flowed with the currents of imperial politics. Decisions made in Cairo and Damascus to promote relations with a particular tribe, to promote one administrative center in order to strengthen its garrison in times of trouble, and to punish a recalcitrant village may have driven changes in administrative structure as much as long-term economic and military objectives. To illustrate, the promotion of al-Salṭ, the capital of the Balqāʾ, from a *wilāyah* to a *niyābah* in 678/1288 would have resulted in the stationing of a higher-ranking commander in the local garrison at a time when military reinforcements were needed to block the northward movement of rebel forces.[73] The interest of Sultan al-Nāṣir Muḥammad in Ḥisbān, which was Wilāyat al-Balqāʾ during his third reign, is illustrated through his personal visits to the town and construction projects, for which there is some archaeological evidence, and is likely tied to his active patronage of local tribes loyal to him during his return to the throne.[74] Textual sources imply that the later transfer of the district capital from Ḥisbān to Amman, in 757/1356, was an economic move—to serve the financial interests there of Amir Ṣarghatmish.[75] As noted earlier, excavations suggest that earthquake destruction of the Ḥisbān citadel was another factor in this decision. On the provincial level, the collapsing of the administrations of the province of Kerak with that of the District of Jerusalem (Niyābat al-Quds) in 912/1506, then with the District of Ṣafad in 916/1510, and finally with the District of Ghazah in 918/1512—all during a period of political chaos in the region—resulted in stripping Kerak of its independent status and pulling its rebellious tribesmen under regional military control.[76] The ultimate

objective of controlling a province that had been so troublesome to Cairo in the past was thus resolved through administrative fiat.

The relations between the state and local communities and their elites permeate Syrian chronicles, if not Egyptian ones, indicating how important clientage was in achieving the state's objectives in a region dominated by fiercely independent-minded tribesmen. Clientage did not guarantee automatic compliancy with imperial programs, however. The tribesmen of southern Syria—townsmen, peasants, pastoralists—were independent actors and could, on their own initiative, influence officials and mold policy, although the chroniclers tend to mask the autonomy of local societies.[77] The give-and-take that always existed between the state and local society may be perceived in the physical and functional relationships of administrative centers with nearby settlements. Kerak, a provincial capital, consisted of the fortified castle and the town, which exhibited some degree of interdependence. Historically the town housed the principle marketplace of southern Jordan and was transformed by the building of a large castle in the Frankish period.[78] With the eclipse of the Mamluk state and the eventual abandonment of the castle by both Mamluk and Ottoman authorities, the town itself returned to its original status—a regional market town. The ceramic record has documented the economic cycles of the town's development as the fortunes of the citadel waxed and waned. The same could be said of Ḥisbān, which grew from a village, with a modest agricultural market serving other villages in the Balqāʾ, to a town with urban institutions, such as a court and madrasah, when the regional capital was transferred there and the citadel expanded in the early fourteenth century.[79] With the abandonment of the citadel, a half century later, the town resumed its previous function as a village with a farmers' market. The presence of the citadel/administrative center appears to have made little impact on the village or its environs on the long term.

The Ḥisbān citadel is suggestive in other ways about imperial-rural relations.

Shām fī ʿAṣr Dawlat al-Mamālīk al-Thāniyah (Irbid, 2002), 33. Ḥujjah attributes this action to an effort to strengthen the defenses of southern Syria, although he goes on to describe the redistricting of southern Syria at the end of the fourteenth century as an effort to better control them.

[77] For more on this topic from a Jordanian perspective, see Walker, "Tribal Dimension in Mamluk-Jordanian Relations," and idem, "The Role of Agriculture."

[79] For a summary of the results of recent excavations at Ḥisbān and a bibliography of published reports, see Øystein S. LaBianca and Bethany J. Walker, "Tell Hesban: Palimpsest of Great and Little Traditions of Transjordan and the Ancient Near East," in *Crossing Jordan,* 111–20, as well as Walker and LaBianca, "Tall Hisban," in "Archaeology in Jordan, 2004 Season," ed. Stephen H. Savage, Kurt A. Zamora, and Donald R. Keller, *American Journal of Archaeology* 109 (2005): 536–39.

The small, three-room bathhouse that sits at the center of the acropolis has attracted scholarly attention, as it is an anomaly for Mamluk citadels. Most garrisons used public baths in nearby towns, as they were not equipped with their own. The *ḥammām,* moreover, does not fit in the overall organization of the "governor's house" of which it is one component: it occupies the space of what should have been an *īwān* facing the central courtyard and, moreover, faces the opposite direction. It, thus, appears to have been the remnant of an older complex. Its three-room linear plan belongs more to the local Roman-early Islamic forms of hypocaust bathhouses than the more familiar, centrally planned forms of the Mamluk period.[80] Excavations in 2007 have provided tantalizing evidence for dating this bath to the late Umayyad or early Abbasid period.[81] Its reuse and incorporation into the Mamluk governor's complex may be related to availability and necessity (as no other public baths have been identified in the medieval town)[82] or to other purposes. The early Islamic "desert castles" of Jordan combined administration with entertainment in reaching out to tribal leaders; recent excavation reports have suggested such a "*qaṣr* model" for the Ḥisbān citadel, the Mamluk governor stationed there entertaining tribal leaders in his residence and consolidating relations between the Mamluk state and the local elite in the process.[83] Although there is no textual evidence for such practice, the frequent meetings between Mamluk officials (including sultans) and local tribal leaders in this period suggest special arrangements to this end. The similarities among ceramic assemblages in citadel, village, and hinterland provide further support for regular exchanges between the administrative/military establishment and the Ḥisbāni community.

As important as co-opting and controlling Syrian tribes were, political programs in the region did not always translate into material investment in local communities. While textual sources laud the construction and repair of mosques, bridges, and markets by Mamluk sultans and amirs, there is little architectural evidence of committed and dependable investment in the region outside the large towns and castles. In rural areas, construction work appears to have been done

[80] Walker and LaBianca, "The Islamic *Quṣūr* of Tall Ḥisbān," 463–64.

[81] A brief preliminary report on this season can be found in Bethany J. Walker and Øystein S. LaBianca, "Tall Hisban," in "Archaeology in Jordan, 2007 Season," ed. Stephen H. Savage, Donald R. Keller, and Christopher A. Tuttle, *American Journal of Archaeology* 112 (2008): 516–18.

[82] According to al-Muqaddasī (d. 375/985), there was once a public *ḥammām* in Ḥisbān (Ghawānimah, *Tārīkh al-Ḥaḍārī li-Sharq al-Urdunn fī al-ʿAṣr al-Mamlūkī* [Amman, 1982], 148). However, I have come across no references to it in Mamluk sources, and no trace has been found of it archaeologically.

[83] Walker, "Mamluk Investment in Southern Bilad al-Sham," 255.

by local masons and at the lowest cost. We return again to the Ḥisbān citadel for evidence from fieldwork. Everything about the fortifications and buildings inside suggest haste, minimum effort, and minimum expense. The ruins on the summit of the acropolis—which include a Roman temple, Byzantine basilica, and quite ancient fortification walls and towers and gates—provided much of the building material for repairs to the castle walls and in constructing the "governor's complex." When the ruins failed to provide enough building material, the local limestone (which is rather soft and friable) was hewn into roughly cut blocks. (There is a striking contrast between the quality of the reused stones and the Mamluk-era blocks.) Ancient structures were reused as much as possible, as were cisterns and the bathhouse. Few new buildings were erected; when walls were newly built or repaired they were roughly faced and rubble-filled. Reinforcements to defensive structures appear, to our eyes, to have been half-hearted. The quality of construction in the Ḥisbān citadel is really no different from farmhouses of the period in other villages in central Jordan (Ḥisbān village, Khirbat Fāris, Dhibān—described below); there is little technologically to separate the buildings of officialdom from those of the Jordanian countryside. The same can be said of contemporary administrative centers in Palestine, such as Khirbat Birzeit.

Defensive works by the Mamluks at the Ḥisbān citadel betray the same standards. In an initial stage of reconstruction, dating to the mid-thirteenth century, the ancient enclosure wall was restored, the southwest tower extended to surround two stories of rooms (including the storeroom), and the south gateway (the main entrance to the citadel) developed by extending the old Roman-Byzantine staircase to a new vaulted passage inside the entrance and adding a plastered courtyard (perhaps a tethering station) outside (Fig. 2). The 2007 excavation season documented the physical development of the south gate and its defensive structures in the mid-fourteenth century, in a third phase of much poorer construction.[84] At this stage the inner corner of the massive southwest tower was enlarged even further with a small guard room and curtain wall, narrowing the south gate in the process, and the room was almost immediately thereafter filled in with rubble. The work does not seem to have served any effective defensive purpose except to give the visual appearance of a heavily fortified tower-gate. This phase of construction appears to have followed an earthquake and may have been part of the post-trauma repairs. This restoration work was of little value in the long run, as the citadel was abandoned soon afterwards. The summit of the tell was then used on and off domestically, as the former storeroom and guard rooms were converted to kitchens and refuse areas.

A similar history of construction has been recently noted at Safed, the center

[84] Walker and LaBianca, "Tall Hisban," (2008).

of commercial activity in the region and the administrative center of the Galilee.[85] Initial defensive reconstruction, initiated by Sultan Baybars after 1266, was done in earnest: a massive tower-gate complex with access ramp and a circular tower were built of solid masonry, adapting pre-existing building arrangements from the Frankish phase. An earthquake at the turn of the fourteenth century necessitated reconstruction and consolidation of walls, towers, and ramps, but maintenance from this point on was gradually neglected. By the end of the Mamluk period, the towers and gates were converted to installations for craft activities and cooking. Even at the most important Mamluk centers in the region, there is evidence for neglect of official structures, as military function gave way to domestic need.

Narrative Two: There was a marked regionalism in Syrian rural culture and a distinct autonomy in village life.

Village life has its own rhythm, interrupted here and there with the pressures, problems, and possibilities offered by the outside world. While the names of most medieval villages cannot be retrieved from the written record, and remain anonymous as a result, their rhythm can be partially recreated archaeologically. It is not easy, however, to describe the "typical" Syrian village of the period, as each region is culturally distinctive. They do, however, share characteristics that mark them as unique products of the Mamluk era. New villages emerged and old ones grew quite quickly in the thirteenth and fourteenth centuries. While the mechanisms behind this demographic growth/settlement expansion are not fully understood, whether pushed by imperial policy or the local response to economic opportunity, it is an important marker of the period. The material culture, settlement configuration, building styles, and land use differ in significant ways from the Frankish and even Ayyubid periods that preceded it. Moreover, such an intensive use of land had not been experienced at these levels since the Byzantine era. (The reuse of Byzantine ruins, including water installations, might be seen in the context of the state's attempt to maximize agricultural production at minimum effort.) The success of this agricultural experiment is indicated by the continued occupation of many of these "new" villages well into the sixteenth century. As a result of targeted investigations of rural sites, the character of village life in the Middle Islamic period is coming into sharper focus.

Two projects in Jordan were designed from the start to investigate "ordinary" villages of the Middle Islamic period: Khirbat Fāris (excavated between 1988 and 1994) and Tall Dhibān (on-going since 2004). The ruins of Khirbat Fāris lie just

[85] Final reports on the Israeli excavations at the Safed castle are not yet complete, but a preliminary field report can be found online: Hervé Barbé and Emanual Damati, "Zefat," *Hadashot Arkheologiyot* 117 (2005) (www.hadashot-esi.org.il/report_detail_eng.asp&id=214&mag_id=110).

west of the King's Highway, on the Kerak Plateau some 17 km north of Kerak.[86] A multi-period site, with occupation spanning over 4,000 years, it is the village of the twelfth–sixteenth centuries that concerns us here. At the west end of the site, the ruins of several stone buildings identified as the remains of the medieval village were uncovered. The single-room peasant homes were made entirely of stone, with earthen floors, and covered with barrel vaults. They were quite small (4x3 m on the sides and 2 m high), which led the excavators to conclude they were entirely residential and not used for storage. The side walls were substantial (a meter thick), wide enough to support the heavy vaults, and their construction rather simple, faced with fieldstones and filled with rubble and mud. The dwellings were clustered around shared courtyards, narrow alleys, and cisterns. McQuitty notes the continuity of this form and its wide distribution, suggesting it represents for Jordan and the Palestinian hill country a typical village construction from the thirteenth through mid-twentieth centuries, where it was used alternatively as peasant home, storage facility, oven house, and stable. It represents a change in rural house form from the preceding period, when village homes included storage space in the thickness of their walls. The reason for this change may have to do with changes in the control of agricultural surplus that resulted from developments in agricultural administration,[87] a hypothesis that, however, requires reference to administrative and economic texts.

Indeed, this vernacular house form can be readily identified at Mamluk sites throughout Jordan. At the modern village of Dhibān, on the Dhibān Plateau 70 km south of Amman, the remains of a late Mamluk/early Ottoman (Phase 2) village have been identified.[88] Occupation took the form of reoccupation of the ruins of an Early Islamic complex (on the tell's southeast corner) and construction of new buildings on the tell's east side and on its acropolis (Field L). Recent fieldwork is focusing on the architectural remains of Field L, consisting of adjacent barrel-vaulted rooms and a well-preserved doorway. Mamluk-era ruins in other fields of excavation are characterized by the same vaulted constructions, external courtyards, and cisterns as documented on the acropolis and at Khirbat

---

[86] The following summarizes the results reported in McQuitty, "Rural Landscape of Jordan"; idem, "Khirbat Faris: Vernacular Architecture on the Kerak Plateau, Jordan," *Mamlūk Studies Review* 11, no. 1 (2007): 157–72; and McQuitty et al., "Mamluk Khirbat Faris," *ARAM* 10 (1998): 181–226.

[87] McQuitty, "Vernacular Architecture on the Kerak Plateau," 164.

[88] The results of the Dhibān project can be found in Benjamin Porter et al., "Tall Dhiban 2004 Pilot Season: Prospection, Preservation, and Planning," *Annual of the Department of Antiquities of Jordan* 49 (2005): 201–16; Benjamin Porter, Bruce Routledge, Danielle Steen, and Firas al-Kawamlha, "The Power of Place: The Dhiban Community through the Ages," in *Crossing Jordan,* 315–22.

Fāris. The excavators have identified three phases of occupation of the acropolis complex, the building used intermittently into the sixteenth century, suggesting a gradual abandonment of the site. The function of the acropolis is not entirely clear, although some indication of the status of the village in the thirteenth and fourteenth centuries is provided by textual sources: the lands of Dhibān constituted an *iqṭāʿ* bestowed by Sultan Baybars on the son of an Ayyubid prince in 1261,[89] and the village had a mosque beside which was built a shrine, the final resting place of two Mamluk amirs in the late fourteenth century.[90]

The Mamluk villages at Ḥisbān and Faḥl belong to the same tradition. Below the Ḥisbān citadel, on its western slopes and leading to the Wādī Majār (Field C), are the remains of the medieval village, occupied for the duration of the Mamluk period and perhaps through the sixteenth century. One structure, identified as a Byzantine farm house, was reoccupied in the Mamluk period. Other buildings, excavated in the 1970s, appear to have been fresh constructions of the thirteenth and fourteenth centuries. The stone houses are all barrel-vaulted (the vaults low-sprung and shallow, as on the summit) with thick walls (c. 1 m in diameter) and earthen floors, clustered around open courtyards and cisterns and divided by narrow alleys, indicating a settlement organized by extended families. In Field O, to the southwest, the same kinds of structures and spatial organization were associated with the nineteenth-century village, demonstrating longevity of this local settlement type. The Mamluk village at Faḥl (with cemetery) reveals similar patterns: courtyard houses (of stone and mudbrick) with beaten earth floors and enclosure walls and divided from one another by narrow streets.[91]

Mamluk village architecture in Jordan, as in Palestine and Israel, fell to two patterns: a distinctly regional style of vaulted stone farmhouse, and reuse of ancient structures. The reoccupation, and adaption, of Byzantine and early Islamic structures appears to have been particularly common, as they were frequently constructed of well-hewn blocks, their masonry ruins functional centuries later. At Shuqayrah al-Gharbīyah, 25 km southeast of Kerak, a fortified compound has been recently excavated, dated to the Umayyad and Abbasid periods.[92] After a

[92] The following is based on a recent preliminary report: Younis M. Shdaifat and Zakariya N. Ben Badhann, “Shuqayra al-Gharbiyya: A New Early Islamic Compound in Central

conflagration sometime in the ninth century, the compound was abandoned for several hundreds of years, to be reoccupied in the thirteenth. Following a pattern familiar in Jordan, the occupants settled in and on top of the ruins, without fully clearing out the earlier debris. Newly built walls were readily distinguished by the excavators from their early Islamic counterparts by their masonry ("clumsy walls" comprised of roughly hewn boulders). The original rooms were subdivided into smaller ones, transforming a complex that probably functioned like the so-called "desert castles" of the steppe into a typical farmhouse with stables. A similar phenomenon has been noted in the Ḥisbān citadel, where an early Islamic building inside the northern gate, destroyed by earthquake in the ninth century, was reused as a kitchen in the early Mamluk period. In the nineteenth century, it was adapted for a stable.[93]

There have been few studies of sacred architecture in rural Jordan, largely because few examples have been preserved, and archaeological investigations of them are logistically and legally challenging. Nonetheless, two published examples in Jordan hint at the potential of using sacred space to reconstruct vernacular life: the mosques at Faḥl and Ḥubrāṣ. The Faḥl mosque (30.2 x 20.5 m) follows a construction style and plan identified in other regions of Jordan in the Mamluk period: stone construction with reused columns, sunk into the ground and supporting arches, the interior space divided by three aisles, a projecting mihrab, earthen floor, and an exterior courtyard.[94] Ruins of the attendant settlement, described above, have been excavated. Architectural survey of the medieval mosques in Ḥubrāṣ (in 2003) and subsequent excavation (in 2006) aimed at tracing village history through the physical and functional development of the local mosque and its associated buildings.[95] The ruins consist of a small square sanctuary (12 x 15 m) with a black and white mosaic floor and sunken columns, originally an Umayyad construction, which doubled in size (to c. 12 x 30 m) in the thirteenth century, presumably to accommodate a growing population. The

Mamluk-era mosque received a minaret (that carried an inscription of dedication by Sultan Qalāwūn in 686/1287), a new floor, a cross-vaulted roof, and a second (and perhaps third) mihrab. It was built with a combination of semi-dressed block and blocks and columns reused from ruins nearby. It resembles, but does not mirror, the contemporary mosque at Faḥl. **The thirteenth-century mosque at Ḥubrāṣ appears to have remained in use for hundreds of years, belonging to a larger ritual complex (one room of which contained imported European porcelain) in the eighteenth and nineteenth centuries. In 1931 a smaller mosque was built in the interior of the medieval ruins, the construction and plan of which resembled the Mandate-era houses nearby, and the twentieth-century sanctuary remained in use until 1970, when the mosque was officially closed for prayers (Fig. 3). Although no trace of the medieval village has appeared, its presence, longevity, history of expansion and contraction, and material culture and economic potential are documented in the local mosque.

In the West Bank, excavations by Birzeit University at Tiʿinnik (1985–87) and Khirbat Birzeit (1996–99, and renewed in 2006) have offered a glimpse into village life in the Mamluk era. Although the final report from Tiʿinnik has yet to be published, an indication of the kind of village it was can be surmised from Ziadeh's 1995 ceramic report.[96] Located in the northern West Bank, 13 km west of Jenin, Mamluk and Ottoman Tiʿinnik was a reoccupation of the Byzantine ruins, with the densest settlement in the late fifteenth and sixteenth centuries (Stratum 6)—a period normally associated with demographic decline. Over 60% of the pottery from this period was handmade and locally produced, with a reduction in wheel-thrown wares by 40% from earlier periods. Local products also included green-glazed bowls and wheel-thrown jars—the kind of assemblage identified in contemporary sites throughout the region. Demographic growth and a reliance on local industries characterize late Mamluk occupation at this site.

Khirbat Birzeit, in the central West Bank on the outskirts of Ramallah, has a different history.[97] Excavations in the 1990s focused on a large, two-floor complex,

[96] Final publication is now underway by Drs. Nancy Lapp (Concordia Seminary) and Hamed Salem (Birzeit University) and is affiliated with the Committee of Archaeological Policy of the American Schools of Oriental Research. For the ceramic report, see Ziadeh, "Ottoman Ceramics."

[97] Preliminary reports from the first phase of excavations can be found in Khaled Nashef, "Abḥāth wa-Tanqībāt fī Khirbat Bīrzayt 1996," *Journal of Palestinian Archaeology* 1, no. 1 (January, 2000): 4–27 (of Arabic section); idem, "Khirbet Birzeit 1996, 1998–1999: Preliminary Results," *Journal of Palestinian Archaeology* 1, no. 1 (January, 2000): 25–27; Khaled Nashef and Omar Abd Rabu, "Khirbet Birzeit Research and Excavation Project 1998: Second Season Excavation," *Journal of Palestinian Archaeology* 1, no. 1 (January, 2000): 4–12; Khaled Nashef and Omar Abd Rabu, "Abḥāth wa-Tanqībāt fī Khirbat Bīrzayt 1999," *Journal of Palestinian Archaeology* 1, no. 2 (July, 2000): 4–12. Ceramics reports can

dubbed the "Original Building" and tentatively identified during the first phase of excavation as the administrative center of a feudal lord (Fig. 4).[98] Built on top of and in the ruins of a Byzantine industrial complex (a wine press), the large stone building is Mamluk in date (Stratum III) and constructed of massive, well-dressed blocks forming 2-faced walls with a rubble and soil core, earthen floors, and vaulted superstructures. In the late Mamluk period (Stratum II) rooms were subdivided and floors replastered, as domestic or public spaces were converted to storerooms. Ottoman reuse of the building (Stratum I) consisted of the building of agricultural terraces in the upper floor, and the filling in of the ground floor. While the pottery included the same kind of assemblage described at Tiʿinnik and other rural sites in the region, the recovery of glazed relief bowls with formulaic inscriptions and glazed wares from Syria indicates wider exchange networks and perhaps a more formal function for the building. The "Original Building" is part of a larger settlement; more recent fieldwork (2006 and 2009 seasons) is investigating the physical and functional relationships between this building and the houses nearby, the results of which are forthcoming.[99]

Excavations by Israeli archaeologists have included such important sites as Safed (and the extra-mural settlement of al-Waṭṭah) and Jerusalem, where efforts have largely focused on fortifications and individual monuments. It is the research on village sites, however, that has described the character of local settlement, the longevity of occupation (not encountered in Jordan), and regional peculiarities that allow for comparison with other areas of southern Bilād al-Shām. Stern's categorization of rural sites on the basis of the exchange networks in which they participated is a useful one for describing settlement type. Givʿat Yasaf (Tall al-Raʾs) on the northern coast belongs to her first group: villages economically tied to coastal centers and international trade. The Mamluk village (Stratum 1) represents a reoccupation in the late thirteenth century of the Persian/Hellenistic site.[100] The settlement took the form of walled courtyards, a large central building (or complex of buildings), and numerous water channels (for irrigation, among other things). Wall construction appears quite similar to that noted throughout southern Syria: roughly hewn boulders of medium size. The central building yielded numerous imported glazed ceramics, to which it likely gained access by its proximity to Acre.

There were different types of villages in the southern Syrian landscape. However,

if one were to search for the "typical" village of the region, one might consider those with few international connections but that were nonetheless participants in regional socio-economic exchanges. Khirbat Burin, described earlier, falls into this category.[101] The late thirteenth- and fourteenth-century village appears to have consisted of clusters of well-built farmhouses surrounding shared outdoor courtyards and cisterns, a pattern repeated in villages in the region today. The houses were used for some time, with reduced occupation into the fifteenth century. The material culture associated with the structures betrayed regional (Greater Syrian), but no international, connections for the main period of occupation. The late Mamluk-era Galilean village of Khirbat Dinʿila, while small, reflected a common pattern: adaptation of Byzantine-era ruins (here the conversion of oil presses to housing, as at Khirbat Birzeit), continuous occupation (in this case well into the sixteenth century), and material culture characteristic of rural society (handmade cooking wares, wheel-thrown jars and jugs, and few, if any, imports). Stern's ceramic study demonstrated that households there acquired kitchen and table wares from different workshops throughout the Galilee and Golan.[102] On a final note, the site of Zuq al-Fauqani, in the Upper Galilee, contains the remains of a rural house occupied from the fourteenth through nineteenth centuries, transformed into a *khān* sometime in the seventeenth.[103] The architecture from the Mamluk levels is no longer extant—only the earthen floors remain—but the pottery as a whole reflects regional connections (reflected by pottery related to Rāshayyā al-Fukhkhār Ware of Lebanon, for example).

By comparison, the site of Givʿat Dani in central Israel, an agricultural settlement 7 km north of Lod, is more isolated economically and geographically. While the limited exposure of the excavations did not reveal architecture of the period, they did produce evidence of a "peripheral settlement" tied to a larger center: a meter and a half thick layer of refuse (Stratum 3—consisting of pottery, ash, and soil), was dated to the thirteenth–fourteenth centuries on the basis of the pottery and covered by a stone-paved floor in the Ottoman period.[104] The pottery revealed the typical range of glazed, handmade, and plain wheel-thrown vessels normally associated with a rural, landlocked site.

Archaeological investigations of Mamluk-era villages, as preliminary as they

are, reveal patterns in rural culture and settlement that are worth revisiting on the basis of text-based research. These villages were by and large self-sufficient, relying more on local and limited regional exchange networks than on the kind of international ones maintained by the state. Most communities appear to have followed a mixed subsistence regime and, when not pushed by state initiatives, diversified their choice of crops. The widespread abandonment of and demographic decline in villages, which happened gradually in many (but not all) parts of Transjordan, are not repeated to the same degree in Cisjordan. The physical, and apparently functional, structures of villages were maintained through the Ottoman and Mandate eras. House construction was modest and followed distinctly regional methods and styles, using local building materials and likely erected quickly; if architectural ruins and abandoned installations could be reused, they usually were, instead of constructing anew. In terms of its geography and intensity, the expansion of Mamluk-era settlement largely mirrored that of the Byzantine period, when land (and water) was used intensively and extensively. If any broad theme can be extrapolated from these patterns, one could be that Syrian villages were poised to function in the absence of a strong, activist state, and demonstrated considerable resiliency in the process. Village life represents, in this manner, the *longue durée* of the Annalistes.

Narrative Three: Industrial production, both large- and small-scale, largely fell to traditional practice and social relations.

The Mamluk state was rarely directly involved in the day-to-day running of agricultural industries, outside of large-scale commercial enterprises such as sugar. Even there, the role of officials was limited.[105] For this reason, these industries reveal much about local social structure, organization of labor and resources, and traditional technologies and markets that provide another perspective on rural societies. Three agricultural enterprises—growing and processing cane sugar, producing olive oil, and making honey—have left strong archaeological footprints and speak to the strength of local traditions.

The lucrative sugar industry under the Mamluks became a state enterprise, as sultans and amirs came to monopolize production and some of the most fertile lands were dedicated to sugarcane cultivation. The best lands for growing sugarcane in Syria—well watered, well drained (the result of a combination of slope and soil texture), with light-textured soil (capable of holding water), and located in areas of abundant sunshine and warm temperatures[106]—are generally

---

[105] On those occasions when officials attempted to interfere in the internal operations of the "estate"—diverting water and, in the process, disrupting traditional water sharing—peasants revolted (Walker, "The Role of Agriculture," 89).

[106] Effie Photos-Jones, Konstantinos D. Politis, Heather F. James, Alan J. Hall, Eichard E.

located in the Jordan Valley and its catchment system. They were among the most valuable *iqṭāʿāt,* and by the end of the fourteenth century they were converted to sultanic estates and *awqāf*.[107] Because the industry, when operating on a large scale, was so dependent on the state to provide adequate labor supplies, safe roads for transport, and dependable markets, its ups and downs reflected in many ways the economic health of the state and the region. Sugar production in Syria peaked in the Crusader and early Mamluk periods, declining significantly by the fifteenth century; evidence for production into the Ottoman period is rather rare but has been documented to the end of the sixteenth century.[108] The industry left behind the mills used to crush sugarcane, the refineries to convert juice to molasses, and the aqueducts that powered them[109]—some 43 sites in Israel alone[110]—as well as the earthenware vessels used to collect the crystals (called alternatively sugar pots, molds, or cones in the archaeological literature) and collect and store the syrup (molasses or syrup jars). Most archaeological studies of sugar production have focused on these architectural and ceramic remains.[111]

Jones, and Jerry Hamer, "The Sugar Industry in the Southern Jordan Valley: An Interim Report on the Pilot Season of Excavations, Geophysical and Geological Surveys at Tawahin as-Sukkar and Khirbat ash-Shaykh ʿIsa, in Ghawr as-Safi," *Annual of the Department of Antiquities* 46 (2002): 611.

[107] For documentation of this process in Jordan, see my "Sowing the Seeds of Rural Decline."

[108] Edna J. Stern, "The Excavations at Lower Horbat Manot: A Medieval Sugar-Producing Site," *ʿAtiqot* 42 (2001): 277–308.

[109] The date and function of the medieval and post-medieval aqueducts that punctuate the southern Syrian countryside have remained problems for the archaeological study of sugar production. Usually their identification as components of sugar mills is made on the basis of associated sugar pots, though this practice is far from consistent. It is possible that many aqueducts originally attributed to Mamluk-era sugar mills may have been part of Ottoman-era flour mills. For some technological studies of mills in Jordan, see Muhammad S. Malkawi, "The Water Mills of Wadi Kufranjeh during the Period between Late Mamluk and Early Ottoman: A Technological Study" (M.A. thesis, Yarmouk University, 1994); Joseph A. Greene, "The Water Mills of the ʿAjlun-Kufranja Valley: The Relationship of Technology, Society and Settlement," *Studies in the History and Archaeology of Jordan* 5 (1995): 757–65; and Alison McQuitty, "Water-Mills in Jordan: Technology, Typology, Dating and Development," *Studies in the History and Archaeology of Jordan* 5 (1995): 745–51.

[110] Reference to Edna J. Stern's M.A. thesis, "The Sugar Industry in Palestine during the Crusader, Ayyubid and Mamluk Periods in Light of the Archaeological Finds" (Hebrew University, 1999, in Hebrew) in Katherine Strange Burke, "A Note on Archaeological Evidence for Sugar Production in the Middle Islamic Periods in Bilad al-Sham," *Mamlūk Studies Review* 8, no. 2 (2004): 111.

[111] For an excellent summary of archaeological research on the Syrian sugar industry and a bibliography of published studies, see Burke, "Archaeological Evidence for Sugar

Five sugar mills have been excavated in southern Bilād al-Shām,[112] and several more have been architecturally and archaeologically surveyed in the wadis of Jordan.[113] The technology of these mills—how they operated and how sugar was physically processed—has been of focal interest in archaeological reports for many years. What is relatively new is the analysis of their industrial waste, which directly reflects technology, availability of natural resources, and exchange networks. It also can be a measure of the environmental impact of sugar refining, an issue not adequately investigated archaeologically. Excavation reports frequently mention the deposits of ash associated with sugar mills, but only recently has that ash been subjected to laboratory analysis. At Horbat Manot, a sugar production site north of Acre, palaeobotanical analysis of charred remains of wood and ash identified trees typical of Mediterranean zones (namely carob, evergreen oak, terebinth, and Cyprus oak—all local vegetation) as the fuel that fed the fireplace in the refinery.[114] Excavations at Tawāḥīn al-Sukkar, a contemporary sugar factory in Jordan southeast of the Dead Sea, included systematic analysis of the waste produced by sugar refining.[115] The purpose of the joint British-Greek project was to "place the sugar industry in the context of the landscape that generated and sustained it,"[116] producing some of the earliest comprehensive data on the technologies and resources that made sugar production possible in the Ayyubid and Mamluk periods. A large waste heap at the site (in Trench II) produced several layers of refuse, including charcoal and ash, sand and gravel, and a white powdery industrial waste. The latter was subjected to x-ray diffraction analysis, which

Production."

112 In addition to those cited in Burke, we should add the recent fieldwork near Safi in southern Jordan (Photos-Jones et al., "Sugar Industry in the Southern Jordan Valley," 591–614) and the brief report on the Abu Sarbut mill in Margreet Steiner, "The Excavations at Tell Abu Sarbut, a Mamluk Village in the Jordan Valley," *ARAM* 10 (1998): 141–51.

113 Ṣāliḥ Ḥamārnah, "Zirāʿat Qaṣab al-Sukkar wa-Ṣināʿatuhu ʿinda al-ʿArab al-Muslimīn," *Annual of the Department of Antiquities of Jordan* 22 (1977–78): 12–19; Rubá Abū Dalū, "Maʿāṣir al-Sukkar fī Ghawr al-Urdunn fī al-Qarnayn al-Thānī ʿAshar wa-al-Rābiʿ ʿAshar al-Mīlādiyīn fī Ḍawʾ al-Maṣādir al-Tārīkhīyah wa-al-Muktashafāt al-Atharīyah" (M.A. thesis, Yarmouk University, 1991), and idem, "Taqnīyah Maʿāṣir al-Sukkar fī Wādī al-Urdunn khilāl al-Fitrāt al-Islāmīyah," *Studies in the History and Archaeology of Jordan* 5 (1995): 37–48.

114 Stern, "Lower Horbat Manot," 293; Uri Baruch, "Charred Wood Remains from Lower Horbat Manot, Western Galilee," *ʿAtiqot* 42 (2001): 309–10.

115 85–90% of the cane processed into crystallized sugar ends up as waste by-products (Photos-Jones et al., "Sugar Industry in the Southern Jordan Valley," 593). For the potential environmental impact of the sugar industry, see Walker, "The Role of Agriculture in Mamluk-Jordanian Power Relations."

116 Photos-Jones et al., "Sugar Industry in the Southern Jordan Valley," 591.

identified several fine-grained minerals used in sugar refining: gypsum (an anti-caking agent), calcite (for the clarification of sugar crystals), bassanite, anhydrite, aragonite, and quartz, all of which occur naturally in the local Lisan sediments.[117] The laboratory results are historically relevant on two accounts: they demonstrate the use of local resources in sugar production, and they suggest ways in which sediments and refuse can help identify sugar refining sites where the architectural remains have disappeared.

As for the transport and marketing of sugar in Mamluk Syria, we know surprisingly little. Archaeologists have focused on production but not the subsequent processes of distribution and consumption. One site that has been identified as a sugar redistribution point is the Ḥisbān citadel. The storeroom of the governor's complex contained dozens of intact molasses jars. They appear to have been stored on wooden shelves and on the floor and were made in at least two standardized sizes. The shape of the jars is generally piriform, like the molasses jars found in sugar mills, but with a visible "waist" in the middle. The hourglass shape produced is ideal for wrapping ropes around the middle of the jar, and it is in this way that we should imagine how many sugar products were transported from mill to market: donkeys carried a jar or two on each side, secured by ropes.[118] It appears at this stage in fieldwork that sugar was transported here from some distance, the Jordan Valley being 24 km to the west as the crow flies but 101 km today by car (via the Allenby Bridge).[119] While Mamluk citadels functioned as repositories for weapons and food, the relatively large quantity of jars (in relation to the limited size of the storeroom and the estimated size of the garrison—likely only a handful of soldiers were stationed there) led the excavators to believe that the sugar, or molasses, was more likely brought to the citadel for redistribution to local markets (the one in Ḥisbān village included) than stored here for the

[117] Ibid., 606, 611.

[118] On the basis of camel bones at Tell Abu Sarbut, the excavators suggest that sugar was transported overland by pack animals (Steiner, "Excavations at Tell Abu Sarbut," 148–49). This kind of transportation may also have been supplemented by Dead Sea shipping; boats carried agricultural products between Transjordan and Palestine in this fashion throughout the Middle Ages (Joseph Greene, "From Jericho to Karak by Way of Zughar: Seafaring on the Dead Sea, Bronze Age to Ottoman," *Studies in the History and Archaeology of Jordan* 10 [2009] [forthcoming]).

[119] Ongoing fieldwork in the medieval village and its hinterland is contradicting earlier assumptions that sugar was grown and processed nearby: the water mills closest to the tell (in the Wādī Ḥisbān), at least, are Ottoman and Mandate-era in date and were almost certainly used for grinding grain (project archives, 2004 survey). The ash deposits on the acropolis will be subjected to palaeobotanical analysis shortly to determine what kind of industrial activity on site produced them. These deposits are described in Walker and LaBianca, "The Islamic *Quṣūr* of Tall Ḥisbān," 464, Fig. 32.

garrison or an *iqṭāʿ* holder.[120] Similar sugar jars were also found in the ruins of the village below the citadel. What were the contents of the storeroom worth?[121] A recent study, based on the holding capacity of the storeroom and that of the jars themselves, calculations of weight and density of processed cane sugar, and the price of Syrian sugar in fourteenth-century markets, estimated that the Ḥisbān stores, if full, potentially held 194 dinars worth of sugar at any one time. This alone would have contributed 10% of a cargo of sugar carried on a Venetian galley in this period.[122]

One important element in the success of the Mamluks' sugar production was securing an adequate work force in what was a very labor-intensive industry. The organization and size of the labor force cannot be determined on the basis of the mills/refineries alone. Burke appropriately highlighted the importance of studying sugar production in relation to supporting settlements, an area of inquiry that until very recently had not been systematically investigated.[123] Excavations at the sister sites of Tawāḥīn al-Sukkar (the sugar factory—hereafter TES) and Khirbat Shaykh ʿĪsá (its supporting village—hereafter KSI) in 1999–2002 were specifically designed to examine the relationship of sugar production to the villages and land that sustained it. A hybrid of landscape and industrial archaeology, the TES/KSI project demonstrated ways in which villages were pivotal to the maintenance and success of the industry. In addition to labor (and here the corvée labor of peasants is meant), villages supported the sugar mills by producing the sugar and molasses jars without which sugar crystal could not be generated from the syrup.[124]

Unlike the sugar industry, the production of olive oil was both a household industry and practiced commercially, as it is today. The processing of olive oil requires coordination of the efforts of cultivators, press owners, and merchants; study of the industry has real potential to reveal social patterns on the village level, if one can flesh this out in the archaeological record. The results of the 2003 season

---

[120] For reports on the storeroom in general, see Walker, "The Late Ottoman Cemetery in Field L, Tall Hisban," *Bulletin of the American Schools of Oriental Research* 322 (2001): 1–19, and idem, "Mamluk Investment in Southern Bilad al-Sham," 249–50.

[121] It is not certain what products were stored in these jars—the sugar crystals or the molasses—as no residue analysis has been done on the vessels to date. We cannot automatically assume that the same vessels used for processing were used for transport and storage, although this is possible.

[122] Walker, "Sowing the Seeds of Rural Decline," 191.

[123] Burke, "Archaeological Evidence for Sugar Production," 118. The sugar factory at Tell Abu Sarbut in the eastern Jordan Valley is a bit of an exception. Here excavators noted the transformation of the industrial site, after a period of abandonment, to a village engaged in a mixed agro-regime, with some continued cultivation of sugarcane, still in the Mamluk period (Steiner, "Excavations at Tell Abu Sarbut"). Research has focused more on the earlier factory, however, than the later settlement.

[124] Photos-Jones et al., "Sugar Industry in the Southern Jordan Valley," 610.

of the NJP in Malkā village produced some evidence of the social and economic mechanisms behind olive oil production in the fourteenth century.[125] Malkā was, according to an unpublished *waqfīyah* of 796/1393, the private property of Sultan Barqūq, who subsequently endowed the entire village in support of his madrasah in Cairo. The document describes in some detail the agricultural production of the village, emphasizing its extensive olive groves (apparently organized into numerous small plots among vegetable gardens) and presses *(maʿāṣir),* which remain the defining characteristics of Malkā's landscape today. Survey of the village and its hinterland resulted in the discovery of an underground, industrial-scale olive press, housed in a cave and used in the Byzantine and Mamluk periods. This "factory" was capable of producing a considerable profit. A recent economic study of the cave-press, based on calculations made for production capacity of presses in the western Galilee and export prices of the commodity provided by Ibn Kathīr, estimated the factory's annual income at 440 dinars, after the needs of the village were met, which was equivalent to 1/3 of a shipment of Spanish olive oil to Alexandria in 1405.[126] If modern production can be used to gauge the workings of the medieval industry, considerable cooperation was required to coordinate the harvest of olives and processing of oil produced on what were essentially family-run plots.

Wheat, olive oil, and sweeteners were staples of the average man's diet in the medieval Levant. Honey replaced sugar for families of limited means as a sweetener and was also used for medicinal purposes. Today beekeeping, and the sale of honey, is a common "small business" in Syrian villages, frequently supplementing incomes derived from other sources. The same was likely true in the Middle Islamic period. While perhaps a less prestigious product than sugar or olive oil, honey had ready markets and was essentially a local industry with no overt relation to state enterprise. Beekeeping is documented in Mamluk and Ottoman texts and is now appearing in unexpected archaeological contexts: cemeteries in Israel, as discussed earlier. [127] Ceramic beehives, in complete form, have been identified in several cemeteries of Mamluk and Ottoman date to mark graves, to seal graves, and (quite possibly) to bury infants. Although this phenomenon is not fully understood, it presents an opportunity to explore the study of household industry and traditions and taboos related to death in village society.

Narrative Four: The physical environment, local resources, and climate helped to mold rural societies in the Mamluk period in important ways.

---

[125] The following relies on the field report found in Walker, "Northern Jordan Survey 2003."

[126] Walker, "Sowing the Seeds of Rural Decline," 192–93.

[127] Taxel, "Ceramic Evidence of Beekeeping."

Limited and unpredictable rainfall is a reality in much of Syria, and this in a region that largely relies on rain-fed agriculture. In Jordan, even today the wheat crop fails once every five years for lack of rain.[128] Floods were equally a present and serious danger: Mamluk chronicles frequently describe the loss of life and property caused by heavy rains and flooding.[129] Climate changed in dramatic ways over the course of Mamluk rule: the wetter conditions of the thirteenth and fourteenth centuries conducive to intensive agriculture contrast with the high temperatures and drier conditions that led to frequent droughts throughout the fifteenth. This has been documented by multiple lines of environmental research, but its impact on contemporary societies is not understood.[130] Similarly, we do not know how growing sugarcane, and other cash crop industries, transformed soils in the short or long terms or to what degree, if at all, deforestation and soil erosion have contributed to the vagaries of settlement and the rural economy in the Middle (Ayyubid-Mamluk) and Late Islamic (Ottoman) periods. Although the impact of climate change on the scale and intensity of settlement has been a fixture of archaeological literature on the Mamluk period for many years, new interest in the ecological aspects of cultural change has forced us to reevaluate

[128] Carol Palmer, "'Following the Plow': the Agricultural Environment of Northern Jordan," *Levant* 30 (1998): 132.

[129] To cite some examples for Jordanian towns and villages: two months of rain in the winter of 761/1359 caused flooding so severe in Ḥubrāṣ that the local qadi drowned and prices skyrocketed (Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah* [Damascus, 1994], 3:164); the great flood of 728/1328 destroyed much of the town of ʿAjlūn, taking away large sections of the marketplace (Yūsuf Ghawānimah, "Al-Tijārah al-Dawlīyah fī al-Urdun fī al-ʿAṣr al-Mamlūkī," *Studies in the History and Archaeology of Jordan* 3 [1987]: 328–29—citing al-Jazarī, Mufaḍḍal ibn Abī al-Faḍāʾil, and al-Nuwayrī); and in 790/1388 heavy rains blocked roads near Ḥisbān, preventing travel for days (Ibn Ḥijjī, *Tārīkh Ibn Ḥijjī* [Beirut, 2003], 1:106–7). The chroniclers rarely mention the abandonment (however temporary) of a village as a result, but in their accounts of the washing away of entire neighborhoods and severe damage to crops, it was likely that residents relocated for a while until they had a chance to rebuild. (This topic is dealt with in more detail in ch. 2 of my forthcoming *Jordan in the Late Middle Age: Transformation of the Mamluk Frontier.*)

[130] Methods of data collection have included palynology, sedimentology, dendrochronology, and isotope analysis. For a list of published studies relevant to Mamluk Syria, see B. Lucke, Z. al-Saad, M. Schmidt, R. Bäumler, S. O. Lorenz, P. Udluft, K.-U. Heussner; and B. J. Walker, "Soils and Land Use in the Decapolis Region (Northern Jordan): Implications for Landscape Development and the Impact of Climate Change," *Zeitschrift der Deutschen Palaestina-Vereins* 124, no. 2 (2008) (forthcoming); Walker, "Sowing the Seeds of Rural Decline," 197, note 119; and idem, "The Role of Agriculture in Mamluk-Jordanian Power Relations," 90, note 38. More recently, two monographs on the topic of climate, land use, and landscape have been published with data sets taken from Jordan and Israel: Rosen, *Civilizing Climate,* and Carlos E. Cordova, *Millennial Landscape Change in Jordan: Geoarchaeology and Cultural Ecology* (Tucson, 2007).

climate and natural resources as variables in the socio-political-economic history of the Mamluk state. The result has been the development of new methods of data collection and revised models for assessing the complicated relationships between climate, land use, and settlement.

It was, in part, to explore social adaptation to limited resources that the Dhībān Excavation and Development Project was launched in 2004.[131] Dhībān is a bit of an anomaly for medieval settlement history. In spite of the challenges presented by its geography (surrounded by canyons, and physically isolated as a result) and environment (poor soils, barely enough annual rainfall for dry farming, no natural springs), the site continued to be settled and resettled since Antiquity. In order to account for this local connection to place, and in a larger sense to understand the phenomenon of large-scale sedentarization in locales with poor environmental conditions, the project has embarked on a focused study of Dhībān in the Mamluk period, when the village was revived, settlement expanded, and land use intensified. The role of the state in reorganizing agriculture, and indirectly settlement, is considered in light of this rural renaissance and its subsequent, and quite gradual, decline. As this project is relatively new, and the excavation component has only recently begun, the results of the cultural ecology study are not yet available.[132] Nonetheless, it is a promising approach to the study of Mamluk villages, introducing new venues of research on the effects of imperial policies in marginal lands.

Originally interested in the roles of climate and land use in the abandonment of the Decapolis region, the Brandenburg Institute of Technology has expanded its field and lab work to include much larger regions of Syria through the medieval periods.[133] Methodologically the Brandenburg project uses soil genesis studies (documenting the factors behind the creation and transformation of soils) to measure the impact of climate change and land use (ranging from intensive agriculture to pastoralism) in the physical transformation of the landscape and in settlement fluctuations. This project, led by Dr. Bernhard Lucke, has collaborated with the NJP since 2005 in documenting the dialectical relations among land use, settlement, and climate. The political ecology approach to Mamluk studies adopted by the NJP, highlighting the competition between state and local society over natural resources, has necessitated a combination of methods in gathering climate proxy data: palynology, phytolith studies, textual analysis, and now

[131] See note 88 for project publications.

[132] We eagerly await the results of the 2009 field season.

[133] For an earlier report, see Bernhard Lucke, Michael Schmidt, Ziad al-Saad, Oliver Bens, and Reinhard Hüttl, "Abandonment of the Decapolis Region in Northern Jordan–Forced by Environmental Change," *Quaternary International* 135, no. 1 (2004): 65–82.

soil analysis and dendrochronology.[134] Preliminary results of soil study in 2006 eliminated soil erosion and deforestation as problems for local farmers in the Middle Islamic period, documented continuity in land use from pre-Mamluk times, and highlighted the role of winter floods in the transformation of the landscape and destruction of villages in pre-modern times.[135] The results of the other climate proxy studies are forthcoming.

The environmental approach is quite new in Mamluk studies. What is emerging from this Jordan-based fieldwork is an appreciation for how complex and ambiguous the Mamluks' management of natural resources was in southern Syria. Furthermore, the impact of climate on rural societies is not clear-cut, and local variations in the agricultural regime, the relation with state officials and local peoples, and the particular structure of local administration all came into play in determining the ways in which local communities responded to the limitations and possibilities offered by climatic variation. Of the research themes adopted in Mamluk archaeology today, this is arguably the most cross-disciplinary and theoretical.

Concluding Thoughts

It is not the purpose of archaeology to rewrite history or deliberately compete with narratives presented by written sources. The very tentative remarks about Mamluk Syria presented above have emerged from recent fieldwork that has sought to explain social change and settlement fluctuations, to flesh out the rural history not fully described by texts, and to acquire a greater knowledge of village life under Mamluk rule. The challenge for future archaeological research is to go beyond what has been done to include studies, for example, that identify more clearly the pastoralists of the rural landscape, consider the phenomenon of migration and resettlement in discourse on settlement "decline," and explore identity in the context of the distinctive regionalism in southern Syrian culture. In the process, it will deepen our understanding of Mamluk societies in their rich diversity and ability to adapt and develop.

Maqriziana IX: Should al-Maqrīzī Be Thrown Out with the Bath Water? The Question of His Plagiarism of al-Awḥadī's *Khiṭaṭ* and the Documentary Evidence

Introduction

One of the most renowned scholars that Islamic civilization has produced, al-Maqrīzī is considered a major historian in his own right and is sometimes compared to the great thinker Ibn Khaldūn, with whom he was associated in the last years of the latter's life. Al-Maqrīzī's views on economics, history, and architecture still stimulate modern research in these fields; his ideas inform the way in which we look at certain questions, especially historiographical ones. His books are among the bestsellers of medieval literature, continuously copied in the age of manuscript culture, and then printed, reprinted, translated, and studied. As with every great figure, some criticisms, generated by contemporary envious colleagues or modern viewpoints based on anachronistic criteria, may tarnish the idyllic portrait. In this respect, al-Maqrīzī is no exception to the rule. Some scholars have questioned his integrity in historiographical terms. The case raised by Ayalon as regards al-Maqrīzī's position towards the *Yāsa,* the Mongol book of laws, probably surpasses all others in the modern period.[1] Ayalon's study did not stir up any controversy among the scholarly community because he based his aguments on irrefutable proofs, even though some remained conjectural.[2]

In his own time, al-Maqrīzī could not avoid the disparagement of his intellectual probity. The most derogatory remarks concern his alleged plagiarism of the work of his colleague and friend, al-Awḥadī. According to al-Sakhāwī, who vehemently

This article is based on the most complete version of a lecture that was first presented as the Mamlūk Studies Review Annual Lecture at the University of Chicago (24 February 2006), and later at the Institute of Islamic Studies, McGill University, Montréal (8 April 2008). The discovery, made in May 2003, was officially announced at the 22nd Congress of the Union européenne des arabisants et islamisants, University of Krakow (29 September–4 October 2004). It is my pleasure to dedicate it to Carl Petry on the occasion of his sixty-fifth birthday.

[1]David Ayalon, "The Great *Yāsa* of Chingiz Khān: A Reexamination," *Studia Islamica* 33 (1971): 99–140, 34 (1971): 151–80, 36 (1972): 113–58, 38 (1973): 107–56.

[2] The present writer recently produced indisputable evidence of al-Maqrīzī's intellectual dishonesty in the affair of the *Yāsa,* thus closing this case opened by Ayalon in 1971. See F. Bauden, "Maqriziana VII: Al-Maqrīzī and the *Yāsa:* New Evidence of His Intellectual Dishonesty," in *The Mamluk Sultanate of Egypt and Syria: Aspects of a Medieval Muslim State,* ed. Reuven Amitai and Amalia Levanoni (forthcoming).

repeated his accusation on several occasions, al-Maqrīzī had supposedly laid hands on his colleague's drafts upon his death (811/1408) and clean-copied the whole lot, adding some data, but publishing it in his own name under the title *Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār.* The treatment al-Maqrīzī reportedly applied to al-Awḥadī's text would thus be similar to what we now call "plagiarism." Such a charge must be taken seriously, even more so in the case of al-Maqrīzī given that the resulting book is considered his magnum opus. Though first opened five centuries ago, this case engendered a lively debate that started with the beginning of the last century. Several scholars have endeavored to elucidate the validity of this charge on the basis of the elements they had at their disposal: al-Sakhāwī's accusation and al-Maqrīzī's text.[3] Most of the time, these efforts have resulted in a justification of al-Maqrīzī, best exemplified by F. Rosenthal's position: "the accusation of plagiarism is much too harsh."[4] In their scrutiny of this charge, most scholars were influenced by al-Sakhāwī's well-known vindictiveness towards almost everybody in his works, and they rebutted his allegations.

The aim of this article is to reexamine the question in the light of new evidence that has surfaced only recently. In one of the two extant volumes of the first draft of al-Maqrīzī's *Khiṭaṭ,* I noticed that 19 leaves are written in a different handwriting, though most of al-Maqrīzī's extant autograph manuscripts are in fact holograph.[5] Through a close analysis, both external and internal, I seek to

[3] In chronological order: Ighnāṭyūs Yūlyānūvitsh Krātshkūvskī [I. Y. Kratchkovsky], *Tārīkh al-Adab al-Jughrāfī al-ʿArabī,* trans. [4] Franz Rosenthal, "al-Maḳrīzī," *Encyclopaedia of Islam,* 2nd ed., 6:194.

[5] In May 2003, I received a copy of the manuscript (Topkapı Sarayı Kütüphanesi [Istanbul] MS E. Hazinesi 1405) and noticed the difference in the handwriting. Given that a new edition of the section covered by this manuscript was in preparation by Ayman Fuʾād Sayyid, I had to await its publication to see if he had established the same fact. When vol. 4 appeared at the end of 2003, I realized that he had apparently not noticed the difference in the handwriting. Moreover, several

demonstrate that this section must be identified as the unique remnant of al-Awḥadī's *Khiṭaṭ* that has survived. As a consequence, this discovery allows me to reopen the case raised by al-Sakhāwī and to see whether or not the charge was justified. However, I do not claim to be an exponent or a proponent in this case: my aim is to try to answer the charge as fairly as possible, and for this, I will have to consider it in view of the perception of plagiarism in the context under study.

This newly-discovered section of al-Awḥadī's *Khiṭaṭ* needs further investigation: a critical edition together with a biography of al-Awḥadī and a study of the text will be published separately.[6]

The Charge

Without the charge brought by al-Sakhāwī (d. 902/1497) against al-Maqrīzī (d. 845/1442), the whole affair would have completely faded into oblivion. Indeed, al-Sakhāwī repeatedly accused al-Maqrīzī of having plagiarized a book written by one of al-Maqrīzī's colleagues whose name was al-Awḥadī (d. 811/1408). On at least five occasions, he leveled this charge in different terms, but always in a very direct manner. The first of these is to be found in his *Al-Tibr al-Masbūk*, under the year in which al-Maqrīzī died, and in his biographical dictionary entitled *Al-Ḍawʾ al-Lāmiʿ* (al-Maqrīzī's entry):[7]

passages found in al-Awḥadī's section and not included by al-Maqrīzī in his final version had been included in the edition, as supplementary data. A. F. Sayyid even reproduced the leaves where these additional data appear (4:123–29 of the introduction). Regarding the first two volumes, I had already stressed that this new edition could unfortunately not be considered as a critical one, due to the fact that A. F. Sayyid emended the texts with passages from the sources quoted by al-Maqrīzī or found in the draft of the *Khiṭaṭ* instead of sticking to the manuscripts of the final version (see my review in this journal, 11, no. 2 [2007]: 169–76). This bias is more visible in the last two volumes of his edition and even more with the section in al-Awḥadī's hand.

[6] See F. Bauden, "From Draft to Palimpsest: A Critical Edition of the Unearthed Part of al-Awḥadī's Autograph Book on the *Khiṭaṭ* of Cairo," forthcoming in *Mamlūk Studies Review*.

[7] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, n.d.; reprint of Cairo, 1934–36), 2:22; idem, *Al-Tibr al-Masbūk fī Dhayl al-Sulūk*, ed. Najwá Muṣṭafá Kāmil and Labībah Ibrāhīm Muṣṭafá (Cairo, 2002–5), 1:73. The quotation is from the former, but both texts are almost identical.

And he remained in his hometown, devoting his time to occupying himself with history to such an extent that he became renowned and celebrated for this. A number of books in this [field] are attributed to him, such as *Al-Khiṭaṭ* of Cairo, which is a useful [book] given that he discovered al-Awḥadī's draft, as already stated in the latter's biography. He appropriated it and made brief additions to it.

وأقـام ببلده عاكفا على الاشتغال بالتاريخ حتى اشتهر به ذكـره وبعد فيه صيته وصـارت له فيه جملة تصانيف كالخطط للقاهرة وهو مفيد لكونه ظفر بمسودة الأوحدي كما سبق في ترجمته فأخذها وزادها زوائد غير طائلة.

In a few words, al-Maqrīzī's reputation regarding the book that earned him fame until our time is demolished: it results from an appropriation of somebody else's work, only improved by adding a few data. The second denunciation is even more defamatory. Al-Sakhāwī wrote it, as he said, in al-Awḥadī's entry:[8]

He devoted his attention to history, of which he was passionately fond. He wrote a comprehensive draft about the topography of Miṣr[9] and Cairo on which he worked hard. [With this], he did a useful work and in an excellent manner. He made a fair copy of part of it. Then Taqī al-Dīn al-Maqrīzī made a fair copy of it [completely] and attributed it to himself [after he had made] additions.

واعتنى بالتاريخ وكان لهجا به وكتب مسودة كبيرة لخطط مصر والقاهرة تعب فيها وأفاد وأجاد وبيض بعضها فبيضها التقي المقريزي ونسبها لنفسه مع زيادات.

So, al-Maqrīzī had supposedly gotten hold of al-Awḥadī's draft—some parts of which had already been transcribed by the latter—made a fair copy of the whole thing, and finally written his name on the title page although he had only expanded it with a few additions. Moreover, we are told that al-Awḥadī's work, even though most of it still consisted of a draft, was a comprehensive book to which he devoted a lot of his time. Last but not least, it is clear that this was more than just a few notes scribbled on some quires: it constituted a really important contribution to the history of Cairo's architectural development. Not content with

[8] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 3:358–59.

[9] To be understood as the quarter of Cairo and not as referring to Egypt.

these two attacks, al-Sakhāwī reiterated his allegation in another of his books devoted to the defense of history as a science, *Al-Iʿlān bi-al-Tawbīkh,* where he provided the same details with, however, a reference to his informant in this affair:[10]

وكذا جمع خططها المقريزي وهو مفيد. قال لنا شيخنا إنه ظفر به مسودة لجاره الشهاب أحمد بن عبد الله بن الحسن الأوحدي بل كان بيض بعضه، فأخذها وزاد عليه زيادات ونسبها لنفسه.

In the same way, al-Maqrīzī compiled [a history] of its topography, and it is a useful [book]. Our master told us that he discovered it in draft form through his neighbor Shihāb al-Dīn Aḥmad ibn ʿAbd Allāh ibn al-Ḥasan al-Awḥadī who, however, had [already] made a fair copy of some parts. He [al-Maqrīzī] appropriated it after making some additions to what he [al-Awḥadī] had done and then attributed it to himself.

Though the words differ only slightly from the previous quotation, the mention of an informant is a clue to understanding on what grounds al-Sakhāwī presumed to bring forth this charge. The *shaykhunā,* in al-Sakhāwī's jargon, refers to the only person he ever considered his master and to whom he devoted a lengthy biographical monograph:[11] Ibn Ḥajar al-ʿAsqalānī (d. 852/1449). This is a significant point because al-Sakhāwī was born in 830/1427, which means that he was only 15 years old when al-Maqrīzī died. It is unlikely that al-Sakhāwī would have heard or witnessed anything relating to this case before al-Maqrīzī's death, given his young age. On the other hand, it is reasonable to think that his master would have told him what he knew about this story when al-Sakhāwī got older, probably after al-Maqrīzī's death. Given that Ibn Ḥajar died seven years after al-Maqrīzī, his disciple was 22 years old by that time, a more credible age for a divulgence of that kind.[12]

[10] Al-Sakhāwī, *Al-Iʿlān bi-al-Tawbīkh li-man Dhamma Ahl al-Tārīkh,* in Franz Rosenthal, *A History of Muslim Historiography,* rev. ed. (Leiden, 1968), 402; ibid., trans. Ṣāliḥ Aḥmad al-ʿAlī (Beirut, 1407/1986), 266.

[11] Al-Sakhāwī, *Al-Jawāhir wa-al-Durar fī Tarjamat Shaykh al-Islām Ibn Ḥajar,* ed. Ibrāhīm Bājis ʿAbd al-Ḥamīd (Beirut, 1999).

[12] For instance, al-Sakhāwī did not get access to Ibn Ḥajar's dictionary of his authorities, *Al-Majmaʿ al-Muʾassis,* before 850/1447. As we will soon see, this was a major source for al-Sakhāwī's charge against al-Maqrīzī. His reading note on *Al-Majmaʿ al-Muʾassis,* together with two others by renowned scholars (Ibn Fahd and Taghrī Barmish), found in Ibn Ḥajar's autograph copy held in al-Maktabah al-Azharīyah, Cairo (MS muṣṭalaḥ 1360, fol. 163a), is edited below.

Al-Sakhāwī confirmed that his informant in this case was Ibn Ḥajar in the biography he dedicated to his master, but he did not refer to an oral tranmission, asserting rather that he read Ibn Ḥajar's allegation in the dictionary of his authorities, *Al-Majmaʿ al-Muʾassis lil-Muʿjam al-Mufahris:*[13]

وقرأت بخطه أيضا في ترجمة الأديب المؤرخ الشهاب أحمد بن الحسن بن عبد الله بن طوغان الأوحدي ما نصه: اعتنى بعمل خطط القاهرة ومات عنه مسودة فبيضه الشيخ تقي الدين المقريزي.

I also read in his [Ibn Ḥajar's] handwriting, in the biography of the man of belles-lettres, the historian Shihāb al-Dīn Aḥmad ibn al-Ḥasan ibn ʿAbd Allāh ibn Ṭūghān al-Awḥadī, what follows: "He devoted his time to working on the topography of Cairo but it was in draft form when he died. The shaykh Taqī al-Dīn al-Maqrīzī made a fair copy of it."

Whatever the case may be, the charge is undoubtedly a very serious one, as he claims that al-Maqrīzī's achievement in this case must be credited to al-Awḥadī. Before investigating if al-Sakhāwī's assertion was grounded on serious evidence and thus justified, it is necessary to turn to al-Awḥadī's biography and study his connection to al-Maqrīzī.[14]

It can be argued that without the incident discussed here, al-Awḥadī would have remained an obscure scholar. He was indeed largely unnoticed, as the data provided by the sources to recount his life are only found in three sources written by contemporaries who were acquainted with him or by a later historian who relied on these testimonies. In fact, the main sources are the very protagonists of this affair: al-Maqrīzī himself, Ibn Ḥajar, and al-Sakhāwī, the last not having had the opportunity to know al-Awḥadī, as he was born shortly after the latter's death. Thanks to the data provided by these authors,[15] we know that Shihāb al-Dīn Aḥmad ibn ʿAbd Allāh ibn al-Ḥasan ibn Ṭūghān al-Awḥadī was born in

[13] Al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 1:394. This is the fifth time al-Sakhāwī exposes al-Maqrīzī's plagiarism.

[14] A fuller account of al-Awḥadī's life will be found in "From Draft to Palimpsest."

[15] Al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah fī Tarājim al-Aʿyān al-Mufīdah*, partial autograph copy in Forschungsbibliothek, Gotha, MS 1771, fols. 47b–49a = ibid., ed. Muḥammad Kamāl al-Dīn ʿIzz al-Dīn ʿAlī (Beirut, 1992), 1:232–37; ibid., ed. Maḥmūd al-Jalīlī (Beirut, 2002), 1:185–90 (no. 120); Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr,* ed. Yūsuf ʿAbd al-Raḥmān al-Marʿashlī (Beirut, 1992–94), 3:38–39; al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 1:358–59.

Cairo in 761/1360 in a family of eastern origin (probably Iraq or Iran). It was his grandfather who had come to Cairo, where he settled in 710/1310–11. He then entered the service of an influential Mamluk, Baybars al-Awḥadī, the governor of the citadel, and the latter's *nisbah* was attached to him, as frequently happened in the Mamluk milieu.[16] His grandson, Shihāb al-Dīn Aḥmad, served in the army where he held several positions, after he had received a thorough instruction in the various Quranic readings. As a scholar, he compiled numerous notebooks *(majāmīʿ)* and composed at least two books: a *dīwān* of his own poetry and a topographical history of Cairo. The latter mostly remained in draft form, though he managed to make a fair copy of some parts of it before his death in his 48th year according to our calendar, in 811/1408. Incidentally, al-Maqrīzī, who was born in the sixties of the eighth century (probably in 766/1364–65, which means that al-Awḥadī was five years older than him), outlived him by more than 34 years, as he died in 845/1442. Even though al-Awḥadī died earlier, the two men were not strangers to one another: they were neighbors, living in the same quarter of Barjawān, in the Fatimid part of the city, close to the street of Bayn al-Qaṣrayn, and they met each other in their respective homes for sessions of transmission *(imlāʾ),* and this occurred in 810/1407, a year before al-Awḥadī's death:[17]

Our fellow, the expert reader [of the Quran], the historian, the man of letters, Shihāb al-Dīn Aḥmad ibn ʿAbd Allāh ibn al-Ḥasan ibn Ṭūghān al-Awḥadī, the soldier, the Shafiʿite, transmitted to me orally in my home of Cairo on Saturday, 7 [nights] before the end of Rajab in 810 [25 December 1407].[18]

وحدثني صاحبنا المقرئ المؤرخ الأديب شهاب الدين أحمد بن عبد الله بن الحسن بن طوغان الأوحدي الجندي الشافعي إملاء بمنزلي من القاهرة في يوم السبت لسبع[19] أن بقين من شهر رجب سنة عشر وثماني مائة.

Their bonds can even be appreciated by the fact that al-Maqrīzī's nephew, Nāṣir al-Dīn Muḥammad ibn Muḥammad ibn ʿAlī, attended al-Awḥadī's lectures,

[16] See J. Sublet, *Le Voile du nom* (Paris, 1991), 28–30.

[17] Al-Maqrīzī, *Durar al-ʿUqūd,* MS 1771, fol. 48b = ed. ʿAlī, 1:235–36 = ed. al-Jalīlī, 1:188.

[18] This is the reading in the autograph copy. In both ʿAlī's and al-Jalīlī's editions: + ليال and the following أن missing. This shows that al-Jalīlī did not rely on his complete copy of the text, which belongs to his family (see Dāwud al-Čelebī al-Mawṣilī, *Kitāb Makhṭūṭāt al-Mawṣil* [Baghdad, 1927], 264, no. 5), and the partial autograph, but on ʿAlī's edition, at least for this part!

[19] See Manuel Ocaña Jiménez, *Tablas de conversión de datas islámicas a cristianas y viceversa* (Madrid, 1946), 42–43.

where he recited to him the Quran and another work he had learned by heart in 810/1407.[20] The relationship between the two scholars must have been friendly, as can be perceived in the biography al-Maqrīzī wrote about him, where some pieces of al-Awḥadī's poetry dedicated to him are provided. In these succinct examples of his mastery of the most appreciated literary genre in the Arab world, sympathy as well as kindness abound. Suffice it to quote the following distich:

شرفت قدري إذ أتيت لمنزلي وملكتني بالبر والمعروف
يابن الخلائف أنت عاضد عصرنا لا بدع إن أنعمت بالتشريف

You honored my rank when you came to my home
and conveyed to me kindness and friendliness.
O scion of the caliphs! You are the support of our times.
It is no heresy if you are vested in the title of sharīf.[21]

Reading the data, it can be inferred that al-Maqrīzī and al-Awḥadī struck up a strong relationship based on mutual respect and devoid of academic rivalry, as sometimes happened in other cases.[22]

Let us now come back to the charge brought by al-Sakhāwī against al-Maqrīzī, and more particularly to his source, Ibn Ḥajar, as he clearly indicated that he owed his knowledge of the case to him. Given this fact, it seems likely that al-Sakhāwī read something about the plagiarism in Ibn Ḥajar's writings. In three different places, Ibn Ḥajar devoted space to an account of al-Awḥadī's work on the *khiṭaṭ*. The first account appears in his chronicle entitled *Inbāʾ al-Ghumr:*[23]

---

[20] See his biography in al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 9:150. He was born in 801/1399. Al-Sakhāwī cast doubt on his birth in that year, given that he already knew two books by heart at the age of 8. He died in 867/1462.

[21] There is an evident play here on the double meaning of *tashrīf:* to bestow upon somebody the title of *sharīf* (descendant of the Prophet) or a robe of honor. In the first case, it is a clear reference to al-Maqrīzī's alleged Fatimid ancestry. On this, see Paul Walker, "Al-Maqrīzī and the Fatimids," *Mamlūk Studies Review* 7 (2003): 83–97, particularly 86–87. On *tashrīf* in the second meaning, see Werner Diem, *Ehrendes Kleid und erhendes Wort: Studien zu* "tashrīf" *in mamlūkischer und vormamlūkischer Zeit* (Würzburg, 2002). The first meaning fits better given the beginning of that verse.

[22] See Anne Broadbridge, "Academic Rivalry and the Patronage System in Fifteenth-Century Egypt: al-ʿAynī, al-Maqrīzī, and Ibn Ḥajar al-ʿAsqalānī," *Mamlūk Studies Review* 3 (2003): 85–107.

[23] Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr,* 2:406.

This Shihāb al-Dīn was passionately fond of history. He wrote a comprehensive draft on the topography of Miṣr and Cairo, parts of which he made into a fair copy. He did a useful work and in an excellent manner.	وكان شهاب الدين هذا لهجا بالتاريخ وكتب مسودة كبيرة لخطط مصر والقاهرة وبيض بعضه وأفاد فيه فأجاد.

As is noticeable, Ibn Ḥajar did not say a word about al-Maqrīzī and the possible use he might have made of al-Awḥadī's work. On the other hand, it confirms that al-Sakhāwī is quoting from his master's work when speaking of al-Awḥadī's book, as the words provided here to describe it are found in the entry he devoted to him in his *al-Ḍawʾ al-Lāmiʿ*.[24] Ibn Ḥajar's silence on the affair persists in the second source, *Dhayl al-Durar al-Kāminah:*[25]

His grandson, Shihāb al-Dīn, who had nice handwriting, compiled a book on the topography of Cairo on which he worked hard and which was in draft form when he died.	وجمع شهاب الدين حفيده—وكان حسن الخط—كتابا في خطط القاهرة تعب عليه ومات وهو مسودة.

Here again, not a shadow of an accusation is to be found in Ibn Ḥajar's report; but once more, this report can be identified as a source of al-Sakhāwī's data (in the use of the phrase *taʿiba ʿalayhi*[26]). However, Ibn Ḥajar became more explicit in the dictionary of his authorities, *Al-Majmaʿ al-Muʾassis,* and revealed a bit more information:[27]

He compiled notebooks in belles-lettres, among them the topography of Cairo. He worked hard on it, but it was in draft form when he died. His friend, the shaykh Taqī al-Dīn al-Maqrīzī, made use of it.	وجمع مجاميع في الأدب منها خطط القاهرة تعب فيه ومات عنه مسودة فانتفع به رفيقه الشيخ تقي الدين المقريزي.

[24] See al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 3:358–59.

[25] Ibn Ḥajar al-ʿAsqalānī, *Dhayl al-Durar al-Kāminah,* 195.

[26] See al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 3:358–59.

[27] Ibn Ḥajar al-ʿAsqalānī, *Al-Majmaʿ al-Muʾassis,* 3:39.

Ibn Ḥajar has hit the nail on the head: "he made use of it" *(intafaʿa bi-hi)*. Interestingly, it must be noted that al-Maqrīzī probably knew what Ibn Ḥajar said about this in the dictionary of his authorities, given that he had read his own biography in it. This is proven by the corrections he added in the margins of the autograph manuscript of *Al-Majmaʿ al-Muʾassis*.[28] It is not known whether Ibn Ḥajar asked al-Maqrīzī to read his own entry and make corrections, if necessary, or let him borrow his book upon its completion,[29] but al-Maqrīzī undeniably leafed through the pages.[30] It is unlikely that he would have failed to notice al-Awḥadī's entry that lies just a leaf before (fol. 129b). If this is the case, he agreed with the fact that he "made use of it [al-Awḥadī's draft of the *Khiṭaṭ*]" *(intafaʿa bi-hi),* as he apparently did not modify Ibn Ḥajar's text.[31] Still, nowhere did Ibn Ḥajar say that al-Maqrīzī made a fair copy of it and then appropriated it, making some additions to it, as did al-Sakhāwī *(bayyaḍahā wa-nasabahā li-nafsihi maʿa ziyādāt)!* Should we conclude that this charge is just the result of al-Sakhāwī's intellectual envy towards someone who, even after his death, was still in the limelight? Truly, al-Sakhāwī managed to build his own reputation as a mudslinger, as he often dipped

[28] Cairo, al-Maktabah al-Azharīyah MS muṣṭalaḥ 1360, fol. 131a. This fact had not been noticed by the editor, al-Marʿashlī, who integrated these corrections in the text as if they were written by Ibn Ḥajar. The handwriting, though, is quite different. A critical edition of al-Maqrīzī's and al-Awḥadī's entries will be found in Appendix 1 at the end of this article. Al-Maqrīzī's additions are identified in the picture by a frame and an arrow. It must be added that Ibn Ḥajar also added, at a later date, at the end of al-Maqrīzī's marginal addition, some interesting data regarding his alleged Fatimid ancestry. These data had not been edited by al-Marʿashlī and were ignored by those who wrote on this subject.

[29] The actual copy was finished in Cairo on Thursday 16 Jumādá II 829/25 April 1426 (fol. 161a). Later on, Ibn Ḥajar added "save for what has been added after that" *(siwá mā ultuḥiqa fīhi baʿda dhālika),* which refers to the numerous marginal additions. It can thus be ascertained that al-Maqrīzī read his entry after 829/1426.

[30] His marginal notes are found on the following leaves: 11a (صوابه يوم الأحد ثالث عشر شوال), 12a (يوم الثلثاء ثاني صح), 50a (عبد الله بن), 111b (ولد في تاسع عشر شهر ربيع الأول سنة تسع عشرة وسبع مائة), 127a (ثاني عشري), 128b (يوم الأربعاء عاشر ربيع الآخر), 135b (أخبرني الثقة فتح الله عنه بما نسبح من ذكره), 137a (اسمه يوسف بن محمد بن عيسى ولقبه سيف الدين). One will conclude that al-Maqrīzī corrected mistakes and added data unknown to Ibn Ḥajar. Al-Sakhāwī noticed al-Maqrīzī's handwriting, as he says in the biography he gave of al-Maqrīzī in his *Al-Tibr al-Masbūk* (1: 77): "*wa-qad dhakarahu shaykhunā fī al-qism al-akhīr min muʿjamihi alladhī waqafa ṣāḥib al-tarjamah ʿalayhi.*"

[31] One will notice on the leaf (see Appendix 1), to the left of this information, an additional note consisting of a few words, which was later cancelled with circles that render the decipherment impossible nowadays (the note is identified in the picture by a frame). It is hard to say if this is even Ibn Ḥajar's handwriting. It could have been related to the question of plagiarism. I will come back to this note below.

his *qalam* in vinegar when depicting others.[32] It can be said that he was not very fond of al-Maqrīzī, as the following extract demonstrates:[33]

He had a good memory for history, but his knowledge of the Ancients was tiny. This is why he often made mistakes in their names [phonetic distortions and slips of letters], and sometimes he misplaced the diacritical marks in the texts *(matn)*. . . . As for the events of Islam, the knowledge of the transmitters and their names, the declaration of [their] dishonesty and integrity, [their] ranks, [their] lives, and all sorts of things which are part of the mysteries and beauties of history, he was incompetent. He had a limited knowledge of *fiqh,* hadith, and grammar.

وكان حسن المذاكرة بالتاريخ لكنه قليل المعرفة بالمتقدمين ولذلك يكثر له فيهم وقوع التحريف والسقط وربما صحف في المتون. . . . وأما الوقائع الإسلامية ومعرفة الرجال وأسمائهم والجرح والتعديل والمراتب والسير وغير ذلك من أسرار التاريخ ومحاسنه فغير ماهر فيه وكانت له معرفة قليلة بالفقه والحديث والنحو.

This is a pretty harsh depiction, and it partly misled modern scholars who dealt with the charge of plagiarism he brought against al-Maqrīzī because they considered that it was additional proof of al-Sakhāwī's envy toward al-Maqrīzī.

Given that al-Maqrīzī is the accused in this affair, it would be interesting to know what he said about al-Awḥadī—his friend *(rafīquhu),* according to Ibn Ḥajar—and his work. In fact, he drew his portrait in two of his books. In his biographical dictionary devoted to Egypt, *Al-Muqaffá,* the only useful data is the following:[34]

He compiled notebooks and copied [a lot] in his own hand. He was skillful in the Quranic readings, belles-lettres, and history.

وجمع مجاميع وكتب بخطه وبرع في القراءات والأدب والتاريخ.

[32] See Carl Petry, "al-Sakhāwī," *EI²,* 8:881.

[33] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 2:23.

[34] Al-Maqrīzī, *Al-Tārīkh al-Muqaffá al-Kabīr*, ed. Muḥammad al-Yaʿlāwī (Beirut, 1991), 1:513–14 (no. 498), 514.

In the dictionary of his contemporaries, *Durar al-ʿUqūd al-Farīdah,* he is more loquacious on the issue:[35]

He memorized a lot about history, particularly the history of Egypt, to such an extent that he hardly missed anything of the history of its rulers, caliphs, and amirs, of the events of its wars, the topography of its houses, and the biography of its notables . . . I have jotted down from him heaps of historical data, and I benefited from him a lot in the field of history. God assisted me in providing me with drafts in his own handwriting about the topography of Cairo that I incorporated in my comprehensive book entitled *Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār*. He also offered me the collection of his poems, which is a nice volume in his own hand.

وكان . . . حافظا للكثير من التاريخ، لاسيما أخبار مصر، فإنه لا يكاد يشذ عنه من أخبار ملوكها وخلفائها وأمرائها ووقائع حروبها وخطط دورها وتراجم أعيانها إلا اليسير. . . . علقت عنه جملة أخبار واستفدت منه كثيرا في التاريخ وأعانني الله بمسودات من خطه في خطط القاهرة ضمنتها كتابي الكبير المسمى بكتاب المواعظ والاعتبار في ذكر الخطط والآثار وناولني ديوان شعره وهو في مجلدة لطيفة بخطه.

Courtesy Forschungsbibliothek (Gotha), MS or. 1771, fol. 49a (featuring al-Maqrīzī's acknowledgment that he incorporated al-Awḥadī's *Khiṭaṭ* in his own book)

Of course, this represents a praiseworthy confession, but does it answer the allegation of plagiarism put forward by al-Sakhāwī? The problem does not lie so much in the fact that al-Maqrīzī incorporated a draft treating of the same subject as the book he was writing, but rather in the fact that he simply made a fair copy of it *(bayyaḍahā)* and then attributed it to himself *(nasabahā li-nafsihi)* after having made some additions to it *(maʿa ziyādāt)*. What about this grievance?

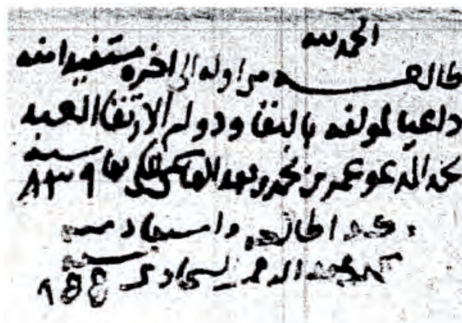
[35] Al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:186.

Should we conclude, as some modern scholars have done, that al-Sakhāwī was liable to spin a yarn to bring such a scurrilous accusation? Here is how Ayman Fuʾād Sayyid appraised it:[36]

This confession . . . refutes the accusation brought by al-Sakhāwī and that many researchers have doubted. It confirms the malicious intent of al-Sakhāwī, who, in consulting al-Awḥadī's biography in al-Maqrīzī's *Durar al-ʿUqūd al-Farīdah,* was only interested in the quotation and garbled al-Maqrīzī's words to give more weight to the accusation he brought against him.

وهذا الاعتراف . . . ينفي الاتهام الذي ساقه السخاوي وتشكك فيه الكثير من الباحثين ويؤكد سوء نية السخاوي الذي اطلع على ترجمة الأوحدي عند المقريزي في «درر العقود الفريدة» ولكنه توقف بالنقل وحرف كلام المقريزي ليؤكد الاتهام الذي ساقه ضده.

Maḥmūd al-Jalīlī, who also dealt with the charge of plagiarism at about the same time as Ayman Fuʾād Sayyid, interpreted the data in a similar way:[37]

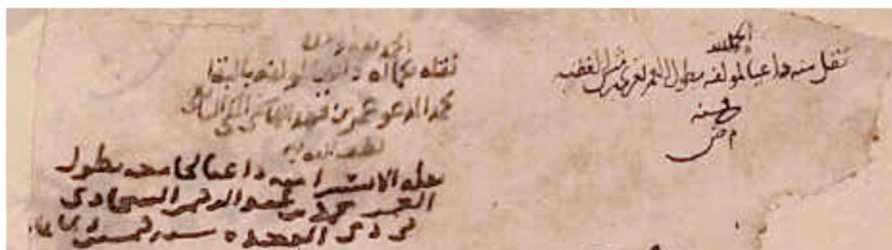


[36] Ayman Fuʾād Sayyid, "Muqaddimat al-Muḥaqqiq," in al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (London, 2002–4), 1:64.

[37] Maḥmūd al-Jalīlī, "Al-Muʾarrikhūn al-Muʿāṣirūn lil-Maqrīzī wa-al-Nāqilūn minhu," in al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* 4:38.

Furthermore, al-Sakhāwī had read the draft of al-Maqrīzī's *Durar al-ʿUqūd al-Farīdah,* given that he wrote on it: "Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī also consulted it and took advantage of it in 855," as it appears on the published photograph and as [it is confirmed] by the fact that he borrowed from *Durar al-ʿUqūd* for several biographies in his book. This establishes a malicious intent of alteration and omission towards al-Maqrīzī, because there is a big difference between copying from the sources and making a fair copy of a complete book and then appropriating it.

ثم إن السخاوي كان قد قرأ مسودة درر العقود الفريدة للمقريزي إذ أنه كتب عليها «وكذا طالعه واستفاد منه محمد بن عبد الرحمن السخاوي سنة ٨٥٥» كما يظهر في الصورة المنشورة، كما نقل في تراجم كثيرة في كتابه عن درر العقود مما يدل على سوء القصد تجاه المقريزي بالتحوير والحذف، فهناك فرق كبير بين الأخذ من المصادر وبين تبييض كتاب كامل ونسبه لنفسه.



Both authors, writing at the same time, considered al-Sakhāwī's accusation to be a mere result of his "malicious intent" *(sūʾ al-nīyah/al-qaṣd)* given that, according to them, al-Sakhāwī made up the charge on the basis of al-Maqrīzī's confession in his biographical dictionary. Al-Jalīlī stressed that a proof of this maliciousness can be seen in the note of consultation al-Sakhāwī wrote on the title page of the autograph of *Durar al-ʿUqūd al-Farīdah*, as is visible here:

Courtesy Forschungsbibliothek (Gotha), MS or. 1771, fol. 1a

الحمد لله || طالعه من أوله إلى آخره مستفيدا منه || داعيا لمؤلفه بالبقاء ودوام الارتقاء العبد || محمد المدعو عمر بن محمد بن فهد الهاشمي المكي بها سنة ٨٣٩ [١٤٣٥–٣٦].
وكذا طالعه واستفاد منه || محمد بن عبد الرحمن السخاوي سنة ٨٥٥ [١٤٥١–٥٢].

To this, two rebuttals can be made. First, al-Sakhāwī also read what Ibn Ḥajar had written in his *Al-Majmaʿ al-Muʾassis* regarding the fact that al-Maqrīzī made use of al-Awḥadī's draft on the *khiṭaṭ,* and this five years earlier, as is shown here:[38]

Courtesy al-Maktabah al-Azharīyah (Cairo), MS muṣṭalaḥ 1360, fol. 163a

الحمد لله || نقل منه داعيا لمؤلفه بطول العمر تغري برمش الفقيه || في سنة م ض [= ٨٤٠\٣٧–١٤٣٦].
الحمد لله وحده || نقله بكماله داعيا لمؤلفه بالبقاء || محمد المدعو عمر بن فهد الهاشمي المكي الشافعي || لطف الله به.
نقله إلا يسيرا منه داعيا لجامعه بطول || العمر محمد بن عبد الرحمن السخاوي || في ذي القعدة سنة خمسين وثمانما[ئة] [١٤٤٧\].

He was thus fully aware of the story thanks to these two sources. Second, it must be emphasized that al-Sakhāwī implicitly acknowledged his awareness of al-Maqrīzī's confession in the *Durar al-ʿUqūd al-Farīdah,* a point apparently disregarded by Sayyid and al-Jalīlī:[39]

---

[38] These reading notes were not published by the editor of this text, al-Marʿashlī. The first reader, Taghrī Barmish, was the *nāʾib al-qalʿah* and Ibn Ḥajar's student. Taghrī Barmish narrated a dream he had involving Ibn Ḥajar, on the same leaf, just above his reading note. This account, unpublished too, can be read in the biography of Ibn Ḥajar that al-Sakhāwī wrote, where he said he read it in one of his master's works (i.e., *Al-Majmaʿ al-Muʾassis*). See al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 1:309–10. Al-Sakhāwī reveals in the same work that he managed to consult the manuscript of *Al-Majmaʿ al-Muʾassis,* which was brought back by somebody else from Ibn Ḥajar's house, and that he took note of the biographies mentioned there in a very short time (maybe four days), before returning it to his master. See ibid., 3:1019 (*ʿāda wa-al-muʿjam maʿahu fa-surirtu bihi kathīran wa-rajaʿtu min fawrī fa-fakaktuhu min al-jild wa-tajarradtu fa-katabtu minhu al-tarājim dūna al-asānīd iktifāʾan bi-al-fihrist maʿa tanbīhī fī kull tarjamah ʿalá asmāʾ mā dhakara fīhā min al-marwīyāt wa-tamma fī ayyām yasīrah aẓunnuhā arbaʿah wa-jiʾtuhu bi-hi fa-qaḍá al-ʿajab min dhālika wa-saʾaltuhu fī fihrist al-kitāb bi-khaṭṭihi fa-faʿala*).

[39] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 1:359.

And there are interesting details in his [al-Awḥadī's] biography in al-Maqrīzī's *ʿUqūd* [= *Durar al-ʿUqūd al-Farīdah*], [where] he [al-Maqrīzī] admitted that he took advantage of his drafts on the topography.

وفي ترجمته من عقود المقريزي فوائد واعترف بانتفاعه بمسوداته في الخطط.

Furthermore, al-Sakhāwī never claimed that Ibn Ḥajar had reported the offense committed by al-Maqrīzī in his own writings. The only thing we are sure of is that he said that Ibn Ḥajar told him *(qāla lanā shaykhunā)*. From this, it may be inferred that this was a testimony by word of mouth, transmitted by a master to his pupil. No doubt, al-Sakhāwī's conviction was strengthened by what he read in al-Maqrīzī's own handwriting in 855/1451–52, ten years after the latter's death, though al-Maqrīzī did not confess he had plagiarized his colleague's draft, but only that he had incorporated it into his own work. Consequently, Ibn Ḥajar's oral disclosure was critical, as we will see. Now, the time has come to leave the world of conjecture and to bring forth evidence.

The Evidence

No autograph copies of the final version of al-Maqrīzī's *Khiṭaṭ* have been reported thus far. However, two volumes, probably out of four, of the first draft have been preserved.[40] It must be stressed that it is quite rare that a draft of a first version would be preserved when a fair copy of a fuller version had been prepared and the book published; when a fair copy of a work had been made, there remained no reason for the draft *(musawwadah)* to survive. Once published, the draft usually disappeared on the author's death, or even earlier if he destroyed it himself.[41] In this particular case, we can explain this idiosyncrasy by the fame gained by al-Maqrīzī during his own lifetime, which gave some value to his autograph manuscripts, even if they were drafts of works already published.[42] After his

[40] They are now held in the library of the Topkapı palace in Istanbul under the shelfmarks E. Hazinesi 1405 and Hazinesi 1472. The latter was published by A. F. Sayyid under the title *Musawwadat Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (London, 1995).

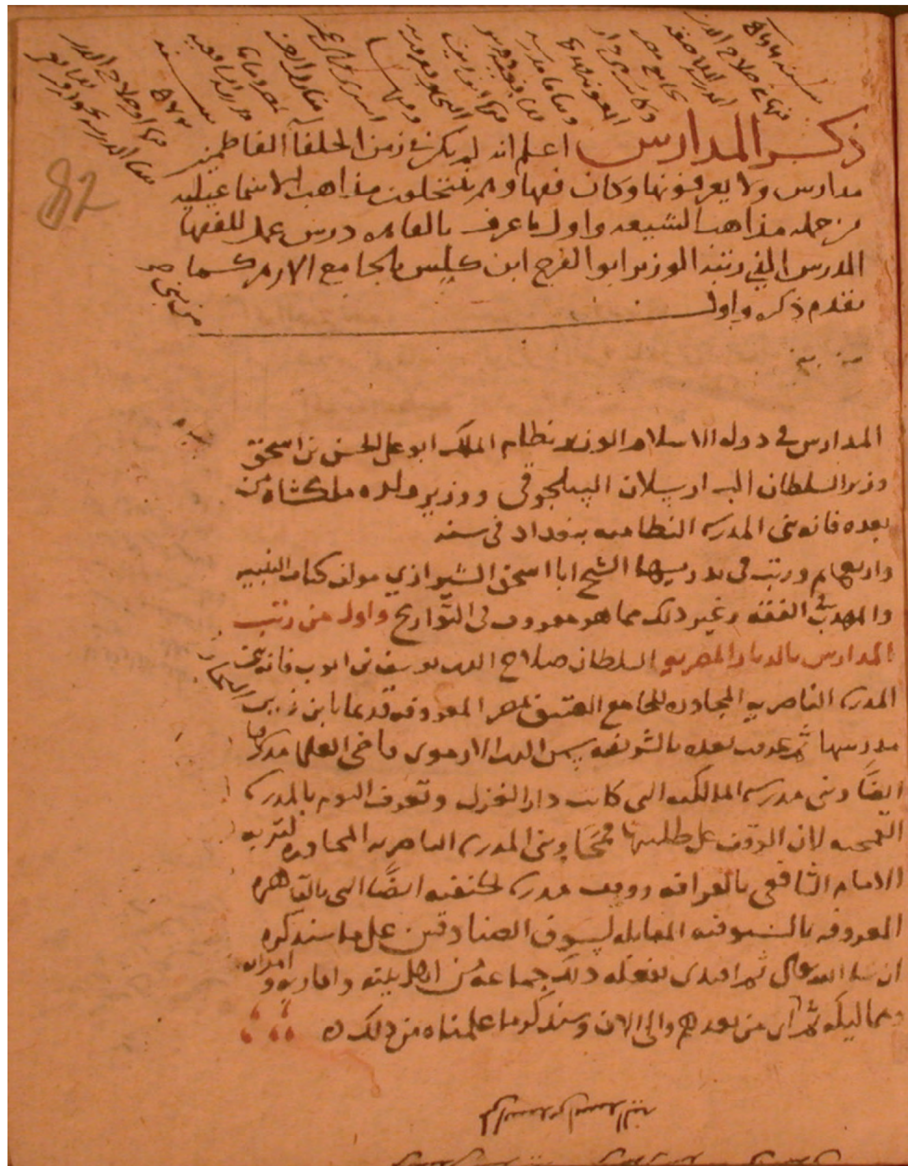
[41] This kind of auto-da-fé is documented for Shujāʿ ibn Fāris ibn al-Ḥusayn al-Dhuhlī al-Suhrawardī al-Ḥarīmī (d. 507/1113). A renowned copyist, he had written a supplement to al-Khaṭīb al-Baghdādī's *Tārīkh Baghdād,* but he "washed" *(ghasala)* the manuscript when he knew that he would die *(fī maraḍ mawtihi)*. By washing, it must be understood that the leaves were washed with water or that the book was immersed in water. In both cases, it caused the ink to fade and rendered the text illegible. In this case, no fair copy had been made. See al-Dhahabī, *Tārīkh al-Islām,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut, 1990–2000), 35:161.

[42] Twenty-one holograph volumes representing twelve different works have been located so far.

death, they became collectibles.[43]

Logically, as we are speaking of drafts, both volumes are holograph manuscripts from the first to the last leaf—with one exception. In the second volume (Topkapı Sarayı Kütüphanesi, MS E. Hazinesi 1405), nineteen leaves (82a–100b), corresponding to two quires[44] and dealing with the chapter devoted to the madrasahs, seem to bear both al-Maqrīzī's handwriting and a different one. The question is: does it correspond to the handwriting of a copyist hired by al-Maqrīzī to produce a fair copy of this section? We know indeed that al-Maqrīzī used a copyist for such a purpose at least once. At the end of his life, four years before passing away (841/1438), he hired a professional copyist[45] who was responsible for producing a fair copy of several small treatises, some of which al-Maqrīzī had finalized during his last stay in Mecca in 839/1435–36.[46] He was less than satisfied with the work accomplished, as he revealed in the comment he added to some colophons.[47] In any case, the handwriting of that copyist does not match with the one found in the section under study in the draft of the *Khiṭaṭ*. Furthermore, neither of the volumes representing the draft was in any way a definitive version, as is shown by the numerous additions in al-Maqrīzī's hand found on slips of paper, in the margins, or in the body of the text itself.

See F. Bauden, "Maqriziana II: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method: Analysis," *Mamlūk Studies Review* 12, no. 1 (2008): 115–16.



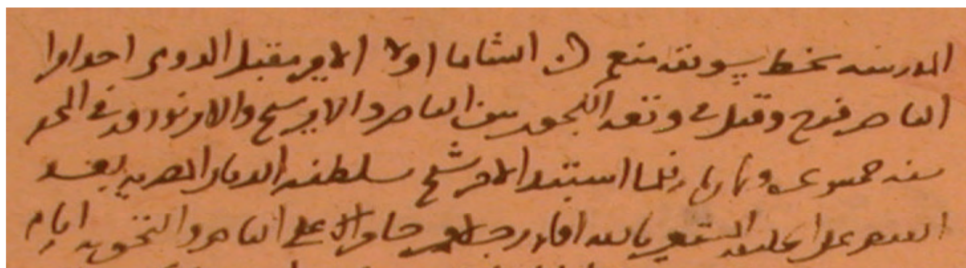
[43] There is no other way to explain why two of his notebooks would have survived. On autograph manuscripts as collectibles, see Houari Touati, *L'Armoire à sagesse: bibliothèques et collections en Islam* (Paris, 2003), 70–71.

[44] One leaf is obviously missing.

[45] The handwriting is clearly that of a clerk who worked at the chancellery. Some features are common with those found in documents produced at the same period. See, for instance, the closing formulas in the colophon on fol. 43a (Leiden, Universiteitsbibliotheek, MS or. 560).

[46] The MS is now in Leiden, Universiteitsbibliotheek, MS or. 560. It was accurately described for the first time by Reinart P. A. Dozy, "Notice sur le manuscrit 560 de la Bibliothèque de Leyde, contenant les Opuscules d'al-Makrízí," in *Notices sur quelques manuscrits arabes,* ed. idem (Leyde, 1847), 17–28.

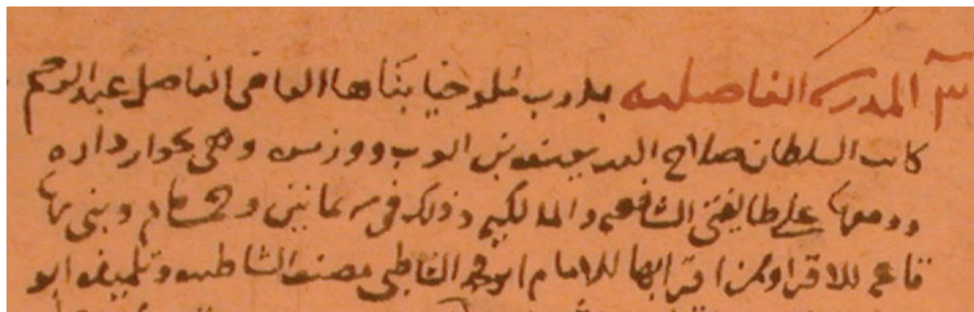
[47] For instance, fol. 61b: انتهى تصحيحه جهد الطاقة مع كثرة سقم النسخة جامعه ومؤلفه أحمد بن علي المقريزي في شهر رمضان سنة إحدى وأربعين وثمانمائة



Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 82a (featuring al-Awḥadī's handwriting in the lower part and al-Maqrīzī's in the upper part (the first five lines) after he rubbed out part of al-Awḥadī's introduction).

Al-Maqrīzī would hardly have asked somebody to recopy these nineteen leaves if they were only a draft, as the rest of the manuscript is.[48] In the following pages,

[48] It must be remembered that none of the twenty-one autograph volumes mentioned earlier contains any handwriting other than al-Maqrīzī's—they are holograph manuscripts. The volume



I argue that this is al-Awḥadī's handwriting and that these two quires must be regarded as the unique surviving part of the book he devoted to the topography of Cairo, a fact that will have consequences for the question of al-Maqrīzī's alleged plagiarism. In support of my allegations, I will produce several external and internal elements.

Thanks to Ibn Ḥajar, whose role was of the utmost importance in this affair, as we will see, we know that al-Awḥadī's handwriting was a nice one *(kāna ḥasan al-khaṭṭ)*.[49] By this, we must understand that he probably had an almost calligraphic script, as opposed to the more common scholar's *naskh.* Ibn Ḥajar wrote in a scholar's *naskh,* as did al-Maqrīzī, which means that the script was not so attractive:

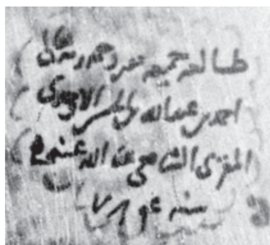
Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 97a: al-Maqrīzī's scholar's *naskh*

The other handwriting featured on these nineteen leaves may indeed be described as beautiful:

Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 83a

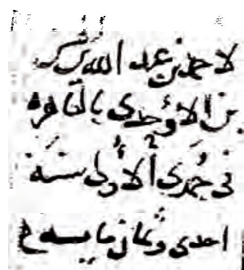
One notices especially the final shape of the *kāf* (line 3: *wa-dhālika*) with its oblique stroke maintained and the curvy *wāw*. Some ligatures are also visible,

of treatises in Leiden already referred to is excluded from this figure.



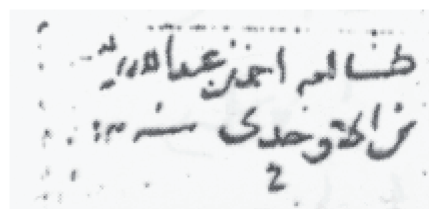
[49] Ibn Ḥajar, *Dhayl al-Durar al-Kāminah,* 195.

most notably in words ending in a *tāʾ marbūṭah* or *hāʾ* (line 1: *al-madrasah,* line 2: *wazīruhu,* line 3: *al-shāfiʿīyah, al-mālikīyah,* line 4: *qāʿah, tilmīdhuhu*). But establishing that this is a pretty script and that it therefore corresponds to Ibn Ḥajar's description of al-Awḥadī's handwriting does not suffice to establish the truth. Ideally, it should be compared with a sample of al-Awḥadī's handwriting. Unfortunately, none of his autograph manuscripts are known to exist anymore,[50] but five very brief specimens of his script are still found on title pages of manuscripts he owned or consulted.[51] To these ownership and reading notes, he always appended the date, a practice also followed by his colleague, al-Maqrīzī.[52] They are all reproduced here:

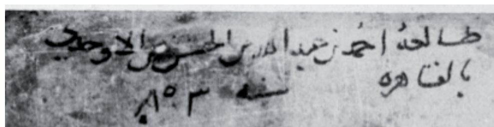


[50] His holograph *dīwān,* given to al-Maqrīzī (see al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:186 [*wa huwa fī mujalladah laṭīfah bi-khaṭṭihi*]), has not been discovered so far. Moreover, the resumé of the "Kitāb al-Hadāyā wa-al-Tuḥaf" (Afyon Karahisar, Gedik Ahmet Paşa Kütüphane Memurluğu, MS 17596), which is said to have been prepared by al-Awḥadī and later copied by Ibn Duqmāq, must in fact be attributed to Ibn Duqmāq. Al-Awḥadī only added a note to the original, complete manuscript of the "Kitāb al-Hadāyā wa-al-Tuḥaf," and Ibn Duqmāq took note of it at the end of his resumé. The attribution to al-Awḥadī is due to a misunderstanding of the note in question and is imputable to the editor of the text, Muḥammad Ḥamīd Allāh (who also wrongly attributed the book to al-Rashīd ibn al-Zubayr): *Kitāb al-Dhakhāʾir wa-al-Tuḥaf* (Kuwait, 1959). The same mistake was repeated by the translator: Ghādah al-Ḥijjāwī al-Qaddūmī, *Books of Gifts and Rarities* (Kitāb al-Hadāyā wa-al-Tuḥaf): *Selections Compiled in the Fifteenth Century from an Eleventh-Century Manuscript on Gifts and Treasures* (Cambridge, Mass., 1996). For more detail about this, see my "From Draft to Palimpsest."

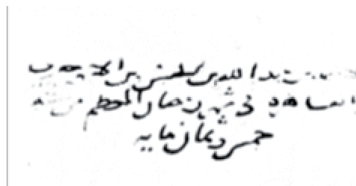
[51] These are: (1) Muḥammad ibn Hilāl al-Ṣābiʾ, "Al-Hafawāt al-Nādirah," Topkapı Sarayı Kütüphanesi (Istanbul), MS Ahmet III 2631, fol. 137a (the text is known to me thanks to F. Rosenthal, *A History of Muslim Historiography,* 479, n. 4, where he states that the reading note is dated to 784/1382: طالعه جميعه فقير رحمة ربه تعالى أحمد بن عبد الله بن الحسن الأوحدي المقرئ الشافعي عفا الله عنه هـ سنة ٧٨٤); (2) Ibn Ḥamdīs, "Dīwān," Biblioteca apostolica vaticana (Vatican City), MS ar. 447, fol. 1a (لأحمد بن عبد الله بن الحسن بن الأوحدي بالقاهرة في جمادى الأولى سنة إحدى وثمان مائة); (3) Ibn Saʿīd, "Al-Mughrib fī Ḥulá al-Maghrib," Dār al-Kutub al-Miṣrīyah (Cairo), MS tārīkh 103 mīm, fol. 1a (طالعه أحمد بن عبد الله بن [الحسن] بن الأوحدي سنة ٢[٨٠]); (4) al-Musabbiḥī, "Akhbār Miṣr," Biblioteca de El Escorial (El Escorial) MS 534, fol. 132a (طالعه أحمد بن عبد الله بن الحسن بن الأوحدي بالقاهرة سنة ٨٠٣); (5) al-Kindī, "Kitāb al-Wulāh wa-al-Quḍāh," British Library (London), MS add. 23.324, fol. 134a (لأحمد بن عبد الله بن الحسن بن الأوحدي بالقاهرة في شهر رمضان المعظم من سنة خمس وثمان مائة). See also Ayman Fuʾād Sayyid, "Muqaddimat al-Muḥaqqiq" in al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* 1:61–62.



[52] To such an extent that al-Maqrīzī's reading notes are found on the title pages of two manuscripts consulted earlier by al-Awḥadī. On al-Maqrīzī's notes of consultation, see F. Bauden, "Maqriziana II," 117–18, where a list is provided.



Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS Ahmet III 2631, fol. 137a.



Courtesy Biblioteca apostolica vaticana (Vatican City), MS ar. 447, fol. 1a.

The following sample must also be considered to be in al-Awḥadī's handwriting. It appears on the title-page of the copy of Ibn Ḥamdīs' *Dīwān* that al-Awḥadī owned (see ownership note above).

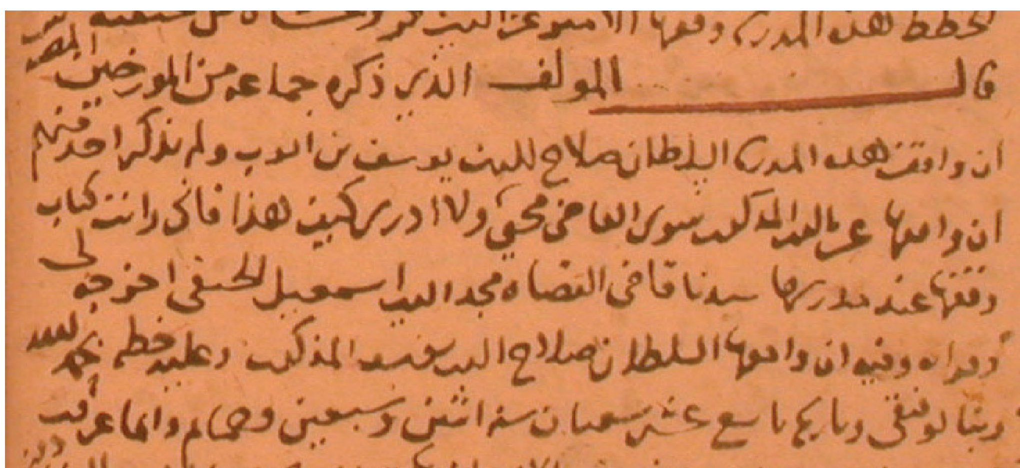
Courtesy Biblioteca apostolica vaticana (Vatican City), MS ar. 447, fol. 1a.

A comparison between these brief specimens and the handwriting appearing in the draft allows us to notice a great similarity. The word *bi-al-Qāhirah* being present twice in these reading notes, it can be compared with the same word in the section of the draft bearing a different handwriting, for which two occurrences are also found:

Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fols. 82a and 93a.

Once again, the resemblance is striking. However, any specialist in Arabic paleography knows perfectly well how difficult and dubious it is to authenticate somebody's handwriting, even more so if the specimens compared are brief, as is the case here. To this *prima facie* evidence, it is thus necessary to bring forward other, internal, elements in order to corroborate the identification of this script as al-Awḥadī's. For this purpose, we must now turn to a textual analysis.

While reading this section, one notices cross references to other parts of the work. The author obviously planned to write a section dealing with houses *(al-ādur),* and from the text it is understood that this section was to come after the one devoted to madrasahs.[53] But in the final version of al-Maqrīzī's *Khiṭaṭ,* the section on houses precedes the one on madrasahs. Though one could argue that, in the draft, al-Maqrīzī had yet to write down the section on houses and that he later modified the order, how can it be explained that, in the second reference, the author of this section refers to his forthcoming study of the house of Ibn Wakīl al-Wazīr al-Maʾmūn al-Baṭāʾiḥī and that this house is not even dealt with by al-Maqrīzī in his final version? If this is al-Awḥadī's script, it means that either he did not finish the section on houses or that, more probably, al-Maqrīzī ignored his data, as will become clear later regarding some of the madrasahs. Another cross reference, on fol. 99b, mentions the construction of al-Azhar mosque, and in this case, the author indicates that he had already dealt with this subject and the question of courses taught in that place.[54] Here again, the section is found neither



[53] Fol. 87a: *wa-sayaʾtī dhikr dhālika in shāʾa Allāh taʿālá fī dhikr al-ādur;* fol. 99a: *wa-sayaʾtī dhikr dhālika fī al-ādur.*

[54] Fol. 99b: *qad taqaddama fī dhikr bināʾ al-jāmiʿ al-azhar mā kāna qarrarahu fīhi al-wazīr Abū al-Faraj ibn Killis min al-dars bi-hi baʿda ṣalāt al-jumʿah . . .*

in the draft nor in the final version.[55] In this case too, al-Maqrīzī did not bother with this cross reference made by al-Awḥadī, as he knew that he would produce a fair copy and that he could modify these references at that time.

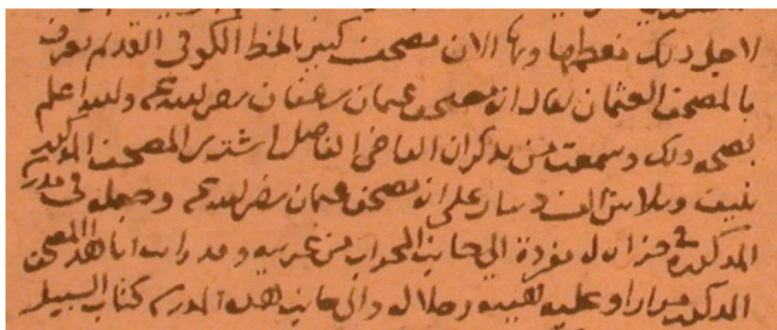
Furthermore, several personal testimonies are found in this specific section, where the author confirms that he visited the monuments whose history he is detailing, in order to verify the historical facts reported in other books he used. For this, we can provide three enlightening examples.

On fol. 82b, one reads the following text:

Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 82b.

It is striking that the first words of this paragraph, until *alladhī,* have clearly been rubbed out by al-Maqrīzī, who replaced them with the convenient *qāla al-muʾallif,* an impersonal way to refer to himself, thus attributing to himself the following words. The author of these lines explains that he had the opportunity to see the document of the *waqf* of the said madrasah (al-Suyūfīyah) and that he read it, then giving details that corroborated what he declared at the beginning of the paragraph. Let us compare this text with the one appearing in al-Maqrīzī's final version of the *Khiṭaṭ:*

[55] The draft just has a section entitled *dhikr al-jawāmiʿ allatī tuqām bi-hā al-jumʿah* (fol. 127a ff). That section has been reorganized in the final version.



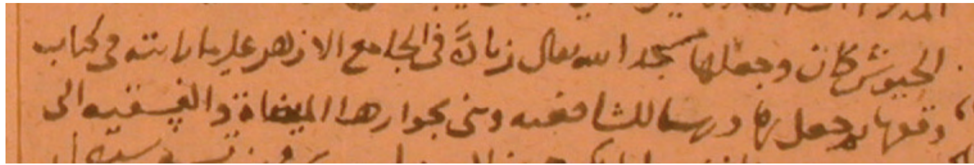
المسودة، و ٨٢ب.	المواعظ والاعتبار، مج ٢، ص ٣٦٥–٣٦٦ (ط. بولاق).[56]
قال المؤلف الذي ذكره جماعة من المؤرخين المصريين || أن واقف هذه المدرسة السلطان صلاح الدين يوسف بن أيوب ولم يذكر أحد منهم || أن واقفها عز الدين المذكور سوى القاضي محيي [الدين] ولا أدري كيف هذا فإني رأيت كتاب || وقفها عند مدرسها سيدنا قاضي القضاة مجد الدين إسمعيل الحنفي أخرجه لي || وقرأته وفيه أن واقفها السلطان صلاح الدين يوسف المذكور وعليه خطه بحمد الله ربنا توفيقي وتاريخه تاسع عشر شعبان سنة اثنتين وسبعين وخمسمائة.	وقد وهم القاضي محيي الدين عبد الله بن عبد الظاهر فإنه قال في كتاب الروضة الزاهرة في خطط المعزية القاهرة مدرسة السيوفية وهي للحنفية وقفها عز الدين فرحشاه[57] قريب صلاح الدين وما أدري كيف وقع له هذا الوهم فإن كتاب وقفها موجود قد وقفت عليه ولخصت منه ما ذكرته وفيه أن واقفها السلطان صلاح الدين || وخطه على كتاب الوقف ونصه الحمد لله وبه توفيقي[58] وتاريخ هذا الكتاب تاسع عشري شعبان سنة اثنتين وسبعين وخمسمائة.

The most conspicuous difference concerns his disregard of the name of the person who is supposed to have shown him the *waqf* document mentioned in the draft. We may wonder why al-Maqrīzī would have deleted such important data that would have confirmed his seriousness and scrupulousness, when he in fact resorted to this practice in other cases. The only possible interpretation is that al-Maqrīzī was reluctant to lie so explicitly about where he got his information (though the temptation to do so must have been strong); when he introduced al-Awḥadī's account with the vaguer and less authoritative "*qāla al-muʾallif,*" he felt no qualms about appropriating it as his own work. The same is true for the following passage, even more disturbing:

[56]I am referring here to the Būlāq edition, given that A. F. Sayyid replaced the text of the final version with the one found in the draft in his own edition of the *Khiṭaṭ* (London, 2002–4), 4:461.

[57]Read فرخشاه.

[58]A. F. Sayyid, *Khiṭaṭ,* renders the text in his edition in this way: الحمد لله ربنا وبه توفيقي. One understands that he combined what he found in the draft with the reading given by the Būlāq edition, thus creating a new motto for Ṣalāḥ al-Dīn!



Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 83a.

As can be seen, this passage is totally devoid of al-Maqrīzī's handwriting. The author of these lines attests that he saw a copy of the Quran attributed to ʿUthmān ibn ʿAffān in the madrasah al-Fāḍilīyah. If we compare this text with the one appearing in al-Maqrīzī's *Khiṭaṭ,* it appears that, in this case too, al-Maqrīzī neglected to mention these personal data:

المسودة، ص ٨٣أ.	المواعظ والاعتبار، مج ٢، ص ٣٦٦ (ط. بولاق).[59]
وبها الآن مصحف كبير بالخط الكوفي القديم يعرف || بالمصحف العثماني. يقال إنه مصحف عثمان بن عفان رضي الله عنه والله أعلم || بصحة ذلك وسمعت من يذكر أن القاضي الفاضل اشترى المصحف المذكور || بنيف وثلاثين ألف دينار على أنه مصحف عثمان رضي الله عنه وجعله في مدرسته || المذكورة في خزانة له مفردة إلى جانب المحراب من غربيه وقد رأيت أنا هذا المصحف || المذكور مرارا وعليه هيبة وجلالة.	وبها إلى الآن مصحف قرآن كبير القدر جدا مكتوب بالخط الأول الذي يعرف بالكوفي تسميه الناس مصحف عثمان بن عفان ويقال إن القاضي الفاضل اشتراه بنيف وثلاثين ألف دينار على أنه مصحف أمير المؤمنين عثمان بن عفان رضي الله عنه وهو في خزانة مفردة له بجانب المحراب من غربيه وعليه مهابة وجلالة.

If this section of the draft was composed by al-Maqrīzī, why would he withdraw such personal testimonies (indicated here with an underline) in the final version? One final example will demonstrate that he did so because he was not at ease with material he had not written himself.

[59] A. F. Sayyid partially replaced the text of the final version with the one found in the draft in his own edition of the *Khiṭaṭ,* 4:462.

. الجيوش كان وجعلها مسجدا لله تعالى زيادةً في الجامع الأزهر على ما رأيته في كتاب
وقفها ثم جعل بها درسا للشافعية وبنى بجوارها الميضأة والفسقية التي

Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 87b.

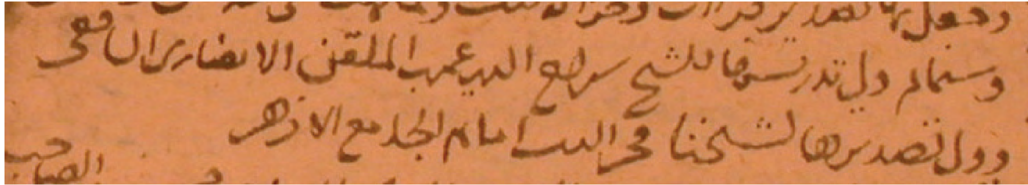
Here is one more personal testimony attributable to the author of these lines where he states that he saw the document of the *waqf* of the madrasah al-Ṭaybarsīyah. Again, the comparison between the two texts is illuminating.

المسودة، ص٨٧ب.	المواعظ والاعتبار، مج ٢، ص ٣٨٣ (ط. بولاق).[60]
. . . الجيوش كان وجعلها مسجدا لله تعالى زيادةً في الجامع الأزهر على ما رأيته في كتاب ‖ وقفها ثم جعل بها درسا للشافعية وبنى بجوارها الميضأة والفسقية التي . . .	. . . الجيوش وجعلها مسجدا لله تعالى زيادة في الجامع الأزهر وقرر بها درسا للفقهاء الشافعية وأنشأ بجوارها ميضأة وحوض ماء سبيل . . .

Once more, the personal data have disappeared in al-Maqrīzī's version. This is upsetting because it betrays his determination never to refer to al-Awḥadī, as he could have simply introduced those words by *qāla al-Awḥadī.*

Last but not least, a decisive element in my opinion lies in the names of persons with whom the author of these lines cultivated a disciple-master relationship, calling them *shaykhunā*. Considering the nineteen leaves, four names are characterized in this way: Sirāj al-Dīn al-Bulqīnī (fols. 90a, 98b), Zayn al-Dīn al-ʿIrāqī (fol. 90b), Fakhr al-Dīn al-Bilbaysī (fols. 90b, 98b), and Taqī al-Dīn al-Baghdādī (fol. 100a). If we consider those who were common masters of both al-Awḥadī and al-Maqrīzī, we find only two of them (al-Bulqīnī and al-ʿIrāqī). Moreover, the remaining two (al-Baghdādī and al-Bilbaysī) are explicitly listed as having played a major role in al-Awḥadī's education, particularly in the field of Quranic readings, in which he excelled,[61] but they do not appear in al-Maqrīzī's curriculum:[62]

[60] A. F. Sayyid partially replaced the text of the final version in his own edition of the *Khiṭaṭ* on the basis of what is found in the draft (4:536).



[61] Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr,* 2:406; al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 1:358. Cf. al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:185–86.

[62] The four are mentioned by him in his dictionary of his contemporaries, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 2:421–42 (al-Bilbaysī, no. 726), 254–55 (al-Baghdādī, no. 584), 234–37 (al-ʿIrāqī, no. 563), 431–36 (al-Bulqīnī, no. 740). It is noteworthy that he devoted less space to the

وتلا بالسبع بل بالأربع عشرة على التقي البغدادي وكذا لازم الفخر البلبيسي الإمام في ذلك اثنتي عشرة سنة.

He [al-Awḥadī] recited [the Quran] according to the seven, and even the fourteen [readings] under the supervision of Taqī al-Dīn al-Baghdādī. Likewise, for twelve years, he was inseparable from Fakhr al-Dīn al-Bilbaysī, who was a master in this [field].

How, then, should we interpret the following passage, where two names are provided?

Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 90b.

ولي تدريسها للشيخ سراج الدين عمر بن الملقن الأنصاري الشافعي || وولي تصديرها لشيخنا فخر الدين إمام الجامع الأزهر.

The first one, Ibn al-Mulaqqin, is simply designated as *al-shaykh,* while the second, Fakhr al-Dīn [i.e., al-Bilbaysī], as *shaykhunā,* although the latter does not appear among al-Maqrīzī's masters.[63] However, about the first, al-Maqrīzī declares:[64]

first two men, who were not his masters, than the last two who were. About al-Bulqīnī, he says that he was "the most venerable man with whom I studied" *(ajall man akhadhtu ʿanhu al-ʿilm).* Ibid., 2:434. It is also worth mentioning that al-Maqrīzī wrote down al-Bulqīnī's death date on the first leaf of the first preserved volume of his draft of the *Khiṭaṭ* (Topkapı Sarayı Kütüphanesi (Istanbul), MS Hazinesi 1472, fol. 1a). See also the list of his masters established by al-Jalīlī on the basis of the information provided by al-Maqrīzī in his biographical dictionary: al-Jalīlī, "Al-Muqaddimah," in al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:21–27 (neither al-Baghdādī nor al-Bilbaysī appears in this list).

[63] The fact that the author of these lines referred to his master only by his *laqab* is rather illuminating, in that the author did not feel the need to clarify who his master was because this was evident in his eyes.

[64] Al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 2:431.

I was closely associated with him for several years and I studied with him numerous works he was authorized to transmit and several of his own books.	صحبته عدة سنين وأخذت عنه كثيرا من مروياته ومصنفاته.

In this case, should he not have called Ibn al-Mulaqqin *shaykhunā* in his draft, rather than applying this title to a person with whom he never studied? Of course, there was no need for him to change these personal data particular to al-Awḥadī in the draft, as they would be modified in the final version.

Thanks to all these elements, we can establish that the fragment covering nineteen leaves preserved in al-Maqrīzī's autograph draft is part of al-Awḥadī's own draft of his book on the topography of Cairo. Yet, we still have to address the accusation of plagiarism brought by al-Sakhāwī ("he made a fair copy of it and attributed it to himself"). For this, it is necessary to consider how plagiarism, a rather modern concept, was understood in the historical context under consideration.

Plagiarism: A Nebulous Concept or a Clearly Apprehended Notion?

Though it is almost as old as literature, plagiarism remains a complicated issue.[65] Conceptualized mainly during the modern period with the impulse of the Romantic movement, which promoted the vision of the inspired writer whose originality was interpreted in aesthetic words, the concept has seen its definition evolving through the ages.[66] When used nowadays, it is understood with moral and aesthetic implications that were not necessarily valid in earlier times and different cultures. Plagiarism, in its modern meaning, may be defined as the act of appropriating, rather faithfully, a textual element written by another author, and doing this without acknowledgement. Moreover, the intent to deceive people into thinking that the borrowed text is the result of one's own work is essential. Plagiarism nonetheless remains a hazy concept in literary terms. Nowadays, plagiarism in literature is better defined as intertextuality, meaning by this that

[65] The Latin word "plagiarius," designating a person who stole a slave or sold a free man as a slave, was used metonymically for the first time by the poet Martial (died in 104) for a person who had appropriated some of his verses. For Antiquity, see Anthony Grafton, "Plagiarism," in *Brill's New Pauly* (Leiden and Boston, 2007), 315. From the very beginning, the ideas of alienation and swindling were thus present. See Ch. Vandendorpe, "Introduction," in *Le Plagiat: Actes du colloque tenu à l'Université d'Ottawa du 26 au 28 septembre 1991,* ed. Ch. Vandendorpe ([Ottawa], 1992), 7. The following book was not available to me before the publication of this article: *Remploi, citation, plagiat: Conduites et pratiques médiévales (X^e–XII^e siècle),* ed. Pierre Toubert and Pierre Moret (Madrid: Casa de Velázquez, 2009).

[66] M. Randall, "Critiques et plagiaires," in *Le Plagiat,* 91–104.

an author cannot help but find himself at the point where all his previous readings intersect, with each of them nurturing his ideas in their turn. In other fields, the term is perfectly well understood, and many universities around the world advise their students with regard to plagiarism and its negative effects.[67] It is thus important to keep in mind the difference that exists between the concept with its literary meaning and its use in the other fields such as the scientific, philosophical, or historical ones.

Looking at the past with this modern definition in mind may lead some scholars to identify striking similarities, either in words or in ideas, in works composed by contemporary (or non-contemporary) authors and, on that basis, to charge one of them—usually the one who wrote later—with plagiarism. When he read the *Disputa de l'Ase* of Anselm Turmeda (ca. 1352–ca. 1424), Miguel Asín Palacios, who knew the *Rasāʾil Ikhwān al-Ṣafāʾ,* immediately saw the resemblance between the story developed by Turmeda and the structure of the 28th epistle of the Brethren of Purity ("The Case of the Animals versus Man before the King of the Jinn"). He concluded that Turmeda had plagiarized the epistle and that, consequently, his work was not original.[68] Recent research has shown that Turmeda had undoubtedly read the said epistle, but that "he took what he found useful in their work, adapted it to his own message and his intended audience."[69] In other words, this is a perfect case of intertextuality.

Such accusations expressed by modern critics towards medieval scholars exist for other fields too, such as history and the sciences. Regarding history, and particularly early Muslim history where the facts are reported on the basis of pieces of information *(khabar)* and traditions *(ḥadīth)* that by definition should not be considered as belonging to a given author, the case raised by J. Horovitz is indicative of this modern trend to identify such practices as plagiarism. Horovitz, following his predecessor, Wellhausen, noticed that al-Wāqidī and Ibn Isḥāq's works shared identical reports both in content and shape, and he concluded that, given that al-Wāqidī never quoted Ibn Isḥāq in his book and that the latter wrote at an earlier date, al-Wāqidī consequently was guilty of plagiarism.[70] J. M. B. Jones

---

[67] Speaking of my own experience, I have already identified some cases of plagiarism in M.A. theses I was asked to supervise. Furthermore, the University of Liège has recently made software available to professors that is supposed to detect plagiarism in the written material submitted by students.

[68] M. A. Palacios, "El original árabe de la *Disputa del asno contra fray Anselmo Turmeda,*" *Revista de filología española* 1 (1914): 1–51.

[69] See L. M. Alvarez, "Beastly Colloquies: Of Plagiarism and Pluralism in Two Medieval Disputations between Animals and Men," *Comparative Literature Studies* 39 (2002): 196.

[70] See J. Horovitz, "The Earliest Biographies of the Prophet and Their Authors," *Islamic Culture* 2 (1928): 518.

reevaluated this assumption and concluded that if both versions were similar, this was the result of the kind of material available at their time.[71] In other words, the story was transmitted by the *quṣṣāṣ,* and both authors shared a common corpus from which they selected the material they found interesting. Though they might slightly modify the form of the material (words, structure of the sentence), they usually did not alter the overall structure or content. Jones could establish, for instance, that al-Wāqidī's version was closer to the story as it was told by the *quṣṣāṣ* because it still contains the characteristics of the literary processes used by these storytellers, which have been reduced by Ibn Isḥāq in his own version. In any case, the charge of plagiarism was out of context, once again.[72]

Similarly anachronistic statements have also been made regarding scientific texts. In the field of medicine, the case recently publicized by Khader Musa is interesting.[73] A comparison between two texts—the *Kitāb Khalq al-Janīn wa-Tadbīr al-Ḥabālah wa-al-Mawlūdīn* of ʿArīb ibn Saʿīd al-Qurṭubī (d. 370/980) and the *Siyāsat al-Ṣibyān wa-Tadbīruhum* of Ibn al-Jazzār (d. 369/979 or 360/970)—led him to conclude that 90% of the contents of the latter could be identified in the former, and this without quoting Ibn al-Jazzār at any time.[74] On the basis of the similarity he found in the contents and the fact that he tracked down one identical passage from the *Siyāsat al-Ṣibyān* in the *Kitāb Khalq al-Janīn,* Musa reckoned that al-Qurṭubī had plagiarized his contemporary's work, a charge that nobody had dared to put forward during the author's lifetime, or any time thereafter.

As in every case, the key elements that drive modern scholars to charge medieval authors with plagiarism are: similarity in either expression or content, the absence of reference to the "plagiarized" source (which points to intellectual dishonesty of the "plagiarist"), and the desire to deceive the reader by pretending that the "plagiarist" is the real author of the book. This is the typically biased view that results from a comparison between two books produced in a given period of the past, judged by a definition of a concept that cannot but be anachronistic when applied to the period in which the said "plagiarism" is detected.[75] Undoubtedly,

[74] Ibid., 127.

[75] As regards literature, see M. Peled, "On the Concept of Literary Influence in Classical Arabic

when dealing with books written in these times, an accusation of plagiarism remains controversial. In order to apprehend the phenomenon of plagiarism correctly, it is thus essential to try to understand how it was perceived in the context we are dealing with, i.e., the pre-modern Muslim culture. We have seen that there may be a difference in the way it was apprehended in literature and the non-literary fields, and we will therefore evaluate both situations independently.

As theorized by Muslim authors of the pre-modern period, plagiarism in literary criticism was a concept expressed through the word *sariqah*.[76] In this sense, it was mainly used for poetry and, to a lesser extent, epistolography.[77] Though many works have been devoted to this theme from an early period onwards,[78] a clear theory of what *sariqah* meant was never really developed.[79] Several works tried to categorize the different genres and the broader limits of plagiarism in poetry, but they resulted in a quite complicated and wide-ranging taxonomy of various kinds of "borrowings," from crude plagiarism to creative borrowing.[80] Even if crude

Literary Criticism," *Israel Oriental Studies* 11 (1991): 37: "A discussion of the concept of literary influence in classical Arabic literature has to contend with several obvious difficulties. First, the very notion as conceived by present-day criticism was unknown to the Arab critics, just as it was unknown to their Greek predecessors, whose ideas on intertextual relations are often discernible in Arabic critical thinking. Consequently the phenomenon of literary influence is never explicitly discussed in Arabic works dealing with problems of poetics. If, in spite of this difficulty, we can attempt to reconstruct their attitude toward it, it is because the results of such influence are nevertheless apparent in Arabic poetry. This was recognized by the medieval critics within another conceptual framework, namely, that of plagiarism *(al-sariqah al-adabīyah)*."

[76] For a very broad presentation of plagiarism in poetry and a good bibliography, see W. Heinrichs, "Sariḳa," in *The Encyclopaedia of Islam, Supplement*, fascicules 9–10, 707–10.

[77] W. Heinrichs, "An Evaluation of *Sariqa,*" *Quaderni di Studi Arabi* 5–6 (1987): 357: "One of the favorite pastimes of the medieval critic of arabic literature was to hunt for *sariqāt* ("thefts", "plagiarisms") in the works of the poets and, to a lesser extent, the epistolographers."

[78] The *Fihrist* of Ibn al-Nadīm, for instance, already listed several titles of books tackling this issue in poetry. See more particularly on this: D. Sturm, "Ibn an-Nadīm's Hinweise auf das Verhältnis zum geistigen Eigentum im Historikerkapitel des Kitāb al-Fihrist," *Hallesche Beiträge zur Orientwissenschaft* 13 (1990): 65–70.

[79] See W. Heinrichs, "An Evaluation of *Sariqa,*" 367: "By now it will have become abundantly clear that the *sariqāt* literature is less important to us for what, on the surface, it purports to be, namely collections of plagiarisms."

[80] With several technical words being applied to each of these kinds of "borrowings." For this, see specially the work of S. A. Bonebakker on al-Ḥātimī (d. 998): "Sariqa and Formula: Three Chapters from Ḥātimī's *Ḥilyat al-Muḥāḍara,*" *Annali dell'Istituto universitario orientale di Napoli* 46 (1986): 367–89; "Four Chapters from the *Ḥilyat al-muḥāḍara*—Arabic Texts," *Quaderni di Studi Arabi* 17 (1999): 29–52. See also his "Ancient Arabic Poetry and Plagiarism: a Terminological Labyrinth," *Quaderni di Studi Arabi* 15 (1997): 65–92; and A. Sanni, "From Value Judgment to Theoretical Formalism: The Development of Arabic Theory on *Sariqa* (Plagiarism)," *Proceedings of the 1989 International Conference on Europe and the Middle East held at the University of Durham,*

plagiarism existed (quotation word for word of the verse[s] of another poet), most of the forms it took encompassed a broad range of literary devices, from borrowing to quotation through evocation, to cite just a few. The idea of blameworthiness conveyed by the word *sariqah* ("theft") was however not instinctive in the mind of those who used that term. Some kinds of *sariqah* were laudable, others reprehensible. Hence the development of the concept of *akhdh,* more neutral, and also divided into two ethical categories: laudable and blameworthy.[81] Arab critics who devoted their time to identifying and classifying the borrowings in poetry relied on a binary system: that of the *lafẓ* (expression) and *maʿná* (poetical idea). If the poetical ideas were considered to be common property, the way they were expressed by a poet was regarded as personal and thus not permissible to be copied and reused in the same context.[82] Furthermore, *sariqah* was never considered from the legal point of view, as Islamic law does not recognize any legal value for the "theft" of intellectual property.[83] Nonetheless, it remains true that "the idea of intellectual property seems to have been well developed."[84] To conclude with this part, *sariqah* in literary criticism, as conceptualized by Arab critics of classical literature, does not fully equate with the word "plagiarism." Most of the cases registered by the treatises on *sariqah* have to do with what is now called intertextuality, though this was not expressed in those terms by Arab critics. However, they knew that a poet or a littérateur is inspired by his previous readings and cannot avoid the repetition of a theme or a metaphor.[85] Plagiarism,

9–12 July 1989 (Oxford, 1989), 384–94; idem, "Recomposition: An Aspect of Arabic Literary Theory," *Islamic Culture* 73 (1999): 105–20; idem, "The Arabic Theory of Originality and Imitation in a New Light," *Asiatische Studien/Études asiatiques* 54 (2000): 597–608.

[81] A. Sdiri, "Les théoriciens arabes et le plagiat," in *Le Plagiat,* 128. *Akhdh* was used for the taking over of a *maʿná* (poetical idea) of an earlier poet. See W. Heinrichs, "An Evaluation of *Sariqa*," 359.

[82] Peled, "On the Concept of Literary Influence," 37–38.

[83] It must be remembered here that in Western law, intellectual property was not recognized as such before the end of the eighteenth century (France, arrêts du Conseil du Roi, 30 August 1777), and was not protected by copyright before the end of the nineteenth century (the Bern convention of 1886). Even in this case, jurists prefer to speak of counterfeit rather than plagiarism. See A. Lucas, "Plagiat et droit d'auteur," in *Le Plagiat,* 199–200.

[84] W. Heinrichs, "Sariḳa," 707. The idea of the consciousness of intellectual property in Islam was expressed for the first time, as far as I know, by G. Schoeller, "Die Anwendung der oral poetry-Theorie auf die arabische Literatur," *Der Islam* 58 (1981): 222. For al-Ḥātimī's point of view, see also Sanni, "The Arabic Theory," 42–43: "He [al-Ḥātimī] dismisses the argument that all poetical ideas are common property and are therefore not subject to copyright. If this were so, he argues, al-Aʿshā (d. 7/629) would not have been imprisoned for his alleged appropriation of a work by another poet."

[85] Abū Hilāl al-ʿAskarī (d. 395/1005) underwent such a situation: "This is something I have experienced myself and about which I have no doubt. Namely, I had composed something to

as we use the term nowadays, should rather be reserved for crude or slavish copying.[86]

If seldom established in literary works, especially poetry, this baser form of plagiarism is more likely to be recurrently used in the other fields of non-literary texts (hadith, history, sciences, etc.). And this is more pertinent for our purposes because the concept of intertextuality can hardly be invoked as a justification in these cases. Historical facts, for instance, would never be considered an author's intellectual property, but the words he chose to recount these facts could. We will see whether, in these cases, an author who slavishly copies from another without quoting his source is regarded as a plagiarist. It has repeatedly been said that authors in Islam very often quoted sources without paying their dues, i.e., citing the author or the title from which they were borrowing, but whether this behavior was evaluated, and if so in what manner (positively, neutrally, or negatively) has not really been approached from the point of view of the authors of these periods. For this, we will have to consider the evaluations and examples collected in several books dating to the period under consideration (eighth–ninth/fourteenth–fifteenth c.) and belonging to different genres, mainly hadith works, history and sciences.

The field of traditions (hadith) might appear to have eluded such practices, but the sources give a different picture. Here is what a renowned specialist of the field, al-Dhahabī (d. 748/1348), had to say about *sariqah* with regard to hadith works:[87]

---

describe women and said: '*safarna budūran wa-intaqabna ahlatā*.' I came to believe that nobody had already combined these two metaphors until I exactly found them [under the pen] of an author of Baghdad. I was really surprised and decided that I would never at all charge any modern poet of plagiarism regarding one of his predecessors" ("*wa-hādhā amr qad ʿaraftuhu min nafsī fa-lā amtarī fīhi wa-dhālika annī kuntu ʿamiltu shayʾan fī ṣifat al-nisāʾ fa-qultu 'safarna budūran wa-intaqabna ahlatā' wa-ẓanantu annī lam usbaq ilá jamʿ hādhayn al-tashbīhayn ḥattá wajadtu dhālika bi-ʿaynihi li-baʿḍ al-baghdādīyīn fa-kathura taʿajjubī wa-ʿazamtu ʿalá allā aḥkum ʿalá al-mutaʾakhkhir bi-al-sariqah min al-mutaqaddim ḥukman ḥatman*"). See al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ* (Cairo, 1913–20, reprint 1963), 2:303.

[86] See Sdiri, "Les théoriciens arabes et le plagiat," in *Le Plagiat,* 127.

[87] Al-Dhahabī, *Tārīkh al-Islām,* 17:140.

Ibn Maʿīn said: "This [transmitter, i.e., al-Ḥusayn ibn Faraj], we know that he plagiarized traditions. I [al-Dhahabī] say: 'The plagiarism of traditions is less considerable than forging or inventing them. It consists in that a traditionist is the only one to transmit a given tradition, then the plagiarist comes and pretends that he heard it too from the same master. This is not similar to the plagiarism of the *ajzāʾ* [small compendia of hadith] and the books: this is far more disastrous than the plagiarism of the transmission, which is less wicked than the forgery of tradition because of his saying: "To tell a lie on my behalf does not equal a lie told on behalf of someone else."'"

قال ابن معين: ذاك نعرفه يسرق الحديث. قلت: سرقة الحديث أهون من وضعه أو اختلاقه وسرقة الحديث أن يكون محدث ينفرد بحديث فيجيء السارق ويدعي أنه سمعه أيضا من شيخ ذاك المحدث وليس ذاك بسرقة الأجزاء والكتب فإنها أنحس بكثير من سرقة الرواية وهي دون وضع الحديث في الإثم لقوله: إن كذبا علي ليس ككذب على غيري.

This very interesting passage posits several perceptions of the word *sariqah* not necessarily encountered so far in the context of literary texts. Thanks to it, we learn that traditionists identified people who attributed to themselves traditions that were known to be transmitted by only one person. This is similar to the appropriation of someone else's intellectual property.[88] However, it was regarded as less egregious *(ahwan)* than the forgery of traditions, which is more blameworthy because it implies that a lie is forged and put in the mouth of the Prophet. Obviously, to "steal" a tradition from someone who is its only transmitter is more easily forgiven. For the sake of understanding, al-Dhahabī wanted to make intelligible that there existed another kind of appropriation of someone else's words that was more harmful than the "theft" of a tradition: the plagiarism *(sariqah)* of works. Even speaking of *ajzāʾ*—the compendia of traditions (often on a certain theme) collected by a transmitter, which necessarily consisted only of hadiths and thus greatly obscured the transmitter's authorial voice—al-Dhahabī considered that to copy it and appropriate it was tantamount to an act of plagiarism. Authorship is nevertheless clearly discernible in these compendia because the transmitter selected those traditions, put them in a given order, and sometimes

[88] Al-Dhahabī provides two examples in other places: "*thumma saraqahu qawm ḍuʿafāʾ mimman yuʿrafūn bi-sariqat al-ḥadīth,*" *Tārīkh al-Islām,* 16:428; idem, *Siyar Aʿlām al-Nubalāʾ,* ed. Shuʿayb al-Arnaʾūṭ et al. (Beirut, 1401–9/1981–88), 10:601; "*uttuhima bi-sariqat ḥadīthayn,*" idem, *Tārīkh al-Islām,* 15:348.

appended a commentary for a difficult word found in a given tradition. Moreover, the personal approach is conspicuous in the *isnād,* which is very individualized.[89] Of course, he added that books *(kutub)* could be the subject of the same treatment, but this is far more to be expected. In al-Dhahabī's perception of the phenomenon, one understands that, on an ethical scale,[90] crude plagiarism (of compendia or books) is situated beneath the forgery of traditions (the worst) and above the appropriation of someone else's traditions (the least of all).

This perception concerning crude plagiarism emerges when reading the biography of a renowned *ʿālim* who was mainly a traditionist: Ibn al-Mulaqqin (d. 804/1401). Here is what a Syrian historian, himself a traditionist, had to say about him:[91]

After that, he wrote numerous books, but the Egyptians accuse him of plagiarism in his works. Indeed, he did not attend anything, he did not study thoroughly, and he composed many works in the sense that he copied the books of others.	ثم كتب بعد ذلك كتبا عديدة والمصريون ينسبونه إلى سرقة تصانيفه فإنه ما كان يستحضر شيئا ولا يحقق علما ويؤلف المؤلفات الكثيرة على معنى النسخ من كتب الناس.

What several authors reproached Ibn al-Mulaqqin for was the fact that his numerous works, amounting to more than three hundred, could only be produced in such quantities because he composed them by stealing what others had already written. We understand that Ibn al-Mulaqqin's books were not necessarily completely borrowed from others, but that the material he put in them mainly stemmed from others' production. One of Ibn Ḥajar's comments enlightens us in this matter. It is reported by al-Sakhāwī in the biography he devoted to his

[89] Al-Dhahabī elsewhere gives a telling example regarding Ibn Wadʿān (d. 494/1100) in this case: "*wa-rawá al-Arbaʿīn al-Wadʿānīyah al-mawḍūʿah allatī saraqahā ʿammuhu Abū al-Fatḥ ibn Wadʿān min al-kadhdhāb Zayd ibn Rifāʿah. . . . Wa-kitābuhu fī al-Arbaʿīn saraqahu min Ibn Rifāʿah wa-ḥadhafa minhu al-khuṭbah wa-rakkaba ʿalá kull ḥadīth rajulan aw rajulayn ilá shaykh Zayd ibn Rifāʿah wāḍiʿ al-kitāb*." See al-Dhahabī, *Tārīkh al-Islām,* 34:200.

[90] Cf. the words he used: *anḥas* (calamitous) and *ithm* (sin).

[91] Ibn Qāḍī Shuhbah, *Ṭabaqāt al-Shāfiʿīyah,* ed. ʿAbd al-Ḥamīd Khān (Beirut, 1987), 4:43. Cf. Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr,* 2:218: "*wa-ishtahara bi-kathrat al-taṣānīf ḥattá kāna yaqūl innahā balaghat thalāthamiʾat taṣnīf wa-ishtahara ismuhu wa-ṭāra ṣīyatuhu wa-kānat kitābatuhu akthar min istiḥḍārihi fa-li-hādhā kathura al-qawl fīhi min ʿulamāʾ al-Shām wa-Miṣr hattá qaraʾtu bi-khaṭṭ Ibn Ḥijjī: 'kāna yunsab ilá sariqat al-taṣānīf fa-innahu mā kāna yastaḥḍir shayʾan wa-lā yuḥaqqiq ʿilman wa-yuʾallif al-muʾallafāt al-kathīrah ʿalá maʿná al-naskh min kutub al-nās*.'" One will notice that in this case, the charge was uttered by a Syrian historian, Ibn Ḥijjī (d. 816/1413).

master, in a section entitled "Those who appropriated someone else's work and attributed it to themselves, adding or cutting out insignificant material, but the majority being mentioned in the words of the original." This section contains several cases of "plagiarism" or "borrowing" that Ibn Ḥajar could track down. Al-Sakhāwī gives the data regarding Ibn al-Mulaqqin on the basis of a note in Ibn Ḥajar's handwriting found on a supplement *(dhayl)* Ibn al-Mulaqqin wrote to his *Ṭabaqāt al-Shāfiʿīyah:*[92]

I [al-Sakhāwī] saw in his [Ibn Ḥajar's] handwriting found on a Supplement of his master Ibn al-Mulaqqin . . . what follows:

"I examined this book from its beginning to its end and compared all the biographies it contains with *Al-Ṭabaqāt al-Wusṭá* of the judge Tāj al-Dīn al-Subkī. I found that almost everything is copied, word for word, from it. Likely, the small amount of additional material does not exceed ten biographies."

وقرأت بخطه أيضا على ذيل لشيخه ابن الملقن . . . ما نصه:

نظرت هذا الكتاب من أوله إلى آخره وقابلت التراجم جميعها على كتاب الطبقات الوسطى للقاضي تاج الدين السبكي فوجدت الجميع إلا اليسير منقولا منها بحروفها والقدر اليسير الزائد لعله عشرة تراجم لا يزيد على ذلك.

As is noticeable, Ibn Ḥajar's comment, written directly on a copy of this book,[93] does not characterize Ibn al-Mulaqqin's borrowing as plagiarism *(sariqah)*. But for someone who reads between the lines, that is precisely what he is saying. Hence al-Sakhāwī's remark:[94]

---

[92] Al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 1:391.

[93] Al-Sakhāwī explains, a few lines later (ibid., 392), that he managed to lay hands on a copy of Ibn al-Mulaqqin's *Ṭabaqāt* in the handwriting of someone who was acquainted with Ibn Ḥajar. The first volume consisted of the *Ṭabaqāt* while the second contained, among other things, the *Dhayl* Ibn Ḥajar examined. Al-Sakhāwī found Ibn Ḥajar's comment on that copy.

[94] Ibid., 392.

I remained astonished at my master's purpose in this matter. It would not have harmed him if he had said in his comment: "He gleaned it from the work of one of his predecessors." Did he think that Tāj al-Dīn's *Ṭabaqāt* would be buried with its author in his grave and would not be published? And that he would not have yet authorized another copy to be made? That is really strange!

ولقد طال تعجبي من شيخنا فيما اعتمده من ذلك فما كان يضره لو قال في خطبته: إنه التقطه من تصنيف من سبقه إليه. أتراه ظن أن طبقات تاج الدين تدفن معه في القبر فلا تظهر؟ وما جوز قط أن ينقل منها نسخة أخرى؟ إن هذا لشيء عجيب!

Even though al-Sakhāwī never speaks of plagiarism *(sariqah)* because the work contained some additional—albeit limited—original material, he considered that his master's judgment was too neutral and that he should have been more explicit in order to reveal Ibn al-Mulaqqin's bad behavior. Interestingly, his comment also demonstrates that a deceit such as this one would have been unmasked sooner or later, as copies usually survived their author and were always likely to be compared with someone else's work.

In the given section of Ibn Ḥajar's biography, al-Sakhāwī lists further cases of appropriation noticed by his master, most of the latter's comments having been found written on the incriminated books. In none of these comments does Ibn Ḥajar refer to the appropriation with the word "*sariqah,*" and his tone always remains almost neutral, with no hint of a moral judgment. He simply exposed what was wrong in the way they acted: the books they produced were just a collection of passages borrowed from others without quoting them; the material they added or omitted was insignificant in comparison with the amount of data they took from others; they copied almost word for word; and, finally, they deceived others by saying that this was their original work. Only once did he pour out his feelings about such behavior. Describing what al-Birmāwī (d. 816/1413) had done in a particular case, he declared: "This does not advance knowledge!"[95] which is, in our modern perception of the phenomenon, a justifiable criticism.

If Ibn Ḥajar was reluctant to use the word "*sariqah*" (plagiarism) in such cases, his remarks nevertheless imply that he did not at all appreciate the way these authors acted. His assessment of one of his colleague's books further corroborates that he felt this way even for verbatim quotations of passages without referring to the source, a practice generally observed in those days. This assessment, which

[95] Al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 1:394 ("*wa-laysa dhālik min shukr al-ʿilm*").

brings us to the historical field,[96] refers to al-ʿAynī (d. 855/1451) and his *ʿIqd al-Jumān,* and Ibn Ḥajar placed it at the beginning of his chronicle entitled *Inbāʾ al-Ghumr:*[97]

I have consulted for it the *History* of the judge Badr al-Dīn Maḥmūd al-ʿAynī, who mentioned that he based himself on the *History* of Ibn Kathīr, and that is indeed the case. However, when Ibn Kathīr['s *History*] ends, he relied mainly on the *History* of Ibn Duqmāq, to such an extent that he uninterruptedly copied almost a full page from it, sometimes following him blindly in his mistakes, even his grammatical mistakes like "*akhlaʿa ʿalá fulān.*" Even stranger, Ibn Duqmāq mentions that he witnessed an event, and al-Badr [al-ʿAynī] blindly reproduces his words although this event happened in Cairo while he [al-ʿAynī] was far away from it, in ʿAyntāb. I have not busied myself with following his slips. Rather, I copied from him things I believe he was aware of, things I did not witness myself but he did, and that were not at my disposal [elsewhere].

وطالعت عليه تاريخ القاضي بدر الدين محمود العيني، وذكر أن الحافظ عماد الدين ابن كثير عمدته في تارخيه وهو كما قال؛ لكن منذ قطع ابن كثير صارت عمدته على تاريخ ابن دقماق، حتى يكاد يكتب منه الورقة الكاملة متوالية، وربما قلده فيما يهم فيه حتى في اللحن الظاهر مثل "أخلع على فلان،" وأعجب منه أن ابن دقماق يذكر في بعض الحادثات على أنه شاهدها فيكتب البدر كلامه بعينه بما تضمنه، وتكون تلك الحادثة وقعت بمصر وهو بعيد في عينتاب، ولم أتشاغل بتتبع عثراته، بل كتبت منه ما ليس عندي مما أظن أنه اطلع عليه من الأمور التي كنا نغيب عنها ويحضرها.

Even if this criticism must be gauged in the light of an academic rivalry between both scholars, as A. Broadbridge stressed,[98] this passage is remarkable because it can be placed in a broader context, i.e., all the other cases Ibn Ḥajar tried to track down: as such, it definitely confirms his own apprehension, in negative terms, of the phenomenon.

[96] For the earlier periods, see particularly the following example mentioned by al-Masʿūdī about Ibn Qutaybah: "*wa-jarrada dhālika Abū Ḥanīfah al-Dīnawarī fī kitābihi wa-qad salaba dhālika Ibn Qutaybah fa-naqalahu ilá kutubihi naqlan wa-jaʿalahu ʿan nafsihi wa-qad faʿala dhālika fī kathīr min kutub Abī Ḥanīfah al-Dīnawarī hādhā.*" Al-Masʿūdī, *Murūj al-Dhahab wa-Maʿādin al-Jawhar,* ed. Barbier de Meynard and Pavet de Courteille, rev. Charles Pellat (Beirut, 1966–74), 3:359.

[97] Ibn Ḥajar, *Inbāʾ al-Ghumr,* 1:4–5.

[98] See A. F. Broadbridge, "Academic Rivalry," 98 ff.

Al-Maqrīzī himself did not refrain from revealing the bad behavior of colleagues, and his reaction is just as significant:[99]

> He [Ibn Duqmāq] limited himself to copying what he found to such an extent that those who know the truth have accused him of negligence. Among this is that he borrowed my notebooks. When he died, I found the history of Timur Lang the tyrant in his handwriting and there, he had copied a section related to the seizure of Aleppo by Timur that I had written, where I said: "An unsuspicious person informed me that he witnessed" and he had written what he saw "An unsuspicious person informed," making the reader believe that he was the person who was telling this section though, by God, he did not find this section but in my handwriting.

> حسبه نقل ما يقف عليه حتى ربما ينسبه من علم حقيقة أمره إلى الغفلة فمن ذلك أنه كان يستعير مجاميعي التي بخطي فلما مات وقفت على أخبار الطاغية تيمورلنك من خطه فإذا هو قد كتب فصلا في أخذ تيمور لحلب من خطي قد قلت فيه: "أخبرني من لا أتهم أنه شاهد،" فكتب هو كما رأى "أخبرني من لا أتهم" فصار يوهم الناظر أنه هو الراوي للجزء ولا والله وقف على ذلك الجزء إلا من خطي.

In al-Maqrīzī's words, the appropriation of one of his texts, quoted word for word, without even modifying passages considered to be personal, was tantamount to negligence *(ghaflah)*.[100] If he was disturbed by the discovery of his own words attributed to someone else, he was more upset by seeing that a fact that was transmitted to him by a trustworthy informant, some sort of a scoop, was "stolen" from him because Ibn Duqmāq used the same words to introduce the informant. In this way, Ibn Duqmāq was becoming another possible source for this matter. Moreover, a comparison of both works would have raised the question of plagiarism and the conclusion reached by a reader would have been disadvantageous to al-Maqrīzī because he was younger than Ibn Duqmāq and

---

[99] Al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:102.

[100] The same word is used to define the way Ibn al-Furāt acted with the same section on Timur Lang: "*thumma baʿda dhālik shāhadtu fī* al-ghaflah *aʿjab min dhālik wa-huwa anna . . . Ibn al-Furāt kataba tārīkh kabīr . . . wa-yanqulu ʿanhu fī tārīkhihi kathīran. Fa-lammā māta waqaftu ʿalá qiṭʿah min tārīkhihi bi-khaṭṭihi fa-marra bī minhu hādhā al-mawḍiʿ bi-ʿaynihi wa-qad katabahu immā min khaṭṭ Ibn Duqmāq aw waqafa ʿalá khaṭṭī ʿindahu fa-qāla huwa ayḍan: 'akhbaranī man lā attahim.' Fa-ṣāra al-nāẓir fī khaṭṭ Ibn al-Furāt yaḥsabu annahu huwa rāwī al-juzʾ ayḍan wa-mā dhāka illā* ghaflah." Ibid.

more likely to have borrowed it from his predecessor.

From all this, we may conclude that authors of non-literary texts were acquainted with the concept of plagiarism in the sense that a text appropriated by someone else is sometimes slightly modified but, nevertheless, remains identifiable for a vigilant mind. It became a pastime for several authors of the Mamluk period to recognize such hoaxes. Sometimes, they were themselves the victims and did not appreciate that the result of several years of thorough study could be stolen by a dilettante. In such cases, their reaction could be measured, as with Ibn Ḥajar, or vehement, as with al-Sakhāwī or al-Maqrīzī. An author like al-Suyūṭī (d. 911/1505) went further and did not refrain from publicly denouncing another author he accused of having plagiarized several of his works.[101] The title and several passages of his book clearly refer to the theft and the thief as *sariqah* and *sāriq* respectively, demonstrating that he understood that the appropriation of his personal work, slightly modified or not, was plagiarism and the author of this act was a plagiarist.[102]

At this point, we probably need to make a distinction between two different situations. The first is the quotation of passages in the body of a work considered as original without referring to the source. Though not appreciated, it appears that this was a rather common practice at all times. But, in this matter, there was undoubtedly a difference between a book written several decades or centuries before and another one published by a contemporary. Old books were considered a common heritage and as such could be plundered without paying one's debts towards their authors.[103] Older sources sometimes circulated for several centuries and were consequently widespread and known to the general readership. Anyone

[101] See al-Suyūṭī, *Al-Fāriq bayna al-Muṣannif wa-al-Sāriq,* ed. H. Nājī (Beirut, 1998).

[102] In the field of the sciences, which was no exception in this matter, a similar example may be quoted. This is the *Faʿalta fa-Lā Talum* (You have done it, so do not condemn) of Quṭb al-Dīn al-Shīrāzī (d. 710/1311), who wrote this treatise partly to denounce the fact that his contemporary, Muḥammad ibn ʿAlī al-Ḥimādhī, had substantially plagiarized his *Al-Tuḥfah al-Shāhīyah.* See J. Ragep, *Naṣīr al-Dīn al-Ṭūsī's Memoir on Astronomy (al-Tadhkira fī ʿilm al-hayʾa)* (New York, 1993), 1:60. I wish to express my thanks to the author for pointing me to this example.

[103] Cf. Charles Nodier's words: "Le plagiat commis sur les auteurs modernes, de quelque pays qu'ils soient, a déjà un degré d'innocence de moins que le plagiat commis sur les anciens." Ch. Nodier, *Questions de littérature légale* (Paris, 1828), 4 (quoted by Ch. Vandendorpe, "Introduction", in idem, *Le Plagiat,* 8). Cf. the attitude of some websites where electronic copies of copyrighted works and manuscripts are put at the disposal of everybody because they are considered to be part of a cultural heritage and as such *waqf lillāh.* An instance of this attitude as regards ancient material can be given for al-Maqrīzī, who extensively exploited al-Kindī's works, as well as Ibn ʿAbd al-Ḥakam's *Kitāb Futūḥ Miṣr* and Ibn Faḍl Allāh al-ʿUmarī's *Masālik al-Abṣār,* without quoting the source in most cases. For al-Kindī, see in particular G. Wiet, "Kindî et Maqrîzî," *Bulletin de l'Institut français d'archéologie orientale* 12 (1916): 61–73.

sharing a common cultural heritage could identify the sources without problem, and in this sense, the phenomenon was in no way comparable to plagiarism: the idea of deceit was generally absent. On the other hand, contemporary works took time to be circulated and become well-known. They could be defended by their own authors or their disciples and were regarded as a personal work normally to be quoted with full attribution. The second situation is the slavish copying and appropriation of somebody else's work by a later author, whether or not he made additions to it, a practice most of the authors condemned. The terms they chose to express their discontent with the phenomenon varied greatly, from the explicit *sariqah* or neutral *akhdh* to a more ambiguous *ghaflah*. Nevertheless, they always referred to the same practice, to be identified as plagiarism.

As Ibn Ḥajar is the central witness in the case at the core of this article, what would he have thought of al-Maqrīzī's plagiarism of al-Awḥadī, given that we can now speak of plagiarism in the light of the aforesaid elements? What Ibn Ḥajar saw in this part of the draft is: that al-Maqrīzī took al-Awḥadī's draft and erased some parts of the text that he then replaced with his own words, to establish that he was the author of these words, as is discernible in the introductory part of the section on the madrasahs; that he modified the personal references made by al-Awḥadī, as is conspicuously evident on fol. 82b where he erased some words and replaced them with *qāla al-muʾallif;* that in most cases he copied al-Awḥadī's words almost verbatim, without citing him in his final version; finally, a close analysis of the layout of this section, I mean the order in which the madrasahs are enumerated, shows conclusively that al-Maqrīzī followed it almost exactlty:[104] only eight madrasahs appear to have been moved to another place in al-Maqrīzī's plan,[105] which means that he stuck to al-Awḥadī's general organization of the section on buildings. This is another upsetting element.

Undoubtedly, it must have been worrisome for a colleague like Ibn Ḥajar to notice that the text composed by al-Awḥadī had been appropriated by his colleague al-Maqrīzī. However, in these conditions, it is better understood why al-Maqrīzī never referred to al-Awḥadī as an author in his *Khiṭaṭ,*[106] not even in the list of

[104] See Appendix 3.

[105] These are nos. 6, 9, 10, 11, 15, 25, 27, 67 according to their order of appearance in al-Awḥadī's draft and nos. 24, 25, 31, 30, 26, 41, 62, 71 according to their order of appearance in the final version of the *Khiṭaṭ*. Three additional madrasahs appearing in the draft have also been moved to another place in the final version, but these were added to al-Awḥadī's draft by al-Maqrīzī and must not be considered here, given that al-Maqrīzī placed them where he found blank spaces in the draft.

[106] Al-Maqrīzī mentioned al-Awḥadī only once for a *khabar* he transmitted to him on the authority of Ibn al-Furāt regarding the teaching sessions that took place in the mosque of ʿAmr ibn al-ʿĀṣ in Fusṭāṭ before 749/1348. Al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* Būlāq ed., 2:256 (see the Sayyid edition, 4:36, l. 22). The same *khabar* is given by al-Maqrīzī in al-Awḥadī's entry in his

authors who preceded him in this field, a list that he placed in his introduction to the book.[107] Sayyid recognized the unforgivable nature of this deliberate omission and noted that al-Maqrīzī should have mentioned al-Awḥadī's contribution, as he did in al-Awḥadī's biography in his biographical dictionary, *Durar al-ʿUqūd al-Farīdah.* Yet Sayyid justified al-Maqrīzī's behavior by claiming that al-Awḥadī's drafts at his death partly covered the material collected in al-Maqrīzī's own drafts: in other words, when al-Maqrīzī took possession of these drafts, he would have noticed that they were nothing more than a miscellany of unorganized extracts *(amshāj min al-nuqūl ulṣiqat janban ilá janb dūna mā ayy tamḥīṣ)*. Nonetheless, these extracts would have been indispensible for his own work, but rather than adding them to his own drafts, Sayyid argues that al-Maqrīzī would have gone back to the sources used by al-Awḥadī. Doing so, he was excused from quoting his name in the body of his work.[108]

Sayyid's argument belittles al-Awḥadī's work: nowhere is it said that his book was just a collection of notes, cards, slips, and extracts. On the contrary, we know for sure that he had already made a fair copy of part of it and that, according to al-Maqrīzī himself, there were several volumes of drafts.[109] Sayyid probably interprets the word *musawwadah* as designating a chaotic draft, but this was not the case. It already reflected the author's intentions toward his book. Consequently, the rough draft was more than a bunch of notes. Proof of this is that such drafts were sometimes prized by later authors. Several examples corroborate that drafts surviving their authors could be deemed useful enough to be sold and later on exploited.[110] The rough draft was often considered as a personal work and worth

---

biographical dictionary. See al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* Gotha MS 1771, fol. 48b = ed. ʿAlī, 1:235 = ed. al-Jalīlī, 1:188.

[107] See al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* Būlāq ed., 1:4–5. The same is true of Ibn Duqmāq (d. 809/1407), another colleague with whom al-Maqrīzī was acquainted, and the author of an unfinished book dealing with the topography of Egypt entitled *Al-Intiṣār li-Wāsiṭat ʿIqd al-Amṣār*. Vols. 4 and 5 of the autograph were discovered and published by K. Vollers in 1893 (Būlāq).

[108] A. F. Sayyid, "Muqaddimat al-Muḥaqqiq," in al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* 1:65.

[109] Al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:186.

[110] Ibn al-Furāt's *Tārīkh,* of which he had time to make a fair copy of the last third only (still 20 vols.), was sold as a *musawwadah* by his son, who had no interest in it. Several historians took advantage of it, among them al-Maqrīzī himself. See al-Sakhāwī, *al-Ḍawʾ al-Lāmiʿ,* 8:51; Ibn Ḥajar, *Al-Majmaʿ al-Muʾassis,* 2:515–16; al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 3:227. See another example reported by al-Sakhāwī, ibid., 6:328 ("*wa-sharaḥa al-Ḥāwī sharḥan ḥasanan mabsūṭan bayyaḍa thulthahu al-awwal wa-māta ʿan bāqīhi musawwadah yuntafaʿ bi-hā ka-al-intifāʿ bi-al-mubayyaḍah wa-in kāna fī tilka ziyādāt kathīrah*"). Abū al-Faraj al-Iṣfahānī's rough draft of the *Kitāb al-Aghānī* was also sold, but probably for another reason: it became a collectible. See Yāqūt al-Ḥamawī, *Irshād al-Arīb ilá Maʿrifat al-Adīb,* ed. Iḥsān ʿAbbās (Beirut, 1993), 4:1719.

being quoted,[111] even when a fair copy of the work existed.[112] More relevant for our purposes, the rough draft could, in some cases, be fair-copied by someone else, a disciple or a colleague; this is what happened with al-Jawharī's famous dictionary, *Al-Ṣaḥāḥ,* which was still a draft when its author became convinced that he could fly like a bird and died as a result. A fair copy of the unrevised rough draft was prepared by his disciple, who was apparently less knowledgeable and introduced many mistakes.[113]

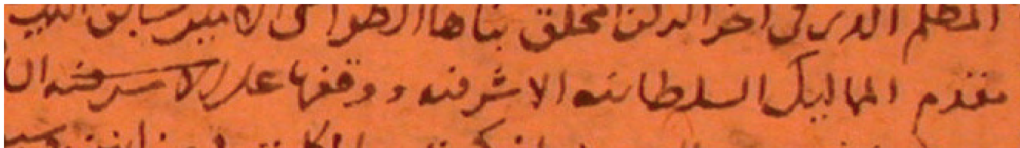
Rough drafts were thus considered personal works in their own right, even though they were not published. They were valued as sources and quoted by others who did not hesitate to refer to them. Thus al-Maqrīzī had several options at his disposal. He could have prepared a fair copy of al-Awḥadī's drafts, even cutting off some parts and adding others, but published it in the name of his colleague, as others did in such cases. This option was disregarded by al-Maqrīzī, who rather decided to start his work on the *khiṭaṭ* thanks to the material collected and already prepared by al-Awḥadī, as I will demonstrate in the following pages. In this case, he could have quoted al-Awḥadī's draft, a solution adopted by several of his predecessors, but he chose not to do so. On the contrary, he completely obliterated al-Awḥadī's contribution to the field, except in the biography he devoted to him in his *Durar al-ʿUqūd al-Farīdah*. However, his decision indicates his intent to deceive the readers of his *Khiṭaṭ*. Consequently, Sayyid's justification hardly stands up, particularly in light of the section identified as being in al-Awḥadī's handwriting. Indeed, it shows that we are not dealing with disorganized cards bearing unverified data, in fact not even a mere draft.

Al-Awḥadī's *Khiṭaṭ*: Just a Disorganized Draft?

A close analysis of the section on the madrasahs allows us to establish several facts, thanks to the external and internal elements it contains.

First of all, it may be argued that al-Awḥadī's work on the madrasahs was at a fairly advanced stage at the time of his death. The section begins with a preamble in which the author explains how and when the madrasah was instituted for the first time and who introduced this institution in Egypt.[114] Then, he proceeds

[111] See al-Dhahabī, *Tārīkh al-Islām,* 45:421 *("muṣannif Tārīkh al-Shīʿah wa-huwa musawwadah fī ʿiddat mujalladāt naqaltu minhu kathīran");* Ibn Khallikān, *Wafayāt al-Aʿyān wa-Anbāʾ Abnāʾ al-Zamān*, ed. Iḥsān ʿAbbās (Beirut, 1968–72, reprint 1994), 6:42 *("naqaltuhā min khaṭṭ al-qāḍī Kamāl al-Dīn Ibn al-ʿAdīm min musawwadat tārīkhihi")*.



[112] See al-Dhahabī*, Tārīkh al-Islām,* 1:24 *("ṭālaʿtu musawwadat Tahdhīb al-Kamāl li-shaykhinā al-ḥāfiẓ Abī al-Ḥajjāj Yūsuf al-Mizzī thumma ṭālaʿtu al-mubayyaḍah kullahā")*.

[113] See Yāqūt al-Ḥamawī, *Irshād al-Arīb,* 2:658. For other examples, see Ibn Ḥajar*, Al-Durar al-Kāminah,* 5:117; idem*, Inbāʾ al-Ghumr,* 1:345.

[114] This preamble was slightly modified by al-Maqrīzī. See the first five lines of text on fol. 82a

with the list of the buildings arranged chronologically according to the year of foundation, starting with the Ayyubid period and proceeding further into the Mamluk period until the end of the eighth/fourteenth century.[115] For almost every building, data about the location, the name of the founder, the year of construction, the furnishings, the *waqf*s dedicated by the founder, and the law schools to which it was devoted are provided. The section ends with an appendix dealing with the lessons that were also organized in the various mosques in Cairo, which demonstrates that, in al-Awḥadī's mind, the section on madrasahs dealt essentially with teaching.

Additionally, this section clearly indicates that al-Awḥadī's work was more than just miscellanies on the topic. In truth, it probably represents the partial fair copy referred to by Ibn Ḥajar and al-Sakhāwī, a fact confirmed by the following passage:

Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 90b.

مقدم المماليك السلطانية الاشرفية ووقفها على ~~الاشرفية~~ الشافعية.

In this passage, the first occurrence of the word *al-ashrafīyah* was right, but it was repeated a few words further on instead of *al-shāfiʿīyah,* a mistake he noticed immediately given that he had not even had the time to add all the diacritical dots. He drew a line through the word and wrote at its end the correct reading. This phenomenon *(homoioteleuton),* typical of the copying process, shows that al-Awḥadī was clean-copying his text.

Thus, al-Awḥadī's work was far from being a draft or a collection of disorganized quotations. The author organized the material according to the date of foundation, as already stressed above, numbered the buildings accordingly,[116] and used red

illustrated on p. 176.

[115] This chronological order is somewhat disrupted at the end with two madrasahs going back to the Ayyubid period that Ibn ʿAbd al-Ẓāhir did not mention in his work, *Al-Rawḍah al-Bahīyah,* though he should have, according to al-Awḥadī (fols. 98b–99b: al-Madrasah al-Nābulusīyah *(lam yadhkurhā Ibn ʿAbd al-Ẓāhir);* al-Madrasah al-Kuhārīyah *(wa-lam yadhkurhā Ibn ʿAbd al-Ẓāhir fī kitābihi wa-hiya min sharṭihi).*

[116] In its current state, the manuscript bears only a few figures placed in front of the names of the madrasahs, starting with no. 3 up to no. 10, then no. 13, where it stops. The fact that the first numbers and those between 10 and 13 are missing may be explained by the fact that they were

ink to write their names. His sources are quoted in the body of the text, while no marginal note in his handwriting nor any addition on a slip of paper is found in the section. Nevertheless, in some cases, he left blank spaces at the end of a building for future additions. In summary, the text is the result of a preliminary version, but it obviously shows that the author intended to revise it in the future. Cross references also confirm that the author had already written more than this section by the time he clean-copied it. He indicates that the section on mosques had already been dealt with[117] and that the one on houses was still to come or to follow, meaning by this that he had already written it in draft form.[118]

Finally, this preserved section proves that al-Awḥadī used several kinds of sources: works by predecessors, oral witnesses, documents, and visits to the monuments described. With all these he was very critical, in that he always tried to corroborate second-hand data with primary information such as documents or inscriptions.

Furthermore, an analysis of the text in al-Awḥadī's handwriting reveals that his book must have been particularly detailed. Through the comparison of this section with the equivalent in the final version of al-Maqrīzī's *Khiṭaṭ,* we notice that the latter decided, quite strangely, not to take advantage of all the material he had at his disposal: 72 madrasahs were recorded by al-Awḥadī[119] against 72 by al-Maqrīzī.[120] Yet, 23 madrasahs present in al-Awḥadī's census were omitted by al-Maqrīzī, which means that he replaced them with new ones: in fact, those built mainly after al-Awḥadī's death (811/1408).[121] If the entirety of al-Awḥadī's *Khiṭaṭ* was as detailed as this surviving part is, then we can only imagine how many buildings al-Awḥadī recorded in the remaining parts of his book and that

presumably rubbed out by al-Maqrīzī. The lack of figures after no. 13 is either due to al-Awḥadī himself, who decided not to use this system until the end of the section, or must be attributed to al-Maqrīzī, who erased them in the same way he likely did at the beginning. Only a material analysis of the manuscript could reveal this.

[117] Regarding al-Azhar (fol. 99b): *"qad taqqadama fī dhikr binā' al-jāmiʿ al-Azhar mā kāna qarrarahu* . . ."; the mosque of al-Ḥākim (ibid.): "*qad qaddamnā mā rattabahu fīhi* . . ."; the mosque of Ibn al-Maghribī (fol. 89b): "*bi-jānib jāmiʿihi al-madhkūr.*"

[118] On one occasion, he referred to this section in the past (fol. 86a): "*kamā qaddamnā sharḥahu fī dhikr al-ādur.*" In the other cases, he always mentioned it in the future (fol. 87a): "*wa-sayaʾtī dhikr dhālik in shāʾa Allāh taʿālá fī dhikr al-ādur*" (the whole sentence has been cancelled with a stroke in red ink by al-Awḥadī himself); (fol. 99a) "*wa-sayaʾtī dhikr dhālik fī al-ādur.*"

[119] This figure does not include the eleven buildings added by al-Maqrīzī to al-Awḥadī's manuscript.

[120] Actually, al-Maqrīzī listed 73 buildings, but his list includes a duplication (nos. 20 and 58: al-Madrasah al-Muhadhdhabīyah; see Appendix 3).

[121] It must also be said that al-Maqrīzī overlooked six of the eleven madrasahs he added to al-Awḥadī's work!

al-Maqrīzī decided to omit in his own work![122]

In light of what has been substantiated and of other elements to be considered shortly, another question arises, one which might have an answer as disturbing as the fact just established: when did al-Maqrīzī start working on the topography of Cairo? Or, more perniciously, did he hit upon the idea of writing a book on this topic before al-Awḥadī's death, as is generally believed, or afterwards, upon acquiring his deceased neighbor's draft?

Dating the Draft of al-Maqrīzī's *Khiṭaṭ*

In order to try to answer this question, a chronologically arranged list of his writings would be necessary. Unfortunately, such a list does not exist, although proposals could be made on the basis of the autograph manuscripts and other elements.[123] Meanwhile, we must rely on the facts at our disposal, and these are al-Maqrīzī's biographical data, dated references in *Al-Khiṭaṭ,* dated notes in the autograph draft of the first version, and the order of the data on some leaves therein.

The earliest date referred to in the final version of the *Khiṭaṭ* is 818/1415, seven years after al-Awḥadī's death, and the last one is 843/1439; it is generally assumed that al-Maqrīzī composed this work between 1415 and 1424.[124] But before composing it, he had to collect most of the data he needed, and this is more problematic. Sayyid is convinced that al-Maqrīzī started to record and organize the material just after the year 806/1404, the year al-Maqrīzī identified as corresponding to the beginning of Cairo's collapse from an architectural point of view.[125] This hardly stands up with al-Maqrīzī's agenda. As a matter of fact, a few pieces of information on his early life as a scholar gathered from various sources

---

[122] That he meant not to include them in the final version of the *Khiṭaṭ* is clearly visible in the manuscript. The names of the neglected buildings are not accompanied by the sign indicating that the data were copied *(nuqila),* while those found in the *Khiṭaṭ* are. On this sign, see Frédéric Bauden, "Maqriziana II," 109–12.

[123] The present writer will tentatively provide a chronology of al-Maqrīzī's works in his forthcoming study of al-Maqrīzī's working method.

[124] See Jean-Claude Garcin, "Al-Maqrîzî: un historien encyclopédique du monde afro-oriental," in *Les Africains,* ed. Charles-André Julien et al. (Paris, 1977), 9:210. According to Nasser Rabbat, the work was begun in 1417 and completed in 1439–40. See Nasser Rabbat, "Al-Maqrizi's *Khitat*, an Egyptian *Lieu de Mémoire*," in *The Cairo Heritage: Essays in Honor of Laila Ali Ibrahim,* ed. Doris Behrens-Abouseif (Cairo and New York, 2000), 22. According to Sabri Jarrar, the book was composed between 1415 and 1422. See Sabri Jarrar, "Al-Maqrizi's Reinvention of Egyptian Historiography through Architectural History," in ibid., 32. Obviously, al-Maqrīzī continued to add new material until very late in his lifetime, as shown by the elements added until three years before his death.

[125] A. F. Sayyid, "Muqaddimat al-Muḥaqqiq," in al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* 1:66.

contradict this statement. First of all, the first work of history (more precisely, economic history) he wrote was published in 808/1405.[126] Secondly, we know for sure that, from 810 to 815, he was far away from Cairo (he lived in Damascus, sometimes travelling between the Syrian capital and his hometown).[127] Under these circumstances, he would hardly have had the time to produce a manuscript of the *Khiṭaṭ* in almost finished form, as represented by the two preserved volumes of the draft, before 811. It may be added that al-Maqrīzī knew perfectly well that Ibn Duqmāq and al-Awḥadī were working on that subject, as both of them were his colleagues. Eventually, Ibn Duqmāq died in 809/1407, leaving an unfinished draft, and al-Awḥadī followed him in 811/1408 with his work in the same stage. If al-Maqrīzī had ventured to write a book on the topography of Cairo shortly after 806/1404, the result would have been a third book on the topic, and at that time he obviously could not have known that the other two authors would die prematurely.

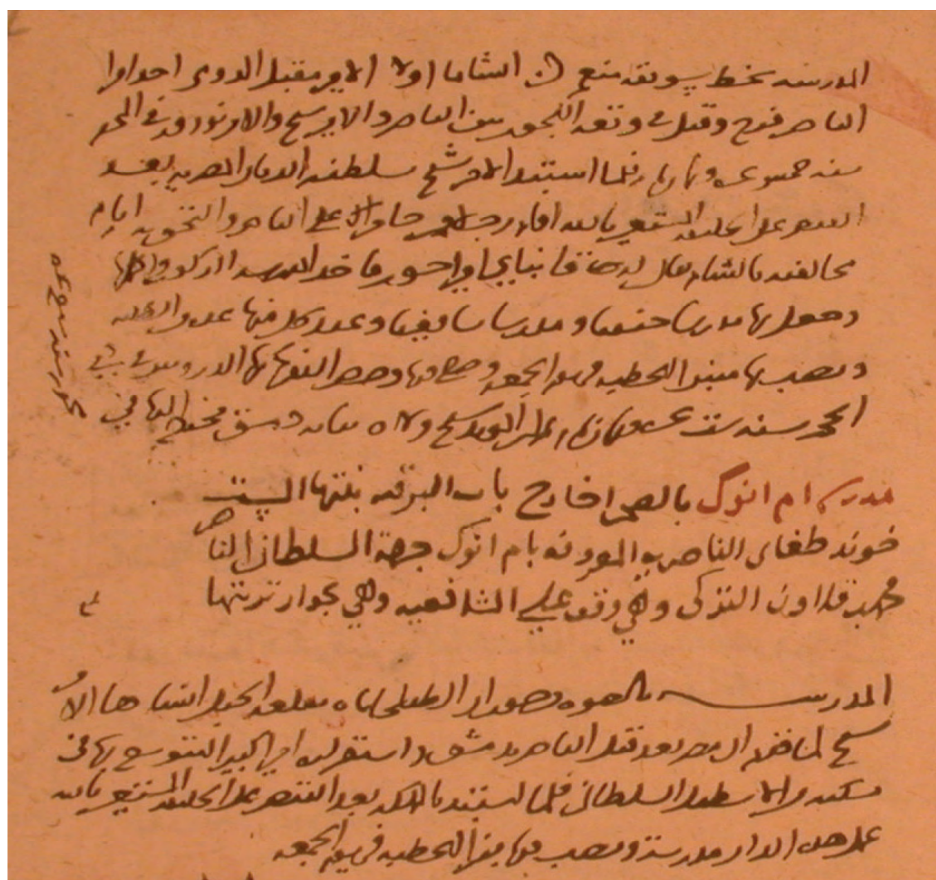
Yet, the two volumes of the draft can be accurately dated between 811[128] and 816, striking evidence that he had at his disposal most of his material at a very early date. For Sayyid, neither manuscript of al-Maqrīzī's draft help in this matter.[129] However, several autograph notes found at the beginning of the first volume, on the first leaves, provide a *terminus ante quem*. These notes refer to events that all took place in 816, although they are scattered on various leaves and were written at different moments as is shown by the color of the ink.[130] If we assume

---

[126] *Ighāthat al-Ummah bi-Kashf al-Ghummah*. The date is provided by al-Maqrīzī himself in his treatise. See John L. Meloy, "The Merits of Economic History: Re-Reading al-Maqrīzī's *Ighāthah* and *Shudhūr*," *Mamlūk Studies Review* 7, no. 2 (2003): 190.

[127] His stay in Damascus was generally thought to have lasted ten years, more or less between 810 and 820. It can now be fixed precisely thanks to the publication of his *Durar al-ʿUqūd al-Farīdah,* where he states that he stayed in Damascus from 810 to 815. See al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:154 *(wa-lammā waradtu Dimashq min sanat ʿashr wa-thamānī miʾah wa-ilá sanat khamsah ʿasharah)* and 34–35.

[128]Even 814 if we consider that he prepared a resumé of the *Tārīkh* of Ibn Muyassar during that year and that this source is quoted in the body of the text of the first volume of the draft.



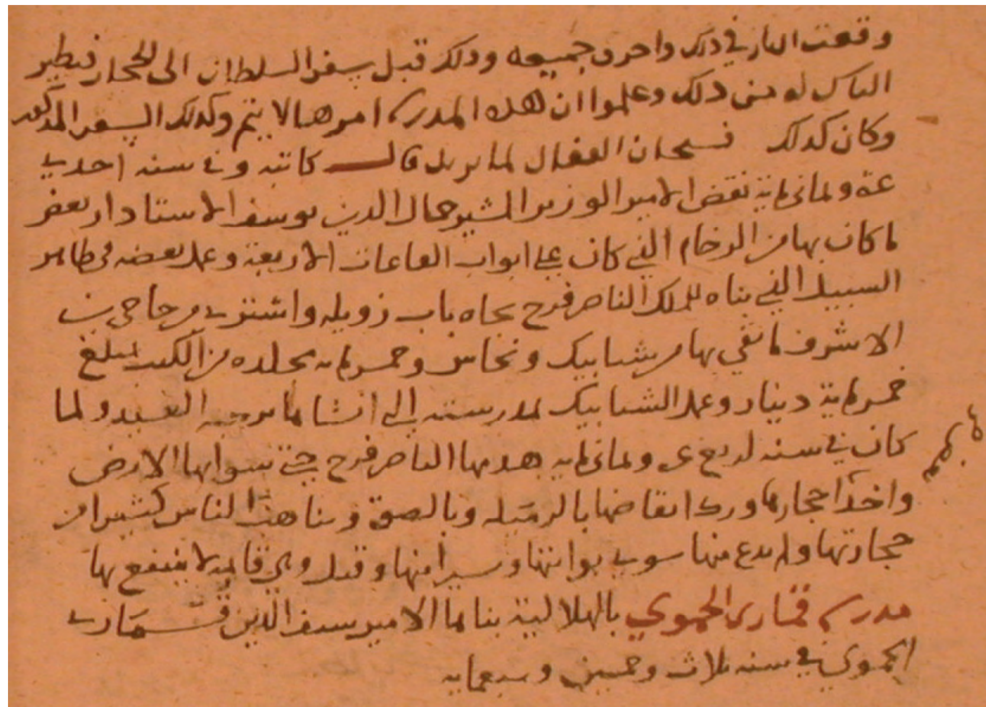
[129] A. F. Sayyid, "Muqaddimat al-Muḥaqqiq," in al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* 1:66 *(wa-lā tuʿīnunā musawwadat al-Maqrīzī lil-kitāb—wa-allatī waṣalat ilaynā minhā qiṭʿaṭayn* [sic] *maḥfūẓatayn* [sic] *fī mathaf Ṭūbqabū Sarāy bi-Istanbūl—fī maʿrifat al-tārīkh al-ḥaqīqī li-bidāyat taʾlīf hādhā al-kitāb)*.

[130] Topkapı Sarayı Kütüphanesi (Istanbul), MS Hazinesi 1472, fol. 1a (title-page providing the title in al-Maqrīzī's handwriting: *Al-Juzʾ al-Thānī min Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār*): note recording the death of Ṣadr al-Dīn ʿAlī ibn al-Ādamī on 8 Ramaḍān 816; fol. 1b (containing a list of contents): note recording the death of *ṣāḥibunā* Fakhr al-Dīn ʿUthmān ibn Ibrāhīm ibn Aḥmad al-Birmāwī 11 nights from the end of Shaʿbān 816); fol. 4a (containing a list of contents for the *kharāj*): note regarding the insurgence of Ṭūghān al-Dawādār on 16 Jumādá I 816.

that al-Maqrīzī wrote down these events shortly after they happened, these notes allow us to establish that, at that date, the first volume of this draft was already finished. On the other hand, one will notice that these leaves contain several parts of the table of contents:[131] from this, it can be deduced that the plan was complete as early as 816, and given that this table refers to contents included not only in this first volume, but also in the second, and probably a third (now lost), we may infer that those parts were also finished by that date.

Proceeding now to the second volume of the draft and, more particularly, to the section now identified as al-Awḥadī's draft, we can draw the same conclusion and even determine that it was completed before 811, which further corroborates the identification of this part with al-Awḥadī's work, as he died during that year. This is proven by the following examples selected from the section in al-Awḥadī's handwriting:

[131] These tables of contents were not published by A. F. Sayyid in his edition of this volume of the draft (al-Maqrīzī, *Musawwadat Kitāb al-Mawāʿiẓ wa-al-Iʿtibār*). A critical edition of these tables will be found in Appendix 2.



Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 97a.

On leaf 97a, a few lines in al-Awḥadī's handwriting dealing with Madrasat Umm Ānūk (founded by al-Nāṣir Muḥammad ibn Qalāwūn's wife at the beginning of the eighth/fourteenth century) can be read.[132] The space left blank, above and below, was used by al-Maqrīzī to add two madrasahs:[133] one in the quarter of the Suwayqat Munʿim for which a date is provided (817) and another one, the Madrasat al-Ṣuwwah, founded by the sultan al-Muʾayyad Shaykh, who reigned from 815/1412 to 824/1421. From this, it may be inferred that both additions were made after these dates. But the dating of this section can be better narrowed with leaf 95b:

[132] It is clearly visible that al-Maqrīzī rubbed out the space at the end of the first two lines as he completed the text afterwards (here in upper case: *al-siTT*; *al-sulṭāN AL-NĀṢIR*).

[133] In his final version, al-Maqrīzī neglected them. This is also confirmed by the absence, above each name, of the *nuqila* sign already referred to earlier.

Courtesy Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 95b.

Here, al-Maqrīzī added a note at the end of al-Awḥadī's text, which ends in the middle of the third line: one is dated to 811 and the following one, added immediately after it, to 814! We can hardly say if the information regarding the year 814 was added at a later stage, but that referring to the year 811 provides us with a very useful *terminus ante quem:* the preceding data was definitely written before that date.[134] Be that as it may, we can now establish that this section was written before 811.

All this implies that, at a very early date, al-Maqrīzī already had in hand a comprehensive version of his book. On this basis, my conviction is that he did not start working on the *Khiṭaṭ* before al-Awḥadī's death. In this case, he would have made a fair copy of his colleague's draft, surely improving and developing it[135] his whole life long;[136] but he largely based himself on what had already been

[134] Another case will strengthen this argument. Regarding the Madrasat Ibn al-Maghribī (fol. 89b), for which all the data is in al-Awḥadī's handwriting, al-Maqrīzī stated at the end that the madrasah was demolished and that its building material was sold in 814.

[135] The improvements are already visible in that section on the madrasahs.

[136] Though his efforts to expand his survey sensibly diminished roughly after 1420. See André

accomplished by another author, as was maintained by al-Sakhāwī.[137] There is insufficient evidence to prove this view, although the following striking features could help to bolster it.

One of the sources used by al-Awḥadī consisted of what he calls "the ancient books of estates" *(kutub al-amlāk al-qadīmah),* likely some archival material.[138] On at least one occasion, he refers to these to confirm the existence of a madrasah that must have been replaced by another building later on.[139] A striking feature regarding this archival material appears elsewhere in the same volume of the draft (this time in al-Maqrīzī's handwriting). On fol. 1a of the same volume, for the Darb al-Ṣufayrah, reference is made to this very source in the first person: "*wa-raʾaytu fī kutub al-amlāk al-qadīmah.*" In the final version of the *Khiṭaṭ,*[140] this became: "*hākadhā yūjad fī al-kutub al-qadīmah.*" The same applies to the other example, a little bit further down (fol. 8b): speaking about the Bāb al-Khūkhah, the author writes this time "*wajadtu fī kutub al-amlāk al-fāṭimīyah,*" which disappeared in the final version.[141] On fol. 39b, one reads: "*wa-raʾaytu fī kutub al-amlāk al-qadīmah allatī bi-ḥārat Barjawān mā yadullu ʿalá dhālika . . . wa-hādhā muwāfiq li-qawl Ibn ʿAbd al-Ẓāhir,*" a personal testimony that was completely omitted in the final version![142]

Raymond, "Al-Maqrīzī's *Khiṭaṭ* and the Urban Structure of Mamluk Cairo," *Mamlūk Studies Review* 7, no. 2 (2003): 148.

[137] It must be remembered here that al-Maqrīzī acknowledged (*Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:186) that he became the owner of several *musawwadāt* of al-Awḥadī's *Khiṭaṭ,* meaning by this several volumes.

[138] This source was also available to Ibn ʿAbd al-Ẓāhir. See al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār* (Būlāq ed.), 1:438, 445; 2:14. On one occasion, al-Maqrīzī referred to this source as *kutub ibtiyāʿāt al-amlāk al-qadīmah* (ibid., 1: 438) from which it may be concluded that these books recorded the sales of properties, probably dating back to the Fatimid period.

[139] Topkapı Sarayı Kütüphanesi (Istanbul), MS E. Hazinesi 1405, fol. 91b *(wajadtu dhikrahā fī kutub al-amlāk al-qadīmah).*

[140] Al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār* (Būlāq ed.), 2:41.

[141] Ibid., 2:45. This precious piece of information has been added by A. F. Sayyid to al-Maqrīzī's text in his recent edition, once again against al-Maqrīzī's intention! See al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* ed. Sayyid, 3:140.

[142] Al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār* (Būlāq ed.), 2:101. The whole passage was introduced by A. F. Sayyid into al-Maqrīzī's *Khiṭaṭ* though the author had decided not to insert it in his final version! See al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* ed. Sayyid, 3: 334.

Another passage may be added to this list. It appears on fol. 53a: "*qāla wa-raʾaytu fī baʿḍ kutub al-amlāk al-qadīmah.*" It is missing in the final version. See Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār* (Būlāq ed.), 2:115. Once again, it was included by A. F. Sayyid in the final version. See al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* ed. Sayyid, 3:381 (who erroneously attributed the passage to Ibn ʿAbd al-Ẓāhir).

Another striking feature lies in the fact that on fol. 111b, a section completely in al-Maqrīzī's handwriting, one reads: "*shaykhunā Fakhr al-Dīn al-Bilbaysī,*" though he was not al-Maqrīzī's

Now, the question is: why would al-Maqrīzī modify this information, written in the first person in the draft, into an impersonal one in the final version of his book? Apparently, al-Maqrīzī was not able to see these books, given that in such cases he always replaced the personal reference in the draft with an anonymous one in the final version, or he simply omitted it altogether. Undoubtedly, he did not feel at ease with a source to which he had no access. Still, in the sections of the draft in his own handwriting, he appropriated the fact that "he saw himself." What induced him to act this way? Personally, I think that these sentences come from al-Awḥadī's draft and that al-Maqrīzī felt uncomfortable, in the end, with these personal testimonies that belonged to someone else. He thus rendered them with more anonymous references in the final version of his *Khiṭaṭ*. Consequently, we may surmise that large parts of the data found in the two preserved volumes of the drafts are likely to be identified as al-Awḥadī's *Khiṭaṭ*.

In order to demonstrate that this view is credible, we need to provide further evidence, still on the basis of the second volume of the draft. We know that before his death in 811/1408, al-Awḥadī had already composed several parts of his book on the topography of Cairo, having already clean-copied part of it. It may thus be inferred that he started working on this topic at a much earlier date. This is confirmed by his reading notes, found on the title page of five manuscripts already mentioned that are dated from 801 to 805.[143] It is reasonable to think that he collected data even during the last decade of the eighth/fourteenth century and that he started to write his work several years before his untimely death.[144] On the other hand, al-Maqrīzī is generally believed to have started collecting data on that topic after the year 806. Turning back to the second volume of the draft, the following quotation in al-Maqrīzī's handwriting is quite disturbing (fol. 127a): "*wa-ammā al-ṭilasm alladhī bi-hi fa-innahu ṣaḥīḥ wa-huwa bāqin mustamirr al-ʿamal ilá waqtinā hādhā wa-huwa sanat thamānin wa-tisʿīn wa-sabʿimiʾah*"! It is found at the beginning of the section dealing with the mosques where the Friday

master. On the contrary, he was al-Awḥadī's master, as stated earlier. If this material was also written by al-Awḥadī, this means that al-Maqrīzī copied it blindly, without taking pains to modify this word relevant only to al-Awḥadī.

[143] See note 51.

[144] Ibn al-Furāt (d. 807/1404) quoted al-Awḥadī in his *Tārīkh al-Duwal wa-al-Mulūk,* where he asserted, on several occasions, that he read the information in his handwriting, meaning that he had access to his notes or books. Among these quotations, some may be identified as stemming from al-Awḥadī's work on the *Khiṭaṭ,* which confirms that al-Awḥadī's book was already in an advanced stage before 807, the year of Ibn al-Furāt's death. See the list provided by A. F. Sayyid, "Muqaddimat al-Muḥaqqiq," in al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* 1:64 (read 9/2: 425 instead of 9/2: 417 and 9/2: 450 instead of 451). The following quotations were overlooked by Sayyid: Ibn al-Furāt, *Tarīkh al-Duwal wa-al-Mulūk,* ed. Qusṭanṭīn Zurayq and N. ʿIzz al-Dīn (Beirut, 1936–42, vols. 7–9), 4/1: 11, 9/1: 132, 9/2: 341, 354.

prayer was performed, starting with the al-Azhar mosque. In it, the author of these lines wanted to specify that the talisman *(ṭilasm)* that was found in that mosque to prevent birds from settling and nesting in the building, thus some sort of scarecrow, was still playing its role at the time he was writing those lines, i.e., in 798. How could al-Maqrīzī have written this at that time, as it would mean that he had already been working on the topography of Cairo well before the date of 798, given that this was part of a section dealing with the great mosques *(jawāmiʿ)?* However, al-Awḥadī could be the author of these lines, given that in the section on the madrasahs, still in his own handwriting, he stated that he had already discussed the great mosques, as we have already seen. Though in his preliminary draft al-Maqrīzī faithfully copied what he was reading, even if they were not his words, he totally disregarded this in his final version.[145]

This demonstration can be reinforced by a similar quotation found in the section on the madrasahs in al-Awḥadī's handwriting, a further element that will prove that this is part of his original clean-copied work. Speaking of al-Madrasah al-Suyūfīyah (fol. 82b), al-Awḥadī specified that he had access to the *waqf* document of this institution, which was shown to him by the scholar who was teaching there *(mudarris),* Majd al-Dīn Ismāʿīl al-Ḥanafī. This scholar must be identified as Ismāʿīl ibn Ibrāhīm al-Bilbaysī, who died in 802/1399.[146] In other words, al-Awḥadī saw this document before that date, proving, if still necessary, that he had been working on this topic well before 802. In the final version of the *Khiṭaṭ,* these personal details were forgotten, but al-Maqrīzī replaced them with his own personal testimony, as he stated that he had seen the very document; this is true, as he quoted some parts of it, though al-Awḥadī did not in his text. This establishes that al-Maqrīzī went back to the source exploited by his colleague and replaced al-Awḥadī's personal testimony with his own, but also that al-Maqrīzī worked on the topic of the *khiṭaṭ* well after 802.

So far we have established that, besides the section on the madrasahs now identified as being al-Awḥadī's autograph fair copy, some parts of the second volume of the draft in al-Maqrīzī's handwriting might originate in al-Awḥadī's work too: in this case, al-Maqrīzī faithfully copied data and left al-Awḥadī's personal testimonies unchanged until he elaborated the final version and the fair copy of the *Khiṭaṭ*. However, this same volume also includes material that was obviously drafted by al-Maqrīzī. The emendations added in the margins and on slips of paper must undoubtedly be credited to him. When a date is mentioned in these additions, it provides us with a *terminus ante quem* for the main text to which it was added. Three cases may be put forward in this respect: two of them

---

[145] Al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār* (Būlāq ed.), 2:273.

[146] See al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:408–13.

are dated to the year 818 and one to the year 813.[147] If we consider now the dates provided by al-Maqrīzī in the body of the text, these never go further than 815 when they are explicitly given, or 815–18 when they must be surmised.[148] Thanks to these elements, we are in a good position to date the second volume of the draft as having been copied sometime between 815 and 818. As we saw, the first volume of the draft may be dated at the earliest to the year 816;[149] this means that al-Maqrīzī had already finished most of that first version by 815. In this context, it is better understood why his appropriation of al-Awḥadī's draft was pivotal: between 811 and 815–18, he expanded his colleague's draft, copying several parts of it into his own new work.[150]

In light of this, al-Sakhāwī's words ("[he] made a fair copy of it [completely] and attributed it to himself [after he had made] additions") are better understood. Of course, it does not mean that everything in the actual version of al-Maqrīzī's *Khiṭaṭ* comes from al-Awḥadī's draft, as we have seen. Obviously, he completed the book, expanded its plan, and added data regarding the period between al-Awḥadī's death in 811 and the date of his own death in 845. Nonetheless, this was not originally his work, and a great part had already been written by someone else.

To conclude this section, we should remember that in al-Sakhāwī's eyes no excuse of any kind could justify this reprehensible way of acting, though Ibn Ḥajar himself, the key witness in this case, did not seem to mind it. Ibn Ḥajar maintained a high opinion of his colleague, al-Maqrīzī, as confirmed by the

[147] Fol. 40a: "*wa-jaddada hādhihi al-suwayqah al-qāḍī Fatḥ al-Dīn ibn Muʿtaṣim kātib al-sirr fī sanat thalāth ʿasharah wa-thamānīmiʾah*"; fol. 26b: "*fī sanat thamān* [sic] *ʿasharah wa-thamānīmiʾah*"; fol. 174a: "*wa-lammā kathura māʾ al-Nīl fī sanat thamān* [sic] *ʿasharah.*"

[148] Fol. 40b: "*wa-mā zāla kharāb ilá sanat iḥdá ʿasharah wa-thamānīmiʿah*"; fol. 77a: "*khaṭībuhu fīhā min ṣafar sanat 814*"; fol. 107b: "*ilá an qutila al-Malik al-Nāṣir fī sanat khamsah ʿasharah wa-thamānīmiʾah*"; fol. 152a: "*wa-baqiya qāʾim ilá shaʿbān sanat khamsah ʿasharah wa-thamānīmiʾah*"; fol. 27b: "*fa-lammā qutila al-Nāṣir Faraj* [815]"; fol. 18b: *"wa-kāna qabla zamaninā hādhā bi-naḥw thalāthīn sanah fī ḥudūd al-thamānīn wa-sabʿimiʾah qablahā* [circa 30 years earlier, at the end of the eighties]."

[149] See p. 206.

[150] When Ibn Ḥajar completed his work entitled *Al-Majmaʿ al-Muʾassis* (his dictionary of authorities), he had already included a biography of al-Maqrīzī which the latter read and even corrected for some details (see above, n. 28). Though this dictionary was started in 803/1400, it was not finished before 829/1426. However, the only work Ibn Ḥajar deemed worthy of mention regarding al-Maqrīzī's production was *Al-Ightibāṭ*. Though we do not know when Ibn Ḥajar wrote al-Maqrīzī's biography (sometime between 803 and 829), this means that al-Maqrīzī's project for the *Khiṭaṭ* was already known to Ibn Ḥajar, as he confirmed that al-Maqrīzī benefitted from al-Awḥadī's draft, but that the book was not yet completed.

following words:[151]

Our master, the most erudite, the scholar of his time [Ibn Ḥajar], revered him and showed him respect and awe. He used to go to his house and to spend time there with him.

كان شيخنا العلامة حافظ العصر [ابن حجر] يكرمه ويبجله ويعظمه ويتوجه إلى داره ويقيم عنده.

And indeed, in 829/1426, Ibn Ḥajar expressed his feelings towards al-Maqrīzī with warm words:[152]

[151] ʿAlī ibn Dāwūd al-Ṣayrafī, *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān,* ed. Ḥasan Ḥabashī (Cairo, 1970–94), 4:243.

[152] Ibn Ḥajar, *Al-Majmaʿ al-Muʾassis,* 3:60.

The friendship that exists between us is beyond words. May God—he is exalted—prolong his benefits.	وبيننا من المودة ما لا يسعه الورق فالله تعالى يديم النفع به.

Yet, Ibn Ḥajar was also acquainted with al-Awḥadī, as they met together during lessons with common masters:[153]

I met him on several occasions and he accompanied me to attend the lessons of some of my masters.	اجتمعت به مرارا ورافقنا في السماع على بعض شيوخنا.

Truly, he must have known him quite well. In the end, is it not he who informs us that al-Awḥadī had nice handwriting *(kāna ḥasan al-khaṭṭ)?*

The question remains: how did Ibn Ḥajar know about the misdemeanor? Once again, sources and manuscripts come to our rescue. Scholars could lend their works, finished or not, to colleagues, if they trusted them. We have a fairly good example concerning al-Maqrīzī and Ibn Duqmāq (d. 809/1407). Al-Maqrīzī declared in his biography, in the dictionary of his contemporaries, *Durar al-ʿUqūd al-Farīdah:*[154]

He borrowed my holograph notebooks. . . . I was closely associated with him for a while and he was my neighbor for many years. He frequently visited me at home.	كان يستعير مجاميعي التي بخطي . . . صحبته مدة وجاورني عدة سنين وتردد إلي كثيرا.

In the case of Ibn Ḥajar, it has already been established that he lent the dictionary of his authorities, *Al-Majmaʿ al-Muʾassis,* to al-Maqrīzī, who did not hesitate to correct therein the data regarding his own biography or to make some marginal additions, which means that he had time to read it through at home. Al-Maqrīzī might have lent Ibn Ḥajar his own works too, but probably not his draft of the first version of the *Khiṭaṭ;*[155] it is unlikely that this is how Ibn Ḥajar discovered

[153] Ibn Ḥajar, *Dhayl al-Durar al-Kāminah,* 195.

[154] Al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:102–3. We have already seen that he was not at all pleased with the use Ibn Duqmāq made of his personal notes.

[155] In 829, he confessed that among al-Maqrīzī's writings he had consulted was *Al-Ightibāṭ bi-Aḥwāl al-Fusṭāṭ,* confirming that that book was already completed by that time, but did not say a word about *Al-Mawāʿiẓ wa-al-Iʿtibār*. See Ibn Ḥajar, *Al-Majmaʿ al-Muʾassis,* 3:60 ("*wa-mimmā waqaftu*

al-Maqrīzī's plagiarism.[156] On a scholar's death, his intellectual legacy could be coveted by his colleagues, particularly if he was a prolific author (the same thing can be said of his library). This is what happened, for instance, to the *Tārīkh al-Duwal wa-al-Mulūk* of Ibn al-Furāt (d. 807/1404), who had not had enough time to make a fair copy of the draft, except for the volumes covering the last three centuries. The draft was sold because his son had no interest in this matter.[157] Al-Maqrīzī made use of it, he said, by which he meant that he summarized it, when he managed to lay hands on it.[158]

As for al-Maqrīzī's legacy, there is an indirect reference to it in al-Sakhāwī's *Ḍawʾ:*[159]

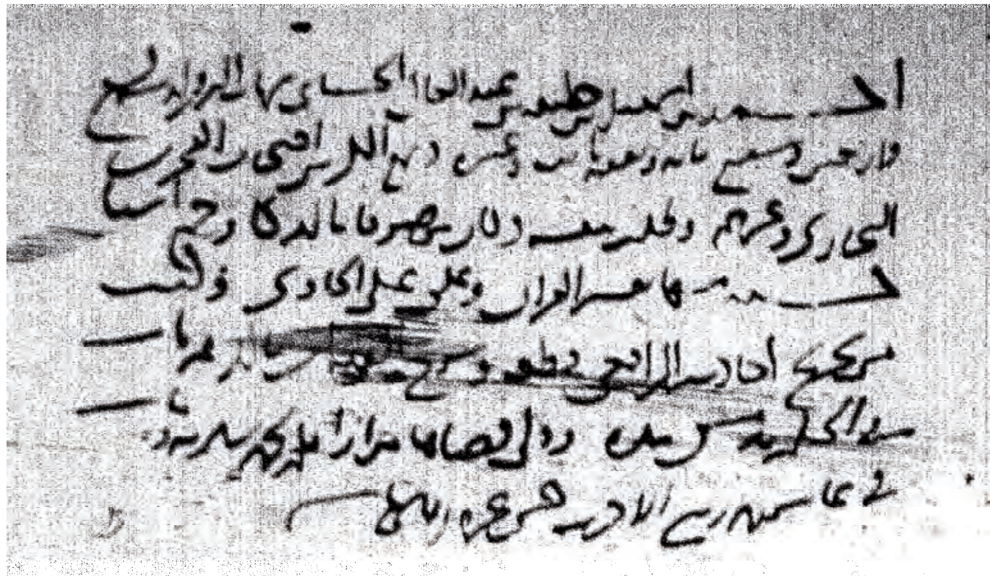
> He [al-ʿUryānī] compiled a commentary on the *shawāhid* of *Al-Kāfiyah al-Shāfiyah* by Ibn Mālik, as I saw in our master [Ibn Ḥajar]'s handwriting. It is a nice commentary that demonstrates a thorough study in grammar . . ., even though some pretend that a commentary on the same book by al-Ghammārī was found in al-Maqrīzī's bequest. If he [al-ʿUryānī] laid hands on it, he might have appropriated it and expanded it.

> وجمع شرح شواهد الكافية الشافية لابن مالك كما رأيته بخط شيخنا وهو شرح حسن يدل على اطلاع زائد في النحو . . . وإن زعم بعضهم أنه وجد بتركة المقريزي شرحها للغماري. فإن كان وقف عليه فيمكن أن يكون أخذه وزاد عليه.

ʿ*alayhi kitābuhu al-Ightibāṭ bi-Aḥwāl al-Fusṭāṭ*").

[156] In *Al-Majmaʿ al-Muʾassis,* 3:39 (al-Awḥadī's entry), he revealed that al-Maqrīzī took advantage of al-Awḥadī's drafts, which means that he already knew what happened, but he refrained from saying more about this. As already stated, al-Maqrīzī read the manuscript of *Al-Majmaʿ al-Muʾassis* but he did not correct Ibn Ḥajar's divulgation. He thus agreed with this view.

[157] About 20 volumes, out of 60 according to al-Sakhāwī, or 100 according to al-Maqrīzī. See al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 3:227; al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 8:51.



[158] Al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 3:227 ("*waqaftu ʿalayhā wa-istafadtu minhā*"). Hence his notes of consultation (dated 818 to 819) found in three volumes of Ibn al-Furāt's holograph copy. See F. Bauden, "Maqriziana II," 117–18.

[159] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 1:70–71. Al-Maqrīzī's library, at least some of his holograph volumes, were inherited by his nephew, Nāṣir al-Dīn Muḥammad ibn Muḥammad al-Maqrīzī (801–67/1399–1462). (On him see al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 9:150). His mark of ownership *(malakahu Muḥammad al-Maqrīzī)* is found in the following holograph manuscripts of his uncle: "Al-Khabar ʿan al-Bashar," vol. 1, Süleymaniye Kütüphanesi (Istanbul), MS Ayasofya 3362, fol. 4a; ibid., vol. 3, MS Fatih 4338, fol. 1a; ibid., vol. 4, MS Fatih 4339, fol. 1a; ibid., vol. 5, MS Fatih 4340, fol. 1a; ibid., vol. 6, MS Fatih 4341, fol. 1a; "Al-Sulūk li-Maʿrifat Duwal al-Mulūk," vol. 1, Süleymaniye Kütüphanesi (Istanbul), MS Yeni Cami 887, fol. 3a.

In 845/1442, Ibn Ḥajar, who was to die seven years later, was probably the first to get access to al-Maqrīzī's private library (the drafts and the fair copies). The fact that he had access to the autograph manuscripts of his colleague is established by two elements: a report and material evidence. As for the report, it is provided by al-Sakhāwī:[160]

وترجمه شيخنا أيضا فيما استدركه على تاريخ مصر للمقريزي ولكنه عنده في عقوده.

Our master [Ibn Ḥajar] also wrote [al-Ḥusbānī's] biography in his additions to al-Maqrīzī's *History of Egypt [al-Muqaffá],* though [al-Ḥusbānī] is found in his *ʿUqūd.*[161]

Courtesy Universiteit Leiden (Leiden), Universiteitsbibliotheek, MS or. 14533, fol. 120b showing al-Ḥusbānī's biography in Ibn Ḥajar's handwriting, confirming al-Sakhāwī's statement.

This information would seem ambiguous if Ibn Ḥajar's handwriting were not found in several of al-Maqrīzī's autograph manuscripts, which definitely proves that he had access to them, most probably after the latter's death, as we are told that he supplemented *(istadraka)* his data. In at least three instances, Ibn

[160] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 1:239.

[161] One must understand that Ibn Ḥajar's addition to *Al-Muqaffá* was not pertinent given that al-Maqrīzī devoted some space to the biographee in his dictionary of his contemporaries. See al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. al-Jalīlī, 1:366 (no. 286).

Ḥajar indeed added notes and data, consisting of additions and corrections, in the margins or in the body of the text: these are several volumes of *Al-Muqaffá,*[162] *Durar al-ʿUqūd al-Farīdah,*[163] and the final version of the *Khiṭaṭ.*[164] To his great surprise, he found (as did I) in a volume of the draft of the first version, nineteen folios in al-Awḥadī's handwriting where al-Maqrīzī had lined through, erased, and modified some words or sentences, adding some details in the margins or on slips of paper. Nevertheless, he hesitated to indicate his discovery in his writings, maybe because of his esteem for al-Maqrīzī. One must remark that Ibn Ḥajar revised his historical works almost until he passed away: al-Maqrīzī's death is recorded in his *Inbāʾ al-Ghumr,* and in this sense he could have added something about his discovery at that time.[165] Anyway, if he did not modify his appreciation of al-Maqrīzī in his books, he might have dropped a word into the ear of his pupil al-Sakhāwī, who had fewer scruples about writing the news down. Alternatively, al-Sakhāwī might have been content with Ibn Ḥajar's words found in his *Al-Majmaʿ al-Muʾassis,* which he interpreted as meaning, in his master's choice of words, that this was a case of plagiarism.[166] Whatever the case, al-Sakhāwī had

[162] His handwriting is found in almost every volume preserved, hence al-Sakhāwī's comment quoted above, which also confirms that al-Sakhāwī managed to consult the autograph volumes of *al-Muqaffá*. For the list of these volumes, see F. Bauden, "Maqriziana II," 115–16.

[163] His handwriting is found on fol. 152 (a biography added) of al-Maqrīzī's partially preserved autograph (Forschungsbibliothek [Gotha], or. 1771).

[164] The autograph of the final version is considered lost, but the copyist of one of the manuscripts used by A. F. Sayyid identified Ibn Ḥajar's handwriting in these notes and indicated it. See al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār,* ed. Sayyid, 4:490 ("*wujida bi-khaṭṭ mawlānā qāḍī al-quḍāh Ibn Ḥajar ʿalá hāmish nuskhat al-muṣannif al-manqūl minhā mā naṣṣuhu*"). A. F. Sayyid did not indicate in which of the manuscripts he used he found this note.

[165] It is interesting to note that some words have been added to the right of the passage where he divulged that al-Maqrīzī benefitted from al-Awḥadī's drafts on the *khiṭaṭ* (Ibn Ḥajar, "Al-Majmaʿ al-Muʾassis," al-Maktabah al-Azharīyah [Cairo], MS muṣṭalaḥ 1360, fol. 129b. See Appendix 1, al-Awḥadī's entry). These words were cancelled later on and are now illegible, and, as such, could have been related to this affair.

[166] That Ibn Ḥajar's words were understood in this sense is confirmed by two details. First, there is the fact that al-Sakhāwī included this case of plagiarism in the list of the other cases identified by Ibn Ḥajar himself. See al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 1:390–94 (*"faṣl fīman akhadha taṣnīf ghayrihi fa-iddaʿāhu li-nafsihi wa-zāda fīhi qalīlan wa-naqaṣa minhu wa-lākinna aktharahu madhkūr bi-lafẓ al-aṣl*"). Secondly, an anonymous reader of *Al-Muqaffá,* who had previously read al-Sakhāwī's words in his *Al-Iʿlān bi-al-Tawbīkh,* added to *Al-Muqaffá* a short biography of al-Awḥadī, in which he mentioned al-Sakhāwī's accusation (attributed to Ibn Ḥajar), and he concluded: "*hākadhā wajadtuhu maktūban bi-khaṭṭ al-ḥāfiẓ Shihāb al-Dīn Ibn Ḥajar al-ʿAsqalānī raḥimahu Allāh wa-huwa thiqah fī dhālika li-annahu amīr al-muʾminīn fī ʿilm al-ḥadīth*"! See al-Maqrīzī, "Al-Muqaffá," Universiteitsbibliotheek (Leiden), MS 14533, fol. 225b. This proves that al-Jalīlī's opinion that *"law kāna hunāka adná shayʾ min al-ṣiḥḥah fī ittihām al-Sakhāwī lil-Maqrīzī fīmā yakhtaṣṣu bi-kitāb al-Khiṭaṭ, la kāna ashāra Ibn Ḥajar ilá dhālika"* is mistaken. See al-Jalīlī, "Al-Muʾarrikhūn al-Muʿāṣirūn

the merit to tell the truth, although Ibn Ḥajar probably never revealed to him all the details, which is why al-Sakhāwī could not give evidence to sustain his accusation. Whether jealousy *(ghayrah)* pushed him to reveal this *qīl wa-qāl* is not important: he did his job as a historian with professional integrity.

There remains one more worrying question: why did al-Maqrīzī not erase every bit of al-Awḥadī's handwriting in his draft by copying the only remaining section of al-Awḥadī's fair copy? And of course, we lay aside the possibility that this also occurs in the lost volumes of al-Maqrīzī's draft. The two-part answer, although completely conjectural, is quite simple. First of all, as already established, the draft was not meant to survive after al-Maqrīzī's death, as a fair copy of his work was already circulating in his lifetime. Secondly, al-Awḥadī died in 811, a long time before al-Maqrīzī's own death. With the passing of time, persons who were closely enough acquainted with al-Awḥadī to be able to identify his handwriting became rare. Even if the draft might have been seen by others, the probability of discovering the secret was almost nil.

Conclusions

The title of this article issues a challenge: should al-Maqrīzī be thrown out with the bath water? Obviously, the answer cannot but be negative. However he behaved, his work on the *khiṭaṭ* still remains the best source for the study of the history of the Egyptian capital from the very beginning down to his own period. This is partly because he used several sources that are now considered lost, but also because he benefitted from al-Awḥadī's work on which he built his own magnum opus. However, the modern historian must be conscious that his tremendous activity as a historian is partly explained by his having recourse to some dubious practices. Plagiarism was definitely one of them, and it is particularly noticeable in the *Khiṭaṭ*.

To conclude, I think that I have been able to establish that:

- the nineteen folios carrying a different handwriting in al-Maqrīzī's draft of the first version of his *Khiṭaṭ* represent one part of al-Awḥadī's fair copy on the *khiṭaṭ;*
- al-Maqrīzī utilized this part for his own book, sometimes modifying slightly al-Awḥadī's text;
- other parts of the *Khiṭaṭ* might have been based on other parts of al-Awḥadī's drafts;
- al-Maqrīzī did not begin working on the *Khiṭaṭ* prior to al-Awḥadī's death, and consequently he completed the work initiated by his colleague, without

lil-Maqrīzī," in al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* 4:40.

crediting him;

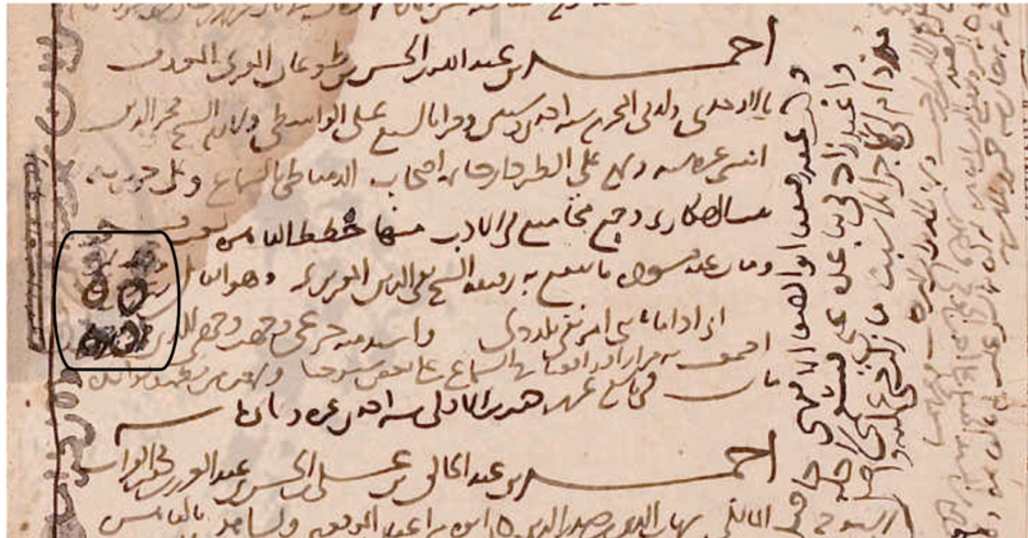
- the charge of "plagiarism"—as perceived in those times—brought against him by al-Sakhāwī, who relied on his master Ibn Ḥajar, was justified because he made a fair copy of al-Awḥadī's drafts, later expanding them and deleting some parts, but the result owed a great deal to al-Awḥadī's work.[167]

Thus, five centuries later, this case can finally be closed. But I would like to conclude with an ironic twist. In his *Laṭāʾif al-Minan,* al-Shaʿrānī recorded the following information:[168]

I also read aloud to him the commentary to the *Alfiyah* of al-ʿIrāqī by Jalāl al-Dīn al-Sakhāwī, the great scholar. It is said that, in fact, it was [written] by Ibn Ḥajar, the great scholar. Al-Sakhāwī discovered the draft in the legacy of Ibn Ḥajar or of someone else, corrected it, made a fair copy of it, and published it.

وقرأت عليه أيضا شرح ألفية العراقي للجلال الحافظ السخاوي ويقال إنه للحافظ ابن حجر ظفر به السخاوي مسودة في تركة الحافظ ابن حجر أو غيره فضبطه وبيضه وأبرزه للناس.

The general moral of this story could be: people who live in glass houses shouldn't throw stones. But one may also conclude that even the harshest critics of plagiarism were not always above the practice themselves.[169]



[167] It is noteworthy to mention that al-Sakhāwī opened another case against al-Maqrīzī regarding his *Tārīkh Miṣr* (i.e., *Al-Tārīkh al-Muqaffá al-Kabīr*). See al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 1: 394 ("*qultu: wa-kadhā ʿamila fī Tārīkh Miṣr lil-Quṭb al-Ḥalabī. Fa-innahu lam yubayyiḍ minhu ghayr al-Muḥammadīn wa-baʿḍ al-hamzah. Fa-akhadha al-musawwadah bi-tamāmihā wa-lakhkhaṣa tarājimahā wa-lam yansub lahu fīmā raʾaytu wa-lā al-tarjamah al-wāḥidah*"). He is referring there to ʿAbd al-Karīm ibn ʿAbd al-Nūr al-Ḥalabī (d. 735/1334), who wrote a *History of the Egyptians* alphabetically organized. In his *Al-Iʿlān bi-al-Tawbīkh*, he did not say a word about this plagiarism, but he advanced that he owned ten volumes of the draft and a fair copy of the Muḥammads in four volumes, which confirms that he could compare this work with al-Maqrīzī's *Al-Tārīkh al-Muqaffá al-Kabīr*. See al-Sakhāwī, *Al-Iʿlān,* in Franz Rosenthal, *A History of Muslim Historiography,* 401.

[168] ʿAbd al-Wahhāb al-Shaʿrānī, *Laṭāʾif al-Minan wa-al-Akhlāq fī Bayān Wujūb al-Taḥadduth bi-Niʿmat Allāh ʿalá al-Iṭlāq al-Maʿrūf bi-al-Minan al-Kubrá* (Cairo, 1976), 64.

[169] Cf. Ch. Vandendorpe, "Introduction," in *Le Plagiat,* 10: "Mais, si traquer le plagiat est une façon pour le critique d'affirmer une culture infiniment supérieure à celle du lecteur naïf, cette activité ne laisse pas d'apparaître dérisoire et virtuellement sans fin, car, pour parodier une formule célèbre, un plagiat peut en cacher un autre et l'on risque toujours de découvrir, avec Anatole France, que 'le volé était lui-même voleur.'"

Appendix 1: A Critical Edition of al-Awḥadī's and al-Maqrīzī's Entries in Ibn Ḥajar's "Al-Majmaʿ al-Muʾassis lil-Muʿjam al-Mufahris" (Cairo, al-Maktabah al-Azharīyah, MS Muṣṭalaḥ 1360, fols. 129b, 131a).

180 This data up to [بالقا[هرة؟, added at a later date, is found in the top margin, in Ibn Ḥajar's handwriting. It is missing in Marʿashlī's edition.

181 Two words illegible now due to water stain.

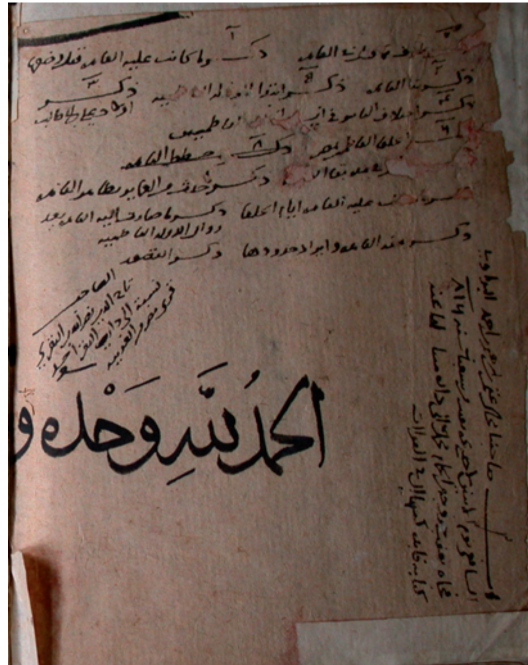
182 One or two words illegible now, as the ink has faded.

183 بضع و: added at a later date by Ibn Ḥajar.

184 This word cancelled by al-Maqrīzī.

185 These words, from جده up to محمد, added by al-Maqrīzī in the right margin.

186 وتبعه أبوه: added by Ibn Ḥajar, above the line.



187 These words cancelled by Ibn Ḥajar during the writing process.

188 The following words were added by Ibn Ḥajar at a later date.

189 The last three words are missing in al-Marʿashlī's edition. The last word seems to be cancelled but this is due to the fact that the ink was not dry and it resulted in a blot as shown by the word that just precedes it.

Appendix 2: A Critical Edition of the List of Contents Found in the First Volume of the Draft of *Al-Mawāʿiẓ wa-al-Iʿtibār* (Istanbul, Topkapi Sarayi Kütüphanesi, MS Hazinesi 1472).[190]

Book Reviews

ṢALĀḤ AL-DĪN KHALĪL IBN AYBAK AL-ṢAFADĪ, *Al-Faḍl al-Munīf fī al-Mawlid al-Sharīf wa-Yalīhi ʿIbrat al-Labīb bi-ʿAthrat al-Kaʾīb,* edited by Muḥammad ʿĀyish (Beirut: Dār al-Kutub al-ʿIlmīyah, 2007). Pp. 136.

ZAYN AL-DĪN MANṢŪR IBN ʿABD AL-RAḤMĀN AL-ḤARĪRĪ AL-DIMASHQĪ, *Lawʿat al-Shākī wa-Damʿat al-Bākī,* edited by Samīḥ Ibrāhīm Ṣāliḥ (Damascus: Dār al-Bashāʾir, 2005). Pp. 134.

REVIEWED BY EVERETT K. ROWSON, New York University

The boom in publication of works by the prolific littérateur al-Ṣafadī (d. 764/1363), which I remarked upon in two previous reviews for this journal,[1] continues unabated, not least because of the ongoing productivity of Muḥammad ʿĀyish. The first of the two volumes under consideration here is particularly welcome, as in it ʿĀyish presents two texts by al-Ṣafadī that have never appeared before in print in any form; but he has been busy with others as well. According to his own count, these are in fact the ninth and tenth of al-Ṣafadī's works that he has edited, and in his introduction to this volume he duly includes the other eight in a full list of all of al-Ṣafadī's oeuvre that has been published to date.

While this list is of some help in keeping up with the flood of recent Ṣafadiana, however, it is not as useful as it might be, since ʿĀyish informs us of only *one* edition for each work, and in particular avoids any mention of alternative editions of the works he has edited himself. Thus, while al-Ṣafadī's critique of the celebrated lexicon *Al-Ṣiḥāḥ* by al-Jawharī (d. ca. 396/1006), the *Nufūdh al-Sahm fīmā Waqaʿa lil-Jawharī min al-Wahm* (ed. Muḥammad ʿĀyish, Beirut: Dār al-Bashāʾir, 2006) is an *editio princeps,* as is the thematic anthology *Rashf al-Zulāl fī Waṣf al-Hilāl* (ed. Muḥammad ʿĀyish, Dār al-Awāʾil, in press), the other six are all works that had in fact already appeared under other editorial hands. The parodic *Ikhtirāʿ al-Khurāʿ* (ed. Muḥammad ʿĀyish, Amman: Dār ʿAmmār, 2004) was edited by Fārūq Asalīm (Damascus: Ittiḥād al-Kuttāb al-ʿArab, 2000);[2] the rhetorical study *Faḍḍ al-Khitām ʿan al-Tawriyah wa-al-Istikhdām* (ed. Muḥammad ʿĀyish, Amman:

---

[1] Review of al-Ṣafadī, *Al-Kashf wa-al-Tanbīh ʿalá al-Waṣf wa-al-Tashbīh,* edited by Hilāl Nājī and Walīd ibn Aḥmad al-Ḥusayn ibn ʿAbd Allāh al-Zubayrī (Leeds: Majallat al-Ḥikmah, 1420/1999), and of Nabīl Muḥammad Rashād, *Al-Ṣafadī wa-Sharḥuhu ʿalá Lāmīyat al-ʿAjam: Dirāsah Taḥlīlīyah* (Cairo: Maktabat al-Ādāb, 1421/2001), in *Mamlūk Studies Review* 8, no. 1 (2004): 315–23; and review of al-Ṣafadī (attributed), *Lawʿat al-Shākī wa-Damʿat al-Bākī,* edited by Muḥammad ʿĀyish (Damascus: Dār al-Awāʾil, 2003), in *Mamlūk Studies Review* 10, no. 1 (2006): 222–26.

[2] See the review by Vanessa De Gifis in *Mamlūk Studies Review* 10, no. 2 (2006): 204–8.

al-Dār al-ʿUthmānīyah, in press) was published (in very defective form, to be sure) by al-Muḥammadī ʿAbd al-ʿAzīz al-Ḥinnāwī (Cairo, 1979); the thematic anthology *Tashnīf al-Samʿ bi-Insikāb al-Damʿ* (ed. Muḥammad ʿĀyish, Damascus: Dār al-Awāʾil, 2004) was edited by Muḥammad ʿAlī Dāwūd (Alexandria: Dār al-Wafāʾ li-Dunyā al-Ṭibāʿah wa-al-Nashr, 2000);[3] the *maqāmah Lawʿat al-Shākī wa-Damʿat al-Bākī* (of questionable authorship, as discussed below) has been repeatedly published in uncritical editions since the late nineteenth century; yet another thematic anthology, *Kashf al-Ḥāl fī Waṣf al-Khāl* (ed. Muḥammad ʿĀyish, Damascus: Dār al-Awāʾil, 2006), has been previously edited twice, once by Sihām Ṣallān (Damascus: Dār Saʿd al-Dīn, 1999) and again by ʿAbd al-Raḥmān ibn Muḥammad ibn ʿUmar al-ʿAqīl (Beirut: al-Dār al-ʿArabīyah lil-Mawsūʿāt, 2005); and al-Ṣafadī's extraordinary collection of his lifetime correspondence, *Alḥān al-Sawājiʿ bayna al-Bādiʾ wa-al-Murājiʿ* (ed. Muḥammad ʿĀyish, Dār al-Kutub al-ʿIlmīyah, 2007), has also appeared in two previous editions, one by Ibrāhīm Ṣāliḥ (Beirut: Dār al-Bashāʾir, 2004) and the other by Muḥammad ʿAbd al-Ḥamīd Sālim (Cairo: al-Hayʾah al-ʿĀmmah al-Miṣrīyah lil-Kitāb, 2006). One detects more than a hint of competitiveness here.[4]

Be that as it may, ʿĀyish's lists—he also surveys unpublished works by al-Ṣafadī surviving in manuscript, lost works, and works falsely attributed to him—provide us with some new and useful details, particularly about the false attributions. His treatment of al-Ṣafadī's biography is, on the other hand, perfunctory, although one would hardly expect him to include a detailed account of it in every single one of this galaxy of publications. The important thing is, of course, the two texts offered here themselves—which seem to be combined in a single volume purely as a matter of convenience, since al-Ṣafadī's monograph composed on the occasion of the Prophet's birthday really has nothing, except authorship, in common with the *maqāmah* he composed in his youth on a homoerotic theme.

That al-Ṣafadī did compose a work for *mawlid al-nabī* with the title *Al-Faḍl al-Munīf fī al-Mawlid al-Sharīf* has been known from bibliographical notices in later authors, but that the work survives in a Princeton manuscript (Garrett Yahuda 3570) has not. To my knowledge, only Marion Holmes Katz, in her recent monograph on the *mawlid,* has shown any awareness of it,[5] and it is certainly good to have the

---

[3] It was first published in Cairo in 1321/1903. Muḥammad ʿAbd al-Majīd Lāshīn announced in his major study *Al-Ṣafadī wa-Āthāruhu fī al-Adab wa-al-Naqd* (Cairo: Dār al-Āfāq al-ʿArabīyah, 2005), 154, that he has prepared his own edition, which is "in the course of publication," but to my knowledge has not yet appeared.

[4] ʿĀyish makes no mention of Lāshīn's major study of al-Ṣafadī (see note 3 above), which offers (pp. 93–161) the most detailed survey of al-Ṣafadī's works that has appeared to date.

[5] Marion Holmes Katz, *The Birth of the Prophet Muḥammad: Devotional Piety in Sunni Islam* (London and New York: Routledge, 2007). Katz has little to say about the work, but her fine study offers

text in print. ʿĀyish gives the essential information about the manuscript—which is an autograph, with a description of the occasion when it was read out publicly in the Umayyad Mosque in Damascus (Ṣafar 759/January–February 1358) and an *ijāzah* at the end—except for, frustratingly, any indication of what other works al-Ṣafadī included in this manuscript in his own hand. (The Princeton catalogues are not helpful in this respect, either; I did determine that the other works in the manuscript are not the author's own, but was unable to compile a full list.) The manuscript has suffered from some water damage, rendering some passages illegible—which, however, ʿĀyish has been able to restore (how accurately is debatable) from parallel passages in al-Nuwayrī's (d. 732/1332) *Nihāyat al-Arab*. In accordance with current scholarly norms, ʿĀyish provides facsimiles of the first and last pages, as well as one other random page, from the manuscript.

The content of the *Faḍl* is on the whole what one would expect, as is clear from Katz's investigation of the genre. The concentration is on the Prophet's birth and early life, with only cursory attention to later events. ʿĀyish has provided (in square brackets) headings that helpfully articulate the text. Primary topics are the Prophet's genealogy, predictions of his advent in the Old and New Testaments, miraculous events at the time of his birth, miracles associated with his mother's pregnancy and labor, his wet nurses, and his youthful journeys to Syria (and encounter with the monk Baḥīrā there, who recognized his prophetic status). Some attention is given to his marriage to Khadījah, the first revelation he received, his first public proclamation of the revelation, the first converts, his heavenly ascent *(isrāʾ* and *miʿrāj),* his letter to the Byzantine emperor Heraclius inviting him to convert to Islam, and the last verse of the Quran revealed to him. All of this is presented in fairly predictable style for al-Ṣafadī, heavily laden with *sajʿ* and interspersed with verses by both the author and others; the work ends with a 70-line poem by the author in praise of the Prophet, which is surprisingly jejune in style but also a bit startling in its explicit attacks on Shiʿis and Muʿtazilis, as well as its liberal use of wine imagery.

ʿĀyish can be presumed to have reproduced faithfully the text in the *unicum* on which he relies. The annotations he has supplied are, however, fairly minimal and occasionally embarrassing. When al-Ṣafadī quotes al-Kharāʾiṭī (d. 327/938) on the "trembling" of the Īwān Kisrā on the night of the Prophet's birth, ʿĀyish follows up appropriately with references to al-Kharāʾiṭī's *Hawātif al-Jinān* (albeit mispointing *al-jinān* as *al-jannān*). But he is completely at sea with the biblical prophecies, perhaps most distressingly when he misreads the place where Jesus grew up, al-Jalīl (Galilee), as al-Khalīl (Hebron), despite the fact that the text specifies the town there as Nazareth (al-Nāṣirah) and adds, in a touch of local

valuable contextualization for it.

color, that it is less than a day's journey distant from Ṣafad (al-Ṣafadī's birthplace). For "Kedar" (*Qāydhār,* Isaiah 42:11–13) ʿĀyish refers only to entries in the *Lisān al-ʿArab* and the *Tāj al-ʿArūs;* and for the Paraclete he footnotes a passage, again, in al-Nuwayrī.[6] While readers are thus left to do their own interpretive work, we can only be grateful that the text itself is now indeed available.

The *ʿIbrat al-Labīb* is quite a different kettle of fish. It is a scandal that this text, also known as *Al-Maqāmah al-Aybakīyah,* has not until now been made available to scholars, despite the fact that it seems to have put the young al-Ṣafadī on the literary map and is available in some half dozen manuscripts. ʿĀyish has no problems acknowledging the work's homoerotic theme ("*adab al-ghilmānīyāt*"), whose popularity in the Mamluk period he grants while pointing out that this *maqāmah* differs from most treatments of the subject by avoiding an explicitly libertine tone *(mujūn),* and stressing that the *ʿibrah* ("lesson") of the title is meant to warn men off from falling into this fatal trap (which by implication is homosexuality, although in fact al-Ṣafadī was probably thinking only of love passion *[ʿishq]* in general, regardless of the sex of the beloved).

In his introduction to the text, ʿĀyish reproduces al-Ṣafadī's own account of its genesis, according to which upon his arrival in Egypt in 727/1327 (at the age of thirty) he discovered that the literati there were enthralled by a *maqāmah* (or *risālah*—the two words are used interchangeably in our sources from this period) by the late ʿAlāʾ al-Dīn Ibn ʿAbd al-Ẓāhir (d. 717/1317) entitled *Marātiʿ al-Ghizlān fī Waṣf al-Ḥisān min al-Ghilmān* ("Pastures for gazelles describing beautiful boys") and acceded to a request by a friend, or friends, to produce an emulative work on the same theme.[7] ʿĀyish adds some brief comments on ʿAlāʾ al-Dīn (who was the grandson of the famous chancery official, littérateur, and historian Muḥyī al-Dīn Ibn ʿAbd al-Ẓāhir (d. 692/1292)), noting that he was the author of *Al-Mufākharah bayna al-Sayf wa-al-Rumḥ*[8] and *Tashrīf al-Ayyām wa-al-ʿUṣūr fī Sīrat al-Malik al-*

[6]Al-Ṣafadī's treatment of both Old and New Testament passages in this context is absolutely standard, as can easily be established by consulting the indices in Hava Lazarus-Yafeh, *Intertwined Worlds: Medieval Islam and Bible Criticism* (Princeton: Princeton University Press, 1992), and Camilla Adang, *Muslim Writers on Judaism and the Hebrew Bible from Ibn Rabban to Ibn Ḥazm* (Leiden: Brill, 1996).

[7]Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* vol. 22, edited by Ramzī Baʿlabakkī (Wiesbaden: Franz Steiner, 1983), 54, and idem, *Aʿyān al-ʿAṣr,* edited by ʿAlī Abū Zayd et al. (Beirut: Dār al-Fikr al-Muʿāṣir and Damascus: Dār al-Fikr, 1998), 3:496.

[8]On this text see Adrian Gully, "The Sword and the Pen in the Pre-Modern Arabic Heritage: A Literary Representation of an Important Historical Relationship," in *Ideas, Images, and Methods of Portrayal: Insights into Classical Arabic Literature and Islam,* edited by Sebastian Günther (Leiden: Brill, 2005), 403–30. *Pace* Gully, I am not convinced that the attribution of a version of the text to al-Ṣafadī in al-Madanī's (d. 1066/1655) *Manhaj al-Tarjīḥ wa-al-Tajrīḥ* represents a *muʿāraḍah* rather than a simple misattribution (with a panoply of minor variants).

Manṣūr.[9] ʿĀyish points out that ʿAlāʾ al-Din's *Marātiʿ al-Ghizlān* is extant in a Cambridge manuscript, but it is not clear whether he (or anyone else) has actually looked at it; he in fact falls back on what he claims is an extract *(qiṭʿah)* from it in al-Nuwayrī's *Nihāyat al-Arab,* which he reproduces in full. This is an inference on ʿĀyish's part, and not necessarily a justified one.[10] Al-Nuwayrī presents, without title, what he simply calls a "*maqāmah ʿamilahā fī sanat 702,*" and the text (which runs to ten pages in the published *Nihāyah*) appears to be complete. Composed in a conventional mix of rhymed prose and poetry, it is put in the mouth of a "lover" who describes his quest for, and success at, finding a (male) beloved, identified (predictably) as a Turk, whose physical beauty is described at some length. The lover reveals his passion, which is initially welcomed by the beloved, until the "chaperone" *(raqīb)* discovers the affair and poisons the beloved's mind against his suitor, leading to separation. The disconsolate lover temporarily revives his hopes with the thought that the beloved's departure may have been coerced, but when his hopeful verses of "complaint" *(shakwá)* reach the latter they are rejected. Whether this is indeed the same *maqāmah* as the *Marātiʿ al-Ghizlān* can only be confirmed by examination of the Cambridge manuscript.[11]

Nor is it entirely clear whether the text in the *Nihāyah* can be considered an appropriate model for al-Ṣafadī's *ʿIbrah.* (ʿĀyish does not comment on this question, and in fact offers no discussion at all after reproducing the former.) Both texts are first-person narratives, in alternating rhymed prose and verse, by someone who has fallen in love with a beautiful Turk and been rejected, but beyond that they have relatively little in common. The *ʿIbrah,* which is much longer, is prefaced by an account of how it was inspired by the *Marātiʿ al-Ghizlān,*[12] followed—in only one of the two manuscripts utilized by ʿĀyish for his edition—by a dedication (and accompanying thirteen-line panegyric) to an obliquely-named patron.[13] The

[9]There has been some scholarly controversy about the authorship of this biography of the Mamluk sultan Qalāwūn, but the predominant opinion seems to be that it was authored by ʿAlāʾ al-Dīn's grandfather Muḥyī al-Dīn.

[10]Jaakko Hämeen-Anttila draws the same inference, although without apparently being aware of the Cambridge manuscript, in his *Maqama: A History of a Genre* (Wiesbaden: Harrassowitz, 2002), 386.

[11]And not necessarily then. The Cambridge catalogue assigns only the *Marātiʿ al-Ghizlān* to the 168-folio manuscript (of which the first folio is missing), which can hardly be the case for a single *maqāmah.*

[12]Al-Ṣafadī here calls the *Marātiʿ al-Ghizlān* a "*risālah*" and says he was asked to compose a "*risālah tumāthiluhā.*" In the *Wāfī* he refers to both works as *maqāmahs* and calls his own the "*naẓīr*" of Ibn ʿAbd al-Ẓāhir's. In the *Aʿyān* he says that he composed his own *risālah* on the "topic" *(māddah)* of Ibn ʿAbd al-Ẓāhir's *maqāmah.*

[13]"*Wa-qad khadamtu bi-hā khizānat al-maqarr al-ʿālī al-makhdūmī al-qaḍāʾī al-Shihābī.*" This is unquestionably Shihāb al-Dīn Aḥmad ibn Yaḥyá Ibn Faḍl Allāh al-ʿUmarī (d. 749/1349), author

narrator begins by expounding, with considerable elaboration, on his fascination with love stories and his resulting desire to fall in love himself.[14] For this purpose he seeks, and finds, an appropriate adviser, who one day tells him of having seen a particularly beautiful young man, describing him so vividly that the narrator falls in love with him, sight unseen, on the spot. Begged to arrange a viewing, the friend does so, but there is no indication of any interaction between lover and beloved before the latter "flees" like a gazelle. The friend then suggests that they go together to observe the beloved hunting with his Turkish friends, and they repair to a garden where they expect to find them. Seven young men *(ghilmān),* including the beloved, appear on horseback, pursuing a herd of gazelles; each is garbed in a different color and riding a horse of a different color, and these are described one by one. They ride off in pursuit of the gazelles and then return, each with his prey. Urged on by his friend, the narrator expresses his "complaint" to the beloved, who rebuffs him, and continues to do so as the narrator pleads ever more desperately for his attention. Finally, God leads the narrator aright: he recovers from his passion and resolves to put his efforts into preparing for the afterlife, turning away from all worldly passions.

Of course, the point of this composition is not the "plot" (such as it is), but rather the rhetoric, which is elaborate, variegated, and sustained. In his edition ʿĀyish is quite helpful in catching instances of *taḍmīn* (incorporation into the poetry of verses by earlier poets, or of Quran or hadith quotations or paraphrases) as well of *ḥall al-naẓm* (recasting well-known verses in prose). On the other hand, he seems to be quite oblivious to meter, and less than fully attentive to the demands of prose parallelism in rhyme (which al-Ṣafadī is in fact quite careful about, and which thus serves—or should serve—as a control on the text). The result is a distressingly high frequency of impossible readings, some but by no means all of which can be corrected by an attentive reader from the information presented.

But the larger problem with this edition of the *ʿIbrat al-Labīb* is a methodological one. ʿĀyish has relied on two manuscripts (for which he gives full descriptions), MS ʿĀrif Ḥikmat (Medina) *majmūʿ ʿāmm* 3065 (dated 1001, with the title "Al-Risālah al-Mawsūmah bi-Damʿat al-Labīb bi-ʿIbrat al-Kaʾīb"), and MS Bodleian Sale 34, fols. 103–13 (no date [eleventh/seventeenth century?], titled "ʿIbrat al-Labīb bi-ʿAthrat al-Kaʾīb"). He has taken the former, which he considers the better of the two, as his "*aṣl,*" supplementing it (in brackets) with phrases missing in

of the *Masālik al-Abṣār* and al-Ṣafadī's patron and friend, to whom he refers as "*al-makhdūm al-Shihābī*" in a letter to the poet Ibn Nubātah (al-Ṣafadī, *Alḥān al-Sawājiʿ* [ed. Ṣāliḥ], 2:219).

[14]One of the very few parallels in phraseology between Ibn ʿAbd al-Ẓāhir's text as cited in the *Nihāyat al-Arab* and the *ʿIbrat al-Labīb* occurs here at the beginning, Ibn ʿAbd al-Ẓāhir's "*ḥakā alīf al-gharām wa-khalīf al-saqām . . .*" being echoed by al-Ṣafadī's "*ḥakā ḥalīf al-ḍaná wa-al-ʿaná wa-alīf nayl al-manūn lā nayl al-muná.*"

it but present in the Bodleian text[15] and occasionally adopting a better reading from the latter, with a clearly presented apparatus in such cases. Having recently obtained a copy of the Bodleian manuscript (for which I thank the staff at the Bodleian library), I was able to check on ʿĀyish's use of it, and the results were not happy ones. To be sure, this is not an impressive manuscript—the scribe makes frequent egregious errors and clearly was often not understanding what he was copying. But in his devotion to his "*aṣl*" ʿĀyish has essentially *ignored* all variants from the Bodleian manuscript that are not either simple additions to the ʿĀrif Ḥikmat text or (to his eyes) clearly superior readings. Much valuable information is thereby lost, and no picture of what is actually in the Bodleian manuscript emerges. Some (in fact) superior readings from it are not recorded at all, and where (as frequently) the sequencing of phrases differs in the two manuscripts ʿĀyish's choices appear arbitrary and fail to make clear the actual reading in either manuscript.

Given these problems, it is difficult to say how good (or bad) the ʿĀrif Ḥikmat manuscript actually is, and in any case a truly critical edition of the text will have to take into consideration additional manuscripts (of which there are known to be two in Cairo, one in Istanbul, and one in Ṣanʿāʾ). In the meantime, the *ʿIbrat al-Labīb* is now available to scholars in a reasonably complete, readable text (although it gets rather messy—in both manuscripts—in the final pages). ʿĀyish appends to his editions of both *Al-Faḍl al-Munīf* and *ʿIbrat al-Labīb* (combined) indices of Quran quotations, hadith quotations, and poetry; these are useful, but also misleading since a single index refers to two very disparate works. (He also misses a few Quran quotations in the *ʿIbrat al-Labīb*.) The book concludes with a list of references.

ʿĀyish has nothing to say about the *Lawʿat al-Shākī wa-Damʿat al-Bākī,* of which he published an edition in 2003, in his introductory material on the *ʿIbrat al-Labīb,* despite the questions raised by any juxtaposition of the two. Both are highly rhetorical narratives of a love affair (of sorts) with a Turkish young man. The *Lawʿat al-Shākī* is attributed to al-Ṣafadī in a majority of the many surviving manuscripts of the work, but in others it is attributed to no less than five other authors. In his edition of it, ʿĀyish argued that it actually does come from al-Ṣafadī's pen (and in my review of his edition I was inclined to agree, although I found his arguments inadequate). Surely the publication of the *ʿIbrat al-Labīb* offers an occasion to reconsider this issue.

Meanwhile, however, Samīḥ Ibrāhīm Ṣāliḥ has produced yet another edition of the *Lawʿat al-Shākī,* attributing it without question—on his title page—to Zayn

[15] Including the dedication to "al-Shihābī," noted above.

Dīn Manṣūr ibn ʿAbd al-Raḥmān al-Ḥarīrī (d. 967/1560).[16] In fact, being well aware of ʿĀyish's edition of the text—which he calls "the best so far"—he justifies his own re-edition precisely on the grounds of his re-attribution, although why an argument about authorship should be grounds for re-editing the text itself remains obscure. (There may be a clue to this in Ṣāliḥ's refutation of ʿĀyish's arguments for attributing the work to al-Ṣafadī, which include what he perceived as its stylistic similarity to al-Ṣafadī's letters in his collected correspondence, the *Alḥān al-Sawājiʿ,* a similarity that Ṣāliḥ flatly denies. Ṣāliḥ questions how ʿĀyish could have compared the two anyway, since the *Alḥān al-Sawājiʿ* was at the time as yet unpublished—it appeared, in an edition by Ṣāliḥ's father, Ibrāhīm Ṣāliḥ, in 2004. But there is no reason to believe that ʿĀyish—who in fact published his own edition of the *Alḥān al-Sawājiʿ* in 2007 [not available to me]—did not at the time have manuscripts of the work at his disposal.)

In the introduction to his edition of the text, Ṣāliḥ presents a fairly persuasive case for al-Ḥarīrī's authorship of it. Observing that it has been known all along that the bio-bibliographers Najm al-Dīn al-Ghazzī (d. 1061/1651) and Ibn al-ʿImād (d. 1089/1678) attribute a work of this title to al-Ḥarīrī (and that none of the bio-bibliographical sources on al-Ṣafadī do so, nor does al-Ṣafadī ever mention it in his own works, despite his predilection for cross-referencing his own works), he has traced al-Ghazzī's and Ibn al-ʿImād's entries to their primary source, the *Durr al-Ḥabab fī Tārīkh Aʿyān Ḥalab* of Ibn al-Ḥanbalī (d. 971/1563). He reproduces Ibn al-Ḥanbalī's biography of al-Ḥarīrī, noting that he states clearly that al-Ḥarīrī "composed a nice romantic *(ghazalīyah) maqāmah* which he titled *Lawʿat al-Shākī wa-Damʿat al-Bākī,*" and observes dryly that as al-Ḥarīrī's contemporary Ibn al-Ḥanbalī should know what he is talking about.

Ṣāliḥ also lists all previous printings of the *Lawʿat al-Shākī*—a dozen of them between 1857 and 1929, then nothing until ʿAbd al-Malik Aḥmad al-Wādiʿī's 1991 edition (Beirut: Dār al-Manāhil)[17] and ʿĀyish's 2003 edition—noting that they all attribute it to al-Ṣafadī. Concerned as he is to refute that attribution and to confirm al-Ḥarīrī's authorship, he pays scant attention to the other manuscript attributions, noting only two of them—Ṣafī al-Dīn al-Ḥillī and al-Māridīnī. This is inadequate, since the total number of manuscript attributions is in fact *six:*

1. al-Ṣafadī (d. 764/1363): so the majority of manuscripts and all printings prior to Ṣāliḥ's.

2. Ṣafī al-Dīn al-Ḥillī (d. 750/1349): one Cairo manuscript, possibly no others. No one has ever taken this attribution seriously.

[16] ʿĀyish was more cautious: the title page of his 2003 edition of the work has "attributed to" *(al-mansūb li-)* Ṣalāḥ al-Dīn Khalīl ibn Aybak al-Ṣafadī.

[17] I have not seen this edition, and was unaware of it when I composed my review of ʿĀyish's 2003 edition.

3. Jalāl al-Dīn Muḥammad ibn Aḥmad ibn Sulaymān, known as Ibn Khaṭīb Dārayyā (d. 811/1408–9): one of the (Cairo?) manuscripts utilized by ʿĀyish for his edition; possibly also an Istanbul manuscript attributing the work to "Jalāl al-Dīn al-Khaṭīb" (but cf. no. 6 below).

4. ʿAlāʾ al-Dīn Abū al-Ḥusayn/al-Ḥasan ʿAlī ibn Sharīf/al-Musharraf al-Māridīnī al-Ḥaskafī (d. 846/1442): one manuscript listed by Sarkīs, possibly identical with one of the manuscripts utilized by Ṣāliḥ for his edition.

5. Zayn al-Dīn Manṣūr ibn ʿAbd al-Raḥmān al-Ḥarīrī al-Dimashqī al-Shāfiʿī, known as Khaṭīb al-Saqīfah (d. 967/1560): authorship attested by Ibn al-Ḥanbalī and his successors, so attributed in manuscripts in the British Museum and Patna.

6. Jamāl al-Dīn Yūsuf al-Khaṭīb al-Madanī al-Ṣāliḥī: so attributed in a Copenhagen manuscript that cites the year 988/1580.

We will probably never know why this work ended up being attributed to so many different people. Ṣāliḥ's case for al-Ḥarīrī is quite strong—the *only* external (non-manuscript) evidence points to him—and although his case against al-Ṣafadī is not as strong, it is supported by the evidence from Bodleian MS Sale 34, which he does not consider. That manuscript includes both al-Ṣafadī's *ʿIbrat al-Labīb* (whose authenticity there is no reason to contest), attributed explicitly to him ("*risālah ʿajībah laṭīfah gharībah lil-shaykh Ṣalāh al-Dīn al-Ṣafadī*") and, immediately following it, the *Lawʿat al-Shākī,* unattributed ("*Damʿat al-Bākī wa-Lawʿat al-Shākī wa-hiya risālah ʿajībah gharībah*"). A comparison of the two, furthermore, makes it clear that they are not by the same author. The *ʿIbrat al-Labīb* is a rhetorically more sophisticated composition; the *Lawʿat al-Shākī* ties its prose and poetry together in a rather mechanistic fashion (prose passage usually followed by poetry expressing exactly the same thing with mostly identical vocabulary) that is foreign to the *ʿIbrat al-Labīb*. If the *Lawʿat al-Shākī* is not by al-Ṣafadī, surely al-Ḥarīrī is the most likely alternative candidate.

But comparing the two texts can also tell us more than this. As with the *Marātiʿ al-Ghizlān* (if that is what al-Nuwayrī is reproducing) and the *ʿIbrat al-Labīb,* we have with the *ʿIbrah* and the *Lawʿah* two first-person narratives of love passion for a young male Turk; but in this case the parallels are much closer. Like the *ʿIbrah,* the *Lawʿah* begins with the narrator expressing his general views on love before launching into his narrative. He then describes how one day he went out to a garden with a friend, and while they were enjoying the natural beauty there suddenly appeared seven Turkish young men, or, as the *Lawʿah* puts it (p. 35), "young men of the number of the planets" *(ghilmān ʿadad al-kawākib al-sayyārah);* the young men in the *ʿIbrah* (p. 106) are described as "*min al-ghilmah al-ḥisān ʿadad al-kawākib al-sayyārah.*" In the *Lawʿah* they "pushed aside the sun in (its) halo and shamed the moon in (its) halo" *(qad amālū al-shams fī al-hālah wa-akhjalū*

al-qamar fī al-dārah), while according to the *ʿIbrah* "among them was the source of my travail like the moon in (its) halo and the sun in (its) halo" *(wa-ṣāḥib balīyatī baynahum ka-al-qamar fī al-hālah wa-al-shams fī al-dārah)*. The following page in both texts offers several more such parallels in phraseology, and there are a number of others (I have found about half a dozen) scattered throughout the two works.

Once the Turks have put in their appearance and the narrator has fallen in love with one of them in particular, the plots of the two works do diverge. The *Lawʿah* has no hunt, nor any detailed description of the Turks' clothing and horses; and the beloved is far more accommodating than his counterpart in the *ʿIbrah*. On first meeting he takes the narrator aside, enthusiastically grants him kisses and embraces, and arranges an appointment for a longer and more private tryst. The friend, who plays a major role in the *Lawʿah,* is commissioned to prepare a room for this private party, with the necessary wine and other accoutrements. The beloved is delayed, but does finally show up, and after enjoying the wine lover and beloved retire to a night of embraces in bed (described in only vague, if highly rhetorical, terms; the friend sleeps outside the door). The next morning the beloved departs, apparently forever, and the narrator returns to the copious weeping in which he has indulged throughout the entire episode.

Despite the divergence in plot, it would appear to be fairly clear that the *Lawʿah* is in fact a direct emulation *(muʿāraḍah)* of the *ʿIbrah*—most likely one by al-Ḥarīrī. (Some misunderstanding of the relationship between the two works could perhaps lie behind the common attribution of the *Lawʿah* to al-Ṣafadī himself, although quite how that happened remains obscure.) What will require further research, however, is a fuller contextualization of these texts. ʿAlāʾ al-Dīn Ibn ʿAbd al-Ẓāhir, al-Ṣafadī, and al-Ḥarīrī (?) were certainly not the only authors during the Mamluk and Ottoman periods who cultivated what Thomas Bauer has called the "erotic *maqāmah,*"[18] and there is a history of this genre yet to be written. One wonders what to make of the fact that al-Ṣafadī mentions having studied with Shihāb al-Dīn Ibn Faḍl Allāh (among other works) the latter's *Damʿat al-Bākī wa-Yaqẓat al-Sāhir,* no manuscripts of which appear to have turned up.[19] Bare titles can, of course, be deceptive, and in particular there is the difficulty of sorting out from "erotic *maqāmah*s" the quite distinct genre of anthologies of epigrams on beautiful boys (and sometimes girls), of which one well-known (but unpublished)

[18]Thomas Bauer, "Mamluk Literature: Misunderstandings and New Approaches," *Mamlūk Studies Review* 9, no. 2 (2005): 115.

[19]Al-Ṣafadī, *Wāfī,* ed. Muḥammad Yūsuf Najm, 8:255; idem, *Aʿyān al-ʿAṣr,* 1:420; and cf. al-Kutubī, *Fawāt al-Wafayāt,* ed. Iḥsān ʿAbbās (Beirut: Dār Ṣādir, 1973), 1:160. Josef van Ess, "Safaḍī-Splitter," *Der Islam* 53 (1976): 259, considers these two separate titles, which seems unlikely (albeit possible) to me.

example by al-Nawājī (d. 859/1455) bears the title *Marātiʿ al-Ghizlān fī al-Ḥisān min al-Jawārī wa-al-Ghilmān*. One wonders about the content of Ibn al-Ḥanbalī's *Martaʿ al-Ẓibá wa-Marbaʿ Dhawī al-Ṣibá,* preserved in manuscript, and whether it has any connection with the *Lawʿat al-Shākī* that he admired by his contemporary al-Ḥarīrī. On the other hand, one might also wonder about the *Bushrá al-Labīb bi-Dhikrá al-Ḥabīb* by Ibn Sayyid al-Nās (d. 734/1334), if it were not known that this (unpublished) work is in fact a collection of his own poems in praise of the Prophet. There remains much sorting out to be done.

As for the *Lawʿat al-Shākī,* while Ṣāliḥ's arguments for al-Ḥarīrī's authorship of it appear to be strong, his edition of the text itself is a disappointment. There were reasons enough to try to improve on ʿĀyish's 2003 edition—but that does not seem to have been Ṣāliḥ's primary motivation, and he has certainly not succeeded in doing so. In fact, his edition may be considered a step backward. He relies on four sources: the 1301 Istanbul printing of the text, ʿĀyish's 2003 edition, and two Damascus manuscripts, one without a named author and the other attributing the work to al-Māridīnī. Why editors should treat published editions as independent text testimonies—and both ʿĀyish and Ṣāliḥ are guilty of this—remains inexplicable to me; but Ṣāliḥ has compounded the problem by taking the Istanbul printing, *de facto,* as his *aṣl.* (He says nothing about an *aṣl,* but from his apparatus it becomes clear that the Istanbul printing is his "default.") It gets worse: Ṣāliḥ not only treats the Istanbul printing as an independent witness to the text, he treats *ʿĀyish's* edition as one. This becomes very messy indeed, because ʿĀyish's edition included readings from a manuscript with a great many obvious interpolations (the scribe clearly prided himself on catching various allusions and interpolated his explanations of them into the text). ʿĀyish (unwisely) included much of this material in his edited text, although he did (prudently) put it in brackets; but Ṣāliḥ ignores the brackets and treats whatever appears in ʿĀyish's text as if it were an independent witness to the textual tradition. The Istanbul printing is almost as bad about interpolations, and Ṣāliḥ takes those at face value as well. The result is quite chaotic.

Where Ṣāliḥ has in fact made a real contribution is in tracking down attributions of the poetry cited in the *Lawʿat al-Shākī*. (An important question that no one, so far as I know, has addressed is the conventions of poetry in *maqāmāt,* specifically in the Mamluk and Ottoman periods. When al-Ṣafadī wrote a *maqāmah*—the *ʿIbrat al-Labīb*—all the poetry seems to have been his own; in the *Lawʿat al-Shākī* the poetry seems to be all someone else's, without any explicit attribution. Was this a diachronic change?) ʿĀyish had managed to identify the authors of numerous previously-anonymous verses in the *Lawʿat al-Shākī,* and Ṣāliḥ has gone much further in this regard, relying in particular on a number of recently published

late-Mamluk poetic anthologies.[20] What should be especially interesting is verses cited in the work that can be identified as being by poets who post-date al-Ṣafadī. But in fact the only such cases are one set of verses attributed to Ibn Khaṭīb Dārayyā (of all people; see above) and another attributed to Ibn Ḥijjah al-Ḥamawī (d. 837/1434), and both come exclusively from manuscripts that are obviously larded with interpolations.

On the other hand, if in fact the *Lawʿat al-Shākī* can be assigned to a late tenth/sixteenth-century author, and yet quotes no poetry later than the early eighth/fourteenth century, that is in itself of great interest, in terms of tracking the history of canon in the "late medieval" and "early modern" periods. But obviously there is yet a great deal more work to be done before we can rely confidently on such evidence as this.

Ṣāliḥ's book provides conventional end matter: Quran quotations, hadith quotations, verse index, references. The last of these is very much up to date (although only Arabic-language sources are considered), and I found it valuable in that respect.

In sum, we should be happy to have available, from Muḥammad ʿĀyish, the texts of two works by al-Ṣafadī that have never been published before, even if those texts are presented in less than optimal form; and Samīḥ Ibrāhīm Ṣāliḥ has given us the latest, and fairly convincing, word on who wrote the *Lawʿat al-Shākī,* even though his edition of the text itself gets us no nearer the original words of its author (whoever he was) than we were before.

Anne F. Broadbridge, *Kingship and Ideology in the Islamic and Mongol Worlds* (Cambridge: Cambridge University Press, 2008). Pp. 232.

Reviewed by Thomas T. Allsen

The Mongolian invasions resulted in the destruction or incorporation of numerous Muslim polities from Turkestan to Syria. When the dust settled in the mid-thirteenth century, there were only two Muslim states left standing along the frontiers of this enormous empire, the Delhi sultanate and the Mamluk kingdom. Not surprisingly, the subsequent history of these two "frontline states" became closely entwined with that of their Chinggisid neighbors. Their relationships with the Il-khans, Chaghadai Khanate, and the Golden Horde were multifaceted involving war,

[20]Most significantly al-Nawājī's *Taʾhīl al-Gharīb* (ed. Aḥmad Muḥammad ʿAṭā, Cairo: Maktabat al-Ādāb, 2005).

diplomacy, trade, and considerable ideological posturing. Anne Broadbridge's fine volume examines the Mamluks' sustained but variable ideological response to the Mongolian challenge.

More specifically, she documents the concepts of political legitimacy advanced by both parties, and discusses their intended audience and the effects of ideology on the actions of ruling elites in the period from the Mongolian conquests to the death of Temür. This she does through a careful analysis of diplomatic messages and exchanges that reveal the subtle, and not so subtle, ideological competition between the Mamluks and their Chinggisid rivals and allies.

Properly, and most helpfully, she begins with the basics, the creation and delivery of ideological messages. Chancelleries, of course, crafted these diplomatic documents, but the messages conveyed were never limited to the written word: the quality and size of the paper, the kind and color of the ink, as well as the method of presentation made important statements about a ruler's legitimacy and majesty. So, too, did the method of dating documents, since calendars of every kind carry with them much political-ideological baggage. This is readily apparent in the long-time practice of Chinese courts, including the Mongolian Yuan Dynasty, who insisted that all subordinate states accept their calendrical system as a condition of their submission. Naturally, the language in which diplomatic documents were written was an equally crucial issue. The Mamluks, she finds, regularly sent their letters in Arabic, expecting that they would be understood or translated by foreign courts. The Mongols, in contrast, had in this respect an advantage, for their chancelleries contained many multi-lingual personnel and could produce documents in a variety of languages and scripts. However, because of the relatively high survival rate of the Mamluk documents and the comparative rarity of those produced in Chinggisid chancelleries, Broadbridge's study relies of necessity on the Arabic materials, and thus in many cases on the translation of originals from Persian, Mongolian, and Turkic. This situation points to the substantial influence wielded by translators and interpreters in such environments who could alter both the tone and substance of diplomatic messages either through error or by design.

The treatment accorded embassies was yet another opportunity for conveying important information about a ruler's intentions and mood. Receptions could be extremely denigrating, as when the Mongols, particularly in the early phases of the empire, required foreign envoys to be purified by fire and to bow before images of the founding father, Chinggis Khan, a singularly distasteful act for monotheists of any stripe. Or, receptions could be marked by acts of great generosity and shows of wealth involving extensive gifts of food, clothing, and exotic goods, and thus served as stages for Mongolian and Mamluk rulers to advertise their resources and reach to visiting embassies.

While offering a picture of the whole context of diplomatic exchanges, emphasis is placed on the more explicit ideological formulas found in the extant diplomatic documents. She begins with the fundamentals of Mongolian political doctrine, their claim of a divine mandate from heaven, *tenggeri,* to rule the face of the earth and the equally vital notion of a special good fortune, *suu* or *sutu,* which attached to the Chinggisid line and assured the success of their imperial venture. This package of ideas, Broadbridge rightly notes, arose in the years following Chinggis Khan's death in 1227. It should be stressed, however, that it was hardly unique to the Mongols. The notion of heavenly mandates resonated in China, where it was an age-old doctrine, while the bestowal of special good fortune was similar to the Turkic concept of *qut* and the Iranian *farr,* "royal glory."

For the Mamluks, the Mongols, more particularly the Il-khan state, were the most challenging of their neighbors, not only in terms of their military power but also in terms of their ideological pretensions. As Broadbridge shows, the Mamluk counter-package of political doctrines can be accommodated into the following periodization scheme.

1260–93: In the initial period, the Mongols simply asserted their mandate to rule and the superiority of Mongolian law, *yasa/jasaγ*, over the shariʿah, while the Mamluks emphasized their guardianship over Islamic society and holy places. In their relationship with the Golden Horde they emphasized religious kinship with their khan, Berke (r. 1257–66), a recent convert to Islam, and solidarity in the struggle against their common enemy, the Il-khans, and thus established a stable alliance which lasted for decades, even when dealing with Jochid rulers who were not Muslims.

1293–1316: The Il-khans' permanent conversion to Islam substantially altered the Mamluk ideological line, since Ghazan now used his adherence to Islam "to invite" Mamluk submission. He posed as a defender of Islam and at the same time invoked Chinggisid dynastic legitimacy and majesty, in pointed contrast to the lowly, slave origins of the Mamluks. His ideological pronouncements were directed at Mamluk subjects in Syria and senior commanders, which were countered by claiming religious "seniority" by reason of their earlier conversion or by disputing the sincerity of the Il-khan's embrace of his new faith.

1317–41: Following the rise of Özbek in the Golden Horde and Abū Saʿīd in the Il-khan realm, Muslim ideological formulas came to dominate in interstate exchanges. With peace established, Mamluks and Il-khans were now rival Muslim rulers and competed with each other over patronage of the holy places as well as in acts of piety and religious patronage. Still older tensions surfaced, the Mamluks stressing their religious seniority and the Il-Khans their dynastic-genealogical superiority.

1335–82: After the rapid disintegration of the Il-khan regime, the Mamluks,

largely by default, enjoyed a period of regional predominance and presented themselves to the contending Il-khan successors as senior sovereigns and guardians of the wider Islamic world. Starting in 1341, the Mamluks' own time of troubles, characterized by political in-fighting and decentralization, undercut their power and prestige but their principle rivals, the Chobanids and Jalayirids, were unable to take advantage.

1382–1404: The advent of Temür, however, posed a new and imposing military and ideological threat. He, like the Il-khans, fused Islamic and Chinggisid political notions and disparaged the Mamluks' slave origins. For their part, the Mamluks reverted to older formulas emphasizing their guardianship of Islam.

Broadbridge's portrayal of this century-and-a-half competition is extensively documented and her conclusions convincing: both the Mongols and the Mamluks took their ideological confrontation seriously; and, while there were frequent shifts in emphasis and novel elements introduced, there was continuous sparring about matters of legitimacy and supremacy; finally, these formulas, although flexible, did force rulers on many occasions to act out, or at least appear to conform to, their ideological pronouncements.

To my mind, the value of any scholarly endeavor can be usefully measured not only on its contribution to its principle theme and subject, but also for the light it casts on neighboring or related fields. Broadbridge, I believe, advances our knowledge on several significant fronts. Among other things, she provides the first full account in a Western language of the diplomatic relations between the Golden Horde and the Mamluks and in the process much improves upon the earlier work of Russian scholars such as Zakirov. She also adds to our understanding of the pivotal role of provincial governors and viceroys in Il-khan politics and diplomacy. As one primarily concerned with the history of the Mongolian Empire, her treatment of the Parvanah and of Choban help establish that these notable episodes in Il-khan history reverberated across the continent: the Parvanah's execution in 1277 is reported in the Chinese sources in some detail and it is now clear that Choban's "personal diplomacy," which led to his fall and death in 1327, extended from Cairo to Beijing. On a related issue, her examination of the more or less permanent place of political defections in Mamluk-Il-khan relations points up the need to study more closely similar movements elsewhere within the empire and along its borderlands, from western China to northwestern India and the Balkans. Further, her detailed descriptions of diplomatic receptions staged by the Mamluks and Mongols reveal that these were occasions on which cultural wares were put on eye-catching display for the benefit of foreign audiences. And, since lavish and competitive bestowals were a regular component of these encounters, such receptions constituted important mechanisms in the exchange of material culture among elites across Eurasia. Lastly, Broadbridge raises essential questions

concerning the purpose and audience for all the ideological jousting. To what extent was the message for external consumption and to what extent was it altered for internal politics? All this suggests a number of interesting comparative studies for which Broadbridge's monograph can serve as a point of departure.

To sum up, this is a high-quality work which, as the publisher's blurb maintains, will indeed "appeal to scholars of Middle Eastern and Central Asian history, Mongol history, and Islamic history, as well as historians of diplomacy and ideology." In other words, Broadbridge has successfully situated one facet of Mamluk history in a wider Eurasian context.

Muḥammad ʿAbd Allāh al-Qadḥāt, *ʿĀʾilat al-Bāʿūnī wa-Dawruhā fī al-Ḥayāh al-ʿĀmmah fī al-Qarnayn al-Thāmin wa-al-Tāsiʿ al-Hijrīyayn* (Amman: Dār Ward al-Urdunīyah lil-Nashr wa-al-Tawzīʿ, 2007). Pp. 125.

Reviewed by Th. Emil Homerin, University of Rochester

Over the past ten years, several books have been published in Arabic on the Mamluk Sufi poet and scholar ʿĀʾishah al-Bāʿūnīyah (see MSR 6 [2006]: 191–92; 7, no. 1 [2003]: 236–39; 13, no. 2 [2009]: 161–63). While they vary widely in terms of scholarship, these books are testimony to the renewed interest in this very erudite woman and author of the Mamluk period. In ʿĀʾilat al-Bāʿūnī, Muḥammad ʿAbd Allāh al-Qadḥāt widens the scope to provide a general overview of the family and its contributions to Mamluk society and culture over four generations.

Al-Qadḥāt sets the political and cultural scene in his brief depiction of the Mamluk sultans, their often violent rule and succession, and the general mayhem that they caused among the populace. He then contrasts this political instability with the flourishing intellectual life of the period. Al-Qadḥāt notes that Cairo, in particular, was a safe haven for many scholars who fled the Mongols in the east and the Reconquista in the west. These émigrés, together with native scholars, found ample support among the Mamluk sultans and amirs, who established pious foundations (*waqf*s) for madrasahs, *khānqāh*s, and other institutions that supported learning. Such patronage would well serve the al-Bāʿūnī family (pp. 7–16). Al-Qadḥāt then turns, in chapter one (pp. 17–23), to a quick survey of sources that have mentioned the town of al-Bāʿūn, located today in Jordan, a few kilometers northwest of ʿAjlūn.

In chapter two (pp. 24–48), al-Qadḥāt traces family members from four generations, beginning with al-Nāṣir (fl. ninth/fourteenth century) and ending with ʿĀʾishah (d. 922/1516), though without mentioning her five brothers and

many other nephews, nieces, and cousins. Al-Qadḥāt reviews the education that various family members received and some of their teachers, their subsequent positions as preachers, teachers, scholars of law, and judges, their membership in the Qadarīyah Sufi order, and the place of honor and respect held by the family among their peers. In chapter three (pp. 51–82), al-Qadḥāt lists some of the books written by family members, occasionally citing samples of prose and, especially, poetry composed by them. In his footnotes, al-Qadḥāt often lists existing manuscripts of some of these works, their locations and index numbers, but it is quite apparent that he has not accessed most or all of these sources, and that he has drawn all of his quotations from previously published works. This is most apparent when al-Qadḥāt deals with the works of ʿĀʾishah, as he relies heavily on Ḥasan Rabābiʿah's 1997 study of her, often repeating the latter's mistakes while adding a few more of his own.

Chapter four (pp. 83–104) is the most interesting portion of this short book, as al-Qadḥāt cites several occasions when members of the al-Bāʿūnī family had interactions with a Mamluk sultan and members of his court. These include Aḥmad al-Bāʿūnī (d. 816/1413), who, as chief qadi, refused to allow Barqūq to appropriate *waqf* funds, which resulted in Aḥmad's brief imprisonment, and ʿĀʾishah al-Bāʿūnīyah, who had an audience with al-Ghawrī in Aleppo shortly before his death in battle with the Ottomans. Perhaps most interesting is al-Qadḥāt's re-telling of a protracted dispute between ʿĀʾishah's father Yūsuf and several al-Bāʿūnī relatives over legal positions in Syria. Here, al-Qadḥāt draws most of his information from al-Biqāʿī's *Iṭḥār al-ʿAṣr,* but al-Qadḥāt never fully analyzes the incidents or several of the key players involved. This is typical for this book, for although al-Qadḥāt is to be commended for diligently citing his published sources, he never goes beyond them to form any opinions of his own. Moreover, as is apparent in his conclusion (pp. 105–10), al-Qadḥāt is often repetitive, some times repeating verbatim earlier statements and notes. In all, this book represents a wasted opportunity; al-Qadḥāt chose a family quite appropriate for a study of Mamluk intellectual and political history, yet, he failed to carry out the research and analysis required to make a significant contribution to Mamluk studies.

Hani Hamza, *The Northern Cemetery of Cairo*. Bibliotheca Iranica: Islamic Art & Architecture Series, no. 10 (Costa Mesa, CA: Mazda Publishers, Inc., 2001). Pp. viii + 58 + 26 figures (maps and plans) + 35 photographic plates.

Reviewed by John Rodenbeck

Its generalized title might seem to imply that this remarkable monograph follows the fortunes of Cairo's busy and much-frequented Northern Cemetery from some discernible beginning down to our own time; and that it might thus include a consideration not only of its celebrated Mamluk monuments, but also of a few belonging to later periods, such as the Qubbat Afandīnā, for example, which was recently reopened (6 May 2008) following extensive repair and restoration. Mamlukologists will be gratified, however, by the fact that the author's interests here are historical rather than purely architectural. His specific subject is the cemetery only during its Mamluk heyday, the period from 1250 to 1517, and though his concern is with monuments, it is much more with buildings erected in that period that have since disappeared than with the handful that are still standing.

A chemical engineer who runs his own business in Cairo, the author is a student of Islamic art and architecture by avocation; and it was the outstandingly rigorous M.A. program in Islamic art and architecture at the American University in Cairo that provided the scholarly training of which this book is a direct result. He has since achieved a Ph.D. in the subject at Cairo University.

The Northern Cemetery of Cairo was published as the tenth in a distinguished series of monographs in Islamic art and architecture, a pioneering effort overseen by an editorial board that includes Abbas Daneshvari, Bernard O'Kane (who was presumably one of Hamza's mentors at AUC), Robert Hillenbrand, and Ali Modarres. Mazda, the California-based publisher of the Bibliotheca Iranica and its Islamic Art and Architecture Series, is primarily interested in Iran and Persian culture, but occasionally ventures into other parts of the Muslim world, as is instanced by this book.

Hamza has inherited his investigative method from two classic works of scholarship, one of which is Doris Behrens-Abouseif's elegant article "The North-Eastern Extension of Cairo Under the Mamluks" (*Annales islamologiques* 17 [1981]). This article creates a general picture of Mamluk-era urban development northeast of al-Qāhirah from Bāb al-Naṣr in the direction of al-Maṭarīyah, an axis along which many Mamluk notables built palaces and pleasure domes. Because of its different character, however, Behrens-Abouseif quite carefully excluded from her purview the area south of the mausoleum of al-ʿĀdil. Hani Hamza's attention, on the other hand, is turned precisely upon that portion of the *ṣaḥrā*ʾ

that Behrens-Abouseif chose to omit, which became what we call the Northern Cemetery. It is bounded on the north by the tomb of Qānṣūh Abū Saʿīd, on the northeast by Jabal al-Aḥmar and the site of Qubbat al-Naṣr, on the northwest by al-Husaynīyah (with its own significant graveyard, al-Bayraqdār, last resting place of Ibn Baṭṭūṭah, al-Maqrīzī, J. L. Burckhardt, and—presumptively—Badr al-Jamālī), on the southwest by the Barqīyah, on the east by the Muqaṭṭam, and on the south by Bāb al-Wazīr and the Citadel. A complete notion of the entire northeastern and eastern corner of Mamluk Cairo could be had by putting these two pieces of intensive research together.

Like Behrens-Abouseif, Hamza has combed through the sources, both Arab and non-Arab, with utmost industry. The Arab sources they use are of course in general the same, but Behrens-Abouseif cites twenty-five travelers' accounts and Hamza only five: al-Maṭarīyah, with its Christian sites, was on every European travel itinerary, the Northern Cemetery on virtually none, with the consequence that references to it by travelers are comparatively rare. (It might also be noted here that in the "Arabic Sources" section of Hamza's otherwise careful bibliography the entries have been transliterated, but have remained alphabetized according to the Arabic alphabet. Four of the entries are not properly "sources," but secondary studies; and the first two lines of the first entry have been printed twice.) The purpose of Hamza's impressive preliminary labor was to establish what exactly stood or was built in the Northern Cemetery in Mamluk times. For such historical purposes mere physical remains are deeply deficient; and it is the written record that must supply the evidence of what once was substantial and real.

Mamluk politics and Mamluk building activity being profoundly interlinked, Hamza's opening chapter offers an overview of construction in the *ṣaḥrā*ʾ against the background of Mamluk political history. He is fully aware that any Muslim funerary structure in Cairo commonly housed and is still apt to house the remains of many people, some of them quite unrelated to the founder. The mere mention of someone in the sources as being buried in the Northern Cemetery he has therefore treated as insufficient evidence that a structure was actually founded by him or erected on his behalf. Despite the limitations imposed by such logical criteria, Hamza has nevertheless disclosed the existence of 106 structures, few of them still extant. Of 29 Bahri buildings, for example, all but one of them mausolea, only 4 now remain; of 77 Burgi buildings, a mere 28 are still standing. The Index of the Survey of Egypt identifies many of the buildings still extant, but whatever is standing at the present moment, quite obviously, is no guide to what was once the case. "It would be rash," Hamza writes,

> to claim that all the foundations in the *'sahara,'* whether surviving or not, have been listed, although it is probable that all the major

> examples are covered. But the corpus of monuments and the related information outlined so far [are] ample for analysis and drawing conclusions on the geographical, topographical and social aspects of development of the *sahara'* (p. 18).

The second chapter is a topographical analysis. It begins with a historical survey of the various names that have been applied to the *ṣaḥrāʾ,* ranging from Maydan al-Qabaq to Eastern Cemetery *(al-qarāfah al-sharqīyah)* to the Tombs of the Mamluks; and fixes an approximate site for the Qubbat al-Naṣr, a vital historical landmark that unfortunately no longer exists. Hamza then indicates the main arteries and street patterns, which are conveniently mapped. He traces four phases of urban growth under four different régimes or phases of government: (1) Bahri (648–784/1250–1382); (2) al-Ẓāhir Barqūq to the accession of al-Ashraf Barsbāy (784–825/1382–1422); (3) al-Ashraf Barsbāy to the accession of Qāytbāy (825–73/1422–68); (4) al-Ashraf Qāytbāy to the end of the Mamluk sultanate (873–922/1468–1517).

Hamza's phase-by-phase listings of foundations follow. Each building is identified, if possible, by either a number in the Survey of Egypt's Index, showing that it is still extant, or by a reference to a second classic work in the field: the late and much-lamented Michael Meinecke's heroic two-volume survey, *Die Mamlukischen Architektur in Ägypten und Syrien* (1992), his last published work, a survey that was intended in large part to supplement the Index by locating monuments that had disappeared. Meinecke thus found 33 new entries to add to the Index's 32 in the Northern Cemetery. In completing his own survey, however, Hamza found more than 40 additional foundations clearly attested.

An interim chapter follows on the patronage and typology of the buildings. The most numerous buildings were mausolea, of which 25 are still standing, many supplied with the remarkable carved stone domes that are one of the special boasts of Mamluk architecture. Several were also used as *khānqāh*s, which gave the area, as Hamza remarks, its "distinctive character." The only other important building type in the *ṣaḥrāʾ* appears to have been the *zāwiyah*.

These three building types reflect major activities in the *ṣaḥrāʾ,* the subject of Hamza's fourth chapter. Such activities certainly included visitations to the tombs of saints and Sufis, especially that of ʿAbd Allāh al-Manūfī, though the *ṣaḥrāʾ* otherwise had much less claim to sanctity than the *qarāfah*s to the south. Nine *khānqāh*s are still extant in the *ṣaḥrāʾ;* however, three or four more are known from the sources, and many other buildings served as *khānqāh*s even if not designated as such, so that by the end of the fifteenth century Sufi activity must have been quite evident. Residential quarters housed inhabitants of other kinds, including a large proportion of foreigners, but an experiment in economic

development earlier in the century had failed and at the time of the Ottoman conquest the population was sparse. Hamza concludes by demonstrating that the period of greatest building activity was during the third quarter of the fifteenth century. An appendix examines in detail the ruined mausoleum of Mankalībughā al-Fakhrī, excluded from the Index because of its artistic mediocrity, but perhaps therefore all the more representative of architectural norms in an area presently known chiefly for its surviving handful of large-scale Mamluk masterworks.

This book may well be the definitive treatment of its subject. One could wish, though, that Mazda had taken much more editorial care. Apart from the bibliographic defects noted parenthetically above, there are frequent typographical errors and some sentences need straightening out, despite the author's excellent English. The graphic material is all informative, though here there are likewise a few mistakes that should have been corrected at an early stage. And why has the sketch map reproduced as Figure 2 not been formalized and thus made much more useful?

Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	ʾ	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	ʿ				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
اَ	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Avoid using apostrophes or single quotation marks for ʿ*ayn* and *hamzah*. Instead use the Unicode characters ʿ (02BF) and ʾ (02BE).

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before "sun" letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES REVIEW

PUBLISHED BY THE MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). Since volume XIII, no. 1, *Mamlūk Studies Review* has been published not in conventional print format, but as an open-access online publication. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress (see the conversion chart near the end of this volume) using a Unicode font that contains all necessary diacritical marks (see the website below for further information). Submissions may be made via email, but authors may be required to send a printed copy and/or a CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Please contact the editor (ideally before creating the files) for specifications relevant to illustrations, photos, maps and other graphics. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://guides.lib.uchicago.edu/mideast and http://mamluk.uchicago.edu. These sites provide links to back issues of this journal, The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, The Chicago Online Encyclopedia of Mamluk Studies, and other Mamluk Studies resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

E-ISSN 1947-2404

MAMLŪK STUDIES REVIEW

The Bruce D. Craig Prize for Mamluk Studies

The Prize Committee is pleased to announce that Nathan C. Hofer (Ph.D. 2011, Emory University) and Matthew B. Ingalls (Ph.D. 2011, Yale University) have jointly been named recipients of the 2011 Bruce D. Craig Prize for Mamluk Studies for their respective dissertations:

Nathan C. Hofer, "Sufism, State, and Society in Ayyubid and Early Mamluk Egypt, 1173-1309"

Matthew B. Ingalls, "Subtle Innovation Within Networks of Convention: The Life, Thought, and Intellectual Legacy of Zakariyya al- Ansari (d. 926/1520)"

Given the outstanding quality of the two dissertations submitted for the Bruce D. Craig Prize for Mamluk studies, the Committee unanimously decided to award it jointly to the two candidates. Both dissertations constitute major contributions to the study of Sufism in Egypt at two different periods (early and late Mamluk). The authors showed not only that they have a solid knowledge of the sources, but that they are also familiar with critical theory.

The focus of Hofer's dissertation is the study of two Sufi "organizations" (the Saʿid al-Suʿada khanqah and the Shadhiliyya tariqa) during the Ayyubid and early Mamluk periods (1173–1309). The author also considered two less-studied manifestations of Sufism (Upper Egypt, and Jewish Sufis of Fustat). His work is instrumental in demonstrating that Sufism was brought by the Sufis to the masses and not the other way around, as has been believed until now.

On the other hand, Ingalls' dissertation is centered on the study of the life and thought of one of the most important representatives of Sufism at the end of the Mamluk period: Zakariyyʾa al-Ansari (d. 926/1520). Perhaps more importantly, it also addresses a crucial issue in our field: should we still consider authors of late medieval Islam incapable of genuine creativity and innovation? The answer he brings forward will certainly invite us to reconsider positions that have been regarded as firmly grounded for a long time.

The Prize Committee for 2011 consisted of Frédéric Bauden (Université de Liège and Università di Pisa), Chair; Jonathan Berkey (Davidson College); and Michael Winter (Tel Aviv University).

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2012 Prize, dissertations must be defended by December 31, 2012, and submitted to the Prize Committee by January 31, 2013. Submissions should be sent to:

The Dhimmi's Question on Predetermination and the Ulama's Six Responses: The Dynamics of Composing Polemical Didactic Poems in Mamluk Cairo and Damascus

Introduction

Among the many epistles about predetermination and free will composed by the Damascene scholar Ibn Taymīyah (d. 728/1328), one stands out. This work is a lengthy poem which appears in the eighth volume of his epistles and *fatāwá* compilation *(Majmūʿat al-Fatāwá).* The poem, usually known as "A Question about Predetermination" *(Suʾāl ʿan al-Qadar),*[1] is also entitled *Al-Manẓūmah al-Tāʾīyah,* a didactic versification rhyming in *tāʾ* throughout the work.[2] And indeed, the monorhyme *tī* appears in all 124 verses of the poem. According to the prologue, penned by Ibn Rushayyiq (d. 749/1348), the copyist of Ibn Taymīyah's works,[3] Ibn Taymīyah composed this poem as a response to an eight-verse poem attributed to a dhimmi scholar. Ibn Rushayyiq introduces the poem as: "A question about predetermination set forth by one dhimmi scholar" *(aḥad ʿulamāʾ al-dhimmīyīn).*[4]

[1]The full text of the poem is available in both well-known and widely-used editions of Ibn Taymīyah's *fatāwá:* Taqī al-Dīn Aḥmad Ibn Taymīyah, "Suʾāl ʿan al-Qadar," in *Majmūʿat al-Fatāwá li-Shaykh al-Islām Taqī al-Dīn Aḥmad Ibn Taymīyah al-Ḥarrānī,* ed. ʿĀmir al-Jazzār and Anwar al-Bāz, 37 vols. (Riyadh and al-Mansura, 1419/1998), 8:149–54; idem, "Suʾāl ʿan al-Qadar," *Majmūʿ Fatāwá Shaykh al-Islām Aḥmad Ibn Taymīyah,* ed. ʿAbd al-Raḥmān ibn Muḥammad ibn Qāsim and Muḥammad ibn ʿAbd al-Raḥmān ibn Muḥammad ibn Qāsim, 37 vols. (Medina, 1425/2004), 8:246–55. This edition was originally printed in Riyadh, 1961–66, and has several reprints: Beirut, 1398–1403/[1978–1982]; Rabat, 1981; [Cairo], 1980; Cairo, [1990]. For several versions of the poem, see Appendix II, Part B, n. 163.

[2]Ibn Qayyim al-Jawzīyah (d. 751/1350), Ibn Taymīyah's most celebrated disciple, mentions Ibn Taymīyah's *Al-Tāʾīyah* in three of his theological works: [Abū ʿAbd Allāh Muḥammad ibn Abī Bakr] Ibn Qayyim al-Jawzīyah, *Shifāʾ al-ʿAlīl fī Masāʾil al-Qaḍāʾ wa-al-Qadar wa-al-Ḥikmah wa-al-Taʿlīl,* ed. Al-Sayīd Muḥammad al-Sayīd and Saʿīd Maḥmūd (Cairo, 1414/1994), 475; idem, *Ṭarīq al-Hijratayn wa-Bāb al-Saʿādatayn,* ed. Abū ʿAbd Allāh Muṣṭafá ibn al-ʿAdawī et al. (Cairo, 1421/2001), 115; idem, *Madārij al-Sālikīn bayna Manāzil Īyāka Naʿbudu wa-Īyāka Nastaʿīn,* ed. Abū ʿAbd Allāh Muḥammad ibn Abī Bakr ibn Ayyūb (Beirut, n.d.), 1:437.

[3]On Ibn al-Rushayyiq's role in copying Ibn Taymīyah's works, see: Caterina Bori, "Ibn Taymiyya wa-Jamāʿatuhu: Authority, Conflict and Consensus in Ibn Taymiyya's Circle," in *Ibn Taymiyya and His Times,* ed. Yossef Rapoport and Shahab Ahmed (Karachi, 2010), 47 endnote 46; idem, "The Collection and Edition of Ibn Taymīyah's Works: Concerns of a Disciple," *Mamlūk Studies Review* 13, no. 2 (2009): 53–68.

[4]Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 8:149.

In 1956, Serajul Haque published a scientific edition of both the dhimmi's and Ibn Taymīyah's poems. This edition, based on two identical manuscripts penned by an anonymous copyist, is slightly different from the *Majmūʿat al-Fatāwá* edition. The prologue of Serajul Haque's edition clearly states that the dhimmi was in fact a Jew: "This is a question composed by one dhimmi Jew" *(hādhā su'ālu baʿḍi ahli al-dhimmati min al-yahūd).*[5] Both versions of Ibn Taymīyah's poem—the *Majmūʿat al-Fatāwá* version and Serajul Haque's version—contain similar prologues. According to both versions, when the poem (written either by an unspecified dhimmi or by a Jew) was presented to Ibn Taymīyah, "*Shaykh al-islām,* the most erudite imam Aḥmad ibn Taymīyah, responded in kind, in a poem he composed" either "in extempore" *(murtajilan)*[6] or "in a hurry" *(mustaʿjilan).*[7]

Ibn Rushayyiq and the anonymous copyist wrote the prologue with a dual-purpose: By adding the words *murtajilan* or *mustaʿjilan,* they emphasized Ibn Taymīyah's excellent command of Arabic; and they managed to give us, the readers, the impression that Ibn Taymīyah composed his poem publicly: either in an actual public debate, in which the two debaters stood facing each other, reciting their verses in front of an astonished crowd, or in a class, in which one of Ibn Taymīyah's disciples presented the poem to Ibn Taymīyah, and he responded immediately. The dhimmi or the Jewish scholar composed a well-structured poem, which stimulated the mind and presented a theological challenge. Immediately after hearing the poem, Ibn Taymīyah excelled by reciting more than 100 verses in extempore, a truly amazing achievement.[8]

A more fascinating possibility nevertheless emerges from the description of Abū ʿAlī Ḥafṣ ʿUmar ibn ʿAlī al-Bazzār (d. 749/ 1348), one of Ibn Taymīyah's biographers. Al-Bazzār quotes here an eyewitness to this exciting event:

> The righteous shaykh Tāj al-Dīn Muḥammad known as Ibn al-Dawrī told me that he participated in one of the shaykh [Ibn Taymīyah]'s classes *(majlis).* A Jew asked Ibn Taymīyah a question on predetermination *(mas'alah fī al-qadar),* which he (i.e., the Jew) composed as an eight-verse poem. When Ibn Taymīyah read the question,

[5] Serajul Haque, "A Poem of Imām Ibn Taymiyya on Predestination," *Journal of the Asiatic Society* (Pakistan) 1 (1956): 2.

[6] Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 8:149. *Irtijāl* is improvising or extemporizing a poem or a speech. The many quotations of improvised poetry in the *adab* sources, like *Kitāb al-Aghānī,* and the sources specializing in poetical theories and grammar, indicate that improvised poems were composed in various meters, and not solely in the inferior *rajaz* meter. S. A. Bonebakker, "Irtidjāl," *The Encyclopaedia of Islam*, 2nd ed., 4:80.

[7] Serajul Haque, "A Poem of Imām Ibn Taymiyya," 2.

[8] Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 8:149; Serajul Haque, "A Poem of Imām Ibn Taymiyya," 2.

> he contemplated for a brief moment, and then he started writing a response to that question. He wrote and wrote, and all the while we thought he was writing in prose. When he finished, his companions *(aṣḥāb)* who were present there looked at what he wrote, and to their astonishment they saw that he composed a poem in the same meter as the verses composed by the man who sought Ibn Taymīyah's opinion. Ibn Taymīyah's work was a rhymed poem of nearly 184 verses. The poem contained vast knowledge to such an overwhelming extent, that were it interpreted, its interpretation would have filled two huge volumes. The poem was truly an unprecedented legal response to a question *(jawāb fatwá).* [9]

This remarkably detailed anecdote is consistent with the aura which is often attributed to Ibn Taymīyah's personality, as the most prominent intellectual of his time. Al-Bazzār's description can be read as a direct confrontation between Ibn Taymīyah and a Jew, who dared enter his *majlis*. Still, as the scene reaches its narrative peak—with Ibn Taymīyah presenting his elaborate response—the mysterious anonymous Jew disappears. Ibn Taymīyah is not even described by al-Bazzār as reciting his fresh new response in verse. He merely gives the papers on which he wrote the poem to his companions, and leaves them to get acquainted with the text, while he himself withdraws to the background of the narrative. In this respect, al-Bazzār's story does not correspond completely with the succinct prologues of Ibn Rushayyiq and the anonymous copyist: although all three texts place the composition of Ibn Taymīyah's poem in the public sphere, Ibn Rushayyiq and the anonymous copyist aim at depicting a vibrant and excited Ibn Taymīyah, reciting a poem in the making, while al-Bazzār describes Ibn Taymīyah as meticulously writing a poem, and upon its completion tossing the papers to his disciples.

The questions arising from all three descriptions of this single event are highlighted especially when it becomes evident that prominent biographers of Ibn Taymīyah, such as Shams al-Dīn al-Dhahabī (d. 748/1347-8) and Ibn Rajab (d. 795/1392), ignored it. Moreover, other prominent biographical sources present the dhimmi's poem and Ibn Taymīyah's poem differently: not as a memorable event which involved Ibn Taymīyah alone, but as part of a larger intellectual endeavor, in which several prominent ulama participated. This article, then, begins with the quest for the identity of the dhimmi or Jewish poet, and continues with an inquiry into the path his poem took until it reached Ibn Taymīyah and five other scholars of his time. The details of the exact circumstances about the composition

[9] Abū Ḥafṣ ʿUmar al-Bazzār, *Al-Aʿlām al-ʿAlīyah fī Manāqib Shaykh al-Islām Ibn Taymīyah,* ed. Ṣalāḥ al-Dīn al-Munajjid (Beirut, 1396/1976), 28.

of the dhimmi's question and the six responses to it enable us to place this case study in the context of the larger phenomenon of the composition of polemical didactic verses in Mamluk Cairo and Damascus. Furthermore, we are able to examine the role of this literary device in that setting. Why were didactic verses composed at all? What was the appeal of such a literary device to the ulama? I will examine these questions mainly through the biographical sources, which emerge as a rich reservoir of both historical data and theological texts of limited scale. I will also present the poems in question, although I will not delve too much into their content. The theological issues raised by these poems and the form of their theological argumentations, although touched upon in this article, certainly deserve further investigation, which remains for future research.

The Dhimmi's Question and His Identity

The poem of the dhimmi or the Jewish scholar (henceforth: the dhimmi's question) is a poetic presentation of a well-known Quranic concept. According to this concept, the infidels used the argumentation of predetermination in order to rationalize their refusal to join the Muslim community and the Islamic faith. The infidels in the Quran cite God's will in their argumentation, albeit—as Kate Zebiri comments in a recent article—"with questionable sincerity."[10] For example, in Q. 6:148: "The idolaters will say, 'Had God pleased, neither we nor our fathers would have served other gods beside Him; nor would we have declared anything lawful.'"[11] The same argumentative line characterizes the dhimmi's question:

1. Listen, you scholars of Islam! I, the non-Muslim under the protection of your religion *(dhimmī dīnikum),* am baffled, so please lead me towards the clearest theological proof.
2. If, as you claim, my Lord decreed my infidelity, although my infidelity did not please Him, what could I have done?
3. He urged me [to be a believer], but at the same time He blocked the entrance [leading to faith] for me. Is there a way that I can enter [your religion]? Please, explain this to me!
4. He decreed that I will go astray, and then He said: Be pleased with the decree! Should I not be pleased with the source of my misery *(shaqwatī)*?
5. Thus, ye people (i.e., Muslims), I am pleased with what has been decreed, while my Lord is not pleased with the misfortune which befell me.
6. Is it possible for me to be pleased with what my Lord is not pleased with? I am confused! Pray, tell me how am I to cope with this confusion.

---

[10] Kate Zebiri, "Argumentation," in *The Blackwell Companion to the Qur'ān,* ed. Andrew Rippin (Malden, MA, 2006), 280.

[11] *The Koran with Parallel Arabic Text,* trans. N. J. Dawood (London, 1956; repr. London, 2000).

7. Since My Lord wished me to be an infidel by virtue of His divine volition *(mashīʾah),* how is it possible [to call me] disobedient, when all I did was to obey the divine volition?[12]
8. Do I have the choice *(ikhtiyār)* to disobey the Lord's decree? Do quench my thirst with theological proofs![13]

This brief poem defies the traditionalist notion of predetermination *(al-qaḍāʾ wa-al-qadar),* while presenting the familiar paradox of divine decree *(al-qaḍāʾ)* versus divine command *(al-amr)* and divine good pleasure *(al-riḍā).* From this presentation two more questions evolve: the question of human good pleasure (also called *al-riḍā*) and human choice *(ikhtiyār).* The essence of the paradox is as follows: God commands the individual to be a believer through His divine speech (the Quran). When the individual acts according to God's command, then he pleases God. Still, the individual's fate and conduct are predetermined by God. Thus, when the individual disobeys God's command, he nonetheless acts according to God's predetermination. When the sinner, i.e., the dhimmi narrator in this poem, refers to this paradox, he does not question the existence of God's divine command or God's predetermination; he merely asks whether this paradox allows his choice to exist, and whether he should be pleased with his preordained fate as a dhimmi, hence a sinner.

The text of the poem itself does not, unfortunately, disclose any information on the identity of its author, but merely states that the narrator, whose words are the words of the poem, is a dhimmi. But can we assume that there is a complete compatibility between the narrator (the *dhimmī dīnikum*) and the poet? In a key article on the identity of a poet (any poet), T. S. Eliot made the distinction between three possible voices the poet may adopt:

> The first voice is the voice of the poet talking to himself—or to nobody. The second is the voice of the poet addressing an audience,

[12] Here I follow the reading in *Majmūʿat al-Fatāwá,* while Serajul Haque's reading is slightly different; hence it slightly changes the meaning of the verse. The version of verse 7 in *Majmūʿat al-Fatāwá* is: *fa-hal anā ʿāṣin fī ittibāʿi al-mashīʾati.* Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 8:149. The same reading appears in Tāj al-Dīn Abū Naṣr ʿAbd al-Wahhāb ibn ʿAlī ʿAbd al-Kāfī al-Subkī, *Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* ed. Maḥmūd Muḥammad al-Ṭināḥī and ʿAbd al-Fattāḥ Muḥammad al-Ḥilw (Cairo, [1992]), 10:352. Serajul Haque's version is *fa-hal anā ʿāṣin fī ittibāʿi mashīʾatī.* Accordingly, Serajul Haque paraphrases this verse: "am I to be a sinner if I follow my own desire?" Serajul Haque, "A Poem of Imām Ibn Taymiyya," 2, 14. Since the meter is broken in both cases, both readings are acceptable. However, the dhimmi's argument is more precise according to the reading in the *Majmūʿat al-Fatāwá*'s version, because the theological problem is how to escape God's decree and volition, and not how to escape human volition.

[13] Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 8:149; Serajul Haque, "A Poem of Imām Ibn Taymiyya," 2–3.

> whether large or small. The third is the voice of the poet when he attempts to create a dramatic character speaking in verse; when he is saying, not what he would say in his own person, but only what he can say within the limits of one imaginary character addressing another imaginary character. The distinction between the first and the second voice, between the poet speaking to himself and the poet speaking to other people, points to the problem of poetic communication; the distinction between the poet addressing other people in either his own voice or an assumed voice, and the poet inventing speech in which imaginary characters address each other, points to the problem of the difference between dramatic, quasi dramatic, and non-dramatic verse.[14]

The dhimmi's question is obviously addressed to other people, the "scholars of Islam." It can be defined as a dramatic verse because the oral element of performance in it is distinct. Even more so, when the dhimmi's question is read in the context of the circumstances surrounding its composition and later in the context of the six responses to it, this brief poem can certainly be reimagined as a dramatic scene. Following Eliot's definitions, what is needed here is first and foremost to establish which voice the poet uses in this poem: is it his own voice addressing an audience? Or does he speak from the mouth of an imaginary character, whose position he assumed in order to make his own point clearer or even stronger? These questions can be easily answered from the text of the poem itself.

The dhimmi's question, although simple at first glance, is quite sophisticated, because it juggles between the narrator's own position and the position of his audience, to whom he refers as "the scholars of Islam." The narrator does not spell out his beliefs in the poem, because he pretends to have adopted the position of "the scholars of Islam." However, this pretense is quite distinct, mainly because of the dramatized tone, in which the narrator refers to himself as a miserable and confused infidel. This tone obviously discloses the aim of the poem, which is to mock the Sunni belief in predetermination. According to the narrator, God decrees the infidel to be an infidel, but at the same time He is not pleased with his infidelity. This is the basic traditionalist position as reflected in numerous Quranic verses and hadiths, which were later processed in traditionalist creeds and treatises.[15] The narrator then continues with a series of questions, demonstrating the paradox which lies at the basis of the traditionalist position: Through

[14] T. S. Eliot, *The Three Voices of Poetry: The Eleventh Annual Lecture of the National Book League Delivered by T. S. Eliot, O.M., at the Central Hall Westminster on 19 November 1953* (Cambridge, 1953), 4.

[15] The most useful sources for Islamic creeds are Arent Jan Wensinck, *The Muslim Creed: Its Genesis and Historical Development* (London, 1932), and William Montgomery Watt, *Islamic Creeds: A Selection* (Edinburgh, 1994).

the Quranic message, God urged the infidel to become a believer, but at the same time He prevented him from complying with His command; another message, conveyed by God to the infidel, is to be pleased with the way he was created, namely as an infidel; in this contradictory message, human good pleasure does not correspond with divine good pleasure. As an infidel, the narrator subjects himself to the divine volition, and in any case, it is unclear whether his will is sufficient to reverse the decree of his infidelity.

The identification of the audience as Muslim traditionalists actually helps determine the identity of the poet himself (assuming there is a complete compatibility between the identities of the poet and the narrator). Although the narrator states that he is a dhimmi, it is more likely that he is a Muslim scholar with rationalistic tendencies, hence a Muʿtazili. That the narrator is a Muʿtazili scholar or a Muslim scholar with Muʿtazili tendencies is evident from the narrator's acquaintance with the basic outlines of the discussion on predetermination in the inner circles of Islamic theology, and his use of the relevant traditionalist vocabulary of predetermination. In verses 5–6, the narrator mentions the theme of feeling content with God's decree *(al-riḍā bi-al-qadar).* This notion, whose origins are tracked in the hadith literature, was thoroughly processed in Hanbali and Ashʿari treatises.[16] In verse 4, the narrator refers to the source of his misery, by which he means his heresy. This verse actually discloses the narrator's knowledge of Islamic theological texts, because the equation "heresy equals misery" *(shaqwah)* appears in the highly deterministic hadith literature.[17]

The key to the narrator's true position is hidden in the closing verse of the poem, where the narrator presents the concept of human choice *(ikhtiyār)* in the guise of a cry for help. "Do I have the choice to disobey the Lord's decree?"—he innocently questions, and then begs—"Do quench my thirst with theological proofs!" This question can be interpreted as doubting the effectiveness and indeed the existence of human *ikhtiyār,* but it can also be read differently: in verse 2, the narrator simply argues that human *ikhtiyār* cannot co-exist with divine predetermination. Verse 8 is simply a rhetorical question, which rephrases the same argument the narrator made in verse 2. This is a blunt attack on the traditionalist and indeed the Ashʿari claim, that human *ikhtiyār* co-exists with divine predetermination. In other words, the narrator expects the Ashʿari response.

[17] See, for example, Shihāb al-Dīn Abū al-Faḍl Aḥmad ibn Nūr al-Dīn Ibn Ḥajar al-ʿAsqalānī, *Fatḥ al-Bārī bi-Sharḥ Ṣaḥīḥ al-Bukhārī,* ed. ʿAbd al-Raḥmān Muḥammad (Beirut, 1408/1988), 11:404–16 *(Bāb al-Qadar),* and Muḥammad ibn Ḥusayn ibn ʿAbd Allāh Abū Bakr al-Ājurrī, *Kitāb al-Sharīʿah* (Beirut, 1421/2000), 154–55, 188–92. There are, of course, other numerous relevant hadith references.

The poem's content therefore suggests that the narrator is a Muʿtazili scholar. But who was the poet who adopted the voice of a dhimmi in this poem? Was he indeed a dhimmi, hence his own person was identical to the voice of the narrator, or was he someone else, hence the narrator in the poem is a character he created for his own artistic or maybe theological and even political agenda? Fortunately, several medieval biographers and historians referred to the identity of the anonymous poet.

Two different assumptions appear in the biographical sources: the poet was either a dhimmi or a Jew; or he was a Muslim scholar with Muʿtazili-Shiʿi tendencies, who composed the poem as a part of the polemic with the Ashʿaris. The scholars who claimed that the poet was a dhimmi or a Jew assumed that a complete correlation between his actual identity and the identity of the narrator of the poem indeed existed. In other words, the poem was perceived by these scholars as an accurate reflection of its author's position.[18] On the other hand, the biographers and historians who believed that the poet was a Muslim scholar viewed the narrator as a literary fiction, designed to serve its creator's theological agenda. Here, scholars were divided between two possibilities: that the poet was either Aḥmad ibn Maḥmūd Fatḥ al-Dīn Ibn al-Baqaqī (who was executed in the year 701/1301), or Shams al-Dīn Muḥammad ibn Abī Bakr al-Sakākīnī (d. Ṣafar 721/1321). Both poets have received some attention in previous studies. Most of the biographers attributed the poem to al-Sakākīnī, while only Tāj al-Dīn al-Subkī attributed the poem's authorship to Ibn al-Baqaqī. Al-Subkī's treatment of the poem, its author, and the responses to the poem is remarkable, and his text is the basis of the present study.

Ibn Kathīr (d. 774/1373) was probably the first historian to attribute the dhimmi's question to the shaykh of the Shiʿis *(shaykh al-imāmīyah)* al-Sakākīnī.[19] Al-

[18]Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 8:149; al-Bazzār, *Al-Aʿlām,* 28; Serajul Haque, "A Poem of Imām Ibn Taymiyya," 2. Al-Ṣafadī ascribes the dhimmi's question to an anonymous Jew, "the Jew, who asked for a legal opinion in verses." Ṣalāḥ al-Dīn Khalīl ibn Aybak al-Ṣafadī, *Aʿyān al-ʿAṣr wa-Aʿwān al-Naṣr,* ed. ʿAlī Abū Zayd et al. (Beirut-Damascus, 1418/1998), 3:484 (the biography of ʿAlāʾ al-Dīn, no. 1210). Cf. ibid., 3:292 (the biography of ʿAlāʾ al-Dīn al-Qūnawī, no. 1122).

[19][ʿImād al-Dīn Abū al-Fidāʾ Ismāʿīl] Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* ed. Aḥmad ʿAbd al-Wahhāb Futayḥ (Cairo, 1418/1998), 14:228. Al-Ṣafadī, Ibn Ḥajar, and others cite Ibn Kathīr, giving him credit for the identification of the anonymous poet as al-Sakākīnī: "shaykh ʿImād al-Dīn Ibn Kathīr said that the verses that were addressed to shaykh Taqī al-Dīn Ibn Taymīyah, which begin with 'O you people of Islam, I, the non-Muslim under the protection of your religion (*ayā maʿsharu al-islām dhimmī dīnikum*)'...were composed by that al-Sakākīnī." Al-Ṣafadī, *Kitāb al-Wāfī bi-al-Wafayāt,* ed. Aḥmad al-Arnāʾūṭ and Turkī Muṣṭafá (Beirut, 1420/2000), 2:193 (biography no. 689); idem, *Aʿyān al-ʿAṣr,* 4:355–59 (biography no. 1525). For an almost identical reference, see Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah,* ed. ʿAbd al-Wārith Muḥammad ʿAlī (Beirut, 1418/1997), 3:249 (biography no. 3721). The nineteenth-century scholar al-Shawkānī (d. 1250/1834) also identified the dhimmi as al-Sakākīnī. Muḥammad ʿAlī ibn

Sakākīnī, as several biographers tell us, was born in 635/1237–38 at the foot of the Qāsiyūn Mountain, near Damascus, and moved to Damascus later in life.[20] He was a pleasant and amiable man, who was never caught—as other Shiʿis were—in abusing the memory of the Prophet's companions. On the contrary, he composed versifications on the virtues of the *ṣaḥābah.* As a learned man of culture *(fāḍil),* who was well-versed in the doctrines of the Shiʿah (which are, to a large extent, identical to the Muʿtazili doctrines), he used to argue *(nāẓara)* about predetermination, which was a major controversial issue between the traditionalists and the rationalists. The biographers do not mention with whom he argued; however, the phrase "he denied the existence of *jabr*" clearly indicates that his major rivals were the Ashʿaris, whose theory of *kasb* was often considered by their rivals as a rationalized version of *jabr.*[21] As a Shiʿi propagandist *(dāʿiyah),* al-Sakākīnī influenced many laymen from the villages surrounding Damascus to become Shiʿis. His propagandist activity is the subject of Ibn Taymīyah's pun on al-Sakākīnī: "He was one of those [scholars] who made the Shiʿi become a Sunni, and made the Sunni become a Shiʿi" *(huwa mimman yatasannanu bi-hi al-shīʿī wa-yatashayyaʿu bi-hi al-sunnī).*[22] Ibn Kathīr states that towards the end of his life, al-Sakākīnī

Muḥammad al-Shawkānī, *Al-Badr al-Ṭāliʿ bi-Maḥāsin Man baʿd al-Qarn al-Sābiʿ,* ed. Muḥammad Ḥasan Ḥallāq (Damascus-Beirut, 1427/2006), 1:101, 704–5. The beginning of the verse as quoted in all these sources is slightly different from the version which appears in *Majmūʿat al-Fatāwá* and other sources: here, the audience is "the people of Islam"; in *Majmūʿat al-Fatāwá* the audience is "the scholars of Islam." Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 8:149.

[20]Stefan Winter discusses the life of al-Sakākīnī's son, as an illustration to the persecution of Shiʿis in Damascus. Stefan H. Winter, "Shams al-Dīn Muḥammad ibn Makkī 'al-Shahīd al-Awwal' (d. 1384) and the Shiʿah of Syria," *Mamlūk Studies Review* 3 (1999): 167–68.

[21]A recent discussion on the connection between *jabr* and *kasb* is: Livnat Holtzman, "Debating the Doctrine of *Jabr* (Compulsion): Ibn Qayyim al-Jawziyya Reads Fakhr al-Din al-Razi," in *Islamic Theology, Philosophy and Law: Debating Ibn Taymiyya and Ibn Qayyim al-Jawziyya,* ed. Georges Tamer and Birgit Krawietz (Berlin, forthcoming).

[22]Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 2:192–94; idem, *Aʿyān al-ʿAṣr,* 4:355–59; Shams al-Dīn Abū ʿAbd Allāh Muḥammad ibn ʿUthmān al-Dhahabī, *Dhuyūl al-ʿIbar fī Khabar Man Ghabar,* ed. Abū Hājir Muḥammad al-Saʿīd Ibn Basyūnī Zaghlūl (Beirut, 1405/1985), 4:60; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:249 (al-Sakākīnī's biography, no. 3721), and 1:94 (Ibn Taymīyah's biography, no. 409); Muḥammad ibn ʿAbd al-Raḥmān Shams al-Dīn al-Sakhāwī, *Al-Tuḥfah al-Laṭīfah fī Tārīkh al-Madīnah al-Sharīfah,* ed. Asʿad Ṭarābizūnī al-Ḥusaynī (Cairo, 1399–1400/1979–80), 3:544–45; al-Shawkānī, *Al-Badr al-Ṭāliʿ,* 1:704–5 (al-Sakākīnī's biography, no. 305), and 1:101 (Ibn Taymīyah's biography, no. 40). In my translation of that sentence, which differs from Winter's translation (Winter, "Shams al-Dīn," 168), I paid special attention to the preposition *bi (tasannana bi-, tashayyaʿa bi-)* which frequently gives a causative meaning to a verb. Also, verbs in the fifth form often bear the significance of adopting a set of convictions: *tashayyaʿa*—to adopt the tenets of the Shiʿah, *tazarraqa*—to adopt the tenets of the Azāriqah, *tahawwada*—to convert to Judaism, *tanaṣṣara*—to convert to Christianity, etc. All these examples appear in the unsurpassed book by William Wright, *A Grammar of the Arabic Language,* 3rd edition (Cambridge, repr. 1997), 1:36–37,

repented and became a Sunni. This made his son very angry with him, "and he wanted to kill his father, when the father pronounced his loyalty to the Sunnah."[23] Al-Sakākīnī made his reputation as a talented poet and a composer of questions on doctrinal issues, targeting the Sunni system of beliefs.[24] One of these questions, so believes Ibn Kathīr, was the poem attributed to a dhimmi scholar.[25] Al-Sakākīnī, however, never admitted to having written the dhimmi's question.

The story of another of al-Sakākīnī's literary works, related by Ṣalāḥ al-Dīn al-Ṣafadī (d. 764/1363), sheds more light on al-Sakākīnī's purpose in composing the dhimmi's question (if he, as Ibn Kathīr claims, composed it). This other literary work, entitled *Al-Ṭarā'if fī Maʿrifat al-Ṭawā'if* (Curiosities about religious sects), was brought to the chief judge Taqī al-Dīn al-Subkī (the father of the historian Tāj al-Dīn al-Subkī, d. 756/1355) in the year 750 (1349–50), some twenty-nine years after al-Sakākīnī's death. The qadi was impressed by the content of the work: it was indeed a work which defamed the principles of Sunni Islam, yet the author of that work presented his profound knowledge of the hadith. Al-Subkī himself destroyed the work by cutting it to pieces, washing it, and then burning it, though not before several *muḥaddithūn* identified the handwriting in the work as al-Sakākīnī's.[26] If al-Sakākīnī was indeed the author of both works—the dhimmi's question and the *Ṭarā'if*—then he employed the same writing technique in both: in the short poem he made use of the character of the dhimmi, while in the *Ṭarā'if* he ascribed the work to a fictional dhimmi, whom he named ʿAbd al-Maḥmūd ibn Dāwūd al-Miṣrī.[27] In the short poem the dhimmi asks "the scholars of Islam" to help him in

---

paragraph 47. Another illuminating example appears in the biography of the mystic al-Ḥallāj (d. 309/922): "From the outside he was a recluse, but when he saw that the people of his town considered the Muʿtazili convictions appropriate, he became a Muʿtazili. When they considered the Shiʿi convictions appropriate, he became a Shiʿi. When they considered the Sunni convictions appropriate, he became a Sunni *(aw yarawna al-tashayyuʿ tashayyaʿ aw yarawna al-tasannun tasannan)*." Al-Dhahabī, *Tārīkh al-Islām wa-Wafayāt al-Mashahīr wa-al-Aʿlām,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut, 1413/1992), 23:36.

[23] Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:228.

[24] According to Ibn Kathīr, al-Sakākīnī composed questions "in the doctrinal style of the People of Good" *(ʿalá madhhabi ahli al-khayri).* Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:228. Three of al-Sakākīnī's poems are quoted by al-Ṣafadī. One of the poems is a praise of the human intellect, the light of which expels the darkness. Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 2:192; al-Ṣafadī, *Aʿyān al-ʿAṣr,* 4:358.

[25] Ibn Kathīr identifies the poem as "the one to which our shaykh Ibn Taymīyah responded." Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:228.

[26] Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 2:192–93; idem, *Aʿyān al-ʿAṣr,* 4:356–57. On the treatment given by the ulama to books containing "heresies," see: Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (Cambridge, 1994), 166–67.

[27] In Ibn Ḥajar's version of the story, the dhimmi's name is ʿAbd al-Ḥamīd. Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:249.

his predicament; in the opening of the *Ṭarāʾif,* Ibn Dāwūd al-Miṣrī also addresses the Muslim scholars. In fact, after writing only the first half of the *shahādah (lā ilāha illā allāh)* and omitting the second half *(wa-Muḥammadun rasūlu allāh)*[28]—a clear indication of his non-Muslim conviction—Ibn Dāwūd says: "I am a dhimmi man, and I do hold respect for Islam. Therefore, I beg of you not to shed my blood, before you hear what I have to say."[29] The rest of the work, which is unfortunately lost forever, revealed, according to al-Ṣafadī, its author's heresy *(zandaqah)* and Shiʿi convictions.[30] Last but not least, both works disclose their author's profound knowledge of Islamic theology and hadith.

Al-Sakākīnī, then, is a likely candidate to be the anonymous dhimmi scholar, but the candidacy of Ibn al-Baqaqī, whose name is mentioned by Tāj al-Dīn al-Subkī, should also be examined here. Al-Subkī was a bit hesitant about naming the poet, and he cautiously remarked that the dhimmi was a literary character invented by "a certain Muʿtazili, who concealed his name, and composed his poem on behalf of one dhimmi."[31] Thereafter, al-Subkī remarks, "Some say that the composer was Ibn al-Baqaqī, for whom there was solid evidence that he held heretical views *(zandaqah).* He was killed by the sword of the noble divine law in the time *(wilāyah)* of the shaykh Taqī al-Dīn Ibn Daqīq al-ʿĪd al-Qushayrī."[32] The cautious tone of al-Subkī discloses the fact that he was not at all sure that Ibn al-Baqaqī was the poet behind "the dhimmi's question." As far as I know, al-Subkī's suggestion to identify the poet as Ibn al-Baqaqī was adopted only by al-Murtaḍá al-Zabīdī (d. 1205/1791) in his *Itḥāf al-Sādah,* although he named the poet Āmin al-Baqtī, which is obviously a misreading or a miscopying of Ibn al-Baqaqī.[33]

[28]This observation is made by al-Ṣafadī himself. Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 2:192; idem, *Aʿyān al-ʿAṣr,* 4:356.

[29]Al-Ṣafadī, *A-Wāfī bi-al-Wafayāt,* 2:192; idem, *Aʿyān al-ʿAṣr,* 4:356.

[30]Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 2:192; idem, *Aʿyān al-ʿAṣr,* 4:356.

[31]Al-Subkī, *Ṭabaqāt,* 10:352.

[32]Ibid., 10:352–53.

[33]Al-Murtaḍá al-Zabīdī quotes the first two verses of the dhimmi's question, then he says: "Some say that the composer of these words is Āmin al-Baqtī, who was executed because of his heretical views in the time *(zamān)* of Shaykh al-Islām Taqī al-Dīn ibn Daqīq al-ʿĪd." Muḥammad Murtaḍá ibn Muḥammad al-Ḥusaynī al-Murtaḍá al-Zabīdī, *Itḥāf al-Sādah al-Muttaqīn bi-Sharḥ ʿUlūm Iḥyāʾ al-Dīn* (Beirut, 1326/2005), 3:279. I have not seen the manuscript of al-Murtaḍá al-Zabīdī's *Itḥāf al-Sādah;* however, replacing Ibn al-Baqaqī with Āmin al-Baqtī is understandable when considering the closeness between *tāʾ* and *qāf* in the Arabic script. Furthermore, al-Murtaḍá al-Zabīdī mentions Ibn al-Baqaqī in the entry *b.q.q.* in his monumental dictionary *Tāj al-ʿArūs.* Al-Murtaḍá al-Zabīdī, *Tāj al-ʿArūs min Jawāhir al-Qāmūs,* ed. ʿAlī Shayrī (Beirut, 1414/1994), 13:44.

Fatḥ al-Dīn Aḥmad ibn Muḥammad al-Baqaqī, with the strange *nisbah* which was a source of ridicule,[34] was a captivating provocateur and a condemned heretic. His flamboyant and misunderstood behavior led the legal establishment first to excommunicate him, and then to execute him. Ibn al-Baqaqī's activity and the story of his execution have been discussed in previous studies,[35] and especially by Joseph H. Escovitz, who offers an accurate reading in the biographical sources on Ibn al-Baqaqī.[36] However, since Escovitz's goal is to explore the activity of the Cairo judges, he is less interested in Ibn al-Baqaqī's religious views and poetic activity, which are crucial in order to determine whether or not Ibn al-Baqaqī is the poet behind the dhimmi's question. Hence, there is no choice but to re-read the same sources, and to describe yet again the complicated events that preceded Ibn al-Baqaqī's execution, but from a somewhat different angle than Escovitz offers.

Lengthy entries in several biographical dictionaries are dedicated to Ibn al-Baqaqī, while the description of the events leading to his execution is most fully elaborated in al-Maqrīzī's (d. 845/1442) *Sulūk,* Ibn Ḥajar's (d. 852/1449) *Durar,* and al-ʿAynī's (d. 855/1451) *ʿIqd al-Jumān.*[37] All these sources describe him as a scholar, whose training in Islamic law was thorough, and who was highly skilled in pub-

[34] Al-Dhahabī comments that it is a *nisbah* of the town Baqaq, near Ḥamāh. Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:182. Ibn Dānyāl (d. 711/1311) composed the following verse on Ibn al-Baqaqī: "Do not reproach al-Baqqī [sic!] for his actions when he diverts from the true conduct/Because had the Divine Law improved his behavior, then he would not have been called after a bedbug *(baqq)*!" Obviously, Ibn Dānyāl calls his protagonist al-Baqqī mainly to make the connection to the bedbug. In terms of meter, this verse seems to me a broken form of *Sarīʿ*. Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:182 (biography no. 784). This poem is also quoted in a modern study on poetry in the Mamluk era, and in a compilation of Ibn Dānyāl's poems. Yāsīn al-Ayyūbī, *Āfāq al-Shiʿr al-ʿArabī fī al-ʿAṣr al-Mamlūkī* (Tripoli, 1415/1995), 365; al-Ṣafadī, *Al-Mukhtār min Shiʿr Ibn Dānyāl,* ed. Muḥammad Nāyif al-Dulaymī (Mosul, 1399/1979), 9, 168. See also a reference in Li Guo, "Paradise Lost: Ibn Dāniyāl's Response to Baybars' Campaign against Vice in Cairo," *Journal of the American Oriental Society* 121, no. 2 (2001): 227, n. 40.

[35] Ibn al-Baqaqī's story as it appears in al-Yūnīnī's (d. 726/1326) *Dhayl Mirʾāt al-Zamān* was translated fully by Li Guo in his *Early Mamlūk Syrian Historiography: Al-Yūnīnī's Dhayl Mirʾāt al-Zamān* (Leiden-Boston-Köln, 1998), 1:200–1. Also, a description of Ibn al-Baqaqī's story, which relies heavily on Joseph Escovitz's description (see the following footnote), appears in: Knut S. Vikør, *Between God and the Sultan: A History of Islamic Law* (New York, 2005), 293–95. See below, n. 40.

[36] Joseph E. Escovitz, *The Office of Qâḍî al-Qudât in Cairo under the Baḥrî Mamlûks* (Berlin, 1984), 136–38. Escovitz reads Ibn al-Ḥajar's *Durar,* al-Ṣafadī's *Wāfī,* al-Maqrīzī's *Sulūk,* Ibn al-Dawādārī's *Kanz al-Durar,* and al-ʿAynī's *ʿIqd.*

[37] Ibn Ḥajar's *Al-Durar al-Kāminah* contains the most coherent account on Ibn al-Baqaqī. Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:181–83 (biography no. 784). Aḥmad ibn ʿAlī al-Maqrīzī, *Al-Sulūk li-Maʿrifat Duwal al-Mulūk,* ed. Muḥammad ʿAbd al-Qādir ʿAṭā (Beirut, 1418/1997), 2:350–51 (the events of the year 701/1301–2); Badr al-Dīn Maḥmūd al-ʿAynī, *ʿIqd al-Jumān fī Tārīkh Ahl al-Zamān,* ed. Muḥammad Muḥammad Amīn (Cairo, 1412/1992), 4:177–83 (the events of the year 701/1301–2). An account which basically contains the same details as the former sources appears

lic debates.[38] However, this brilliant, active, but controversial scholar[39] seemed to take religious matters rather lightly. For instance, he regularly ate during the days of Ramadan with no justifiable excuse. But worse than that: he was once seen by his dinner-guests stepping on a leather-chest *(rabʿah)* in which copies of the Quran were kept, in order to reach an object on a top shelf.[40] When his appalled guests reproached him, he called them a bunch of asses, and "said heretical words" *(talaffaẓa baʿda dhālika bi-al-kufri).* These guests were among those who testified against Ibn al-Baqaqī in front of the Maliki judge.[41]

According to al-ʿAynī, Ibn al-Baqaqī's general conduct indicated his total disparagement of the religious observances and his lack of belief *(wa-kāna qalīla al-dīni sayyiʾa al-iʿtiqādi).*[42] According to al-ʿAynī, Ibn al-Baqaqī delved in logic and philosophy, "and that corrupted his moral conduct" *(afsadat ʿalayhi niẓāmahu).*[43] The sources referred to Ibn al-Baqaqī as a *zindīq, kāfir,* or *murtadd* (heretic), terms

[41] Al-ʿAynī, *ʿIqd,* 4:179.

[42] Ibid., 178.

[43] Ibid. *Niẓām,* according to the *Lisān,* is behavior, as in the phrase *laysa li-amrihi niẓāmu,* which means that his conduct was not appropriate. [Muḥammad ibn Mukarram] Ibn Manẓūr, *Lisān al-ʿArab* ([Beirut], n.d.), 6:4469 *(n.ẓ.m.).*

reserved for either Muslim or non-Muslim heretics.[44] Still, these labels, and especially the term *zindīq,* were officially granted to Ibn al-Baqaqī only after a legal procedure,[45] while he obviously saw himself as a part of the Sunni community. In other words, there is no doubt that to his mind Ibn al-Baqaqī was a Sunni, whose interpretation of Sunni behavior and the Sunni creed was completely different from that of his immediate environment.[46]

Apart from the anecdotal descriptions of Ibn al-Baqaqī's behavior, the sources detail his shaky relationship with the entire religious establishment. As an erudite scholar, he never concealed his belittlement of the ulama, whom he considered ignorant. He had a longtime dispute in verses with the Shafiʿi chief judge Ibn Daqīq al-ʿĪd (d. 702/1302),[47] and he also cursed the Maliki chief judge Zayn al-Dīn ʿAlī ibn Makhlūf.[48] What led to Ibn al-Baqaqī's imprisonment in 701/1301 was his shaky relationship with that Maliki judge, Ibn Makhlūf. That, combined with Ibn al-Baqaqī's well-known lax religious conduct, provided the Maliki qadi with the necessary proof of Ibn al-Baqaqī's *zandaqah.* The Maliki qadi, having heard witnesses attest to Ibn al-Baqaqī's conduct, ruled that Ibn al-Baqaqī was a heretic, and sentenced him to death. When this ruling *(maḥḍar)* of the Maliki qadi arrived at the Shafiʿi chief judge, Ibn Daqīq al-ʿĪd, he refused to approve the Maliki judge's

[44] Al-ʿAynī, *ʿIqd,* 4:180. F. C. de Blois, "Zindīḳ," *EI2,* 9:510, claims that the usage of the term *zindīq* "for Muslim or non-Muslim 'heretics' is clearly secondary, though widespread." This categorical statement should be re-evaluated, especially in view of different indications in the biographical sources. Vikør's treatment of *zindīq* seems to me more accurate. According to Vikør, the term *zindīq* "is used for someone who said he was a Muslim, but in reality presented ideas that were in opposition to the foundations of Revelation." Vikør, *Between God and the Sultan,* 292.

[45] A *sajʿ* description of Ibn al-Baqaqī, written by al-Ṣafadī, for instance, could be understood as an emphasis on the formalities of the procedure: "He demonstrated unacceptable disdain, and he exposed things that even the Christians deem inappropriate, until it became evident on the basis of a thorough investigation *(ʿan taḥqīq)* that he was a heretic *(zindīq)* who withdrew from the Islamic faith *(murtaddun ʿan al-islāmi).*" Al-Ṣafadī, *Aʿyān,* 1:356. Although the use of *ʿan taḥqīq* could be taken as a linguistic ornament with no substantial meaning, which is meant to rhyme with the other parts of the sentence, it is probably used here to denote a critical investigation of the evidence by the qadi or the mufti.

[46] Ibn al-Baqaqī was mistakenly identified as a Jew by Serajul Haque, whose mistake derives from combining two sources, without checking the biography of Ibn al-Baqaqī. The first source is the anonymous copyist of Ibn Taymīyah's poem, who attributes the poem to a Jew. The second source is al-Murtaḍā al-Zabīdī, who attributes the poem to Āmin al-Baqtī, which is a misreading of Ibn al-Baqaqī. Serajul Haque, "A Poem of Imām Ibn Taymiyya," 1. A similar process of combining two different sources led Reuven Snir to include Ibn al-Baqaqī in an article which discusses the contribution of Jews to Arabic literature, and to identify Ibn al-Baqaqī as a Jewish poet. Reuven Snir, "The Emergence and Demise of Arab-Jewish Culture in Modern Times," *Electronic Journal of Oriental Studies* 8, no. 9 (2005) 9:5.

[47] Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:182; al-ʿAynī, *ʿIqd,* 4:182–83.

[48] Al-Maqrīzī, *Al-Sulūk,* 2:350.

verdict, claiming that Ibn al-Baqaqī was not a heretic.[49] In doing so, Ibn Daqīq al-ʿĪd accepted Ibn al-Baqaqī's line of defense, as revealed in an appeal he wrote from his prison cell to Ibn Daqīq al-ʿĪd. This appeal, a pseudo-legal opinion *(ṣifat futyā)* commenting on Quran 8:38 ("Tell the unbelievers that if they mend their ways their past shall be forgiven"), was meant to emphasize Ibn al-Baqaqī's repentance and remorse, but also to provide the judges with the appropriate Quranic proof on the necessity to exonerate him. Obviously, Ibn al-Baqaqī thought he should be forgiven for his misdeeds, because the Quranic text specifically promises God's forgiveness to the unbelievers, if they repent. Ibn al-Baqaqī's line of defense was rejected by the Maliki judge, who thought that the Quranic verse referred only to born-heretics who converted to Islam and then regretted their conversion.[50] In the same vein, Ibn al-Baqaqī screamed this argument out loud in front of Ibn Daqīq al-ʿĪd, when he was taken to trial: "O Muslims! I was a heretic, and then I became a Muslim" *(yā Muslimūna anā kuntu kāfiran wa-aslamtu).*[51] When Ibn Daqīq al-ʿĪd received the *maḥḍar* prepared by the Maliki judge, he ruled: "I will not carry out the execution of a man who testifies that there is no God but Allāh, and that Muḥammad is the Messenger of God."[52] Thereafter, Ibn Daqīq al-ʿĪd discarded the *maḥḍar* without signing it.[53]

Another line of defense was then taken, this time with the intervention of the wali of Cairo, Nāṣir al-Dīn Ibn al-Shaykhī, who was fond of Ibn al-Baqaqī.[54] The wali ordered that Ibn al-Baqaqī's case be transferred to Ibn Daqīq al-ʿĪd's court, thinking that it would be a more favorable venue for Ibn al-Baqaqī. This time, the wali ordered the Shafiʿi judge to prepare a different *maḥḍar,* in which Ibn al-Baqaqī was proclaimed insane and exempt from the charge of heresy. Ibn Daqīq al-ʿĪd took his time to read the new *maḥḍar,* and then said: "God protect me from that! I know this man and he is in full possession of his mental faculties."[55] This difference of opinion ignited another round of appeals, this time to the Maliki judge, urging him to execute Ibn al-Baqaqī. Finally, the sultan himself intervened: he assembled all the relevant parties, and the four chief judges of Cairo. The Maliki judge presented his case for execution. The Hanafi judge agreed with him, and said: "Kill him! His blood will be upon my head."[56] In Rabīʿ I 701 (November 1301) Ibn al-Baqaqī was executed in the Madrasah al-Ṣāliḥīyah in the Bayn al-Qaṣrayn

area in Cairo.[57] A detailed description of the execution appears in several sources. Ibn al-Baqaqī continued to proclaim his innocence, and screamed: "Are you going to kill a man who testifies that his Lord is Allāh, and says the *shahādah*?" He then was beheaded; his head was stuck on a spear and displayed, while his body was hanged and crucified in Bāb Zuwaylah.[58]

The most important feature in Ibn al-Baqaqī's personality, which is relevant to our case, is his deep involvement in poetry: he was very well-read and knew volumes of poetry by heart in addition to composing his own poems.[59] His casual use of poems is reflected in the following anecdote, told by an eyewitness who was sitting in Ibn Daqīq al-ʿĪd's court when Ibn al-Baqaqī barged in, and asked the qadi about some unspecified issue. The qadi was prepared to answer, but before he had a chance to do so, Ibn al-Baqaqī turned away from him, mumbling: "My passion for you made me stop where you live" *(waqafa al-hawá bī ḥaythu anti)*. This is actually the opening verse of a love poem by the poet Abū al-Shīṣ al-Khuzāʿī (d. 196/811): "My passion for you made me stop where you live/and therefore I cannot go back or move forward/I think that my love for you makes the memories pleasant, so let the rebukers rebuke."[60] Ibn Daqīq al-ʿĪd responded calmly to Ibn al-Baqaqī's outburst, and predicted that Ibn al-Baqaqī's fate was doomed. Indeed, three weeks later Ibn al-Baqaqī was executed.[61] The poem is a key to understanding the special friendly relationship between Ibn al-Baqaqī and the respectable judge, although its message is not entirely coherent. I assume that the poem is meant to express Ibn al-Baqaqī's disappointment in his longtime friend, who did not help him in his time of distress.[62] At any rate, I would not connect this love poem to the evidence of Ibn al-Baqaqī's lenient approach towards homosexuality.[63]

[62] This is al-Maqrīzī's interpretation. After quoting the verse, he adds: "It means that the qadi ceased to be [my friend]" *(yaʿnī anna al-qāḍīya inqataʿa)*. Al-Maqrīzī, *Al-Sulūk,* 2:350. Cf. "*inqaṭaʿtu ʿan baytihi* - j'ai cesse d'aller chez lui cesser d'etre aupres de quelqu'un le quitter. *inqaṭaʿū ʿan baʿḍihim* - cesser d'etre amis." Reinhart Pieter Anne Dozy, *Supplement aux dictionnaires arabes* (Leiden, 1967), 2:370.

[63] Al-ʿAynī, *ʿIqd,* 4:178.

Prior to these events, at an unknown date, Ibn Daqīq al-ʿĪd composed a poem in which he criticized the ruling elite for neglecting the ulama. In this poem, Ibn Daqīq al-ʿĪd praised the knowledge and humility of the ulama, as opposed to the vanity of the people of governance. Ibn Daqīq al-ʿĪd called the ulama "the people of virtue" *(ahl al-faḍāʾil),* while he named the people of governance "the people of ranks" *(ahl al-marātib):*

1. As for the people of highest ranks in this world, to their mind the people of virtue are outcast.
2. They have no interest in protecting us from harm, nor do they have interest in improving our circumstances.
3. Indeed, they made us go lower and live in the dwellings of wild beasts, because we are not their kind, and because they neglect us.
4. I wish we could have let them know what we think of them, I wish they would have known
5. that they have comforts of ignorance and wealth, while we have the burdens of knowledge and the lack [of means].

Ibn Daqīq al-ʿĪd's poem, which was meant to be a political critique, received a poetic response from Ibn al-Baqaqī. Using the same vocabulary of Ibn Daqīq al-ʿĪd's poem, Ibn al-Baqaqī criticized him harshly:

1. Where are the highest ranks in this world? He who possesses knowledge is not among them.
2. There is no doubt that they have their good fortune, and that they and their kind have no interest in helping the likes of us.
3. They are the wild beasts and we are the civilized people. Our wisdom will lead them to wherever we want; while all they can say is "yes."
4. Only neglect from their part will keep us separated from them, because their passionate love is lacking.
5. We have the comforts of knowledge and the lack [of means], while they have the burdens of ignorance and servants.[64]

When Ibn al-Baqaqī's case was rejected at Ibn Daqīq al-ʿĪd's court, an anonymous enemy urged a poet by the name of Shihāb al-Fazzārī to write a poem to the Maliki judge. Al-Fazzārī wrote: "Tell the Maliki judge, the blessed, the revealer of all things ambiguous and obscure/Do not neglect the heretic, and treat him as a Muslim should." Ibn al-Baqaqī wrote to the Maliki judge from his prison cell:

[64] Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:182; al-ʿAynī, *ʿIqd,* 4:182–83. The poems are quoted also in Ibn Daqīq al-ʿĪd's biography, written by al-Subkī. Al-Subkī, *Ṭabaqāt,* 9:215. Ibn al-Baqaqī's poem is quoted out of context, and hence improperly described in: Khālid Ibrāhīm Yūsuf, *Al-Shiʿr al-ʿArabī Ayyām al-Mamālīk wa-Man ʿĀṣarahum Dhawī al-Sulṭān* (Beirut, 2003), 479.

"You, who compelled me to obey and put on a dress, whose touch is as pleasant as the touch of a snake/You prepared for me chain-mail, whose weaving is very tight, and I am forced to tear its links with arrows."[65] Not only a prolific poet,[66] Ibn al-Baqaqī inspired others to write about him in verses. His predicament was documented by Ibn Dānyāl (d. 710/1310) in the following verses: "The hero al-Baqaqī thinks that he will escape the clutches of the Maliki/indeed, the Maliki will hand him over soon to the Mālik (i.e., God)."[67]

Was Ibn al-Baqaqī the poet behind the dhimmi's question, as only al-Subkī suggested? The biographers and historians did not connect the poem with Ibn al-Baqaqī, but with al-Sakākīnī. Still, al-Subkī's suggestion that Ibn al-Baqaqī's was the author of the dhimmi's question is not far-fetched. Given the abundant evidence in the biographical sources of his poetic activity on the one hand, and his unconventional "heretical" views on the other, Ibn al-Baqaqī is a very likely candidate to have been this anonymous poet: he was bold enough to defy Sunni convictions and standards for proper religious conduct, and he certainly possessed both the poetic skills and the mischievous character to assume the identity of a dhimmi, and to pose a tricky theological question to the smug Sunni ulama whom he so much despised. Ibn al-Baqaqī's attraction to logic and philosophy, although not specifically to Muʿtazilism, established another linkage between him and the dhimmi's question. In terms of poetic skills, the ability to say things with tongue in cheek, and his overall unconventional personality, Ibn al-Baqaqī is a more likely candidate to be the poet behind the dhimmi's question than al-Sakākīnī. When taken at face value, the dhimmi's question is an utterance of a Muʿtazili conviction. As such, both Ibn al-Baqaqī and al-Sakākīnī are likely candidates to have composed it. However, there is no way to determine which of the two is the author, and that is the meaning of al-Subkī's hesitation.

The Envy of Scribes

The dhimmi's question received responses from six ulama in Cairo and Damascus. The six responses (including a shorter version of Ibn Taymīyah's response) were collected by al-Subkī, who cited them in the biographical entry of ʿAlāʾ al-Dīn

[65] Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:183; al-Maqrīzī, *Sulūk,* 2:351. I use here al-Maqrīzī's version, which is more comprehensible. See also: ʿAlī Ṣāfī Ḥusayn, *Ibn Daqīq al-ʿĪd Ḥayātuhu wa-Dīwānuhu* (Cairo, 1960), 183.

[66] For a two-verse love poem by Ibn al-Baqaqī, see: Jamāl al-Dīn Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Al-Dalīl al-Shāfī ʿalá al-Manhal al-Ṣāfī,* ed. Fahīm Muḥammad Shaltūt (Cairo, 1998), 1:87 (biography no. 304). For more poems, see: Muḥammad ibn Shākir al-Kutubī, *Fawāt al-Wafayāt wa-al-Dhayl ʿalayhā,* ed. Iḥsān ʿAbbās (Beirut, 1973), 1:152–53 (biography no. 57); al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 8:103–4 (biography no. 1238); idem, *Aʿyān al-ʿAṣr,* 1:356–59 (biography no. 182).

[67] Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:182; al-Ṣafadī, *Al-Mukhtār min Shiʿr Ibn Dānyāl,* 169.

al-Bājī (d. 714/1314). Al-Bājī, a respectable Shafiʿi scholar, was credited for his immense knowledge of Ashʿari *kalām,* and his skills in public debates.[68] Apart from al-Bājī's and Ibn Taymīyah's, al-Subkī cites the poems of Nāṣir al-Dīn al-ʿAsqalānī (d. 730/1330), Ibn al-Labbān (d. 749/1348), Najm al-Dīn al-Ṭūsī (whom I identified as Ibn al-Rifʿah) (d. 710/1310),[69] and ʿAlāʾ al-Dīn al-Qūnawī (d. 729/1329). This cluster of poems, recorded in al-Subkī's *Ṭabaqāt,*[70] addresses the dhimmi's question directly. These six poems were probably composed soon after the circulation of the dhimmi's question; however there is no indication as to the exact year in which they were written. It is safe to assume that the poems were composed before the year 710/1310, the year in which Ibn al-Rifʿah died. Ibn Taymīyah's poem was completed on the 3 Dhū al-Ḥijjah 712/1 April 1312.[71]

From the few background details which al-Subkī provides in the preface of this cluster of poems, we can determine with certainty that there was no open debate between Ibn al-Baqaqī and any of the above-mentioned ulama. Such a high-profile public debate would have been recorded in the sources. Furthermore, the uncertainty about the identity of the poet in the contemporary sources suggests that the dhimmi's question was circulated orally without being ascribed to a specific author. Still, the infrequent clues which al-Subkī occasionally inserts between the poems help us reconstruct the following narrative: When the poetic question of the dhimmi (composed by either an anonymous Shiʿi-Muʿtazili,[72] or the *zindīq* Ibn al-Baqaqī) started circulating in Cairo and Damascus, it was obvious that the author meant "to defame the Divine Law" *(al-ṭaʿn ʿalá al-sharīʿah).* Al-Subkī continues: "As a result, the most senior (or prestigious) ulama from Egypt and Syria were enthusiastic to respond to his poem in kind, through poems" *(jawābihi*

[68] Al-Subkī, *Ṭabaqāt,* 10:353–54.

[69] Al-Subkī, *Ṭabaqāt,* 9:25. The editors of the *Ṭabaqāt* do not identify Najm al-Dīn al-Ṭūsī at all. I succeeded in associating Najm al-Dīn al-Ṭūsī with Ibn al-Rifʿah based on the work of al-Murtaḍá al-Zabīdī, who refers to al-Najm Aḥmad ibn Muḥammad al-Ṭūsī as one of the ulama who responded to "Āmin al-Baqtī's" poem. Al-Murtaḍá al-Zabīdī, *Itḥāf al-Sādah,* 2:279. This clue led me to Ibn al-Rifʿah's biography in the biographical dictionaries. Also, in his poem, Ibn al-Rifʿah inserts a few hints about his identity. Ibn al-Rifʿah identifies himself as Aḥmad of Ṭūs (verse 93). Then he inserts the word *rifʿah* (high position) when he refers to his shaykh (verse 97). See below, Appendix II, Part E.

[70] Al-Subkī, *Ṭabaqāt,* 10:352–66. There are two additional poems which appear in a fifteenth-century Hanafi *kalām* manual and a fourteenth-century *adab* compilation. See below, Appendix III.

[71] This information appears in the colophon of the manuscript which Serajul Haque used for his article. Serajul Haque, "A Poem of Imām Ibn Taymiyya," 2. In Dhū al-Qaʿdah 712/February 1313 Ibn Taymīyah arrived in Damascus after his four-year stay in Egypt. Yahya Michot, *Muslims under Non-Muslim Rule: Ibn Taymiyya* (Oxford, 2006), 163.

[72] Al-Subkī attributed the dhimmi's question to a Muʿtazili who concealed his identity. Al-Subkī, *Ṭabaqāt,* 10:352.

naẓman).[73] In other words, the ulama composed their poems in order to rebut the outrageous words of a heretic.

However, the case study of the dhimmi's question and the responses it evoked necessitate a comprehensive, broad-based examination: the place of poetry in intellectual activities in Mamluk Cairo and Damascus. Composing poetry was always considered a desirable trait for a scholar in the eyes of the learned elite, from the early days of the Umayyad caliphate. The famous poet and scholar Ibn Rashīq (d. 456/1063–64 or 463/1070–71) dedicated a chapter in his *Kitāb al-ʿUmdah* to the poems written by caliphs, *quḍāh,* and *fuqahāʾ,* while indicating that the famous Muḥammad ibn Idrīs al-Shāfiʿī (d. 204/820) "was one of the finest of all men who were subjected to the temptations of poetry."[74] Similar remarks about the composition of poetry appear in the biographical dictionaries from the Mamluk period. A typical example, one of many, is the biography of a fourteenth-century Shafiʿi scholar. This scholar's detailed biography in al-Sakhāwī's (d. 902/1497) *Al-Ḍawʾ al-Lāmiʿ* lists the names of several poems he composed on various topics, among which is *Al-Manẓūmah al-Lāmīyah fī al-Jabr* (a didactic verse with the rhyme letter *lām* which discusses the doctrine of fatalism).[75]

We take the entry of al-Bājī in al-Subkī's *Ṭabaqāt* as another typical example: biographical entries of ulama contain hundreds of verses composed either by the subject of the biographical entry, or by his colleagues and friends. The poems cover a vast range of topics: they can be poems lamenting a scholar or praising his virtues, and also poems that the scholar himself composed for the purpose of teaching. The poetic activity of the ulama cannot be ignored, both because of the sheer volume of this poetry and its popularity, especially in Cairo and Damascus.[76] Michael Chamberlain's observation on the poetic ambitions of the intellectual elite hits the mark: "The aʿyān valued poetry highly as can be seen by the vast

[73] Ibid., 353.

[74] Abū ʿAlī al-Ḥasan Ibn Rashīq al-Qayrawānī, *Al-ʿUmdah,* ed. Muḥammad Muḥyī al-Dīn ʿAbd al-Ḥamīd (Cairo, 1353/1934), 1:24. Al-Shāfiʿī's poetry is cited in the bibliographical sources, and was also preserved in a *dīwān. Dīwān al-Imām al-Shāfiʿī,* ed. Īmān al-Biqāʿī (Beirut, 1421/2000). The thirteenth-century Jamāl al-Dīn al-Qifṭī describes al-Shāfiʿī's poetry as "splendid poetry of the jurisprudents" *(shiʿr ajall min shiʿr al-fuqahāʾ).* Jamāl al-Dīn ʿAlī ibn Yūsuf al-Qifṭī, *Al-Muḥammadūn min al-Shuʿarāʾ wa-Ashʿāruhum,* ed. Riyāḍ ʿAbd al-Ḥamīd Murād (Damascus, 1975), 193.

[75] Shams al-Dīn Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ,* ed. ʿAbd al-Laṭīf Ḥasan ʿAbd al-Raḥmān (Beirut, 1424/2003), 2:138 (biography no. 1331).

[76] This point is emphasized in Geert van Gelder's comprehensive discussion on didactic verses in Arabic. Geert Jan van Gelder, "Arabic Didactic Verse," in *Centres of Learning: Learning and Location in Pre-Modern Europe and the Near East,* ed. Jan Willem Drijvers and Alasdair A. MacDonald (London- New York- Köln, 1995), 106.

quantities of it quoted in the chronicles and biographical dictionaries, and many shaykhs tried to attain some distinction in it."[77]

Still, the belletrists and philologists did not think highly of the poems written by the ulama, because these poems were contaminated by legal jargon. Even when a jurist tried to write a proper *qaṣīdah* while sticking to the prosodic conventions, his language revealed his identity, as is illustrated in the following anecdote conveyed by Ibn Khaldūn (d. 808/1406) in his *Al-Muqaddimah*. According to Ibn Khaldūn, one of his colleagues tried to trick the leading philologist of his times. He recited a *qaṣīdah* which began with the conventional *nasīb:* "I did not know when I stood near the traces of the abandoned dwelling places/what the difference *(mā al-farq)* was between the new ones and those that were almost effaced." The philologist immediately recognized the poem as the work of a jurist, because the phrase *mā al-farq* was a juridical expression *(min ʿibārāt al-fuqahāʾ)* and not proper Arabic speech and style *(wa-laysat min asālīb kalām al-ʿarab).*[78] The term "the poetry of the jurisprudents" *(shiʿr al-fuqahāʾ)* and the phrase "composed poetry in the manner of the jurisprudents" *(qāla shiʿr ʿalá ṭarīqat al-fuqahāʾ)* were derogatory when used by a literary epicure like Ibn Khaldūn.[79] In the context of the biographies of the ulama, *shiʿr al-fuqahāʾ* was an indication of a desirable skill for scholars.[80]

Ibn Khaldūn's illuminating anecdote illustrates that the ulama's compositions were never regarded as real poetry. Indeed, the ulama may have not succeeded in composing *shiʿr* in the sense of "genuine poetry" or high literary poetry.[81] However, they certainly were skilled enough to compose instrumental verses and even full-scale poems "for the sake of providing explicit information on a particular

[80] Al-Qifṭī, *Al-Muḥammadūn min al-Shuʿarāʾ,* 193.

[81] I adopted the definition of *shiʿr* as "genuine poetry" from Wolfhart Heinrichs' defining article "Literary Theory: The Problem of Its Efficiency," in *Arabic Poetry: Theory and Development,* ed. Gustav E. von Grunebaum (Wiesbaden, 1973), 26–27. Heinrichs states: "in many cases it is impossible to keep 'genuine' and didactic poetry apart."

branch of knowledge."[82] These were the mnemonic textbooks in the madrasahs;[83] they were often branded as *qaṣīdah,* but not in the classical sense of the term. Instead of *shiʿr,* the ulama wrote *naẓm* in a variety of scholarly fields, and therefore the term *manẓūmah* was more appropriate.[84] The authors of the *manẓūmāt* had the liberty to compose poems on any theme they desired, and their poems were also free from the strict conventions of writing a proper *qaṣīdah.* Sometimes the didactic poem disguised itself as a "genuine poem,"[85] but mostly the poems were direct and to the point, as is the case of the responses to the dhimmi's question.

Were the responses to the dhimmi's question indeed recited as part of a theological debate? Probably not, but one cannot ignore two clues which imply that these poems were composed orally, and recited to the disciples of the specific *ʿālim* who composed them. One of al-Bājī's students testified that al-Bājī's students overheard their teacher recite the poem to himself. Did al-Bājī recite the poem while composing it, or after completing it? Perhaps he was preparing himself for a public recitation of the poem? This we cannot know. But we have Ibn Ḥajar's description of Ibn Taymīyah. Ibn Ḥajar derived this description from previous sources. According to Ibn Ḥajar, when Ibn Taymīyah was informed *(waqafa ʿalá)* of the dhimmi's question, "he crossed his legs and responded in a *majlis*—responded in one sitting—without getting up, in a 119-verse poem, which begins:

---

[82]Van Gelder, "Arabic Didactic Verse," 117. Studying the various branches of poetry was an essential part of the curriculum of the *ʿulūm al-ʿarabīyah,* the study of the Arabic language. Thus, the students were required to study *ʿarūḍ* (metrics), *qawāfī* (rhymes), and *ṣunʿat al-shiʿr* (prosody). Makdisi, *The Rise of Colleges,* 79.

[83]Makdisi mentions the importance of didactic verses in grammar lessons. Makdisi, *The Rise of Colleges,* 80–91.

[84]Geert Jan van Gelder, "Naẓm," *EI2,* 12:668. The term *shiʿr taʿlīmī,* which is used in several modern studies to denote didactic verses, is inaccurate, as van Gelder persuasively demonstrates in "Arabic Didactic Verse." This term is a translation of the English "didactic poetry," and is not drawn from Arabic sources. Van Gelder, "Arabic Didactic Verse," 104. For two important discussions on didactic verses, which use all the same the term *shiʿr taʿlīmī,* see: Ṣafāʾ Khulūṣī, "Didactic Verse," *Religion, Learning and Science in the ʿAbbasid Period,* ed. M. J. L. Young, J. D. Latham, and R. B. Serjeant (Cambridge, New York, Port Chester, Melbourne, Sydney, 1990), 498–509; Yāsīn al-Ayyūbī, *Āfāq al-Shiʿr al-ʿArabī,* 467–85.

[85]See, for instance, the traditional amatory prologue *(nasīb)* in Ibn Qayyim al-Jawzīyah's 6000-verse didactic poem. Ibn Qayyim al-Jawzīyah, *Al-Kāfiyah al-Shāfiyah fī al-Intiṣār lil-Firqah al-Nājiyah,* ed. ʿAbd Allāh ibn Muḥammad al-ʿUmayr (Riyadh, 1416/1996), 31–34 (verses 1–52). The fine line between "genuine" poetry and didactic versification is well reflected in Abū al-ʿAlāʾ al-Maʿarrī's (d. 449/1058) *Luzūmīyat.* A good example is his poem on predetermination. Khulūṣī, "Didactic Verse," 504. Another example is Ibn al-Wardī's (d. 749/1349) poem. Ibid., 505–6. See also van Gelder, "Arabic Didactic Verse," 111.

"Your question, hey you!"[86] So these poems were definitely recited orally to the ulama's disciples.

The six responses of the ulama served several purposes and satisfied several needs apart from their obvious didactic purpose: prominent scholars were expected to defend the pillars of Sunni Islam, which were severely attacked by a persuasive heretic. This defense should be as eloquent as possible. Since the attack was in verse, the defense was likewise. In this respect, the dhimmi's question dictated the meter and the rhyme: because the poem was written in the *ṭawīl* meter (considered a respectable meter),[87] and rhymed with *tī* throughout, all the six respondents retained the same prosodic structure. Last but not least, the dhimmi's question provided the six respondents with an opportunity to air their poetic skills and to boast about them.

We further cannot exclude the possibility that these poems also reflect the scholars' inclination to compete with each other. Al-Subkī himself and the scholars whose poems he cited came from the same milieu: they either permanently lived in Cairo or commuted between Damascus and Cairo. The biographical sources reveal extensive interaction between them. For example, al-Bājī taught al-Subkī's father the art of debating; Ibn Taymīyah (so we are told by al-Subkī) highly respected al-Bājī, and refrained from speaking in his presence; Ibn al-Labbān, a colorful although eccentric Sufi, resided in Cairo and studied *fiqh* from Ibn al-Rifʿah; Ibn al-Rifʿah, a prominent scholar with a reputation of never having lost a public debate, was once appointed as Ibn Taymīyah's opponent in a public debate; Nāṣir al-Dīn al-ʿAsqalānī, better known as Shāfiʿ ibn ʿAlī, a well-known man of letters and a historian with a reputation as a competent poet, corresponded regularly with al-Qūnawī; al-Qūnawī was a chief judge in Cairo, and maintained an amiable relationship with Ibn Taymīyah. In brief, these scholars were well acquainted with each other, often debated one another publicly, and occasionally wrote poetry.[88]

This close-knit relationship among the six scholars suggests that the scholars were familiar with each other's literary yield. At least, they were all familiar with al-Bājī's response. According to al-Subkī, al-Bājī was the first of the senior scholars in Cairo and Damascus who took the challenge of responding to the dhimmi's question. Al-Bājī's response was taken by his contemporaries as an example, and so other scholars participated in the endeavor to rebut the dhimmi's question. Al-Subkī emphasizes that all six scholars drew upon their poetic skills, and each

[86] Ibn Ḥajar, *Al-Durar,* 1:94 (biography no. 409).

[87] *Ṭawīl* is one of the four meters which were of frequent usage in the classical pre-Islamic *qaṣīdah*s. O. Wright, "Music and Verse," in *Arabic Literature of the End of the Umayyad Period,* ed. A. F. L. Beeston et al. (Cambridge, 1983), 456–57.

[88] For the biographies and references to the biographical sources, see Appendix I.

wrote a poem according to his rank or level *(ʿalā ṭabaqātihim).*[89] This phrase may indicate that the scholars who belonged to various groups participated in the endeavor to rebut the dhimmi's claims. On the other hand, it may also indicate that, like in many other scholarly areas, the ulama who wrote poetry were evaluated, graded, and ranked by their peers. We find numerous references which rank the muse of poetry of this scholar or another in al-Sakhāwī's biographical dictionary. Poetry or *naẓm* is ranked by al-Sakhāwī as good *(ḥasan or jayyid),* acceptable or satisfactory *(maqbūl),* or mediocre *(wasaṭ).* [90] In the same vein, a scholar can be ranked "at a mediocre level in poetry…and at a high level in philosophy" *(wa-huwa fī al-shiʿr mutawassiṭ al-ṭabaqah…wa-kāna qawī al-ṭabaqah fī al-falsafah).*[91]

When al-Subkī remarks that the people of that time took al-Bājī's response and arranged it or composed it again according to their ranking in composing poetry *(fa-naẓamūhu ʿalá ṭabaqātihim fī al-naẓm),* he means that the ulama made their best efforts, and that the outcome was dependent upon the poetic skills of each scholar. Al-Subkī, however, does not rank the poems. He is more interested in the fact that the six had a unanimous response *(wa-al-kull mushtarikūn fī jawāb wāḥid),* and that al-Bājī's response represented "the essence of the theology of the Sunnis" *(ḥāṣil kalām ahl al-sunnah).*[92] Al-Subkī did not appreciate al-Bājī's poetry in general, but he considered the content of this particular poem good. Nevertheless, there is no way of telling which of the six responses was al-Subkī's favorite.[93]

[89] Al-Subkī, *Ṭabaqāt,* 10:354.

[90] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 1:23 (biography no. 49). Ibn al-Qurdāḥ's (d. 841/1438) biography is a case in point. Ibn al-Qurdāḥ was a talented musician, who played the dulcimer *(sanṭīr)* and the lute *(ʿūd).* Al-Sakhāwī remarks: "He was skilled in many fields of art: he composed poetry and wrote prose and versified mediocre poetry and below that" *(wa-ḍaraba fī kathīr min al-funūn bi-naṣīb wa-naẓama wa-nathara al-naẓm al-wasaṭ wa-mā dūnahu).* Mediocre poetry or versification *(naẓm wasaṭ),* here and elsewhere, is actually categorized as good. Al-Sakhāwī also says about Ibn al-Qurdāḥ: "He composed poetry, which sometimes was perceived as mediocre and acceptable, while most of it was silly and inferior *(wa-kāna rubbamā yudraku minhu al-wasaṭ al-maqbūl wa-al-kathīr minhu safsāf).*" Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 2:125 (biography no. 1288). Ibn Taymīyah's poetry was also marked as "mediocre" *(shiʿr wasaṭ),* but I doubt whether this term means that his poetic skills were bad, as Caterina Bori claims in her comprehensive discussion of Ibn Taymīyah's biography. Caterina Bori, *Ibn Taymiyya: una vita essemplare: Analisi delle fonti classiche della sua biografia,* Supplemento no. 1 alla *Rivista degli Studi Orientali* 76 (Roma-Pisa, 2003), 70–72.

[91] Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 8:197 (biography no. 1373 of al-Nahrājūrī the poet).

[92] Al-Subkī, *Ṭabaqāt,* 10:354.

[93] Al-Subkī's father heard a poem by al-Bājī whose topic was the divine attributes according to the Ashʿari doctrine. The poem goes like this: "His life and knowledge, potency and will, His hearing and seeing and word, His eternal existence. These are the eternal attributes of God's essence, praised be He, according to al-Ashʿarī, the most learned and pious." Al-Subkī comments: "the

To my mind, al-Qūnawī's poem, which is the most impressive of all six responses, has the highest poetical quality.

Theology in Verses

In examining the form and content of the dhimmi's question and its responses, I considered all the poems as parts of a single literary compendium. This compendium was created by different poets, who zealously retained the meter and rhyme of the poem which ignited this literary activity. The direct responses to the dhimmi's question form a magnificent although eclipsed work of a debate *(munāẓarah)* in verses,[94] with conspicuous common features in terms of language and argumentation. We should consider this poetic unit as an eclipsed *munāẓarah* simply because it does not actually reflect a dialogue between two or more disputants. This compendium is merely a single question and several responses. In this respect, it would have been much more enlightening to read the dhimmi's response to the responses of the ulama, had there been one. Furthermore, this poetic compendium cannot be classified as a dispute poem because it was written by several authors.[95]

All the poems were indeed written as responses to the dhimmi's question, because all six poems specifically address the literary character of the dhimmi.[96] These direct addresses to the dhimmi mostly appear in the beginning of the poems, but also as the poems proceed and reach their climax. Al-Bājī refers to the dhimmi as "you scholar" *(ayā ʿāliman).* Shāfiʿ ibn ʿAlī refers to the object of his poem as "O dhimmi" *(yā dhimmī),* and so does Ibn al-Rifʿah. Ibn Taymīyah rudely refers to the addressee of his poem as "hey, you!" *(yā hādhā).*[97] Apart from

---

words of al-Shāṭibī (d. 790/1388) in his poem rhyming in *rāʾ* are more elegant or nicely put than al-Bājī's." Al-Subkī, *Ṭabaqāt,* 10:343.

[94]On the importance of *munāẓarah* in theological literature, see: E. Wagner, "Munāẓara," *EI2,* 7:565–68; G. J. H. van Gelder, "Debate Literature," *Encyclopedia of Arabic Literature,* ed. Julie Scott Meisami and Paul Starkey (London and New York, 1998), 1:186. An analysis of a fully fledged literary *munāẓarah* in prose appears in: Livnat Holtzman, "Debating the Doctrine of Jabr" (forthcoming, see n. 21). For the art of debating and the place of *munāẓarah* in intellectual activity in Mamluk society, see: Michael Chamberlain, *Knowledge and Social Practice,* 164–65; Makdisi, *The Rise of Colleges,* 109–11, 128–29.

[95]Cf. Wolfhart Heinrichs, "Rose versus Narcissus: Observations on an Arabic Literary Debate," in *Dispute Poems and Dialogues in the Ancient and Mediaeval Near East,* ed. G. J. Reinink and H. L. J. Vanstiphout (Leuven, 1991), 180–81.

[96]All the references to the poems are from al-Subkī's *Ṭabaqāt*. For a complete translation of the poems, see Appendix II.

[97]Al-Subkī, *Ṭabaqāt,* 10:352 (Al-Bājī's Response, verse 1); ibid., 10:357 (The Response of Shāfiʿ ibn ʿAlī, verse 2); ibid., 10:359 (The Response of Ibn al-Rifʿah, verse 1); ibid., 10:354 (The Response of Ibn Taymīyah, verse 1).

these direct references, all the poems describe the dhimmi and his viewpoint. They mock, reproach, and try to educate the dhimmi, and finally they express their desperation and complete disgust with him and his views. Three references to the dhimmi's stubbornness are echoes of the descriptions of the heretics in the Quran.[98] In his poem, the dhimmi claimed that God blocked the entrance leading to the true faith for him. Three of the respondents chose to directly answer his claim, using his own words.[99]

Among the six responses, Ibn al-Labbān's presentation of the dhimmi is the richest. In the course of four verses, Ibn al-Labbān portrays the dhimmi as an ignoramus, who refuses to be persuaded by rational argumentation; but also as a hypocrite, who uses the excuse of predetermination to justify his improper deeds and false convictions. This hypocrite begs God to give him guidance, when he is not interested in it in the first place. His question does not reflect genuine perplexity and a sincere request for help, but is an artifice *(ḥīlah)*, which is meant to allow him to stick to his heretical convictions. Ibn al-Labbān, however, is willing to be generous with the dhimmi, and he indeed hopes that he will receive God's grace and mercy.[100]

But did the six ulama indeed consider their rival to be a dhimmi (a Jew, a Christian, etc.)? Apparently, even though the response to the dhimmi's question was unanimous, as al-Subkī claims, each response was custom-made for a different persona. Each response is dependent on the way the scholars interpreted the extreme fatalism which the dhimmi expressed in his question. Also, some of the scholars took the dhimmi's question at face value, and did not try to remove the fatalistic mask of the dhimmi's true identity. Here, the scholars had several possibilities: either they perceived the dhimmi the way he introduced himself in his poem, that is as a non-Muslim who seeks advice from Muslim scholars, or they perceived the dhimmi as a Muslim, who disguises himself as a dhimmi. As a Muslim, the dhimmi is either a Muʿtazili-Shiʿi, who upholds free will and opposes fatalism, or he is a fatalist. As an upholder of fatalism, it is somewhat difficult to pinpoint the dhimmi's affiliation to a specific theological trend.

Al-Bājī and Shāfiʿ ibn ʿAlī direct their responses to a Muʿtazili, because their addressee does not understand the essence of the belief in predetermination,[101] and he presumptuously assumes that he is a creator whose actions are not pre-

[98] Ibid., 10:354 (The Response of Ibn Taymīyah, verse 1); ibid., 10:364 (Ibn Rifʿah's Response, verse 85); ibid., 10:365 (Al-Qūnawī's Response, verse 5).

[99] Ibid., 10:352 (The Dhimmi's Question, verse 3); ibid., 10:352 (Al-Bājī's Response, verse 14); ibid., 10:364 (The Response of Ibn Rifʿah, verse 78); ibid, 10:366 (Al-Qūnawī's Response, verse 8).

[100] Ibid., 10:357–58 (Ibn al-Labbān's Response, verses 5–8).

[101] Ibid., 10:353 (Al-Bājī's Response, verse 12).

determined.[102] Ibn al-Labbān, al-Qūnawī, and Ibn al-Rifʿah, on the other hand, direct their responses to a rival who is outside the conventional circle of Islamic theology. Ibn al-Labbān's dhimmi is portrayed as an unconventional Muslim sinner, in the image of Ibn al-Baqaqī, who is pleased with his heresy. Ibn al-Labbān in his turn encourages him to repent. This summons to repent can only be directed to a Muslim.[103] According to al-Qūnawī, the dhimmi is a non-Muslim (he refuses to utter the Muslim profession of faith) with extreme fatalistic tendencies (he rejects the notion that man has the ability to act).[104] Ibn al-Rifʿah's dhimmi is also a Muslim sinner, whose arguments are sophistic.[105] The interesting turn in Ibn al-Rifʿah's attitude towards the dhimmi takes place after the middle of his long response, where he refers to his opponent as a sinner of dubious Jewish origin: he was a historical Jew in times immemorial prior to the Prophet's message. Ibn al-Rifʿah warns the dhimmi that his stance, as reflected in his question, raises the suspicion that he still has Jewish tendencies. If the dhimmi wishes to be considered a Muslim—adds Ibn al-Rifʿah—then he should follow the Islamic shariʿah.[106] Ibn Taymīyah addresses an extreme fatalist, who uses the excuse of predetermination in order to proceed with his sinful life. This position calls to mind Ibn Taymīyah's harsh attacks on Ibn ʿArabī's (d. 638/1240) followers, but also his wide-ranging polemics with the Ashʿaris.[107] Ibn Taymīyah's dhimmi is, then, either an Antinomian Sufi, or an Ashʿari, or both.

Following the conventions of the medieval *munāẓarah,* the six ulama insult the dhimmi in the course of their responses. Al-Qūnawī, for example, doubts

[102] Ibid., 10:357 (The Response of Shāfiʿ ibn ʿAlī, verse 2).

[103] Ibid., 10:358 (The Response of Ibn al-Labbān, verses 16, 19, 20).

[104] Ibid., 10:366 (Al-Qūnawī's Response, verse 14).

[105] Ibid., 10:364 (The Response of Ibn al-Rifʿah, verse 90).

[106] Ibid., 10:362–63 (The Response of Ibn al-Rifʿah, verses 61, 65, 67–68). In verses 67–68 Ibn al-Rifʿah raises the argumentation of *naskh* (the abrogation of Quranic verses), which was a fixed ingredient in the polemic between Muslims and Jews. A clarifying example appears in: Abū ʿAbd Allāh Muḥammad ibn Aḥmad al-Qurṭubī, *Al-Jāmiʿ li-Aḥkām al-Qurʾān,* ed. Sālim Muṣṭafá al-Badrī (Beirut, 1420/2000), 2:44 (interpretation of Q. 2:106). See also: Camilla Adang and Sabine Schmidtke, "Polemics (Muslim-Jewish)" *Encyclopedia of Jews in the Islamic World*, ed. Norman A. Stillman (Leiden, 2010)
Brill Online http://www.brillonline.nl/subscriber/entry?entry=ejiw_COM-0017750 (Last accessed March, 2011).

[107] From the vast literature on Ibn Taymīyah and his rivals, suffice it to mention: Ibn Taymīyah, "Fī al-Iḥtijāj bil-Qadar," *Majmūʿat al-Rasāʾil al-Kubrá,* ed. Muḥammad Rashīd Riḍā ([Cairo], [1966]), 2:97–156. The epistle appears also in *Majmūʿat al-Fatāwá* (1998) 8:183–221. For an analysis of Ibn Taymīyah's epistle, see: Fritz Meier, "The Cleanest about Predestination: A Bit of Ibn Taymiyya," in *Essays on Islamic Piety and Mysticism,* trans. John O'Kane with the editorial assistance of Bernd Radtke (Leiden, 1999), 309–34. Translation of idem, "Das Sauberste über die Vorbestimmung," *Saeculum* 32 (1981): 74–89.

the dhimmi's ability to understand his response. He declares that he could have provided a much more elaborate and methodical response, but he knows that his opponent is incapable of understanding the subtleties of the kalāmic method. To that he apologetically adds that since his purpose was to persuade his opponent, his response is but a summary.[108] This apology of al-Qūnawī may hint that he was familiar with the much longer responses of his peers, and that he felt obligated to explain the brevity of his response. Ibn al-Labbān's attack on his opponent is less insulting: he refers to the deficiencies in the dhimmi's argumentation, and his lack of rational thinking. He also urges the dhimmi to get rid of his sophistic thinking.[109] Al-Bājī's attack on the dhimmi concentrates on the dhimmi's "tricks and snares" *(ḥabāʾil ḥīlati)*, which is a common description of false methods of theological speculation.[110] Even Ibn al-Rifʿah, whose poem is the most patient and polite attempt to convince the dhimmi, mocks the latter's verses, calls them "invalid and absurd," and opines that the dhimmi should be flogged with a whip.[111]

As al-Subkī claimed, the essence of the ulama's response to the dhimmi was the traditionalist concept of *al-riḍā bi-al-qadar*, that is, being satisfied with God's predetermination. According to al-Subkī, al-Bājī's response and the subsequent responses had the following message: "Be satisfied with God's predetermination and not with the consequence or the outcome of that action. You should be satisfied with the action of predetermining, since it comes from God. As for the outcome of this action: well, it is divided into things you should be satisfied with, like faith, and things you are forbidden to be satisfied with, like unbelief."[112] This message, one might add, is repeated in each of the six responses. Al-Subkī's understanding of the kernel of all six responses is, of course, correct. We can, however, add several observations to his analysis.

Although all six responses basically reject the dhimmi's attempt to blame God for his being a heretic and to therefore be held unaccountable for his actions, each scholar tackled this concept from a different angle. As literary texts, not all the poems are interesting or captivating. However, each poem has its conspicuous theme. The shorter poems of al-Bājī and Shāfiʿ ibn ʿAlī, and Ibn al-Labbān's poem, are direct answers to the question. They lack metaphors and other literary devices, and are generally dull. The longer poems, however, are well-developed, rich with metaphors, allusions, and images. These poems widen the theoretical discussion using numerous examples in a variety of areas, from the history of the world's faiths to everyday life. All these examples are typical of theological trea-

[112] Ibid., 10:354.

tises in prose. Ibn Taymīyah's response, for example, gives a survey of heretical faiths, like the views of the philosophers and the Zoroastrians.[113] When explaining to the dhimmi that his claims are bound to shake the foundations of society, Ibn Taymīyah depicts a horrendous situation, in which acts of murder, highway robbery, corruption of rulers, etc., will be dismissed as the outcome of God's will and predetermination.[114] Al-Qūnawī's poem gives two everyday examples to corroborate his claim (quenching one's thirst is dependent on drinking water; one should not starve himself to death thinking that this death was predetermined). Al-Qūnawī concludes his words with two vivid and captivating metaphors (the ship and the carpet).[115] Ibn al-Rifʿah's magnificent piece concentrates on the creation of the world, the creation of the human race, and the human spirit.[116] Ibn al-Rifʿah also plants hints to his identity and inclination to Sufism.[117]

The ulama's six responses represent a typical mixture of fourteenth-century traditionalism and rationalism. The traditionalist position is reflected both by the frequent references to the concept of predetermination, and also by direct and indirect reference to the concepts of *fiṭrah* and divine guidance, which are embedded in the Quran and hadith. According to these intertwined concepts, Islam is the natural disposition of every human being, and God guides every human being as He pleases: to the correct path of Islam or to the deviant path of heresy.[118] The *fiṭrah* is an axial theme in Ibn al-Rifʿah's poem. According to Ibn al-Rifʿah, had the dhimmi eliminated the artificial thinking of *kalām,* and listened to the sound mind and followed the pure instincts God had granted him, he would have reached the correct answer to the question he had asked.[119] The same idea, in different variations, also appears in other responses.[120]

The rationalist Ashʿari position is reflected by the use of kalāmic argumentations, and more so, by using explicit references to the Ashʿari theory of *kasb,*[121]

[113] Al-Subkī, *Ṭabaqāt,* 10:355 (The Response of Ibn Taymīyah, verses 9–18).

[114] Ibid., 10:355–56 (The Response of Ibn Taymīyah, verses 20–29).

[115] Ibid., 10:366 (Al-Qūnawī's Response, verses 11, 15, 24, 25).

[116] Ibid., 10:360–62 (The Response of Ibn al-Rifʿah, verses 26–48).

[117] Ibid., 10:364–65 (The Response of Ibn al-Rifʿah, verses 95–98).

[118] For a recent discussion of the traditionalist concept of *fiṭrah,* see Livnat Holtzman, "Human Choice, Divine Guidance and the *Fiṭra* Tradition: The Use of Hadith in Theological Treatises by Ibn Taymiyya and Ibn Qayyim al-Jawziyya," in *Ibn Taymiyya and His Times,* ed. Yossef Rapoport and Shahab Ahmed (Karachi, 2010), 163–88. For references to the rich literature on this topic, see ibid., 184, n. 11.

[119] Al-Subkī, *Ṭabaqāt,* 10:361, 363 (The Response of Ibn al-Rifʿah, verses 44, 64–65).

[120] Ibid., 10:353 (Al-Bājī's Response, verse 5); ibid., 10:355 (The Response of Ibn Taymīyah, verse 19); ibid., 10:366 (Al-Qūnawī's Response, verse 10).

[121] This theory holds that the ability to perform an action does not exist in the human agent, until God creates this ability in him. The formula—God creates the ability to perform an ac-

as the ultimate tool for solving the problem of predetermination. The scholars emphasize that God creates the human action and the ability to perform the action. The human being acquires this ability, and then performs the action. The idea that the human being has a choice to act or to abandon the act also stands in the middle of the *kasb* theory. The scholars in general succeeded in dressing the fundamentals of *kasb* in a poetic garment, while maintaining the rhythmic tone of their poems. Al-Bājī presents the basic principle of *kasb* in the following words: "Both our actions and our essences are created by God. We do not create either of them, not really."[122] Another principle of *kasb* is stated well by Ibn al-Labbān: "God the All-Knowing created in the human being a choice between actions which entail God's satisfaction and His alienation. Through this [choice], God enabled the human being to perform what He predetermined for the human being; thus God's will always prevails."[123] Ibn al-Rifʿah specifically mentions *kasb* twice in his poem.[124] Apart from the *kasb* theory, the scholars refer to other subtle theological issues, like causality.[125] Ibn Taymīyah's poem, which indeed deserves special attention, is slightly at variance with the other poems, since it reflects Ibn Taymīyah's longtime adversity with the Ashʿaris, although not in the version that al-Subkī quotes. Rather, in the complete version of the poem, as it appears in *Majmūʿat al-Fatāwá,* Ibn Taymīyah used his response as a vehicle to indirectly criticize the Ashʿari concept of *kasb* and *ikhtiyār* (choice), and to promote his idea of real choice for the human being.[126]

Both traditionalism and rationalism are two sides of the same coin of highly theorized theology not meant for laymen. But since the six ulama share a common didactic purpose to educate both the "dhimmi" and their lay audiences, they also offer some advice (which the dhimmi initially requested in his poem). In addition to asking the dhimmi to listen attentively to their responses, and promis-

tion, and the human agent acquires *(kasaba)* the ability from Him—was glossed and refined by Ashʿari theologians in order to prove that the human agent's actions are not his, but also were not forced upon him. The *kasb* theory was perceived by its proponents as a golden mean between the Muʿtazili concept of free will, with the human agent as the creator of his actions, and the traditionalist position, which negated any possibility of the human agent being a creator of his actions. A definitive article on *kasb* is: Michael Schwarz, "Acquisition *(kasb)* in Early Kalām," in *Islamic Philosophy and the Classical Tradition: Essays Presented by His Friends and Pupils to Richard Walzer on his Seventieth Birthday* (Columbia, SC, 1972), 355–87. For more references, see: Livnat Holtzman, "Human Choice," 183, n. 3.

[122] Al-Subkī, *Ṭabaqāt,* 10:353 (Al-Bājī's Response, verse 6).

[123] Ibid., 10:358 (The Response of Ibn al-Labbān, verses 12–13).

[124] Ibid., 10:360–61 (The Response of Ibn al-Rifʿah, verses 17–18, 33–34).

[125] Ibid., 10:355 (The Response of Ibn Taymīyah, verses 10–11); ibid., 10:358–59 (The Response of Ibn al-Labbān, verses 9–11, 20, 26); ibid., 10:366 (Al-Qūnawī's Response, verses 9, 14).

[126] See Appendix II, B, Part 2 (a few more verses by Ibn Taymīyah).

ing him that if he follows their line of thinking he will reach the peace of mind that he is seeking,[127] the ulama mainly guide the dhimmi through the etiquette of religious discourse. They urge him to listen to their voice, which is the true voice. "Stop using this language of protesting!" suggests Ibn al-Labbān.[128] "You should be pleased with that predetermination," advises al-Bājī, "Abandon all your straying doubts and embrace the most apparent proof!"[129] Ibn Taymīyah's suggestions are similar: "Do not abandon the apparent truth. Do not turn your back to the upright idea."[130] The ulama's direct approach to the dhimmi represents a mixture of self-confidence and disdain. Each scholar is convinced that his advice is the ultimate guide for attaining the truth, and the dhimmi's success in reaching this truth is guaranteed (provided that he follows the scholar's advice). All six responses represent the practical aspect of theology; however, al-Qūnawī's apology is by far the most pragmatic and realistic of the six: knowing that the dhimmi will not listen to his sage advice, let alone understand it, al-Qūnawī decides to issue a brief response, and not to waste his time on the lost soul of a dhimmi.

Conclusion

The ample anecdotes in the biographical sources indicate that composing poetry was one of the favorite and most prestigious activities of the Damascene and Cairene ulama. The historian al-Ṣafadī, a distinguished poet himself, refers to didactic poems about grammar and prosody, but also about *fiqh* and the Quran, as a remarkable achievement, an indicator of the ulama's linguistic skills.[131] The ulama's six responses to the dhimmi's question indeed represent an important aspect of the intellectual life in Mamluk Damascus and Cairo.

The case-study of the dhimmi's question—although we have only partial and scanty textual evidence—demonstrates how an intellectual activity is ignited, and how a fashionable trend is established. First, a riddle in rhyme was orally circulated. Perhaps several students of Islamic law in Mamluk Cairo excitedly and amusingly recited the dhimmi's question in one of the *majālis,* without knowing how to correctly answer the paradox it posed. Perhaps laymen repeated the catchy short poem of the dhimmi. Finally, the dhimmi's question reached al-Bājī. The horrified scholar decided to confront the controversial poem, and composed his response. Al-Bājī's peers envied his literary endeavor, and challenged his re-

[127] See, for example, al-Subkī, *Ṭabaqāt,* 10:357 (The Response of Shāfiʿ ibn ʿAlī, verse 7).

[128] Ibid., 10:358 (The Response of Ibn al-Labbān, verses 14).

[129] Ibid., 10:353–54 (Al-Bājī's Response, verses 12, 14).

[130] Ibid., 10:356 (The Response of Ibn Taymīyah, verse 37).

[131] Al-Ṣafadī, *Nuṣrat al-Thāʾir ʿalá al-Mathal al-Sāʾir,* ed. Muḥammad ʿAlī Sulṭānī (Damascus, [1971]), 386–87.

sponse by composing their own responses. The anonymous "dhimmi" faded into oblivion, and his identity was never categorically defined. Still, the ulama added another academic achievement to their résumé: they defied the heretic while demonstrating their intellectual superiority.

The general framework of the medieval *munāẓarah* includes mainly lengthy debates in prose. The dhimmi's question and the ulama's six responses expanded the boundaries of this genre to include poetry. The use of poetry enables these theological works to become a powerful tool in polemics, simply because the texts are easily and orally proliferated. The theological argumentations, which are usually difficult to grasp, are molded into rhythmic texts with a clear enthusiastic tone. The medieval debates appear in abundance in the theological literature; while the *munāẓarāt* written in prose have received much attention in modern scholarship, those written in poetry were neglected. The stage is now set for researchers to turn their attention to the theological debates written in poetry—although these poems demand extra effort in order to understand their contents, and to study these challenging works of theology.

Appendix I: Notes on the Ulama

The following description contains some details about the ulama who wrote responses to the dhimmi's question, including the scholar's poetic skills, his experience in debating, and his relationship with other members of this group. Ibn Taymīyah's biography is not included, for obvious reasons.

1. **ʿAlāʾ al-Dīn al-Bājī** (ʿAlī ibn Muḥammad ibn ʿAbd al-Raḥmān ibn Khaṭṭāb, d. 714/1314): [132] A prominent Shafiʿi jurisprudent, who according to his own avowal was a close friend of the famous Muḥyī al-Dīn al-Nawawī (d. 676/1277), the author of the famous commentary on Muslim's *Ṣaḥīḥ.*[133] According to al-Subkī, al-Bājī was a skilled and almost undefeated debater, and an expert in Ashʿari *kalām.*[134] An elliptical anecdote, told by an eyewitness, connects al-Bājī to a debate with a Jew: "We were at Ibn Daqīq al-ʿĪd's, and he said: 'O *fuqahāʾ*! A Jewish fellow came in and wanted to debate.' We stayed still, but al-Bājī did not hesitate and promptly said: 'Bring him over! With God's grace we will oppose his sophistic argument *(shubhah)!*'"[135] Unfortunately, there is no record of the debate itself. Al-Subkī's father, *al-imām al-wālid,* Taqī al-Dīn al-Subkī (d. 756/1355), learned the art of debating from al-Bājī. The celebrated Ibn Daqīq al-ʿĪd admired al-Bājī, and treated him with an extraordinary measure of respect.[136] Al-Bājī was also treated with the utmost respect by Ibn Taymīyah: "Whenever Ibn Taymīyah saw him, he treated him with admiration. When in the presence of al-Bājī, Ibn Taymīyah dared not make an utterance. So ʿAlāʾ al-Dīn used to say: 'Speak so we can argue with you!' And Ibn Taymīyah said: 'The likes of me does not speak in your presence. It is my duty to benefit from you.'"[137] Al-Subkī

[132]For al-Bājī's biography, see: al-Subkī, *Ṭabaqāt,* 10:339–67 (biography no. 1394); Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:60–61 (biography no. 2865); al-Kutubī, *Fawāt al-Wafayāt,* 3:73–74 (biography no. 352); al-Ṣafadī, *Aʿyān,* 3:483–87 (biography no. 1210).

[133]Al-Subkī, *Ṭabaqāt,* 10:341–42

[134]Ibid., 10:339–40. Al-Subkī describes al-Bājī as an undefeated lion *(wa-kāna asad lā yughālabu).* Ibid., 10:339. Al-Bājī's expertise in Ashʿari *kalām* is reflected by the names of the books for which he wrote abridgements, for example Fakhr al-Dīn al-Rāzī's (d. 606/1209) *Kitāb al-Arbaʿīn.* His profound understanding of Shafiʿi *fiqh* is demonstrated by an anecdote which appears in *Al-Durar.* Apparently, as a youth he attended a class in which al-Ghazālī's (d. 505/1111) *fiqh* manual, *Al-Wasīṭ,* was studied. The young al-Bājī addressed one of the issues in the text, raising fifteen different questions and giving elaborate answers to each question. The astonished teacher asked al-Bājī his age, and conveyed his admiration at his knowledge. Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:60.

[135]Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:60; al-Ṣafadī, *Aʿyān,* 3:485. Al-Ṣafadī claims that al-Bājī was well versed in the Torah, and he used to argue with Jews about it.

[136]Al-Subkī, *Ṭabaqāt,* 10:339.

[137]Ibid., 10:342. Al-Bājī is mentioned as one of the six ulama who discussed Ibn Taymīyah's release from prison with the amir Salār. The ulama demanded that Ibn Taymīyah correct his creed.

establishes the reputation of al-Bājī as a poet by quoting two of al-Bājī's poems: one short autobiographical poem,[138] and a long *manẓūmah,* which al-Bājī's students memorized after hearing al-Bājī recite it to himself *(anshada li-nafsihi).* This 122-verse *manẓūmah* or *urjūzah* describes the happiest of all men as a believer whose knowledge of all branches of science, such as *fiqh, tafsīr,* history, languages, and medicine, is vast. In the poem, al-Bājī advises his listeners to travel in order to acquire knowledge.[139]

2. **Nāṣir al-Dīn Ibn ʿAsākir al-ʿAsqalānī** (Shāfiʿ ibn ʿAlī ibn ʿAbbās al-Kinānī al-ʿAsqalānī al-Miṣrī, d. 730/1330):[140] A poet and historian, who wrote biographies of the Mamluk sultans. He was skilled in calligraphy and versification.[141] He was blinded by an arrow during the Mongol attack on Ḥimṣ in Rajab 680/October 1281.[142] An enthusiastic bibliophile, Shāfiʿ ibn ʿAlī, who had eighteen closets full of rare books, recognized each book by feeling it and touching it. Al-Ṣafadī, who was a personal acquaintance of Shāfiʿ ibn ʿAlī, lists his numerous works in various Islamic sciences, which include a *dīwān* of his poems, glosses of poetry, and a poem describing a dispute between the sword and the pen.[143] Al-Ṣafadī, however, does not associate

Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:46 (the events of 706/1306–7). Al-Bājī is also named among the many *fuqahāʾ* who attended Salār's residence in order to witness the debate between Ibn Taymīyah and the three qadis, a debate that never took place, as the qadis declined the invitation to attend. Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:49. In the edition of *al-Bidāyah wa-al-Nihāyah* that I use, the text incorrectly writes al-Bājī as al-Tājī, and also writes Ibn Al-Rifʿah as Ibn Rafʿ. These errors are corrected in the anthology: *Al-Jāmiʿ li-Sīrat al-Shaykh Ibn Taymīyah,* ed. Muḥammad ʿUzayr Shams and ʿAlī ibn Muḥammad ʿImrān, with an introduction by Bakr Abū Zayd (Mecca, 1420/1999–2000), 363.

[138] Al-Subkī, *Ṭabaqāt,* 10:344. According to al-Ṣafadī, al-Bājī himself told him that he made Ibn Taymīyah retract things that he wrote. Al-Ṣafadī, *Aʿyān,* 3:485.

[139] Al-Subkī, *Ṭabaqāt,* 10:345–52.

[140] The identification is that of the editor of al-Subkī's *Ṭabaqāt,* 19:357, n. 1. Shāfiʿ ibn ʿAlī's biography appears in al-Ṣafadī, *Nakt al-Himyān fī Nakt al-ʿUmyān,* ed. Aḥmad Zakī Bak (Cairo, 1427/2007), 166–70. A similar biography appears in Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:109–10 (biography no. 1923). Shāfiʿ ibn ʿAlī is also mentioned in the events of the year 730/1329–30 in Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Beirut, 1413/1992), 9:207.

[141] Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:109. For a short biography, which is mainly based on Ibn Ḥajar, see P. M. Holt, "Shāfiʿ b. ʿAlī," *EI2,* 9:180. Holt was interested in Shāfiʿ ibn ʿAlī because of the latter's biography of Baybars.

[142] Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:109–10 (biography no. 1923).

[143] As far as I know, the poem is no longer extant. The theme of a debate between a pen and a sword is well known in Arabic poetry. Perhaps Shāfiʿ's poem preceded Ibn al-Wardī's dispute poem on the same theme, which drew van Gelder's attention. Geert Jan van Gelder, "The Conceit of Pen and Sword: On an Arabic Literary Debate," *Journal of Semitic Studies* 32, no. 2 (1987): 353–56.

Shāfiʿ ibn ʿAlī with responses to the dhimmi's question.[144] Here is a nice *khafīf* verse by him: "Whoever saw the morning brightness of white hair, which has broken in the blackness of my curls, asked me:/Pray, what is it? And I answered: This is a night of worries [about love], obliterated by the wise conviction of the morning."[145]

3. **Shams al-Dīn Ibn al-Labbān** (Muḥammad ibn Aḥmad ibn ʿAbd al-Muʾmin, d. 749/1348, from the plague).[146] A gifted Sufi preacher of the Shādhilīyah order and teacher who conducted regular sessions of recitations *(majlis tadhkīr)* and sessions of academic sermons *(majlis al-waʿẓ)* in Cairo.[147] He also wrote a few treatises on Shafiʿi *fiqh,* grammar, and *tafsīr.* There are several references to Ibn al-Labbān's reputation in the brief entries which were written about him. Al-Subkī is subtle and does not disclose many details: "He sometimes uttered spontaneous words of which the literal meanings could raise doubts about him, but we are sure he was innocent of them. And also a dreadful thing happened to him."[148] Ibn Ḥajar volunteers a few more details: apparently, Ibn al-Labbān's reputation as a Sufi preacher preceded him; however, he was heard producing monist utterances *(kalimāt ʿalá ṭarīq al-ittiḥādīyah).* He was put on trial, but eventually rescued by the Maliki qadi.[149]

4. **Najm al-Dīn Aḥmad ibn Muḥammad al-Ṭūsī** (Shaykh al-Islām, Najm al-Dīn Abū al-ʿAbbās Aḥmad ibn Muḥammad ibn ʿAlī ibn Murtafiʿ ibn Ṣārim Ibn al-Rifʿah, d. 710/1310). Al-Subkī refers to Ibn al-Rifʿah as the greatest Shafiʿi of his time, and adds various superlatives to his name. Ibn al-Rifʿah was a skilled debater, who had a reputation of never being defeated in debates, as he never met his equal on these occasions *(lā yuqāwamu fī majlis munāẓarah wa-lā yuqāwá).*[150] According to Ibn Ḥajar, Ibn al-Rifʿah

[144] Al-Ṣafadī, *Aʿyān,* 3:484 (the biography of ʿAlāʾ al-Dīn, no. 1210); ibid, 3:292 (the biography of ʿAlāʾ al-Dīn al-Qūnawī, no. 1122).

[145] Al-Ṣafadī, *Nakt,* 168; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:109. Yāqūt ascribes the poem to someone else. Yāqūt al-Ḥamawī, *Muʿjam al-Udabāʾ: Irshād al-Arīb ilá Maʿrifat al-Adīb,* ed. Iḥsān ʿAbbās (Beirut, 1993), 1163 (biography no. 406).

[146] Al-Ṣafadī, *Aʿyān,* 4:300.

[147] Ibid.; al-Subkī, *Ṭabaqāt,* 9:94.

[148] Al-Subkī, *Ṭabaqāt,* 9:94.

[149] Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:201.

[150] Al-Subkī, *Ṭabaqāt,* 9:25 (biography no. 1298). Ibn Rifʿah's biography in al-Subkī's *Ṭabaqāt* is brief (three pages long) for a scholar of his caliber. Cf. Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:66 (the events of the year 710/1310–11) and Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʿda al-Wāfī,* ed. Muḥammad Muḥammad Amīn (Cairo, 1999), 2:82–83 (biography no. 256).

was appointed to be Ibn Taymīyah's rival in a debate. After the event was over (Ibn Ḥajar does not report who won the debate), people asked Ibn Taymīyah about Ibn al-Rifʿah. Ibn Taymīyah complimented Ibn al-Rifʿah's knowledge of Shafiʿi law: "I saw a shaykh from whose beard the laws and regulations of the Shafiʿis were flowing."[151] The well-to-do Ibn al-Rifʿah, who was appointed to several official positions in Cairo during his lifetime, was subjected to a slander campaign initiated by other scholars, but from which he was exonerated.[152]

5. ʿ**Alāʾ al-Dīn al-Qūnawī** (ʿAli ibn Ismāʿīl ibn Yūsuf, Qāḍī al-Quḍāh, d. 729/1329). Al-Qūnawī, born in Konya, was a Shafiʿi *faqīh* and a prominent Sufi, who lived and worked in Cairo for thirty years. He conducted a life of piety and poverty in Cairo, until he was appointed as a teacher in the Sharīfīyah, and as the director of the Ṣāliḥīyah *khānqāh.* Two years before his death, he was appointed as the Shafiʿi head judge of Damascus.[153] Al-Qūnawī was well-versed in Ashʿari *kalām,* logic, and polemics.[154] He also had poetic skills: apart from his response to "someone who meant to defame the divine law," al-Qūnawī composed a poem in the *ṭawīl* meter which discusses different kinds of head wounds *(shijāj).*[155] Al-Subkī also mentions a debate *(munāẓarah)* between al-Qūnawī and Taqī al-Dīn al-Subkī, but unfortunately the contents of this debate are no longer extant.[156] In 727/1328, prior to his departure from Cairo to take up his position as the new chief Shafiʿi judge in Damascus, al-Qūnawī was asked by the sultan al-Nāṣir ibn Qalāwūn to intervene with the governor of Syria to release Ibn Taymīyah from prison. The following is a description of these relationships, as it appears in al-Ṣafadī's *Aʿyān al-ʿAṣr:* "Although he (i.e., al-Qūnawī) had disagreements with Shaykh Taqī al-Dīn Ibn Taymīyah, and although he thought that Ibn Taymīyah was wrong in many issues, he praised Ibn Taymīyah, admired him, and defended him. However, when al-Qūnawī was about to leave Cairo [for his post in Damascus], the sultan said to him: 'When you arrive in Damascus, tell the governor of Damascus to free

[151] Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:169 (biography no. 730). Cf. al-Ṣafadī, *Aʿyān al-ʿAṣr,* 1:325 (biography no. 169).

Ibn Taymīyah.' [Al-Qūnawī] asked: 'Your Excellency, on what grounds did you put him in jail?' The [sultan] replied: 'Because of his *fatāwá* on that issue.'" Al-Qūnawī indeed met the governor upon his arrival in Damascus;[157] however, his mission failed. It was probably the governor who made Ibn Taymīyah's release conditional on his retracting his *fatāwá,* although a lacuna in al-Ṣafadī's text does not allow us to determine this with a great deal of certainty. According to al-Ṣafadī, "He [probably the governor] said: 'If he retracts them, we shall set him free.'"[158] Ibn Ḥajar concludes: "Some say that this answer is the reason for the continuance of Ibn Taymīyah's stay in prison until he died, because it was unconceivable that he would retract."[159]

[157] Shams al-Dīn Abū ʿAbd Allāh Muḥammad ibn Ibrāhīm ibn Abī Bakr al-Jazarī, *Tārīkh Ḥawādith al-Zamān wa-Anbāʾihi,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Sidon-Beirut, 1419/1998), 2:196, 369; Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:141 (the events of the year 727/1326–27).

[158] Al-Ṣafadī, *Aʿyān,* 3:290 (biography no. 1122). The ambiguity in al-Ṣafadī's text (which was copied by Ibn Ḥajar) remains in Laoust's description of al-Qūnawī's intervention for Ibn Taymīyah. Henri Laoust, *Essai sur les doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad b. Taimīya* (Cairo, 1939), 148, n. 1. See also Michot, *Muslims under Non-Muslim Rule,* 168.

[159] Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:16 (biography no. 2687); al-Shawkānī, *Al-Badr al-Ṭāliʿ,* 1:479 (biography no. 305).

Appendix II: Translation of the Six Responses

Notes:

1. The translation is as accurate and literal as possible, although I often had to paraphrase text.
2. The terms *mashīʾah* and *irādah* are consistently translated as [divine] creative will and commanding will, respectively.

A. Al-Bājī's Response:[160]

1. Hear me out, you scholar, who exposed the signs of his embarrassment, who craves for the guidance of a small and selected group of notable men.
2. I was so pleased to see that you seek the truth. May a breath of truth coming from the clouds of His mercy reach you!
3. You know that truth is regained only by truth, so seek refuge at its doorstep, like other reasonable people, and abandon the tricks and snares.[161]
4. A long time ago did God decree who strays from the correct path and who walks in it. He did that through His power as an effective agent *(faʿʿāl).* So [do not look] for the restrictions of wise purpose [in creation].[162]
5. God created human reason, and more so, He created the action of thinking that God's actions are good *(taḥsīn).* The limitations of human beings do not apply to the Creator.
6. Both our actions and essences are created by God. We do not create either of them, not really.
7. But He granted those He created, the human beings, a guide to all these predetermined eternal actions.
8. Through that guide we were able to recognize the people of happiness, the believers, from the people of misery, the heretics. The same applies to us: what He had wished for us is solely by virtue of His creative will.
9. As we put on clothes for everyone to see, so we mark our actions. These actions were created either as actions that please Him, or actions that make Him angry.

[160] Al-Subkī, *Ṭabaqāt,* 10:353–54.

[161] Trick and snares, here *ḥabāʾil ḥīlah.* What al-Bājī means here, obviously, is that the dhimmi is requested to abandon the incorrect reasoning and logical analogies which the Muʿtazilah usually use.

[162] Wise purposes, here *ḥukm ḥikmah.* Al-Bājī refers here to the Ashʿari notion according to which God did not create the world for a cause or a wise purpose. Cf. Muḥammad ibn ʿAbd al-Karīm al-Shahrastānī, *Nihāyat al-Aqdām fī ʿIlm al-Kalām,* ed. Alfred Guillaume (Baghdad, [1960]), 397.

10. His relationship to us is like the relationship of a king, who is beyond asking "how" his actions are performed, and "what is the reason" for his actions.
11. It is He who ordains life and death. It is He who is exempt from any condemnation. What the weak minds think as good is but a shameful thing.
12. Thus, you should be pleased with that predetermination, while you shouldn't be mistaken and be pleased with the object of this predetermination, when it is a predetermined act of heresy.
13. That we are assigned commands and interdictions obliterates our excuses on the Day of Resurrection.
14. Therefore you should come through that entrance, whether it is blocked or open. Abandon all your straying doubts, and embrace the most apparent proof!
15. The commands and interdictions are clearly revealed, and there is no doubt about it and no delusion.

B. The Response of Ibn Taymīyah:[163]

1. Hey, you there! Your question is the question of a stubborn man, who argues with the Lord of the Throne, the Creator of all beings!
2. A long time ago, the devil Iblīs, who is the root of all evil, used this question in order to argue with [the angels], the most respectable creatures residing up above.[164]
3. The root of all errors that people make—regardless of the group or sect they are affiliated to—is to question the reasons for God's actions.[165]

---

[163] Al-Subkī, *Ṭabaqāt,* 10:354–57. This version of Ibn Taymīyah's poem is abridged, but all the same it retains the kernel of the complete version of the poem. There is no doubt that Ibn Taymīyah's poem should be studied for its own merit. Nevertheless, for the purpose of this study, Ibn Taymīyah's poem is presented as part of the six responses found in the original set of al-Subkī. When translating the poem, I consulted what seems to be the most complete version of the poem as it appears in: Ibn Taymīyah, *Majmūʿat al-Fatāwá* (1998) 4:149–54 (here indicated as MF). This version contains 124 verses. I also consulted Serajul Haque's version (here indicated as SH), which contains 103 verses. Another version of the poem, which I have not consulted, appears in Abū ʿAbd Allāh Muḥammad ibn Aḥmad Ibn ʿAbd al-Hādī, *Al-ʿUqūd al-Durīyah min Manāqib Shaykh al-Islām Ibn Taymīyah,* ed. Abū Muṣʿab Ṭalʿat ibn Fuʾād al-Ḥulwānī (Cairo, 1423/2003), 300–6. Serajul Haque's summary of the poem was of great help. In addition, the following studies on Ibn Taymīyah's poem also were of help: ʿAbd al-Raḥmān ibn Nāṣir al-Saʿdī (d. 1376/1956), *Al-Durrah al-Bahīyah: Sharḥ al-Qaṣīdah al-Tāʾīyah fī Ḥall al-Mushkilah al-Qadarīyah,* ed. Abū Muḥammad Ashraf ibn ʿAbd al-Maqṣūd (Riyadh, 1419/1998); Muḥammad ibn Ibrāhīm al-Ḥamd, *Al-Qaṣīdah al-Tāʾīyah fī al-Qadar li-Shaykh al-Islām Aḥmad ibn Taymīyah* (Riyadh, 1424/2003).

[164] Cf. verses 1–2 in MF and SH.

[165] Cf. verse 6 in MF and SH.

4. The creative will of God, the Lord of the Throne and the Creator of all beings, necessitates the actual existence of all the creatures.
5. The essence of God is necessary, with its necessary and eternal attributes.[166]
6. Therefore, when you ask "why did He want [this and that from me]?" it is the same as asking "why did He exist from all eternity?"
7. Such a question negates every reason, and it was sanctioned by every religion.
8. In this reality, there are many particular phenomena or particularities *(takhṣīṣ).* Anyone with a certain degree of reason can point out the fact that these particularities came about by virtue of His will.
9. [The theory] that one existent emanates from another, and the theory that two creators are possible, are like shots that miss the mark.[167]
10. There is no doubt that every effect *(musabbab)* has its entailing cause *(ʿillah).*
11. However, causes—as you can very well see—emanate by virtue of His creative will.
12. Therefore, when you say: "why did God want [this and that from me]?" your words make people fall right into the pit.
13. The Zoroastrians believed that there is one creator who creates things that are good and benefit us, and one creator who creates things that are evil and harm us.
14. The ancient Zoroastrians stumbled and fell into this sophistic argument of dualism, because they inquired about the cause of evil.[168]
15. The heretical philosophers, who believe in the "eternal intellect" *(al-ʿaql al-qadīm)* as the [first] cause,
16. Were looking for a cause of existence after non-existence, and they failed to find it. Therefore they went astray.
17. The roots of evil in any nation which was blessed by the religion of the prophets
18. Were revealed when these nations delved into these questions and their idolatry was thus evident. As a result, the indisputable evidences were erased throughout the era of apostasy.

---

[166] Verses 4–5 here correspond to verses 8–9 in MF and verses 7–8 in SH.

[167] Ibn Taymīyah refers here to the theory of *iṣdār* (emanation) of the philosophers, and the Muʿtazili view which allows *(tajwīz)* the existence of another creator (which is the human being) other than God. See: al-Saʿdī, *Al-Durrah al-Bahīyah,* 128–29.

[168] "The cause of evil": the text says *ʿillat al-sirr,* which is "the cause of the secret." However, Serajul Haque's version provides a better solution *(ʿillat al-sharr),* which I decided to adopt. Cf. verse 18 in SH.

19. We can easily contradict what you say, because this excuse that you seek can be easily refuted by anyone who possesses pure instincts.[169]
20. Let us assume that you stop blaming heretics and sinners who divert from the correct path.
21. This approach inevitably leads you to ignore every offender, whether he committed a murder, or stole property, or violated the sanctity of one's marriage.
22. In other words, you have no right whatsoever to be angry with a murderer or with a thief who robbed the needy.
23. You have no right to be angry with a man who abuses your well-guarded honor, even if he abuses you publicly. You have no right to be angry with the adulterer for fornicating.
24. You have no right to be angry with the highway robbers. You cannot be angry with the perpetrators of corruption in the land.
25. You cannot be angry with false witnesses who spread evil lies and slander. You cannot be angry with those who recklessly defame women of unblemished reputation on the basis of one single doubt.
26. You cannot be angry with those who purposefully annihilate the civilization of mankind, nor can you be angry with the corrupt ruler.
27. So stop condemning every perpetrator. Do not demand to punish the offender.
28. In sum, you must smooth the way of these liars and slanderers.[170]
29. Can people's minds or their innate nature accept the claim of this vile person, who says: "What could I have done?"[171]
30. When someone is administered a poison, this surely guarantees his death. And still, everything was predetermined by virtue of God's creative will.
31. In the same vein, your apostasy is like a poison you swallow. Its outcome is the punishment of hellfire, just as the outcome of gulping poison is death.
32. Don't you think that in this world, whoever perpetrates a crime is bound to be punished, either by predetermined punishment, or by a punishment as prescribed in the divine law?
33. The perpetrator is never pardoned, and this is God's predetermination. [The perpetrator will be punished] also in the hereafter. There is no doubt about that.[172]
34. If you wish to receive an answer, which may possibly save you from God's great fire,

[169] Verses 6–19 here correspond to verses 30–43 in MF and verses 11–23 in SH.

[170] Verses 20–28 here correspond to verses 47–55 in MF and verses 27–35 in SH.

[171] Verse 29 here corresponds to verse 69 in MF and verse 49 in SH.

[172] Verses 30–33 here correspond to verses 74–77 in MF and verses 54–57 in SH.

35. Beware of the Lord of creation! Go towards Him humbly, and implore Him that would He guide you to the truth.
36. Entrust the shackles of your soul in the hands of the truth, and listen attentively. Never defy whoever preaches for the sound divine law.
37. Do not abandon the apparent truth. Do not turn your back to the upright idea.[173]
38. We are content with God's decree, because we were ordered to be content, even with misfortunes,
39. Like diseases, poverty, humiliation, and exile. We are pleased with every hurtful thing, provided that it is not a crime.
40. As for the evil deeds that are considered reprehensible, there is no Quranic text which orders us to be pleased with these acts.[174]
41. The knowledgeable people said: We should not be pleased with acts of disobedience and hateful sins.
42. A group of people said: We are pleased with His decree, but we are not pleased with the outcome of this decree [when this outcome is bad deeds performed by the human being]. [These bad deeds] deserve the ugliest epithets.
43. Another group of people said: [These bad deeds] are attributed to Him, but since we perform them, we should be discontent with them.
44. We are pleased with these deeds because He created them. We are discontent because we acquire or perform these sins.[175]

C. A Few More Verses by Ibn Taymīyah:[176]

1. There is no escape for the human being from what God predetermined, but he can choose between a good act and a vile one.
2. He is not compelled to act, and he is not devoid of a will. But he wills because a will was created [for him].

[173] Verses 34–37 here almost correspond to verses 85–88 in MF and verses 65–68 in SH. However, the second hemistich of verse 36 corresponds to the second hemistich of verse 88 in MF and verse 68 in SH, while the second hemistich of verse 37 corresponds to the second hemistich of verse 87 in MF and verse 67 in SH.

[174] "There is no Quranic text": the text in al-Subkī actually says *fa-lā hunna matī,* which does not make sense. I therefore adopted Serajul Haque's version, which has: *fa-lā naṣṣun yatī*.

[175] Verses 38–44 here correspond to verses 99–104, 106 in MF and verses 79–84 and 86 in SH. In the case of verse 44 above, I preferred the version in MF; otherwise, the verse is incoherent.

[176] The above are verses 116–22 in MF and verses 96–102 in SH. Al-Subkī omitted these verses, but because they present the kernel of Ibn Taymīyah's approach, I decided to include them.

3. One of the most wonderful things is the creation of the will, by virtue of which the human being can choose the correct path from the erroneous path.
4. When you [O dhimmi] say: Do I have the choice to abstain from God's decree? it is as if you say: Do I have the choice to abstain from God's creative will?
5. [You could have said]: I choose not to choose to perform an erroneous act. If only you had taken this approach to abandon heresy, you could have earned redemption.
6. This approach is possible, although it is dependent on what God wills from the individual who has a will.
7. Be careful and make an effort to understand the significance of the many notions I conveyed to you. If you use your innate nature, you will surely grasp these notions.

D. The Response of Shāfiʿ ibn ʿAlī:[177]

1. You asked, however you did not express your words clearly. A small group of scholars conducted numerous inquiries about Him, who holds the truth.
2. You, O dhimmī, are not—as you are presumptuous to assume—a creator whose actions are not predetermined.
3. Indeed, everything necessarily exists by virtue of His predetermination, and for this there is the clearest evidence.
4. Is it possible that the things He does not want exist in His kingdom? Indeed, whoever holds this opinion goes astray.
5. So, you should be pleased with whatever He predetermined, and nothing else, so do not struggle with what He wanted by virtue of His creative will.
6. For He, the Most Sublime, has the ability to erase and confirm. So do not resist His judgment, and accept this as true.
7. If you follow my response, you will be a Muslim and resign yourself to the will of God. So, by following the truth, you will be a part of the best of all nations.

E. The Response of Shams al-Dīn Ibn al-Labbān:[178]

1. Hear me out! After praising God, the creator of all created, for giving us guidance through the Quran and Sunnah

[177] Al-Subkī, *Ṭabaqāt,* 10:257.
[178] Ibid., 10:357–59.

2. And through the most virtuous messenger, who was sent to the best of all nations, carrying with him the purest greeting from the All-Merciful:
3. Indeed, things exist by virtue of God's creative will. Things which do not correspond with His will do not exist.
4. However, He was never pleased with heresy. He never liked that for the human being. Heresy is not praiseworthy.
5. Whosoever is not guided by God uses the following artifice *(ḥīlah):* at every moment, he emphasizes what cannot be done.
6. He ignores the thorn in the flesh of his thought. He does not let his intellect distract him from his destination.
7. But at the same time, he endeavors with all his might to appeal to his Lord, with a sincere, determined, and passionate prayer.
8. At that time, let us hope that the grace and mercy that he hopes for will be granted to him.
9. Still, God's predetermination applies at times to heresy, and at other times to belief. But this predetermination is concealed, because of God's wise purpose.
10. Many a time, what is predetermined for us occurs by virtue of a cause, which we are accustomed to perceive as conditional.
11. Thus we see, for instance, that the causal connection between poison and death, cure and good health, is like the causal connection between actions of obedience and happiness, and actions of disobedience and misery.
12. God the All-Knowing created in the human being a choice between actions which entail God's satisfaction and His alienation.
13. Through this [choice], God enabled the human being to perform what He predetermined for the human being, thus God's will always prevails.
14. So, stop using this language of protesting. Remove your locks of hair and pretty clothes. It is good to be patient in times of distress *(al-ṣabr ʿinda al-muṣībah).*
15. As for displaying our satisfaction with God's predetermination, it is obligatory, because it means subservience to the ruling of the divine creative will.
16. The fact that you are pleased with your misery is misery itself, because you do not recognize the miracle of predetermination.
17. This miracle will be revealed when you empty your heart of caprices, and be pleased with the right belief and conviction.
18. Then you will be pleased with what God is pleased with and with what He predetermined. That way you will eliminate one perplexity after the other.
19. You said: If my Lord wishes me to be an apostate, then I should wish it too. These words are true, provided that you wish to repent.

20. The effect of the cause is separated from the outcome. In the same vein, you should confirm that what He actually wants is for you to repent.
21. When you disobey the divine ordinance, you are considered a rebel, even though you act in accordance to God's will.
22. There is no doubt that the human being has a choice. One person believes that he can affect his action alongside the divine eternal power.
23. Another person says: human actions are varied and specific, like performing pilgrimage or adultery.
24. Therefore, the human agent can affect his action to be either adultery or pilgrimage. However, this action is actually predetermined.
25. According to the people of truth, the Ashʿaris, the human agent cannot affect the action with his created ability.
26. God has the power to create in the human being the action and the ability which accompanies it, in a mechanism of causality *(sababīyah).*
27. This is a choice in us, which has no effect on the action. The greatest proof is for God.
28. In a nutshell, we are submitted to the sovereignty of the Creator of the creation.

F. The Response of Ibn al-Rifʿah, Najm al-Dīn al-Ṭūsī:[179]

1. Lend me your ears, O dhimmi! If only you were able to hear the response to your question, a response backed up with proofs, a response which you sought!
2. Use your intelligence and try to decipher the secret of all that the Lord of Existence created.
3. He predetermined and compelled the creation of all the existents through His knowledge and power, entirely of His volition.
4. He dealt with His creation as He pleased. Nobody knows what He wishes. His goal is well-concealed.
5. Indeed, He created the entire existence, which had no shape in the beginning.
6. But, hey, you! Your question should have never been written down; because it implies that He causes every despicable thing to appear;
7. And that He, as a proprietor, causes the slave to act by creating his act, whether an act of kindness, or an act of evil;
8. And that He grants the human being the ability to understand all the facts, so he is able to distinguish between the various things he is given;

[179] Ibid., 10:359–65.

9. And that He has partners in His property and in the object of His will, and thus the evil deeds of some of His creatures should be ascribed to Him;
10. And that He creates in all mortals the incapability to act, and that He compels them to act.
11. According to what is known to all His creatures, this is sheer misery which demonstrates your slip of the tongue.
12. All the things that we quoted are from a poem rhyming with *tī*, which is the response of a despicable slave to the acts of his Lord. These things make our Lord angry.
13. An action whose benefit we cannot see, like the death of a dear friend bitten by a snake, is not necessarily reprehensible.
14. There is no injustice when He deprives His creatures of their ability and compels them to act *(ilzām)*,
15. Because He creates things by virtue of His knowledge, and He knows the invisible. He endows these things that He creates with life and existence through His generosity and mercy.
16. And so, He does with His creatures as He pleases, even though the external signs of His wisdom are concealed from us.
17. If God did not state that the acquisition of human acts *(kasb)* existed, then actions would not have been specifically attributed
18. To a specific creature, not metaphorically and not otherwise, because it was as if He categorically stated that there was no creative will.
19. People who claim to use their minds should not contemplate their regular false analogies;
20. For example, when they say that tying up a child and then commanding him to walk is an ugly act. This claim is adjacent to their stupidity.
21. This analogy to His actions is false, because everything exists by virtue of the divine will.
22. If this is their claim, then the reply to them should be: For what purpose did He create humankind, if after a while He makes them die in disgrace?
23. When He acts, He is above any benefit or damage. These are the words of a person who should be flogged with a whip.
24. He is the Creator, the All-Merciful, utterly and totally. When He created [the world] with His sound judgment, He made clear
25. What He wished: He wished for light and life, and He wished to lead His creatures through the darkest nights.
26. And so He arranged the parts of existence *(ajzāʾ al-wujūd)* and brought them to realization by His actions. All this came about when the spirits were at the beginning of creation.

27. When this was created, He brought to light a third substratum *(maḥall thālith),* in which even the strange and mysterious secrets became evident.
28. And after all was created, He created [a creature] whose attributes are manifested. By virtue of His power He made [this creature] perfect in his understanding and knowledge.
29. He informed [this creature] what He wanted him to be, and He also informed him that He wanted him to obey His continuous command.
30. This is Man, the crown jewel of His creation. He is more magnificent than any other being, because he is able to go higher and nearer [to God] than any other being.
31. He gave him a mind, with which he understood what goodness and piety were. When using the mind, this creature is able to prove the existence of his Creator, while using the clearest proofs.
32. He gave him knowledge and the ability to hear. He also granted him light, so he was able to distinguish between the various forms.
33. He made him choose from whatever he wished for himself the things which he needed in order to improve his posture and shape.
34. He made him acquire good deeds as he pleased, deeds the outcome of which is generous and scented.
35. He installed in him an irascible faculty *(quwwah ghaḍabīyah).* By using it he could push back anything harmful, like mortal sins and other calamities.
36. He also installed in him the lustful faculty. By using it he could obtain anything his instincts desired.
37. So, it is entirely up to this creature to acknowledge the deeds which his [Creator] wishes and loves, and to push back the deeds which his [Creator] hates and despises.
38. Therefore, the All-Merciful entrusted him with the divine law, after He expelled any possible flaw that was originally in him.
39. When this creature followed the desires of his heart, and dived into the ocean of ignorance without a doubt in his mind,
40. In came the messengers, carrying a message from his Creator to each soul. The message was about the illuminating roads, which the Creator made visible.
41. [The Creator] obligated mankind to follow the Messenger, and to acknowledge every religious duty and every Prophetic habit.
42. [The Creator] made clear that everything that came into existence came from Him. He also declared that every creature definitely must obey Him.
43. [The Creator] predetermined that a certain man would be an ignorant heretic, remote from his [Lord], and that even if he followed the divine law, it would not benefit him.

44. [The Creator] predetermined that another man would be created with a pure mental constitution. This man rigorously opposed what was perceived by the senses.
45. However, nobody knows what was predetermined for him, so he cannot graciously follow his destiny as he wishes.
46. But when a vile soul inclines to the road which is not the road of Islam and its followers,
47. She tends to ascribe the will that drove her to act to the Creator, without having a substantial knowledge about that.
48. That this soul remains in the state of heresy is not by virtue of a divine command. [This soul] was expelled from the doorstep of heresy, and all the same [it became a heretic].
49. It is possible that a man lives as a heretic all his life, and suddenly the happiness of the Islamic belief that was preordained for him will catch him.
50. And so he converts to Islam, and by doing so, he will erase his biggest sins. By virtue of God's grace, he will become one of the inhabitants of heaven.
51. Another man, who is a devout Muslim, praying night and day, constantly invoking God's name, and performing the pilgrimage to Mecca every year,
52. And suddenly what was preordained for him, by virtue of God's knowledge, will catch him, and so he will be led to be one of the inhabitants of hell.
53. This is the judgment that is always carried out. It is well-concealed even from the shrewdest heart.
54. And so, I clarified the highlights of the way this judgment is carried out from the beginning of this world until the very last generation.
55. So, you dhimmi! Do you acknowledge that according to the people of the divine law you are definitely a heretic?
56. That is because you stated, God forbid, that God predetermined your heresy, whereas God never wished that the people of any religious faith would be heretics!
57. Look, since He predetermined at the beginning of creation that people would be heretics, He will not change the verdict of His will.
58. That is what the Prophet of God, who never became silent, said: that things materialize by virtue of His creative will.
59. Therefore, we cannot be positively certain that you are a heretic, because there never is a final resolution at any epoch, if you turn to Islam.
60. However, the predetermined verdict only clarifies where a person is headed to, whether heaven or hell.
61. If you were predetermined to be one of the inhabitants of heaven, the fact that you were a Jew before the Prophet was sent did not do you any harm.

62. And if you were predetermined to be one of the inhabitants of hell, then your atonement would not benefit you at all.
63. The predetermined verdict is never known. Performing deeds which do not please God does not necessarily lead to hell.
64. He gave you a mind and an established understanding. He also showed you a way of natural behavior, a way which includes every natural disposition that you have.
65. So, pronounce the Muslim profession of faith, and walk under the flag of the divine law as a believer, using your power to do good deeds.
66. Furthermore, you choose for yourself anything that you wish to try, whether disturbing doubts or lustful desires.
67. If you do not believe in abrogation *(naskh),* then you consider the divine message and law that Moses brought a lie,
68. Because the message and law that Moses brought abrogated customs that some people used to have, such as the marriage of a sister to several of her brothers.
69. So, if you affirm the truthfulness of *naskh,* then you should follow the divine law, which contains every agreeable and nice rule.
70. But if you defame *naskh,* then there is no textual proof for the notion that you prefer *(tarjīḥ).*
71. When poverty strikes you, do you not make your best own effort in order to protect [yourself] from hunger?[180]
72. And when you are suddenly hit by a crime, like an attempt to kill you or rob you, or by any other evil deed or temptation,
73. Do you actually attribute all these, at any moment, to the All-Merciful Creator?
74. If you choose to strengthen your soul, preach to her the message of the Muslim profession of faith.
75. The particular is entailed from the general, without any exception. You can clearly see that from the various signs of the divine wisdom.
76. If, in your time of trouble, you make a speedy effort to shove away any sin that comes your way,
77. And at the same time you lie, and you are truly not pleased with God's actions,
78. Then know this: He called you, and He did not block the entrance for you. So seek refuge in Him, and ask Him to lead you to the good path.
79. If you were born just to burn in His hellfire, then following the divine law was of no avail.

[180]This translation is approximate given the fact that one of the words *(ḥūbīyā),* as the editor of al-Subkī's *Ṭabaqāt* comments, is unreadable and has no meaning.

80. Whether or not you are pleased is of no importance, because you are seized by the most evil grasp.
81. The Lord of all beings obligated you to be pleased with what He predetermined and created by virtue of His knowledge and power.
82. At the same time, He is not pleased that you are pleased with a certain thing that He predetermined. Therefore, He forbade you to refrain from vile deeds at any time.
83. Therefore, to be pleased with what He forbade you to be pleased with, does not please Him at all. He is pleased only when you follow His legislative will.
84. [He is pleased when you follow] what emerged after the world was created. [He is pleased when] you see the deeply hidden things in your natural disposition.
85. But since He wanted you to be a heretic, you became stubborn and did not accept and fear the divine law.
86. That you are pleased with what was predetermined for you does not please Him. Following the judgment of His creative will is not the correct way.
87. In time immemorial He shaped you in a form through which His judgment was carried out and His proof installed.
88. So actually there is no option to resist His firm judgment or to deviate from it.
89. But He granted you with the power and the ability to acquire your action. He generously granted you a great gift, which is the ability to achieve complete understanding.
90. So, O dhimmi, your argument is sophistical and cannot be considered as sound.
91. Do not meddle in God's words and actions. He chooses every action, as He pleases.
92. There is no good outcome to what you desire, because it is a distressful deed, which only miserable and sinful souls possess.
93. My answer to you, O dhimmi, includes ninety-six verses, the gems of my artistic skills.
94. You wished to refute the truth, woe unto you, by your invalid and absurd verses.
95. My Lord! Have compassion and mercy for your slave Aḥmad, who was born in Ṭūs.
96. Aḥmad plunged into the oceans of knowledge and wisdom. Knowledge is the ultimate goal. He plunged into the light of divine providence,

97. Equipped with the highest spiritual states *(aḥwāl rifʿah)* he acquired with the help of His shaykh: the spiritual states of passion *(wajd),* exaltation *(ijlāl),* and repentance *(inābah).*
98. Aḥmad is very knowledgeable and devout, because he recognizes the splendor of the divine grace.
99. Whoever bows sincerely to the divine presence, which is the ultimate haven of every soul,
100. Has a vast knowledge of secrets. When you travel there by night, you sense the gentle breeze of happy spirits.
101. You, who contemplates this response and tries to understand it, you should reflect on this knowledge and not dismiss it.
102. Place the meaning of each and every word in its right place. Note that we have included here numerous virtues.
103. Do not blame others before you accomplish in good faith what He created you for.
104. [Do not] act meanly towards Him, who created human mind and particularized it with the ability to understand, every hour of the day.
105. We send our prayer to the Prophet Muḥammad. This prayer will grant us closeness [to God] in the Day of Recompense.

G. The Response of ʿAlāʾ al-Dīn al-Qūnawī:[181]

1. I praised my Lord before every word I uttered. I prayed in order to glorify the Prophet, the best of humankind.
2. I tried to come up with sound advice for the person who sought a clarification in order to solve a sophistic argument.
3. The first thing that a person who seeks the truth and wishes to follow the truth should do
4. Is to grab every difficult puzzle and sophistic arguments by their halter and make them move away. These arguments interfere with our efforts to versify our proof.
5. Next, you should listen carefully and refrain from being stubborn, because there is no use in a stubborn-head who wishes to seek the truth.
6. If you truly wish to reveal the grief that was inflicted on you, then listen to me, and I hope that you will be guided to the correct path.
7. You are right: God the All-Knowing indeed predetermined by virtue of His creative will everything that was and everything that will be.
8. If you think about that seriously, you will realize that after He sent His prophet, He never blocked the entrance.

[181] Al-Subkī, *Ṭabaqāt,* 10:365–66.

9. It is a well-known fact that His predetermination is dependent on conditions.
10. And that is what a healthy mind sees as possible and never rejects. The same happens when you see how things are created after other things happen.
11. For example, you can quench your thirst each time you drink. And you can satisfy your appetite only after you eat.
12. No wonder that it is dependent on conditions. God, who created all beings, predetermined
13. That you will be a heretic, as long as you are in a state of committing injustice, and as long as you refuse to take [into consideration] the causes leading to divine guidance, and the capacity [to rightly act].
14. Among the causes that you rejected are divine ordinance, the ability to act, and the uttering of the Muslim profession of faith.
15. You are like a person who fasts for a very long time, thinking to himself: "I should die from starvation, since He predetermined that I would starve."
16. If you submissively turned to your Lord and surrendered to the true religion,
17. If you paid your dues to the good contemplation in full, and fixed your eyes attentively and willingly with every glance you have,
18. Then the good guidance that God wished for you would come true, and His predetermination would not be violated at all.
19. Hear me out! The effusions of God in eternity are plentiful. Address yourself to God so you win an effusion.
20. Or else trust the Lord and act, because every good deed is made easy for the man who is meant to perform it. There is no doubt about that.
21. Had I known that your mind is capable of understanding things which are vague and subtle,
22. I would have elaborated on this and gone on and on about it. I would have investigated the matter according to the methods of theology and philosophy.
23. But since my goal here is to persuade the likes of you, what I present is but a summary of long chapters.
24. The ship would have sunk in the depths of the sea had it not been forbidden to discuss these matters on which you had inquired.
25. Therefore I fold the carpet that I spread before, and I beg the Almighty God to forgive my slip of the tongue.

Appendix III: Two Additional Responses

The following two responses are not included in al-Subkī's account. The first response was composed by Abū Saʿīd Faraj ibn Qāsim ibn Aḥmad ibn Lubb al-Taghlibī (d. 782/1380–81). Ibn Lubb was the mufti of Granada and taught in al-Madrasah al-Naṣrīyah. His response is quoted by the Andalusian Maliki scholar Abū Isḥāq Ibrāhīm ibn Mūsá al-Shāṭibī al-Andalusī (d. 790/1388), in his *adab* compilation *Al-Ifādāt wa-al-Inshādāt*. According to al-Shāṭibī's account, Ibn Lubb was asked about the dhimmi's question, probably in a letter. Ibn Lubb signed his response with the following note: "These written verses are a response to the above six verses." The dhimmi's question in this version is, then, a six-verse question (verses 5–6 of the original do not appear in this version). Al-Shātibī, who provides a brief interpretation of Ibn al-Lubb's response, heard the author recite his response in Rajab 759/July 1358. [182]
The Response of Ibn Lubb:

1. The Lord predetermined the heresy of the heretics; however He did not determine that this heresy is an obligation, which pleases Him. This principle applies to all religions.
2. He forbade His creatures to perform the [bad] deeds that He all the same wished to occur. His sovereignty is the conclusive proof.
3. We are pleased with God's decree, while our hatred is reserved for sins.
4. You should not be pleased with a human act which was specifically forbidden by the divine law. However, you should commit your cause to the way He organized things and to the rule of His creative will.
5. He invited everyone to observe the practices of religion. He made some of them successful in performing their religious duties. In sum, the success was granted to a few, but the invitation to perform these duties was to all.
6. Therefore, when you take other routes than the route of His divine law, you are disobedient, even though you walk in the path of the divine creative will.
7. The choice of performing an act is yours, while God is the creator. His will is materialized in His creation.
8. What God does not want to exist, does not exist. God, who created creation, is exalted and sublime.
9. This is the answer to the questions of an ignoramus, a blind man who shouts:

[182] Abū Isḥāq Ibrāhīm ibn Mūsá al-Shāṭibī, *Al-Ifādāt wa-al-Inshādāt,* ed. Muḥammad Abū al-Ajfān (Beirut, 1403/1983), 172–75.

10. Listen, you scholars of Islam! I, the non-Muslim under the protection of your religion, am baffled, so please lead me towards the clearest theological proof.

The second response, that of Badr al-Dīn Muḥammad ibn Asʿad al-Tustarī (d. ca. 737/1336), appears in a Hanafi *kalām* manual written by Kamāl al-Dīn Muḥammad ibn ʿAbd al-Wāḥid ibn Humām (d. 861/1457). The Persian al-Badr al-Tustarī visited Cairo in 727/1326–27, but there is no indication that he learned about the dhimmi's question during his stay there. Al-Tustarī's poem comprised two verses only:

1. God predetermines heresy, which means that He knows the most secret truths by virtue of His eternal knowledge.
2. Then He created things according to what He knows, by virtue of His eternal power.[183]

According to Ibn al-Humām, al-Tustarī "wrote a preface in prose in which he summarized the essence of his two-verse response. He wrote: the meaning of God's predetermining the heresy of the heretic is that God has knowledge of things."[184]

[183] Kamāl al-Dīn Muḥammad ibn Muḥammad ibn Abī Bakr ibn ʿAlī Ibn Abī Sharīf, *Al-Musāmarah: Sharḥ al-Musāyarah fī al-ʿAqāʾid al-Munjiyah fī al-Ākhirah li-Kamāl al-Dīn Muḥammad ibn ʿAbd al-Wāḥid al-Ḥanafī al-Maʿrūf bi-Ibn al-Humām wa-maʿahu Ḥashiyah ʿalá al-Musāyarah li-Zayn al-Dīn al-Qāsim ibn Quṭlūbughā al-Miṣrī al-Ḥanafī,* ed. Muḥammad ʿUmar al-Dumyāṭī (Beirut, 1423/2002), 136.

[184] Ibn Abī Sharīf (d. 905/1499–1500), the Shafiʿi scholar who glossed Ibn al-Humām's text, sees these verses as an explanation to the term *al-qaḍāʾ wa-al-qadar:* God's *qaḍāʾ* indicates God's eternal knowledge, while God's *qadar* indicates God's creating by virtue of His power. Ibn Abī Sharīf, *Al-Musāmarah,* 136.

Mamluks and Their Relatives in the Period of the Mamluk Sultanate (1250–1517)

The age of the Mamluk Sultanate is regarded as the period in which the "mamluk principles," as defined by David Ayalon, were most clearly expressed. These were: the mamluk's loyalty to his master, solidarity among mamluks serving the same master *(khushdāshīyah),* and the concept of "one generation nobility" (i.e., that sultans and amirs did not bequeath status, privileges, or property to their sons).[1] The prevalent view regarding the Mamluk Sultanate is that dynastic and hereditary tendencies were weak throughout its reign.[2] It is similarly believed that, under the Sultanate, blood ties, marital bonds, and ethnic solidarity were of marginal importance in comparison with the pseudo-familial ties between the master and the mamluk, and between mamluks of the same household.[3] Furthermore, it has been argued that in this era the right to rule and hold key positions in the Sultanate was reserved exclusively for mamluks. According to this argument, the ruling elite's main characteristic was its mamluk descent; all mamluks were of elite status; and mamluks were proud of their slave origin even after manumission.[4]

In my dissertation, I have examined a variety of social ties of sultans and amirs in the period of the Mamluk Sultanate. I argue that, throughout the period, blood ties, marital ties, and ethnic solidarity were of greater importance than what is commonly thought in scholarly research. Notwithstanding this, significant changes are evident in the patterns of social ties upon the transition from the Turkish to the Circassian ruling class (1382–1517). Only under the latter do we see the waning of the biological family, the decline of agnate lines, the enhanced

prestige of pseudo-familial ties, and the erosion in the dynastic and hereditary principles.[5] In what follows, I will focus on a specific type of mamluks' social ties: their relatives who resided within the territory of the Sultanate.

It is commonly held that the phenomenon of the importing or migration of relatives of mamluks into the territory of the Sultanate was characteristic of the Sultanate's Circassian period. According to Ayalon, during the second half of the fifteenth century, a large number of such relatives were brought into the Sultanate and received positions as amirs, without having to undergo military training. Ayalon even calls the second half of the Circassian period "the period of rule by brothers-in-law and relatives."[6] The fact that a marked presence of mamluks' relatives is evident specifically in a period in which the importance of blood ties seems to have declined remains unexplained. D. S. Richards points out that it is possible to find instances of the importation of mamluks' relatives into the Sultanate also during the fourteenth century (i.e., during the Turkish period).[7] In what follows, I will survey additional instances, which Richards has not mentioned, of the arrival of mamluks' relatives into the Sultanate during the Turkish period (1250–1382). I will examine the identity of the mamluks whose relatives were brought into the Sultanate, and analyze the patterns of bringing in relatives, during both the Turkish and Circassian periods. I will also discuss the changes that can be identified in these patterns after the transition to Circassian rule, and relate them to other changes that occurred in the change of ruling classes. Additionally, I will argue that only a small cadre of favored mamluks could bring their relatives into the Sultanate. This group of mamluks could shed the signs of slavery, the most important of which was the lack of family ties. Only this group, and not all the mamluks, can be regarded as elite.

The Turkish Period

In both the Turkish and Circassian periods, the bringing of relatives was the prerogative of the ruling sultan. It will be demonstrated that almost all of the family members brought into the Sultanate were relatives of the ruling sultans or of amirs related by marriage to the sultans. All the instances of bringing in the sultan's relatives occurred after he had taken power. As to amirs' relatives, they were almost always brought into the Sultanate after the amirs had married into the sultan's family.

[7]D. S. Richards, "Mamluk Amirs and Their Families and Households," in *The Mamluks in Egyptian Politics and Society,* ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 36–37.

We cannot identify relatives of mamluk sultans or amirs who were brought into the Sultanate at the beginning of the Turkish period. We may assume this was because most of the mamluks in this period were Kipchaks whose families had been uprooted due to the Mongol invasion, and whose enslavement entailed complete detachment from their families. Due to the fact that during almost the entire Turkish period the Sultanate was not ruled by slaves, but by the Qalawunid family (1279–1382), the importation of relatives of the sultan is largely irrelevant, and in that period the phenomenon was effectively limited to the relatives of amirs. Nonetheless, we find instances in which the Qalawunid sultans brought their maternal relatives into the lands of the Sultanate. For example, al-Nāṣir Muḥammad ibn Qalāwūn (d. 1341), beginning in 1304, brought in a number of his mother's relatives, at least two of whom immediately became senior amirs.[8]

The importation of mamluk amirs' relatives started only in the fourteenth century. It may be that locating the relatives of mamluks, in order to bring them into the Sultanate, only became possible at this time, since many of the mamluks in this period were Mongol captives (some from noble Mongol families), or Turco-Mongol slaves from the Golden Horde who had been sold by their families. The first relatives of a mamluk amir brought into Egypt were the relatives of the Mongol captive Salār al-Manṣūrī (d. 1310), whose father had been a senior amir in Anatolia. Salār's daughter married Mūsá ibn ʿAlī ibn Qalāwūn in 1299. The marriage was consummated in 1304, and shortly afterwards, in 1305, Salār's relatives were brought into Egypt and immediately became amirs.[9] This pattern of bringing in the relatives of a mamluk amir (and promoting them) after marital ties had been established with the Qalawunid family recurs throughout the Turkish period. All the mamluks whose relatives were brought into the Sultanate dur-

ing this period were Turkish/Tatar slaves, related by marriage to the Qalawunid family. In addition to the case of Salār, we know that the families of Baktamur al-Sāqī, Arghūn al-Kāmilī, Baybughā Urūs, Ṭāz al-Nāṣirī, and Jaraktamur al-Ashrafī were brought into the Sultanate after these amirs had married into the Qalawunid family (see the table below). The families of Bashtāk al-Nāṣirī, Yalbughā al-Yaḥyāwī, and Qawṣūn al-Nāṣirī probably also arrived in Egypt after these amirs had created marital bonds with the Qalawunid family.

Table: Mamluks Whose Relatives Were Brought into Egypt during the Turkish Period[10]

Name of Mamluk	*Year of Death, Age at Death*	*Year of Marital Tie with the Qalawunids*	*Age when Marriage Took Place*	*Year when Relatives were Brought In*
Salār al-Manṣūrī	(d. 1310, bit less than 50)	1299	About 38	1305
Baktamur al-Sāqī	(d. 1332, about 50)	Before 1313~	30 or less	1314–16
Qawṣūn al-Nāṣirī	(d. 1341, about 40)	1326	About 25	At latest 1330
Bashtāk al-Nāṣirī	(d. 1341, less than 40)	1332~	30 or less	1336
Yalbughā al-Yaḥyāwī	(d. 1347, 20–25)	Before 1340	Less than 18	At latest 1338

Arghūn Shāh al-Nāṣirī	(d. 1349)	Before 1340	Less than 30	?
Arghūn al-Kāmilī	(d. 1357, less than 30)	1344	Less than 17	1350
Baybughā Urūs	(d. 1353)	1344–45?	?	1350
Ṭāz al-Nāṣirī	(d. 1361)	Before 1349	?	1351
Jaraktamur al-Ashrafī	(d. 1376, less than 20)	Before 1376	Less than 20	After the marriage

As can be seen from the table, almost all the amirs whose families were brought into the Sultanate had married into the Qalawunid family at an early age. Throughout the Mamluk Sultanate's reign, mamluks rarely started a family before the age of thirty.[11] In this period almost all the mamluks who had children before this age had established marital ties with the sultans while still young. Some of these mamluks were only formally slaves,[12] while most of the rest were favored mamluks who had been raised from their youth by the sultan, or those whom he chose to advance from an early age due to his affection for them. This small unit of privileged mamluks constituted an important part of the ruling elite. They were distinct from the large body of mamluks, and shed the characteristics of slavery, most important of which was the lack of family ties. Unlike the majority of mamluks, the favored mamluks were not prevented from creating families. Not only did they become relatives of the royal family, they also

[11] I discuss this subject in detail in my dissertation. This assertion is based on data culled from the sources and gathered in a database including all the social ties of Mamluk sultans and amirs. Naturally, we have more information concerning sultans. In the Turkish period, almost all of the Turkish/Mongol mamluk sultans who ruled Egypt started a family while in their thirties, and usually around the age of 35 (except al-Muʿizz Aybek who started a family when he was 40 or even 45). Circassian mamluk sultans, by contrast, started families while in their forties or later, usually after the age of 45 (except al-Muʾayyad Shaykh, who started a family when he was about 35). There is no reason to believe that the data concerning the sultans is not representative of the general situation. However, data concerning a few dozen amirs reveals that in the Turkish period, only rarely did mamluk amirs start a family before the age of 30, while in the Circassian period they only rarely did so before the age of 35. It seems that the Circassians were perceived in a most negative manner during the Turkish period. They were discriminated against, manumitted at a later age, and thus delayed from starting their own families. Under those conditions, it seems that the Circassian mamluks developed a slave ethos and ascribed more importance to pseudo-familial ties.

[12] The best example of such a mamluk is Qawṣūn al-Nāṣirī. He was an adult when formally sold to al-Nāṣir Muḥammad. Qawṣūn was proud of not being a real slave, and of being exempt from the normal procedure of training and promotion; see al-Ṣafadī, *Aʿyān,* 4:138.

established families of their own, from a young age, and brought their own relatives into the territory of the Sultanate. Upon their arrival, these relatives became amirs. The sons of these favorite mamluks had quite a good chance of becoming amirs, both because their fathers were attached to the royal family, and because their fathers had parented them while young.[13]

The situation of the non-Turkish mamluks was worse than that of the majority of the Turco-Mongol mamluks. Since there is no evidence supporting the sale of non-Turkish mamluks by their families, we may assume that most of them were war captives, and therefore their enslavement was more traumatic than that experienced by their Turco-Mongol counterparts.[14] As soon as the non-Turkish mamluks entered the Sultanate, their connection to their families was severed forever. The Turco-Mongol mamluk, however, had the possibility of becoming a favored mamluk, marrying into the Qalawunid family, establishing a family while still young, and bringing his relatives into the Sultanate. This privilege was almost totally unavailable to non-Turkish mamluks, who were undoubtedly perceived by their contemporaries as being "more enslaved" than the Turco-Mongols.

By bringing in their in-laws *(aṣhār),* and promoting them to senior amirates, the Qalawunids definitely reinforced the idea that the right of being part of the ruling elite belonged to those who had a family (i.e., those who were not slaves), which thereby strengthened their legitimacy to rule. Beginning at least with the third reign of al-Nāṣir Muḥammad ibn Qalāwūn (1310–41), until the Circassian period, the Mamluk Sultanate was ruled by a royal family, its relatives, and its in-laws.

The Circassian Period

There was a greater presence in the Sultanate of relatives of the sultans during the Circassian period. Nonetheless, I do not believe that the phenomenon of bringing in relatives was more characteristic of the Circassian ruling elite than of the Turkish one. One reason why more relatives of the sultans can be identified in the Circassian period is that, in contrast to the Turkish period, most of the sultans in this period were mamluks themselves and not descendants of sultans. While the Turkish period was typified by bringing relatives of amirs who had married

[13]See for example Ibn Taghrībirdī, *Al-Manhal,* 12:152, 155; idem, *Al-Nujūm,* 10:194, 11:4; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:523; al-Ṣafadī, *Aʿyān,* 5:191; al-Maqrīzī, *Al-Sulūk,* 3:180, 301.

[14]For evidence that during the third reign of al-Nāṣir Muḥammad non-Turks were enslaved in war while Turks were sold by their families, see al-ʿUmarī, *Kitāb Masālik al-Abṣār wa-Mamālik al-Amṣār: Mamālik Bayt Jinkiz Khān* (Wiesbaden, 1968), 69–70. Al-ʿUmarī states explicitly that the Circassians were war captives. Unfortunately, we cannot corroborate this information because biographies of Circassian mamluks from the Turkish period usually do not contain data concerning the method of their arrival into the Sultanate.

into the Qalawunid family, the Circassian period is characterized by bringing in relatives of the sultans themselves, with a decline in the arrival of relatives of the amirs. The dimensions of this phenomenon, however, should not be overstated, since only three sultans—al-Ẓāhir Barqūq (1382–99), al-Ashraf Barsbāy (1422–38), and al-Ashraf Qāytbāy (1468–96)—brought a large number of family members into the Sultanate and made them amirs, some of senior rank. Al-Ashraf Barsbāy brought his wife's relatives, as well as his own.[15] Al-Mu'ayyad Shaykh (1412–21), al-Ẓāhir Ṭaṭar (1421), al-Ẓāhir Khushqadam (1461–67), al-Ashraf Īnāl (1453–61), al-Ẓāhir Yalbāy (1467), and al-Ẓāhir Timurbughā (1467–68) did not bring a single relative of theirs to Egypt, and al-Ẓāhir Jaqmaq (1438–53) brought only his sister.[16]

The second reason as to why more relatives of the sultans can be identified in the Circassian period is related to changes in the patterns of the slave trade in this period. There is substantial evidence that, in the Circassian period, Circassian relatives were bought as slaves together or individually. We know, for example, that Qānībāy, the relative of al-Ẓāhir Ṭaṭar, was in Egypt before Ṭaṭar, and recognized the latter upon his arrival in the land; Jarkas al-Muṣāriʿ, the brother of al-Ẓāhir Jaqmaq, was bought by al-Ẓāhir Barqūq before he purchased Jaqmaq; and Ṭawkh, the elder brother of al-Ashraf Īnāl, was purchased together with Īnāl by al-Ẓāhir Barqūq.[17] The phenomenon apparently assumed additional momentum beginning

[15]For the relatives of Barqūq, see al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, n.d.), 2:326, 284–85, 6:221–22, 10:302–3, 12:59, 74, 115; al-Sakhāwī, *Wajīz al-Kalām fī al-Dhayl ʿalá Duwal al-Islām* (Beirut, 1995), 1:376; al-Malaṭī, *Nayl al-Amal fī Dhayl al-Duwal,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut and Sidon, 2002), 2:387, 3:110; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:242–43, 4:255, 350–51; Ibn Taghrībirdī, *Al-Manhal,* 3:105–7, 217, 6:11–15, 9:37, 67; idem, *Al-Nujūm,* 14:144; al-Maqrīzī, *Al-Sulūk,* 4:188. For the relatives of Barsbāy and his wife, see Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr* (Cairo, 1960), 1:349, 412, 469, 504; al-Jawharī, *Inbāʾ al-Haṣr bi-Abnāʿ al-ʿAṣr,* ed. Ḥasan Ḥabashī (Cairo, 1970), 80, 312; al-Sakhāwī, *Al-Ḍawʾ,* 3:7, 21, 36–38, 63, 220, 6:85, 163–64, 218, 10:224, 280, 303–4, 12:17, 164; idem, *Wajīz,* 2:697; al-Malaṭī, *Nayl,* 4:186, 199, 278, 332, 369, 405, 418, 5:45, 50, 6:26, 90, 22, 377, 381, 434, 7:95, 183; Ibn Taghrībirdī, *Al-Manhal,* 3:6–7, 4:23–24, 217, 5:14–16, 326, 9:63–64, 12:134–35; idem, *Al-Nujūm,* 14:258, 15:246; al-Maqrīzī, *Al-Sulūk,* 4:646, 1132. For the relatives of Qāytbāy, see Ibn al-Ḥimṣī, *Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut and Sidon, 1999), 1:334, 382; Ibn Iyās, *Badāʾiʿ,* 1:613, 633, 636, 639, 650; al-Malaṭī, *Nayl,* 7:171, 207–8, 231, 279, 312, 381, 8:105, 107, 151–52, 231; al-Sakhāwī, *Al-Ḍawʾ,* 2:315, 3:64, 6:227; idem, *Wajīz,* 3:1222.

[16]Al-Sakhāwī, *Al-Ḍawʾ,* 2:272, 3:44, 6:168; al-Malaṭī, *Nayl,* 5:306, 6:382, 7:343, 8:146; Ibn Iyās, *Badāʾiʿ,* 1:413, 577, 2:906.

[17]Ibn Taghrībirdī, *Al-Nujūm,* 14:197–98, 16:58; idem, *Al-Manhal,* 4:211, 275–76; al-Sakhāwī, *Al-Ḍawʾ,* 2:328. For other relatives of sultans who apparently were not brought into the Sultanate by these sultans, but bought as slaves by others, see for example Ibn Taghrībirdī, *Al-Nujūm,* 11:168, 15:306; idem, *Al-Manhal,* 11:272; al-Maqrīzī, *Al-Sulūk,* 4:607–8, 1149; al-Sakhāwī, *Al-Ḍawʾ,* 10:169. For mamluk relatives who were apparently bought together or one after the other, see for example Ibn Taghrībirdī, *Al-Nujūm,* 12:242, 15:141, 165, 172–73, 287, 16:282; idem, *Al-Manhal,* 8:257, 9:64, 12:138; al-Sakhāwī, *Al-Ḍawʾ,* 3:43, 65; al-Malaṭī, *Nayl,* 7:268.

at the end of the reign of al-Ashraf Barsbāy or during the time of al-Ẓāhir Jaqmaq. It took on graphic dimensions in the reign of al-Ashraf Qāytbāy, Barsbāy's mamluk, since the number of his relatives mentioned in the sources is unprecedented, even though Qāytbāy was not responsible for bringing most of them. Many of them came to Egypt as slaves before he became sultan.[18]

As in the Turkish period, in the Circassian period the importation of relatives was the sultan's prerogative. Al-Ashraf Barsbāy, al-Ẓāhir Jaqmaq, and al-Ashraf Qāytbāy all brought members of their families into the Sultanate after each had become the sultan, and al-Ẓāhir Barqūq brought his relatives after becoming *atābek* (commander-in-chief and regent) and the de facto ruler of the Sultanate. Unlike the Turkish period, in the Circassian period we find hardly any instances of amirs bringing in their relatives. Similar to the Turkish period, the amirs who had established marital ties with the families of the sultans had the possibility of bringing their relatives into the lands of the Sultanate. The three most prominent instances of the bringing of an amir's relatives in the Circassian period are the bringing of the relatives of Īnāl al-Yūsufī (d. 1391), Taghrībirdī min Bashbughā al-Ẓāhirī (d. 1415), and Yashbak min Salmān Shāh al-Faqīh (d. 1473). The three were related by marriage to the family of al-Ẓāhir Barqūq or that of al-Muʾayyad Shaykh.[19]

Taghrībirdī min Bashbughā al-Ẓāhirī, the father of the famous historian Yūsuf ibn Taghrībirdī, was bought by Barqūq at about the time he became sultan (1382). Taghrībirdī was about 24 years old when his firstborn son was born in 1395.[20] In the Circassian period, it is not common to find mamluks who had offspring before the age of 35, and most began to have children while in their forties.[21] This said, in the Circassian period, as in the Turkish period, there was a small cadre of favorite mamluks who had married into the families of the sultans at an early age and had established their own families while still young.[22] At times, they were also able

[18]See for example al-Sakhāwī, *Al-Ḍawʾ,* 2:274, 3:36–38, 53, 65, 76, 6:227, 10:166, 11:276; al-Malaṭī, *Nayl,* 6:368, 7:138, 166–67, 172, 175, 254, 268, 358, 381; Ibn Iyās, *Badāʾiʿ,* 1:409, 455, 468, 504, 577, 622; Ibn Taghrībirdī, *Al-Nujūm,* 16:364.

[19]For Īnāl al-Yūsufī, see Ibn Qāḍī Shuhbah, *Tārīkh,* 1:438; al-Sakhāwī, *Al-Ḍawʾ,* 2:274, 10:270; Ibn Taghrībirdī, *Al-Manhal,* 2:349–51, 12:130–31. For Yashbak min Salmān Shāh, see al-Sakhāwī, *Al-Ḍawʾ,* 3:65. For Taghrībirdī min Bashbughā al-Ẓāhirī, see Ibn Taghrībirdī, *Al-Manhal,* 2:200–1, 4:42, 46, 174, 5:316–23, 368, 6:316–17, 8:401, 9:54–57; idem, *Al-Nujūm,* 12:106, 13:118, 14:252, 15:135; al-Sakhāwī, *Al-Ḍawʾ,* 2:329–30, 12:19, 132; al-Malaṭī, *Nayl,* 4:206.

[20]Ibn Taghrībirdī, *Al-Manhal,* 2:309, 4:40–41.

[21]See footnote 11 above.

[22]I found nine instances in the Circassian period in which mamluks had children before the age of 35 (including Taghrībirdī). In six of these instances the mamluks were related by marriage to the family of the Sultan, or were closely connected with it. For details, see al-Sakhāwī, *Al-Ḍawʾ,* 2:270–72, 315, 3:53–55, 7:131, 8:291, 11:234, 12:21, 25, 27, 59, 89, 90, 165, 167; idem, *Wajīz,* 1:332;

to bring their relatives into the Sultanate, although this phenomenon was much less widespread than it had been in the Turkish period. Taghrībirdī is the best example of such a favorite mamluk. He was the brother (or relative) of Shīrīn, the wife of Barqūq and the mother of Barqūq's son al-Nāṣir Faraj. Taghrībirdī also had numerous marital ties to the Barqūq family.[23] Taghrībirdī's relatives were brought into the Sultanate.[24] He also was related by marriage to the sultans al-Muʾayyad Shaykh and al-Ẓāhir Jaqmaq, since Shaykh was married to the daughter of Shīrīn, and Muḥammad ibn Jaqmaq married Taghrībirdī's granddaughter.[25]

The question arises, why did the phenomenon of bringing relatives of those bound by marriage to the sultan's family wane in the Circassian period? Two possible answers present themselves. First, because of the changes in the slave trade patterns, many mamluks already had relatives in the territory of the Sultanate. Second, during the Circassian period, the mamluk amirs who had marital ties to the sultan's family were fully "annexed" to the royal family. In that period, the status of the women of the sultan's family devolved to those amirs, who were often buried in the mausoleums of the sultans, together with their sons. The sources from the Circassian period contain many references to the sons of amirs who married daughters of sultans as descendants in a cognate line of the sultans *(asbāṭ),* and these sons were given a royal title *(sīdī).*[26] Family and marital ties in the Circassian period were a factor that balanced the erosion of the biological family, the decline of the agnate lines, and the decline of the dynastic and hereditary principles.

"Joseph's Law": A Reassessment

Ulrich Haarmann discovered that European travelers who visited Egypt at the end of the Circassian period had found an explanation for the almost exclusive rule of the Mamluk Sultanate by mamluks, in the Biblical precedent of Joseph (in Haarmann's terminology, "Joseph's Law"). For example, Arnold von Harff,

---

al-Malaṭī, *Nayl,* 5:281, 301, 402, 7:84, 97, 186, 312; Ibn Iyās, *Badāʾiʿ,* 1:342, 570, 647, 650, 736, 2:994; Ibn Taghrībirdī, *Al-Nujūm,* 14:254, 15:459, 16:319; idem, *Al-Manhal,* 2:346–47, 9:98–100; al-Maqrīzī, *Al-Sulūk,* 4:786.

[23]Ibn Taghrībirdī, *Al-Manhal,* 2:200–1, 4:42, 5:368, 12:131; idem, *Al-Nujūm,* 11:7, 13:118, 14:129, 252, 15:135; al-Sakhāwī, *Al-Ḍawʾ,* 2:329–30, 10:270, 12:19, 132; al-Malaṭī, *Nayl,* 4:206.

[24]See footnote 19 above.

[25]Ibn Taghrībirdī, *Al-Manhal,* 3:476–80; al-Sakhāwī, *Al-Ḍawʾ,* 2:316–17, 12:51; al-Malaṭī, *Nayl,* 5:284.

[26]See for example Ibn Iyās, *Badāʾiʿ,* 1:349, 469, 574, 577, 736; Ibn al-Ḥimṣī, *Ḥawādith,* 2:66. In the Turkish period there are hardly any references to descendants in a cognate line of the sultans, and the use of the term *sīdī* is limited to sons of sultans. In that period, sons of amirs who had marital ties to the Sultan's family were buried with their fathers and not in the mausoleum of the sultan. I discuss this in detail in my Ph.D. dissertation.

who visited Egypt in 1496, maintained that the government in Egypt was in the hand of slaves because "since the time of Joseph, who was sold into slavery by his brothers and came to Egypt, it had never been doubted that the sultan had to be an infidel [that is, one not born a Muslim]." According to Haarmann, von Harff apparently deduced this idea from the comparison that Felix Fabri (who visited Egypt in 1483) had drawn between the mamluks and the Joseph narrative.[27] Haarmann regards these theories by European travelers in light of the travelers' overarching perceptions of the Mamluk Sultanate as exotic and strange, and he apparently does not think that these ideas were based in Egyptian/Mamluk concepts.[28] In addition to von Harff and Fabri, we could mention another European traveler who related the Biblical Joseph narrative to the Mamluk context. Pietro Martire de Anglería, the ambassador of the Granadan kings who visited Egypt in 1501, asked himself the question that had been asked by European travelers before him: how did slaves become the rulers of such a great empire? Pietro Martire indicated that there were a number of views regarding this question. One opinion that he set forth is that in order to show their gratitude for the benevolence of Joseph, who freed ("habia librado") Egypt by resolving the famine in the land, ever since the Egyptians have given the reigns of government in their country to slaves. Pietro Martire comments that, in his opinion, this was merely a fairy tale, but does not specify the sources of his information regarding this "fairy tale."[29] Our first inclination is to assume that these were other European travelers who had spent time in Egypt before him, but there is no unequivocal evidence of this. The tale that he relates is not mentioned by Fabri or von Harff, who connect the Biblical Joseph narrative and the mamluks. I will argue below that the connection between the mamluks and the Biblical Joseph is not a European invention. The European "fairy tales" are based on at least a nucleus of Egyptian (and Muslim) tales, and the mamluks themselves found some linkage between themselves and the Biblical narrative, although it appears that they emphasized parallels different from those highlighted by the Europeans. While the European travelers found an explanation in the Joseph narrative for the fact that only slaves were entitled to rule in Egypt, the mamluks themselves stressed the fact that some of them, like Joseph, had found redemption by being reunited with their families af-

[27]Ulrich Haarmann, "Joseph's Law—The Careers and Activities of Mamluk Descendants before the Ottoman Conquest of Egypt," in *The Mamluks in Egyptian Politics and Society,* ed. Philipp and Haarmann, 61.

[28]Ulrich Haarmann, "The Mamluk System of Rule in the Eyes of Western Travelers," *Mamlūk Studies Review* 5 (2001): 1–24.

[29]Pietro Martire de Anglería, *Una embajada de los Reyes Católicos a Egipto (Según la "Legatio Babylonica" y el "Opus Epistolarum" de Pedro Mártir de Anglería),* edited and translated by Luis García y García (Valladolid, Spain, 1947), 112–14.

ter a lengthy separation. The comparison that the mamluks drew between themselves and Joseph is indicative of the mamluks' self-perception, the importance they ascribed to the link with relatives, and their aspiration to reunite with their relatives as a way to shed their slave status.

The image of the Biblical Joseph was present in Mamluk Egypt. A number of places in Egypt, for instance, were named after Joseph, and there are numerous references to the Biblical character in the contemporary literature.[30] There are many instances in the sources of comparisons between Joseph and the mamluks or Mamluk-era Egyptian rulers. The comparison between the Biblical Joseph and the mamluks or rulers in Egypt was based on a number of motifs common to the story of Joseph's life and the life history of the mamluks/Egyptian rulers. Joseph was a stranger in Egypt, as were the mamluks; both Joseph and the mamluks had been sold into slavery; both Joseph and some of the mamluks had been so sold by their families; Joseph had been imprisoned in Egypt but succeeded in being freed from prison;[31] Joseph ruled in Egypt, like at least some of the mamluks; and Joseph was reunited with his family after not having seen them for as lengthy a period as at least some mamluks. The typical Joseph-mamluk comparison did not contain more than a single motif. This comparison apparently became more elaborate in the Circassian period, in which a large number of mamluk sultans ruled, and its emphases may have changed.

It appears that at least until the late Turkish period the comparisons between the Joseph narrative and the lives of the mamluks tended not to employ the "slave who rises to power" motif. The first Joseph-mamluk comparison that I found did not come from the territory of the Mamluk Sultanate. The Afghan al-Juzjānī, who in 1259 completed a biographical dictionary, the last parts of which are concerned with the Ghūrīs and the slaves who succeeded them, compares the mamluk sultan of Delhi, Aybek, with Joseph, because both had been sold into slavery by their brothers.[32] It should be noted that when von Harff compared Joseph to the mamluks he referred to the fact that both Joseph and the mamluks were sold into slavery by their families. The first association of Joseph with a mamluk in the territory of the Mamluk Sultanate is with al-Ẓāhir Baybars (d. 1277), which appears in Ibn al-Mughayzil (d. 1296). One of the amirs of the Ayyubid ruler al-Ṣāliḥ

[30] See for example al-Nuwayrī al-Iskandrānī, *Kitāb al-Ilmām,* ed. Etienne Combe and Aziz Suryal Atiya (Hyderabad, 1968–76), 5:49, 244, 6:412; al-Maqrīzī, *Al-Sulūk,* 3:1125; Ibn al-Dawādārī, *Kanz al-Durar,* 8:4; al-Ṣafadī, *Aʿyān,* 5:600; and see also Ulrich Haarmann, "Regional Sentiment in Medieval Islamic Egypt," *BSOAS* 43 (1980): 56–57. The story of Joseph was a popular theme in Arabic and Persian literature and the first Turkish version of the story appeared in 1233; see S. L. West, "The Qiṣṣa-i Yūsuf of ʿAlī: the First Story of Joseph in Turkic Islamic Literature," *Orientalia Academiae Scientiarum Hung* 37/1–3 (1983): 69–84.

[31] It is common for contemporary sources to refer to imprisonment as a metaphor for enslavement.

[32] Peter Jackson, *The Delhi Sultanate: A Political and Military History* (Cambridge, 2003), 7, 63.

Ayyūb (d. 1249) is quoted as saying to al-Ẓāhir Baybars: "God put you in the place of Joseph, and put in your hand the souls of his servants."[33] The fact of Baybars being a mamluk is marginal in this comparison, and Baybars is compared to Joseph simply because both ruled in Egypt. An additional Joseph-mamluk comparison in Turkish-period sources is that between the amir Baybughā Urūs and Joseph, based on their both having been imprisoned and freed. In this instance, too, Baybughā's being a mamluk seems marginal.[34] In sources from the Turkish period, we also find a comparison between Joseph and al-Nāṣir Muḥammad ibn Qalāwūn. al-Nāṣir Muḥammad ibn Qalāwūn is quoted as saying that he was a foreigner in Egypt, just like Joseph was a foreigner in that land.[35] In that case, the Egyptian ruler to whom Joseph is compared was not a mamluk. The most significant comparison between Joseph and mamluks in the Turkish period comes in the context of family reunification. The historian Baybars al-Manṣūrī (d. 1325) relates that Salār al-Manṣūrī's family arrived in Egypt in 1304. He adds that: "He was pleased by the reunification and his family's presence after a lengthy separation, and having despaired of meeting them. For since he had been separated from his family in the battle of al-Abulustayn during the reign of al-Ẓāhir Baybars in 1276, thirty years had passed. His family came to him from afar, and his desires were met by their closeness. As [God] had done for Joseph son of Jacob, their hearts rejoiced at the reunion."[36] At least in the Turkish period, the most prominent motif in the mamluk-Joseph comparison is connected to the fact that they were separated from their families, and were reunited after the great suffering caused by their being apart.

The Joseph-mamluk comparisons become markedly more frequent in the time of Barqūq. In the case of Barqūq himself, the comparison with Joseph was patently upon the initiative of this sultan, who had brought his father and his family to Egypt in 1380, when he was the *atābek.* According to al-Suyūṭī (d. 1505), Barqūq was the only Circassian mamluk sultan whose father was a Muslim: his father came to Egypt, converted to Islam, and died about a month before Barqūq assumed the throne.[37] Barqūq chose to meet his father upon the latter's arrival in Egypt at al-ʿIkrishah, which, according to Barqūq's confidant Ibn Duqmāq (d.

[37] Al-Suyūṭī, *Ḥusn al-Muhāḍarah fī Tārīkh Miṣr wa-al-Qāhirah* (Cairo, 1967–68), 2, 120; see also al-Sakhāwī, *Wajīz,* 1:249.

1407), is where Joseph met his father when Jacob came to Egypt.[38] Al-Maqrīzī (d. 1441) tells us that Barqūq also established a religious trust for the tomb of Joseph's brothers.[39] Before the time of Barqūq, there are hardly any references in the sources to al-ʿIkrishah, and no source preceding the reign of this sultan mentions al-ʿIkrishah as the meeting place of Joseph and his father.[40] There are more references to al-ʿIkrishah in the sources beginning in the time of Barqūq.[41] In the Circassian period al-ʿIkrishah apparently was a ceremonial site.[42]

Barqūq clearly compared himself to the Biblical Joseph. As in the Turkish period, the comparison was based on their both having been separated from their families, with whom they were eventually reunited. Once Barqūq took power, the prevalent conception was that the ruler had to come from an established family. Barqūq's having made the effort to bring his family to Egypt before he crowned himself as sultan shows that he was compelled to take account of the conception that only those who had a family (that is, those who were not slaves) could legitimately rule, but might also attest to his comparing himself to Joseph as a slave who shed this status and assumed power. Barqūq's comparing himself to Joseph was not limited to their both having succeeded in reuniting with their families. Ibn Ṣaṣrá (d. after 1399) observes that, like Joseph, Barqūq was imprisoned and freed and takes this opportunity to mention that Barqūq returned to power, as had Solomon (!).[43] This comparison does not explicitly refer to Joseph and Barqūq as slaves who ascended the throne, but it comes very close to making such a statement.

There are additional indicators that, in the Circassian period, the mamluk-Joseph comparison might have been based on the "slave who rises to power" pattern. There is an instance in this period in which verse 12:21 from the Quran ("We have given Joseph an exalted place on earth") was read during the sultan's coronation.[44] Al-Nuwayrī al-Iskandrānī (who wrote his book in 1373) interprets this verse in the context of the Joseph narrative: according to him, Zulaykhah, Pharaoh's wife, bought Joseph and imprisoned him, but after his imprisonment

[44] Al-Buqāʿī, *Tārīkh al-Buqāʿī* (Cairo, 1992–93), 1:305.

Joseph became a great king, just as the faithful believers go to Paradise after their "imprisonment" in this world. The meaning of this verse according to al-Nuwayrī is therefore: the Egyptians thought that Joseph was their slave, but he turned them into his slaves when he sold them food during the famine. Upon the arrival of Joseph's family in Egypt, he declares: "O people of Egypt, you are my slaves, but I free you today in honor of my meeting my father."[45] The reading of this verse during the coronation of a Mamluk sultan might attest that during the Circassian period it was the mamluks themselves who made the connection between the mamluks and Joseph the slave who rose to become the ruler.

Two observations should be made in this context. First, al-Nuwayrī's commentary on the Quran verse reveals a (confused) similarity to the tale heard by Pietro Martire. Both Martire's tale and al-Nuwayrī's commentary expressly mention Joseph as the one who acted beneficently with Egypt during a time of famine. But while Martire maintains that Joseph freed the Egyptians when he gave them food, al-Nuwayrī states that Joseph enslaved them by this act. Al-Nuwayrī nonetheless relates that Joseph freed the people of Egypt, but in the context of his family's arrival in Egypt. Second, the Joseph-mamluk comparison in Mamluk sources stresses the aspect of liberation that followed the distress *(al-faraj baʿda al-shiddah)* in the life stories of both—distress that ensued from enslavement, imprisonment, and separation from one's family. The most frequent motif in the comparisons to Joseph in the Mamluk sources is the reunion with one's family that leads to redemption and liberation. It is not incidental that the liberation of the people of Egypt is connected with the arrival of the family of Joseph, who freed them when he himself was redeemed. I found only a single instance in the sources from the Mamluk period in which an explicit comparison between Joseph and the mamluks is based on the fact of both having been slaves who became rulers. Even, however, in this instance, the aspect of redemption following distress is emphasized. Al-Nuwayrī al-Iskandrānī has al-Ẓāhir Baybars make the following declaration: "If it had not been for what Joseph's brothers had done, he would not have become king of Egypt. One who withstands travail will in the end prevail, since suffering is the key to rewards."[46]

The European travelers were not the first to compare the mamluks and Joseph. While, however, the Mamluk sources highlight the aspect of redemption in the narratives of Joseph and the mamluks who rose to power, the European travelers

[45] Al-Nuwayrī al-Iskandrānī, *Kitāb al-Ilmām,* 2:121; Ibn Abī Ḥajalah (d. 1374) interprets this verse as following: Joseph became a king after suffering the hardships of imprisonment; see Ibn Abī Ḥajalah, *Sakardān al-Sulṭān,* ed. ʿAlī Muḥammad ʿUmar (Cairo, 2001), 121.

[46] Al-Nuwayrī al-Iskandrānī, *Kitāb al-Ilmām,* 4:79. According to al-Nuwayrī al-Iskandrānī, Aydekīn al-Bunduqdār, the master of Baybars, replied: "Because you withstood the rigors of enslavement, you became king of Egypt."

stress the mamluks' exclusive right to rule, based on the Biblical Joseph precedent. We cannot reject out of hand the possibility that, in the Circassian period, the mamluks themselves supported the idea that the right to rule of one who had been a slave was based on the Biblical Joseph precedent. Possibly, a Joseph-mamluk comparison based on a "slave who rose to assume power" narrative could be found in this period. But the most important lesson, in my opinion, to be learned from "Joseph's Law" is that the mamluks regarded the separation from their families as traumatic. Anyone who was reunited with his family after a period of distress was regarded as having been redeemed from servitude like Joseph in the Bible, and as becoming a legitimate ruler. Long before Orlando Patterson defined a slave as someone lacking family ties,[47] the mamluks perceived themselves as slaves because of the absence of such family ties. Even among the military slaves, only the outstanding few succeeded in completely freeing themselves of their slave status and becoming members of a ruling elite with family attachments. The other mamluks certainly cannot be regarded as an elite proud of its slave status.

Royal Justice and Religious Law: *Siyāsah* and Shariʿah under the Mamluks

Current studies of the legal history of the Mamluk Empire (1250–1517) are, by and large, depressing narratives of decay and corruption. One finds denunciations—often in remarkably moralistic language—of the rigidity of Islamic law, the corruptibility of the jurists, and the incursion of arbitrary sultanic justice at the expense of the shariʿah. In an influential monograph on law under the Bahri Mamluks (1250–1382), Nielsen states that:

> It is hardly necessary to point out that only in limited fields did the provisions of the Sharīʿa apply. Whatever criminal, fiscal and commercial provisions there existed were largely ignored. Sharīʿa lawyers had themselves contributed to this state of affairs, for when at an early stage its provisions were being left behind by practical developments they had accepted and developed stratagems...which avoided the intent of the law. Later they had accepted the recognition merely of the theoretical validity of the Sharīʿa and its symbolic supremacy...as being sufficient for the religious legitimacy of the state.[1]

According to Nielsen, the rigidity and impracticality of Islamic law led to the corruption of the legal establishment. This view is shared by almost all subsequent studies. Escovitz concludes that "many Chief Judges even compounded the difficulties of the Islamic community by adding their own varieties of corruption and fraud to the baser designs of the Mamluks."[2] In a recent study of Ibn Khaldūn's tenure as Maliki judge in Cairo, Morimoto remarks that "inevi-

tably, such an endeavor required him to take a scalpel to the degenerate world of Egypt's judiciary"[3] and that "in short, the *muftī*s were crooked lawyers."[4] The ideal theoretical law gave way not only to corruption, but also to arbitrary political power. L. Fernandes claims that rulers resorted to the *muftī*s whenever they wanted to legitimize action or behavior which would normally raise criticism, but ultimately "the Mamluk sultan listened to himself!"[5] The use of *maẓālim* courts by the sultans is seen solely in terms of a tool of political legitimacy, rather than from a legal perspective.[6] Finally, in a study on the encroachment of military courts on the jurisdiction of the qadis, Robert Irwin concludes that while some may have tried to judge in equity, "their 'justice' and 'protection' will not have differed very much from that offered by Don Corleone."[7]

These moralizing, caricature-like accounts of the Mamluk legal system take as their point of departure Schacht's model of a rigid and idealized Islamic law. In his *An Introduction to Islamic Law,* Joseph Schacht depicts the classical legal system, which took form under the Abbasids during the ninth and tenth centuries, as one in which Islamic law "became increasingly rigid and set in its final mould…not altogether immutable, but the changes that did take place were concerned more with legal theory and the systematic superstructure than with positive law."[8] In this system, the interaction between theory and practice was an uneasy truce between religious scholars and rulers. The traditional Islamic ruler could not legislate, but the scholars "half sanctioned the regulations which the rulers in fact enacted, by insisting on the duty…of obedience to the established authorities."[9]

[8]J. Schacht, *An Introduction to Islamic Law* (Oxford, 1964), 75.

[9]Ibid., 84.

There are two fundamental problems here. First, over the last three decades the model articulated by Schacht (but ultimately derived from Weber) has been refuted by literary and documentary evidence attesting to the continued development and application of Islamic law. We now know that Islamic legal theory never closed the door of *ijtihād,* and there are by now quite a number of studies demonstrating actual, significant shifts in positive law.[10] Change occurred through an articulation of new doctrine in a *fatwá* or a commentary, superseding the older doctrine preserved in the canonical texts.[11] We also know now that Schacht underestimated the practical application of Islamic law, especially with regard to commercial contracts.[12] *Fatwá*s were given in response to questions arising from real life, as shown by examples from within the Mamluk domains.[13] Changes introduced by Mamluk *muftī*s had implications for judicial practice.[14] Finally, the fourteenth-century archives of the Islamic court of Jerusalem, discovered in the 1980s, is a tangible testament both to the wide-ranging jurisdiction of Mamluk

qadis, as well as the close link between actual judicial practice and the legal literature.[15]

A second problem is the dogmatic view of the Mamluk state as intruding into a pure, perfect sphere of Islamic law. According to the dominant paradigm, which has also been recently espoused by Wael Hallaq, the ideal form of Islamic law is independent of the state. The legal role of the state was merely to enforce the decisions of qadis, or limited to matters directly related to the machinery of government.[16] It follows that any intervention of the state in legislation or administration of the law is a corruption of the ideal shariʿah. Schacht and Hallaq adopt this view even though they both recognize that the Ottoman Empire, the one Islamic state for which we have abundant legal records, exemplifies synergy between the ruler's law and Islamic law. The Ottoman *kanun* added to the religious law in matters relating to public order, taxation, usury, and land tenure. Yet, at the same time, the *kanun* was accepted as an integral part of the legal culture required by the shariʿah; the two complemented each other.[17] The whole administration of justice was based on the shariʿah, the authority to administer justice was given to the qadi, and the office of the grand *muftī,* shaykh al-Islām, was responsible for assuring the observance of the sacred law in the state. While the Ottoman sultans issued positive laws in the form of the *kanun,* sultanic decrees were couched in the terms of Islamic law.[18]

For the Mamluk period, a first attempt to integrate sultanic authority into a legal framework, rather than an ethical or political one, was made by Kristen Stilt in her recent monograph on the Cairo *muḥtasib* (market inspector).[19] Stilt dem-

[15]Christian Müller, "A Legal Instrument in the Service of People and Institutions: Endowments in Mamluk Jerusalem as Mirrored in the Ḥaram Documents," *Mamlūk Studies Review* 12, no. 1 (2008): 173–91; idem, "Settling Litigation without Judgment: The Importance of a Hukm in Qadi Cases of Mamluk Jerusalem," in *Dispensing Justice in Islam: Qadis and Their Judgements,* ed. [16]Hallaq, *Sharīʿa,* 201–9.

[17]Ibid., 214–21.

[18]See also Colin Imber, *Ebu's-Suʿud: The Islamic Legal Tradition* (Edinburgh, 1997), 94–95, for a recent discussion of the Ottoman legal system in the sixteenth century. In standard accounts of the history of Islamic law, the Ottoman legal system is invariably seen as an exception. See Sherman Jackson, *Islamic Law and the State: The Constitutional Jurisprudence of Shihāb al-Dīn al-Qarāfī* (Leiden, 1996). Interestingly, Schacht remarked that royal legislation through *kanun* is attested for the Mamluks too (Schacht, *An Introduction,* 91n). Schacht does not provide evidence to support this claim.

[19]Kristen Stilt, *Islamic Law in Action: Authority, Discretion, and Everyday Experiences in Mamluk Egypt* (New York, 2011).

onstrates that the Mamluk *muḥtasib* functioned in what she calls a *fiqh-siyāsah* framework. By this she means that the sources of legal authority for the Mamluk *muḥtasib* were, on the one hand, the manuals of legal doctrine, i.e., scholarly jurisprudence *(fiqh);* as well as, on the other hand, the legal authority of the sultan, i.e., the ruler's *siyāsah*. The sultan's *siyāsah* power did not come with an extensive body of literature, and there is little record of sultanic policies. But when matters involved broad public policy that transcended particular rules of doctrine, sultanic authority played a key role.[20] Examples are decrees forbidding women from public outings, levying of local taxes for the building of a dike, or investigating fraud.[21] Rulers also had extensive punitive powers, in the form of discretionary *taʿzīr,* especially for crimes that could not be proven because of the strict rules of procedure applied by qadis. Following Frank Vogel's work in a modern context, Stilt argues that the shariʿah often encompassed both *fiqh* and *siyāsah*. Equating shariʿah with *fiqh,* and opposing them to a political or secular *siyāsah,* creates the misperception that rulers did not have religious concerns or influence, and that the jurists did not engage in considerations of public welfare.[22]

In this article, I aim to take this argument further. First, I will argue here that this symbiotic relationship between Islamic law and Mamluk *siyāsah* was subject to historical change over time. In the second half of the fourteenth century, and especially in the fifteenth century, we clearly see an expansion of the jurisdiction of royal courts and the courts of other military officers, especially the *ḥājib* (chamberlain) and the *dawādār*. The *maẓālim* courts of the pre-Mamluk classical tradition, which normally focused on abuses of power, were now transformed into courts with wide jurisdiction, parallel to the shariʿah courts of the qadis. These new institutions were called *siyāsah* courts, because of their emphasis on equity at the expense of the formalism of the shariʿah. It is important to emphasize that, unlike the public policy responsibilities of the *muḥtasib,* as studied by Stilt, the *siyāsah* courts of the fifteenth century had jurisdiction over cases that had little direct effect on public policy, such as reclamation of debts and matrimonial cases.

I will also hope to show that the evidence from the Mamluk era does not point to a corruption of an ideal and rigid Islamic law, but rather indicates a legal system in which the state takes an active role in adapting the sacred law, the shariʿah, to social practice. For many Mamluk jurists, the ruler's *siyāsah sharʿīyah*—governance according to Islamic law—is a requirement of the shariʿah, not an external intrusion. In this, the development of the Mamluk legal system has much in common with the later, more centralized and bureaucratized, Ottoman one. Under

[20] Ibid., 200–5.

[22] Ibid., 26, citing Frank Vogel, *Islamic Law and Legal System: Studies of Saudi Arabia* (Leiden, 2000), 171–72.

the Mamluks we can also identify the emergence of important antecedents to Ottoman institutions, such as the Royal Hall of Justice, the Dār al-ʿAdl, with its associated state-appointed *muftī*s. These developments have also wider implications for the political history of the Mamluk Sultanate.

In terms of chronology, I am suggesting three distinct stages in Mamluk legal history. The first stage begins with the appointment of four chief qadis in 1265, one for each legal school *(madhhab),* and the construction of a royal Dār al-ʿAdl. In this period, the jurisdiction of the royal and military courts is largely limited to penal law, areas of the law where the shariʿah's strict evidentiary procedures often failed to secure conviction. Later, from around 1350, the jurisdiction of military officers, especially the chamberlains, expands significantly to include family law and debts. During this period the Dār al-ʿAdl is relocated outside of the Citadel and closer to the city (at least in Cairo), and a position of a dedicated *muftī Dār al-ʿAdl* is introduced. Despite initial objection from religious scholars to these infringements on the jurisdiction of the shariʿah, the expansion of the military-executive courts gathers pace over the course of the fifteenth century. Some religious scholars even come to accept them as beneficial and indeed integral elements in the application of Islamic law. Finally, the reigns of Qāytbāy (r. 1468–96) and Qānṣūh al-Ghawrī (r. 1501–16) see a concentration of all jurisdiction in the hands of the sultans, who present themselves as champions of the shariʿah and openly dispute the formalistic doctrines of the judiciary.

I

The foundation of the Mamluk sultanate was accompanied by one of the major legal reforms in the history of Islamic law. In 1265, shortly after assuming power, Baybars decided to appoint four chief qadis in Cairo, one from each of the Sunni schools of law, thereby adding Hanafi, Maliki, and Hanbali judges to the incumbent Shafiʿi. The judiciary of Damascus was similarly reformed the following year. Over the next century non-Shafiʿi chief qadis were appointed in other Mamluk towns and cities, including Aleppo, Tripoli, Hama, Safed, Jerusalem, and Gaza. The appointment of four chief qadis continued up to the Ottoman conquest.[23]

[23]The following paragraphs summarize the arguments of my "Legal Diversity in the Age of Taqlīd: The Four Chief Qāḍīs under the Mamluks," *Islamic Law and Society* 10, no. 2 (2003): 210–28. For earlier accounts of the establishment of this quadruple judiciary, see E. Tyan, *Histoire de l'organisation judiciare en pays d'Islam,* 2nd revised ed. (Leiden, 1960), 138–42; J. Escovitz, "The Establishment of Four Chief Judgeships in the Mamluk Empire," *Journal of the American Oriental Society* 102 (1982): 529–31; J. Nielsen, "Sultan al-Ẓāhir Baybars and the Appointment of Four Chief *Qādī*s, 663/1265," *Studia Islamica* 60 (1984): 167–76; S. Jackson, "The Primacy of Domestic Politics: Ibn Bint al-Aʿazz and the Establishment of the Four Chief Judgeships in Mamluk Egypt," *Journal of the American Oriental Society* 115 (1995): 52–65.

The purpose of the new quadruple structure of the judiciary was to create a uniform yet flexible legal system. The need for predictable and stable legal rules was addressed by limiting qadis' discretion and promoting *taqlīd,* i.e., adherence to established school doctrine. The establishment of chief qadis from the four schools of law, on the other hand, allowed for flexibility and prevented the legal system from becoming too rigid. The quadruple judiciary enabled litigants, regardless of personal school affiliation, to choose from the doctrines of the four schools one that would suit their particular case.

Judges were expected to pass judgment in conformity with their legal schools, in order to avoid suspicion of impartiality. The Shafiʿi jurist al-Fazārī, in response to a query sent from the royal encampment of Sultan Baybars in 662/1264, explains that "some of our colleagues prevent a judge who subscribes to one school of law from giving judgments according to another school, to avoid suspicion [of impartiality]. This rule is required by the administration of justice *(siyāsah)*...not by the Divine law *(sharʿ)*."[24] The regulation of qadis was explicit in appointment decrees, which instructed conformity to the dominant opinion of the school in order to guarantee predictability. This meant that a qadi was not allowed to go beyond the doctrine of the school to which he was appointed by the sultan. On the other hand, the introduction of a quadruple judicial system also allowed the state an active role in the legal system, through the selective use of the different doctrines of the four schools. By authorizing qadis from different schools to follow their doctrine on specified points of law, the state indirectly intervened in a variety of social and economic interactions.

This is clearly demonstrated in a royal decree appointing ʿAlī ibn Munajjā ʿAlāʾ al-Dīn al-Tanūkhī (d. 750/1349) as the Hanbali chief qadi of Damascus in 732/1332:

> The people of Damascus are often in need of a judge from this [viz., the Hanbali] *madhhab* in most contracts of sale and lease, in sharecropping contracts of *muzāraʿah* and *musāqāh,* in settlements following damages caused by *force majeur (jawāʾiḥ samāwīyah)* according to the principle of *lā darar wa-lā dirār,* in marrying off a male slave to a free woman with the permission of his master, in stipulating that a bride should not be re-located from her hometown, in dissolving the marriage of a husband who deserted his wife without maintenance, and in the sale of an irreparable and dilapidated endowment that is of no use to its beneficiaries.[25]

[24] ʿAbd al-Raḥmān ibn al-Firkāḥ al-Fazārī, "Fatāwá," MS Chester Beatty 3360, fol. 107b.

[25] Al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ* (Cairo, 1913–18), 12:57. For the qadi's biography, see al-Ṣafadī, *Aʿyān al-ʿAṣr wa-Aʿwān al-Naṣr* (Beirut, 1998), 3:1285–86.

According to the decree, a Hanbali qadi is appointed because his school of law is the only one that can authorize some of the daily transactions made by the people of Damascus. The Hanbali school is the only one that allows sharecropping contracts in which the cultivator provides the seeds, while the other schools consider share-cropping contracts legal only if the proprietor provides the seeds.[26] Only the Hanbalis hold the seller liable for loss of crops due to *force majeur,* while the other schools maintain that the loss is incurred by the buyer.[27] Unlike other schools, the Hanbalis do not apply the concept of equality in marriage *(kafāʾah)* to difference in status between a slave and a free woman.[28] Only the Hanbalis assert the validity of stipulations in marriage contracts, including a stipulation that prohibits the husband from re-locating his wife.[29] The Hanbalis, together with the Malikis, allow for the dissolution of a marriage in case of desertion.[30] Similarly, only the Hanbalis permit the sale of a dilapidated endowment that is no longer reparable.[31] In sum, these opinions are, for the most part, held only by the Hanbalis, to the exclusion of the other schools.

Appointment decrees for Hanafi and Maliki chief qadis contain parallel guidelines. The Maliki chief qadi is enjoined to apply his school doctrine so as to allow an executor of a bequest to serve also as a guardian for the orphans of the deceased;[32] to permit the use of documentary evidence;[33] and, most importantly,

[26]Muwaffaq al-Dīn Ibn Qudāmah al-Maqdisī, *Al-Mughnī* (Beirut, 1984), 5:589–90 (no. 4142). See also Abū al-Walīd Ibn Rushd, *Bidāyat al-Mujtahid wa-Nihāyat al-Muqtaṣid,* ed. Mājid al-Ḥamawī (Beirut, 1995), 4:1392.

[27]Hanbali doctrine also limits the definition of *force majeur* to damages caused by natural disasters, exclusive of damages caused by human agency, such as theft (*Al-Mughnī,* 4:233–34 [nos. 2941–43]). The Malikis hold that the seller is liable only if more than a third of the crops are damaged (Ibn Rushd, *Bidāyat al-Mujtahid,* 3:1267–70).

[28]The Hanbali doctrine on this point is equivocal. The Hanbali jurist al-Khiraqī (d. 334/946) limited the criteria of equality in marriage *(kafāʾah)* to lineage and piety, while Ibn Qudāmah accepted all the additional criteria required by Hanafis and Shafiʿis, including freedom (*Al-Mughnī,* 7:374–76 [nos. 5190–92]). Maliki doctrine, on the other hand, limits the criteria of *kafāʾah* even further, holding that only the piety of the groom should be taken into consideration (Y. Linant de Bellefondes, *Traité de droit musulman comparé* [Paris and Le Haye, 1965], 2:179).

[29]Ibn Rushd, *Bidāyat al-Mujtahid,* 3:1038.

[30]Ibn Qudāmah, *Al-Mughnī,* 8:247–48 (no. 6473).

[31]Ibid., 6:250–52 (no. 4410).

[32]For the appointment decree, see Ibn Faḍl Allāh al-ʿUmarī, *Al-Taʿrīf bi-al-Muṣṭalaḥ al-Sharīf* (Cairo, 1894), 121. On the Maliki position see Ibn Qudāmah, *Al-Mughnī,* 7:392 (no. 5215); Ibn Rushd, *Bidāyat al-Mujtahid,* 3:955.

[33]On the Maliki position regarding documentary evidence, see W. Hallaq, "*Qādī*s Communicating: Legal Change and the Law of Documentary Evidence," *Al-Qanṭara* 20 (1999): 453ff.; E. Tyan, *Le notariat et le régime de la preuve par écrit dans le pratique du droit musulman* (Beirut, 1945), 76, 82–84; J. Wakin, *The Function of Documents in Islamic Law* (Albany, 1972), 8–9.

to facilitate the prosecution of heretics *(zanādiqah).* While the majority opinion in the other schools requires qadis to spare the lives of heretics who subsequently return to the fold of Islam, the Maliki doctrine requires the qadi to impose capital punishment in every case of proven heresy, regardless of subsequent repentance.[34] As many examples in the Mamluk chronicles show, cases of heresy were indeed regularly transferred to Maliki qadis to ensure that the death penalty was applied.[35] Appointment decrees for Mamluk *muḥtasib*s also contain a directive to follow Maliki law. As Kristen Stilt argues, this is because only the Malikis allow the ruler greater flexibility in the area of price-setting, and because the Malikis allowed rulers more flexibility in the application of discretionary *taʿzīr* punishment.[36]

Until the middle of the fourteenth century, the sultans or other military-executive officials exploited the differences between the doctrines of the different *madhhab*s. They did not usually directly intervene in the legal system, with two major exceptions concerning criminal law and *maẓālim* sessions. With regard to criminal law, some military officials, such as governors or police chiefs, had jurisdiction over criminal cases, such as theft and highway robbery, and they were competent to enforce the Quranic punishments for these offences *(ḥudūd)* or lesser punishments. This was a direct result of strict evidentiary requirements of the shariʿah judges, who required, for example, four eye-witnesses in cases of adultery. Ibn Taymīyah (d. 1326) explained the current division of jurisdiction between the qadi courts and the military-executive courts in the following way:

> According to the practice *(ʿurf)* in our time, in the regions of Egypt and Syria it is the military authority that carries out the prescribed punishments for criminal offences *(ḥudūd)* which involve mutilation, such as the amputation of the thief's hand or the punishment of the highway robber and similar things. It may also happen that the military authority imposes a punishment that does not involve mutilation, such as, for example, the flogging of a thief. It is competent also in litigations *(mukhaṣamāt),* commercial contracts (?) *(muḍarabāt),* and "trials of suspicion" *(daʿāwī al-tuham)* in which there are neither written documents *(kitāb)* nor witnesses. The of-

[34]Ibn Qudāmah, *Al-Mughnī,* 10:76–77 (no. 7088); Ibn Qayyim al-Jawzīyah, *Iʿlām al-Muwaqqiʿīn ʿan Rabb al-ʿĀlamīn,* ed. Ṭāhā ʿAbd al-Raʾūf Saʿd (Beirut, 1964), 3:129–33. Note that the rule applies only to the category of heretics *(zanādiqah),* and not to the category of apostates *(murtaddūn).*

[35]Rapoport, "Legal Diversity," 223ff.

[36]Stilt, *Islamic Law,* 54.

> fice of the qadi is competent in these matters if there are written documents and witnesses.[37]

According to Ibn Taymīyah's account of early fourteenth-century judicial practice, military courts had effective jurisdiction over criminal cases. In addition, they were also competent in "trials of suspicion," which did not depend on the claims of a private plaintiff, but were instigated by a governor or a *muḥtasib* (market inspector) in order to protect public law and order. According to Ibn Taymīyah and other fourteenth-century Mamluk jurists, such trials had very relaxed laws of procedure, allowing for torture to be used in order to extract confessions from thieves and robbers.[38] Finally, the military courts had competence when standard forms of evidence, i.e., written documents or witnesses, were not available. It is clear from Ibn Taymīyah's account that the jurisdiction of the military courts was limited to these legal cases in which the qadis' formalistic attitude to proof and evidence prevented the application of justice.

A second channel of direct political intervention in the administration of justice was through the *maẓālim* courts. Nielsen's study of actual cases brought before royal *maẓālim* sessions in the thirteenth and fourteenth centuries, as reported in Mamluk chronicles, suggests that most of the *maẓālim* sessions were concerned with usurpation of property, abuse of endowments by government officials, and disputes over *iqṭāʿ* (fief) allocation to soldiers. The royal *maẓālim* sessions also heard cases of blasphemy, apparently because the death penalty (at least for this offence) required the consent of the sultan and all the chief qadis. Until the middle of the fourteenth century there is no evidence that the royal *maẓālim* courts heard cases of family law or contracts, which appear to have been under the exclusive jurisdiction of qadi courts.[39]

The Islamic legal tradition delineates the legal procedure to be followed in *maẓālim* sessions, and it is clear that the Mamluk *maẓālim* was not arbitrary.[40] The *maẓālim* panel, described in detail in administrative manuals, included the four chief qadis, who not only gave legal advice but sometimes issued judgments at the request of the sultan. In many cases, and in virtually all *waqf* cases, qadis were consulted. The jurists often disagreed among themselves, and the sultan and the amirs may have sided with one faction against the other, but the even-

tual result was based on sharīʿah reasoning, even if the jurists were not present.[41] Moreover, when a trial is reported in some detail, there is evidence of rules of procedure, such as the calling of witnesses, the taking of oaths, and presentation of documentary evidence.[42]

Significantly, Mamluk royal sessions of *maẓālim* were held in a purpose-built Dār al-ʿAdl (Hall of Justice), an Ayyubid innovation and a distinct Mamluk institution. The establishment of a Hall of Justice was introduced by the Ayyubid sultans, with the earliest known built in 1163 by Nūr al-Dīn ibn Zankī in Damascus, followed by another one in Aleppo in 1189. In Cairo, the Ayyubids built a Dār al-ʿAdl in the citadel by 1207. Baybars, upon assuming power, built a new Dār al-ʿAdl in 1262, in a location just under the Cairo Citadel. He personally presided in the Dār al-ʿAdl sessions on Mondays and Thursdays, to inspect *maẓālim* petitions and to review the troops.[43] These Halls of Justice were a new phenomenon in Islamic history, and Nasser Rabbat has linked them with the Islamic revival of the counter-Crusade, to which the rulers responded by offering royal justice as means of gaining legitimacy and popularity.[44] But, given Baybars' cotemporaneous reform of the judiciary, it seems obvious that Baybars' foundation of a new royal Hall of Justice also had important implications for the Mamluk legal system. In the context of legal history, the Dār al-ʿAdl seems to reflect a formalization of royal justice and a greater emphasis on the judicial functions of the sultan. Baybars established both a new Dār al-ʿAdl and a quadruple judiciary, and these two major developments marked a closer integration of the ruler in the administration of justice.

II

Around 1350, the jurisdiction of *siyāsah* courts expanded substantially to include cases of debt and matrimonial litigation. This expansion in *siyāsah* jurisdiction was linked to a shift in the role of the *ḥājib,* or chamberlain. Under the Ayyubids and the early Mamluks the *ḥājib* was responsible for dealing with disputes among

Darling, "Medieval Egyptian Society and the Concept of the Circle of Justice," *Mamlūk Studies Review* 10, no. 2 (2006): 1–17.

[44] Rabbat, "The Ideological Significance," 4, 19.

the amirs and the soldiers, with limited jurisdiction over government officials. As al-Maqrīzī explains, in the old days, the *ḥājib* could not overrule the court of a qadi, even with regard to government officials:

> The judgment *(ḥukm)* of the chamberlain did not go beyond litigations among the soldiers, their disagreements over *iqṭāʿ,* and so forth. In the past, none of the chamberlains sat in judgment in shariʿah matters, such as cases of matrimony or debt, as all these matters were under the exclusive jurisdiction of the qadis of the shariʿah. It was always the case that one of the clerks or the tax-farmers *(ḍummān),* or any similar office-holder, would run away from the court of the chamberlain to the court of one of the qadis and take refuge in the judgment of the shariʿah, and nobody would then attempt to seize him from the qadi's court. Some of them would remain for months and years in the qadi's jail, safeguarding themselves from the chamberlains.[45]

But around 1350, the jurisdiction of the chamberlains expanded substantially at the expense of the courts of the qadis:

> Then all of this changed. The title of chamberlain is nowadays given to a group of amirs who sit in judgment among the people… The chamberlain today gives judgments to the noble and the lowly, regardless of whether the judgment is according to the shariʿah or to what they call *siyāsah,* and if a qadi tries to seize a debtor from the court of the chamberlain he is unable to do so.[46]

Al-Maqrīzī traces the expansion in the jurisdiction of chamberlains to a case concerning commercial debt that occurred in Cairo in 1352–53:

> In the days of Sultan al-Malik al-Ṣāliḥ Ṣāliḥ ibn Muḥammad ibn Qalāwūn, when the amir Sayf al-Din Jurjī was chamberlain, the sultan ordered him to take responsibility for the matter of creditors and settling their disputes with their debtors. Previously, it was not the practice of the chamberlains to sit in judgment on shariʿah matters. The reason for this was that a group of Persian merchants appeared before the sultan in the Dār al-ʿAdl in 752 [1352–53] and said that they had to flee their lands because of the injustice of the Mongols, and that the merchants in Cairo had bought from them

[45] Al-Maqrīzī, *Al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār,* ed. Ayman Fuʾād Sayyid (London, 2002), 3:713–14.

[46] Ibid., 3:714.

> some merchandise, but used the sale price of the goods for other purposes [lit., ate the prices, *akalū athmānahā*]. Then the [Cairene] merchants established before the Hanafi qadi that they were unable to pay, and he put them in his prison and declared some of them bankrupt. The amir Jurjī was then ordered to release the debtors from the prison, and to deliver what they owed to the [Persian] merchants. The sultan also rebuked the chief qadi Jamāl al-Dīn ʿAbd Allāh al-Turkmānī al-Ḥanafī for his actions, and banned him from sitting in judgment among merchants and debtors. Jurjī then took the debtors out of prison and punished them until he delivered their property to the [Persian] merchants bit by bit. Since then, the chamberlains were allowed to sit in judgment over the people.[47]

According to al-Maqrīzī, the legal situation here was as follows: Persian merchants sold merchandise in Cairo, but the buyers, apparently local merchants, resold the goods without paying the sale price to the sellers. The buyers then went to a Hanafi qadi in order to be proclaimed bankrupt, so that they would not have to pay. The Persian merchants then complained to the sultan, who ordered the chamberlain to take over the case and overrule the judgment of the Hanafi qadi. Rather than imprisoning the debtors or declaring them bankrupt, the chamberlain punished them, presumably torturing them, until they disclosed the whereabouts of money that they were hiding. It was then handed over to the sellers (the Persian merchants). The sultan then decided to transfer the jurisdiction over cases of debt from the Hanafi qadis to the courts of the chamberlains.

In terms of legal doctrine, the problem here is that most schools of law allow debtors to escape payment once they are declared bankrupt. Only the Hanafis take a stricter position, allowing a debtor to claim bankruptcy only after a period of imprisonment.[48] This strict position was highlighted in appointment decrees of Hanafi chief qadis, who were entrusted with imprisoning a debtor who claims bankruptcy.[49] It therefore seems that due to this strict position, matters of debt were brought before Hanafi qadis, who, following the dominant view in their school, would not declare a debtor bankrupt until he spent some time in jail. This appears to be the law applied in this case. However, Hanafi law still provided the buyers (the local merchants) a way out of payment, since they were prepared to stay in the qadi's jail until they would be declared bankrupt or until the Persian

[47] Ibid., 3:717–18. See also al-Maqrīzī, *Sulūk,* 2:863. This passage is also discussed by Irwin, "Privatization of Justice"; Escovitz, "The Establishment," 100; J. Nielsen, "Maẓālim and Dār al-ʿAdl under the Early Mamluks," *The Muslim World* 66 (1976): 127.

[49] See Ibn Faḍl Allāh al-ʿUmarī, *Al-Taʿrīf,* 119–20; al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 11:95, 200.

merchants moved on. The fact these were foreign merchants clearly had some relevance in the case, as they were in greater need of protection, compared to local merchants bound by networks of trust and reputation.[50]

In effect, the sultan intervened in order to plug what he regarded as a legal loophole. He undoubtedly believed that the debtors had the means to pay up for the goods they had bought, and that the formalism of the qadi would allow them to escape payment. It is also significant that this case highlights the limits of the quadruple shariʿah judiciary. This case was heard before a Hanafi qadi precisely because Hanafi doctrine was the most severe with regard to debtors. However, when even Hanafi doctrine was not seen to be sufficiently strict, the sultan responded by transferring the case to the court of the chamberlain, who applied what was in effect *siyāsah* justice. Whether or not the expansion of the chamberlain's jurisdiction was indeed triggered by this one case, al-Maqrīzī's account is instructive with regard to the way the jurisdiction of the chamberlain was expanded when the quadruple *madhhab* system was no longer deemed adequate.

The expansion in the jurisdiction of the chamberlain was followed by reforms of the institution of the Dār al-ʿAdl. During the early 1360s we first hear of the appointment of an official of the state called the *muftī Dār al-ʿAdl,* whose responsibilities appeared to be giving legal opinions to the ruler during the sessions of royal justice.[51] Until that time, the granting of legal opinions was not considered a state activity, and, while many of the individual *muftī*s were also qadis or other state officials, they were not acting as official, state-appointed *muftī*s. Among the first jurists appointed to the position were former chief qadis, such as the Hanafi Ibn al-Ṣāʾigh (appointed in 765/1364) and the Shafiʿi Taqī al-Dīn al-Subkī. By the beginning of the fifteenth century, the Dār al-ʿAdl in Cairo and the one in Damascus had four official *muftī*s each, while Aleppo had only a Hanafi and a Shafiʿi.[52] The apparent similarity between the *muftī Dār al-ʿAdl* and the Ottoman shaykh al-Islām has already been noted.[53]

The appointment of an official *muftī Dār al-ʿAdl* was followed, at least in Cairo, by the relocation of the sessions of royal justice from the Dār al-ʿAdl to a new site. In 789/1387 Sultan Barqūq decided to receive petitions in the Royal Stables, further down the slope of the Citadel and closer to the residential quarters of Cairo. The functions of royal justice were thus separated from other official ceremonies that remained in the imposing Dār al-ʿAdl itself.[54] Ibn al-Furāt's account conveys

how the sultan's direct involvement in administering justice was perceived as a radical break with the past. Specifically, for the first time, the sultan's Hall of Justice became a court of appeals heard against judgments made by either qadis or chamberlains:

> At the end of the month of Ramaḍān it was announced by heralds in Cairo and Miṣr and their environs that whoever had been subject to injustice or had a complaint *(shakwá)* or a petition *(qiṣṣah)* could come on Sundays and Wednesdays to the royal stables. Al-Ẓāhir Barqūq started sitting in the stables on those days, accompanied by the *kātib al-sirr,* the *dawādār,* and *naqīb al-jaysh.* Whoever had a complaint or was subject to injustice could come before him in the stables. When someone came before him, the sultan asked whether he had already taken his affair before a qadi or a chamberlain *(ḥājib).* If the answer was no, the sultan had him beaten up and thrown out. But if he said yes, but that the magistrates had not satisfied him, he would be allowed to bring his adversary before the sultan and make an accusation against him, and the sultan would then personally pass judgment between them. This is something that we have never heard before regarding any king. The first time he sat in judgment was Monday, 23 Ramaḍān [789, 7 October 1387].[55]

The relocation of the Dār al-ʿAdl away from the Citadel and closer to the city completed a radical reconfiguration of the Mamluk legal system in the second half of the fourteenth century. It involved granting jurisdiction to chamberlains in commercial disputes (previously under the exclusive jurisdiction of qadis), creating a new position of *muftī Dār al-ʿAdl* as a legal advisor to military-executive magistrates, and positioning the sultan as a court of appeal against the decisions of both shariʿah and *siyāsah* magistrates. In doing that, he undertook a more direct responsibility for the administration of justice among the population at large. Al-Maqrīzī specifically comments that the purpose of the move to the stables was that the sultan would be able to pass judgment among the people *(lil-ḥukm bayna al-nās).*[56] While Baybars' intervention in the legal system was indirect, through the quadruple judiciary, Barqūq undertook a far more direct engagement with the administration of law and justice.

III

The legal reforms of the second half of the fourteenth century created an overlap of jurisdiction, and inevitable conflicts, between the *siyāsah* courts of the chamberlains and the shariʿah courts of the qadis. Nielsen does not find any reference to cases brought to the chamberlain's court during the period he studied (up to 1382),[57] but, as Robert Irwin rightly notes, the chronicles of the fifteenth century provide ample references to the justice offered by the chamberlains in commercial cases.[58] Attempts to re-introduce limitations on their jurisdiction were few and short-termed. In 823/1420, for example, a Hanafi qadi sent a messenger to the chief chamberlain, asking for a debtor held at his court. When the chamberlain refused to give up the prisoner, the Hanafi qadi, with the support of his Shafiʿi colleague, lodged a complaint with the sultan. Al-Muʾayyad Shaykh then ordered that *sharʿī* debts, i.e., debts that fall under the jurisdiction of the shariʿah, should only be brought before the qadis. The chamberlain and other amirs were dissatisfied, and indeed the edict was abolished two days later.[59] By the 1430s the chamberlains clearly had regained parallel jurisdiction in pursuing debtors. A royal edict of 833/1430, during an outbreak of the plague, instructed "qadis, chamberlains, and other officials" not to imprison debtors due to the widespread mortality.[60]

During the 1420s there is also clear evidence for the establishment of courts by other military officials, specifically the *dawādār*s.[61] Ibn Taghrībirdī states that that the first *dawādār* to pass judgment among the people, and to have orderlies *(nuqabāʾ)* at his door, was Qurqmās al-Shaʿbānī, around 824 or 825 (1421 or 1422).[62] A case from 826/1423 suggests that the *dawādār*s had acquired substantial judicial powers, and may have served as a court of appeal against the decisions of qadis. Ibn Ḥajar says that the grand *dawādār* Sūdūn min ʿAbd al-Raḥmān heard a case against a deputy qadi by the name of Jamāl al-Dīn al-Ṭanbadī, known as Ibn ʿArab, who was alleged to have passed an improper judgment *(muḥākamah ghayr marḍīyah).* The *dawādār* ordered the Shafiʿi chief qadi to relieve this deputy from his post. In addition, the *dawādār* instructed the qadi to limit the number of deputies to no more than ten at any given time.[63]

[63] Ibn Ḥajar, *Inbāʾ al-Ghumr,* 3:305.

Another case of conflict of jurisdictions attests to the continuous authority of military courts in matters of commercial transactions. In 856/1452, a Muslim brought suit before a Maliki qadi against a foreign Jewish merchant, who was said to be "from among the merchants of the Circassians." The Muslim asked for a court order that would require the Jew to seek justice only through shariʿah courts *(anna-hu lā yuṭālibuhu bi-ḥaqqihi illā min al-sharʿ).* The qadi gave this injunction, but the Jewish merchant refused, saying that he would pursue his rights as he pleased. The qadi repeated the injunction through the translator, but the Jew did not hear (or obey), so the qadi had him beaten and imprisoned. Upon his release, the Jew complained to the sultan, who had the Maliki qadi brought before him. When the qadi protested that he only acted according to the shariʿah, the sultan told him that the *siyāsah* "runs the same course as the shariʿah" *(tajrī majrá al-sharʿ),* and rebuked him for passing judgment with partiality and anger.[64] Like the case of the Persian merchants reported by al-Maqrīzī, this case similarly indicates royal protection for foreign merchants. It also explicitly articulates the sultan's justification for the *siyāsah* courts: a parallel judiciary, which is as legitimate as that of the qadis, and one which ultimately derives its authority from the shariʿah.

Not only foreign merchants, however, appealed to *siyāsah* justice in order to reclaim their debts. In a case dated 876/1471, the wife of the Shafiʿi chief qadi of Egypt filed a complaint against her husband with the *naqīb al-juyūsh,* head of the police. She claimed that she gave her husband a loan of 250 gold dinars, and that he refused to pay her back. Given the strict division of property between spouses, such disputes were not uncommon, although the wife is said to have been incited to bring the suit by her brother, a former chief qadi himself. The head of the police, acting without permission from the sultan, sent four orderlies (*naqīb*s) to the qadi's house. The orderlies, using intimidating language, brought him before the head of the police and then placed him under house arrest. Only at the intervention of the *kātib al-sirr,* Ibn Muzhir, did the wife agree to resolve the dispute under the shariʿah.[65]

Furthermore, military-executive magistrates intervened in litigation between spouses, not only with regard to debts. As indicated by al-Maqrīzī, fifteenth-century chamberlains had acquired jurisdiction in matrimonial cases. In a case from Jerusalem, the family of a bride whose husband failed to consummate the mar-

[64]Irwin, "Privatization of Justice," 67; Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. W. Popper (Berkeley, 1930), 1:129.

[65]ʿAlī ibn Dāwūd al-Jawharī al-Ṣayrafī, *Inbāʾ al-Haṣr bi-Abnāʾ al-ʿAṣr,* ed. Ḥasan Ḥabashī (Cairo, 1970), 365–66. On this woman and her economic activity as supervisor of a family endowment, see Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, 1934–36), 12:7.

riage (thereby depriving her of her rights to maintenance) complained to the amir Azbak al-Ẓāhirī, who was chief chamberlain in 868/1463–64. Azbak set a deadline for the consummation of the marriage, and threatened to issue a judicial divorce unless the groom complied.[66] In another case a husband complained before the grand *dawādār* Yashbak min Mahdī that one of the clerks in the bureau of escheats had seduced his wife. The man claimed that his marriage had collapsed as a result of this affair, that he had divorced his wife, and that the woman had now married her lover. The *dawādār* sent orderlies to bring the suspected couple from their home, and ultimately ruled that the couple should compensate the cuckolded husband with 1,000 dinars.[67] A contemporary legal opinion tells of a man who swore on pain of divorce that if his wife left home without his permission, he would complain about her to the military courts *(siyāsah)* and bring the police to arrest her.[68]

The authority of *siyāsah* magistrates was founded on popular notions of equity. For al-Qalqashandī, the chamberlain is responsible for establishing the rights of the oppressed, enforcing judgments, helping the weak, and judging by the laws of justice. He specifically equates the court of the chamberlain in his own time with the classical institution of *maẓālim.*[69] Some individual chamberlains did attempt to fulfill these roles. Sūdūn al-Ẓāhirī al-Maghribī (d. 843/1439–40), who acted as chamberlain in the first half of the fifteenth century, was ridiculed for being excessively concerned with the protection of the weak. Ibn Taghrībirdī claims that Sūdūn assumed that the weaker party is always in the right, and always suspected coercion on the part of the stronger party. So whenever a soldier and a peasant came before him, he would always favor the peasant and disparage the claims of the soldier. This would go on until the soldier would ask for a settlement *(muṣālaḥah),* or, if he had sufficient clout, would take his case somewhere else. The chamberlain's manner became so well known that the weak would come to seek him from afar.[70]

Chamberlains and other military-executive officials did not ignore the shariʿah. This meant a level of familiarity with Islamic law by *siyāsah* magistrates, and it is not surprising to find that several military officers indeed had training in Islamic law, or had shariʿah specialists in their courts. Timurbāy ibn ʿAbd Allāh al-Shihābī (d. 798/1395–96), a chamberlain under Barqūq, is described as a pious man who loved scholarship and scholars, and who had learned Hanafi jurisprudence

with Ibn al-Furāt's father. During his tenure as chamberlain his judgments were based on thorough examination *(wa-ṣāra yuḥarriru fī aḥkāmihi)*. Whenever he was in doubt regarding a legal question, he inquired of scholars.[71] Ibn Taghrībirdī commends the justice enacted by military officials who had learned Hanafi law, including the future sultan al-Ẓāhir Ṭaṭar, who gave judgments in the Citadel as an amir.[72]

What made *siyāsah* magistrates so popular was that they were able to offer justice, not just law. Two final examples of conflicts between shariʿah and *siyāsah* illustrate this tension. One comes from a work by Tāj al-Dīn al-Subkī, dating to the 1360s, which describes the way military officers resolved cases of fornication. According to al-Subkī, one of the rules *(aḥkām)* set up by *wālī*s (police chiefs) is that a man who deflowered a woman and impregnated her was forced to marry her. They do so, al-Subkī explains, because they think that this is better for the child, who would otherwise carry the disgrace of fornication. This policy, explains al-Subkī, goes against the shariʿah, which rules that the child of fornication is not attached to the fornicator, and does not become his child. Yet, according to al-Subkī himself, the solution in the shariʿah is merely a fine, equal to the expected decrease in the bride's marriage gift *(mahr)*.[73] The shariʿah, as attested by a leading jurist, offers a limited financial penalty through a restitution of the financial damage caused by the removal of virginity. The police chiefs, on the other hand, offered a more effective form of justice, with a view to the future benefit of the child.

A second example of a conflict between shariʿah law and *siyāsah* justice comes from the diary of Ibn al-Ṣayrafī, a late fifteenth-century Cairene deputy qadi and chronicler. The case has been translated and discussed by Carl Petry in another context, but, as it is a first-hand account of the actual workings of the interaction between shariʿah and *siyāsah,* it is also relevant here.[74] The account begins with a verbatim extract from a petition filed with the chief Hanafi qadi, Muḥibb al-Dīn Ibn al-Shiḥnah. The petitioner was the maternal aunt of a twelve-year-old girl, whose parents were absent from Cairo:

[74] Ibn al-Ṣayrafī, *Inbāʾ al-Haṣr,* 226–29. See the translation and analysis by C. Petry, "Conjugal Rights Versus Class Prerogatives: a Divorce Case in Mamlūk Cairo," in *Women in the Medieval Islamic World,* ed. Gavin R. G. Hambly (London, 1999), 227–40; and discussion in my *Marriage, Money and Divorce in Medieval Islamic Society* (Cambridge, 2005), 79–80. My interpretation of the text is substantially different from Petry's, both in its details and its overall significance. According to Petry, the case demonstrates the prerogatives of the military elite.

> the slave, relative of such-and-such, who is a virgin adolescent girl, kisses the earth [before your feet] and states that she [the girl] is poor and weary of begging, and that her parents have been absent from Cairo and its environs for a period of more than three years. She asks that a noble permission would be granted to one of the deputy qadis to marry her off to someone who wishes to do so, for a fair marriage gift and for a suitable husband, as an act of charity towards her.

The maternal aunt's choice of a school of law was not random; only Hanafi doctrine allowed for the qadi to marry off a minor orphan.[75] The Hanafi qadi delegated this particular case to his deputy, our narrator Ibn al-Ṣayrafī himself, who then verified that the girl's parents were indeed absent, and married her off to a servant *(ghulām)* in the service of a royal mamluk. According to his account, he also inserted a clause forbidding the groom to consummate the marriage until the girl had attained puberty.

The marriage of this orphan girl, arranged by a Hanafi deputy qadi, ended in divorce and recrimination, and was subsequently, in 875/1470, the subject of complaint to the grand *dawādār,* who, as we have noted, may have acted as a court of appeal against decisions made by shariʿah qadis. While the events of the marriage were contested, it is clear that the marriage was consummated, and that the girl asked her husband for a divorce, which he granted only after demanding financial compensation from her maternal aunt. The aunt then raised an uproar in her Bulaq neighborhood, and the local people took the girl and went to the court of the grand *dawādār,* Yashbak min Mahdī.

The *dawādār* ordered the servant (i.e., the groom) and his master, the royal mamluk, to come to his court. The master protested that his servant "…has done nothing that was not authorized by the qadi and the witnesses," and so the *dawādār* then summoned Ibn al-Ṣayrafī to explain his actions. The following exchange, as recorded by the deputy qadi himself, merits a verbatim quotation, as it encapsulates the contrast between the formalism of the shariʿah law and the popular, "common sense" notions of equity that guide *siyāsah* justice:

> I [i.e., Ibn al-Ṣayrafī] entered, and stood before him.
>
> He said to me: "O qadi, did you marry this girl to that man?"
>
> I said, "Yes."
>
> He said, "How come?"

[75] Ibn Qudāmah, *Al-Mughnī,* 7:382 (no. 5201); Ibn Rushd, *Bidāyat al-Mujtahid,* 3:944–46.

> I said, "The person who appointed me as his deputy permitted me to do so by a comprehensive deposition in his own handwriting."
>
> He said, "Should this girl be married off?" indicating that she is young.
>
> I said, "This is the law of my school [the Hanafi school], because the Prophet, pbuh, married ʿĀʾishah, the mother of believers, may God be pleased with her, when she was nine years old."
>
> He said, "Do you equate this girl with that one [ʿĀʾishah], or this man with that man [the Prophet]?"
>
> I said, "No, my lord. But the Prophet, pbuh, is our guide to religious law *(mashraʿ)* and we are his people, who follow his sunnah."
>
> He fell silent, ceasing to speak with me. Then he turned to the qadis and amirs attending the council, and said to them, "The qadi had this reply for me, and I have no further business with him, but only with the mamluk soldier and his servant."

As Ibn al-Ṣayrafī is keen to point out, he had done nothing improper. He was authorized to marry off the girl, by permission of the Hanafi qadi who appointed him. He had ascertained, by sufficient legal evidence, that the girl's parents were indeed not available to marry her off. The formalism of the qadi contrasts, however, with the perspective of the *dawādār;* for him, this was a case of a twelve-year-old girl being subjected to sexual intercourse and financial extortion, and it required an administration of *siyāsah* justice to protect the vulnerable and the defenseless. He summoned all the involved parties to another session in his court a few days later, and then had the husband flogged more than 100 times, and ordered him publicly humiliated across the city, "as an example to anyone who deflowers *(yaftaḥ)* girls." He also ordered a review of the financial aspects of the divorce settlement by the chief Hanafi qadi. As a result, the husband was to pay the girl four gold coins as her share of the marriage gift. It is important to note that the *dawādār,* despite his forceful intervention in the case, still regarded the settling of the monetary obligations of the husband as something that fell within the remit of shariʿah, not *siyāsah.*

While the different approaches of the qadi and *dawādār* are clearly distinguished, the justification for the punishment meted out to the husband remains vague. Neither the procedure by which these allegations were proven, nor the exact crime committed by the servant, is explicitly cited. But Ibn al-Ṣayrafī has a remarkable addendum, noting that, "The retribution by the amir *dawādār*—may God protect him—originated from proper authority against the right people"

(ṣadara min ahlihi fī maḥallihi), as this soldier and his servant were well-known thugs who terrorized their neighborhood. Despite the way his own actions were subject to scrutiny and criticism by the *dawādār,* Ibn al-Ṣayrafī still does not hesitate to support the implementation of *siyāsah* justice.

IV

As this example shows, not all members of the judiciary objected to the expanded jurisdiction of the *siyāsah* courts, even if it came at the expense of the courts of the qadis. Admittedly, other jurists and religious scholars condemned *siyāsah* justice as a symptom of decay and corruption, sometimes in very harsh words. But other, more nuanced, approaches are evident in writings of the ulama. The problem with *siyāsah* justice was usually not that *siyāsah* is illegitimate per se, but that it was left in the hands of incompetent and corrupt officials. The principle of *siyāsah* was acceptable or even necessary, but without the guidance of the shariʿah, it allowed significant room for abuse.

The first sustained account of *siyāsah* justice comes from the pen of Ibn Taymīyah, writing in the 1320s, i.e., before the great expansion in *siyāsah* jurisdiction. As the title of his important work "Al-Siyāsah al-Sharʿīyah" suggests, he attempted to resolve the duality between *siyāsah* courts and the qadi courts through a reform of the Islamic laws of proof and evidence, specifically advocating the use of circumstantial evidence in criminal cases.[76] This reform was required because the courts of the shariʿah were too weak, and the *siyāsah* courts of the military officials too arbitrary. For Ibn Taymīyah, the qadis focus on the formalities of the law rather than its intent. The *siyāsah* magistrates, on the other hand, do not have recourse to the Quran and sunnah at all, but rely only on personal opinion, and this opens the way to corruption:

> Those who claim to judge by divine law are in fact lacking in knowledge of the sunnah. So when they give judgments in many matters, they deprive people of their rights and fail to uphold criminal law *(ʿaṭṭalu al-ḥudūd),* so that blood is shed, property is usurped illegally, and prohibited activities become accepted as licit. On the other hand, those who judge by *siyāsah* resort to a kind of personal opinion without reliance on the Quran and the sunnah. The best of them would pass judgments with no bias and seek justice, but

[76]For a fuller discussion of Ibn Taymīyah's position, see Johansen, "Signs as Evidence"; and my "Ibn Taymiyya's Radical Legal Thought: Rationalism, Pluralism and the Primacy of Intention," in *Ibn Taymiyya and His Times: Proceedings of a Conference Held at Princeton University, 8–10 April 2005,* ed. Y. Rapoport and Sh. Ahmad (Karachi, 2010), 191–226, esp. 211–12.

> many are biased and give preference to the strong, those who give them bribes, and the like.[77]

Ibn Taymīyah does not in fact seek the abolition of *siyāsah* courts. Rather, he argues that the *siyāsah* of the ruler and Islamic law neither contradict nor compete with each other. Just rule is part and parcel of Islamic law, and if conflicts arise, it is only because Islamic law is understood too narrowly or because the rulers act unjustly. In this framework, the objective of political power should be the benefit of religion, and the improvement of the material well-being of the believers in those matters without which the religion cannot prosper—like the protection of property or the enforcement of a penal system. According to this view, the principles of good governance are religious principles on par with religious duties such as prayer and fasting, even though they are not necessarily part of the legal norms established by jurists; in fact, good governance take precedence over the non-binding juristic legal interpretation of non-fundamental legal points.

Ibn Taymīyah therefore calls for the incorporation of considerations of utility and political expediency within the norms of Islamic jurisprudence, and views the division of jurisdiction between qadis and other magistrates as a matter of expediency that is not enshrined in the law. All those who are in a position of authority—including rulers, governors, and market inspectors—participate in the implementation of Islamic law. In practical terms, this meant a reform in the Islamic laws of proof and evidence. Ibn Taymīyah's disciples argued that circumstantial evidence should play a much more prominent role in trial procedures. They viewed the role of the judge (whether a qadi or any other magistrate) not as an arbiter of conflicting claims, but as someone who is capable of establishing the truth by his ability to read signs and interpret them as proofs. In order to do so, judges should be able to read all the available signs—such as physical signs in things and property, known social hierarchies, prevailing customs—rather than depend solely on depositions of witnesses. Ibn Taymīyah, who, incidentally, was never employed by the state, nor was ever a qadi, supported a convergence of *siyāsah* and shariʿah justice through a relaxation of evidentiary procedures. In some respects, Ibn Taymīyah had presented a blueprint for the *siyāsah* justice that would subsequently emerge in the second half of the fourteenth century.

Other jurists reacted to *siyāsah* justice with strongly-worded opposition. Tāj al-Dīn al-Subkī, son of Taqī al-Dīn—himself the most prominent opponent of Ibn Taymīyah's religious reforms—presents a very different approach towards *siyāsah*. In "Muʿīd al-Niʿam," written in the 1360s, he calls on government officials to al-

[77]Ibn Taymīyah, *Majmūʿ Fatāwá Aḥmad ibn Taymīyah,* ed. ʿAbd al-Raḥmān ibn Muḥammad ibn Qāsim al-ʿĀṣimī wa-ibnuh Muḥammad (Beirut, 1997), 20:392–93. Translated by A. Bewley in Ibn Taymīyah, *The Madinan Way: the Soundness of the Basic Premises of the School of the People of Madina* (Norwich, 2000), 87.

ways rule by the shariʿah. For those who tell the ruler that applying the shariʿah is a sign of weakness, he warns of divine punishment.[78] In criminal cases, military officials are allowed to follow (taqlīd) the school of law that allows for the most severe discretionary punishment (taʿzīr) and long imprisonments, as long as they are motivated by public interest and not by personal whim. In blasphemy cases, they are allowed to adopt the strict view recently put forward even by non-Maliki jurists.[79] But they are not allowed to go beyond the limits of the shariʿah, by which al-Subkī means the doctrines set by the schools of law.

His most severe rebuke is reserved for the chamberlains, who, as we have seen, had their jurisdiction expanded substantially in the 1350s, a decade before the composition of the treatise:

> We say: the chamberlain should refer all affairs to the shariʿah, and should not think that the *siyāsah* brings any benefit. Rather, the *siyāsah* brings harm to the land and to the subjects and leads to chaos. The best interests of men are served by the laws handed down by their Creator, who knows best what brings them benefit and what brings them harm. The shariʿah of our Prophet Muhammad (pbuh) guarantees all the benefits to humanity in this world and the next, and only harm comes when it is set aside. But whoever follows it finds that his days are good and calm…
>
> If you like, look at the annals of the just and unjust kings and amirs, and see which of the two is more secure and which is longer lasting. I have observed these, and found that anyone who thought that he could better the world with his intellect, and rule the land through exercise of personal opinion and *siyāsah (bi-rayihi wa-siyāsatihi),* and go beyond the limits and warnings of God, had suffered ill fate, and his days were dark and troubled…
>
> And as for someone who thinks that his affairs will not succeed if he does not shed blood with no just reason and if he does not beat innocent Muslims, let him know that he is a rebel, an ignoramus, a stupid ass, whose dominion will soon perish and whose fall is imminent…
>
> If one of those asses says: "How should I know that? I am a Turkish simpleton *(ʿāmmī)* who knows not the Book and the Sunnah." Tell him that this would not help him with God. Ask someone who knows; otherwise you will come to the Day of Judgment with your adversaries, those you have beaten and punished, dragging you

[78] Al-Subkī, *Kitāb Muʿīd al-Niʿam,* 34.

[79] Ibid., 36–37.

> over the mountains face-down. Then, no excuse will help you. If it is impossible for you to understand, then what business do you have in taking on this job? Leave it.[80]

Like Ibn Taymīyah, al-Subkī equates *siyāsah* with personal opinion. However, al-Subkī is unequivocal in his support for the formalities of the shariʿah within the limits of the four-*madhhab* system.

Another strong condemnation of the *siyāsah* justice administered by the chamberlains is offered by al-Maqrīzī, writing in the 1420s. Al-Maqrīzī accuses the chamberlains of simple greed, saying that they have "no other purpose but to procure a daily income by the hands of the commander of the court guards *(ras nawbat al-nuqabāʾ).* Many of them have no *iqṭāʿ* to support their rank, and they make their living solely from the litigation *(maẓālim)* of God's servants." He labels the word *siyāsah* a "satanic term," claiming, rather fancifully, that it is derived from the word "Yāsa," the legal code of the Mongols:

> The judgments of the chamberlains are called judgment of *siyāsah,* which is a satanic term. Most of our contemporaries who do not know its origin employ it carelessly, saying that when a matter does not accord with the judgments of the shariʿah it must be according to the judgments of *siyāsah.* But while they take it lightly, it is a grave matter in the eyes of God, as I will explain, for this is a valuable section…
>
> Our contemporaries are wrong regarding its origin, for it is a Mongol word. It was originally "*yāsah,*" and was mispronounced by the Egyptians, who prefixed the letter "s" to pronounce "*siyāsah,*" and then added the definite article, so that the ignorant think it is an Arabic word, but the truth is what I have just told you.[81]

As David Ayalon has shown, there is no evidence for the application of the Mongol Yāsa under the Mamluks.[82] Moreover, a close reading of al-Maqrīzī's account actually reveals a principled acceptance of *siyāsah* justice as complementing shariʿah, echoing the views of Ibn Taymīyah a century earlier. After labeling *siyāsah* a "Satanic term," al-Maqrīzī then distinguishes between the correct, just *siyāsah,* which conforms to the shariʿah, and its corruption at the hands of incompetent individuals:

---

[80] Ibid., 57–58.

[81] Al-Maqrīzī, *Al-Mawāʿiẓ,* 3:714–15.

[82] David Ayalon, "The Great Yāsa of Chingiz Khān: A Re-examination," *Studia Islamica* 33 (1971): 97–140; 34 (1971): 151–80; 36 (1972): 113–58; 38 (1973): 107–56; Irwin, "Privatization of Justice," 63.

> You should know that people in our days, and since the beginning of the Turkish dynasty in Egypt and Syria, divide judgments into two categories: judgment of shariʿah and judgment of *siyāsah*. The shariʿah is those religious duties which God has set, such as prayer, fasting, pilgrimage, and the remainder of charitable deeds… [On the other hand], the term *siyāsah* is used to describe the law *(qānūn)* laid down for guarding morals *(ādāb)* and public interest and setting public affairs in order.
>
> The *siyāsah* is of two kinds. One is the just *siyāsah* that extracts justice from the unjust sinner. This first kind is indeed part of the shariʿah, known to some and unknown to others, and this *siyāsah sharʿīyah* has been the subject of many books. The other kind is the unjust *siyāsah,* forbidden by the shariʿah.

Ibn Taghrībirdī, who repeats some of al-Maqrīzī's observations mentioned above, also makes a similar distinction between just and unjust *siyāsah* in his annals for the years 861 and 863 (1456–57 and 1458–59). According to his account, in this period every junior officer set out his own court, and would hear litigations, using no rules of evidence but raw intimidation and coercion. The result, Ibn Taghrībirdī laments, was that merchants and artisans could not pursue their trades, as they had no legal protection. Robert Irwin rightly recognizes this as "privatization of justice." However, Ibn Taghrībirdī is specifically concerned with the rough justice offered by junior officers. He is not objecting to *siyāsah* justice as such, nor to the justice offered by chamberlains or *dawādār*s. His concern is, more specifically, that the "authority of the magistrates of the shariʿah and the *siyāsah* is set at naught by the power of the purchased mamluks *(julbān)* of the sultan Īnāl."[83] Ibn Taghrībirdī groups together "the magistrates of the shariʿah and the *siyāsah,*" in effect the qadis, chamberlains, and *dawādār*s, and regards them as the pillars of a just legal system which is being threatened by the junior officers.

The reaction of jurists and scholars to the administration of *siyāsah* ranged from complete rejection, through acceptance and accommodation, to outright celebration of its role in complementing the shariʿah. An example of the latter attitude is the treatise "Taḥrīr al-Sulūk fī Tadbīr al-Mulūk," composed for Qānṣūh al-Ghawrī by Abū al-Faḍl Muḥammad Ibn al-Aʿraj (d. 925/1519), a minor religious scholar in Cairo.[84] Much of the work consists of verbatim quotations from the classical text by al-Māwardī. But the author precedes the traditional narrative by

[83] Ibn Taghrībirdī, *Nujūm,* 7:494; Irwin, "Privatization of Justice," 68.

[84] Abū al-Faḍl Muḥammad Ibn al-Aʿraj, *Taḥrīr al-Sulūk fī Tadbīr al-Mulūk,* ed. Fuʾād ʿAbd al-Munʿim (Alexandria, 1982). The work is discussed in Darling, "Medieval Egyptian Society and the Concept of the Circle of Justice."

offering remarkable guidelines for the use of intimidation and physical violence in *siyāsah* courts. For him, this is what makes *siyāsah* necessary to complement the shariʿah:

> He [i.e., the *nāẓir fī al-maẓālim*] can examine crimes and grievances prior to any complaint; he can intimidate *(irhāb)* a suspect of injustice and crime before the crime has been proved by admission or by conclusive evidence. He can also stimulate *(al-ḥaml ʿalá)* a confession of the truth, and imprison culprits for injustices. He can use physical force to gain a confession after circumstantial evidence of a crime has appeared, and he can chastise a defendant who denies guilt after the truth has been confirmed by evidence. He can also coercively encourage the criminals to repent. The qadis do not have recourse to these forms of *siyāsah:* they cannot examine injustice and litigations before they were brought to their attention, only after; and they have no means to pass judgment in them, other than their own personal knowledge, a confession, or fair evidence *(bayyinah ʿadilah).*"[85]

I do not believe that al-Aʿraj was trying to gain royal favor by legitimizing torture and physical intimidation; given the prevalence and indispensability of *siyāsah* justice in fifteenth-century Mamluk society, this was hardly necessary. Al-Aʿraj attempts here to address the lack of predictability in *siyāsah* justice, and to formally set out rules guiding *siyāsah* magistrates. These guidelines were most probably grounded in the actual praxis of *siyāsah* courts for more than a century, but here are incorporated into the juristic discourse.

V

The final decades of the Mamluk Sultanate, under the reigns of the sultans Qāytbāy (r. 1468–96) and Qānṣūh al-Ghawrī (r. 1501–16), represent an unprecedented degree of royal intervention in the administration of justice. Qāytbāy and Qānṣūh did not see themselves as merely enforcers of Islamic law and justice, but also as its interpreters. They were, as Carl Petry aptly puts it, "champions of the shariʿah" against the formalistic attitude of the qadis and the *muftī*s.[86] They opened the gates of their court to an increasing number of litigants, and dealt

[85]Ibn al-Aʿraj, *Taḥrīr al-Sulūk,* 38. Compare ʿAlī ibn Muḥammad al-Māwardī, *Al-Aḥkām al-Sulṭānīyah wa-al-Wilāyāt al-Dīnīyah* (Cairo, 1983), 71; *The Laws of Islamic Governance,* trans. Asadullah Yate (London, 1416/1996), 120. Elsewhere, Ibn al-Aʿraj outlines the difference between the *siyāsah* of the amirs and the judgments passed by qadis (*Taḥrīr al-Sulūk,* 57).

[86]Carl F. Petry, *Protectors or Praetorians?: The Last Mamlūk Sultans and Egypt's Waning as a Great Power* (Albany, 1994), 198.

with an expanding range of civil cases. The sultans also settled disputes between the chief qadis by applying "common sense" interpretations. Finally, by the final years of Qānṣūh's reign, he appeared ready to publicly overrule the interpretations of the qadis, not in the name of *siyāsah* but rather in the name of the correct application of the shariʿah itself.

The above-mentioned deputy Ibn al-Ṣayrafī, who attended the bi-weekly court *maẓālim* sessions of Qāytbāy, presents the sultan as impatient with the indeterminacy of the chief qadis.[87] In a case involving an endowment of a madrasah, when the founder's stipulations and the alterations to the original structure were discussed, Qāytbāy rode to the building to see for himself.[88] In a legal dispute over the renovation of a synagogue in Jerusalem, Qāytbāy summoned qadis to review the case, but also expressed his own interpretation of the law, finally siding with the jurists who permitted the renovation.[89] In another case, the sultan acted as a court of appeal against the judgments of a qadi. After a divorcee had complained that her ex-husband, an ironsmith, refused to pay the remaining portion of her marriage gift, and that she had been refused justice by a Hanafi deputy, the sultan found the deputy guilty of bias.[90]

The royal dispensation of justice reached now a wider public through the building of a new Dār al-ʿAdl. Fifteenth-century sultans followed Barqūq's example and held sessions in the royal stables to adjudicate cases. Ibn Taghrībirdī reports this for Sultan Khushqadam in 871/1466, noting that in doing so he continued past traditions.[91] Qāytbāy appears to have gone further by experimenting with opening his *maẓālim* sessions to the petitions of commoners. He then became convinced of the futility of such an approach when a woman came to complain that her husband had taken a second wife.[92] Like Sultan Barqūq a century earlier, Qāytbāy then attempted to control the crowds at his door by ordering that his court would only hear appeals against the decisions of lower magistrates.[93] The increasing demand for litigation to be brought before the royal court was recognized by Sultan Qānṣūh, who demolished the old Dār al-ʿAdl and erected a new, more spacious building in 916/1511.[94] Qānṣūh, interestingly, also repeated earlier attempts to limit the power of lower *siyāsah* magistrates. In 910/1505 he banned

all trials except those conducted according to the shariʿah, and he did so again in 919/1513–14, after an outbreak of the plague. Predictably, the bans failed, as the *siyāsah* magistrates argued that ordinary litigants had no other way of securing their rights. [95]

In criminal cases Qāytbāy and Qānṣūh applied very severe punishments, often beyond the Quranic punishments *(ḥudūd)* of the shariʿah.[96] Qānṣūh applied torture to a Jewish merchant, and refused to accept his conversion to Islam, in a display of royal, effective justice during one of his final public sessions on the racecourse *(maydān).*[97] Thieves were regularly condemned to death after suffering corporal punishment.[98] But a range of other public punishments were used. A slave who was convicted of stealing was beaten and then led by an earring in the nose like an animal.[99] The goriest public processions were reserved for Bedouin chiefs and highway robbers, who were marched through town after being amputated and blinded.[100] Female criminals were also led through town in humiliating processions, apparently an unprecedented form of punishment for women.[101] A survey of half a dozen cases of theft and forgery brought before the sultans found a variety of punishments, including amputation, public procession with bare heads, and jail sentences. There was no apparent codification, but, given that the offences are not clearly specified, this was not necessarily arbitrary justice.[102]

The severity of punishment in criminal cases, coupled with an active interpretation of the shariʿah against the views of the legal practitioners, led to an outright conflict between the sultan and qadis during the final years of the sultanate. In this famous case, dated 919/1513, a Cairene religious scholar came home to find his wife in bed with another man, who was, incidentally, a deputy qadi.[103] The

husband complained to the court of the chamberlain, and the latter gave orders that the two adulterers should be beaten severely, fined, and led through the city on donkeys, facing backwards. Sultan Qānṣūh, however, was dissatisfied with the leniency of the punishment. He blamed the qadis for appointing fornicating deputies, and demanded that the adulterers be punished in the way prescribed by Islamic law, i.e., by stoning. It was an unusual order; no stoning had taken place for many years, and apparently never during Qānṣūh's long years in power. But, while the sultan, representing secular authority, was pushing for an Islamic punishment, several jurists issued a *fatwá* against a death sentence, arguing that the fornicator had in the meantime retracted his confession. In an overt struggle over the right to interpret the law of the land, the jurists argued that the sultan was bound to act according to the Islamic law of evidence; execution would be a criminal offence, and the sultan liable for the blood money. At this point the sultan told them off as senseless fools, and dismissed all four chief qadis, paralyzing all legal and economic activity in Cairo for three days. He ordered that the two lovers be hanged, facing each other at the gate to the house of one of the jurists who objected to the death sentence. Their bodies remained on the gallows for two days, until the sultan gave permission to bury them.

VI

The final years of the Mamluk Sultanate witnessed a direct competition over the interpretation of the shariʿah between the sultan and the jurists. It was the culmination of a continuous rise in the state's control over the legal system, which started with the appointment of the four chief qadis by Baybars in 1265. During this early period of Mamluk rule, the quadruple shariʿah system allowed the state, in co-operation with the qadis, to pick and choose from the doctrines of the legal schools in order to promote social objectives. However, by the middle of the fourteenth century, the jurisdiction of the *siyāsah* magistrates, and specifically the chamberlain, was enhanced to include the redemption of debts, often by torture, and certain categories of matrimonial disputes. The expansion of *siyāsah* jurisdiction was designed to offer legal solutions that went beyond the doctrines of the Sunni schools of law. By and large, *siyāsah* justice was perceived as a necessary complement to the shariʿah, as it plugged loopholes in the schools' doctrines. *Siyāsah* magistrates believed that their justice was a necessary prerequisite for the implementation of the shariʿah, and not in opposition to it. This expansion in *siyāsah* jurisdiction, particularly in relation to the redemption of debts, bears

port, "Women and Gender in Mamluk Society: An Overview," *Mamlūk Studies Review* 11, no. 2 (2007): 1–47.

striking similarity to the expansion of the jurisdiction of the English chancery in these same decades.[104]

The expanding role of the sultan in the administration of justice manifested itself in the increasing size and importance of Dār al-ʿAdl, an Ayyubid innovation which became a distinctly Mamluk symbol of sovereignty. The first Mamluk hall of justice was built by Baybars in 1262, and subsequent ones were both larger and closer to the Cairene urban population which they served. In the second half of the fourteenth century the institution also acquired its independent legal advisors, the *muftī*s of Dār al-ʿAdl. During the final decades of the Sultanate, Qāytbāy and Qānṣūh went further than any of their predecessors in centralizing the administration of law in their own hands, and often questioned the interpretation of the shariʿah by their qadis. In these final years the tension between the *siyāsah,* grounded in notions of equity but open to arbitrary implementation, and the formalistic and ineffective shariʿah, came to a head. It is only the Ottomans who would resolve this tension by enforcing a unified *kanun* based on the shariʿah.

The implications of this historical approach to the legal history of the Mamluk Sultanate are far-reaching, not only for the Sultanate itself, but for the entire narrative of the history of Islamic law. Wael Hallaq recently argued that the ruler's intervention in the legal sphere was minimal, limited to administrative regulation that mostly pertained to the regime's machinery of government. Thus, according to Hallaq, the civilian population was subject to the shariʿah, while the government's servants were subject to a more coercive code of the sultan; a dual system, where the rulers were subject to a different law from the ruled.[105] However, as we have seen, the evidence of the Mamluk period shows otherwise. There is ample evidence that the Mamluk *ḥājib* and other military officers sat in justice over all segments of the urban population from the middle of the fourteenth century until the demise of the Mamluk dynasty. There was no dual system of justice, one for the elite and one for the commoners. In fact, such a dual system would have impinged on the overarching superiority of the shariʿah, which is shown by Hallaq to be the hallmark of Islamic societies. The *siyāsah* of the sultans and the amirs was necessary for the continuous application of shariʿah norms; the expansion of the *siyāsah* jurisdiction set out to bolster the shariʿah rather than defeat it.

This fits with a much wider pattern in Muslim societies of the late Middle Ages and the Early Modern period. As said above, the Ottoman *kanun* added to

[104]Robert C. Palmer, *English Law in the Age of the Black Death, 1348–1381: A Transformation of Governance and Law* (Chapel Hill, NC, 1993).

[105]Hallaq relies on secondary literature regarding the legal history of the Mamluk Sultanate, and gets some of the facts wrong. In his discussion of the Mamluk *siyāsah* court he claims that the Mamluk *ḥājib* did not have any jurisdiction over the civilian population (*Sharīʿa,* 201), save rare exceptions at the end of the thirteenth century (ibid., 209).

the religious law in matters relating to public order, taxation, usury, and land tenure. Rather than viewing government intervention as an exception, it seems that, at least from the middle of the fourteenth century, rulers intervened quite heavily in legislating, modifying, and applying the shariʿah. We should forsake the long-held paradigm that views the state as essentially external to Islamic law, a paradigm that makes no sense at all for legal historians of other civilizations.[106] Rather, the evidence of the Mamluk legal system—the most highly developed system of Islamic law in the Middle Ages—shows that the *siyāsah* of the state was not only an integral and legitimate element of the shariʿah, but also an increasingly central one.

Khubz as *Iqṭāʿ* in Four Authors from the Ayyubid and Early Mamluk Periods

Introduction

Iqṭāʿ is the delegation of "fiscal rights of the state over lands remaining juridically in the hands of their former owners."[1] *Iqṭāʿ* is a major question in studies of medieval Islamic society. In spite of the amount of previous research many points still need to be clarified. To date, the *iqṭāʿ* system has been studied mainly from a legal point of view: the assignment of *iqṭāʿ*, the duties and rights of the *muqtaʿ*, etc.[2] However, the emotional relations and loyalties underlying it, as well as relationships between levels of power, have been neglected.

While investigating these topics I have frequently come across the use of the term *khubz* in reference to *iqṭāʿ* in Ayyubid and early Mamluk chronicles. The question underlying this article is whether a semantic study of the term used to refer to the *iqṭāʿ*, above and beyond its intrinsic value, can contribute to a deeper understanding of the *iqṭāʿ* system and how it functioned. In spite of its repeated appearance, no comprehensive inquiries exist to date on this particular use of the term *khubz*. Brief notes on the topic can be found in the critical editions and translations of Arabic texts and in research on the *iqṭāʿ* system.[3]

The main issues to be considered in this article are, first of all, whether the use of the term changes from one author to another and whether the two terms are used interchangeably by the authors under discussion. Secondly, I will verify to what extent *khubz* was perceived and used as a substitute for *iqṭāʿ* and whether the main meaning of *khubz*—bread, subsistence—influences its use in a given context or expression. In order to investigate these issues, after an overview on the authors' uses of the term, I will concentrate on three particular cases. Although the article focuses on four works from the Ayyubid and early Mamluk periods, I will also give a brief overview of the use of *khubz* in later centuries. Through

The research for this article was funded by the Collaborative Research Centre "Differenz + Integration," SBF 586—Universitäten Leipzig und Halle-Wittenberg (Germany) www.nomadsed.de. I thank Prof. Jürgen Paul and Dr. Kurt Franz for their insightful comments and helpful suggestions.

textual analysis I hope to contribute, first of all, to describing some features of the use of this term in referring to *iqṭāʿ,* not only in writing but also in the spoken language. Secondly, I hope to contribute to the understanding of the *iqṭāʿ* system and how it functioned. My final goal in both cases is not to paint a comprehensive picture, but rather to present some preliminary reflections based on the reading of texts from the period under review.

Before approaching the topic, it is worth considering two preliminary points. As far as the way the terms *iqṭāʿ* and *khubz* have been translated into European languages is concerned, a variety of solutions have been adopted. When translating al-Maqrīzī's *Kitāb al–Sulūk* into French, Quatremère mostly kept the Arabic terms for both *iqṭāʿ* and *khubz,* while in Broadhurst's English translation of the same work *iqṭāʿ* is translated as "fief" and *khubz* sometimes as "emoluments."[4] In the French versions of Ibn Shaddād's *Al-Aʿlāq al-Khaṭīrah fī Dhikr Umarāʾ al-Shām wa-al-Jazīrah* (by A. Eddé) and al-Makīn Ibn al-ʿAmīd's *Al-Majmūʿ al-Mubārak* (by A. Eddé and F. Micheau) *iqṭāʿ* is not translated, while *khubz* has been expressed with the words "allocation" and "concession."[5] Jacqueline Sublet translated *iqṭāʿ* as "fief" in some cases, while in others she kept the Arabic word. The same can be said for *khubz,* which is occasionally translated as "dotation." [6] In this article I have chosen to keep the Arabic words because none of the modern terms fully correspond with what *iqṭāʿ* and *khubz* refer to in all their complexity.

Secondly, when I began analyzing the use of the term *khubz,* I focused on the dichotomy of *khubz/iqṭāʿ*. In the course of my inquiry, though, I realized that, particularly in some of the authors under review, the verbal noun—*iqṭāʿ*—is hardly used. In the part of Ibn Shaddād's work which I analyzed it is used only twice, and in Ibn al-ʿAdīm Kamāl al-Dīn's *Zubdat al-Ḥalab min Tārīkh Ḥalab* and Ibn Wāṣil's *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb* it appears more frequently but is still not the most common term. All the authors, including al-Makīn, generally use a verb from the same root, *aqṭaʿa*. Consequently, this discussion will not be limited to the alternation between *khubz* and *iqṭāʿ,* but the use of the term *khubz* will be investigated in the wider context of *iqṭāʿ*-related phraseology.

Sources

This article focuses on four works dating back to the seventh century. Three of them are historical writings, for example Ibn Wāṣil's *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb.*[7] This is the story of the Ayyubids, covering the period from the rise of the Zangids to the ascension to power of al-Malik al-Ẓāhir Baybars (658). It was composed in Hama around 670. My considerations are mainly based on vols. 3 and 4. Further quotations are also taken from vols. 2 and 5. The second of the works under discussion is al-Makīn Ibn al-ʿAmīd's *Al-Majmūʿ al-Mubārak,*[8] a universal history from creation to the Mamluks' rise to power. The third piece of historical writing I have considered is a local history, Ibn al-ʿAdīm Kamāl al-Dīn's *Zubdat al-Ḥalab min Tārīkh Ḥalab.*[9] This treats the history of Aleppo from its origins to 641. The last work I have analyzed is a historical topography of Syria, *Al-Aʿlāq al-Khaṭīrah fī Dhikr Umarāʾ al-Shām wa-al-Jazīrah,* composed between 671 and 680 by Ibn Shaddād (vols. 1 and 2).[10]

The authors mentioned share many similarities. First of all they lived in the same period and witnessed the dynastic transition between the Ayyubids and the Mamluks. Their works belong to the so-called "siyāsa oriented historiography."[11]

[7] Arabic text edited by Jamāl al-Dīn al-Shayyāl (vols. 1–3) and H. Ramīʿ S. Ashūr (vols. 4–5) (Cairo, 1953–1977). Vols. 2 and 3 do not include an analytical index. In the index to volumes 3 and 5 both *khubz* and *iqṭāʿ* are listed, while in the index to vol. 4 only *iqṭāʿ* is mentioned. In the index to vol. 3, a passage containing *khubz* is not mentioned (112–13). Following is a list of passages from the *Mufarrij* containing the terms *khubz* and *iqṭāʿ,* some of which will be mentioned in this article: *(khubz)* 2:265; 3:81, 108, 112–13; 5:69, 206, 337, 277; *(iqṭāʿ)* 3:14, 23, 54, 55, 131, 126, 204, 239, 251, 269; 4:23, 30, 70, 73, 88, 89, 110, 133, 226, 231, 284.

[11] Tarif Khalidi, *Arabic Historical Thought in the Classical Period* (Cambridge, 1994), 184. On Ayyubid and Mamluk historiography, see Donald P. Little, *An Introduction to Mamluk Historiography*

Developing from the eleventh century, this new type of historiography focused mainly on issues related to governance. Like most of the historians of this period, all of the authors under review held positions in the administration and had close links with the court.[12] Ibn Wāṣil studied in Damascus and Aleppo, and during his life he held official positions in the service of various patrons including the Ayyubid ruler of Hama, Muẓaffar II, and the sultan Baybars. He also held teaching posts and judgeships in different places. He was in close contact with the ruling and administrative elites as well as with scholars. Like Ibn Wāṣil, Ibn al-ʿAdīm[13] also had close links with the leading group of his town, Aleppo. He was born in 588 and, like Ibn Wāṣil, he was given diplomatic missions by the Ayyubid ruler of the town. He served as secretary, judge, and vizier, and held teaching positions as well. In addition to the *Zubdat al-Ḥalab* he also wrote a biographical dictionary called *Bughyat al-Ṭalab fī Tārīkh Ḥalab*. ʿIzz al-Dīn Ibn Shaddād served in the bureaucracy, first in Ayyubid Aleppo—as secretary of the chancellery of al-Malik al-Nāsir—and then in Cairo. He wrote a biography of Baybars and the *Al-Aʿlāq al-Khaṭīrah fī Dhikr Umarāʾ al-Shām wa-al-Jazīrah,* a historical topography of Syria. The last of the authors discussed, al-Makīn, was an Egyptian Copt. Like his father he was a high official of the army's *dīwān* in Syria, where al-Makīn moved for unknown reasons.[14]

In addition to the works of these authors, I have also considered the last volume of *Al-Kāmil fī al-Tārīkh*[15] by Ibn al-Athīr ʿIzz al-Dīn ʿAlī (d. 630), which was the model for the works of Ibn Wāṣil and al-Makīn. The period dealt with in this volume starts with the rise to power of Ṣalāḥ al-Dīn and ends in 628. Further examples have been taken from later historians: the *Dhayl Mirʿāt al-Zamān* of al-

(Wiesbaden, 1970); Franz Rosenthal, *A History of Muslim Historiography* (Leiden, 1952).

[15]Arabic text edited by Carl J. Tornberg (1807–1877) (Beirut, 1965–67), vol. 12, and translated by Donald S. Richards, *The Chronicle of Ibn al-Athīr for the Crusading Period from al-Kāmil fī'l-Tarīkh,* pt. 3, *The Years 589–629/1193–1231: The Ayyūbids after Saladin and the Mongol Menace* (Ashgate, 2008). The passages containing the term *iqṭāʿ* in this volume—some mentioned in this article—are on pages 125, 136, 137–38, 155, 163, 173, 342, 346, 412, 445, 446 of the Arabic text. This edition contains only an index of geographic and personal names.

Yūnīnī[16] and the biographical dictionary *Tālī Kitāb Wafayāt al-Aʿyān,* composed by the Christian Ibn al-Ṣuqāʿī,[17] both of whom died in 726; al-Nuwayrī's (d. 732) *Nihāyat al-Arab fī Funūn al-Adab;*[18] and al-Maqrīzī's (d. 845) *Kitāb al-Sulūk.*[19]

Khubz in Seventh-Century Works

It has already been pointed out that in this period *khubz* was used with the meaning of *iqṭāʿ,* and my research confirms this assumption. Clear evidence of this is that occasionally the two terms are used alternatively to refer to the same object, sometimes both in the same sentence or in different contexts. In the year 637, for example, al-Malik al-Ṣāliḥ distributed *iqṭāʿāt* to his mamluks. Both Ibn Wāṣil[20] and al-Makīn[21] report the episode, but the *iqṭāʿāt* are referred to as *akhbāz* by the former and *iqṭāʿāt* by the latter:

Mufarrij, 5:277

وكاما قطع خبز أمير أعطاه لمملوك من مماليكه وقدمه

al-Makīn, 152

و أمّر مماليكه وأعطاهم الإقطاعات

The choice of the term clearly results from the writers' phrasing and linguistic choices.

According to the analysis undertaken, all of the authors under review use *khubz* to refer to *iqṭāʿ* at least once. The use of the term, however, changes from one author to another. Ibn Shaddād, Ibn Wāṣil, and Ibn al-ʿAdīm do not use the word *khubz* often. In their works this term appears only in a small percentage of the sentences referring to the *iqṭāʿ* system. In Ibn Shaddād, for example, *khubz* is

[16] Quṭb al-Dīn Mūsá al-Yūnīnī, *Dhayl Mirʾāt al-Zamān,* 4 vols. (Hyderabad, 1954–61).

[17] Text edited and translated by Sublet, *Tālī Kitāb.* The passages containing the term *khubz* and *iqṭāʿ* in this text are the following: paragraphs: 2, 16, 43, 108, 127, 129, 130, 141, 167, 187, 253, 323 *(khubz)* and paragraphs: 82, 84, 128, 162, 138, 326 *(iqṭāʿ* and *aqṭaʿa).* In the index both the passages containing "*iqṭāʿ*" and the ones containing "*khubz*" are mentioned.

[18] Claude Cahen and Ibrahim Chabbouh, "Le Testament d'al-Malik aṣ-Ṣāliḥ Ayyūb," *BEO* 29 (1977): 97–144.

[19] Aḥmad ibn ʿAlī al-Maqrīzī, *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk,* ed. Muḥammad Ziyādah (Cairo, 1956).

[20] Ibn Wāṣil, *Mufarrij,* 5:277.

[21] Al-Makīn, *Al-Majmūʿ al-Mubārak,* 152; from now on the page numbers given for al-Makīn's work refer to the Arabic text edited by Cahen (see above).

used three times[22] while the verb *aqṭaʿa* is used forty-one times and *iqṭāʿ* twice. In the third volume of the *Mufarrij, khubz* is used only three times[23] while terms coming from the root *q-ṭ-ʿ* are used fifteen times. In the *Zubdat al-Ḥalab, khubz* is used even less. At first glance it seems that *khubz* and *iqṭāʿ* are used interchangeably. In Ibn Wāṣil, for example, *khubz* and *iqṭāʿ* are used in the same narrative contexts and in almost identical sentences. See, for example, *khubz* in these passages: 2:265; 5:206, 269, 277; 3:112–13; and *iqṭāʿ* in these (verb and noun): 4:73, 89, 110. On pages 3:112–13 and 2:265, *khubz* refers to the *iqṭāʿ* given in a certain place, Aleppo in one case (2:265)[24] and the Orient in the other (3:112–13).[25] The term *iqṭāʿ* is used in a similar context in two passages: رجع الى مصر فأقطعه... بها إقطاعا and وأقطعه إقطاعًا ببلاده.[26]

An exception is al-Makīn, who, unlike the other authors, uses the term *khubz* copiously (*khubz* twelve times and *iqṭāʿ* seventeen times, both verb and verbal noun). The use of the term *khubz* by this author is complex, as in some cases he uses phrases related to the *iqṭāʿ* theme interchangeably, while in others the appearance of a given term depends on the narrative context. *Khubz* is usually used when the *iqṭāʿ* is taken from the enemy and given to the supporters of the prince. One example can be seen on page 162:

> واعتقل جماعة من الأمراء المماليك الصالحية ثم سيّرهم إلى الحصون
> واعتقلهم بها وأعطى أخبازهم للأمراء القيمريّة زيادة على ما بأيديهم
>
> Il [al-Malik al-Nāṣir] fit arrêter un certain nombre des émirs mamelouks Ṣāliḥīya qu'il envoya dans différentes forteresses où ils furent incarcérés; il donna leur concessions *(aḫbāz)* aux émirs Qaymarīya.[27]

In the same narrative context the term *khubz* is also used on page 149 [Al-Malik al-Ṣāliḥ] وأعطى أخبازهم للخوارزمية ("Il donna leurs concessions *(aḫbāz)* aux émirs khwārizimiens"), 134 [al-Malik al-Kāmil] وأمرهم أن يخرجوا من ديار مصر وأعطا أخبازهم لمماليكه ("Le sultan leur ordonna [aux émirs qui l'avait trahi] de quitter l'Egypte; il donna leurs concessions *(aḫbāz)* à ses mamlouks"),[28] and on page 176:

---

[22] Ibn Shaddād, *Al-Aʿlāq,* 382, 320, 299.

[23] Ibn Wāṣil, *Mufarrij,* 3:81, 112–13.

[24] وأقطعهم أخبازا كثيرة بحلب

[25] ولما استقر المُلْكُ بمصر للملك العادل استدعى أبنه الملكَ الكاملَ ناصر الدين محمدًا من الشرق, وجعله نائبًا عنه بالديار المصرية, وجعل خبزه الأعمال الشرقية، وهى التى كانت خبز الملك العادل لما كان نائبًا عن أخية السلطان الملك الناصر بمصر

[26] Ibn Wāṣil, *Mufarrij,* 4:89, 110.

[27] The French translation is taken from Eddé and Micheau, *Chronique des Ayyoubides,* 91.

[28] A variety of phrases are used by the authors to say "to take away" or "confiscate" the *iqṭāʿ,* such as أخذ إقطاع See, for example, Ibn al-ʿAdīm, *Zubdat al-Ḥalab,* 173v, where Nūr al-Dīn writes to the

[al-Malik al-Muẓaffar Ṣayf al-Dīn Quṭuz]

واستمرّ بجماعة ممّن كان في خدمته من عسكر الشام على أخبازهم
وأقطع أخباز القيمريّة وابن يغمور ومن انفصل عن الخدمة اجماعة
ممّن وصل صحبته من الأمراء الصالحيّة والمعزّيّة وغيرهم

Il [al-Malik al-Muẓaffar Ṣayf al-Dīn Quṭuz] confirma leurs concessions *(aḫbāz)* à un certain nombre (d'émirs) de l'armée syrienne passés à son service; quant aux concessions *(aḫbāz)* de Qaymarīya,[29], d'Ibn Yaġmūr, et de ceux qui avaient abandonné son service il les donna en *iqṭāʿ* à des émirs Ṣāliḥīya, Muʿizzīya ou autres.[30]

In the expression "to give an *iqṭāʿ*" al-Makīn uses both *khubz* and either the verb *aqṭaʿa* or the noun *iqṭāʿ*. The latter is always followed by the phrase "through diploma" بمناشير.[31] As *khubz,* on the other hand, is never followed by such an expression, it is possible that a more technical term like *iqṭāʿ* was perceived by the author as more appropriate for the sentence. In two of the examples quoted, moreover, the author is talking about the administration of the kingdom. For example on page 159: وتولى فخر الدين ابن الشيخ تدبير المملكة وأقطع البلاد بمناشيره ("Faḫr al-Dīn Ibn al-Šayḫ assura l'administration du royaume et concéda lui même les *iqṭāʿ* par diplôme"),[32] and on page 155:

واستولي معين الدين على دمشق وأعمالها وحصونها وبلادها ودبّرها
تدبيراً جيّدًا وأقطع ملوك الخوارزميّة وأمراءهم أكثر بلاد الشام والساحل
بمناشير

Il [Muʿīn al-Dīn] les [Damas et sa province] administra d'excellente façon et concéda en *iqṭāʿ* par diplôme aux princes Khwārizmiens et à leurs émirs la plus grande partie de la Syrie et du littoral."[33]

As will be shown in the following paragraphs, *khubz* is also used by al-Makīn in the context of requests and complaints. The way al-Makīn uses the term *khubz* makes his work particularly interesting and suitable for an investigation into the use of the term. But what is the reason underlying the difference between

---

prince of Damascus, accusing his amirs:
فكان يقول له في بعض الأوقات: "إنّ فلاناً قدْ كاتبني في تسلبم دمشق—يعني بعض أمراء مجيرالدّين— فكان يبعد ذلك عنه ويأخذ أقطاعه"

[29]Troops settled in Syria where they had *iqṭāʿāt.*

[30]Eddé and Micheau, *Chronique des Ayyoubides,* 121.

[31]Al-Makīn, *Al-Majmūʿ al-Mubārak,* 155, 159, 176; see also 164.

[32]Eddé and Micheau, *Chronique des Ayyoubides,* 86.

[33]Ibid., 78.

al-Makīn and the other authors? A biographical explanation may seem the most obvious one, though no certainty can be attributed to it. Looking at the biographies of the four authors under discussion, al-Makīn's is clearly the most unusual one. He was an Egyptian Copt, a high official of the army's *dīwān* in Syria. Moreover, as he was a Christian, unlike the others, he never held teaching positions or judgeships. However, the simpler explanation may be that the particularities in al-Makīn's use of *khubz* are merely due to the fact that his phrasing and semantic choices are different.

Khubz and Troops

In addition to the differences between the authors, there is one expression containing the term *khubz* that is used by three of them. This is *khubz* followed by the number of horseman that could be fed with it, to indicate the value of the *iqṭāʿ*.

In al-Makīn's work, for example, similar expressions are quite common. On the other hand, *iqṭāʿ* is never followed by words relating to value:

> و في سنة سبع وعشرين وستّمائة رتّب السلطان الطواشي شمس الدين العادلي نائبه في بلاد الشرق وأعطاه الموزّر خبز بمائة فارس مضافا إلى إقطاعه بالديار المصريّة وهي الأعمال الإخميميّة وما معها فتكمّل حبزه ثلثمائه وخمسين فارس[34]

> En 627, le sultan désigna l'eunuque *(ṭawāšī)* Šams al-Dīn al-ʿĀdilī comme lieutenant dans les territoires d'Orient et lui donna al-Muwazzar, concessions *(ḫubz)* correspondent à cent cavaliers; ceci s'ajoutait à ses *iqṭāʿ* d'Egypte, à savoir la province d'Iḫmīm et ses dépendances, ce qui au total représentait une concession *(ḫubz)* de trois cent cinquante (?) cavaliers.[35]

> وفيها بعث السلطان الملك الصالح صاحِب مِصر الصاحب جمال الدين يحي بن مطروح إلى دمشق وزيرا أميراً وأنعم عليه بخبز سبعين فارس ببلاد الشام[36]

> Cette même année là il [al-Ṣāliḥ, souverain du Caire] envoya al-Ṣāḥib Ğamāl al-Dīn Yaḥyā b. Matrūḥ à Damas avec les fonctions de vizir et d'émir, lui accorda une concession *(ḫubz)* de soixante-dix cavaliers en Syrie.[37]

---

[34] Al-Makīn, *Al-Majmūʿ al-Mubārak,* 139.

[35] Eddé and Micheau, *Chronique des Ayyoubides,* 44.

[36] Al-Makīn, *Al-Majmūʿ al-Mubārak,* 157.

[37] Eddé and Micheau, *Chronique des Ayyoubides,* 81–82.

This expression is also used by Ibn Shaddād:[38] وقصد عزاز فأخذها من مظفّر الدين وعوّضه عنها خبز مائة فارس ("Il la [ʿAzāz] prit à Muẓaffar al-Dīn et lui donna en échange une allocation *(ḫubz)* de cent cavaliers"); and further:

وهي في عصرنا كورة تحتوي على ضياع يعمل خراجها خبز أربعين طواشيا

> [Qūrūs] À notre époque c'est un district qui comprend des domaines *(ḍiyāʿ)* dont l'impôt foncier *(ḫarāǧ)* représente une allocation *(ḫubz)* de 40 cavaliers.[39]

Similar expressions can be found in Ibn Wāṣil's work as well. Sometimes *khubz* is followed by the number of horsemen that could be fed with its income: "[The sultan] gives a *khubz* of two hundred horsemen in Egypt" (5:69). In other cases the value of the *iqṭāʿ* is counted in dinars: "Al-Ẓāhir [decided] to give [to Sayf al-Dīn] a *khubz* of 50,000 dinars" (3:81).

From the frequency of this use of *khubz,* mainly followed by the number of horsemen, it is reasonable to assume that it was a widespread expression in the period under discussion, especially in the bureaucracy and the administration.[40] This hypothesis is also corroborated by the fact that even in the works of Ibn Wāṣil and Ibn Shaddād, who do not use *khubz* very often, in a high percentage of cases the term is used in this expression. In the part of the *Al-Aʿlāq* I analyzed, for example, although there are fifty passages in which things related to the *iqṭāʿ* system are mentioned, *khubz* appears only three times. In two of those cases the term is followed by a sentence indicating its value. This is the only situation, moreover, where there is a clear correspondence between the use of the term by both al-Makīn and the two other authors.

As in al-Makīn, in the two volumes of the *Mufarrij* under review the passages containing the term *khubz* are the only ones that account for the value of an *iqṭāʿ*. On the other hand, Ibn Shaddād also uses other expressions for the same purpose; for example:[41]

---

[38]Ibn Shaddād, *Al-Aʿlāq,* 382.

[39]Eddé, *Description,* 55, 279–280.

[40]Another common expression in that period must have been "possessions and *iqṭāʿāt*" الاموال والاقطاع. See al-Makīn, *Al-Majmūʿ al-Mubārak,* 145, 168; in both cases the verb used is أعطا ; Ibn Wāṣil, *Mufarrij*, 3:251; Ibn al-ʿAdīm, *Zubdat al-Ḥalab,* 238r.

[41]Ibn Shaddād, *Al-Aʿlāq,* 396. See also 377 (twice on the same page), 380 كان مقطعه + ب. The abundance of expressions indicating the value of the *iqṭāʿāt* in Ibn Shaddād might be related to the nature of his work. In fact, the author paid special attention to the economic details related to the places described.

وكانت القصبة وهذه القرى مقطعة لثمانين طواشيًا

In later centuries, *iqṭāʿ* followed by the number of horsemen became more common.[42] This evolution must have been a consequence of the change in the organization of the army in the fourteenth century, when a well-defined military organization was established in which the *iqṭāʿ* of hundreds, forties, and tens came to be connected with the ranks of the officer corps.[43] *Khubz* plus a number of horsemen, however, can still be found in the work of authors living in subsequent decades, such as Ibn al-Ṣuqāʿī:[44]

> ولما فتح الملك المظفر قطز الشام أعطى الامير فارس الدين المذكور خبز ناصر الدين القيمرى, وهو مائتى وخمسون فارسا فأعطى منها لبدر الدين بكتوت المذكور خبزمائة فارس بمنشور سلطانى, وسلم إليه باقى الاقطاع يحكم فيه
>
> [al- Malik al- Muẓaffar] octroya à l'émir Fāris al-Dīn la dotation de Nāṣir al-Dīn al-Qaymurī, qui était de 250 cavaliers. Il obtint par un édit sultanien. L'autorisation de concéder à Badr al-Dīn Baktūt ses droits sur une partie de sa dotation, soit 100 cavalier. Il garda le reste pour lui.[45]

The expression under discussion is also interesting because of the combination of the term *khubz* and the number of horsemen to be fed from it. The use of *khubz* in this expression seems to be connected to its meaning of bread. Although it refers to *iqṭāʿ*, a shadow of its principal meaning—bread subsistence—is highlighted in this context and might have made the use of the term particularly appropriate in a sentence referring to the number of troops that could be sustained by the

---

[42] See, for example, al-Maqrīzī, *Kitāb al-Sulūk,* 1:509: an *iqṭāʿ* of one hundred horsemen is inherited by the son of a Kurdish amir; al-Yūnīnī, *Dhayl Mirʾāt al-Zamān,* 3:85: Baybars gave to al-Qaymarī—another Kurdish amir—an *iqṭāʿ* of forty horsemen.

[43] See R. Stephen Humphreys, "The Emergence of the Mamluk Army, II," *Studia Islamica* 46 (1977): 147–82; Amalia Levanoni, "The Mamluks' Ascent to Power in Egypt," *SI* 72 (1990): 121–44. On the Mamluks' amirs and their ranks, see David Ayalon, "Studies in the Structure of the Mamluk Army II," *Bulletin of the School of Oriental and African Studies* 15 (1953): 203–28, 449–76; Reuven Amitai, "The Remaking of the Military Elite of Mamluk Egypt," *SI* 72 (1990): 145–63; idem, "The Mamluk Officer Class during the Reign of Baybars," in *War and Society in the Eastern Mediterranean, 7th–15th Centuries,* ed. Yaacov Lev (Leiden, 1996).

[44] See also paragraph 141,"Il leur conceda des dotations allant de 10 à 40 cavaliers"; paragraph 127 "*khubz* of 300"; paragraph 127 "[al-Malik al-Ẓāhir] gave him a *khubz* of 100 horsemen" (خبز مائي فارس).

[45] The same episode is reported in paragraph 16. The passage also describes the further division of an *iqṭāʿ* .

iqṭāʿ. The way *khubz* is used is also related to the idea of feeding in another case, albeit to a lesser extent.

Khubz: Complaints and Requests

Let us have a look at a couple of passages from al-Makīn:

> فخافت القيمريّة على أنفسهم فكاتبوا الناصر صاحب حلب بأن يحضر ليأخذ دمش واشترطوا الزيادات في أخبازهم
>
> Les Qaymarīya prirent peur et écrivirent à al-Nāṣir, souverain d'Alep, de venir prendre Damas à condition qui il leur augmentât leurs concessions *(akhbāz)*[46]
>
> فسيّر إليهم وطيّب قلوبهم وحمل إليهم الأموال وزاد في إقطاعاتهم
>
> [al-Malik al-Kāmil appris qu'un group d'émirs convinrent de le déposer]
>
> Il leur envoya un messager pour les apaiser, leur fit porter des présents et augmenta leurs *iqṭāʿ*[47]

In both cases the issue at stake is the increase of the *khubz/iq*ṭāʿ of an amir. The two sentences are similar to each other and the same verb is used in both of them (زاد) but on page 133 we find the word *iqṭāʿ*, while on page 161, *khubz*. In my opinion, in this case *khubz* is used because of the context of request. Although the episode is not reported in direct speech, by using the word *khubz* the author seems to be sympathetic to the amirs. *Khubz* is used in a request once again, by al-Makīn, on page 143:

> فبعث الملك الصالح إلى أخيه الملك الكامل يسأله أن يُنعم عليه ببعلبك وأعمالها مع خبزه المتقرّ له من أيّام أبيه
>
> Al-Malik al-Ṣāliḥ fit demander a son frère al-Malik al-Kāmil de lui accorder Balbek et sa province en plus de la concession *(ḫubz)* qui lui avait été attribuée au temps de leur père.[48]

---

[46] Al-Makīn, *Al-Majmūʿ al-Mubārak,* 161. The French translation is taken from Eddé and Micheau, *Chronique des Ayyoubides,* 90.

[47] Al-Makīn, *Al-Majmūʿ al-Mubārak,* 133. French translation from Eddé and Micheau, *Chronique des Ayyoubides*, 32.

[48] Eddé and Micheau, *Chronique des Ayyoubides,* 53.

I think that the use of the term *khubz* in a context of request is not fortuitous. The word *khubz,* with its implicit meaning of bread and subsistence, was probably perceived by the author as the most appropriate for a request. In the amir's speech the term *khubz* is meant to move the prince. In other words, I think that the choice of the word *khubz* in this case is a stylistic one. The same stylistic reason could lie behind the use of *khubz* in the context of a complaint on page 169: "les amirs se plaignent (شكوا) de leurs concessions, *aḫbāz.*"[49] In this case it is also reasonable to assume that the use of the term *khubz* represents a stylistic choice aimed at emphasizing the moment. This use is also linked to the meaning of subsistence and bread, which is connected to the term, making it particularly suitable in the context of complaints. The fact that *iqṭāʿ* is never employed by al-Makīn in similar contexts corroborates this hypothesis. Even more interesting is the fact that in the historical writing of another author *khubz* is used in a similar way. In the *Zubdat al-Ḥalab,* the only passage in which the term *khubz* is used is on 203v: "The Yārūqīy are concerned (خاف) for their *akhbāz.*" In this case the use of the word *khubz* could be a result of the author's desire to show his sympathy for the defeated amirs. It is a stylistic device, to emphasize the moment and to increase the intensity of the scene. Although *khubz* and *iqṭāʿ* are synonyms in al-Makīn's century, the former might have preserved a shadow of its original meaning, bread subsistence, which would make it suitable for putting emphasis on an episode, or in the context of a request.

It is not surprising that al-Makīn is the only one who uses *khubz* in this way. Using the term as a stylistic device is a choice which depends on the style and the language of each author. Obviously, these choices may be influenced by the author's life experience and cultural background. Ibn Wāṣil might have preferred to use different, rhetorical meanings, or he might have had a different perception of the term *khubz* itself.[50] In the case of Ibn Shaddād, his style might have been shaped by the nature of his work, which was a historical topography.

There is something that must be added on the use of *khubz* in the context of a request. It appears that *khubz,* with its implicit meaning of feeding, stresses the idea of mutual relations and dependence between the prince and the amir. Humphreys states that "The institution of the *iqṭāʿ* did not establish a tie of personal fealty between man and man. There is no evidence of any kind to suggest that the sovereign and his *muqṭāʿ* formally undertook a body of mutual obligations to each other…An *iqṭāʿ* was conceded through a decree *(manshūr)* issued by the

[49] Ibid., 106.

[50] On the rhetorical devices used by Ibn Wāṣil, see Hirschler, *Medieval Arabic Historiography,* 91–93.

prince, in the same manner as any other office of state would be conceded."[51] I think that this assumption takes into account only the contractual point of view, which does not exclude the existence of bonds of loyalty and dependence between the *muqṭāʿ* and the prince. With regard to this, the use of the term *khubz* referring to *iqṭāʿ,* and especially its use in the context of request, is significant. It suggests, in fact, the existence of a moral relationship of rights and duties, which in this context is evoked on purpose. The term chosen in the amir's speech is intended to emphasize this relationship and the legitimacy of the request. This hypothesis would also fit with what Mottahedeh says about acquired loyalties in the Buyid period: "these acquired loyalties are best seen in times of stress, when men were trying to make effective their demands on others by explicitly referring to the validity of such loyalties."[52]

The question is whether the term *khubz* is used by the protagonists, or if it is just a stylistic device used by the author. In fact, one assumption does not exclude the other. Since the authors wrote *khubz,* the term must have been in use during that period so it is reasonable to assume that the protagonists used it as well.

Iqṭāʿ/Khubz as an Estate

There is one more use of *khubz* that is worth analyzing: the use of the word to refer to estates. This use of the term is relevant from two points of view. First of all, it shows to what extent the word *khubz* was used with the same meaning as *iqṭāʿ*.

According to some scholars, *iqṭāʿ* is a polysemantic word. Both Humphreys[53] and Irwin argued convincingly that the term—in addition to its main administrative meaning—can refer to a large number of related institutions. Irwin mentions it "as a means of maintaining a garrison, as a mark of status, as a formal approval of a local notability, as recognition of *de facto* political authority, as a loose equivalent of the term *wilaya,* and very likely even to designate Frankish fief tenure under Muslim suzerainty."[54] What about *khubz*? Does it substitute for *iqṭāʿ* exclusively as a term for tax allocation, or is it also used in other cases? It is difficult to answer this question. Further research is needed. In the texts I examined there is one case in particular which is remarkable. It is a sentence taken

[51] R. Stephen Humphreys, *From Saladin to the Mongols: The Ayyubids of Damascus, 1193–1260* (New York, 1977), 375.

[52] Roy P. Mottahedeh*, Loyalty and Leadership in an Early Islamic Society* (Princeton, 1980), 41.

[53] Humphreys, *From Saladin to the Mongols,* 371–75.

Holt (Warminster, 1977), 72; Linda Northrup, *From Slave to Sultan* (Stuttgart, 1998), 276, n.130; Ulrich Haarmann, "The Sons of Mamluks as Fief-holders in Late Medieval Egypt," in *Land Tenure and Social Transformation in the Middle East,* ed. Tarif Khalidi (Beirut, 1984), 141–68.

from Ibn Wāsil's *Mufarrij* (5:206): "The Khwarizmi amirs headed towards the east and settled in their *akhbāz*."

ثم رحلت الخوارزمية عن حمص وعادوا إلى الشرق فأقاموا به في أخبازهم

This sentence is very interesting, and not only because it shows to what extent—at least by this author—*khubz* was perceived as a synonym of *iqṭāʿ*. In this case the use of *iqṭāʿ* and its meaning are also relevant for an understanding of the *iqṭāʿ* system as a whole.

In the line by Ibn Wāṣil quoted above *khubz* clearly refers to a place, to a piece of land. In the passages I examined, *khubz* is used with this meaning only once, while *iqṭāʿ* recurs frequently with this meaning, generally combined with verbs of movement or state of being verbs, such as "to stay." Let me quote some examples from Ibn al-Athīr's *Al-Kāmil:*

وكان عسكره بمصر قد تفرّق عن الأفضل من الخشبيّ، فسار كلّ منهم إلى إقطاعه ليربعوا دوابّهم

> Al-Afḍal's army in Egypt had already parted from him…and every man had gone to his fief to put his horses on the spring grass.[55]

and

فهرب فخر الدين جركس وزين الدين قراجة الذي أعطاه الأفضل صرخد، فمنهم مَن دخل دمشق ومنهم مَن عاد إلى إقطاعه

> Fakhr al-Dīn Jahārkas and Zayn al-Dīn Qarāja, to whom al-Afḍal had given Ṣarkhad, fled and some there were who entered Damascus and others who returned to their fiefs.[56]

The term is used in the same sense in Ibn Wāṣil's *Mufarrij,* 4:70: نازل...في إقطاعاته and 3:126: ومنهم من ذهب الى إقظاعاته ("the ones who went to their *iqṭāʿ*"), and in Ibn al-ʿAdīm's *Zubdat al-Ḥalab,* الملك الأشرف في حرّان وابن المشطوب في اقطاعه رأس عين ("al-Malik al-Ashraf was in Ḥarrān and Ibn al-Mashṭūb in his *iqṭāʿ,* Rās ʿAyn").[57]

A further example is taken from the biographical dictionary *Tālī Kitāb Wafayāt al-Aʿyān,* by Ibn al-Suqāʿī. "He [al-Amīr Ḥusām al-Dīn Banjār] settled in Egypt in

[55] Ibn al-Athīr, *Al-Kāmil,* 155.

[56] Ibid., 163. The English translation of the two passages is taken from Richards, *The Chronicle of Ibn al-Athīr,* 50, 56.

[57] Ibn al-ʿAdīm, *Zubdat al-Ḥalab,* 241v.

the *iqṭāʿ* given to him and to his father" (واقام بمصر باقطاع له ولولده).[58] Jacqueline Sublet translated the sentence in a different way: "il demeura en Egypte (vivant) d'un fief qu'on lui avait donné, a lui et a son fils." However, some doubts about this translation arise from the structure of the sentence: the parallel between the two objects of ب makes it clear that both "*iqṭāʿ*" and "Miṣr" refer to a locality. The IV form of the verb قام followed by the preposition ب, moreover, usually means to settle down. Sublet's reluctance to translate *iqṭāʿ* as a locality is understandable, as it implies an important deviation from its principal meaning. As I said above, *iqṭāʿ* is an allocation of taxes, mainly land taxes, that does not imply any change of ownership of the land. In consequence the use of the term to refer to an estate involves a deviation from its proper meaning and use. The same shift in meaning described for *iqṭāʿ* underlies the use of *khubz* in the passage of Ibn Wāṣil mentioned above (5:206). From the grammatical point of view this shift is not negligible, either. *Iqṭāʿ* is a verbal noun. Verbal nouns usually refer to the act of doing something; the term *iqṭāʿ* refers to a process. Its usage to indicate an estate implies the loss of its aspect of transitivity.

The frequency of this particular use of the term *iqṭāʿ* deserves some consideration, as it implies that it was common in the spoken language. Although its formal meaning was the allocation of taxes, mainly land taxes, *iqṭāʿ* must have come to be associated with land ownership and in some cases even with properties.[59] Beyond the semantic point of view, the use of the term *iqṭāʿ* as a locality is interesting for an understanding of how the *iqṭāʿ* system worked in reality, and how it was perceived by people at that time. This use of the term may lead to the conjecture that, although it was formally a temporary allocation of fiscal rights, *iqṭāʿ* must have been, at least in part, perceived as an estate. With regard to this, it is worth mentioning a lease concerning a portion of an *iqṭāʿ*, even though it comes from a later period. The contract is a document from al-Ḥaram al-Sharīf, Jerusalem.[60]

All this shows that the functioning reality of the *iqṭāʿ* system is not only far from being understood, but also too complex to be contained within the traditional definition of *iqṭāʿ*. It must have represented a variety of developments on the ground, according to different historical periods and places. In some cases

[58] Al-Suqāʿī, *Tālī Kitāb,* paragraph 82.

[59] "L'assimilation entre muqṭāʿ et propriétaire devenait facile en cas d'*iqṭāʿāt* héréditaires et de longue durée. L'impôt foncier (ḫarağ) en effet était souvent payée, en partie du moins, en nature, comme la redevance du métayer et a peu près dans le même proportions." Anne Marie Eddé, *La Principauté Ayyubide d'Alep* (Stuttgart, 1999), 502.

[60] Donald P. Little, *A Catalogue of the Islamic Documents from al-Haram aš-Šarif in Jerusalem* (Beirut, 1984), 298. Most of the documents date to the period between 793 and 797.

these local developments may not have been too far from Western feudalism.[61] Evidence from the Ayyubid period, for example, shows that at that time *iqṭāʿāt* were often inherited, and that the *muqṭāʿ*s used to live in their *iqṭāʿāt* and enrich them with architectural works as a symbol of their power.[62]

Is it possible to say when this shift in the meaning of the term *iqṭāʿ* in the language occurs? Further research is needed on this topic. It is clear, however, that *iqṭāʿ* must already have been used in this sense before the time of Ibn al-Athīr, as testified by his use of the term as a locality.

Khubz in Later Centuries: An Overview

What about later centuries? Is *khubz* still in use? Do the meaning and the use of the term change? Although this article focuses mainly on sources from the thirteenth century C.E., I will now put forward a few considerations based on some quotations from authors of the fourteenth and fifteenth centuries. The use of the term *khubz* as *iqṭāʿ* also continued in later centuries, but it came to be used with different meanings as well.

As in previous centuries, in this period the use of the term *khubz* changes from author to author. Some of them use the term both to indicate the *iqṭāʿ* of amirs, and with a new meaning, usually related to non-Mamluk soldiers. Gibb, for example, notes that "When al-Maqrīzī (d. 845) says (*Kitāb al-Sulūk,* 1:65) that Saladin after the battle at Mont Giscard, *qataa akhbaza jamaatin minal-akrad,* it is probable that *khubz* means here 'allowance of pay' rather than *iqṭāʿ,* as in later Mamluk usage."[63] The same author nevertheless uses *khubz* when referring to *iqṭāʿ,* as in the following passage:

وسبب ذلك أن السلطان استكثر أخباز المماليك أصحاب بيبرس
الجاشنكير وسلار النائب وبقية البرجية، وكان الخبز الواحد ما بين
ألف مثقال في السنة إلى ثمانمائة مثقال وخشى (السلطان) من وقوع
الفتنة بأخذ أخبازهم

The reason for this survey was as follows. The sultan regarded the *ahkbāz* (that is, the *iqṭāʿ*s) of the *mamlūk*s who were the retainers

[61] On the difference between the Muslim *iqṭāʿ* and the Western fief see Cahen, "L'évolution de l'iqtaʿ du IX au XIII siècle"; idem, "Iḳṭāʿ"; idem, "Réflexions sur l'usage de mot 'Féodalité,'" *Journal of the Economic and Social History of the Orient* 3 (1960): 2–20. A different opinion is expressed by Irwin, "Iqtaʿ and the End of the Crusader States," 77.

[62] Eddé, *La Principauté Ayyubide d'Alep;* Benjamin Michaudel, "The Use of Fortification as a Political Instrument by the Ayyubids and the Mamluks in Bilād al-Shām and in Egypt (Twelfth–Thirteenth Centuries)," *MSR* 11, no. 1 (2007): 55–67.

[63] H. A. R. Gibb, "The Armies of Saladin," *in Studies on the Civilization of Islam* (London, 1962), 86, n.16.

> of Baybars al-Jāshankīr and *al-nāʿib* Salār, and of the surviving *al-Mamālīk al-Burjīya* to be excessive. That is to say, this was because one *iqṭāʿ* was between an annual revenue of 1000 mithqāls (1,000 dīnārs) and 800 mithqāls, but the sultan was afraid of provoking riots by confiscating their *khubz*."[64]

Also al-Yūnīnī, who lived before al-Maqrīzī, uses *khubz* with different meanings. In some passages of his *Dhayl Mirʿāt al-Zamān* the word *khubz* refers to *iqṭāʿ*. On 2:242, for example, when he accounts for the *iqṭāʿ* given to Baybars in 659, the author refers to the *iqṭāʿ* with the term *khubz*.[65] On the other hand, the same author uses the term with a different meaning in another passage:

> وفيها في يوم السبت سادس عشر جمادى الأول كان ابتداء الروْك والشروع في إقطاعات الأمراء وفي اخباز الحلقة والأجناد وجميع عساكر الديار المصرية

> In this year [697], on Saturday, Jumādā I 16 (March 1, 1298), the land redistribution *(al-rawk)* came into effect. Amīrs began to be granted fief lands *(iqṭāʿ)*, while the non-Mamluk *ḥalqa* troopers and all Egyptian soldiers received their fief-related allowance *(akhbāz)*.[66]

Al-Yūnīnī distinguished between the two terms; while *iqṭāʿāt* was given to the amirs, *khubz* is what non-Mamluk soldiers received. This is not the only case where *khubz* is related to soldiers rather than to amirs' *iqṭāʿāt*. In the work of a contemporary of al-Yūnīnī, al-Nuwayrī, *khubz* seems to be used in the same sense. In "Le Testament d'al-Malik aṣ-Ṣāliḥ Ayyūb"[67]:

> اذا كتب منشور لامير ياخذوا منه المايتي واكثر ومن الجندي من الماية ونازل ويكون الجندي خبزه الف دينار يفرقوا خبزه في خمس ست مواضع في قوص وفي الشرقية وفي الغربية فيزيد الجندي اربع وكلا تروح الخبز للوكلا وما يحصل للجندي من خبزه شي

> Si un diplôme était écrit pour un émir, ils lui prenaient 200 dinars et même plus, s'il l'était pour un soldat 100 et moins (?); le soldat dont l'allocation *khubz* est de 1000 dinars ils la dispersent entre

[64] Al-Maqrīzī, *Kitāb al-Sulūk,* 2:146. The translation is taken from Sato, *State and Rural Society,* 147. See also the following passages: 2:386 and 3:407; in the former the term *khubz* refers to the *iqṭāʿāt* of the Khāṣṣakīyah, and in the latter it refers to the *iqṭāʿ* of an amir.

[65] The term *khubz* has the same meaning also in 2:92. See also al-Maqrīzī, *Kitāb al-Sulūk,* 3:85.

[66] Li Guo, *Early Mamluk Syrian Historiography: Al-Yūnīnī's Dhayl Mirʾāt al-Zamān* (Leiden, 1998), 1:106 (English translation), 2:11 (Arabic text).

[67] Cahen and Chabbouh, "Le Testament," 102 (Arabic text), 110 (French translation).

> cinq et six endroits à Qus et dans la Sharqiya et la Gharbiya il est obligé de nommer 4 gérants, auxquels va tout le *khubz,* et il ne lui revient rien à lui même…
>
> يا ولدي اكثر الاجناد اليوم عامة وباعة وقزازين كل من لبس قبا وركب فرس وجا الى امير من هاولاء الترك وقدم له قوس وبرطل واستاذداره على خبز جندي من جندي معروف بالشجاعة والحرب، طرده اميره واعطا خبزه لذلك العامي الذي لا ينفع، واكثرهم على هذه الحالة، فاذا عاينوا العدو وقت الحاجة هربوا وينكسروا العسكر لانهم ما يعرفوا ولا هو شغلهم فينبغي ان لا تستخدم
>
> O mon fils, la plupart des soldats de l'armée sont des gens du peuple, des boutiquiers et des tisserands (?). Quiconque revêt un *qabā,* monte un cheval et vient trouver un de ces Emirs turcs, on lui amène un cheval on corrompt le….et l'*ustādhdār,* pour avoir le *khubz* d'un soldat connu par sa vaillance et ses qualités de guerre, l'émir l'abandonne et donne le *khubz* à ce soldat commun, qui n'est d'aucune utilité (pour l'armé).[68]

According to Claude Cahen, who edited the text, *khubz* is "un des termes courents pour designer les *iqṭāʿāt* de dimensions modestes."[69] *Khubz* has also been used to refer to the *iqṭāʿāt* of the sons of Mamluk amirs in the *ḥalqah*. These *iqṭāʿāt* were usually inferior compared with those granted to the Royal Mamluks.[70]

I will conclude with a contemporary of al-Yūnīnī and al-Nuwayrī, who shares many similarities with al-Makīn, both in his biography and in his use of term *khubz:* Ibn al-Suqāʿī. Like al-Makīn, he was an Egyptian Copt. He worked in the Mamluk administration. He wrote a biographical dictionary, *Tālī Kitāb Wafayāt al-Aʿyān*. In this work the term *khubz* is used more than any other expression related to the concept of *iqṭāʿ* (fourteen times out of twenty). I have already quoted some passages of his work, talking about the use of *khubz* followed by the number of horsemen to be maintained by it. The copious use of the term by this author confirms its bureaucratic usage. Apparently, *khubz* and *iqṭāʿ* are used interchangeably in his writing. Although in the *Tālī Kitāb khubz* refers mainly to *iqṭāʿ,* in one

[68]Ibid., 102 (Arabic text), 111 (French translation).

[69]Ibid., 110.

[70]This passage is quoted in Amalia Levanoni, "Awlad al-Nas in the Mamluk Army during the Bahri period," in *Mamluks and Ottomans: Studies in Honor of Michael Winter,* ed. Ami Ayalon and David J. Wasserstein (London, 2006), 97.

case it is related to soldiers' wages: "[He promised] that he would appoint him as (give him the office of) soldier with a *khubz:* يجعله جندي بخبز"[71]

Some Final Remarks

The presence of the term *khubz* in the work of all the authors under review confirms its usage. The point now is to understand to which linguistic register the term *khubz* belonged. The frequent use of this term, in fact, could be related to a wider use of colloquialisms or bureaucratic terms, or to the author's familiarity with the latter. My opinion is that, although *iqṭāʿ* was the administrative term, *khubz* must have been widespread, especially in bureaucracy and administration and in certain expressions like "*khubz* of 100 horsemen." A very interesting point is that in Ibn al-Athīr the term *khubz* never appears. The fact that this term is not used cannot, in my opinion, be solely attributed to the chronological gap between him and the authors under review. Ibn al-Athīr was a professor who devoted most of his life to his literary work. His *Al-Kāmil,* moreover, is partly assembled from his students' notes.[72] If the language used in *Al-Kāmil* is the same language the author used for his lessons, the absence of the term *khubz* is not surprising; on the contrary, it would fit perfectly with the use of the term mainly in the spoken language and the vernacular of the administration. As *iqṭāʿ* was a technical term, the most correct one, in fact, it is not surprising that it was commonly used by teachers during their lectures. The absence of the term in Ibn al-Athīr does not prove that the term *khubz* was not in use at that time; it is rather a result of the author's linguistic and stylistic choices. It is true, however, that the decades between Ibn al-Athīr and the writers discussed in this article are not insignificant. The use of *khubz* might have become more common in the period that followed.

The use of the term in the narratives I have analyzed is not in conflict with the hypothesis that it was used particularly frequently in administration. It is well known that in the period under review the authors already enjoyed a certain independence from tradition and that their language contains colloquialisms.[73] What is more, all of the authors mentioned in this article held positions in the administration or had close ties with the courts and administrative and political groups, which may have shaped the language of their works.

The textual analysis of the works under discussion confirms that *khubz* was mainly used with the meaning of *iqṭāʿ,* even when the latter came to refer to lo-

cality. Nevertheless there are specific uses of *khubz* which might be connected to its meaning of bread: firstly al-Makīn's use of the term in the context of complaints and requests; secondly its use followed by the number of horsemen to be sustained by the *iqṭāʿ*.

The analysis of these particular cases also highlights the relevance of a semantic analysis for an understanding of the functioning of the *iqṭāʿ* system and of the way the latter was perceived in the period under discussion. Although further research is needed, I think that the use of the word *khubz* to indicate *iqṭāʿ* and its usage in contexts of complaint is relevant to the social and emotional relations that underlie the contractual aspect. Even more relevant for an understanding of both the local perception of the *iqṭāʿ* system and of its functioning on the ground is the use of both *iqṭāʿ* and *khubz* to mean an estate. Both these points, moreover, show that the local developments of the *iqṭāʿ* system might present particular features that are not congruent with the traditional definition of *iqṭāʿ* as a tax allocation and nothing more. In fact, these local developments might in some cases bring into question—at least in part—the assumptions about the differences between the Muslim *iqṭāʿ* and the Western fief.

To conclude, I would say that a semantic study can, to some extent, help us to go beyond a purely legal perspective, and can contribute to a better understanding of the features of the *iqṭāʿ* system and especially of its local developments.

The 727/1327 Silk Weavers' Rebellion in Alexandria: Religious Xenophobia, Homophobia, or Economic Grievances

In Rajab 727/May 1327, Alexandria rebelled against the wali Rukn al-Dīn al-Karakī. This rebellion lasted nearly two months, and the sources describe it as a *fitnah*. Ibn Baṭṭūṭah says that he came to know of it when he was in Mecca that year. News of this event spread to other parts of the Islamic world.[1] The most detailed accounts of this rebellion are found in al-Nuwayrī's *Nihāyat al-Arab fī Funūn al-Adab* and al-Maqrīzī's *Al-Sulūk li-Maʿrifat Duwal al-Mulūk,* two of the most important sources for the Mamluk period in Egypt.[2] At first glance, this rebellion seems to have been no more than a scuffle between Egyptians and Europeans on the corniche. However, a third report that sheds new light on this incident was recently found in al-Jazarī's *Ḥawādith al-Zamān.*[3] This report turns out to be an account of the events told to al-Jazarī by two merchants who had been in Alexandria during the rebellion and were interviewed by al-Jazarī in Damascus about five months later. Because they had lived through the event, and because they themselves were merchants, they provide significant details that are not mentioned elsewhere, and they shed more light on an episode which scholars,

Initial research for this paper was done while on a grant from the American Research Center in Egypt and the National Endowment for the Humanities (2005). An earlier version was delivered at the American Research Center in Egypt Annual Conference, New York, NY (2006).

[1]See Jamāl al-Dīn al-Shayyāl, *Tārīkh Madīnat al-Iskandarīyah fī al-ʿAṣr al-Islāmī* (Cairo, 1966), 107. I have found that there are too few sources, other than the ones cited in this study, that deal specifically with Alexandria during the Mamluk period, even though the city played a major part in that history.

[2]Shihāb al-Dīn Aḥmad ibn ʿAbd al-Wahhāb al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab,* ed. Muṣṭafá Hijāzī (Cairo, 1997), 33:232–36; Aḥmad ibn ʿAlī al-Maqrīzī, *Al-Sulūk li-Maʿrifat Duwal al-Mulūk,* vol. 2, part 1, ed. Muḥammad Muṣṭafá Ziyādah (Cairo, 1934), 284–86. Al-Maqrīzī provides another account in his *Al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1270 A.H.), 1:326–27. Other primary sources give a brief notice of the incident, such as Zayn al-Dīn ibn Muẓaffar Ibn al-Wardī, *Tārīkh* (Beirut, 1996), 2:272–73; Faḍl Ibn Abī al-Faḍāʾil, *Al-Nahj al-Sadīd wa-al-Durr al-Farīd,* ed. Samira Kortantamer as *Agypten und Syrien Zwischen 1317 und 1341 in der Chronik des Mufaḍḍal b. Abī l-Faḍāʾil* (Freiburg, 1973), 37–38, where he refers to his source as *al-muʾarrikh,* most likely referring to al-Jazarī since his report about the incident seems to be a short summary of al Jazarī's account, often using the same vocabulary; Ibn Aybak al-Dawādārī, *Die Chronik des Ibn ad-Dawādārī,* ed. Hans Robert Roemer (Cairo, 1960), 1:342.

[3]Shams al-Dīn Muḥammad ibn Ibrāhīm al-Jazarī, *Ḥawādith al-Zamān wa-Anbāʾihi wa-Wafayāt Akābir wa-al-Aʿyān min Abnāʾihi,* ed. ʿUmar Tadmurī (Beirut, 1998), 2:185–89.

relying on al-Nuwayrī and al-Maqrīzī, have described as a brawl between Europeans and Egyptians.[4] What is fascinating in these accounts is not that there are discrepancies in their story; variants are quite common in the sources and are to be expected, given that authors often provided brief and selective summaries and notices of what they chose to include in their chronicles. It is, however, the nature of those differences that proves to be unusual. Al-Nuwayrī offers religious grounds for the scuffle that marked the rebellion, while al-Maqrīzī provides a homophobic pretext for the same incident. It will be demonstrated in the following discussion that, according to the merchants' account, the rebellion was rooted in grievances held by the silk-weavers in Alexandria against economic policies imposed by al-Karakī. Further, while al-Nuwayrī and al-Maqrīzī reduce their narrative to an isolated incident, al-Jazarī's account shows that the scuffle is one of a series of related events. It will also be demonstrated that religious and homophobic grounds merely provided convenient tropes to justify the Egyptians' reaction and to lay the responsibility for this *fitnah* and its disastrous consequences squarely on the shoulders of the Europeans.

Alexandria's role in Mediterranean commerce cannot be overstated. Alexandria gradually assumed a greater role in the context of the increased volume of Mediterranean trade after the year 1000 and in the context of the competition between European and Muslim merchants in the following period. The hostilities of the Crusader era at once hindered and spurred commerce and competition. Saladin, for example, forced European merchants to evacuate from the Red Sea (ʿAydhāb) and Cairo and restricted their operations to Alexandria, especially after Reynald de Chatillon's 1183 failed naval expedition.[5] Commerce and cultural contacts in Alexandria must have peaked again after Damietta was demolished early in the Mamluk period due to repeated European attacks against it. Alexandria thus became Egypt's major outlet to Mediterranean trade. After the fall of Acre in 1291, commercial treaties with European powers were renewed and new ones were concluded that made Alexandria the principle port in the eastern Mediterranean for the exchange of goods brought from the East, especially by the Kārimī merchants.[6] In 1310 the sultan al-Nāṣir Muḥammad reconnected Alexandria

[4]Eliahu Ashtor, *Levant Trade in the Latter Middle Ages* (Princeton, 1983), 52–54. Following Ashtor, see also Linda Northrup, "The Bahri Mamluk Sultanate," in *Cambridge History of Egypt: Islamic Egypt 640–1517,* vol. 1, ed. Carl Petry (Cambridge, 1998), 285. The best current treatment of al-Nāṣir Muḥammad's reign is Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad Ibn Qalāwūn* (Leiden, 1995), 151–52. Curiously, Levanoni does not mention this incident, even though it is a prime example al-Nāṣir's policy of confiscations.

with the Nile by digging what came to be known as al-Khalīj al-Nāṣirī to facilitate trade and other economic activity in and around Alexandria.[7] Textiles were among the most important products of Alexandria, whether manufactured in the government's Dār al-Ṭīrāz or produced on private looms.[8] Textiles were made of various materials, such as wool, cotton, linen, flax, and silk. The silk industry flourished in Alexandria during the Mamluk period, especially the Bahri period. The ownership of the silk industry at this time was mixed: privately owned looms churned out their products alongside government-owned workshops, such as Dār al-Ṭīrāz.[9] Much of the trade in these commodities was conducted with European merchants and reached various parts of the world.[10] It is perhaps due to these extensive commercial contacts that the Alexandria mint, according to Schultz, produced at this time only gold coins.[11] Therefore, the immediate and wider historical background of the *fitnah* of 1327 was increased commercial and cultural contacts between Europeans and Muslims in Alexandria, a thriving market in which textiles figured prominently. It was al-Karakī's decree to restrict the sale of silk to the government's warehouse, as shown only by al-Jazarī, that caused the initial grievance: imposing a state monopoly on the sale of silk and other items had deleterious consequences for the fortunes of the merchants and textile producers of Alexandria at a time when the market was brimming with trade activity. Local grievances mounted against this policy as the Egyptians became more impoverished, to the extent that some textile producers could not repay European merchants for money they had either borrowed or received as advance on their goods. This, then, is the volatile environment in which the *fitnah* took place.

The following examination will help us reconstruct the rebellion of 1327. There is much agreement between the three authors, yet each account has its own nuanced retelling of the story, especially in the choice of terms used to identify the participants, in the specific event that sparked the discontent, and in the associated actions that the authors chose to include in their account, especially those taken by the central government. Taken altogether, it should be noted that the three accounts complement one another in the sense that they share cer-

tain events and settings, albeit not always in the same order, and provide details that fill in the gaps created by the selective summarizing. This examination, then, should provide a wider view of an expression of social discontent that, even though it appears limited, anticipates a larger turn in Mamluk economic policies and practices.

Of the three authors, al-Nuwayrī was the closest to the event; he was writing in Cairo, where he died five years later, in 1332. The similarities and differences between these authors, however, are not dictated by time or space; al-Jazarī interviewed the eyewitnesses in Damascus five months later, while al-Maqrīzī wrote his account more than a century later. As such, al-Maqrīzī had a larger pool of sources, perhaps even al-Nuwayrī's and al-Jazarī's, and was more selective in reconstructing his account. In order to appreciate the distinctive features of each account, the following analysis will examine the main points in the story: the reason for the rebellion and the government's reaction to it.

The Reason for the Fitnah

Al-Nuwayrī says:

> And on Thursday the 5th of the month of Rajab, of the year 727, a huge *fitnah* occurred in the port *(thaghr)* of Alexandria between the people of that city and its governor *(mutawallīh),* Rukn al-Dīn Baybars al-Karakī. And the cause of this *fitnah* is that a group of common folks *(jamāʿah min ʿawāmm al-thaghr)* gathered on that day for sightseeing as they habitually do *(li-yatafarrajū ʿalá ʿādatihim).* They stood at a storyteller's circle outside the port, between the two gates, the Green and the Sea Gate. In the circle there was a *Firanjī* who belonged to the emissaries of the Byzantine ruler *(rusul ṣāhib Isṭanbūl),* and whenever the storyteller mentioned the Prophet (prayer and peace be upon him) the people raised their voice in prayer as Muslims habitually do in that case. One of them said: get this *Firanjī* away from among us for we pray for the Prophet (prayer and peace be upon him) and he does not pray for him. So they wanted to get him away from the circle but he refused to leave. So he was pushed away from it. A foot soldier from the governorate of the city came to his aid *(fa-aʿānahu baʿḍ rajjālat al-wilāyah bi-al-thaghr)* and said that he belongs to the emissaries who had just arrived to [meet] the sultan. Some of the commoners beat the foot soldier who then sought help from a group of his comrade foot

> soldiers. The commoners outnumbered them and beat them and thereafter the *fitnah* rose up.[12]

At least two points relevant to the discussion should be noticed in al-Nuwayrī's description of this event. First, he uses the word *ʿawāmm* to describe the Egyptians who were sightseeing on that Thursday afternoon, and he uses the word *Firanj* to denote Europeans or Byzantines. Second, he reports that the incident around the storyteller's circle originated as a religious dispute, namely suspicion or misunderstanding of the European's failure to participate in the prayer. The suspicion aroused by the presence of the European at the storyteller's circle could be understood within the context of religious xenophobia. The perceived lack of respect for the Prophet, and as such also for Muslims, led to the desire to exclude him from the circle. The audience, or at least one in the crowd, wanted to remove the European from the circle on the grounds that he did not share in the blessing for the Prophet. This would seem to suggest that if the European willingly excluded himself from the circle, nothing would have happened. But since he had to be removed forcibly, the fault and the responsibility for the ensuing problems, the source would suggest, lies with the European.

Al-Maqrīzī reports on this incident in two of his works. In the *Sulūk* version, he does not mention the storyteller or the sightseeing activity, because, as he insists, he was giving a summary account *(mulakhkhaṣ)* of the incident. He says:

> On Thursday the 5th of the month [of Rajab] the *fitnah* took place in Alexandria and its summary [account] is that a *Firanjī* merchant had an exchange *(fāwaḍah)* with a Muslim and had hit him. And that [happened] because the *Firanjī* stood near a beardless youth (*ṣabī amrad,* a minor) to take him and do with him that act *(li-yakhudhahu wa-yafʿala bi-hi dhālika al-fiʿl)*. A Muslim man forbade him and told him: "that is not lawful." The *Firanjī* then hit the [Muslim's] face with a shoe. Other Muslims rose up against the *Firanjī* whose companions rose up to protect him. Evil fell between the two groups and they fought [each other] with weapons. The governor of the city, al-Karakī, rode [to the scene] to find that the people had banded together and [that they] had brought out their weapons. The people testified against the *Firanjī* with what necessitated his execution *(shahidū ʿalá al-firanjī bi-mā yūjību qatlahu)* and they carried him off to the qadi. The markets of the city and its gates were shuttered.[13]

[12] Al-Nuwayrī, *Nihāyat,* 33:232–33.

[13] Al-Maqrīzī, *Sulūk,* 284.

In his version in the *Khiṭaṭ,* which is even more truncated, al-Maqrīzī mentions this incident with some modification and says that a *Firanjī* merchant went to the place by the sea where common folks go sightseeing. There, the European merchant approached a beardless youth and solicited sexual acts, as understood from al-Maqrīzī's words "*taʿarraḍa ilá ṣabī amrad yurāwiduhu ʿan nafsihi.*"[14]

Al-Maqrīzī, as we have read, is consistent in his reference to the *Firanj* as a party to the incident. However, he refers to them as merchants, not as emissaries. And instead of using the word *ʿāmmah* to describe the Egyptians, al-Maqrīzī described them as Muslims. We know, of course, that the emissaries could be merchants and vice versa and we know also that at the time the majority of the inhabitants of Alexandria were Muslims. Neither of the accounts is fundamentally flawed, but it is the choice of words and how they color the story that should be noted here. The most serious difference between the two accounts is the point of interaction between the two parties. Al-Nuwayrī describes a cultural scene: people sightseeing, a storyteller's circle on the corniche, and a fight motivated, as we have seen, by religious sentiments. Al-Maqrīzī cites inappropriate sexual advances towards a boy as the cause of the fight. This introduces a more nuanced conflict between the two sides, one that includes other issues, such as honor, morality, and cultural values, especially regarding homosexuality. This is problematic, given that contemporary Arabic sources speak of homosexuality as a practice recognized in certain social circles.[15] But although acknowledged in the literature, the practice was not necessarily condoned. It was also considered a serious crime to attack young boys. Al-Jazarī reports several cases that resulted in the castration and death of those accused of assaulting young boys.[16] Therefore, when the *Firanjī* merchant solicited the boy, it was regarded as an affront towards religious as well as cultural and moral sensibilities. Not only was it considered a "sinful" act (not *ḥalāl*); the objection could have been also on the grounds of homophobic reactions or even against pedophilia. That this exchange was perceived by the Muslim as an insult, perhaps even to his own honor, is reinforced by the

[14] Al-Maqrīzī, *Khiṭaṭ,* 1:326. For a more famous example, the expression, *yurāwiduhu ʿan nafsihi* is mentioned in the Quran, 12:23–61, in reference to the attempted seduction of Joseph.

[15] See, for example, Everett Rowson, "Two Homoerotic Narratives from Mamlūk Literature: al-Ṣafadī's Lawʾat al-Shākī and Ibn Daniyāl's al-Mutayyam," in *Homoeroticism in Classical Arabic Literature,* ed. J. W. Wright and Everett Rowson (New York, 1997). For a review of other recent literature on the subject of homosexuality see S. Schmidtke, "Homoeroticism and Homosexuality in Islam: A Review Article," *Bulletin of the School of Oriental and African Studies* 62, no. 2 (1999): 260–66.

[16] See al-Jazarī, *Ḥawādith,* 3:677, where a black slave was castrated in Cairo because he used to "*yataʿarraḍu li-awlād al-nās*." Two other cases involved young boys, but the executions resulted from their murder. See, for example, ibid., 2:346, 386.

account that the European hit the Egyptian's face with his shoe, a decidedly disrespectful thing to do to a Muslim.

For all we know, such effrontery as reported by al-Nuwayrī or as reported by al-Maqrīzī may or may not have occurred at all. But we are faced with two different versions for the same event. Could these variant explanations have been rumors circulated in the aftermath of Alexandria's troubles? Or could the religious and the sexual explanations serve as convenient tropes to describe "triggers" for social uprisings? Both authors reported what they deemed a sufficient pretext to explain or to justify people's anger against the European's perceived transgression, whatever it may have been. In the absence of any context other than that provided by al-Nuwayrī and al-Maqrīzī, these authors seem to suggest that the Egyptians were reacting to this or to that provocation only. Isolated and out of context, these versions of events could have misled modern historians to describe this incident merely as a brawl.

However, a brawl it was not, for "brawl" suggests a brief noisy quarrel that may involve a number of people. Al-Jazarī supplies information that points to city-wide and long term discontent and resentment based on specific economic grievances. And far from the price one pays for a brief quarrel, the people of Alexandria endured a month-long government extortion that severely punished the town.

Al-Jazarī, in the course of listing notable events of the year 727, says that he had a conversation with Muḥammad ibn Nāṣir al-Dīn al-Tānī, a traveling merchant *(tājir saffār)* and resident of Alexandria, along with Aḥmad ibn al-Ṣabbāb al-Ḥarrānī, also a traveling merchant who had been in Alexandria when the *fitnah* took place. They told him:

> When it was in the afternoon, on Thursday, the 6th of Rajab, emissaries on behalf of the *Firanj* had arrived and were staying inside the Sea Gate, between the two gates, where people *(al-khaliqu)* pour in for sightseeing. One of the *Firanj* went out sightseeing [also] and stood next to a group of people. There [among them] stood a beardless youth *(ṣabī amrad)* and [the *Firanjī*] stood next to him and stepped on his foot [intending that] as signal to him *(fa-daʿasa ʿalá rijlihi ishāratan ilayhi).* A man said to the *Firanjī* "this is not lawful." The *Firanjī* was carrying a leather shoe with which he hit the face of the man who disapproved [of his intent]. Another man came forth and disapproved [of what the European did] and then the talk widened. The discord intensified and there was much hitting [between them]. The news went to the governor, who rode out with his men and ordered the gates of the city shut. He sought those who

> caused the disturbance, but the people fled from his clutches. The wali then brought the *Firanj* [back] to the place of their residence and he returned to his own.[17]

So far, this is not much different from the previous accounts, except that the merchants supply a more exact location where the altercation took place, on the corniche and in the span between the two gates facing the sea. However, an important additional element in the merchants' account is the actual physical contact that was understood to be the solicitation when the *Firanjī* stepped on the boy's foot, intending it as a signal. A signal to do what, they did not say, but it is implied that he was seeking sex with the boy. It is not clear why stepping on the boy's foot was meant to be a signal for what al-Maqrīzī referred to in one instance as "to do with him that act" and in another "*yurāwiduhu ʿan nafsihi.*" Here again, the *Firanjī* hit the man's face with a shoe, now of leather, before others joined in the melee. Once again, the sexual trope is used as the basis of the quarrel, albeit taking place in an environment that combines al-Nuwayrī's location (now more precise) and al-Maqrīzī's sexual solicitation. As we shall see below, however, the Egyptians were reacting to more than hearsay "triggers" for their grievance against the Europeans and the government.

The Immediate Aftermath: Friday 6th of Rajab

Matters did not come to an end after al-Karakī secured the safety of the Europeans by taking them to their quarters. Al-Karakī had to deal with an angry town on the verge of insurrection. Yet, no further action against the Europeans is reported by any of the accounts. Resentment, discontent, and violence were directed, from now on, at al-Karakī and his aids. Armed clashes took place and resulted in death and injury. The government was on the retreat and al-Karakī seemed to lose his grip on the situation, prompting him to seek aid from Cairo. In reporting on this, here too the three reports are nuanced.

Al-Nuwayrī says that when al-Karakī rode out to repulse the people after they had overpowered the troops, the people stoned him and his aides, whereupon he ordered the city gates closed, preventing many people outside from going back home. An official with the title of *rayyis al-khilāfah* came around the corniche in a boat loaded with archers and began to shoot at the crowd, killing many of them. The chief judge of Alexandria, ʿImād al-Dīn al-Kindī, counseled al-Karakī to cease and desist *(ashāra ʿalá al-mutawallī bi-al-kaff),* but al-Karakī refused to listen. Al-

[17] Ibid., 2:185–86. According to calculations based on Freeman-Granville the 5th of Rajab falls on Thursday (G. S. P. Freeman-Granville, *The Muslim and Christian Calendars: Being Tables for the Conversion of Muslim and Christian Dates from the Hijra to the Year A D 2000,* 2nd ed. [London, 1977], 37, 62).

Nuwayrī adds here that "it was said" that ʿImād al-Dīn told the populace that it was therefore lawful to fight the government, fanning the flames of the *fitnah* to the extent that al-Karakī and his aides were besieged in their residences. In the meanwhile, a group of people attacked the residence of the *rayyis al-khilāfah,* where arms were stored, and looted everything in it. Another group went to the prison and broke its doors and let prisoners out. Al-Nuwayrī adds, in what seems to be an afterthought, that the people had intended to free the Mamluk commanders imprisoned there, but the latter refused to leave. This last act prompted al-Karakī to relay the news to the sultan in Cairo.[18]

Al-Maqrīzī does not mention any of this at all. Rather, he says that trouble started again after the late evening prayer, when al-Karakī opened the gates to let in those who had been locked out since the afternoon. He says that, in the crush of the people coming in, ten people perished and many others were injured, in addition to some loss of property. In a curious twist, al-Maqrīzī says that it was then that al-Karakī recognized the extent of the people's resentment against the Europeans. And, never mind that it was late at night and the Europeans were safely tucked away, al-Maqrīzī says that it was then that al-Karakī rode against the people but they stood their ground until they forced him to retreat after much blood was shed on both sides. In response, al-Karakī dispatched carrier pigeons to Cairo to inform the sultan of the news.[19]

The story as related by al-Jazarī seems to indicate that some calm was restored after al-Karakī delivered the Europeans to their quarters, except of course for those who were locked out of the city and were becoming increasingly anxious at the late hour. A group of city notables went later that night to al-Karakī requesting that he open the gates. Al-Karakī obliged and had the gates opened, and, according to the merchants, he also deployed a group of archers right then and there who proceeded to shoot at the people coming in and assaulted them, even with swords, so that more than ten people were killed and many were wounded. Thereafter, that is on Friday morning the 6th of Rajab, the people of Alexandria woke up lamenting the death and injury to their kin and slapping their faces in grief. Al-Karakī, coming to inspect the scene in the morning, faced a hostile crowed who stoned him all the way back to his residence, where he shut himself off from the angry crowd.[20]

But the merchants broke off their narrative here to say that problems had actually started twenty days earlier. They said:

[18] Al-Nuwayrī, *Nihāyat,* 33:233.

[19] Al-Maqrīzī, *Sulūk,* 284–85.

[20] Al-Jazarī, *Ḥawādith,* 2:186.

> Before all of this by about twenty days, there came to the governor two middlemen *(samāsirah*, sg. *simsār)* from the storehouse known as the Qaysārīyah of the ʿAjam and said: The middlemen of the *qaysārīyah* have agreed with the silk weavers, and likewise with the criers *(dallālīn,* sg. *dallāl)* that they would buy [the silk] from them [directly] and take their commission from the merchants *(yaʿtābūna min al-qazzāzīn wa-yakhudhū min al-tujjār al-samsarah).* The additional charge [thus] will fall on the strangers, especially the foreigners *(wa-an yaqaʿu al-ḥayf ʿalá al-gharīb, khuṣūṣan al-ʿajam).* [Accordingly] they had made most of the selling of goods, the buying of textiles, and the selling of crops in [other] bazaars and storehouses, and thus the revenue of the sultan and the people was lost in those [transactions]. So the governor decreed that nothing will be bought or sold except in the Qaysārīyah of the ʿAjam, and any one who sells in [other] storehouses will be disciplined.
>
> Ibn al-Ṣabbāb continued: [Thereafter] the affairs of the silk weavers were ruined. So, before this incident, they had gone [then] to the aforementioned gate and threw stones at the governor and he ordered it shut between him and the people, fearing [more] stoning and [further] disturbance. In the meanwhile, a man from Alexandria named Ibn Ruwāḥah came to the governor and apologized for those of the ignorant and of the silk weavers who acted in such a manner, and secured [from the governor] his decree that the [silk weavers] could conduct their business as they had done before. And the affair was settled. But [some informants] kept giving the governor information by saying [the proverb]: "*Oil is only extracted in the presses,*" and similar talk.[21]

Having given us the *casus belli,* the merchants resumed their account regarding the Friday morning events. They said that having driven al-Karakī back to his residence once more, two individuals set the gate that protected him on fire and broke the prison door, which happened to be adjacent, and let some prisoners out. The cells in which the Mamluk commanders were imprisoned were located on the second floor. When fire and smoke reached them they began to cry out for help. Al-Karakī and his archers climbed to the roof top and began shooting again at the people below, forcing them to retreat. From there, the people proceeded towards some official buildings, including the secretary's residence, and looted them. It was then that al-Karakī summoned help from Damanhūr, among other areas

[21] Ibid., 2:187.

around Alexandria, including Bedouin auxiliaries. He also wrote to the sultan informing him of the events. The merchants add that al-Karakī misrepresented the people and exaggerated their actions when he described them as declaring their disobedience to the sultan *(wa-ḥarrafa ʿalayhim wa-fakhkhama, wa-anna ahl al-balad kharajū ʿan al-ṭāʿah).* The secretary who wrote the letter, the merchants add further, is the one whose house was looted.[22]

Some observations are warranted here due to the issues raised and the discrepancies found among the three authors. Al-Nuwayrī's account leads one to believe the fighting was done on the outside, during the same afternoon, and that the flames of the *fitnah* were fanned by the qadi ʿImād al-Dīn after he deemed it lawful to fight the government. This *fatwá* emboldened the people, who besieged al-Karakī and then proceeded to loot *dār rayyis al-khilāfah* and to break the prison door. Clearly these were acts of civil disobedience, and al-Nuwayrī seems to blame ʿImād al-Dīn and the people for this turn of events. His interjection that the people had intended to set free the imprisoned Mamluk commanders reflects, as he once was a government official, the concerns of the central government, who, as we shall see below, took immediate steps to secure itself against a possible conspiracy. Al-Karakī, on the other hand, seems to be carrying out his official duties, however badly. Al-Maqrīzī also leans favorably toward al-Karakī, regardless of the discrepancies in his version. Al-Maqrīzī says that al-Karakī, without the intercession of the notables, had the gate opened. The death and injury that followed resulted from the crush of the people coming in and was not the fault of al-Karakī. The merchants' account, however, gives us the distinct impression that death and injury at the gate were not only unnecessary but also that they were due to the treachery of al-Karakī. They also clearly blame him for his lies and exaggeration in describing the people's actions. Thus, while al-Nuwayrī and al-Maqrīzī could blame the Europeans for starting the initial troubles, albeit based on hearsay and altogether different grounds, the two seem to cast their blame on the people for the ensuing trouble, not the state.

The merchants' account, as related to us by al-Jazarī, is decidedly on the side of the people. First and foremost, trouble had been brewing because of the economic loss that the people of Alexandria had endured due to the restrictions imposed by al-Karakī. Therefore, the initial grievance that created the resentment against the European merchants lies here, and it is the only concrete reason, from what had been reported, that may have led to the altercation on the corniche. For, as today the corniche in Alexandria is a very busy place, one can imagine that it was also a busy place on that Thursday afternoon, as understood from the choice of words in the merchants' account, *tanṣabbu al-khaliq lil-furjah,* "the throngs pour in for sightseeing." Could it be expected that the European should have been fluent in

[22] Ibid.

Arabic so as to recognize every mention of the Prophet by the storyteller? Could the European have been pushed out simply because the Egyptian was already ill-disposed to his presence because of the economic grievance? Also, could the European have accidentally stepped on the boy's foot, given the comings and goings on the corniche on Thursday afternoons? Is it possible to see that the ambiguity of this act is reflected in the ambiguity of the report, which said only that stepping on the foot was a "signal"? Was it this lacuna that prompted al-Maqrīzī to fill in his clarifications nearly a century later by explaining that the signal was "to do with him that act" or by adding the more unmistakable phrase "*yurāwiduhu ʿan nafsihi*?"[23] Furthermore, the religious and the sexual are *sui generis* explanations of the same incident. We understand that they are tropes because it is taken for granted that such reasons were sufficient to cause popular discontent. No doubt, it is possible that both explanations were mere rumors that began to circulate after the scuffle. Of course, rumors themselves could lead to misunderstandings and suspicion, among other reactions, including the action described above, whether based on this or that trigger. The inclusion of the sexual trope in the merchants' account supports this also, even though they were the source of the initial grievance. These merchants stayed in Alexandria for the next five months and were in touch with the people in its market place and thus picked up, so to speak, the talk of the town.

It is thanks to them that they provided a context when they rooted their story in a sequence of events beginning with the grievance of the silk weavers, a grievance that led then to similar social action played out in the same geographic location and with a similar pattern. If not for the merchants, the state's responsibility for the rise of popular discontent, at least in this case, would have remained unknown. Thus, the rebellion was based on concrete reasons, i.e., the effects of the tax/monopoly policy on the textile sector, especially the silk weavers. What amounts to a brawl in these accounts seems to have been one in a series of confrontations over a period of two months in the spring of 1327.[24] The great extent of the popular grievance could perhaps be gauged by taking into account that in 1380 fourteen thousand active looms were in Alexandria.[25] We do not have a figure for 1327 but we do for 1295, prior to the famine that devastated many areas in Egypt, including Alexandria. Al-Jazarī says that the number of looms then

---

[23]It is very likely that al-Maqrīzī was summarizing from *Ḥawādith al-Zamān* and from *Nihāyat al-Arab*.

[24]The summary provided by Ibn Aybak al-Dawādārī, who provides a paraphrased account, also suggests this continuity. *Chronik,* 1:342.

[25]Mackie, "Toward an Understanding of Mamluk Silks," 127. The same figure for 1388 is given in Marzouk, *Textile Industry,* 79, and the same figure for 1394 is given in Walker, "Social Implications of Textile Development," 171.

was 12,000, a number that was severely reduced due to the disease and famine that caused so many deaths that year.[26] Alexandria's economy, however, recovered quickly, especially after 1310, and throughout al-Nāṣir Muḥammad's third reign. In 1324, Symon Simeones admired the fine quality and enormous quantity of silks, linens, and cottons that were being produced in Alexandria.[27] Thus, the number of looms in 1327 must have become high enough again to employ a wide social base, since the demand for the city's silks and other textiles was high. Furthermore, the fact that Egyptians had been dealing with Europeans before this event without incidents of this nature suggests that the resentment harbored by the Egyptians was not against Europeans per se. Rather, they were against dealing with those merchants (and they could have been of any origin) under the unfavorable conditions created by al-Karakī's decree, which was the source of the ill feeling in the first place.

The Response of the Central Government

Cairo stepped in roughly three days after the scuffle on the corniche. Al-Maqrīzī says that the carrier pigeons arrived in Cairo the following Sunday morning. The sultan became angry and very anxious, especially regarding the Mamluk commanders. According to al-Jazarī, he immediately convened a council which included judicial representatives, to give their *fatwá*s regarding subjects who rebel against the sultan. The sultan indeed suspected that this affair may have been a conspiracy and took immediate precautions in Cairo; the three sons of the imprisoned Mamluk commander Sayf al-Dīn al-Abū Bakrī were arrested. It is possible to reconstruct the reaction of the central government using the three accounts, keeping in mind that each author had his own biases and concerns. For example, the affair of the imprisoned Mamluk commanders seems to be the overriding concern of al-Nuwayrī and al-Maqrīzī. Between them, we have a list of the imprisoned commanders who were transferred to the citadel prison in Cairo, as well as the locations where they were eventually incarcerated. This attention to detail is contrasted with their vague references to the population. They use general designations like *jamāʿah, nās, ʿāmmah,* or *ahl al-thaghr.* As for the money extracted, they shared terms such as *ṣāḍara, akhadha, faraḍa.* Yet they give two different totals for the fines that were collected. Al-Jazarī does not mention anything regarding the Mamluk prisoners. Rather, attention is paid here to the extortions imposed on Alexandria and how the population suffered. Differences in their emphasis and detail notwithstanding, these accounts provide us a glimpse at the state in action and a measure of what happened after Cairo weighed in.

[26] Al-Jazarī, *Ḥawādith,* 1:282.

[27] See Marzouk, *Textile Industry,* 79.

Command was promptly assigned to ʿAlāʾ al-Dīn Mughalṭāy al-Jamālī, whose titles are given as *wazīr, mudabbir al-dawlah,* and *ustādh al-dār al-ʿāliyah,* and he was immediately dispatched to Alexandria. Mughalṭāy was accompanied by Sayf al-Dīn Aldamur *(amīr jandār)* and Sayf al-Dīn Ṭughān *(mushidd al-dawāwīn).* There was also Tāj al-Dīn Abū Isḥāq, *wakīl* and inspector of the privy purse *(wakīl al-sulṭān* and *nāẓir al-khawāṣṣ al-sharīfah)* who either came along or, according to al-Jazarī, came a week later. They left "in what remained of Sunday" and must have marched continuously, for they were ready to tackle the issues before them by Tuesday morning. According to al-Maqrīzī, this party left with *tadhākir,* memoranda regarding what to do in Alexandria. More instructions came later as communication with the central government continued for the next three weeks.

Mughalṭāy and his party took up their post in Dīwān al-Khums, the government's warehouse where it collected the duty of 1/5 *(khums)* from European merchants. Starting on Tuesday morning, Mughalṭāy took command of the situation and proceeded to undertake several measures to accomplish the tasks with which he was charged. In the following reconstruction, I will explain his actions in each area separately.

1. The Qadi ʿImād al-Dīn al-Kindī

All three accounts mention the punishment meted out to the qadi with some details added here and there. Al-Nuwayrī says that Mughalṭāy summoned the qadi, insulted him, declared him to be incompetent *(akhraqa bi-hi),* and then removed him from his post. Al-Nuwayrī added that the post was given to ʿAlam al-Dīn al-Ikhnāʾī. He recognized that ʿAlam al-Dīn was the first Shafiʿi ever to hold the post. Furthermore, the qadi and one of his deputies, Shams al-Dīn al-Mudhdhin al-Bulbaysī, who was also removed from his post, had to pay a fine. Al-Nuwayrī does not specify how much the fine was, but rather lumps it with the rest of the population and the Kārimī merchants. He says that the total collected here equaled 50,000 dinars, of which 20,000 dinars came from the Kārimī merchants.[28] Al-Maqrīzī does not mention any of this. His reference to the qadi is brief, mentioning only that he was about to be executed when Mughalṭāy changed his mind at the last minute, informing the sultan that he investigated the accusations against the qadi and found them to be false.[29]

The implied charges of sedition against the qadi were serious and it is from al-Jazarī's account that we get more information, including an exchange between Mughalṭāy and the qadi. When the qadi and his deputies were summoned, they were humiliated by having been brought over to Mughalṭāy in chains. Mughalṭāy

[28] Al-Nuwayrī, *Nihāyat,* 33:234.

[29] Al-Maqrīzī, *Sulūk,* 286.

proceeded to berate the qadi and his deputies and charged them with dereliction of their duty, since they did nothing to calm the situation even though the cry went out in Alexandria that "whoever wants to fight in the path of Allah should come." The implication here is that there was a declared rebellion against the state since fighting against it was tantamount to fighting in (the ever legitimate) "path of Allah." Acquiescing to such a cry, or not responding to it, made the qadi and his deputies, according to Mughalṭāy, accomplices in such action. The qadi, however, responded that the rebellion took place without their orders or involvement and that even had they wished to stop it, they would not have been able to repulse the great masse of participants *(mā naqdiru narudda al-sāwad al-aʿẓam)*. Mughalṭāy, nonetheless, removed the qadi and his deputies, and the Malikis never recovered the post after that. The qadi's deputies each had to pay a fine; al-Bulbaysī paid five hundred dinars and Ibn al-Tinnīsī paid six hundred dinars.[30]

This must have been a serious setback for the Malikis. According to Jonathan Berkey, the latter Fatimids allowed the Maliki jurist al-Ṭurṭūshī to establish the first Sunni madrasah in Alexandria.[31] The post of chief qadi must have remained in their charge until this incident. Al-Ikhnāʿī, we know from a different context, was soon promoted to chief judge of Damascus.[32]

2. *Ibn Ruwāḥah, Chief of Dār al-Ṭīrāz*

Once again, all three authors mention Ibn Ruwāḥah in the course of their reports. Al-Jazarī, however, mentions him only in the context of the early disturbances, when he intervened on behalf of the silk weavers after they expressed their discontent regarding al-Karakī's decree to limit the sale of goods to the government's warehouse. Al-Nuwayrī and al-Maqrīzī imply serious charges of sedition and incitement against him. Al-Nuwayrī says that Ibn Ruwāḥah had come to Mughalṭāy and promised that he, along with his men (about four hundred strong), would protect the port with no additional stipend. However, all withdrew to a place called Munyat Murshid and sought the protection of a holy man, Muḥammad al-Murshidī. Thereafter, Mughalṭāy sought him out and brought him back to Alexandria, where he was executed along with others who met the same fate. Mughalṭāy informed the sultan that Ibn Ruwāḥah was the head of the rebellion

(ras fitnah). Al-Maqrīzī adds that Ibn Ruwāḥah gave weapons and other provisions to the people, inciting them against the Europeans.[33]

3. *Confiscations, Fines, and Other Acts of Extortion*

Al-Nuwayrī and al-Maqrīzī do not give precise figures regarding these activities even though they mention specific numbers, albeit different totals. Al-Nuwayrī, as mentioned above, says that Mughalṭāy collected a sum of 50,000 dinars from various people, including the qadi, his deputies, Kārimī merchants (20,000 dinars), and other townsmen. Al-Maqrīzī reports that Mughalṭāy imposed a fine of 500,000 dinars (could a zero have been added in error, or in exaggeration?) and proceeded to confiscate money for the next 20 days until he collected the lower figure of 260,000 dinars. Ibn al-Dawādārī puts the figure at 1,070,000 dirhams.[34]

Al-Jazarī provides more detail and specific information regarding Mughalṭāy's actions in this regard, although he does not give a final figure. The fines imposed on the qadi and his deputies have already been mentioned. Mughalṭāy then sought out the Kārimī merchants, the town notables, the silk weavers, and those who had property inside and outside of the town. Mughalṭāy took from each category of people an amount commensurate with their means. For example, Tāj al-Dīn ibn al-Kuwayk, the Kārimī merchant, paid 2000 dinars. Each silk loom paid a fine of 100 dinars. Each linen loom paid 50 dinars. Each *funduq* paid 3 months rent in advance.[35] Each orchard paid an amount commensurate with its produce. Although no final figure is given, al-Jazarī says that fines, confiscations, and loss affected everyone in Alexandria, "the large and the small, the high and the lowly. Calamity and harm spread to all the people of Alexandria so that no one was spared the loss, and many became impoverished, especially the silk weavers who could not pay back the European merchants their due."[36]

4. *Executions*

We have already seen that Ibn Ruwāḥah was executed along with others. There were many who were executed, in addition to the ten individuals who died at the gate earlier or during the fighting that ensued after the initial incident. Al-Nuwayrī says that Mughalṭāy executed (literally *waṣṣaṭa,* split in half) a group of

[33] See al-Nuwayrī, *Nihāyat,* 33:234–35; al-Maqrīzī, *Sulūk,* 285; Ibn al-Dawādārī, *Chronik,* 1:342.

[34] Al-Nuwayrī, *Nihāyat,* 33:234; al-Maqrīzī, *Sulūk,* 286; Ibn al-Dawādārī, *Chronik,* 1:342.

[35] For a discussion of some of these *fanādiq* and other commercial and artisan establishments, see Niall Christie, "Reconstructing Life in Medieval Alexandria from an Eighth/Fourteenth-Century *Waqf* Document," *Mamlūk Studies Review* 8, no. 2 (2000): 163–90.

[36] Al-Jazarī, *Ḥawādith,* 2:188.

commoners. Al-Maqrīzī says that Mughalṭāy arrested a group of *ardhāl* (lowly) and split them in half. Others had their hands or legs cut off.[37]

Al-Jazarī gives a few more details regarding these executions. Apparently the town was under some sort of lockdown *(mahbūsīn fī al-balad)* and no one was allowed to leave the town except those who performed necessary functions, in addition to the Bedouins, perhaps the auxiliaries who had been summoned earlier. Tension and suspicion of Mughalṭāy's actions must have been high given the confiscations and other punitive measures. On Friday the 20th of Rajab Mughalṭāy executed 30 individuals outside the city gates, just before the Friday prayers. The news of this calamity spread quickly to the mosque and all the congregants began to flee in panic, fearing that they were to be attacked next. In their panic, many fled without their shoes and other property. Some merchants lost the gold coins that they had in their possession. It was a chaotic scene that was described as the "end of days" *(wa kānat ka-qiyāmah qad qāmat).* The tense atmosphere was eased somewhat when, according to al-Jazarī, Tāj al-Dīn, the sultan's *wakīl,* arrived and began to calm the people down and allowed them to move about.[38]

5. Miscellaneous Actions

There were other acts that only al-Nuwayrī and al-Maqrīzī report. Al-Nuwayrī says that the storehouse of the archers (Ibn Ruwāḥah's men) was emptied of its contents. He adds that Mughalṭāy arrested nearly 90 men, slaves and freemen, who were pressed into chain gangs and were later used for construction work.[39] Al-Maqrīzī says that Mughalṭāy counted the suits of armor usually stored in the town to be used in its defense in case of a foreign attack and found that there were six thousand pieces. He had them stored in a warehouse and sealed it.[40]

6. The Mamluk Prisoners

Only al-Nuwayrī and al-Maqrīzī report on the fate of the Mamluk prisoners at this time, and their lists are nearly identical.[41] According to al-Nuwayrī, these

[37] Al-Nuwayrī, *Nihāyat,* 33:234; al-Maqrīzī, *Sulūk,* 285.

[38] Al-Jazarī, *Ḥawādith,* 2:188–89.

[39] Al-Nuwayrī, *Nihāyat,* 33:234

[40] Al-Maqrīzī, *Sulūk,* 286.

[41] These Mamluks were arrested and released several times starting in 710, after al-Nāṣir Muḥammad came to power for the third time. Some of them were involved in the conspiracy of Baybars al-Jashnikīr against him; others were involved in later conspiracies or seem to have abused their authority. See Abū al-Maḥāsin Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963), 8:232 ff., 9:12–15; al-Nuwayrī, *Nihāyat,* 32:165, 169, 175, 196, 199, 220–21. See also Robert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250–1382* (Carbondale, IL, 1986), 106–8.

prisoners were packed off to Cairo with a contingent to guard them, and everyone arrived on Sunday the 22nd of Rajab, 12 days after they were sent off. Al-Maqrīzī says that they arrived on the 18th of Rajab. These prisoners include:

- Sayf al-Dīn Baktamur al-Abū Bakrī (whose three sons had been arrested earlier). Al-Abū Bakrī was eventually sent to al-Karak to be imprisoned there.[42]
- Sayf al-Dīn Tamur al-Sāqī, former governor of Tripoli. He was also packed off to al-Karak, but may have been transferred back to Alexandria some time later.
- ʿAlam al-Dīn Sanjar al-Jāwilī. He was imprisoned in the Lions' Tower in the Cairo Citadel.
- Sayf al-Dīn Bahādur al-Maghribī. He was also imprisoned in the Lions' Tower.
- Sayf al-Dīn Tughluq.
- Ghānim ibn Atlas Khān.
- Sayf al-Dīn Qutlubak al-Miʿlāʾī, known also as al-Awshāqī.
- ʿIzz al-Dīn Aydamur al-Yūnisī.
- Sayf al-Dīn Kajkan.
- Fakhr al-Dīn Ayāz, formerly governor of Qalʿat al-Rūm, also called Qalʿat al-Muslimīn.

The last six commanders were thrown into the dungeons in the Cairo Citadel, but Fakhr al-Dīn Ayāz was later freed due to his advanced age and frailty.

Al-Maqrīzī adds a few more names to those who were thrown in the dungeons. These were Sayf al-Dīn Balāṭ al-Jūkandār, Sayf al-Dīn Burulghī al-Ṣaghīr, Ḥusām al-Dīn Lajīn Zīrbāj al-ʿUmarī, Rukn al-Dīn Baybars al-ʿAlamī, and Sayf al-Dīn Ṭushtumur, brother of Batkhās (or Banhās) al-Manṣūrī. According to al-Nuwayrī, however, these men were held back in Alexandria's prison. Indeed, al-Jazarī says in the context of the events of 735 (8 years after the rebellion) that he received a letter from his colleague in Alexandria, Najm al-Dīn ibn al-Miḥaffdār, saying that 13 Mamluk commanders, among whom the above disputed names were mentioned, were transferred to Cairo, where they were set free.[43]

Mughalṭāy and his company returned to Cairo at the end of Rajab loaded with gold. He took up residence in the vizierate hall in the Citadel, which was newly

[42] According to Ibn Taghrībirdī, Baktamur died a year later in the Citadel prison; see: *Al-Nujūm al-Zāhirah,* 9:274.

[43] The lists appear in al-Nuwayrī, *Nihāyat,* 33:235–36, and in al-Maqrīzī, *Sulūk,* 286. Al-Jazarī reports on their freeing in *Ḥawādith,* 3:764.

built opposite the Dār al-Inshāʾ (chancellery). Other officials came along that day and sat according to their rank in places that had been prescribed for them, and proceeded to execute the affairs of the state. According to al-Jazarī, the sultan Muḥammad did not take any of the confiscated money. Rather, he distributed it among his loyal commanders.[44]

Conclusion

The penchant of some Mamluk chroniclers to copy from one another, to summarize lengthy accounts according to their own interests, and to often reduce complex events to simple and brief descriptions poses a potential source of confusion and misunderstanding. The writing of history becomes, in part, a process of deconstruction and reconstruction. We are fortunate that bits and pieces of information can still be found to allow us a closer look at society, to recreate a fuller account of events under investigation, as we have learned from the above, and to correct false impressions that may have been constructed earlier. The three accounts, put together, give us a glimpse at a moment in the life of Alexandria under Mamluk rule, a moment rich with detail when the townspeople were up in arms against the state. These accounts, infused with realism, breathe life into that moment of social action. At first glance, this action could be described as a riot, brawl, or some similar term implying that the action was haphazard and based on a flimsy rationale. But upon further investigation, thanks to the merchants' reports related by al-Jazarī, we find that this social action, an uprising of sorts, was based instead on concrete economic grievances against a specific state policy. Rather than being haphazard or spontaneous, this rebellion reveals a degree of awareness which implies conscious and deliberate, rather than passive, participation. This was also a sustained social action that went on for a period of two months before the state brought its full weight to bear and crushed the uprising.

The state employed what seems to have been a disproportionately severe set of punitive measures that included the arrest and execution of many people, in addition to financial exactions that heavily burdened the economy and the people's livelihood. This was no punishment for a brawl, unless the brawl is seen as only the cover for the response to this heavy-handed appropriation of surplus wealth for the state's own ends (the government was then nearly bankrupt). Moreover, this was no isolated incident. Indeed, this attack on Alexandria could be considered the watershed that allowed al-Nashw, the sultan's new *wakīl,* to continue a feverish confiscation policy from 1332 to 1339 that damaged several sectors of the

[44] Al-Jazarī, *Ḥawādith,* 2:189.

economy, not to mention those who were flogged to death in an effort to extract money from them.[45]

The Mamluk state, after the end of the Crusades and the disappearance of the Mongol threat, developed an apparent sense of insecurity. We have seen that the central government's immediate reaction was to treat the event as a conspiracy, as indicated by the arrest of the sons of al-Abū Bakrī. Conspiracies against the reigning sultan were in fact not unusual; indeed, al-Nāṣir Muḥammad had a long history of facing such conspiracies. He also became the subject of an assassination attempt a few years later, but he survived the assassin's dagger.[46] The Mamluks, having lost—or one might say fulfilled—their initial *raison d'être* as a military elite that defended the lands of Islam under their rule (largely the Arab Middle East), later shifted their energy inward and turned against each other, causing political instability at a time when greater powers were arising around them.[47] Attacks against the textile producers and the Kārimī merchants, among other productive sectors, would eventually undermine their whole economy. The third reign of al-Nāṣir Muḥammad represented at once the pinnacle of peace and the point at which the Mamluk system of government became redundant.[48] This must be one of the reasons that contributed to the eventual demise of the Mamluk system of governance.

[45] Almost every year in that period one or another sector of the market was attacked. For an accounting of what was extracted see Levanoni, *Turning Point,* 150–54.

[46] Al-Jazarī, *Ḥawādith,* 3:673.

Finding Meaning in the City: al-Maqrīzī's Use of Poetry in the *Khiṭaṭ*

A notable feature of the *Khiṭaṭ*[1] by al-Maqrīzī is the incorporation of poetry in many sections devoted to the structures or landscape features of Cairo.[2] This poetry is especially evident in the Bulaq edition, where the dense blocks of Arabic text are occasionally interrupted by columns of verses. The *Khiṭaṭ* has been mined by scholars as a source of information about elements of the historic city of Cairo; historical works on the cityscape of Cairo are indebted to the book for the who and when and how of its structures.[3] From the standpoint of documenting the history of Cairo, this emphasis has been useful, but has led to the poetry in the *Khiṭaṭ* being passed over, as these poems rarely contain anything in the way of objective historical facts. Li Guo, at the conclusion of an essay on the poet Ibn Dāniyāl, writes "…human emotions, collective sentiments, and public opinions all count; and the *adab* material, especially poetry, represents an ideal vehicle for such 'soft data.'"[4] The present article looks closely at what is added to the *Khiṭaṭ* and our understanding of Cairo by the inclusion of this poetry.

[1] *Al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1854). In the translations for this article I make use of the edition of Ayman Fuʾād Sayyid, published by the Al-Furqān Islamic Heritage Foundation (London, 2002–4). Page numbers refer to the standard Bulaq edition.

[2] This use of poetry in the *Khiṭaṭ* comes as no surprise since it was a common feature of Mamluk histories, both chronicles and biographical dictionaries. Al-Maqrīzī should be understood as participating in what has been called the "literarization" of history writing in the Mamluk period, a notion developed by Ulrich W. Haarmann in *Quellenstudien zur frühen Mamlukenzeit* (Freiburg, 1969), and something of its growing importance among Mamluk historians is portrayed by Robert Irwin in "Mamluk History and Historians," in *Arabic Literature in the Post-Classical Period,* ed. Roger Allen and D. S. Richards (Cambridge, 2006), 159–70. The redistribution of the poetic material into sections of the *Khiṭaṭ* relating to topographic features casts this material in a new light, allowing us to see relations between the poetry and features of the landscape that could be obscured by chronological or biographical methods of organization.

[3] The building by building approach to Cairo taken by Doris Behrens-Abouseif in *Islamic Architecture in Cairo: An Introduction* (Cairo, 1989) and more recently in *Cairo of the Mamluks: A History of the Architecture and Its Culture* (New York, 2007) is an example of an approach made possible by the wealth of information on each building collected by al-Maqrīzī.

[4] "Reading *Adab* in Historical Light: Factuality and Ambiguity in Ibn Dāniyāl's 'Occasional Verses' on Mamluk Society and Politics" in *History and Historiography of Post-Mongol Central Asia and the Mongol East,* ed. Judith Pfeiffer and Sholeh A. Quinn (Wiesbaden, 2006), 400.

The poetry in the *Khiṭaṭ* falls broadly into two categories. The first is poetry that occurs incidentally within a larger passage cited on a specific topic. An example of this would be a passage from the *Risālah* of Abū al-Ṣalt al-Andalusī (d. 528/1134), containing a record of poetry composed on the occasion of Abū al-Ṣalt's visit to the pyramids.[5] The second type of poetry in the *Khiṭaṭ* is that collected by al-Maqrīzī himself, presumably in much the same way that he excerpted other bits and pieces of geographical, religious, or historical information related to Egypt. The holograph notebook of al-Maqrīzī represents a sample of the method by which he collected the poetry.[6] The conclusion of the section in the *Khiṭaṭ* on the pyramids offers an example of al-Maqrīzī's editorial handling of poetry as it concludes with eight poems, in different meters and ranging from two to thirteen verses in length. The poems follow each other with no commentary or explanation.[7] Clearly al-Maqrīzī found poetry an important addition to the *Khiṭaṭ,* as it is not only incidentally included, but purposefully collected and organized.

The *Khiṭaṭ* as Social Text

We continue to learn much through the "Maqriziana" studies of Frédéric Bauden about al-Maqrīzī's editorial/authorial process for compiling the *Khiṭaṭ*. His compositional work included the use of notebooks and note cards to select passages drawn from a wide number of books that touched in some way on Egypt and Cairo. These studies have left us with a view of al-Maqrīzī as a lively curator of information, and as an editor able to deftly summarize and hone in on crucial passages.[8] In a serious charge as to the intellectual honesty of al-Maqrīzī, we learned how he incorporated into his own working manuscript large sections of a previous manuscript by his near contemporary al-Awḥadī, who died in 811/1408.[9] The natural emphasis in these inquiries has been on al-Maqrīzī as author, but we should perhaps not ignore a second result: a view of the *Khiṭaṭ* as a social text.

[5] *Khiṭaṭ,* 1:118 = *Risālah al-Miṣrīyah,* in *Nawādir al-Makhṭūṭāt,* vol. 1, ed. ʿAbd al-Salām Hārūn (Cairo, 1951), 26–27.

[6] Frédéric Bauden, "Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method: Section 1," *Mamlūk Studies Review* 7, no. 2 (2003): 21–68. For an example of the collection of poetry see section XXXIII in "Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method: Section 2," *Mamlūk Studies Review* 10, no. 2 (2006): 81–139.

[7] *Khiṭaṭ,* 1:121–22.

[8] In addition to Maqriziana I/1 and I/2, see "Maqriziana II: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method Analysis," *Mamlūk Studies Review* 12, no. 1 (2008): 51–118.

[9] Frédéric Bauden, "Maqriziana IX: Should al-Maqrīzī Be Thrown Out with the Bath Water? The Question of His Plagiarism of al-Awḥadī's *Khiṭaṭ* and the Documentary Evidence," *Mamlūk Studies Review* 14 (2010): 159–232.

That is to say, the *Khiṭaṭ* can now more than ever be understood as the product of a community rather than of a single author, somewhat more Wikipedia than *Decline and Fall of the Roman Empire*. The *Khiṭaṭ* speaks with many voices, and was not so much the expression of one man as the result of a shared interest in Cairo and its history.[10]

If we approach the *Khiṭaṭ* as a social text, then the poetry gains a unique interest for us: it provides evidence for the contemporary experience of sites. The passages of poetry embedded in the *Khiṭaṭ* are other voices that ascribe value (beauty, piety, power) to sites independently of the author's insistence. As we will see when examining the poetry more closely, there is good evidence that much of this poetry was exchanged and circulated among its contemporary audience, and so the poetry gives us a glimpse of widespread views of sites. If we were able to read poetry from this era only in the context of a traditional *dīwān,* we would be forced to make many guesses as to its reception. In the *Khiṭaṭ* much of the poetry is embedded in historical contexts and lines of argument that allow us to see how it interacted with the social spaces of Cairo. If historical enquiry is broadened to include details about the experience of a city, then these poems, found throughout the *Khiṭaṭ,* can be invaluable. The lived experience evident here will of course be limited to the males who read and circulated this formal poetry.[11]

We learn something more about the audience for the *Khiṭaṭ* by sampling the placement of the poetry. If we step back and examine the sections in the *Khiṭaṭ* to which poetry is attached, we find in Cairo a select number of nodes of attention. These nodes are by no means limited to buildings, but include natural features such as the Nile and the ponds *(birak)* in the vicinity of Cairo. Poetic attention was not determined by the sheer splendor of a mosque. The mosque of the Citadel, built by Sultan al-Nāṣir Muḥammad in 718/1318, was richly decorated in marble and unique in several aspects of its construction; al-Maqrīzī speaks highly of its

[10] Particularly suggestive in this direction is the way al-Maqrīzī can be understood as taking up a project begun by his two colleagues Ibn Duqmāq and al-Awḥadī, both of whom had the misfortune of dying before bringing their work to completion. See "Maqriziana IX," 205.

[11] The poetry cited in the *Khiṭaṭ* reflects the elevated register of the formal *qaṣīdah.* Although the *Khiṭaṭ* was written in the midst of what has been described as the "heyday of popular Arabic literature," the poetry here gives no glimpses of the rich popular tradition that was blossoming among the *ʿāmmah.* Nevertheless we should not confine the readership of even this formal poetry to a group of elites, but rather assume a wide circulation for many of these poems. See Margaret Larkin, "Popular Poetry in the Post-Classical Period" in *Arabic Literature in the Post-Classical Period,* 191–242. Thomas Bauer underlines this point about the mixed audience for formal poetry in "In Search of 'Post-Classical Literature': A Review Article," *Mamlūk Studies Review* 11, no. 2 (2007): 153–55.

beauty.[12] But no poems are present in this section that would point us to discussions or arguments that revolved around this structure.

More broadly, the Citadel, while extensively described in the *Khiṭaṭ,* has little poetry attached to the sections that cover its structures, with the exception of two short poems on the great *īwān,* described as having been written at the point of its construction under Sultan al-Nāṣir Muḥammad.[13] These poems on the *īwān* are clever lines of propaganda for the rule of Sultan al-Nāṣir Muḥammad, making use of the very visible *īwān* as a symbol of his power. It makes sense that the *īwān,* clearly visible from lower Cairo as we know from nineteenth-century representations, would be taken up in propagandistic praise poetry. But the Citadel as a whole appears to have been resistant to poetic use, likely reflecting the "exclusion" and "segregation" from the general populace of Cairo that was an important part of the Mamluk ruling ethos.[14] The absence of poetry tells us something about the nature of that space, indicating a lack of personal experience and knowledge of the individual sites on the part of civilians. Specific elements of this military complex were simply not available for poetic composition and popular discussion.

The concluding section of the *Khiṭaṭ* reviews places of worship for Jews and Christians. In contrast to the mosques and madrasahs, which can fairly bristle with passages of poetry, these final sections are devoid of poetry. The exception is again insightful: poetry is used on a several occasions as monasteries are being described. This is a result of the public nature of some monasteries. On some occasions a monastery served as an open park where individuals could take relaxation. Al-Maqrīzī notes that the Monastery al-Quṣayr was much beloved because of its overlook, and then cites a poet who wrote of the amusements here:

How often at the al-Quṣayr Monastery I had revelry
with every possessor of youthful passion and charm.
I amused myself there with a flirtatious fawn,
marvels of description falling far short of this place.[15]

[12] Al-Maqrīzī writes of the mosque of the Citadel: "He made it an excellent structure and had much on the interior crafted from splendidly colored marble...The mosque took its place as one of the most sublime and greatest mosques in Egypt,." *Khiṭaṭ,* 2:325.

[13] Ibid., 2:209.

[14] Nasser Rabbat uses these terms to describe the unique place of the Citadel in Cairo. As is well known, the Mamluk system provided few positions for native Egyptians in the upper levels of the state. Under Sultan al-Nāṣir Muḥammad a somewhat more open version of the Citadel emerged with "semi-public" access being allowed for the mosque and the *īwān*. Presumably this would represent the point of maximum openness for the Citadel, and in times of stress it would revert to being characterized by "exclusion" and "segregation." See *The Citadel of Cairo: A New Interpretation of Royal Mamluk Architecture* (Leiden, 1995), 283–87.

[15] *Khiṭaṭ,* 2:502.

It would seem that to attract poetic composition a site had to be on the map of the elite who composed this formal poetry. Undoubtedly there were Christians and Jews who wrote and circulated poetry about their repasts, but the poetry in the *Khiṭaṭ* represents that which the Muslim elite would have consumed.[16]

We will now examine some sections of the *Khiṭaṭ* that were rich in poetry.

Misfires of Panegyric

The amir Sarghitmish constructed his madrasah right next to the venerable mosque of Ibn Ṭūlūn, then nearing 500 years old. The madrasah of Amir Sarghitmish, completed in 757/1356, is remarkable for several elements of its design, and al-Maqrīzī is complimentary: "The madrasah became one of the most marvelous and beautiful structures, and one of the most delightful also on the interior."[17] Amir Sarghitmish appointed as teacher of Islamic law at the madrasah a man known as Qiwām al-Dīn, whose full name was Amīr Kātib ibn Amīr ʿUmar al-ʿAmīd ibn al-ʿAmīd Amīr Ghāzī al-Atqāʿī. At the grand opening, which in good Mamluk style took the form of a great repast in the new madrasah, Qiwām al-Dīn stood up and delivered a poetic panegyric for the founder¾and his appointer¾Amir Sarghitmish. As recorded in the *Khiṭaṭ* this eulogy is made up of 21 verses. The poem is introduced by al-Maqrīzī as being "in the height of odiousness" *(fī ghāyat al-samājah).* We immediately recognize the reason for this characterization as we read the poem, which truly is remarkable for its exaggerated praise:

> Have you seen the one who has strength
>   and arrives near to God and expels suspicion?
> He appears as a banner, lofty with nobility.
>   He advances having achieved victory!
> He races ahead with piety and bestows right guidance;
>   he gives generously and loves liberality.
> He exemplifies custom; he makes vivid the sunnah.
>   He sweetens our time with his excellent judgment.
> This one Sarghitmish, the days
>   of his princehood have sent forth nourishing rain clouds.
> He takes away barrenness to bring abundance,
>   and distress to bring a carefree heart.[18]

[16] The record for Jewish composition of poetry is strong thanks to the Geniza documents, through which we see an active community involved in poetry that has parallels to broader Islamic culture. See S. D. Goitein, *A Mediterranean Society: An Abridgement in One Volume,* ed. Jacob Lassner (Berkeley, 1999), 165, 215.

[17] *Khiṭaṭ,* 2:403.

[18] Ibid., 2:404.

This is only the first third of the poem, and the remaining lines go on like this or even advance a notch in exaggeration. Amir Sarghitmish handsomely rewarded Qiwām al-Dīn 10,000 dirhams for these lines of praise.

A first point to make about this poem is simply that it has been cited at such length. It was such a standout example of exaggerated praise that a full 21 verses made it into the *Khiṭaṭ*¾quite a block of text for lines that add nothing factual, either about the mosque or the biography of Amir Sarghitmish. It is hard to resist the conclusion that this is an example of lines being included for the sole reason that it was a striking example of bad poetry¾and possibly thus entertaining for the reader.

This panegyric raises questions about composition. How did these lines, delivered orally in 757/1356, get placed with such accuracy into this particular historical event? As it happens, due to the amount of manuscript materials relating to the composition of the *Khiṭaṭ* we are able to trace with surprising precision how this poem came to be placed here.[19] Al-Maqrīzī found the poem in the biographical sketch of the poet Qiwām al-Dīn contained in *Aʿyān al-ʿAṣr* by the historian al-Ṣafadī (d. 764/1363).[20] We know that al-Maqrīzī came across this poem some time after he had composed a draft of this section on the mosque of Amir Sarghitmish since we find in the margins of his rough draft the note *yudhkar madḥ Qiwām al-Dīn fīhā* ("panegyric of Qiwām al-Dīn should be cited here"). This note functioned as a reminder that the panegyric poem should be inserted in this section when a final copy was made, and in the manuscripts of the finished works we indeed find it here. Since the poem is not found in the biography of Amir Sarghitmish composed by the same al-Ṣafadī in another historical work, *Kitāb al-Wāfī bi-al-Wafayāt,*[21] we can attribute to al-Maqrīzī the positioning of this poem in a place that was bound to get more readers than within the biographical sketch of a poet who was not well known. In this instance he is in no way following an earlier account of the mosque, but inserting a lengthy poem he had come across in his reading. The motivation for bringing this poem to the attention of readers was its inherent interest as an example of an odious praise poem.

Our knowledge of the social context in which this poem was delivered enhances our sense of the use and abuse of poetry in the Mamluk era. We can imagine coming across a eulogy like this in a *dīwān,* and wondering who could

[19]The following discussion is indebted to personal communication from Frédéric Bauden.

[20]Al-Ṣafadī, *Aʿyān al-ʿAṣr wa-Aʿwān al-Naṣr,* ed. ʿAlī Abū Zayd (Beirut, 1997–98), 1:622–27.

[21]Al-Ṣafadī, *Kitāb al-Wāfī bi-al-Wafayāt,* ed. Sven Dedering (Wiesbaden, 1981). The extent to which al-Maqrīzī made use of this work by al-Ṣafadī, though without explicit citation, is demonstrated in Bauden, "Maqriziana XI: al-Maqrīzī et al-Ṣafadī: Analyse de la (Re)Construction d'un Récit Biographique," *Quaderni di Studi Arabi* 4 (2009): 99–136.

possibly have been impressed with all this exaggerated praise, but the introduction by al-Maqrīzī marking the poem as "the height of odiousness" allows us to understand that the poem was by no means free from criticism among its audience. We might think of poems such as this in the *Khiṭaṭ* as embodied miniatures, giving us both a glimpse of actual context and reception.

In an introduction to the Arabic poetry of the "post-classical age" Salma Khadra Jayyusi remarks on the difficulty that later Arabic poets had in continuing the tradition of panegyric in an age of rulers who held sway over smaller regions: "The poet's enthusiasm was blunted; one can easily imagine his psychological difficulties and the artificiality that pervaded the writing of his panegyrics…The only innovation they could introduce was the pursuit of exaggeration, which diminished poetic appeal still further."[22] One way to approach this particular poem, then, is as a vivid example of this problem. The amir Sarghitmish¾powerful, but not sultan¾is praised with a couplet such as the final one above: "He takes away barrenness to bring abundance/and distress to bring a carefree heart." This was still a variety of poetry that was in demand from powerful men who wished to have words of praise directed at themselves, but it is now characterized by a social misfire, as it is received cynically by other elites. In fact, in this case it is held up to almost unbearable ridicule by being cited at length.

We should be cautious, however, in attributing this tension in praise poetry to the Mamluk era alone. Suzanne Pinckney Stetkevych has shown in an essay on panegyric in the Abbasid era that such tensions were inherent in the genre. Indeed, al-Mutanabbī's poetry dedicated to Kāfūr, Ikhshidid ruler of Egypt in the fourth/tenth century raises some of the same questions. Stetkevych treats panegyric through the lens of ritualized exchange, in which praise and monetary reward mutually support each other. In a perfect world the excellence of the poetry and the patron are matched, but in fact this was rarely the case, and tension arose: "If the panegyrist is a bad poet, no amount of virtue and heroism on the part of the patron will enable him to produce a good poem, and as the poor or mediocre poem is consigned to oblivion, so, too, is the renown of the patron." [23]

Al-Maqrīzī provides us with a dramatic miniature that allows us to complicate this view of praise. By any reasonable account the praise poetry delivered by Qiwām al-Dīn should be judged successful. The poet delivered the bombastic lines and those lines were ratified by the generous reward from his patron, the amir Sarghitmish. This is exactly the ideal spelled out by Stetkevych. Despite that suc-

[22] Salma Khadra Jayyusi, "Arabic Poetry in the Post-Classical Age," in *Arabic Literature in the Post-Classical Period,* 33–34.

[23] Suzanne Pinckney Stetkevych, "Abbasid Panegyric and Political Allegiance: Two Poems of al-Mutanabbī on Kāfūr," in *Qasida Poetry in Islamic Asia and Africa,* ed. Stefan Sperl and Christopher Shackle (Leiden, 1997), 1:40.

cess the poem was not well-received. Al-Maqrīzī counted the poem as a misfire. Reading the verses it is hard not to agree with al-Maqrīzī's characterization of them as "the height of odiousness." Even if the externals of this gift-giving situation were strictly followed by poet and patron, it is clear that for the audience something was lacking. This third party of the audience and their participation is not taken up by Stetkevych, but it is a necessary element for this ritual exchange.

We owe to the *Khiṭaṭ* a number of miniatures such as this in which we learn to read poetry within a fleshed-out context. Another panegyric misfire takes place in the madrasah of Sultan Qalāwūn, which as a grand building in the center of Cairo gets a lengthy section devoted to it in the *Khiṭaṭ*. Al-Ashraf Salāḥ al-Dīn Khalīl was the first successor to Sultan Qalāwūn, and his reign was a short three years (689–93/1290–93). Upon completion of a successful jihad against the Franks, he returned to Cairo and after a grand entrance to the city, came to the madrasah-mausoleum of Qalāwūn. Al-Maqrīzī sketches the mausoleum as "packed with judges, elites, readers, shaykhs, and legal scholars." In the midst of the ceremony in honor of the sultan's return, a poet[24] climbed the pulpit and began to declaim a poem written in honor of the sultan. The poem began with this verse:

> Visit your parents and stop by their tombs,
> It is as if you were transferred to them.[25]

This turned out to be a spectacularly ill-chosen line to begin his panegyric. Al-Maqrīzī notes that Sultan Khalīl understood the meaning of the line (which could not be taken for granted for a Turkish Mamluk) and rose immediately in outrage at the bad omen of these words (the mention of movement to tombs). Sultan Khalīl was calmed, but returned immediately to the Citadel. Al-Maqrīzī informs us that the poet did not get a reward.

We see again the misfire of panegyric, though this time on the more straightforward basis of unhappiness on the part of the patron. Words whose glory was to be found in ornamented elusiveness are brought crashing to the ground on account of a sultan who took the words literally and found them to be an ill omen. The story brings a dash of humor with it, as we read the expression of outrage from the sultan: "This guy couldn't find anything to say except that line?"[26]

Reading the *Khiṭaṭ* we enter a society in which event, place, and words were closely linked. Events were celebrated at monumental constructions whose very names specified the person they were meant to memorialize. Poetry was a vital part of an event, and in turn those poems came to be associated in social memory

[24] Al-Maqrīzī gives the poet's full name as Najm al-Dīn Muḥammad ibn Fatḥ al-Dīn Muḥammad ibn ʿAbd Allah ibn Muhalhal ibn Ghayyāth ibn Naṣr, known as Ibn al-ʿAnbarī the exhorter.

[25] *Khiṭaṭ,* 2:381.

[26] The Arabic text is "*mā wajada hadhā shay'an yaqūluhu sawa hadhā al-bayt!*"

with those sites. The *Khiṭaṭ* as developed by al-Maqrīzī builds upon these interconnections and mimics the connections that were already present in society.

Falling Minarets

One delicate point in the architecture of medieval Cairo was the minaret, whose spindly form and vulnerability to earthquakes made it liable to collapse. The tragedy of a minaret failure was a major event in medieval Cairo, and in the case of the tumble of the minaret under construction at the mosque of Sultan Ḥasan, it could be quite a deadly event. Through the editorial addition of poetry into his *Khiṭaṭ,* al-Maqrīzī allows us to catch a glimpse of the social use of poetry in making sense of such an incident.

The *Khiṭaṭ* provides a superb example of a running dialogue conducted through poetry. This exchange surrounded the failure of a minaret during the construction of the madrasah-*khānqāh* of Sultan al-Muʾayyad in 821/1418. Since this construction took place within the lifetime of al-Maqrīzī and well after the point where he is known to have begun compiling the material for the *Khiṭaṭ,*[27] there should be no surprise that the stages in the construction of this large mosque are noted in detail. For example, we learn that on the 27th day of Shawwāl in 819/1416 the magnificent door originally installed in the madrasah of Sultan Ḥasan was transferred to the new construction. Then on the 17th day of Rabīʿ II there occurred an accident in which ten workers fell from the mosque, four of whom died. These are just two examples of the detailed nature of al-Maqrīzī's reporting on the construction of this mosque.

Shortly after the completion of the madrasah-*khānqāh* in 821/1418, a lean was discovered in a minaret that stood over Bāb Zuwaylah. This minaret was one of two built over the older gate in association with the new madrasah-*khānqāh.* In what turns out to be a fascinating account of the procedure in such an event, the engineers made a report to the sultan and then the sultan authorized the tearing down of the minaret. The engineers commenced a controlled destruction of the minaret, but two days later a portion of it fell, destroying some buildings and killing a man. At that point Bāb Zuwaylah was closed for a month, and al-Maqrīzī writes: "No collapse like this had been known since Cairo was founded."[28]

The response of the elite to this event was to chatter. Al-Maqrīzī writes: "The literary men of the age wrote lots of poetry about the collapse of this minaret." He goes on to give six samples of the poetic chatter that came about as a result of the collapse. In lining up these poems one after another al-Maqrīzī makes clear their

[27] With respect to the date for the composition of the *Khiṭaṭ,* Frédéric Bauden has argued that the rough drafts can be dated between 811 and 816/1408 and 1413 ("Maqriziana IX," 204–5).

[28] *Khiṭaṭ,* 2:329.

interrelationship. Introducing the second poem he notes that the person wrote "countering him" *(yuʿāriḍuhu).* Following another poem he writes: "the people circulated this poem" *(wa-tadāwala hadhā al-nās).* These poems were not isolated examples that came to light years later in poetic collections, but opinions exchanged in the immediacy of the event.

The first poem is by Shihāb al-Dīn Aḥmad ibn ʿAlī ibn Ḥajar al-ʿAsqalānī, best known for his hadith scholarship and biographical compendia.[29] Here is Ibn Ḥajar's response to the failure of the minaret:

> The mosque of our master al-Muʾayyad is splendid;
> its minaret is radiant with beauty and adornment.
> It says, having leaned over them, "Go slowly,
> for there's nothing against my body more harmful than the eye."[30]

At the conclusion of these lines al-Maqrīzī points out a double entendre *(tawriyah)* that might otherwise elude us. On the one hand there is the obvious meaning that the "eye" *(al-ʿayn)* makes reference to "the eye that strikes things and thus ruins them"¾that is, the evil eye. The second meaning is that "the eye" is a reference to Shaykh Badr al-Dīn Maḥmūd al-ʿAyntābī, the scholar better known by the shortened form of his name, al-ʿAynī. The people among whom this poem circulated had no trouble seeing in these lines the cut-down aimed at a man who had some connection to the new construction. That warranted a response on the part of al-ʿAynī:

> A minaret when revealed is like a handsome bridegroom;
> its destruction comes through the judgment of God and fate.
> They say: "It was struck by 'the eye.'" I say: "That's wrong!
> Nothing deserves destruction except worthless stone *(ḥajar)*."[31]

This poem is similar to the first. A gnomic comment on the handsomeness of the minaret is followed by a verse that points a finger of blame. The lines can be interpreted literally as turning back the notion that the evil eye could cause a minaret to collapse, but with an insider's reading we see that it is a statement of the author's own innocence (as "the eye") and then a shift of the rhetorical blame onto his accuser, whose name included the word "*ḥajar*" or stone. We should understand that Ibn Ḥajar is being equated with "worthless stone."

---

[29]For an analysis of his poetic output see Thomas Bauer, "Ibn Ḥajar and the Arabic Ghazal of the Mamluk Age," in *Ghazal as World Literature I: Transformations of a Literary Genre,* ed. Thomas Bauer and Angelika Neuwirth (Beirut, 2005), 36–55.

[30]*Khiṭaṭ,* 2:329.

[31]*Khiṭaṭ,* 2:329.

This kind of word play is often mentioned as one of the characteristics of Mamluk-era poetry. In his review of contemporary criticism of Mamluk-era poetry, Th. Emil Homerin cites Bakrī Amīn Shaykh's opinion that Arabic poems of the age were marked by intricate word-play, and that this tendency is most visible in the area of invective, where tribes or society were no longer criticized, but only individuals.[32] The exchange captured by al-Maqrīzī so far conforms to this view. We see quibbling word play tied to invective aimed at individuals. These are not lines that would be anthologized and appreciated by a modern audience, as they are simply too local and personal in their concerns.

As it happens, al-Maqrīzī was in agreement with the above critique in his explicit judgment of the lines. This kind of comment from al-Maqrīzī is rare, and it gives us some clues as to the grounds of reception for poetry like this. Al-Maqrīzī writes: "Neither of these poets achieved his aim, for neither al-ʿAynī Badr al-Dīn Maḥmūd, overseer of pious donations, or Shaykh Shihāb al-Dīn Aḥmad ibn ʿAlī ibn Ḥajar had any real relation to the minaret so that he might serve as a useful double entendre."[33] In other words, these are examples of failed poems, whatever their popular currency, on account of their disconnect from the event at hand. This was an example of personal animosity being transferred to discussion of a current event with which neither man was appreciably involved. Thus the double entendre is labeled by al-Maqrīzī a failure. He then cites a third poem:

> Upon the tower *(burj)* of Bāb Zuwaylah was founded
> a minaret for the house of God and place of safety.
> That damn tower *(burj)* abandoned it, causing it to lean.
> So, people, shout: "Damnation to the tower *(al-burj)*!"[34]

These lines would again strike us as somewhat innocuous, except for the extra information supplied by al-Maqrīzī: the manager and overseer of the construction of the madrasah-*khānqāh* was a man by the name of Bahāʾ al-Dīn Muḥammad ibn al-Burjī. Re-reading the short poem we can note that the three references to "the tower" *(al-burj)* can be understood as criticism of the man to whom construction was assigned. The final invective "damnation to the tower!" now has a more personal point to it. Because of the real connection between actual builder and poetic effect, al-Maqrīzī judges this to be effective in a way the previous two were not. This double entendre must have been striking since the next three poems cited by al-Maqrīzī employ variations of it. This is the poem that al-Maqrīzī specifies as being circulated by the people.

[32] Th. Emil Homerin, "Reflections on Arabic Poetry in the Mamluk Age," *Mamlūk Studies Review* 1 (1997): 70.

[33] *Khiṭaṭ,* 2:329.

[34] Ibid.

A second section in the *Khiṭaṭ* deals with the fall of another minaret. In this case it is a fall that resulted in a real tragedy: 300 lives were lost in the year 762/1361 when one of the minarets under construction for the madrasah of Sultan Ḥasan toppled. Most of the dead were orphans busy learning the Quran at the nearby *maktab al-sabīl,* though a few non-orphans were in that number. This was a momentous tragedy¾as it would be considered today. Al-Maqrīzī provides a snapshot of the public reaction: "When the minaret fell the general populace *(ʿāmmah)* of Fustat and Cairo talked continually *(lahijat)* about how it was a warning about the downfall of the state."[35]

As we have already noted in the much less tragic case of the failure of a minaret connected to the madrasah-*khānqāh* of Sultan al-Muʾayyad, one central use of poetry in this era was as a way to identify and set public meaning for an event. Al-Maqrīzī tells us that the people of Cairo "talked continually" about the event, leading to a popular interpretation of impending trouble for the current state. Poetry, as should be clear now, was another way for this society to talk about an occurrence, and al-Maqrīzī provides an example of how a poet tried to step in and even re-direct opinion concerning this one. The following is the full poem, consisting of 9 verses, cited by al-Maqrīzī:

Rejoice! For, O sultan of Egypt, a messenger
of your fortune brought a saying that circulated like a proverb.
The minaret did not fall because of any fault,
but because of a hidden secret that has been revealed to me.
Underneath were readers of the Quran, so the minaret listened
and its passion in this state led it to lean!
If God were to reveal the Quran upon a mountain
its peak would lift from the power of its emotion.
The stones of the minaret did not cease moving, and finally fell
from fear of God, not because of any weakness or fault.
Its sultan was absent, so it became despondent and threw
itself down from passion with heart ablaze.
So praise God, a fortune liable to envy vanished because of what
the Merciful One decreed in eternity.
No harm struck the madrasah after that day;
You built the edifice with knowledge and craft.
You continued until you saw this world by the madrasah
filled with knowledge, for there's no one in Egypt without work.[36]

[35] Ibid., 2:316.

[36] Ibid. The full name of the author of these lines was Shaykh Bahāʾ al-Dīn Abū Ḥāmid Aḥmad ibn ʿAlī ibn Muḥammad al-Subkī.

The point of the lines is to exculpate the sultan from any possible wrongdoing in the death of the orphans. Building on the notion that Quran recitation was going on directly underneath the minaret, the poet gives us a vivid image of the minaret out of piety leaning to hear the Quran, and thus falling onto the school. This line of reasoning is bolstered with an allusion to the episode in the Quran in which Mt. Sinai is seen by Moses to crumble in the process of revelation.[37] Stones, apparently, are supposed to crumble when confronted with the Quran. A second, less fully developed reason for the fall is also given in the dejection of the minaret at the absence of its sultan. The last two verses praise the sultan for his construction and for filling the world with knowledge¾and, incidentally, providing work for everyone in Egypt.

This poem was clearly meant to defend the sultan and deflect the tongue-waggers that saw in this event a bad omen. But as it happened, those who saw in it a portent were proven correct when the sultan was killed a mere 33 days after this incident, according to al-Maqrīzī. That is a remarkable fact since it allows us to date this poem quite precisely to the immediate aftermath of the minaret's fall. This was not a poem written in repose and calmly meditating on a past event, but one written in the heat of public discussion of an event. The goal of the poem was to shift public discourse away from blaming the sultan and toward understanding the incident as actually in support of his piety, or, at least, as an act of God.

The poetry that came to surround these two minaret failures can be seen as contributing toward the social memory of these events. James Fentress and Chris Wickham write about the formation of social memory: "How does one make individual memory 'social,' then? Essentially by talking about it."[38] Poetry in medieval Cairo was one way for society to talk about the events that mattered to it and that demanded explanation. In both the above examples we see that major events were closely followed by the chatter of poetry assigning blame or excuses.

The Boat on the Shrine

The mausoleum of Imam al-Shāfiʿī is located in the southern cemetery of Cairo, known as al-Qarāfah. The official embrace of Sunni Islam by Ṣalāḥ al-Dīn and his Ayyubid successors paved the way for the monumental mausoleum built over the grave of Imam al-Shāfiʿī, who had died in Fustat several centuries before in 204/820. The massive domed structure that now marks the tomb was erected by a successor to Ṣalāḥ al-Dīn, Sultan al-Malik al-Kāmil, in 607/1211.

---

[37] The well-known story is at 7:142–44.

[38] James Fentress and Chris Wickham, *Social Memory: New Perspectives on the Past* (Oxford, 1992), ix–x.

Al-Maqrīzī treats the mausoleum under the heading of "tomb" *(qabr).*[39] The focus of the section is on the remains of Imam al-Shāfiʿī, beginning with a note about his death and burial in the cemetery outside Fustat, and then moving on to a story about the attempted relocation of his body to Baghdad during the Fatimid era. This planned relocation was foiled by the combination of popular unrest and a miraculous sign. Only after this earlier history does al-Maqrīzī mention the later Ayyubid construction of the mausoleum *(qubbah)* that now marks the tomb.

Although the section on the mausoleum is only of medium length (slightly over one page in the Bulaq edition), it is marked by an abundance of poetry. Seven short poems are included: three near the opening that lavish general praise on Imam al-Shāfiʿī, then four at the conclusion. These last four were explicitly written about the mausoleum itself, and in particular one feature that stirred interest: the copper boat that sits upon the dome.

Al-Maqrīzī introduces the four concluding poems with a short introductory gloss: "A number of poems have been written about this mausoleum." Multiple inclusions of a site in poetry is a positive sign of its cultural importance, demonstrating that social chatter centered on it, but what further makes these poems worthwhile to study is their engagement with a deeper cultural question about the confines of knowledge in this era. The mausoleum and its boat evidently afforded people of Cairo an opportunity to reflect on the development of Islam, from its early pure days to their own time.

Although the boat has undoubted links to ancient Egyptian religious practices,[40] J. M. F. Van Reeth points out how the boat took on a particular meaning as a result of the political/religious context of this mausoleum, arguing that in the context of the religious transformation of Egypt under the Ayyubids the boat becomes an allusion to the story of Noah. Just as in the story of Noah a small group remained faithful and were brought through the flood, so in the case of Imam al-Shāfiʿī we find an example of faithfulness and resistance to heresy. Van Reeth writes: "L'imām fournissait ainsi l'exemple, le modèle *par excellence* de la conversion. Comme lui, l'Egypte avait besoin de se disculper: elle¾ou du moins ses dirigeants¾avait été chiite; il fallait maintenant retourner à l'orthodoxie sous l'étendard de la théologie šāfiʿite."[41]

There can be no doubt that the story of Noah, in this circumstance, could easily serve as a metaphor for the changes in Egypt; the theme of fidelity to orthodoxy

---

[39] *Khiṭaṭ,* 2:462–63. A mosque built beside the earlier tomb during the reign of Ṣalāḥ al-Dīn is briefly treated at 2:296.

[40] Doris Behrens-Abouseif, *Islamic Architecture in Cairo: An Introduction* (Cairo, 1989), 85.

[41] "La Barque de l'Imām Aš-Ŝāfiʿī," in *Egypt and Syria in the Fatimid, Ayyubid, and Mamluk Eras, II: Proceedings of the 4th and 5th International Colloquium Organized at the Katholieke Universiteit Leuven in May 1995 and 1996,* ed. U. Vermeulen and D. De Smet (Leuven, 1998), 258–59.

is strong in both. The specific connection of the boat on the mausoleum to the story of Noah is confirmed by many elements of later popular devotion, and this combined with the general note of restoration evident in the inscriptions from the mausoleum make for a plausible case that this is workable interpretation of the mausoleum at the time of its construction. Van Reeth pushes this too far, though, when he assumes that all references to the boat and the story of Noah reference the Ayyubid transformation. The poems compiled by al-Maqrīzī in the section on the mausoleum must be interpreted on their own, without the assumption that later poets could not have applied the same system of metaphors in a novel way.

The first of the four poems with which al-Maqrīzī concludes his section on the mausoleum is a description of a small group approaching the mausoleum:

> I passed near the dome of al-Shāfiʿī
> and my eye spotted upon it a river boat.
> So I said to my companions: "Now don't be amazed
> if there are boats above the water!"[42]

This is an effective way to begin this group of poems as it points out, from the vantage of a group of friends, the physical detail that will be central throughout this small group of poems: that odd boat upon the mausoleum. There is no attempt in these lines to set meaning, rather we find just a clever reference to a curious point of Cairo's topography. The lines serve as a reminder that the boat was a well-known feature, and as such open to creative re-use.

The second poem in the series is by ʿAlāʾ al-Dīn Abū ʿAlī ʿUthmān ibn Ibrāhīm al-Nāblusī, and constructs a view of the importance of Imam al-Shāfiʿī in Egypt:

> Al-Shāfiʿī has become master *(imām);*
> among us his school of law is gold.
> He was truly a sea of knowledge when he departed,
> for atop his grave is a ship.

The first verse is a statement of fact: the legal school of Imam al-Shāfiʿī was indeed preeminent in Egypt, and had been since the rejuvenation of Sunni Islam under Ṣalāḥ al-Dīn.[43] His school of law could plausibly be called "gold" *(mudhhab)* since it received wealthy endowments from Cairo's rulers. In this case the boat atop the mausoleum is used as a clue to Imam al-Shāfiʿī's importance: the fact that a boat is there is fitting, because it is over a man who can be considered a

[42] *Khiṭaṭ,* 2:462 = Muḥyī al-Dīn ibn ʿAbd al-Ẓāhir, *Al-Rawḍah al-Bahīyah al-Zāhirah fī Khiṭaṭ al-Muʿizzīyah al-Qāhirah* (Beirut, 1996), 80.

[43] André Raymond provides a brief description of the changeover of Egypt to Sunni Islam, and the raising of the Shafiʿi school of law to a place of pre-eminence in Egypt, in *Cairo,* trans. Willard Wood (Cambridge, 2000), 102–4.

"sea of knowledge." Although the actual reasons for the boat's placement should be sought among the continuities between medieval popular religion and more ancient Egyptian practices, the poet in this case used the boat as an indicator for the nature of the person buried there.

The next poem is by a poet who is not named, but simply referred to as "someone else" *(akhar).*

I came to the tomb of al-Shāfiʿī to make visitation
but an ark stood opposite us even when there was no sea.
So I said, "God be exalted, this is a sign
indicating that his grave has drawn together the sea."

The context in this case is a "visitation," the technical word for a pious visit to a grave or other site viewed as having *barakah.* Except for the explicitly pious intention of the writer, these lines are similar to the first poem of the group. The word *fulk* ("ark") is used also in the Quran for Noah's ark,[44] which sets us unavoidably in the context of that story. The poet claims to discover in this sight a sign: the grave marked by the boat "embraces" or "draws together" *(ḍamma)* the sea. What "sea" means in this case is not wholly clear, but given the allusion to the story of Noah, we can begin by identifying it with the uncontrolled waters of the flood. Given the context of the poems immediately before and after this one, we might assume that again the "sea of knowledge" is in mind. In this case the boat is accorded tremendous power; it is a powerful organizer or even master of the chaotic sea. The sea of knowledge is envisioned as an unruly entity, but the religious thought of Imam al-Shāfiʿī, as represented by the boat on his tomb, is nevertheless able to master it.

The final poem of the series is by the famous Mamluk poet Sharaf al-Dīn Abū ʿAbd Allāh Muḥammad ibn Saʿīd ibn Ḥammād al-Būṣīrī, author of the *Burdah.*

On the dome of the grave of al-Shāfiʿī is a ship
that came to anchor on the sturdy construction above the rocks.
Ever since the deluge of knowledge receded to his grave
this ark sits firmly at the mausoleum as upon Mount Judi.

The first verse begins in the same place as the previous ones, pondering the significance of the boat. As earlier noted, the mausoleum of Imam al-Shāfiʿī lies toward the Muqaṭṭam Hills, and the poet makes use of this placement to communicate the idea of bedrock: the boat has anchored "above the rocks" *(fawq jalmūd).* These foundation rocks are immediately contrasted with the "deluge of knowledge"

[44]This word can be found in Quran 7:64.

(ṭūfān al-ʿulūm).[45] That is a surprisingly vivid metaphor for knowledge, or more precisely, the religious sciences.[46] These sciences are made to appear chaotic and uncontrollable as they are likened to the deluge. In the midst of that deluge is a boat, again connecting us to the story of Noah with the use of the Quranic word *fulk*. In this case the "ark" that provides safety for the righteous comes to rest not on a mountain but at the bedrock of the tomb of Imam al-Shāfiʿī. Mount Judi is the mountain in present-day Turkey upon which the ark was thought to have come to rest after the flood.[47] At this point we can recognize how the series of metaphors again underlines the scholarly mastery of Imam al-Shāfiʿī.

What al-Maqrīzī thought about these poems is difficult to know, beyond the obvious fact that he was so struck by their similarity that he lined them up one after another. By citing them in his section on the mausoleum of Imam al-Shāfiʿī he constructs what I have called a social text. These short poems break out of any fixed meaning that al-Maqrīzī brought to his presentation of the mausoleum and give us a glimpse of how the site was experienced by the elite more broadly. In this case we find a broad agreement on the cultural importance of Imam al-Shāfiʿī given metaphoric resonance through the incorporation of the well-known boat atop the mausoleum. This is perhaps what Th. Emil Homerin had in mind at the conclusion of his essay on Mamluk poetry when he wrote: "...reading poetry by Muslims in the Mamluk Age can heighten our perceptions of their lives by helping us to feel more sharply and with more understanding some of what they may have felt and believed in their own day..."[48] The meaning of this site can be seen to arise through the intertwining of a general understanding of the past with the physical presence of the mausoleum itself.

Concluding Thoughts

None of the poems considered in this essay are likely to make it into the next edition of the *Norton Anthology of World Literature*. In the creation of such an anthology the literatures of past and present cultures are sifted for texts that are deemed approachable by students in our own time. David Damrosch elucidated a three-point definition of world literature. His second point is of interest to us: "World

[45] The word here for deluge *(ṭūfān)* is used in Quran 7:133 and 29:14, the former in a list of plagues brought on Egypt in the time of Moses, the latter for the Deluge proper.

[46] How this image of a "deluge of the religious sciences" could be taken as a reference to Fatimid rule is not explained by Van Reeth ("La Barque de l'Imām Aš-Ŝāfiʿī"). Reference to the same story does not mean its application has remained stable, and in this case the details of the poem break down if the Ayyubid situation is applied with any rigor.

[47] Mount Judi is named as the resting place for Noah's boat in Quran 11:44. See also Yāqūt, *Muʿjam al-Buldān* (Beirut, 1957), 2:179–80.

[48] Th. Emil Homerin, "Reflections on Arabic Poetry in the Mamluk Age," 85.

literature is writing that gains in translation." Discussing why some literature translates and other literature does not, he writes: "It is important to recognize that the question of translatability is distinct from questions of value. A work can hold a prominent place within its own culture but read poorly elsewhere, either because its language doesn't translate well or because its cultural assumptions don't travel. Snorri Sturluson's dynastic saga *Heimskringla* is a major document in medieval Nordic culture, but it only makes compelling reading if you are fairly knowledgeable about the political history of Norway and Iceland."[49]

This provides us with a frame for understanding what we encounter in the poetry that al-Maqrīzī has framed for us in the *Khiṭaṭ*. It is poetry that translates only with difficulty because it is so closely tied to its social and physical context. In other words, it is not poetry that abstracts easily into discussions of the universal human spirit, as its interest is in negotiating meaning for concrete events and places.

It is often exactly on the score of "universality" that Mamluk poetry is criticized. This can be seen in a recent essay on "Arabic Poetry in the Classical Age" in the last volume of the *Cambridge History of Arabic Literature:* "The poet seems incapable of capturing the particular, of exploring inner experience and so arriving at the essence of life. He does not see beyond the expected, the recurrent, beyond the conventional routine and formality of externalized living."[50] If we look closely at the terms we see that the author is reaching for some standard of universality in the poetry. The poet is supposed to look *through* the world to the underlying elements of the human condition. But if we have discovered anything in the poems analyzed here, it has been their unwillingness to forget about where they are. The framing of these poems by al-Maqrīzī attaches them to a time and place, and these dramatic miniatures in turn allow the poetry to stand out as lively and even artful texts that interact with their setting in an effort to create meaning.

One result of thinking of these poems so sharply within a particular context is to make us re-think the notion of universality. Here we can get some help from anthropologist Clifford Geertz, who addressed the notion of universal and particular in the study of human beings. He argued that the study of human beings does not consist in discovering universally shared traits (religion, marriage), but studying the particulars of different cultures. That particularity opens up the danger of losing touch with any hope for broader relevance or for connecting discrete facts about human beings back to some larger picture. Here Geertz points

For an overview of the standard critical evaluation of this poetry see Th. Emil Homerin, "Reflections on Arabic Poetry in the Mamluk Age," 63–64.

us to another kind of universal: "...the mechanisms by whose agency the breadth and indeterminateness of his inherent capacities are reduced to the narrowness and specificity of his actual accomplishments."[51] That is to say, what should hold our attention are the universal mechanisms (cultural, psychological) by which human beings create their social worlds.

Thinking of the Mamluk poetry examined here in this light, we can acknowledge that it is not the sort of poetry that most readily translates into modern concerns; nevertheless, we find in it lively examples of human beings attaching meaning to their experience. This has been evident in each of the poems cited in this article, whether it be the panegyric and its interpretation, the attribution of blame for the failure of a minaret, or meditation on that boat sitting on top of the mausoleum. Each time, we see traces of lively public discussions seeking to find some frame for understanding events and the world. Each of these poets is busy at what Geertz describes (with use of a phrase from John Dewey) as a human being putting "a construction upon the events through which he lives, to orient himself within 'the ongoing course of experienced things...'"[52]

An Arabic History of the Byzantine Empire

The pre-Islamic history of the Fertile Crescent barely occupied the medieval Muslim historians.[1] Their use of early non-Arabic sources to reconstruct the past of Egypt and Syria is minimal.[2] Hence it was a great surprise to discover that recently an Egyptian professor edited an Arabic chronicle of Byzantium.[3] It is not an original Arabic writing, but an adoption of an unknown Greek chronicle that tells the history of the East-Roman Empire from the days of Constantine (324–37) to the emperor Leo the Isaurian (717–41).

The text does not name the composer, nor the date and place of its writing. From internal data we may assume that this Arabic text was composed after the conquest of Constantinople (Istanbul 857/1453)[4] by the Ottomans but prior to their conquest of Syria and Egypt (1516–17).[5] The usage of Mamluk administrative terminology suggests that the composer was a contemporary.[6] His use of Syriac names of the months indicates that the he was a Syrian priest familiar with the Seleucid *(rūmī)* calendar.[7]

In October 1453 an ambassador sent by Muḥammad ibn ʿUthmān (Fatih Sultan Mehmed) arrived in Cairo and informed the sultan al-Ashraf Sayf al-Dīn Abū al-Naṣr Īnāl (or Aynāl) that on Tuesday the twentieth of Jumādá I (29 May 1453) the Ottomans had seized Constantinople (Istanbul).[8] It is likely that this news gener-

ated mix reactions in Cairo. While the official response was a festive welcome, among the Christian subjects of the Mamluk Sultanate it evoked a nostalgic atmosphere. Hence, it seems sound to speculate that the dramatic information on the fate of the Byzantine capital city stimulated intellectual curiosity among the governing echelons of the sultanate, as well as among its Christian subjects. This anonymous chronicle reflects this mood.

Book Reviews

Katia Cytryn-Silverman, *The Road Inns (Khāns) in Bilād al-Shām*. British Archaeological Reports, International Series, 2130 (Oxford: Archaeopress, 2010). Pp. vi, 290.

Reviewed by Olivia Remie Constable, University of Notre Dame

This new study of rural *khān*s in Mamluk Syria provides a very useful compilation of material on these road inns. The author brings new data to our knowledge of the buildings' patronage, architecture, and historical details, although the book does not add significantly to our overall understanding of these institutions. The most important new contributions made by Katia Cytryn-Silverman are laid out in Chapter 5 (pp. 83–159), a "Gazetteer" surveying twenty-three rural *khān*s and presenting data collected by the author during five years of field research, followed by one hundred pages of plates and figures (pp. 179–280) containing maps, plans, and photographs of these buildings, both in black and white and in color.

The volume is laid out in five chapters, starting with a short introduction (Chapter 1) and ending with the Gazetteer (Chapter 5), followed by a brief conclusion, a bibliography, and the extensive collection of images. The emphasis throughout is on Mamluk buildings, although the author includes a considerable amount of comparative evidence of Ayyubid, Saljuq, Ottoman, and Iranian *khān*s and other similar courtyard buildings and hostelries.

In Chapter 2, Cytryn-Silverman tackles the vexing question of terminology; she seeks to pin down the exact meaning of *khān,* and describes the chapter's aim as "to avoid taking misinterpreted structures into consideration by establishing clear parameters before commencing the proper sorting" (p. 2). The chapter is organized into sections on epigraphical evidence, from inscriptions on the buildings themselves, evidence from other written sources (both Islamic and European), and a survey of modern scholarship on the question of terminology. In general, this provides good coverage of the available evidence, although it does have some flaws. For instance, the author believes that Western sources are especially useful for terminology because their transcriptions can show "contemporary popular use." This was indeed sometimes the case, but she goes on to assert that these outsiders were "not biased by traditional uses of terminology" because "they were usually learning the terms for the first time" (p. 36). This seems unlikely. Not only were words like *fondaco* well known in Mediterranean Europe by the later Middle Ages , but most Western travelers came to Palestine and Syria by way of

Egypt, where they would have encountered all sorts of local hostelries and related institutions. Following her line of reasoning about local usage, Cytryn-Silverman cites Anselme Adorno's visit in the early 1470s to a recently-built *funduq* on the road to Damascus, and makes the point that "his spelling of the term according to Arabic phonetics *(très beau fondouk),* not in the Italianized manner *fondaco,* no doubt reflects what he heard" the building called (p. 38). But the French that she cites is the modern translation by Jacques Heers, while Adorno's original Latin *(pulcherrimo fundico)* does reflect the Italianized term.[1] In her survey of the modern scholarship on terminology, the author considers my 2001 article on Crusader *fondaco*s. However, my 2003 book (listed in the bibliography) would have been much more helpful, since it provides a considerably more detailed discussion of the topic.

Returning to the main point of Chapter 2, while the "proper sorting" of buildings and their terminology is a worthy objective, there is always a danger that such clarity of purpose will impose organization on a disorganized and inconsistent reality. The author dismisses as "simplistic and even misleading" R. Hillenbrand's warning that "it is worth emphasizing once more that the use of these various terms may imply no more than differences in regional vocabulary rather than connoting distinctive functions or types" (p. 5). My own research tends to support Hillenbrand's point that terminology can be flexible and contextual. Although Cytryn-Silverman is quite correct that *khān* was the dominant term used for the rural inns that she is studying during the Mamluk period, the word also appears in other settings—she admits that "the parallel use of the term *khān* for urban inns is…confusing" (p. 162)—and at times the term *khān* could be interchangeable with other words (*funduq, wakālah, qalʿah,* etc.). Sometimes, seeking regularized usage and meaning may itself be simplistic and misleading.

Chapter 3, on the patronage of Mamluk rural inns, looks at the patterns and chronology of *khān* foundations. At least twenty-seven such buildings were founded in greater Syria during the period between 1291 and 1477, by at least eighteen Mamluk patrons. Ten of these *khān*s were founded during the reign of Sultan Qalāwūn, and Cytryn-Silverman agrees with J. Sauvaget that these especially catered to the *barīd* service. Through an analysis of other foundations by the same patrons, the author finds a variety of motivations for the foundation of rural *khān*s, including piety, charity, wealth management, personal prestige, and financial gain. These motives for patronage are not surprising, but it is useful to have their foundations contextualized within the broader nexus of political, economic, and social events in Mamluk Syria.

---

[1] *Itinéraire d'Anselme Adorno en Terre sainte: 1470-1471,* ed. and trans. Jacques Heers (Paris, 1978), 322–23.

Chapter 4 is devoted to a consideration of architecture. *Khān*s built in the Mamluk period, together with counterparts built under the Ayyubids and Saljuqs, all shared a common courtyard plan, with access through a single entrance. Beyond this, Cytryn-Silverman identifies and describes a number of architectural features that particularly defined Mamluk road inns in Syria. Only twenty-three of these buildings still offer enough remaining material for an architectural analysis, but the author discusses layout, spatial organization, and evidence of fortification. Beyond the basic plan, we learn details about water supply, masonry, and the decoration of façades and other features. The chapter concludes with a summary of the architectural data, presented in table form, that allows comparison of Mamluk *khān*s with their Ayyubid predecessors (pp. 79–81). The next chapter, the Gazetteer, contains detailed information on each of the twenty-three Mamluk inns noted in Chapter 4.

The final third of the book, devoted to plates and figures, is impressive and interesting. These images provide visual evidence for many of the points that the author discusses in the text, especially architectural details. However, the images are of varying quality, reflecting their diverse origins. Many are copied from nineteenth- and twentieth-century publications and photographs, some are aerial images, while others are (presumably) the author's own photographs. Most of the pictures illustrate points made in the Gazetteer, so a considerable amount of flipping back and forth is necessary in order to link arguments and illustrations. Many of the images are quite small and crowded, sometimes laid out with more than ten to a page. The author includes numerous floor-plans of *khān*s and other similar courtyard buildings, collected together over several pages (pp. 182–85, 194–95), and it is sometimes hard to know what to make of these. The compilation of plans certainly confirms general similarities of form, but the different origins of the images mean that they differ in presentation and style. For instance, on the page, most of the *khān*s look to be much the same size, but this is misleading since many floor-plans have no scale indicated, while those that do have a scale indicator often use different formats depending on their source. This could have been corrected and regularized by the addition of a standard scale indicator (measurements were provided in the table at the end of Chapter 4).

Reviewed by Adam Talib, University of Oxford

Ṣalāḥ al-Dīn Khalīl ibn Aybak al-Ṣafadī (b. 696/1297 in Ṣafad, d. 764/1363 in Damascus) was the most important litterateur of the fourteenth century. He left a voluminous oeuvre, much of which remains in manuscript, so the publication of any of his works is cause for celebration.[2] The book under review may appear a tad peculiar at first glance. It is, after all, a narrow nevological study-cum-poetry anthology; but it is a most intriguing collection of fourteenth-century scientific, cultural, and poetic material on a common epidermal feature, which, when fortuitously placed, ineffably enhances beauty.[3] Another famous, and prolific, Mamluk author, Shams al-Dīn Muḥammad ibn Ḥasan al-Nawājī, produced his own nevi poetry anthology entitled *Ṣaḥāʾif al-Ḥasanāt fī Waṣf al-Khāl* (available in a critical edition edited by Ḥasan Muḥammad ʿAbd al-Hādī) in response to al-Ṣafadī's work. And yet despite al-Ṣafadī's importance as an *adīb* and the need to redress the legacy of neglect that continues to hinder the study of Mamluk literature, the publication of one of his works by three different editors in editions of varying quality within a decade strikes me as a bit excessive.

In 1999, Sihām Ṣallān published the first edition of *Kashf al-Ḥāl.* This edition, apparently the result of her master's thesis work, is clearly deficient and uncritical, but, as space is limited, I will direct the curious to the extensive criticism that

[2]For details of al-Ṣafadī's life and oeuvre, see the essay by Everett Rowson in the new collection *Essays in Arabic Literary Biography II: 1350–1850,* ed. Joseph E. Lowry and Devin Stewart (Wiesbaden, 2009), 341–57.

[3]I should make a disclosure of self-interest here: I am the possessor of a fairly prominent birthmark and the reader should be aware of a bias on my part. Yet I would just say that, although my birthmark does not deface my face, I am still waiting for it to make me very beautiful.

this edition has already attracted.[4] Proceeding chronologically, the next edition, published in 2005, is—in spite of its atrocious cover art—very good.[5] The editor, ʿAbd al-Raḥmān ibn Muḥammad ibn ʿUmar al-ʿUqayl, based his edition on Copenhagen MS 293 (copied in 996/1587), in consultation with three other versions of the text, which he calls abbreviations.[6] In early 2011, an older manuscript (dated to 847/1444) turned up in a Christie's auction, but it seems not to have been examined by scholars and its provenance is not explained.[7] Al-ʿUqayl's edition includes a comprehensive critical apparatus including footnotes containing textual variants, cross-references, glosses, and biographies, as well as six indexes of Quranic citations, *aḥādīth* and *āthār,* proper nouns, locations, and books. Unfortunately, the editor's outdated and uncritical appraisal of Mamluk poetry and his positivistic attitude toward modern pseudoscience and medieval epistemology is a blemish on the façade of his fine edition.

The editor's antiquated attitude toward the aesthetics of Mamluk poetry rehashes many of the shop-worn criticisms of Mamluk literary arts that still seem to circulate: "But al-Ṣafadī was a child of the Mamluk period and one of those poets that went around in a vicious cycle[:] emulating one another, recycling tropes, talking to themselves, and stealing from those who came before them. Like the other poets of his day, al-Ṣafadī was mad about excess in rhetorical arts like parallelism, emulation, double entendre, etc., which he overdid with the worst kind of hyperbole" (pp. 26–27). I understand that this conventional wisdom regarding the aesthetic value of Mamluk literature is a regrettably widespread tenet of faith among many scholars as well as laypeople, so one cannot indulge in too much

[4]See Abū ʿAbd Allāh al-Junādī's review in *Majallat ʿĀlam al-Kutub* 23, No. 5–6 (Rabīʿ I–Jumādá II 1423/May–August 2002): 539–46; as well as in ʿUqayl's edition of the text in the section "Al-Nashrah al-sābiqah min al-kitāb," 96–100.

[5]The cover depicts an attractive young woman, complete with a *khāl* near her lips, turned a quarter toward the camera, but she is rendered horrifically ugly by the grossly inartistic embossing of her lips and pupils, which makes her look like a bogeyman.

[6]"*Wa-thalāth makhṭūṭāt mukhtaṣarah min al-kitāb*" (62): these are Cairo, Dār al-Kutub MS 221 *adab Taymūr*; Damascus, Ẓāhirīyah Library [presumably now in the Asad National Library] MS 6927 (used by Ṣallān for her edition); and Paris, Bibliothéque Nationale MS 3973. For more information on the Copenhagen MS Cod. Arab. 293, see *Catalogue of Arabic Manuscripts: Codices Arabici and Codices Arabici Additamenta, Book Three,* ed. Irmeli Perho (Copenhagen, 2007), 1137–41.

[7]I would like to thank Kristina Richardson of Queens College, The City University of New York, who alerted me to the presence of this manuscript. I tried to contact Christie's about the MS, but have yet to hear back from them. The MS is included in a codex along with two other works: Ṣamawʾal al-Maghribī's "Nuzhat al-Aḥbāb wa-Muʿāsharat al-Aṣḥāb" and Badr al-Dīn al-Ḥasan al-Shāfiʿī's "Dalīl al-Mujāz bi-Arḍ al-Ḥijāz," copied on 15 Rajab 843 22 December 1439 and 12 Rabīʿ I 859/2 March 1455 in Aleppo. See the Christie's lot description (lot 99/sale 7959: "Art of the Islamic and Indian Worlds," held in London on 7 April 2011), which—bafflingly, to me—is silent about the codex's provenance.

Mamluk-style *mubālaghah* in condemning it, but I do consider it even more regrettable when it is espoused by a scholar who has made a welcome contribution to the study of Mamluk literature.[8]

Having nitpicked the editor's introduction slightly, I must say that the edition he has produced is very good. The text itself is composed of two introductions—the first a lexical investigation of the word *khāl,* said to be one of the most polyvalent words in Arabic, the second a medical and physiognomic treatise on birthmarks, including answers to such questions as "Where's the best place to have a birthmark?" and "What does the color of a birthmark signify?" as well as a section on famous people who had birthmarks—and a large anthology of short poems (86% of the poems are two-liners and 97% of them are of four lines or less) on the theme at hand, organized alphabetically by rhyme-letter. In all, the book contains, according to al-ʿUqayl, "some 790 verses," ninety-five percent of which appear in the anthology section *(al-natījah),* with the other five percent sprinkled through the two introductions *(muqaddimah)* (pp. 68–69) (By my count, there are 800 verses in the *natījah* alone.) The editor also mentions the practice of copyists or owners adding verses on the topic to their copies; this in his eyes is rather inconvenient, though it must have been ubiquitous and even one of the great appeals of anthological texts.[9]

The most recent edition of this text was prepared by Muḥammad ʿĀyish and published in Damascus in 2006.[10] According to the editor, he took the same Copenhagen MS 293 as his primary witness and also compared it with the Damascus manuscript mentioned above. This edition is, therefore, in terms of manuscripts consulted alone less critical than the one prepared by al-ʿUqayl. Yet having fewer witnesses is not the only thing wrong with this edition. There are a few peculiarities in the edition that defy explanation as well as a healthy proportion of simple errors. I was able to compare a few pages of these two editions to each other as well as to Copenhagen MS 294, which neither editor used and which is

[8] Al-ʿUqayl writes that he is preparing an edition of the same author's *Ladhdhat al-Samʿ fī Waṣf al-Damʿ* (p. 44).

[9] Al-ʿUqayl criticizes the copyist of the Damascus Ẓāhirīyah MS for incorporating the verses of ʿĀʾishah al-Bāʿūnīyah (d. 922/1516), which were written in the margin of the Copenhagen MS 293; this poet lived a couple of centuries after al-Ṣafadī and therefore her verses could not have been included in the original work (pp. 66–67). It is a testament to the editor's respect for the text and the practice of critical editing that he includes these verses in a footnote (p. 259 n.), noting their spurious inclusion in the Ẓāhirīyah MS without suppressing them.

[10] ʿĀyish has also edited the same author's *Ikhtirāʿ al-Khurrāʿ fī Mukhālafat al-Naql wa-al-Ṭibāʿ* (Amman, 2004), *Tashnīf al-Samʿ fī Insikāb al-Damʿ* (Damascus, 2004), *Faḍḍ al-Khitām fī al-Tawrīyah wa-al-Istikhdām* (Amman, 2005), *Rashf al-Zulāl fī Waṣf al-Hilāl* (Damascus, 2009), and [pseudo-] Ṣafadī, *Lawʿat al-Shākī fī Damʿat al-Bākī* (Damascus, 2003).

available online at the website given above.[11] A comparison of ʿĀyish's text with even the few facsimile manuscript pages reproduced in both editions points to unnecessary errors.[12] Other deviations from al-ʿUqayl's version could either be the result of an unacknowledged preference for the Damascus manuscript variant over the Copenhagen manuscript or occasional paleographical or grammatical difficulties.[13] The unexplained deviations from the text of al-ʿUqayl's edition as well as the other Copenhagen manuscript raise questions as to the editor's working method, but belaboring this point is unnecessary.

In sum, the edition of *Kashf al-Ḥāl* prepared by al-ʿUqayl is the most dependable, and while the editor's narrow-minded literary estimations are unfortunate, they do not detract from the quality of his edition. He deserves many thanks for making available a very interesting text and adding to the still deficient, though growing, library of al-Ṣafadī's works available to researchers and readers. It is all the more fortuitous that the Danish Royal Library has provided a digital copy of MS 294, which was not consulted by any of the editors, on its website for researchers to use. With the combination of al-ʿUqayl's edition and Copenhagen MS 294, al-Ṣafadī's text can be studied by researchers interested in social history and popular culture, medieval Islamic medicine, belles-lettres and poetry, as well as readers who are interested in exploring the breadth and depth of this great scholar's literary output.

---

[11] On this MS, see *Catalogue of Arabic Manuscripts: Codices Arabici and Codices Arabici Additamenta, Book Three,* 1142–43. The MS is undated, but its title page reads: "*bi-rasm al-khizānah al-ʿālīyah al-ʿalāʾīyah Ibn Faḍl Allāh ṣāḥib dawāwīn al-inshāʾ,*" and it is this vague reference that may link the MS with the Faḍl Allāh family of chancery secretaries who were so prominent in the Mamluk period. I admit that this identification is a guess.

[12] It is clear from the plates in al-ʿUqayl's edition, for example, that the Copenhagen MS ʿĀyish claims to have used as his main witness (MS 293) has "*nashhadu anna Muḥammadan* …" and this is also found in al-ʿUqayl's edition as well as the digital copy of Copenhagen MS 294 available online (cf. al-ʿUqayl's ed., 117). The Damascus MS has "*ashhadu,*" which may explain why ʿĀyish chose that reading, but it is unlike him not to have indicated that change in the footnotes, especially as he generously records the Damascus MS's variant readings throughout his edition (ʿĀyish's ed., 33; cf. plate in al-ʿUqayl's ed., 108). In my brief survey, I encountered only one error that al-ʿUqayl made and ʿĀyish did not. The first poem in the *natījah* section should begin "*wa-la-kam munītu* …" not, as al-ʿUqayl has it: "*wa-la-kam munnītu* …" as it does not fit the meter.

[13] E.g., *ʿadūwan la-hum* for *ʿadūw al-hamm; ka-anna al-Buḥturī* for *kāna al-Buḥturī; fa-mā aḥadan* for *fa-mā aḥadun; ʿamma bi-al-nās al-hudá* for *ʿamma al-nās bi-al-hudá.*

Mahdī Asʿad ʿArār, *Dīwān Fayḍ al-Faḍl wa-Jamʿ al-Shaml* (Beirut: Dār al-Kutub al-ʿIlmīyah, 2010). Pp. 512.

Reviewed by Th. Emil Homerin, University of Rochester

ʿĀʾishah al-Bāʿūnīyah (d. 922/1517) was one of the most prolific woman authors in Islamic history. She composed panegyrics and *mawlid*s in Arabic to the prophet Muhammad and wrote works on Islamic mysticism, including several volumes of mystical and devotional poetry. Surviving among the latter is her collection *Dīwān Fayḍ al-Faḍl wa-Jamʿ al-Shaml* ("The Emanation of grace and the gathering union"), which contains over 370 poems. In this verse, ʿĀʾishah explored the full range of Arabic rhymes, meters, and poetic forms, including the quatrain *(dū bayt),* the ode *(qaṣīdah),* the love poem *(ghazal),* poems in praise of Muḥammad *(al-madīḥ al-nabawī),* as well as verse in praise of mystical wine *(khamrīyah).* ʿĀʾishah also composed in newer poetic forms including the quintain *(takhmīs),* the strophic forms of *musammaṭ, zajal,* and *muwashshaḥ,* and the *kān wa-kān,* a form using multiple internal rhymes and popular for sermons. This important collection has been recently edited and published for the first time by Mahdī Asʿad ʿArār.

Following his preface and acknowledgments, ʿArār provides a short introduction (pp. 11–25) on ʿĀʾishah's life growing up as the daughter of the chief Shafiʿi judge of Damascus, where she died in 922/1517. He recounts the story of ʿĀʾishah's trip with her son to Cairo during which highway men robbed their caravan and stole a dozen books that she had composed earlier in Damascus. Arriving destitute in Cairo, ʿĀʾishah was befriended by Ibn Ajā, the personal secretary to the sultan al-Ghawrī, who looked after her and her son. ʿArār also mentions that ʿĀʾishah led a religious life and was thoroughly familiar with Islamic mysticism thanks to her spiritual masters Ismāʿīl al-Hawwārī and Yaḥyá al-ʿUrmawī. However, ʿArār gives no information about either teacher, nor does he even mention that ʿĀʾishah and her extended family were members of the Qadarīyah Sufi order. Even more surprising, ʿArār says nothing about ʿĀʾishah's husband, Aḥmad ibn Muḥammad Ibn Naqīb al-Ashrāf (d. 909/1503), with whom she also had a daughter, Barakah (b. 899/1491). ʿArār does mention the friendly exchange of poems between ʿĀʾishah and the litterateur ʿAbd al-Raḥīm ʿAbbāsī (866–963/1463–1556) in Cairo, and then provides a brief inventory of ʿĀʾishah's writings, with a few comments on her by later historians. ʿArār's brief biography is adequate, though lacking important details to be found in recent scholarship on ʿĀʾishah al-Bāʿūnīyah. Though my work in English (including *MSR* 7:211–34) may not have been readily available to ʿArār, I was surprised that he did not mention the useful works by Ḥasan Rabābiʿah, including his study *ʿĀʾishah al-Bāʿūnīyah: Shāʿirah* (Irbid: Dār al-Hilāl lil-Tarjamah, 1997).

In his next section (pp. 26–55), ʿArār makes a number of observations on the collection *Fayḍ al-Faḍl wa-Jamʿ al-Shaml,* which he values for its literary quality and fine mystical poems. ʿArār notes that this collection contains a number of poems that had appeared in earlier works by ʿĀʾishah, though it is by no means a complete collection of her verse; among the missing poems are her quintain on al-Būṣīrī's *Burdah* and her most famous poem, the *Fatḥ al-Mubīn fī Madḥ al-Amīn* ("The Clear inspiration in praise of the trusted prophet"). Next, ʿArār reviews some of the poetic forms used by ʿĀʾishah in her verse and several elements of style, citing brief examples of each, along with some of her major themes, such as love of God and the need to live a pious life. He also touches on ʿĀʾishah's poetic influences, which included al-Ḥallāj, al-Būṣīrī, and Ibn al-Fāriḍ, among others. ʿArār then concludes this section with a review of some key Sufi terms frequently found in ʿĀʾishah's verse, such as *basṭ* ("exhilaration"), *jadhb* ("spiritual attraction"), *ḥāl* ("mystical state"), etc. ʿArār provides a brief definition for each term and cites their use in several verses. Here again, he could have profited from Rabābiʿah's *ʿĀʾishah al-Bāʿūnīyah,* particularly the latter's detailed discussion of ʿĀʾishah's poetic style and forms.

In the final section of his introduction (pp. 56–66), ʿArār lists and describes the three manuscripts from Egypt's Dār al-Kutub al-Miṣrīyah that he used for his published edition. He states that his primary manuscript ("A") was MS 581 Shiʿr Taymūr, dated 1031/1622. His two other manuscripts were ("B") MS 112 Shiʿr Taymūr and ("J") MS 431 Shiʿr Taymūr, both also dated 1031/1622, though ʿArār argues persuasively that this date for "B" and "J" most likely is the date of the original from which they were copied, probably "A."

For my own work on ʿĀʾishah al-Bāʿūnīyah, I have used and made copies of both "A" and "J," and in addition, I have two other copies of *Fayḍ al-Faḍl,* Cairo MS 4384 (Adab), dated 1341/1922, and Rabat's Bibliothèque Generale #734. Using these manuscripts, I read through ʿArār's edited edition. Unfortunately, I found many errors and discrepancies, too many to be listed in this review. The most common error was that ʿArār did not note many variant readings among the manuscripts, or note, in some cases, where he appears to be offering his own reading. An example of this problem is the following couplet as found in the printed edition (p. 74):

tawājadtu ḥattá lāḥa lī fī tawājudī
wujūdun ʿani-l-aghyāri lil-qalbi ṣārifu
fa-lā wājidun illā li-ḥālī wājidu
fa-lā ʿārifun illā bi-mā qultu ʿārifu

I was rapt, until in my rapture there appeared

an existence for the heart free from others.
So no one is ravished save he finds my state,
and there is no gnostic save he knows what I say.

The issue here is the term *wujūdun* in the nominative case, when all of the manuscripts that I have cite the word in the accusative case: *wujūdan*. This would lead to a different reading and translation, something like:

I was rapt, until in my rapture he appeared
with an existence for the heart free from others.
So no one is ravished save he finds my state,
and there is no gnostic save he knows what I say.

Now, it may be that ʿArār took his reading from MS "B," which I do not have, but he does not mention any variations whatsoever. In another poem (pp. 105–6), without a note, ʿArār omits verse 15 as found in "A":

wa-la yustamaʿ fīhi bi-sh-shāfaʿata shāfiʿin
siwāka yā khayra-l-khalqi min jinn wa-insin

No intercessor's word will be heard save yours,
you, the best of creation among humans and jinn.

While the vast majority of ʿArār's omissions are of minor textual variations, some may affect the reading of individual poems in subtle ways, and so serious scholars will still need to consult the manuscripts of the *Fayḍ al-Faḍl* in the course of any research on ʿĀʾishah al-Bāʿūnīyah that involves this work. Nevertheless, having edited manuscripts myself, I want to be clear that I am not disparaging the good intentions and dedicated efforts of the editor, Mahdī Asʿad ʿArār. Yet, had another reader given his manuscript close attention, ʿArār would have been in a position to publish a more rigorous edition. That being said, over the last few years, many publishers have reduced their staff and too frequently rely on authors to serve as their own copy editors. When one must read over a text many times, it is all too easy to read through and miss omissions and mistakes, and I believe this may have happened with ʿArār's published edition of the *Fayḍ al-Faḍl*. Still, Mahdī Asʿad ʿArār has made a useful contribution to Arabic literature in that he has provided wider access to the verse of an important Arab Sufi poet.

Alan Mikhail, *Nature and Empire in Ottoman Egypt: An Environmental History* (Cambridge: Cambridge University Press, 2011). Pp. xxv + 347.

Reviewed by Martyn Smith, Lawrence University

As is evident from the title, the focus of this book is on Egypt during the Ottoman period. Yet the book warrants attention from readers of this journal for its methodology as well as for details that throw light on the Mamluk period. Alan Mikhail is not the first to take up issues concerning water usage or commodities in Egypt during this time, but his approach to these topics through the theoretical lens of environmental history makes this an especially noteworthy work. The field of environmental history emerged in the 1970s and gained momentum through the 1980s and 1990s. Historians writing within this field have enriched our understanding of various regions and periods by emphasizing the dynamic interaction of human beings with the natural world. In their work the natural world is not simply a static backdrop for human events, but a dynamic actor in its own right.

Previous to this book the Middle East had not yet attracted a self-consciously environmental history on this scale. In an overview of the state of environmental history in 2003, J. R. McNeill writes: "…in Arab and Ottoman historiography, almost all researchers remain indifferent to the possibilities of environmental history…"[14] McNeill goes on to point out how the rich Ottoman archives could form the basis for an environmental history of the Middle East. Mikhail cites this passage in its entirety in the introduction to *Nature and Empire in Ottoman Egypt* (p. 16), and it defines his project both in terms of aim and sources. This book fills a methodological gap in historical accounts of Egypt and challenges us to consider similar approaches to other periods of history.

Mikhail makes good use of archival records, which include documents from rural Egyptian courts, imperial orders, and local petitions, to tell a sweeping story of the changing relationship of the Ottoman Empire to the natural world. Broadly this change can be described as a transformation from a dependence on local knowledge and expertise in solving problems related to the natural world to the imposition of top-down projects that seek to control nature. Considering the present environmental challenges of Egypt, what comes first to mind are likely expansive projects such as the Aswan High Dam or recent efforts to engineer residential cities outside the Nile Valley. Mikhail traces this penchant for large-scale projects back to the construction of the Maḥmūdīyah Canal from 1817 to 1819. As many as 360,000 peasants labored in the construction of this canal, out of which

[14] J. R. McNeill, "Observations on the Nature and Culture of Environmental History," *History and Theory* 42 (December 2003): 30.

an astounding 100,000 died from disease and hardship. This attempt to engineer the landscape would turn out to be typical of the next two centuries of Egyptian history, but Mikhail demonstrates that this centralized approach to nature was not typical of the earlier Ottoman Empire.

The first three chapters of this book lay out in some detail the management of natural resources that prevailed in the first centuries of Ottoman rule. The first, entitled "Watering the Earth," is the most interesting with respect to implications for study of the Mamluks. In the decades after their conquest of Egypt in 1517 the Ottomans undertook a survey of Egypt's irrigation system. This survey contains fine-grained details of the irrigation practices in Egypt down to the level of the village. An important issue this survey attempted to define was whether a canal should be classed as *sulṭānī* or *baladī*. If the former, the maintenance of the canal was a public good undertaken by the state; if the latter, the local group that benefited from the canal was responsible for its maintenance. Any survey of irrigation practices from the early Ottoman period had to reflect practices and assumptions that extended back into the Mamluk period. This dependence on earlier practices in respect to irrigation is evident in the Ottoman law code for Egypt, the Kanunname, where frequent reference is made to what was done during the reign of the Mamluk sultan Qāytbāy (p. 12). This Ottoman way of going about the administration of the irrigation system of Egypt signaled a fundamental respect for local precedent, and that precedent was often inherited from the Mamluk period.

The two further chapters on the Ottoman management of the natural world have fewer implications for the study of the Mamluks since they detail the circulation of commodities (grains and wood, primarily) within the larger empire itself. This issue of the circulation of commodities has been a central interest for environmental historians, evident in a classic work of environmental history such as *Nature's Metropolis: Chicago and the Great West* (1991) by William Cronon. Mikhail argues that the early Ottoman Empire developed remarkably efficient modes of distribution for these commodities, circulating Egypt's grain to meet the needs of pilgrims in the Hijaz or residents of Istanbul, and thus achieving "caloric parity across the empire" (p. 123). On the other hand, wood was quite scarce in Egypt but abundant in other parts of the Ottoman empire, so Egyptian grain was partially balanced by import of another commodity. Mikhail describes this circulation as "natural resource management" (p. 123). Although Mikhail early on cautions that his descriptions should not be seen as "romanticizing" elements of this early modern Ottoman system (p. 33), he provides us with a largely positive image of the early Ottoman state managing the natural world in a sustainable manner.

The big story that Mikhail tells in this book is the way this Ottoman system got out of whack in the later period, especially in its waning days under the ad-

ministration of Mehmet Ali. Making Egypt into a modern state in the nineteenth century was a wrenching experience, and that experience has been narrated in other books, such as *All the Pasha's Men* (1997) by Khaled Fahmy. Mikhail's view of the critical events of this era is inflected by environmental history, which he connects to a breakdown in the previous distribution system of commodities. His account of Mehmet Ali's invasion of Syria from 1831 to 1841 allows us to see more clearly his theoretical vantage point. Other historical works (such as that by Fahmy, for example) have pointed out the importance of Syria's wood in the calculus for the invasion. But Mikhail lends this need for wood a deep explanatory power: "Mehmet ʿAli's ten-year incursion into Syria and Anatolia was largely driven by his desire to acquire usable wood supplies for his province" (p. 167). Having already seen how the Ottoman state achieved a studied balance in commodities, we grasp that as Egypt became an independent power it would run against a fundamental imbalance in commodities, and this imbalance would push the state outward. This understanding of the circulation of commodities could be useful in trying to understand the forces that determined Mamluk territorial ambitions as well, and it is certainly to be hoped that this approach will be taken up further in the study of the Mamluks.

My criticism of the book is that while Mikhail has delivered a book that fills an important gap in modern scholarship on Egypt, to a surprising extent he is rediscovering the emphases of Egyptian historians themselves. This goes oddly unacknowledged even as Mikhail cites Egyptian historians in order to make his points. This appears most starkly in Chapter 3, which takes as its subject the circulation of wood. On pages 130 and 131 al-Jabartī is cited no less than nine times in the footnotes. A sample note from these pages reads: "The timber yards of Bulaq were at the base of al-Khurnub Tenement near a huge market complex built from stone and wood..." Details of Egypt's dependence on and use of wood are often drawn from this Egyptian historian. Something similar happens in the final chapter detailing the construction of the Maḥmūdīyah Canal, where Mikhail sketches the history of the canal and draws extensively from Mamluk historian al-Maqrīzī (pp. 264–65). It is evident that Egyptian historians shared this interest in commodities and the management of water. The central writers of history in the Egyptian tradition have themselves emphasized many of the principal themes of environmental history.

In the work of the Mamluk historian al-Maqrīzī we can find a view of history that has many parallels with the work of environmental historians, though obviously not expressed through modern assumptions. An example can be seen in his economic treatise known as the *Ighāthah,*[15] in which he advances a strident argu-

[15] *Mamluk Economics: A Study and Translation of al-Maqrīzī's Ighāthah,* ed. and trans. Adel Allouche (Salt Lake City, 1994).

ment against the Mamluk management of the natural world and the currency. In one section al-Maqrīzī recounts historical instances of *ghalāʾ*, or scarcity. Arriving at the Fatimid conquest of Egypt in 358/969, he emphasizes the crisis in commodity prices at that point.[16] He thus encourages the reader to understand a central historical event as a result of a crisis in resources, paralleling an approach to history that we have seen in the book by Mikhail. More broadly, the well-known *Khiṭaṭ* of al-Maqrīzī takes up many of the particular topics that are at the heart of Mikhail's book. In his section on Nilometers al-Maqrīzī describes how levees and canals are maintained by a percentage of the land tax and that the cutting of the levees takes place in accordance with the expertise of locals (1:61). Part of what animated al-Maqrīzī is that this system of precedents was failing, and he wrote in the midst of what he felt to be a crisis. But it is here that we should look for the forebears to an environmental approach to Egyptian history. An unexpected result of *Nature and Empire in Ottoman Egypt* is that it allows us to better perceive the strengths of historians like al-Maqrīzī and al-Jabartī.

Leigh Chipman, *The World of Pharmacy and Pharmacists in Mamlūk Cairo* (Leiden and Boston: Brill, 2010). Pp. viii + 318.

Reviewed by Li Guo, University of Notre Dame

The book under review sets out to analyze a popular medieval Arabic manual for pharmacists and, in light of this key text, to explore various related issues. The manual is the *Minhāj al-Dukkān*, "How to manage a [drug] store [hereafter: Handbook]," attributed to one Abū al-Muná Dāwūd al-Kūhīn al-ʿAṭṭār (fl. 1260), a Jewish druggist living and practicing in late Ayyubid and early Mamluk Cairo. Based on the author's Hebrew University dissertation (2006), this well-written book combines solid, old-fashioned textual research (materials in Arabic, Judeo-Arabic, Latin, Greek, and Hebrew) with sound technical synthesis and delicate historical contextualization. The result is a richly documented and carefully argued essay on the history, theory, and practice, as well as social and cultural impact, of pharmacy and pharmacists in what S. D. Goitein would call a "Mediterranean Society," where Arab, Jewish, and Christian physicians and pharmacists worked side by side, sharing common resources.

The book is divided into two main parts: Part One (3 chapters) deals with the textual and technical aspects of the Handbook, while Part Two (2 chapters) ad-

[16] Ibid., 30.

dresses issues pertaining to the practice of pharmacy and its scientific, social, and legal context. Four appendices provide information about the manuscripts of the Handbook, its recipes, tests as suggested by various sources, and a glossary of terminology.

Chapter 1 lays the groundwork for analysis with a description of the content and structure of the Handbook. Through an outline of its chapters with translated headlines, Chipman confirms the Handbook's affiliation within the *aqrābādhīn* (Greek *graphidion*) tradition, albeit with its own compositional features. This is followed by a comparative analysis of sources: a chain of transmission—from Ibn Jumayʿ (d. 1198), via Ibn Abī al-Bayān (d. 1236), to al-Kūhīn al-ʿAṭṭār—is established through painstaking correlations, taking into consideration other indirectly quoted sources.

Following the above discussion of continuity and discontinuity of the Handbook vis-à-vis the *aqrābādhīn* tradition, Chapter 2 highlights the non-technical elements added to the Handbook. These elements show, as Chipman argues, greater similarities to a medical encyclopedia than to a druggist's recipe collection. This is evidenced in the Introduction and Chapter 23 of the Handbook, which spell out concerns relating to medical ethics, showing an affinity to the Greek tradition as inherited and transmitted by medieval Arab, Persian, and Jewish medical practitioners. The addition of these segments to the Handbook thus demonstrates al-Kūhīn al-ʿAṭṭār's indebtedness to a long chain of "physicians' writings for physicians," as the author compares these segments with the key "classic" texts of the genre. These additions set the Handbook apart from other how-to pharmacy manuals, and delineate an environment in Cairo where medical (and by extension pharmaceutical) moral injunctions evidently gained currency among local practitioners.

For those interested in learning more about the nuts and bolts of pharmaceutical practice at the time as described in the Handbook, Chapter 3 is perhaps the highlight of the book. Instead of a laundry list, the discussion is grouped under various thematic rubrics. Chipman is quick to point out that of the thousands of pharmaceutical items mentioned in the documentary sources such as the Cairo Geniza, only a fraction were in common use. This gap, Chipman argues, stimulated the development of lists of drug substitutes and synonyms, which, alongside the related matter of weights and measures, constitute the focal point of this chapter. Another topic discussed is the identification and treatment of *materia medica*. Other practical aspects scattered throughout the Handbook are summarized in the following segment.

Part Two, "The Pharmacist and Society," consists of two chapters that deal with the scientific context and social impact of the pharmacy and pharmacists on society, respectively. Biographical dictionaries and documents (the Cairo Geniza,

waqf collections) are utilized effectively in Chapter 4. A brief summary of the current scholarship on pharmacy and medicine within the context of scientific research in the post-Mongol Islamic Near East leads to a detailed account of the role played by the pharmacist in Mamluk society. It is interesting to learn that the terms commonly used at the time to denote "pharmacist"—*ʿaṭṭār,* which also means "perfume seller," and *ʿashshāb,* "herbalist"—indicate the broadening range of the craft. Chipman points out that the classical term *ṣaydalānī,* "pharmacist" per se, had fallen out of use by that time. Combing through the massive volumes of major Mamluk biographical dictionaries, the life and career of some seventy-five *ʿaṭṭār*s (or *ʿashshāb*s) are surveyed. The segment on pharmacists in hospitals is extremely informative as well.

In some ways, Chapter 5, "The Pharmacist in the Marketplace," comes as a pleasant surprise, and for this reviewer, a treat. By utilizing materials usually considered irrelevant to the subject of "history of science," or "Islamic medicine," this chapter not only sheds rare light on hitherto seldom explored areas relating to the practice of medicine and pharmacy in the pre-modern Arab world, but also invites us to re-examine the value and use of non-historical sources for historical inquiry. The discussion of the fascinating topic of what we today might call "consumer protection" is based on a careful survey of an array of materials—legal and literary. There are so many things to learn from Chipman's reading of these unconventional materials. There are, for example, almost no references to pharmacists or drugs *per se* in major Mamluk fatwa collections, while moralist treatises touch upon the matter only briefly, often within the context of correct behavior. It is in the *ḥisbah* manuals that specific guidelines, rules, and appropriate procedures regarding quality control are to be found.

Refreshingly informative is also the segment on the "image" of the pharmacist presented in popular literature, such as *The 1001 Nights* and shadow plays. The remarkable thing about these literary texts, "fiction" by nature, is that in addition to, as one would expect, shedding light on mentality and psyche, and on society's attitudes and sentiments towards the perfumer-druggist, they also afford many *technical details* in relation to the pharmacy and pharmacist that are not found in "conventional" sources. This is particularly true with regard to the shadow plays. In one shadow play, a group of tricksters parade onto the stage; they represent a variety of "quacks," among them a *maʿājīnī,* "seller of medicinal pastes," and an *ʿashshāb*, "herbalist." A translation of their self-portraits, in the form of monologue and songs, is provided. Here, the "fiction" offers some technical details that conventional medical texts fail to provide; and Chipman is to be commended for tackling this extremely challenging material, providing the reader, for the first time, with a full English translation. Speaking of the translation, I have only one note to add. Regarding the lyric sung by the *ʿashshāb*-herbalist, the word

dashāsh ("a powder") in the Kahle edition would be better replaced by its variant, *ḥashāʾish,* "hashish, weed" (see Everett Rowson's review of the edition in the *Journal of the American Oriental Society* 114 no. 3 [1994]). It not only fits the profile of an *herbalist,* but also is grammatically appropriate (feminine verbs follow), and scans the meter (which ought to be *mujtathth,* p. 167) as well. To use these kinds of literary sources is justified by the fact that the author of the shadow plays, Ibn Dāniyāl, was himself an eye doctor in Cairo. The technical accuracy of his description of the medicinal craft (including pharmacy) has been confirmed by modern Orientalist and practicing physician M. Meyerhof, among others. It is true that the theme of "quacks" becoming the butt of the joke had developed into a literary topos, but the reality and implication behind it cannot be denied. The figure of a druggist as a "greedy swindler" and trickster as represented in legal and popular literature, Chipman argues, may help to explain why we know so little about the pharmacist as a person: if chronicles are virtually silent on many an *ʿaṭṭār* when they appear in biographical dictionaries, it is because they were *literati* at the same time. Ibn Dāniyāl the eye doctor knew a thing or two about the sentiment against his fellow craftsmen in Cairo, insofar as his shadow plays and poetry are riddled with self-loathing while describing the profession of "health care" in general. As for al-Kūhīn al-ʿAṭṭār the druggist, not only was he ignored by biographical dictionaries, the "Hall of Fame" for medieval Muslim learned men, he was also shunned by his own kind: the best known figure in the history of Arab medicine, Ibn Abī Uṣaybiʿah, in his comprehensive roster of Arab physicians, did not say a thing about the Jewish druggist, who was actually his contemporary and a fellow student. The silence is telling: the Jewish druggist was not a physician; this shows us a further divide from within, between doctors and pharmacists, in medieval Cairo. Such is the fascinating, and rather sad, story of the pharmacist in Mamluk Cairo. We owe Leigh Chipman for bringing it to life.

Doris Behrens-Abouseif, *Cairo of the Mamluks: A History of the Architecture and Its Culture* (London and New York: I. B. Tauris, 2007). Pp. xix + 359, illus.

Reviewed by J. M. Rogers, The Nour Foundation

The development of Fatimid al-Qāhirah into the great metropolis it became under the Mamluks was by no means a foregone conclusion. Under Baybars Fusṭāṭ was not entirely neglected, though his Friday mosque in its northern sector, the Jāmiʿ al-Jadīd (660/1261–62), was already abandoned by al-Maqrīzī's time, and al-Nāṣir Muḥammad's mosque in the same area (no. 15), also called the Jāmiʿ al-Jadīd (711–

12/1312–13) survived for an even shorter time. Baybars' works on the island of Rawḍah were similarly impermanent, and heralded his successors' concentration upon al-Qāhirah, its citadel, and the port of Būlāq on the Nile. The present volume combines Doris Abouseif's long familiarity with the rich Mamluk historical and biographical tradition and her deep knowledge of the historical topography of Cairo to give a masterly account of the city and its architecture between 1250 and the Ottoman conquest.

Though she takes due account of earlier scholarship, and of Creswell's meticulous surveys, Professor Abouseif's originality lies in the importance she gives to foundation documents (*waqfīyah*s). They frequently offset the errors of the historians whom she justly criticizes for their ignorance of architectural styles and technicalities; the *awlād al-nās* (like the historian Ibn Taghrībirdī), who were often directly involved in construction and its management, were generally much better informed. In the last resort *waqfīyah*s could not guarantee immunity from confiscation, and they only rarely state what must often have been the case, namely that a particular foundation was ad hominem, a madrasah, say, for a respected teacher or a *khānqāh* for a particularly revered Sufi. But they otherwise give a clear idea of the patrons' intentions and their conception of their role in the development of the city.

Behrens-Abouseif's discussions of the individual monuments comprise a biography of the founder and the historical background of the structure; an analysis of the foundation document; and a description of the plan, fabric, and decoration. This last has often been complicated by the long-term activities of the Comité de conservation des monuments de l'art arabe, which, understandably, did not have the funds to embark on large-scale operations and which for much of its existence was advised by experts whose standards of authenticity fell well short of present-day conservators. Behrens-Abouseif usefully records such arbitrary restorations, though lack of space precludes mention of routine maintenance and repairs which may be recorded in later copies of the *waqfīyah,* or detailed descriptions of major alterations in the Ottoman period, for example to the mosque of Aqsunqur al-Nāṣirī (no. 24).

The author begins her survey with the mausoleum of the Ayyubid al-Ṣāliḥ Najm al-Din Ayyūb (no. 1), who was the creator of the Bahri regiment and a pioneer in the development of Bahri funerary architecture. In this she follows the historians, who gave the prime role in the expansion of al-Qāhirah to al-Ṣāliḥ's successors, whose mosque-foundations led the way for courtiers and 'the people' to settle in their vicinity. These figure prominently among the sixty monuments Behrens-Abouseif discusses in detail,[17] and her survey is largely a social, eco-

[17]Unlike Michael Meinecke's 2 volumes (*Die mamlukische Architektur in Ägypten und Syrien [649/1250 bis 923/1517]* [Glückstadt, 1992]), her chronological coverage is even—28 of the 60 monu-

nomic, and architectural study of sultans' pious foundations and their interaction with the urban fabric, as well as those of their amirs, with whom they often had ties of kinship or marriage. Periodization of architecture by reign is reasonable (with the obvious reservation that overlaps of some projects from reign to reign complicate a linear chronology), though Behrens-Abouseif observes that only al-Nāṣir Muḥammad and Qāytbāy can be said to have established a regnal style.

As foreign usurpers, and Hanafis at that, the Mamluk sultans were heavily dependent upon the goodwill of the ulama, and prudence might have led them to favor the Shafiʿis, the predominant *madhhab* in Egypt. This *madhhab,* however, did not recognize the Turkish dynasties, which naturally were not of Qurayshi stock, as legitimate. Baybars' solution was to replace the Shafiʿi imam with chief qadis for each of the four schools, a seeming even-handedness which in fact worked to the Hanafis' advantage. His successors also abandoned the immemorial Shafiʿi principle that there should be no more than one congregational mosque in each quarter *(khuṭṭ).* The multiple *khuṭbah*s, along with the lack of space available in central Cairo for major building projects, increasingly favored neighborhood mosques and funerary oratories with residential features, where a funerary dome and a minaret became virtually essential markers. The latter, which were the work of specialist builders, were transformed into highly decorative architectural features, as well as foci of structural development.[18] Understandably, prestige vied with piety, the tomb generally occupying the most conspicuous position on the street front and, for example in the case of the amir Shaykhū (no. 25), even prompting the suppression of the mihrab to allow for a window to overlook the street.

With few exceptions (among them the mosque of Sultan Ḥasan, no. 27), even royal founders deliberately chose modestly proportioned buildings and multiple foundations rather than a single colossal unit, a tendency which, especially in the fifteenth century, must have further decreased the cost to the patron. The available figures suggest that the average building cost of even a royal foundation was not much more than the monthly pay of a royal Mamluk, and could not compare with what the sultans spent on luxuries in the market, imported at prices which they could not dictate. It was the luxury of their furnishings, Behrens-Abouseif suggests, that accounted for the much greater cost of palace architecture, most of which, ironically, has disappeared without a trace.

---

ments chosen for detailed discussion are Burji. Meinecke's volume 2 is a very full summary catalogue of the monuments, either extant or historically attested, but in his general discussion in volume 1 Burji architecture in Cairo is allotted a mere 26 pages.

[18] See now Doris Behrens-Abouseif, with contributions by Nicholas Warner, *The Minarets of Cairo: Islamic Architecture from the Arab Conquest to the End of the Ottoman Empire* (London and New York, 2010).

The degree to which Cairene architectural evolution was determined by the urban environment was unique in Islam, nor did the unification of Egypt and Syria under Mamluk rule lead to a merging of architectural styles. The sultans' limited intervention in Damascus and Aleppo gave even their viceroys' most splendid monuments a provincial air, well illustrated by Khayrbak's two mausolea in Cairo (no. 60) and in Aleppo (figs. 15–16), though the marked difference between them is also to be explained by the fact that the Cairene foundation was erected late in Khayrbak's life, when he was at the zenith of his career. Yet the cityscape was not just a haphazard agglomeration, and under al-Nāṣir Muḥammad urban planning and design were a conspicuous feature of his patronage. (In marked contrast to David Ayalon and his pupils, Behrens-Abouseif ascribes to al-Nāṣir Muḥammad a very positive role in the development of Cairo.) Architecture went hand in hand with civil engineering projects such as the building of canals, bridges, aqueducts, reservoirs, hippodromes, port installations, and maintenance of the Nile bed to keep the river navigable. Many later projects involved the exploitation of natural features, especially water,[19] and the fact that hunting lodges, palaces, grazing grounds, and amirs' residences were generally inside Cairo—along the Khalīj, around the large reservoirs, and on the banks of the Nile—added to the amenities of the city. Moreover, pious foundations like the domed mosques of Yashbak at Maṭarīyah and Ḥusaynīyah (nos. 48–49) were part of complexes of gardens with residences and religious buildings.

For most of the period the sultan's circle in central Cairo largely monopolized patronage. The caliphs were kept in modest seclusion, well away from the center, though their tomb (no. 6), which Professor Abouseif identifies as originally intended for the sons of Baybars, was magnificently decorated. The pious foundations of the civilian elites associated with the ruling establishment, including viziers and other high bureaucrats, tended to take the form of substantial contributions to the maintenance and repair of existing royal foundations, like the Māristān of Qalāwūn (no. 8). The foundations of merchants, even those as rich as the Kārimīs, were conspicuously few and seem to have been confined to increasingly run-down areas like Fusṭāṭ.

In Behrens-Abouseif's view, the markets of Cairo and Damascus with their well-developed artistic traditions tended to make court workshops superfluous, though this is not to say that there were no long-term builders' workshops, or still less that building projects were extemporized. This leads her to a perceptive discussion of the organization of construction, which, for the most part, can be attributed to the work of skilled craftsmen under the administration of favorite amirs or qadis. However, the problem of coordinating the virtually discrete parts

[19] Cf. Doris Behrens-Abouseif, *Azbakiyya and its Environs: from Azbak to Ismāʿīl, 1476–1879* (Cairo, 1985).

of Sultan Ḥasan's complex (no. 27), for example, was real enough. Inescapably (in this case at least), the supervisor's functions must have closely approximated to those of a modern architect. The lavish marble revetment to the qiblah *īwān* added after the sultan's death strongly suggests, moreover, that the material (all obtained from earlier monuments) must have been acquired at an early stage in the project and drawings prepared to show how the panels were to be assembled. Elsewhere, the *embarras de choix* which faced craftsmen and builders when it came to vaulting, *muqarnas,* façade designs, portals, etc., was evidently resolved in largely practical terms, without any pattern books, let alone such detailed records as the Timurid scroll published by Gülru Necipoğlu.[20] This must explain why there is so little resemblance between the four minarets erected by Qāytbāy in Cairo—at his funerary foundation in the Cemetery (1474) (no. 47); at his madrasah on the Qalʿat al-Kabsh (1475); at his madrasah on the island of Rawḍah (1491); and at al-Azhar (1495)—when standardization would have saved much labor and expense.

The skilled staff associated with the courts of the sultans and their viceroys must have been constantly overstretched, which would have precluded concentration on the provinces, where Cairene architectural influence was sufficiently infrequent to evoke comment. Qāytbāy was exceptional in this respect, but the gang he dispatched to Jerusalem that built his *sabīl* in the Ḥaram[21] evidently did not include a specialist in dome construction, for research has shown that the dome's decoration is not fully adapted to the surface and some details were not executed, a diffidence which suggests both lack of supervision and inexperience on the workmen's part.

Construction was rapid and cheap. Oppression *(ẓulm)* was patently no bar to founding a *waqf:* the despoliation, confiscation, coercion, forced labor, and straightforward theft of which al-Maqrīzī complained all substantially reduced building costs. The recycling of material from earlier buildings, which was much decried because of the abuses to which it gave rise (even Ibn Taghrībirdī describes al-Muʾayyad's acquisitions for his funerary complex at Bāb Zuwaylah [no. 35] as "a want of good behavior and chivalry"), may not, however, invariably have involved illegality, for the materials could have come from *awqāf,* the revenues

of which were no longer adequate to keep the buildings in good repair, thereby permitting them to fall into ruin.[22]

It is generally agreed that, once the historians' stock invocation of the great arch of Ctesiphon is dismissed as a *topos,* foreign influence on Mamluk architecture in Egypt and Syria was limited to Iran and Anatolia. What about European influence, however? The Bahris, of course, were notorious for their conspicuous use of *spolia:* the doorway of the church of St. Andrew from Acre in the façade of the madrasah of al-Nāṣir Muḥammad in the Naḥḥāsīn (no. 13), or the column carved with Palestinian monuments incorporated into the façade of the mosque of Sultan Ḥasan. However, the street façade of Qalāwūn's madrasah-mausoleum-hospital (no. 8) strongly suggests that Crusader prisoners-of-war, possibly from north Syria, may have had a hand in its design. Later, features like fenestration, as in the madrasah of Uljāy al-Yūsufī (Rajab 774/January 1373) (no. 31), and moulded cornices also look startlingly European. Unfortunately, even when one can establish a chronological sequence of these developments, it is difficult to say more. Unlike Damascus, access to Cairo for much of the Mamluk period was restricted for Western travelers and merchants, the free movement of craftsmen was unpredictable, and the supply of Frankish prisoners-of-war to work on building projects after the reign of al-Nāṣir Muḥammad constantly fluctuated. Nor did Europeans necessarily build in their native styles: the two Mamluks from Oppenheim in the Palatinate who built the fortress of Qāytbāy in Alexandria (completed 1479), whom Felix Fabri met on the streets of Cairo, produced a building strongly reminiscent of fortress architecture in southern Italy.

Chapter 10 of Behrens-Abouseif's volume contains a useful Appendix by Philipp Speiser (pp. 101–5) surveying Mamluk building materials and construction methods. Considering the constant shortage of wood and the increasing shortage of marble and other building materials, the Mamluks, who relied upon techniques perfected in the Fatimid and Ayyubid periods, did well to maintain this skilled workmanship in increasingly unfavorable circumstances.

This volume is richly illustrated, and Nicholas Warner's plans and axonometric views are handsomely executed. It is, however, slightly let down by the copy-editing. The misprints are mostly benign, but it is much to be hoped that the confusion of "privy purse" with "privy" is corrected in subsequent editions.

[22] Sometimes, moreover, the ulama seem to have missed the point. When al-Ghawrī arbitrarily confiscated marbles for the decoration of his palace on the Citadel, the Baysarīyah, instead of denouncing his action out of hand, Ibn Iyās criticizes him for not using the marbles instead in his funerary foundation (no. 56) in central Cairo.

Emanations of Grace: Mystical Poems by ʿĀʾishah al-Bāʿūnīyah (d. 923/1517), edited and translated by Th. Emil Homerin (Louisville, KY: Fons Vitae, 2011). Pp. 151.

Reviewed by Richard McGregor, Vanderbilt University

The study of religious life in the Mamluk Empire has benefitted greatly over the last fifteen years from the work of Emil Homerin. His studies of the Sufi poet Ibn al-Fāriḍ (d. 632/1235), along with a number of fine translations, have illuminated the important intersection of high poetry and mysticism. The translation under review here of selections from *Fayḍ al-Faḍl wa-Jamʿ al-Shaml* (The Emanations of grace and the gathering of union) is a significant advance in our knowledge of this corner of medieval religious life. The author is ʿĀʾishah al-Bāʿūnīyah (d. 923/1517), a Syrian mystic and writer, who according to Homerin wrote more in Arabic than any other woman before the twentieth century. She was from a well-established family of scholars, most of whom spent their careers in Damascus. Several of her relatives were religious men of note; one great uncle was an ascetic, and an uncle a writer of devotional poems (p. 13). Her family were devotees of ʿAbd al-Qādir al-Jīlānī (d. 561/1166) and associated with the Qadarīyah Sufi order. ʿĀʾishah's most immediate spiritual affiliation and training were with Jamāl al-Dīn Ismāʿīl al-Ḥawwārī (d. 900/1495) and Muḥyī al-Dīn Yaḥyá al-ʿUrmawī (fl. ninth–tenth/fifteenth–sixteenth c.). The Bāʿūnī family married a number of their daughters into the leading family of Sharifan descendants of the Prophet. ʿĀʾishah's husband Aḥmad ibn Muḥammad ibn Naqīb al-Ashrāf died in 909/1503, leaving behind one daughter and one son (p.14). It was with her son ʿAbd al-Wahhāb that ʿĀʾishah travelled to Cairo, in order to support his career in administrative service. She spent only three years there, but wrote several new poems and cultivated a network of contacts with the literati of Cairo. She travelled with ʿAbd al-Wahhāb to Aleppo, where she had an audience with Sultan al-Ghawrī in 922/1516, before returning finally to Damascus.

Although her connection to Ibn al-Fāriḍ is important, and will be treated below, her poetry is distinct in its focus on praise for the prophet Muḥammad. Beyond poetry, ʿĀʾishah also composed, copied, and epitomized works on Sufi theory; she drew on the great mystics of the tradition including al-Jurjānī (d. 816/1413), al-Kalābādhī (d. 385/995), al-Sulamī (d. 412/1021), ʿUmar al-Suhrawardī (d. 632/1234), and Ibn ʿAṭā Allāh al-Iskandarī (d. 709/1309). Her acumen as a poet is well attested in her most famous work, *Fatḥ al-Mubīn fī Madḥ al-Amīn* (The Clear inspiration in praise of the trusted prophet), in which she engages the various complex schemes of verse known as *badīʿ*. Remarkably, she also composed a commentary on this work in which she refers to nearly fifty earlier poets. The manuscript history of the *Fayḍ al-Faḍl*—the collection Homerin has translated here—is murky because it

seems to have been composed and copied at various points throughout her career. Nevertheless, Homerin suggests a terminal date of 919/1513 for the collection, the point at which she left Damascus for Cairo.

Homerin presents us with forty-five short poems, and the longer *Ode in "T" (al-ṭaīyah al-Bāʿūnīyah)* at 252 verses, which is followed by a ten-page commentary entitled "Homage to Ibn al-Fāriḍ" composed by Homerin himself. A full-length study would be ideal, but this commentary serves as a very effective way of locating the two poets in relation to one another. Homerin highlights a number of passages from the *Ode in "T,"* connecting them with key texts from Ibn al-Fāriḍ's poem of the same name. Central concepts such as love of God, annihilation in the divine, spiritual submission, and poverty are examined. Parallels are also drawn between the two poets' use of devices such as wine, the drinking glass, and the seeker lost in drunkenness.

Homerin relies on both manuscript material and recently published editions of the poems (p. 10). He is currently at work on a critical Arabic edition of this material. My spot checks comparing the translations to a draft of Homerin's edition show that the care and skill displayed in these translations is consistent and impressive. Researchers in the field will benefit not only from ready access to this material, but also from the poetic sensibility captured in the translations.

Perhaps surprisingly, the same attention has not been paid to the many short subtitles that appear throughout the collection. These phrases vary in length, with some providing cues to either ʿĀʾishah's psychological state or to the circumstances in which the poems were composed. Occasionally a frame for reading is provided. For example, one poem is introduced with the following (p. 40): "From His inspiration upon her as was needed [to refute her critics]," and another (p. 45) "From His inspiration upon her as she stood before the Noble Stone (in Mecca)," and (p. 35) "From His inspiration upon her concerning the required mystical stages." The significance of these introductory (and perhaps linking?) statements should not be over-stated; the content of the poems themselves remains central. Yet Homerin's presentation does not do them justice, and they are at times awkwardly translated. The subtitle on page 35, for example, *(wa-min fatḥihi ayḍan wa-jadda al-wajdu)* appears as "Also from His inspiration, and rapture was intense." Perhaps easier on the ear would be to phrase the second half as "when the rapture was intense." On page 36, the subtitle runs, "From His inspiration upon her, and patience was gone as loving desire increased," which might better run, "Her inspiration when patience had given way to desire." The poem on page 46 is introduced by "*wa-min fatḥihi ʿalayhā thubutuhā bi-sharaf al-dhikr*," which Homerin translates, "From His inspiration upon her regarding her certainty of the nobility of recollection." While this is accurate, perhaps phrasing such as, "By inspiration of her high standing in divine remembrance" would resonate more

easily with an English reader. On page 66 the poem is introduced with, "From His inspiration upon her, indicating His blessing her with her exemplary faith," but a more felicitous phrasing would run, "From a divine inspiration blessing her as spiritual exemplar." In addition to these criticisms, the following should be addressed. Footnote 4 on page 54 is made redundant by the first footnote on page 34. Further, it would be helpful to identify the "axis al-Jīlī" as ʿAbd al-Qādir al-Jīlānī on page 127 rather than later in the text on page 139. The source cited in footnote 17 on page 16, Mājid al-Dhahabī and Ṣalāḥ al-Khiyamī, "Dīwān ʿĀʾishah al-Bāʿūnīyah" in *Turāth al-ʿArabī* 4 (1981), should be added to the bibliography. These small technical errors aside, Homerin has given us an excellent introduction to an important yet underappreciated medieval poet.

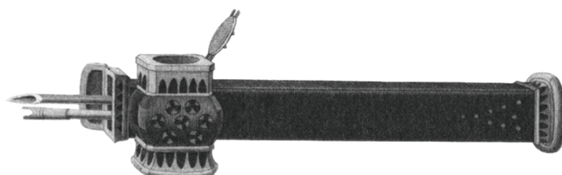
Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association–Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991): http://www.loc.gov/catdir/cpso/romanization/arabic.pdf.

ء	ʾ	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	ʿ				
		ة	h, t (in construct)			ال	al-		



ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
َا	ā	ُوّ	ūw	ِيّ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Avoid using apostrophes or single quotation marks for *ʿayn* and *hamzah*. Instead, use the Unicode characters ʿ (02BF) and ʾ (02BE).

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence or a title. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before "sun" letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as terms which are found in English dictionaries, such as Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES REVIEW

PUBLISHED BY THE MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). Since volume XIII, no. 1, *Mamlūk Studies Review* has been published not in conventional print format, but as an open-access online publication. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress (see the conversion chart near the end of this volume) using a Unicode font that contains all necessary diacritical marks (see the website below for further information). Submissions may be made via email, but authors may be required to send a printed copy and/or a CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Please contact the editor (ideally before creating the files) for specifications relevant to illustrations, photos, maps and other graphics. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://guides.lib.uchicago.edu/mideast and http://mamluk.uchicago.edu. These sites provide links to back issues of this journal, The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, The Chicago Online Encyclopedia of Mamluk Studies, and other Mamluk Studies resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

E-ISSN 1947-2404

The logo that appears on the cover and title page was created by John E. Woods.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig
Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2011 Prize, dissertations must be defended by December 31, 2011, and submitted to the Prize Committee by January 31, 2012. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

Previous Prize Winners:
2004: Tamer el-Leithy, Princeton University, "Coptic Culture and Conversion in Medieval Cairo: 1293-1524."

2005: Zayde G. Antrim, Harvard University, "Place and Belonging in Medieval Syria, 6th/12th to 8th/14th Centuries."

2006: Nahyan A. G. Fancy, University of Notre Dame, "Pulmonary Transit and Bodily Resurrection: The Interaction of Medicine, Philosophy and Religion in the Works of Ibn al-Nafīs (d. 1288)."

2007: No prize was awarded.

2008: No prize was awarded.

2009: No prize was awarded.

2010: No prize was awarded.

Sending Home for Mom and Dad: The Extended Family Impulse in Mamluk Politics

With the exception of references to harem politics or marriage ties, scholars rarely spend much time discussing biological family in connection with the Mamluks, as the concept seems incompatible with the system of imported young slaves and the significance ascribed to surrogate familial relationships as the basis for political allegiance. Yet ideas about biological family may have mattered far more to individual mamluks than scholars currently acknowledge. An examination of the concept of biological family reveals two distinct types of biological relatives: first, biological offspring, particularly males, and second, the existing biological family every mamluk left behind in the old country.

The topic of male biological offspring has attracted plenty of scholarly attention, primarily because it is through sons that men attempt to establish dynasties. Scholars have investigated the importance of sultans' sons in Mamluk society, and their assessments of the relevance, or lack thereof, of the concept of dynasty in the Mamluk world can be divided into two general camps. The arguments made by one side of the discussion read as follows: scholars suggest that the desire of a sultan to form a dynasty by leaving his position to a biological son was inimical to the Mamluk system itself, with its hallmark one-generation aristocracy, its systematic political disenfranchisement of the children of mamluks (the *awlād al-nās*), and the ties of loyalty created among mamluks and their patrons or masters, which replaced biological ties. In this view, the Mamluk system was one in which the position of sultan passed primarily from mamluk to mamluk through factional maneuvering or struggle. Although the biological sons of sultans did inherit their father's positions, everyone, including the dying sultan and the son himself, knew that the son was functioning as a placeholder, since real power would then be assumed by one or even multiple commanders, either covertly, in which case the nominal sultan remained as a figurehead, or overtly, in which case the nominal sultan was deposed.[1]

This article was first presented in Chicago, Illinois, at the International Conference on Mamluk Politics, April 13–15, 2007. I thank John Meloy for reading the paper for me there.
[1] Amalia Levanoni, "The Mamluk Conception of the Sultanate," *International Journal of Middle East Studies* 26 (1994): 373–74, 377–83, 385; idem, "The Sultan's *Laqab*—A Sign of a New Order in Mamluk Factionalism?" in *The Mamluks in Egyptian Politics and Society,* ed. Amalia Levanoni and Michael Winter (Leiden and Boston, 2004), 113; idem, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad Ibn Qalāwūn (1310–1341)* (Leiden, 1995), 114–17; and also Robert Irwin, "Factions in Medieval Egypt," *Journal of the Royal Asiatic Society* (1986): 232,

By contrast, other scholars have suggested that the Mamluk sultans were serious in trying to establish dynasties and thus made real efforts to set up their biological sons to take over after them.[2] Unfortunately for these nascent dynasties, however, the older, wiser, and more experienced mamluk colleagues of the dying sultan tended to thwart these attempts, which often relegated the son to the abovementioned position as placeholder. This latter assessment can be related to three major time periods: first, the initial fifty-odd years of the sultanate when the impulse to establish dynasties was particularly strong; second, the eighth/fourteenth century when the Qalāwūnid dynasty lasted for decades, although only a few Qalāwūnids held any real power; and third, the Circassian period beginning in the late eighth/fourteenth century and continuing throughout the ninth/fifteenth centuries, during which the impulse to form dynasties faded over time and ultimately died.[3]

Of these two schools of thought on what could be called the Dynastic Impulse, I myself follow the latter (i.e., the one arguing for a general interest in forming dynasties among Mamluk sultans). I base this choice on the evidence provided both by the specific actions of individual sultans such as Baybars (r. 658–76/1260–77), Qalāwūn (r. 678–89/1279–90), Khalīl (r. 689–93/1290–93), Shaʿbān (r. 764–78/1363–77), and Shaykh (r. 814–24/1412–21), among others, and on the ideas about dynasty they expressed to external rulers through diplomacy.[4] The primary

237–38. For the suggestion that non-hereditary succession was the rule and Qalāwūnid dynasty was an anomaly, see: Robert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250–1382* (Carbondale, 1986), 156–57, also 127, 132, 134, 144, 149; P. M. Holt, "Succession in the Early Mamluk Sultanate," *Deutscher Orientalistentag* 23 (Stuttgart, 1989), 146–47; idem, "The Structure of Government in the Mamluk Sultanate," in *The Eastern Mediterranean Lands in the Period of the Crusades,* ed. P. M. Holt (Warminster, 1977), 46; idem, "Mamlūks," in *The Encyclopaedia of Islam,* 2nd ed., 6:323–24; and idem, "The Position and Power of the Mamluk Sultan," *Bulletin of the School of Oriental and African Studies* 38 (1975): 239–41.

[2] See David Ayalon, "From Ayyūbids to Mamlūks," *Revue des Etudes islamiques* 49 (1981): 55–56, reprinted in his *Islam and the Abode of War* (London, 1994); also idem, "Mamlūk Military Aristocracy—A Non-Hereditary Nobility," *Jerusalem Studies in Arabic and Islam* 10 (1987): 209, reprinted in *Abode of War;* also idem, "Studies on the Structure of the Mamluk Army—II," *BSOAS* 15, nos. 2 and 3; 16, no. 1 (1953–54): 208, reprinted in his *Studies on the Mamluks of Egypt* (London, 1977); and idem, "The Circassians in the Mamluk Kingdom," *Journal of the American Oriental Society* 69, no. 3 (1949): 145–46, reprinted in his *Studies on the Mamluks of Egypt*. Note that Ayalon believed the Mamluks gave up the hereditary principle for the sultanate by the Circassian period; see references in footnote 3 below. Also see Linda Northrup on Qalāwūn, *From Slave to Sultan: The Career of al-Mansur Qalāwūn and the Consolidation of Mamluk Rule in Egypt and Syria (678–689 A. H./1279–1290 A.D.)* (Stuttgart, 1998), 243–49.

argument in favor of the existence of a Dynastic Impulse, I would contend, lies not in the lived reality of political power (whether a son managed to hold on as sultan), but in the intention of the dying monarch. Whether a designated successor succeeded or failed to retain power was ultimately less important than what the outgoing sultan was trying to achieve. I therefore consider the most significant aspect of this Dynastic Impulse to be the attempt by high-ranking mamluks to create a network of support based on a family conservatively defined by biology, not on a surrogate family of other mamluks. I hope soon to compose a longer study of the topic of the Dynastic Impulse and to explore these questions further there.

In addition there is a lesser-known phenomenon, closely related to the Dynastic Impulse, which supports my contention that biological relations mattered more to the Mamluks than scholars tend to acknowledge, but which is almost invariably passed over in favor of the topic of dynasty. This related topic is a mamluk's interest in reconnecting with those long-lost relatives he left behind when starting his career. I call this the Extended Family Impulse, and see it as evidence of a larger, general Mamluk interest in biological relations. The remainder of this article will suggest that the Extended Family Impulse appeared when, for personal and political gain, some mamluks attempted to reconnect with the biological families they had been forced to abandon. This phenomenon appeared most frequently as part of Mamluk success stories, in which certain commanders reached high political, military, and economic levels, and often had ambitions for the position of sultan. Then suddenly they sent home to the old country and brought their parents, siblings, cousins, nephews, nieces, and anyone else they could find to Cairo. Once the relatives arrived the Mamluk commanders found jobs for the men, usually somewhere in the military. The extent of the power these relatives held varied greatly: in some cases their careers were undistinguished, but in a few cases they attained considerable influence in Mamluk society and played important roles in major historical events.

This article will explore the Extended Family Impulse by looking at three case studies of successful men whose long-lost relatives joined them in Cairo at high points of their careers. First is the commander Salār (d. 710/1310), who was one of two men to control the sultanate throughout the second reign of al-Nāṣir Muḥammad in the early 700s/1300s. The second is Yalbughā al-Yaḥyāwī (d. 748/1347), a great favorite of al-Nāṣir Muḥammad during the 730s/1330s, who held several governorates in Syria after Muḥammad's death, and rebelled twice against Muḥammad's sons, once successfully, once not. Third is the commander and then sultan Barqūq (d. 801/1399), whose implementation of the Extended Family Impulse was the most visible and successful of all three, and the most clearly connected to the concept of Dynastic Impulse, at least until the invader Temür (d. 807/1405) entered the picture and helped destroy Barqūq's forming Ẓāhirī dynasty. The article will present

each man's career in brief, discuss the timing of his relatives' arrival in Cairo and the careers they achieved, and outline the ultimate fate of each family. Thereafter I will draw some larger conclusions about these three cases, about the concept of the Extended Family Impulse, and about the Mamluk interest in biological relations in general.

Salār

The first case was the commander Sayf al-Din Salār, who was either an Oirat or, less likely, a Turk, acquired as a mamluk for the commander and later sultan al-Manṣūr Qalāwūn after the battle of Abulustayn in 675/1277.[5] Initially Salār worked for Qalāwūn's son and first heir, al-Ṣāliḥ ʿAlī; then after ʿAlī's death from illness in Shaʿbān 687/September 1288, he ascended through the ranks of commanders during the reigns of al-Ashraf Khalīl (r. 689–93/1290–93) and al-Manṣūr Lājīn (r. 696–98/1296–99). Salār encouraged the overthrow of Lājīn in Rabīʿ II 698/January 1299, then rose to prominence along with another well-known commander, Baybars al-Jashnakīr. The two men led rival factions, which allowed them together to marshal broad support and control the sultanate throughout the second reign of al-Nāṣir Muḥammad (second r. 698–708/1299–1309) with Salār as the vicegerent *(nāʾib)* and Baybars as the high steward *(ustādār)*.[6] Then in 704/1304–5, Salār's daughter married the amir Mūsá, who was the only son of Salār's former Qalāwūnid master, al-Ṣāliḥ ʿAlī. The lavish wedding included a grand public procession, in which all the important commanders participated.[7] This match, and the festivities that accompanied it, demonstrated how well Salār had done for himself politically, socially, and financially in Mamluk society.

A few years later in 708–9/1308–9, however, the situation changed when al-Nāṣir Muḥammad rebelled against his two jailers, withdrew to the desert stronghold of Karak, and reestablished himself from there with Syrian support. His success spelled doom for Baybars and Salār. First to fall was Baybars, who had become sultan in Muḥammad's absence, and who therefore fled when Muḥammad arrived outside Cairo. After reinstatement, Muḥammad had Baybars hunted down, brought back to Cairo, and strangled in his presence.[8] Salār lasted slightly longer. He cooperated with Muḥammad at first by letting him in to the citadel, and promptly stepped down as vicegerent. Later Muḥammad granted Salār's petition for a transfer to the

desert fort of Shawbak in late 709/spring 1310, but this return to the sultan's good graces proved to be temporary. A few months later in Rabīʿ I–II 710/August 1310 Muḥammad had Salār forced back to Cairo. There he was tortured to reveal the location of his wealth and imprisoned in the citadel, where he died of starvation in particularly horrible fashion.[9]

Salār's story is not instructive because of his political rise and fall, since this, although dramatic, was unremarkable. Rather, Salār's career is interesting in the way it illustrates the Extended Family Impulse. Although Salār began his career as a mamluk after the battle of Abulustayn, and although mamluks are assumed to lose all ties to family upon the commencement of their careers, Salār had biological brothers, whom he left behind in Anatolia when he went to Egypt to work for al-Ṣāliḥ ʿAlī. During those many years in Egypt when Salār rose from a mamluk to a commander to the position of vicegerent, he had no contact with the relatives he had left behind.[10]

But he must either have wanted contact all along and been unable to establish it, or developed an interest in seeing his family again once he had achieved success, because eventually Salār felt confident enough to send messengers to Anatolia to find his family and invite them to Mamluk territory. The first contact took place during the reign of the Ilkhanid ruler Ghazan (r. 694–703/1295–1304), but it was not until after Ghazan's death in spring 703/1304 that Salār's relatives could make a surreptitious departure from Ilkhanid territory. Then in late fall 704/1304 two of Salār's brothers, Fakhr al-Dīn Dāwūd and Sayf al-Dīn Jabā, along with Salār's mother and about 200 other Mongol men and their families, arrived in Mamluk territory from Anatolia.[11] Salār also had at least one other brother, Samūk, who appears as a commander of unknown rank in the Mamluk forces, but there is no

reference to his arrival in the sultanate. Did he arrive with Dāwūd, Jabā, and their mother, or did he enter the sultanate as a mamluk like Salār?[12] We do not know.

Salār was apparently overjoyed to see his siblings and mother, as he had not laid eyes on them since the battle of Abulustayn nearly thirty years earlier. He celebrated the occasion by having his brothers appointed *ṭablakhānah* commanders, or second-tier commanders rating their own military bands, and by building a house for his mother.[13] It is reasonable to assume that the family members enjoyed places of honor at the wedding of Salār's daughter to Amir Mūsá later that year, although the sources do not specify where they sat at the banquet or note the brothers' place in the grand public procession.[14]

After this initial flurry of excitement, the trajectory of the brothers' careers is difficult to discern, since the histories only occasionally refer to Dāwūd, Jabā, and Samūk. When they do, however, the brothers are always involved in Salār's endeavors. In 707/1307–8, for example, al-Nāṣir Muḥammad was trying to rebel against Salār and Baybars. At one point many of the commanders loyal to Salār and Baybars were armed, mounted, and ready, waiting outside the citadel for signs of action. All three of Salār's brothers were among them, watching the door through which Muḥammad and his mamluks might come. After a number of hours some of Muḥammad's mamluks emerged to skirmish with the commanders, which caused Samūk to shoot an arrow that hit the frame of a citadel window in which Muḥammad was sitting (apparently to the great consternation of the sultan).[15] Next the populace appeared and began to berate the commanders, and the same brother, Samūk, had to be restrained from attacking in retaliation.[16] Ultimately the standoff was settled through negotiation, not violence, but the presence of all of Salār's brothers among the commanders at such a tense time shows their real connection to Salār's affairs.

Then in Jumādá II 709/November–December 1309, when al-Nāṣir Muḥammad was camped at Gaza with the Syrian forces preparing to march on Egypt, and important commanders were defecting to him from Cairo, Salār sent out a force to

[12] He appears only in brief text references, with no background given. See al-Nuwayrī, *Nihāyah,* 32:127; al-ʿAynī, *ʿIqd,* 4:427; al-Maqrīzī, *Sulūk,* 2:34, 35, 60, 86.

[14] Baybars al-Manṣūrī, *Zubdah,* 382; al-Maqrīzī, *Sulūk,* 2:9.

[15] Al-Nuwayrī, *Nihāyah,* 32:127–128, mentioning the "brothers" *(ikhwah)* but only Samūk by name; al-ʿAynī, *ʿIqd,* 4:427 (albeit in 1306–7/706, citing Ibn Kathīr and mentioning all three brothers by name); Ismāʿīl Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah fī al-Tārīkh,* ed. Maktab Taḥqīq al-Turāth (Beirut, 1993), 14:50, albeit without mentioning the brothers—clearly a different version from the one al-ʿAynī was citing; al-Maqrīzī, *Sulūk,* 2:34–35.

[16] Al-Maqrīzī, *Sulūk,* 2:34–35.

pursue the defectors. This was composed of some of the commanders with their men, as well as Salār's own force of five hundred mamluks. Of the two leaders Salār appointed to this detachment, one was his brother Samūk.[17] Although Samūk did not manage to apprehend the defectors, the fact that Samūk participated in a campaign as important as this on Salār's behalf suggests that neither Salār's brothers nor Salār himself saw their posts as nepotistic sinecures.

But the brothers' connections to Salār carried a price, since Salār's relatives also participated in his misfortune. When in 709/1310 the newly reinstated al-Nāṣir Muḥammad permitted Salār to go to Shawbak, the sultan also sent Salār's brother Jabā to Aleppo.[18] But shortly thereafter when Muḥammad had Salār arrested, he also had all three of Salār's brothers detained, along with others of Salār's companions.[19] Unlike Salār, however, some of these prisoners were fed while incarcerated, since at least two of the brothers, Dāwūd and Jabā, remained alive in prison until they were freed in 715/1315–16 (we do not know the fate of Samūk). Only Salār's mother appears to have suffered nearly as much as her son, as she herself died only a few days after he did; although since there is no evidence that she was imprisoned and starved as well, it seems more likely that she perished of grief.[20]

Yalbughā

The second case is Yalbughā al-Yaḥyāwī, who was one of the Khāṣṣakīyah commanders (i.e., in the personal retinue) for al-Nāṣir Muḥammad.[21] Unfortunately the sources provide not a word about his origins—not the chronicles, not the biographical dictionaries, nothing. Rather he appears to have sprung, fully-formed, out of the pages of the histories in the late 730s/1330s. By this point he was very close to the sultan—in fact, one author claims that Yalbughā was one of if not the closest of Muḥammad's personal retinue to him.[22] Certainly signs of Muḥammad's favor towards Yalbughā were clear: in 738/1337–38 Muḥammad built a house and stable complex for Yalbughā below the citadel, even though it meant taking property away from other commanders.[23] On another occasion when Yalbughā fell seriously

[17] The other was one Qutuz al-Fāriqānī. Al-Maqrīzī, *Sulūk,* 2:60.

[18] He and other commanders were sent out via Damascus, then when they reached Aleppo the *ṭablakhānah* commanders were ordered to stay there for a full year, while the commanders of ten were recalled. Al-Maqrīzī, *Sulūk,* 2:76–77.

[19] Al-Maqrīzī, *Sulūk,* 2:86.

[20] Ibid., 2:88–8, 144.

[21] Al-Ṣafadī, *Aʿyān,* 5:585.

[22] Ibid.

[23] See al-Shujāʿī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Ṣāliḥī wa-Awlādihi,* ed. Barbara Schaefer (Wiesbaden, 1977), 25, saying only that the dispossessed was the commander Aydughmish and unnamed others; he also put the cost at forty million silver coins. Al-Maqrīzī says that Muḥammad built another house at the same time for the favored commander Altunbughā al-

ill and seemed near death, Muḥammad demonstrated his devotion by personally nursing him, refusing to leave the sickbed and neglecting other important duties until Yalbughā recovered.[24] Muḥammad celebrated Yalbughā's return to health by throwing a great party, paying off 30,000 silver coins worth of debt for debtors, freeing one lucky political prisoner, and giving Yalbughā lavish presents as a "welcome back" gesture.[25] Nor was this generosity towards Yalbughā unusual, since Muḥammad routinely showered him with quantities of gifts, cash, robes of honor, and horses.[26]

After Muḥammad's death Yalbughā remained in favor for several years. First he requested and received the governorate of Hama from the sultan al-Ṣāliḥ Ismāʿīl (r. 743–46/1342–45) in 743/1342–43.[27] Thereafter he was promoted to governor of Aleppo in summer 744/1343, then governor of all Syria at Damascus in fall 746/1345.[28] Although his next move was to rebel in Damascus against Ismāʿīl's successor, the sultan al-Kāmil Shaʿbān (r. 746–47/1345–46), this turned out to be a shrewd decision, since his feelings were widely shared, and ultimately the Egyptian commanders replaced Shaʿbān with al-Muẓaffar Ḥājjī (r. 747–48/1346–47) in autumn 747/1346.[29]

Māridānī, and adds as dispossessed the commanders Qawsun and Tashtamur al-Sāqī. Al-Maqrīzī, *Sulūk,* 2:438–39.

[24] Information about the event is scanty, and the dating is tricky. In his biography for Yalbughā, al-Ṣafadī claims that Muḥammad refused to go see his own son Ibrāhīm—ill with smallpox—while Yalbughā was sick; even when Ibrāhīm died, Muḥammad skipped the funeral in order to stay with the commander. In his biography for Ibrāhīm, however, al-Ṣafadī does not mention Yalbughā at all, but rather simply claims that Muḥammad refused to visit his son or let his other children visit, which implies that the isolation was motivated by fear of disease. Al-Ṣafadī, *Aʿyān,* 5:591–92 (Yalbughā's biography) and 1:120 (Ibrāhīm's biography). Since Ibrāhīm died in 1337–38/738, this would place Yalbughā's illness in that same year. By contrast, al-Maqrīzī puts Yalbughā's illness in 1339–40/740, does not mention Ibrāhīm, and instead claims that Muḥammad failed to go to the Palace of Justice (Dār al-ʿAdl) while Yalbughā was sick. Al-Maqrīzī also credits Yalbughā with taking the opportunity of his illness to convince Muḥammad to dismiss the extortionist financial official al-Nashw, despite al-Nashw's great influence and position in Muḥammad's administration. Al-Maqrīzī, *Sulūk,* 2:477, 490. (For al-Nashw, dismissed in 1339/740, see Levanoni, *Turning Point*, 149–55.) Regardless, both authors manage to suggest that Yalbughā's health was of great importance to Muḥammad.

[25] Al-Maqrīzī, *Sulūk,* 2:491.

Muḥammad Kamāl ʿIzz al-Dīn ʿAlī (Beirut, 1985), 185–86; see also Irwin, *Mamluk Sultanate,* 133–34.

Although Ḥājjī confirmed Yalbughā as governor of Syria, some months later Yalbughā became uneasy about the sultan's pattern of arresting commanders.[30] He therefore rebelled again in early 748/spring 1347, but this time less successfully, since Ḥājjī had indeed called for his arrest.[31] Yalbughā therefore fled north from Damascus with his entourage, hoping to reach the area around Tabriz in former Ilkhanid territory.[32] But his flight was a failure because the Bedouin of the region harassed him mercilessly, while the Syrian forces raced after him so closely that he was forced to abandon many of his supplies. After only a few days of this Yalbughā and his companions surrendered to the governor of Hama, who imprisoned some of them and sent Yalbughā and a few others to Cairo. Yalbughā did not make it to Egypt alive; he was intercepted and beheaded at Qāqūn in autumn 748/1347 by its governor, Manjak, who kept the body and forwarded only the head to the central authority.[33]

As in the case of Salār, it is not Yalbughā's political rise and fall that is of interest, but rather the way his actions during the successful portion of his career allowed him to exercise the Extended Family Impulse. Although the beginning of Yalbughā's story is obscure, certainly by the time Muḥammad's favor for him became apparent in the late 730s/1330s Yalbughā was in a position to find a place in Mamluk territory for the family he had left behind in his homeland, wherever it was. It is unclear who first contacted whom. Some historians say that Yalbughā sent for his father, mother, and two brothers, while others say that Yalbughā's family heard of his success and volunteered to emigrate.[34] Either way, Yalbughā's relatives eventually joined him in Cairo in a reunion that was joyous all around and financially fruitful for Yalbughā's kin. Muḥammad made Yalbughā's father, one Tabata or Tabuta, a *ṭablakhānah* commander in Cairo in Jumādá II 739/January 1339.[35]

[30] Al-Ṣafadī, *Aʿyān,* 5:587–88.

[31] Ibid., 5:588; al-Maqrīzī, *Sulūk,* 2:732–33.

[32] ʿUmar Ibn al-Wardī, *Tārīkh Ibn al-Wardī,* ed. Muḥammad Mahdī al-Sayyid Ḥasan al-Khurāsānī (Najaf, 1969), 2:494, says unspecifically that Yalbughā fled to the Mongols, which could mean the Chobanids or the Jalayirids in the Ilkhanid heartland or even, perhaps, the Uyghur Eretna in Anatolia. Ibn Kathīr, *Bidāyah,* 14:257, specifies a route that headed towards the Caucasus, not Anatolia (from Damascus towards al-Qaryatayn in the Syrian desert), which narrows it to the Chobanids or the Jalayirids. Al-Maqrīzī, *Sulūk,* 2:733, specifies that a report of Yalbughā's intention places the Chobanids as his goal.

[33] Al-Ṣafadī, *Aʿyān,* 5:588–90.

[34] For the argument that Yalbughā brought his family see Ibn al-Wardī, *Tārīkh*, 2:495, Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʿda al-Wāfī*, ed. Muḥammad Muḥammad Amīn and Saʿīd ʿĀshūr (Cairo, 1984–), 6:358; for the suggestion that they volunteered to come see al-Ṣafadī, *Aʿyān,* 2:563; Aḥmad Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Akhbār al-Miʾah al-Thāminah* (Beirut: 1993), 2:213.

[35] Al-Shujāʿī, *Tārīkh,* 45.

Later, once Yalbughā was established as governor of Aleppo, Tabuta became a commander of one hundred—the highest rank—in Aleppo, while Yalbughā's two brothers, Asandamur and Qarakuz, each became *ṭablakhānah* commanders as well, as did an unidentified male relative and Yalbughā's oldest son, Amir Muḥammad, even though this last was only a child.[36] Thereafter the entire family accompanied Yalbughā to Damascus when he was transferred, where his father received a new position (it is unclear whether his brothers did as well, or just held their old ones in Aleppo in absentia).[37]

Like Salār's family, Yalbughā's relatives shared in his misfortune: they joined him in his flight from Mamluk territory and were arrested with him by the governor of Hama. Yalbughā's father was even put in chains like his son and sent towards Egypt. But also as in Salār's case, the relatives did not suffer as much as the recalcitrant commander. When Yalbughā and his father reached Qāqūn, therefore, they were separated, with Tabuta going on first to Cairo and then to a three-month stint in prison in Alexandria, while Yalbughā's journey ended with his death in Qāqūn itself.[38]

Barqūq

The third and final case involves the best known man of all three: the commander and then sultan Barqūq, who ruled in two nearly-consecutive reigns at the end of the eighth/fourteenth century (r. 784–91/1382–89, 792–801/1390–99). Barqūq was a Circassian mamluk from a commander's household, not the sultan's household, but despite this handicap he managed to become the strongest person in the sultanate by 782/1380. In 784/1382 Barqūq had enough support to depose the reigning Qalāwūnid sultan, al-Ṣāliḥ Ḥājjī (r. 783–84/1381–84), and become sultan himself, with the regnal title of al-Ẓāhir. Barqūq weathered the storms of factional struggle within the sultanate until 791/1389, when he was forced out by rebel commanders coming from Syria with the support of Anatolian Turkmen. Although the rebels reached Cairo, captured Barqūq, and imprisoned him in Karak, Barqūq managed to reinstate himself as sultan by Ṣafar 792/February 1390. He deposed Ḥājjī again, and had his chief rival, a commander named Mintash, hunted down and killed. Barqūq then took the precaution of replacing many powerful commanders in Egypt and Syria with his own men, and thus enjoyed a strong grip on the sultanate until his death in Shawwāl 801/June 1399.[39]

Even more clearly than Salār and Yalbughā, Barqūq displayed a distinct interest in biological family. Evidence of this is found in the lengths to which he went to

[36] Al-Ṣafadī, *Aʿyān,* 5:587, 591; 2:563.

[37] Al-Ṣafadī, *Aʿyān,* 2:563.

[38] Al-Ṣafadī, *Aʿyān,* 2:563–64.

[39] For an outline of Barqūq's rise to power see Holt, *Age of the Crusades,* 127–29.

establish his sons as his heirs and surround them with family, which suggests his invocation of the Dynastic Impulse.[40] In addition, in a clear case of the Extended Family Impulse, he exhibited an urge to reconnect with the biological family he had left behind when he entered the sultanate. This impulse appeared almost immediately after he took control in 782/1380, when he sent home to Circassia and summoned what appears to have been all of his surviving relatives to Cairo. They came in considerable numbers and were escorted by the same slave trader, Khwājā ʿUthmān ibn Musāfir, who had originally brought Barqūq himself to Egypt.[41] The delegation included Barqūq's elderly father, Anaṣ; at least two of Barqūq's sisters, one older than the sultan and one younger; and several of Barqūq's nephews, as well as assorted additional relatives whose precise relationships to Barqūq are unknown.[42]

The welcome that the delegation received was a public one, and it displayed a level of ceremony typically reserved for high-ranking members of the Mamluk administration, or for the most important foreign ambassadors. This set the tone for how Barqūq wanted the other Mamluk officers to view his family, and by extension himself. The focus of attention was Anaṣ, the patriarch, whom Barqūq met outside Cairo with an escort of all the Mamluk forces, dressed in their finest. After Barqūq greeted his father he conducted him to a tent that he had had set up, and seated Anaṣ in the highest place within it in the company of several important commanders. Since Barqūq at this point was still only a commander himself and not yet sultan, and perhaps in order to show respect to his father, he sat below Anaṣ as they all conversed (Anaṣ probably through a translator) and enjoyed a meal of fish, fruit, and sweets, which Barqūq had ordered for the occasion.[43] It is unclear where the rest of Barqūq's relatives were during this—perhaps they also entered the tent, or perhaps they were seated nearby in suitable accommodations. Regardless, thereafter everyone rested for a few hours, then rode into the city in a grand procession through streets lighted with candles, in front of the assembled population, which had turned out to witness the spectacle. Thereafter Anaṣ (and the rest of the party) arrived at their lodgings, at which point the Qalāwūnid sultan Ḥājjī gave Anaṣ a position as commander of one hundred, the highest of the commander ranks.[44]

---

[40] Ibid., 178–79. I hope to address this example more fully in my upcoming article on the Dynastic Impulse.

[41] Ibn Taghrībirdī, *Manhal,* 3:105; see also Ayalon, *L'Esclavage du Mamelouk* (Jerusalem, 1951), 2.

[42] Ibn Taghrībirdī, *Manhal,* 6:112; 3:105; 3:482.

[43] It is a mystery why Barqūq chose to serve his father fish, since this was not a part of Circassian cuisine. Perhaps he wanted the novelty? For Circassian food in general see Amjad Jaimoukha, *The Circassians: A Handbook* (New York, 2001), 190.

[44] Ibn Taghrībirdī, *Manhal,* 3:105–6.

Unfortunately for Barqūq, if he had intended his father to play any real political role in the sultanate, this hope was dashed by his father's death of old age within a year of his arrival—one historian mentions that Anaṣ did not live to see his son become sultan.[45] Barqūq's luck was better with his younger relatives, among them a nephew, Baybars, son of Barqūq's younger sister, and a nephew or great-nephew, Sūdūn, son or grandson of Barqūq's older sister.[46] Both boys were raised in the Royal Harem with Barqūq's sons until they were old enough for Barqūq to take their training in hand personally. Barqūq started Baybars as a commander of 10.[47] When Barqūq was ousted in 791/1389 Baybars was arrested for his loyalty to his uncle, but was then freed as Barqūq made his comeback.[48] Later, when Barqūq led the Mamluk armies to Syria to hold off the invader Temür in 796/1394, he not only took Baybars with him, but honored him by assigning him to the vanguard sent to Aleppo, which seemed to be where Temür was most likely to attack.[49] Before his death in 801/1399 Barqūq made Baybars lord of the audience *(amīr majlis),* and then secretary of state *(dawādār),* both of which were among the highest offices for commanders.[50] Barqūq also granted Sūdūn a series of (unspecified) military posts until he became a commander of one hundred in Egypt in Ṣafar 800/October 1397.[51]

Perhaps because of the excellent foundation their uncle had given them, neither man's career suffered after Barqūq's death. Their cousin Faraj took over immediately as sultan. But since he was too young at the time to assert himself, he was advised by a collection of commanders, one of whom was his cousin Baybars, who remained secretary of state *(dawādār).* During Faraj's early reign Sūdūn was promoted to master of the royal stables *(amīr akhūr),* but was removed from office on charges of rebellion and sent to prison in Alexandria for a few months. Upon his return to Cairo, however, he was reinstated and even promoted to senior secretary of state *(dawādār kabīr),* replacing his cousin Baybars, who had become chief military commander *(atābak).*[52] Shortly thereafter Sūdūn became governor of

Syria, another strong position and one normally limited to mamluks, not their relatives. He held this post until he was killed in Temür's invasion of Syria in Rajab 803/February–March 1401.[53] Thereafter only Baybars remained as a major player in Mamluk politics until 1405–6/808, when he found himself caught opposing his ousted cousin Faraj. When Faraj made his comeback Baybars fought him as a representative of the new sultan, Faraj's younger brother ʿAbd al-ʿAzīz, but he did so only halfheartedly. Perhaps as a result Baybars was captured and sent to Alexandria, where he died.[54]

Those were the case studies; now, the conclusions. The first conclusion concerns the Mamluk system. As we know, this allowed for many possible personal relationships and their corresponding emotional connections, whether between or among mamluks, between patrons and clients, and among biologically unrelated members of the same household. Nevertheless this variety of relationships among unrelated members of the military elite did not always completely replace relations with biological families—at least, not in the minds of all mamluks. Instead, many manifested a desire to reunite with their biological families by sending back for them and then incorporating them into political networks in Egypt and Syria. The three case studies presented here represent particularly successful and visible examples of this Extended Family Impulse, but other important mamluks sought out their kin as well. Similarly, lower-ranking mamluks may well have had these impulses, but we do not know whether they were able to implement them.

A few examples should demonstrate the popularity of bringing family from home. One example from the 750s/1350s is the governor of Aleppo, Arghun al-Kāmilī, whose brothers and relatives had come from "home" and been appointed commanders *(. . . kāna li-arbaʿah min ikhwatihi al-qādimīn min al-bilād wa-aqāribihi arbaʿah imrāt)*.[55] Another is the commander Ṭāz (d. 763/1362), lord of the audience *(amīr majlis)* and a major figure during the reigns of al-Muẓaffar Ḥājjī and al-Nāṣir Ḥasan (r. 748–52/1347–51), whose father, Quṭghāj, and brother, Jarkas, came from the "lands of the Turks ([?] *bilād al-turk*) to Cairo in 752/1351–52. Quṭghāj then headed back home to bring the rest of the family to Egypt.[56] In the Circassian period, the commander and then sultan al-Ẓāhir Barsbāy (r. 825–41/1422–38)

[53] Ibn Taghrībirdī, *Manhal,* 6:113–15; see also Broadbridge, *Kingship and Ideology,* 190.

[54] Ibn Taghrībirdī, *Manhal,* 3:482.

[55] Unfortunately we do not know any details about these positions. Al-Maqrīzī, *Sulūk,* 2:895.

[56] He died on the way and was buried in Maʿarrah, where the governor of Aleppo built a tomb for him. Later Jarkas died and was interred in the same tomb; thereafter Ṭāz transferred both men's bodies to Cairo and constructed a new tomb for them there. The sources do not record whether the rest of the family ever arrived in Egypt. Al-Maqrīzī, *Sulūk,* 2:886–87. For Ṭāz see al-Ṣafadī, *Aʿyān,* 2:567–71. See also al-Maqrīzī, *Sulūk,* 2:892, for the betrothal of an unnamed brother of Ṭāz, and al-Ṣafadī, *Aʿyān,* for the troubles of yet another brother, Jartamur (?).

brought relatives to Cairo from Circassia, two of whom—his elder brother Yashbak and another relative named Jānim—became commanders of one hundred.[57]

Other mamluks clearly had family with them in Cairo, but we have no record of their arrival. One example from the 730s/1330s is the mamluk Almās (or Ulmās) the chamberlain *(ḥājib),* one of al-Nāṣir Muḥammad's inner circle, who fell precipitously from favor and was executed in 734/1333, along with his brother, a commander of unknown rank named Qarā.[58] The death of their third brother, Mughulṭāy, who was known for building a mosque in Cairo, is unrecorded.[59] Apparently the family also included other relatives, but these were sent to Syria and "dispersed" *(ukhrija aqāribuhu ilá al-shām wa-furriqū)* at the time of Almās's disgrace; thereafter only one, Shaʿbān, appears in the historical sources when he was freed from prison in 740/1339–40.[60] Similarly, Baybughā Arūs (d. 754/1354), vicegerent during the first reign of al-Nāṣir Ḥasan, made his brother Manjak *(akhuhu Manjak)* vizier and their careers intertwined significantly, but we do not know how or when Manjak came to Mamluk territory.[61]

Amalia Levanoni has collected numerous examples of the Extended Family Impulse among Circassian commanders.[62] She suggests that the Circassian cultural practice of the *ataliqate,* or the fostering of children with other families, may have contributed to this phenomenon among Circassian mamluks in particular.[63] As the case studies and examples here show, however, this impulse was not restricted to Circassians, since any successful mamluk could employ it, and many did. Despite the prevalent expression of the Extended Family Impulse, a word of warning is in order. Although it is usually clear in the sources when commanders brought relatives from home, discerning the status of commanders' brothers inside the sultanate is a far more complicated matter. Most recently Jo Van Steenbergen has cautioned

[61] See al-Ṣafadī, *Aʿyān,* 2:87; 2:532–33; 5:440. In all of these, the two are not described as being like brothers *(mithl),* but just as brothers.

[62] I reproduce here footnote 122 from Levanoni, "Sultan's *Laqab*," 104, which directs the rea - er to the following additional examples: Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. Muḥammad Kamāl al-Dīn ʿIzz al-Dīn (Cairo, 1990), 2:476; Muḥammad Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr* (Cairo, 1982–84), 2:309, 319, 367, 369, 423, 430, 469; 3:104, 107, 110, 145, 153, 171, 175, 190, 213, 249, 276, 288, 298; al-Ṣayrafī, *Nuzhah,* 3:258; Ibn Taghrībirdī, *Manhal,* 2:346, 5:15, 327; 6:164–65, 186; Ibn Ḥajar, *Durar,* 8:396.

[63] Levanoni, "Sultan's *Laqab,*" 108, note 143.

that the word "*akh*" or "brother" was sometimes used to denote not a biological relationship between two men who shared parents, but a fraternal-style relationship between two biologically unrelated mamluks. The historical sources designate this mamluk-style, non-biological brotherhood by using such phrases as "they were like *(mithlu)* brothers," "he was like a brother to him," "between them there was brotherhood," etc.[64] By contrast, the designation of biological brotherhood seems to dispense with the "like brothers" phrasing. Nevertheless, a challenge for historians is discerning which type of "brother" is which when they encounter evidence of such relationships. Regardless, although mamluks did forge and maintain important relationships with other mamluks, some clearly refused to forget their original families. These reconnected with their kin as soon as they could, and they profited personally and even politically from the presence of biological relatives nearby.

The second conclusion is that for a relative, coming to join a mamluk promised at least a modest career. Rarely, however, were these careers glorious. One reason for the lack of significant career advancement was that the relatives' link to their mamluk family member was a double-edged sword: although the connection brought jobs, family members were routinely punished along with their mamluk relative in times of disgrace. Nevertheless families usually suffered less for the crimes of individual commanders than the commanders themselves did, and even when commanders were executed for bad behavior, their families tended to be pardoned sooner or later. Thus whereas Salār and Yalbughā both died for their political machinations, Salār's brothers were only imprisoned and later freed, while in Yalbughā's case the family remained unmolested, other than the three months Yalbughā's father spent in prison.

Another reason why male relatives of mamluk commanders did not advance to grand careers was their placement in the military hierarchy of the Mamluk Sultanate. As non-mamluks, they should only have received jobs in the auxiliary forces *(ḥalqah)*. In the early years of the sultanate this was a significant part of the armies, and the corps included numerous immigrants, who were often politically and militarily important in those years. Nevertheless, the auxiliary forces overall were not as prestigious, well-compensated, or well-trained as the mamluk forces; furthermore, the auxiliaries deteriorated in quality and remuneration over time.[65]

Unfortunately the sources do not always specify where relatives of mamluks were positioned; thus, although we may assume that their posts were in the auxiliaries in the absence of evidence to the contrary, we cannot be completely sure. It seems likely that Salār's relatives received positions in the auxiliaries, despite his

---

[65] David Ayalon, "Army—II," 448–56; idem, "The Auxiliary Forces of the Mamluk Sultanate," *Der Islam* 65 (1988), 19–20, reprinted in his *Abode of War.*

own high position, because the auxiliaries were at their most prestigious then. And certainly Salār's brothers played active roles in factional struggles and were heavily involved with their brother's fortune, whether this was from the auxiliaries or not. The positions that Yalbughā's relatives received in Egypt and Syria may also have been in the auxiliary forces, but the information is too scanty to tell one way or the other. By contrast, Barqūq's nephew Baybars and great-nephew Sūdūn were an exception, since their jobs—constable *(amīr akhūr),* lord of the audience *(amīr majlis),* secretary of state *(dawādār),* chief military officer *(atābak),* governor of Syria—were reserved for the Mamluk military elite, not members of the auxiliaries. Such important positions did not normally go to relatives, and the fact that Baybars and Sūdūn held them attests to the strength of Barqūq's patronage.

The final conclusion, perhaps more tentatively drawn, is that individual mamluks maintained connections to the world outside the sultanate, despite their immersion in the complexity of the Mamluk system. In Salār's case, admittedly, contact with that world was limited—he lived during a time of open hostility between the Sultanate and the Ilkhanate, where his family was located, which may explain why he had no news of them for over thirty years. When he did contact them in Ilkhanid Anatolia, therefore, he had to do so secretly. By contrast, Barqūq lived in a time of relative peace, and appears to have maintained a link to his homeland, since he sent for his relatives openly as soon as he was in a position to do so, using the slave merchant who had brought him to Egypt.[66]

But it was Yalbughā who boasted the most complex interactions with the world outside the sultanate, as reflected in his relationship to his biological family. Yalbughā appears to have kept a link to his relatives throughout his career, since news went back and forth between him and them even before they migrated to Cairo. But where was Yalbughā's family? The histories are silent, except for one late source, which mentions their origin in the land of the Mongols *(bilād al-tatar* or *al-tatār).*[67] I read this as Ilkhanid territory, not the Golden Horde, since this latter was usually designated as *bilād qifjāq.* Nor do I read it as more distant Mongol territories, since these were less frequently the source of mamluks. The personal names in the family were Turkish—Yalbughā, Asandamur, Qarakuz, Tabuta. The Ilkhanate was therefore a likely place of origin for Yalbughā, especially the northwestern Caucasus region, which contributed Circassians and other peoples to the slave trade. It is possible to imagine that if Yalbughā and his family came from the Ilkhanate, he may have enjoyed additional connections in Ilkhanid territory that the histories do not reveal.

[66] For the close relationship between a mamluk and his slave trader see David Ayalon, "Mamlūk: Military Slavery in Egypt and Syria," in his *Abode of War,* 10 (first full publication, abridged version in *EI2* 6, fasc. 103–4).

[67] Ibn Taghrībirdī, *Manhal,* 6:358.

But what would be the reason to imagine this? To answer, we must look more closely both at Yalbughā's career and at his other interactions with those outside the sultanate. From 744/1343 to 746/1345, Yalbughā was governor of Aleppo. This was an extremely important post for ambitious Mamluk commanders in the chaotic years after the death of al-Nāṣir Muḥammad in 741/1341, since the position was conductive to fomenting Syrian rebellions against Egypt. Earlier, during the first decades of the Mamluk sultanate, Mamluk commanders wishing to rebel against the sultan had looked to the Ilkhanids for military support.[68] But once the Ilkhanate began to disintegrate after 736/1335, it lost control of Anatolia, which allowed the Mamluks to acquire a number of useful vassals there, among them the Dulqadirid Turkmen. In the later eighth/fourteenth century every Mamluk rebel in Syria started as governor of Aleppo, which allowed him to call on Anatolian vassals such as the Dulqadirids for military support against Cairo. Commanders could also flee to Anatolia for refuge if events turned sour.

Yalbughā rebelled twice against the Mamluk sultan: once against al-Kāmil Shaʿbān in 746–47/1346, and later against al-Muẓaffar Ḥājjī in 748/1347. Unlike all other Mamluk rebels in this period, however, Yalbughā did not turn to the Dulqadirids for support, perhaps because he had badly damaged his relations with them while he was governor of Aleppo.[69] As a result, when his second rebellion went poorly and he was forced to flee, YalbughaYalbughā instead looked to the region from which his family may have come: former Ilkhanid territory. He turned in particular to the Chobanids, with whom he tried to take refuge in 748/1347.[70]

The Chobanids were a small dynasty of Mongols that emerged during the disintegration of the Ilkhanate. At the time of Yalbughā's flight from the sultanate, the Chobanids controlled the southern Caucasus and northwestern Iran, and maintained territorial interests in Anatolia.[71] In addition to their location in what may have been his own homeland, Yalbughā may also have fled to the Chobanids because he was already in contact with them. In late summer 744/1343, when Yalbughā was a governor in either Hama or Aleppo, an ambassador from the Chobanid ruler Ḥasan ibn Temürtash (d. 744/1343) traveled through Syria on his way to Cairo.[72] As a governor Yalbughā was responsible for hosting the ambassador both going to and

[71] Charles Melville and Abbas Zaryab, "Chobanids," *Encyclopedia Iranica* 5:496–502.

[72] He was made governor of Aleppo in June–July 1343/Ṣafar 744 after the death of the previous governor, Altunbughā al-Māridānī. Al-Maqrīzī, *Sulūk,* 2:645–46.

coming from Egypt.[73] Since Mamluk protocol required him to interact with the ambassador, Yalbughā may have taken the opportunity to send a private message to Ḥasan.[74] His later attempt to flee with his family to the Chobanids suggests he believed in his chances of a good reception there.

Regardless of his destination, Yalbughā's situation suggests that he in particular, and individual mamluks in general, had more connections to the outside world than is usually acknowledged. These connections may have involved not only the extended families of mamluk commanders, but slave merchants, as in Barqūq's case, secret messengers, as in Salār's case, or perhaps formal ambassadors, as in Yalbughā's case. This indicates that scholars must look outside the sultanate even when investigating internal Mamluk politics. At times it is difficult to discern the outlines of these relationships, which makes the task harder. But since these connections did at times factor in to Mamluk political decisions, it is necessary to try.

To conclude: One previously understudied element in Mamluk politics is the category of biological relations that includes not a mamluk's offspring, but rather the biological family he left behind in the old country. I have called the interest that mamluks showed in reconnecting with their long-lost relatives the Extended Family Impulse, and I see it as a related, but relatively ignored subcategory within the general idea of what I have termed the Dynastic Impulse. I have suggested that some mamluks reconnected with their existing biological families for both personal and political gain. We see this phenomenon play out most frequently as part of Mamluk success stories, when commanders reached high political, military, and economic levels, then sent home to bring their families to Cairo. Once the relatives arrived, the Mamluk commanders found jobs for the men, who might attain considerable influence in Mamluk society, or, more often, remain undistinguished. Overall this suggests that while the Mamluk military system was inimical to the appeal of biological family, actual mamluks themselves were not, and in some cases they went to considerable lengths to surround themselves with their kin.

[73] Ambassadors from Ilkhanid or post-Ilkhanid territory usually entered the Mamluk Sultanate from the northeast, passing through Aleppo and the smaller cities to Damascus, from which they headed on to Cairo. For the ambassador see al-Maqrīzī, *Sulūk,* 2:648.

[74] Since Ḥasan died in 1343/744, his brother and successor, Malik Ashraf (r. 1343–57/744–58), would have received this.

University of Helsinki

Climbing the Ladder: Social Mobility in the Mamluk Period

It is often said that the civilian sector of Mamluk society was relatively egalitarian with no strong barriers to social advancement. The social group of ulama (scholars) has been considered a particularly open group, whose membership was based on scholarly merit, whereas social origin played a less significant role.[1] This view was modified by Ulrich Haarmann, who showed that the ulama were not very eager to accommodate descendants of mamluks into their ranks. The sons of mamluks were wealthy enough to devote time to scholarship, but the established scholars tended to hold their foreign background against them.[2]

This article examines how difficult it was for sons of commoners to gain fame as scholars or to be included among the civilian notables through other merits. Ibn Ḥajar al-ʿAsqalānī's biographical dictionary *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah*[3] describes the lives and careers of notables of the eighth/fourteenth century. Among them there are individuals who were of commoner origin, but their number is quite small, which indicates that even though upward social mobility was possible, a commoner only rarely reached the status of a notable.

The fact that Ibn Ḥajar makes it a point to mention commoner origin of the person described clearly shows that the information was considered relevant. Especially the inclusion of the father's non-scholarly occupation shows that lineage did indeed matter. Why else should he mention that someone's father is "said to have been a porter?"[4] In addition, I found three occasions where Ibn Ḥajar describes the commoners in a way that shows clear prejudice. First, in his entry on the poet Ibrāhīm ibn ʿAlī al-Miʿmār Ghulām al-Nūrī, Ibn Ḥajar states that "even

[1]Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (Ca - bridge, 1994), 64: "the recruitment of the learned elite was relatively open, and the circulation of individuals . . . was rapid." Also Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, MA, 1967), 107–10, describes the ulama as a group that was open to anyone devoted to learning.

[2]Ulrich Haarmann, "Arabic in Speech, Turkish in Lineage: Mamluks and their Sons in the Intelle - tual Life of Fourteenth-Century Egypt and Syria," *Journal of Semitic Studies* 33 (1988): 81–114; and idem, "Ideology and History, Identity and Alterity: The Arab Image of the Turk from the ʿAbbasid to Modern Egypt," *International Journal of Middle East Studies* 20 (1988): 175–96.

[3] Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah,* ed. al-Shaykh ʿAbd al-Wārith Muḥammad ʿAlī (Beirut, 1997); idem, *Dhayl al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah,* ed. al-Shaykh Aḥmad Farīd al-Mazīdī (Beirut, 1998).

[4] Ibn Ḥajar, *Al-Durar,* 4:158.

though he was a commoner, Ibrāhīm was intelligent and talented and had a pleasant character."[5] Similarly, the poet Yūsuf ibn ʿAbd al-Ghālib is characterized as "a good poet, though a commoner."[6] Finally, an obviously unpopular *muḥtasib* Muḥammad ibn ʿAlī is described as "a commoner, uncouth and boorish."[7]

This leads to the question: how did the commoners manage to overcome social barriers and enter the ranks of the notables? To examine the individual strategies of social advancement, I looked into the career patterns of persons who started their lives as commoners or whose fathers had belonged to the common people.

The Commoners in Ibn Ḥajar's Dictionary

ʿĀmmah, the commoners, were a broad social group that Ira Lapidus has further subdivided into three categories. The first category consisted of respectable shopkeepers, physicians, craftsmen, and workers. Below them were the disreputable: those who engaged in trades that were considered to be morally suspect or were connected with substances seen as impure, for example usurers, money changers, butchers, tanners, etc. The lowest strata consisted of vagabonds, prostitutes, beggars, and others who lived on the fringe of society.[8]

In sifting through Ibn Ḥajar's material and selecting relevant biographical entries, I followed certain parameters. First, I limited my selection to persons living in Mamluk Syria and Egypt. Second, I picked out persons who themselves or whose fathers had earned their livelihoods by a trade, placing them in the social class of commoners. It must be underlined that I only selected the persons whose trades are explicitly mentioned by Ibn Ḥajar.[9] The same applies to the fathers' trades. I excluded the cases where the trade is only given as a patronymic forming a part of the person's name rather than mentioning the actual profession of the father.

It was easy to include the various artisans: the tailors *(khayyāṭ),* carpenters *(najjār),* stonemasons *(ḥajjār),* and porters *(ḥammāl)* clearly belong to the commoners. In addition, I selected those who worked as doorkeepers *(bawwāb),* sweepers *(farrāsh),* or caretakers *(qayyim)* in mosques, tombs, or madrasahs. They were the lowest paid employees of the religious institutions, but even though they worked among the scholars, they were not necessarily scholars themselves. I also included muezzins, when it is the only occupation given or when it occurs together with a craft.

Merchants *(tājir)* form a problematic group because the social status of a merchant depended on his wealth, and that again depended on what was traded. A

[5] Ibid., 1:35, no. 129.

[6] Ibid., 4:285, no. 5244.

[7] Ibn Ḥajar, *Al-Dhayl,* 212, no. 538.

[8] Ira Lapidus, *Muslim Cities,* 80–85.

[9] The trade appears together with verbs such as *kāna, iktasaba, taʿāná*, etc.

spice merchant or jeweler could easily be counted among the notables, whereas a trader in cotton or soap was less likely to become wealthy enough. I included as shopkeepers the merchants who were said to work in shops or who were reported to sell daily necessities, but I omitted the entries where Ibn Ḥajar does not specify the merchant's activities. Physicians *(ṭabīb)* and oculists *(kaḥḥāl)* are equally problematic because, like the merchants, they could belong either to the common people or the elite. Their social status depended on their clientele: those treating members of the elite had a higher status than those whose patients represented a more modest segment of the population. As Ibn Ḥajar does not usually give any details on the type of patients, I decided to exclude the two medical professions.

In this way, I managed to find ninety relevant biographies among the 5,962[10] persons portrayed in the dictionary. This number is not an exact figure, partly due to my own exclusions and partly due to the fact that Ibn Ḥajar does not always provide information on the livelihoods of the persons. However, even though the quantification remains inexact, the very small number clearly indicates that upward social mobility was difficult and infrequent. This is consistent with the conclusion presented in my earlier study of contemporary popular literature. The stories analyzed portray a rather rigid social system in which advancement was rare and social ambition was seen as a negative characteristic.[11]

Basis of Fame: Longevity

The overwhelming majority of the commoners included in Ibn Ḥajar's dictionary were *muḥaddith*s, transmitters of traditions. Their fame rested in their ability to memorize hadiths and to pass them on to others. To memorize hadiths was considered a religious merit, and according to one of the hadiths, the Prophet had said: "Anyone who preserves forty beneficial traditions for my *ummah* will be asked to enter paradise from any door he wishes."[12]

A *muḥaddith* needed a good retentive memory but, apart from basic literacy, no further learning was necessary. However, memorization alone was not enough to guarantee fame; to become truly successful, a *muḥaddith* needed an appreciative audience that found him or her worth listening to. Ibn Ḥajar mentions that Egyptian scholars crowded around Ḥasan ibn ʿUmar,[13] listening avidly to his transmission. They had realized his value as a transmitter in 713, when he had reached the age of eighty or eighty-one. According to Ibn Ḥajar, some students had come across Ḥasan's name in *isnād*s and, after ascertaining his advanced age, set out to find him.

[10] The four volumes of *Al-Durar* contain 5,323 entries, and *al-Dhayl* contains 639 entries.

[12] Khalid Alavi, "Concept of Arbaʿīn," *Islamic Studies* 22, no. 3 (1983): 75–78.

[13] Ibn Ḥajar, *Al-Durar,* 2:18–19, no. 1546: Ḥasan ibn ʿUmar ibn ʿĪsá ibn Khalīl ibn Ibrāhīm al-Kurdī Abū ʿAlī, d. 720/1320.

The scholars began frequenting Ḥasan, and for the last years of his life, he became a focus of scholarly attention.

The foundations for Ḥasan's fame were laid in his childhood by his father, a sweeper and a caretaker at a mausoleum *(turbah)* in Damascus. The father was aware of the prestige in being a *muḥaddith,* and he took care to introduce his son, at a very early age, to scholars. Ibn Ḥajar mentions ʿAlī ibn al-Lātī as the boy's first teacher and, according to al-Ṣafadī, Ḥasan was only three years old when he heard hadiths from al-Lātī.[14] Ḥasan not only learned hadiths but also memorized works on *fiqh* and *tafsīr*. Ḥasan's studies in these subjects also seem to have begun very early. Ibn Ḥajar informs us that Ḥasan learned al-Mālik's *Al-Muwaṭṭaʾ* from Mukarram ibn Muḥammad, who died in 635/1238 when Ḥasan was not more than five or six years old.[15]

It was important for an aspiring *muḥaddith* to listen to already-famous *muḥaddith*s and to secure an *ijāzah* to transmit the texts further. The teacher should preferably be a very old shaykh because this limited the number of transmitters included in the *isnād* of the hadiths. The length of the *isnād* was seen as an important factor guaranteeing the reliability of the transmission: the shorter the *isnād*, the closer the text was to the original. To reach this goal, old renowned *muḥaddith*s gave *ijāzah*s to very young children even though it is obvious that the children could not have earned them by actually memorizing the texts. In spite of this, the practice was considered acceptable because it was seen to enable the direct transmission of hadiths from a passing generation to an emerging one. The child who gained the *ijāzah* was expected to memorize the hadiths when growing up.[16] This must also have been the case with Ḥasan because he cannot have been able to learn any texts at the age of three, when he became a pupil of al-Lātī's.

As an adult, Ḥasan moved from Damascus to Cairo and opened a paper shop in Giza at the gate of the main mosque *(jāmiʿ).* He also functioned as a muezzin in a minor mosque. Then finally, he was "found" by the Egyptian scholars and gained a large scholarly audience. He had outlived many of his contemporaries and had become the last person in Egypt to transmit directly from the old Damascene shaykhs

[14] According to Khalīl ibn Aybak al-Ṣafadī, *Kitāb al-Wāfī bi-al-Wafayāt,* vol. 12, ed. Ramaḍān ʿAbd al-Tawwāb (Wiesbaden, 1979), 195, the father took his son to hear Ibn al-Lātī when the son was in his fourth year *(fī al-rābiʿah).*

[15] Ḥasan ibn ʿUmar was born 629 or 630. Mukarram ibn Muḥammad's date of death (Rajab 2, 635/1238) is mentioned in Shams al-Dīn Muḥammad al-Dhahabī, *Siyar Aʿlām al-Nubalāʾ,* ed. Bashshār ʿAwād Maʿrūf and Muḥyī Hilāl al-Sirḥān (Beirut, 1998), 23:34, no. 85.

[16] Asma Sayeed, "Women and Hadith Transmission: Two Case Studies from Mamluk Damascus," *Studia Islamica* 95 (2002): 88. Sayeed refers to al-Khaṭīb al-Baghdādī (d. 463/1070) and Ibn al-Ṣalāḥ al-Shahrazūrī (d. 643/1245) as scholars who had considered the practice acceptable.

that he had listened to when he was still a child.[17] Ḥasan is a typical example of a famous *muḥaddith:* he started very young and had a very long life.

Ḥasan's *kunyah* was Abū ʿAlī, but Ibn Ḥajar does not record ʿAlī's biography. One of the problems in using a biographical dictionary as a source is the difficulty in finding the children. The biographies are organized according to the first name of the person, followed by his father's name, grandfather's name, etc. It is easy enough to go backwards along the lineage, whereas going forwards is practically impossible if the entry does not give the first name of the son or sons. The *kunyah* is sometimes given, but that is only helpful if it really does refer to the son who earned fame enough to be included in the dictionary. If one of the other sons became famous, or if the *kunyah* was just a cognomen that did not refer to any actual son, it leads to a blind alley.[18]

In Ḥasan's case, ʿAlī's biography is not included in the dictionary, and I skimmed the dictionary for sons with a different first name but found none. Ḥasan may—like his own father—have introduced his son or sons, at an early age, to scholars, but it seems that the sons were not as lucky as the father had been in combining longevity with interesting *ijāzah*s, a circumstance that would assure fame and prestige.

Gradual Mobility

Sometimes Ibn Ḥajar gives enough information to enable us to establish a family line of several generations and to examine the developments in the social status of the family members. In Ibrāhīm ibn Muḥammad's case, it is possible to follow a family of *muḥaddith*s from Ibrāhīm to his son Muḥammad and grandson ʿAbd Allāh. The biographies attest that the social advancement attained by the family in the three generations was modest, and that a family member's notability continued to rest on his activities as a *muḥaddith*. The slowness of the process and the very small steps taken presumably reflect the reality for most families attempting to climb the social ladder.

Ibrāhīm ibn Muḥammad[19] was the head of the muezzins in the Umayyad mosque of Damascus and was famous for his beautiful voice. Apart from his professional duties as a muezzin, he memorized hadiths and obviously managed to get some

[17] Ibn Ḥajar, *Al-Durar,* 2:18.

[18] According to A. J. Wensinck, "Kunya," *The Encyclopaedia of Islam,* 2nd ed., 5:396, the *kunyah* could be given by parents to a child and therefore did not necessarily correspond to reality. Richard W. Bulliet, *The Patricians of Nishapur: A Study in Medieval Islamic Social History* (Cambridge, MA, 1972), 87, notes that euphony and historical connections often governed the choice of *kunyah*.

[19] Ibn Ḥajar, *Al-Durar,* 1:38–39, no. 149: Ibrāhīm ibn Muḥammad ibn Aḥmad ibn Muḥammad al-Wānī al-Khallāṭī al-Hamdānī Burhān al-Dīn al-Dimashqī. Year of death is not given here, but in the entry of the son (ibid., 3:178), the year 735/1334 is given as the year of death of both father and son.

fame as a transmitter because he is associated with some well-known scholars. Ibn Ḥajar mentions that his own teacher, Burhān al-Shāmī,[20] had gained an *ijāzah* from Ibrāhīm ibn Muḥammad.

Ibrāhīm's contacts with scholars enabled him to assure that his son, Muḥammad,[21] began to learn hadiths quite early. He is known to have attended transmission sessions in 694 when he was ten years old. Later, he travelled to Aleppo, Mecca, Medina, and Cairo to learn from the local *muḥaddith*s. Muḥammad gained a reputation as a hard-working student, and Ibn Ḥajar quotes Shams al-Dīn al-Dhahabī's positive comments on Muḥammad's intelligence and cheerful nature. Muḥammad seems to have acted as a muezzin like his father but, in addition, he broadened his scholarly activities by serving as *shāhid* (notary) for a short time. Muḥammad did not live to be very old but died at the age of fifty, in 735, only a month after his father's death. Ibn Ḥajar reports that, after his death, Muḥammad appeared to someone in a dream informing him about the situation of some others in heaven. The fact that this type of report is included in the biographical entry indicates that Muḥammad ibn Ibrāhīm had managed to gain a fair amount of prestige in his lifetime. A further indication of Muḥammad's fame is that al-Maqrīzī included an obituary about him in his chronicle *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk*.[22]

Muḥammad ibn Ibrāhīm's son ʿAbd Allāh[23] followed in the footsteps of his father and grandfather and built up a career as a *muḥaddith*, first by memorizing hadiths transmitted by local authorities and later by increasing his repertory through independent study. Ibn Ḥajar praises ʿAbd Allāh's keen wit and ability as a fast and fluent reader. Ibn Ḥajar's entry on ʿAbd Allāh is very short and gives little information, but there is some indication that ʿAbd Allāh occupied himself as a copyist.[24] Copying was a respectable scholarly occupation and may be considered an advancement if compared to the father's temporary employment as *shāhid*. In spite of this advancement, the extreme brevity of Ibn Ḥajar's entry indicates that ʿAbd Allāh's fame did not reach the level of his father's.

ʿAbd Allāh's *kunyah* is Abū Muḥammad, but no son of that name is included in Ibn Ḥajar's biography, nor can he be found in the dictionary covering the ninth/fif-

[20] Burhān al-Dīn Ibrāhīm ibn Dāʾūd al-Shāmī (d. 797/1395); his biography is in ibid., 1:22, no. 61.

[21] Ibid., 3:178–79, no. 3416: Muḥammad ibn Ibrāhīm ibn Muḥammad ibn Aḥmad al-Wānī Amīn al-Dīn thumma al-Dimashqī al-Ḥanafī al-Muʾadhdhin Abū ʿAbd Allāh, d. 735/1334.

[22] Taqī al-Dīn Aḥmad al-Maqrīzī, *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah (Cairo, 1942), 2:388.

[23] Ibn Ḥajar, *Al-Durar,* 2:172, no. 2197: ʿAbd Allāh ibn Muḥammad ibn Ibrāhīm ibn Muḥammad al-Wānī Sharaf al-Dīn Abū Muḥammad al-Ḥanafī, d. eighth century. Only the century is given for the death year.

[24] Ibn Ḥajar, ibid., mentions that ʿAbd Allāh *"ʿamila Arbaʿīn Buldānīyah,"* which must mean that he made a copy of the book. Ibn Ḥajar does not explicitly mention that he made copying his trade.

teenth century written by Ibn Ḥajar's pupil, Muḥammad al-Sakhāwī.[25] ʿAbd Allāh was less famous than his father, but his son seems to have totally dropped out from the ranks of the notables.

The three biographies show a slow change in the status of the family, but for all of them—father, son, and grandson—the most important aspect of their careers was their activity as *muḥaddith*s. The shift from being employed as *shāhid* to occupying oneself as a copyist can be described as a slight advancement, but none of them took steps towards more demanding branches of scholarship, which could have led them to endowed positions within the madrasah system or judiciary. The reason cannot have been a lack of talent because Ibn Ḥajar has recorded the scholars' explicit praise for Muḥammad and ʿAbd Allāh.

The reason may have been that the family lacked the necessary network to secure appointments. As *muḥaddith*s, they had contacts with the scholarly world and even enjoyed some fame, but this was obviously not enough to attract the attention of patrons who would have promoted their scholarly careers. The necessity of such patronage is amply attested by a large number of biographies included in Ibn Ḥajar's dictionary. Further, the established scholarly families were able to promote their members; other studies have shown that some families formed dynasties that in practice monopolized certain high-status appointments.[26] Those common people able to enter the scholarly circles had to invest time in forming the necessary connections in order to move from the margins to more prestigious positions. The case of Ibrāhīm ibn Muḥammad and his son and grandson shows that even the span of three generations was not enough to create an effective scholarly network that would have secured the upward mobility of the family and finally established it as one of the scholarly families. As it is, the second generation—represented by Muḥammad—was the one to gain the highest acclaim, and the status was to some extent kept up by the third generation, whereas the fourth generation again disappears into anonymity.

THE IMPORTANCE OF NETWORKS: FROM TURNER TO QADI

The biography of Muḥammad ibn Salmān[27] presents a case where the information is detailed enough to explain how he managed to create a scholarly career in spite of his modest starting point as an artisan. According to Ibn Ḥajar, Muḥammad ibn Salmān came to Ḥamāh from the east as a child, together with his father. Muḥammad learned the trade of a turner (an artisan who crafts objects on a lathe) but later be-

[25] Muḥammad al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, n.d.).

[26] A well-known scholarly family dynasty was Banū Jamāʿah, who held the office of Shafiʿi *qāḍī al-quḍāh* in Egypt for more than half a century; see Kamal S. Salibi, "The Banū Jamāʿa: A Dynasty of Shāfiʿite Jurists in the Mamluk Period," *Studia Islamica* 9 (1958): 98.

[27] Ibn Ḥajar, *Al-Dhayl,* 96–97, no. 214: Muḥammad ibn Salmān ibn ʿAbd Allāh al-Ḥamawī thumma al-Ḥalabī Shams al-Dīn al-Kharrāṭ, d. 806/1403.

came interested in scholarship. Ibn Ḥajar reports that he became a proficient scholar in a short time. He married the sister of one of his teachers, Jamāl al-Dīn Yūsuf ibn al-Ḥasan al-Ḥamawī (d. 809/1407).[28] He studied law and was appointed assistant judge *(nāʾib al-qāḍī)* in Aleppo in 776. After serving in that capacity for some time, he was appointed judge *(qāḍī)*. He was also an overseer *(wālī)* of several madrasahs. Ibn Ḥajar mentions further that Muḥammad ibn Salmān had two famous sons. Both of them, Muḥammad and ʿAbd al-Raḥmān, were known as skilled poets, and one of the sons, ʿAbd al-Raḥmān, inherited his father's position as a judge when the father died in 806.

Muḥammad ibn Salmān's remarkable advancement from artisan to judge deserves closer study. Ibn Ḥajar gives Muḥammad's name as Shams al-Dīn Muḥammad ibn Salmān ibn ʿAbd Allāh al-Ḥamawī thumma al-Ḥalabī. Al-Sakhāwī mentions Muḥammad ibn Salmān in *Al-Ḍawʾ al-Lāmiʿ,* where he adds the *nisbah*s al-Ḥarrānī and al-Shāfiʿī to his name.[29] Further information on Muḥammad's ancestors is found in al-Sakhāwī's entries for Muḥammad's two sons. According to al-Sakhāwī, ʿAbd al-Raḥmān was the eldest son, and his mother was Jamāl al-Dīn Yūsuf's sister. ʿAbd al-Raḥmān's great-grandfather's father is given as al-Qāḍī al-ʿAllāmah Shams al-Dīn al-Marwazī.[30] The genealogy shows the family's origin in the east, first in Merv and then in Ḥarrān, and places it socially among the scholarly families. The advance of the Mongols must have forced the family to move westward and brought Muḥammad's father to Ḥamāh.

It is likely that Muḥammad's career was assisted by the fact that he belonged to a scholarly family. His father was a newcomer, and Muḥammad had to begin with learning an artisan trade but was soon able to devote himself to scholarship. His career was boosted by his marriage into a local scholarly family, an occurrence indicating that he was accepted as a member of the scholarly class. Otherwise, such a marriage between an artisan and a sister of a scholar would have been unlikely. It may well be that the scholarly credentials of Muḥammad's family were recognized and helped him to attain the marriage connection.[31] The new family alliance must have played a part in securing him his appointments in the judiciary.

---

[28] Ibid., 129, no. 298. In Muḥammad ibn Salmān's biography, Ibn Ḥajar states only that he became related by marriage to Jamāl al-Dīn Yūsuf (ṣāharahu), but al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 7:255, no. 643, mentions that Muḥammad married Jamāl al-Dīn Yūsuf's sister.

[29] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 7:255.

[30] Ibid., 4:130, no. 343. The great-grandfather is given as Abū al-Faḍl Zayn al-Dīn ʿAbd Allāh in ibid., but as Shams al-Dīn ʿAbd Allāh in ibid., 9:83, no. 234.

[31] It is interesting to note that the earlier source, Ibn Ḥajar, does not mention the scholarly ancestry of Muḥammad ibn Salmān, but it is found in al-Sakhāwī's *Al-Ḍawʾ al-Lāmiʿ,* a later source. It is possible that the family tree grew backwards only later and Muhammad's marriage depended only on his personal relationship to Jamāl al-Dīn Yūsuf.

The importance of family relationships is further underlined by the fact that Muḥammad's eldest son, ʿAbd al-Raḥmān, inherited his father's position at the latter's death. ʿAbd al-Raḥmān was also a poet and earned fame by his literary activities. He eventually settled in Cairo, and Ibn Taghrībirdī mentions that ʿAbd al-Raḥmān recited a *qaṣīdah* celebrating the conquest of Cyprus to Sultan al-Malik al-Ashraf Barsbāy in 829. In Cairo, ʿAbd al-Raḥmān was able to attain high administrative positions,[32] but his fame seems to have rested mainly on his poetic talents; in the obituary, Ibn Taghrībirdī focuses on his abilities as a great poet.[33]

The younger son, Muḥammad, gained fame as a poet after settling in Cairo in 815.[34] Al-Sakhāwī's entry on Muḥammad is relatively short, but he reports that Muḥammad's poetry was appreciated by the scholars. He also mentions that Muḥammad entered into the administration in Cairo and gained a position in the *dīwān al-inshāʾ*. Muḥammad died of the plague in 823/1420.[35]

Presumably due to their family connections in Syria, the brothers were able to attain the notice of the Shafiʿi scholar Nāṣir al-Dīn Ibn al-Bārizī (d. 823/1420). He was a friend of Amir al-Shaykh al-Maḥmūdī, who became sultan al-Malik al-Muʾayyad Shaykh in 815/1412.[36] According to al-Sakhāwī, the younger of the two brothers, Muḥammad, came to Cairo together with Ibn al-Bārizī and was his close companion *(muqarrab).* It must have been Ibn al-Bārizī who used his connections with the Mamluk elite to secure Muḥammad's first administrative appointment in Cairo.[37] When ʿAbd al-Raḥmān, the elder brother, arrived in Cairo, Ibn al-Bārizī seems to have also helped him to launch his administrative career in the *dīwān al-inshāʾ*.[38]

None of the sources that I have used mention the names of ʿAbd al-Raḥmān's and Muḥammad's children, and this has prevented me from finding out information on the next generation. However, the children must have received a good education

[32] Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* ed. Fahīm Muḥammad Shaltūt et al. (Cairo, 1963–72), 14:296, mentions that ʿAbd al-Raḥmān was *muwaqqiʿ al-dast*. Maya Schatzmiller, *Labour in the Medieval Islamic World* (Leiden, 1994), 155, translates the title *muwaqqiʿ al-dast* as "scribe for Royal Bench in the Palace of Justice."

[33] Ibn Taghrībirdī, *Al-Nujūm,* 15:205–6.

[34] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 9:138.

[35] Ibid., 9:83–84, no. 234.

[36] Nāṣir al-Dīn Muḥammad ibn Muḥammad Ibn al-Bārizī's biography is in al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 9:137–38, no. 350. His friendship with Amir al-Shaykh is mentioned in Ibn Taghrībirdī, *Al-Nujūm,* 13:80; and al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 9:137–38, mentions that Ibn al-Bārizī came to Cairo in the company of Amir al-Shaykh in 815.

[37] Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 9:83–34.

[38] Ibid., 4:130, no. 343. Al-Sakhāwī mentions that ʿAbd al-Raḥmān entered the *dīwān al-inshāʾ* "in the days of Nāṣir al-Dīn Ibn al-Bārizī."

and had ample opportunities to benefit from their fathers' networks and to continue in their footsteps in the scholarly world.

Talent Combined with Patronage

Muḥammad ibn Yūsuf[39] represents a case where talent, initial wealth, and timely patronage formed the ingredients of success. Muḥammad ibn Yūsuf was born in al-Jazīrah as a son of a money changer *(ṣayrafī)*. The trade of a money changer was one of the disreputable professions, carrying the taint of illegal gain. Ibn Ḥajar mentions the father's trade but then underlines that Muḥammad ibn Yūsuf came to Egypt alone *(mujarrad),* obviously leaving his disreputable father behind in al-Jazīrah. He settled in Qūṣ and began to pursue studies in various fields. Ibn Ḥajar is silent on Muḥammad's finances and does not mention his having any employment or learning any trade. Presumably, his father's trade had provided Muḥammad with enough wealth to enable him to concentrate on studies. Only when Muḥammad moved to Cairo did he attain endowed teaching appointments at various madrasahs. Muḥammad seems to have been quite a versatile scholar who was not only interested in religious sciences but also in *adab,* logic, and mathematics. It must have been these three last-mentioned subjects that he was teaching to Christian and Jewish students as well as to Muslim students.

In Cairo, Muḥammad became a companion of Amir Baybars al-Jāshnakīr (d. 709/1310), and Ibn Ḥajar mentions that Baybars' patronage improved Muḥammad's status. It must have been due to Amir Baybars that Muḥammad was appointed preacher at the Citadel's mosque. Patronage was often a necessary requirement for securing high-status appointments, but patrons could prove fickle. Amir Baybars had another favorite, Naṣr ibn Salmān al-Manbijī, who had founded a *zāwiyah* at Bāb al-Naṣr in Cairo. Naṣr was originally a *faqīh* but came to prefer the life of a Sufi ascetic, and according to Ibn Ḥajar, Naṣr had an influence over Baybars, who relied on him. Naṣr became very influential during the short period when Baybars was sultan (708–9/1309–10).[40] Ibn Ḥajar informs us that Naṣr conspired against Muḥammad. It may well be that Muḥammad's interest in non-religious subjects such as logic and mathematics, combined with the denominational diversity of his pupils, led Naṣr to dislike him. Naṣr's influence caused Baybars to abandon his protégé, and as a consequence Muḥammad was expelled from his position as the preacher at the Citadel's mosque. When Baybars's reign ended, Muḥammad's fortunes again improved, and he was appointed preacher at the mosque of Ibn Ṭūlūn.

[39] Ibid., 4:183, no. 4810: Muḥammad ibn Yūsuf ibn ʿAbd Allāh al-Jazarī.

[40] Ibid., 4:240, no. 5056.

ʿAlī ibn Muḥammad's[41] biography forms another case where Mamluk patronage explains at least some of the success. ʿAlī ibn Muḥammad was born in Baalbek as a son of a butcher *(laḥḥām)*. The father died when ʿAlī was a baby, and he was raised by his maternal uncle, who taught him to work with linen. According to Ibn Ḥajar, ʿAlī later became interested in scholarship and began to study Hanbali law. Ibn Ḥajar does not tell how it was possible for a linen worker to change his career in this way, but it can be assumed that ʿAlī had managed to gain enough wealth to be able to devote his time to studying. ʿAlī excelled in his studies, and he is known to have written books on *uṣūl al-fiqh*.[42] His talents were obviously recognized by the Damascene scholarly community because Ibn Ḥajar reports that he functioned both as a teacher and *muftī*. At some point, ʿAlī was appointed assistant judge *(nāba fī al-ḥukm)*. He was therefore already a well-established scholar when Timur Lenk's occupation of Aleppo in 803 made him leave Damascus and settle in Cairo. Upon his arrival in Cairo, he gained a teaching position at al-Manṣūrīyah, and a few months later, shortly before his death,[43] he was offered a position as judge, which he declined.

This last stage of his career is described by al-Maqrīzī, who reports that ʿAlī was acquainted with the Mamluk amir Yashbak al-Dawādār, who acted as his patron in Cairo, but he does not give any information on how ʿAlī had been able to attract the amir's attention.[44] Ibn Ḥajar does not mention any Syrian patrons or family connections that would explain ʿAlī's obvious success in Syria, but he reports that ʿAlī gave sermons *(waʿaẓa)* at the Umayyad mosque. It may well be that his preaching activities attracted the attention of local Mamluk notables, who then helped him to gain the appointment as assistant judge. These Mamluk contacts would then later have secured him the attention of Amir Yashbak.

Not all talented commoners were fortunate enough to attract the attention of well-connected patrons. Muḥammad ibn ʿUmar[45] was the son of a baker, but he had a paralyzed hand, a condition that prevented him from learning his father's trade. Instead, Muḥammad turned to scholarship at an early age. Muḥammad chose to study Shafiʿi law[46] and, like the above-mentioned ʿAlī, became so accomplished that he

[41] Ibn Ḥajar, *Al-Dhayl,* 62, no. 121: ʿAlī ibn Muḥammad ibn ʿAbbās ibn Fityān al-Baʿlī thumma al-Dimashqī al-Ḥanbalī ʿAlāʾ al-Dīn Ibn al-Laḥḥām, d. 803/1401.

[42] Khayr al-Dīn al-Ziriklī, *Al-Aʿlām* (Beirut, 1995), 5:7.

[43] According to Ibn Ḥajar, *Al-Dhayl,* 62, he died on *ʿĪd al-Aḍḥá,* whereas al-Maqrīzī, *Al-Sulūk,* 3:1072, places the death two months earlier, on *ʿĪd al-Fiṭr*.

[44] In al-Maqrīzī, ibid., 1059, his arrival to Cairo is noted as coming *"ilá ʿindi al-amīr Yashbak al-Dawādār."* The Amir was Yashbak al-Shaʿbānī who was Lālā of Sultan Faraj.

[45] Ibn Ḥajar, *Al-Durar,* 4:72, no. 4293: Muḥammad ibn ʿUmar ibn Muḥammad ibn al-Khabbāz al-Dimashqī, d. 752/1352.

[46] Ibn Ḥajar does not specifically mention the law school, but Muḥammad studied with the Shafiʿi scholars Muḥammad ibn ʿAlī Kamāl al-Dīn al-Zamlakānī (d. 727/1327) and ʿAbd al-Wahhāb ibn

was given permission to issue fatwas. Ibn Ḥajar further mentions that Muḥammad wrote books and praises the good quality of his work. In spite of these obvious assets, Muḥammad does not seem to have functioned as a teacher or judge, thus never attaining endowed positions. Muḥammad may just have been less lucky, or he may not have had as likeable a personality as ʿAlī and thus remained unable to form the connections required for gaining appointments. A possible reason for this could be Muḥammad's fame as a good impersonator, noted by Ibn Ḥajar *(la-hu qudrah ʿalá al-muḥākāh)*. This must have been a significant characteristic because Ibn Ḥajar includes it in the few lines that constitute the entry on Muḥammad's life. Muḥammad's impersonations may have caused offense and formed an impediment to his career.

Acquired Wealth as the Source of Fame

In some cases, the accumulation of wealth secured a commoner a place among the notables. ʿAbd al-ʿAzīz ibn Manṣūr[47] was the son of a Jewish convert to Islam, and he began his career as a tailor. It was a profession that he may have learned from his father, though Ibn Ḥajar does not mention the father's occupation. ʿAbd al-ʿAzīz's customers seem to have been rather wealthy because tailoring brought him into contact with silk merchants. According to Ibn Ḥajar, ʿAbd al-ʿAzīz realized that he would have a chance to improve his status if he involved himself in the silk trade; he therefore took up an offer to join a trade caravan traveling from Aleppo to northern China.[48] The tour was successful, and ʿAbd al-ʿAzīz returned with a large quantity of silk, which formed the foundation of his subsequent wealth. The risk ʿAbd al-ʿAzīz had taken in joining the trade expedition paid off; instead of remaining a poor tailor, he became a wealthy man, as evidenced by the fact that his income tax *(maks)* from one year amounted to forty thousand dinars. ʿAbd al-ʿAzīz lived up to the expectations that society had of wealthy members by giving generously to charities, paying his *zakāt* dutifully, and establishing various pious foundations *(waqf)*.

Muḥammad ibn Musallim[49] also made his large fortune on trade. The foundations of Muḥammad's success were laid by his father, who started as a porter but managed somehow to gain some wealth and marry into a wealthy merchant family. Muḥammad was raised in circumstances that Ibn Ḥajar describes as respectable; as an adult he established himself as a merchant, obviously benefiting from his moth-

Muḥammad Ibn Qāḍī Shuhbah (d. 726/1326).

[47] Ibn Ḥajar, *Al-Durar,* 2:233, no. 2452: ʿAbd al-ʿAzīz ibn Manṣūr al-Karīmī ʿIzz al-Dīn, d. 713/1313–14.

[48] The goal of the expedition is given as *"bilād al-Kh[i]ṭā."* According to C. E. Bosworth, "Ḳarā Khiṭāy," *EI²,* 4:581, Khiṭā and Khaṭā are used in Muslim sources to refer to northern China.

[49] Ibn Ḥajar, *Al-Durar,* 4:158, no. 4692: Muḥammad ibn Musallim ibn Aḥmad al-Bālisī, d. 776/1374–75.

er's family connections. Muḥammad was successful in commerce and became one of the notable merchants of the century. His generosity increased his fame, and he gained the respect of scholars by establishing a madrasah in al-Fusṭāṭ. Muḥammad died in 776, and his sons—grandsons of a modest porter—inherited a huge fortune.

Three Commoners as Administrators

The position of the market inspector *(muḥtasib)* was precarious because he could easily become a focus of popular discontent. He was the person whom the sultan appointed to oversee and control the markets; in situations where food became scarce and prices high, the population tended to blame the *muḥtasib* for their hardships.[50] The *muḥtasib*s were often established *faqīh*s, but also lesser scholars, and sometimes even commoners, could be appointed to the office.

One of the *muḥtasib*s of commoner origin was Muḥammad ibn Ṣubayḥ,[51] who seems to have gained his appointment through Mamluk patronage. Muḥammad ibn Ṣubayḥ began his career as the chief muezzin in Damascus. He was famous for his beautiful voice, and it was presumably this characteristic that caught the attention of the *nāʾib al-salṭanah* and caused Muḥammad to become the *nāʾib's* imam. He was obviously able to build on this relationship because he was subsequently appointed as the *muḥtasib* of the Ṣāliḥīyah district in Damascus. Ibn Ḥajar's succinct entry does not give any information on Muḥammad's abilities as *muḥtasib,* but he must have been relatively competent because Ibn Ḥajar does not connect him with any scandals.

Muḥammad ibn ʿAlī,[52] who was the son of a seller of beverages, got the opportunity to purchase the office of *muḥtasib*. Muḥammad ibn ʿAlī learned his father's trade and seems to have had some education, even though Ibn Ḥajar does not mention it. However, the fact that Muḥammad was appointed an agent at the Maliki deputy court *(wakīl fī bāb nāʾib al-ḥukm al-mālikī)*[53] indicates that he must have acquired at least some basic scholarly skills. According to Ibn Ḥajar, the occupation led Muḥammad into trouble, and he ended up in prison. Ibn Ḥajar does not specify the nature of the trouble, but al-Maqrīzī reports that Muḥammad was

[50] About the relationship between *muḥtasib*s and the population, see Irmeli Perho, "Al-Maqrīzī and Ibn Taghrībirdī as Historians of Contemporary Events," in *The Historiography of Islamic Egypt (c. 950–1800),* ed. Hugh Kennedy (Leiden, 2001), 110–14.

[51] Ibn Ḥajar, *Al-Durar,* 3:278, no. 3864: Muḥammad ibn Ṣubayḥ ibn ʿAbd Allāh al-Tiflisī al-Dimashqī, d. 725/1325.

[52] Ibn Ḥajar, *Al-Dhayl,* 211–12, no. 538: Muḥammad ibn ʿAlī al-Ḥibrī al-Sharrābī, d. 823/1420.

[53] Al-Maqrīzī, *Al-Sulūk*, 4:543, reports that Muḥammad was *nāʾib al-qāḍī*. One of his *nisbah*s was al-Sharrābī, which refers to his father's trade as beverage seller; his other *nisbah* was al-Ḥibrī, which could refer to his own profession: someone who uses ink. Maya Schatzmiller, *Labour in the Medieval Islamic World* (Leiden, 1994), 168, translates *wakīl bi-abwāb al-quḍāh* as "agent in court."

accused of *kufr* and was threatened with death. In the end, his life was spared, and he was punished through beating and imprisonment.[54]

After being released from prison, Muḥammad opened a shop and began to sell sugar. He was obviously a good businessman because he prospered, but this did not satisfy his ambition. He seems to have been determined to obtain a public office and, finally, he managed to buy himself an appointment to the office of *muḥtasib* in 808/1405. Al-Maqrīzī expresses his abhorrence of the practice of selling offices,[55] and his description of Muḥammad himself is unflattering: he was stupid and impudent.[56] Ibn Ḥajar is equally negative in his portrayal, and according to him Muḥammad was not only impudent but also uncouth, boorish, and shameless. Ibn Ḥajar concludes his entry by stating: "and in this year [823] God freed [us] from him."[57]

It is possible that Muḥammad ibn ʿAlī really was an unpleasant person, but it is also possible that al-Maqrīzī's and Ibn Ḥajar's statements reflect their prejudice against a commoner's occupying a relatively important public office, which was usually held by scholars of law. To make things worse, the commoner had purchased the office, which was a practice that the Mamluks condoned but the scholars abhorred.

To some extent, Muḥammad bears a resemblance to a fictional character in the Arabian Nights. In the Hunchback cycle, there appears a one-eyed butcher who managed to prosper in his trade and began to invest in property. His financial and social advancement was cut short by the authorities, who confiscated his property on the basis of some false accusations. Later, the king had him beaten because he could not abide people who had only one eye. Soon he was caught and beaten again because the scars of the earlier beating were a proof that he was guilty of something.[58] Both the fate of the fictional butcher and the historical Muḥammad ibn ʿAlī show how difficult it was to advance socially; even if a person succeeded to climb up the ladder, it was very easy to fall down again. Muḥammad ibn ʿAlī's case shows that it was indeed possible to achieve a higher social status, but the scholarly elite did not necessarily view the achievement positively.

Some commoners were able to attain powerful administrative positions through personal relationships to members of the Mamluk elite. The Cairene dancer Khālid ibn al-Zarrād[59] is an example of a person who was able to use his status as the amirs' favorite to make a career. Ibn Ḥajar's entry does not give Khālid any ge-

nealogy but only the patronymic Ibn al-Zarrād, son of the chainmail maker. The father's name is not given, nor is his trade specifically mentioned, but in this case the patronymic might actually refer to the father's profession. As the son of a chain-mail maker, Khālid would have had a good opportunity to form contacts with the Mamluk amirs. Khālid became a dancer and performed in the *wālī's* house in Cairo *(dār al-wilāyah)*. Amir Sanjar—the *wālī* of Cairo[60]—took a liking to him and promoted him to the position of the overseer *(muqaddam bayt al-wālī)*. After Sanjar, another amir, Ibn Hilāl al-Dawlah, took over the patronage of Khālid, and with his support Khālid's career advanced further; eventually, he was appointed *muqaddam al-dawlah*. Ibn Ḥajar notes that with this upward mobility both Khālid's wealth and corruption increased, and soon he became associated with Mamluk notables who stole state funds. Together with other offenders, Khālid was arrested in 735 and was ordered to pay a huge fine; still he seems to have had protectors because he was quickly released from prison. Khālid lost his position as *muqaddam al-dawlah* but managed to regain some of his earlier status by becoming the *wālī*'s overseer again. This was his title in 742, when he once again got into trouble. According to al-Maqrīzī, Khālid's greed and oppressive actions led the governor to confiscate his wealth. Three years later, in 745, he managed to bargain with the sultan and was reappointed *muqaddam al-dawlah*. The success was short-lived, however; only a few months later, Khālid was arrested and accused of oppression. He was punished, and this time the punishment was so harsh that he did not survive it.[61]

According to Ibn Ḥajar, Muḥammad ibn ʿAlī was an uncouth and boorish *muḥtasib,* but he does not seem to have been caught in any misconduct, whereas Khālid was punished both for stealing and oppression. The fact that he was able to pay the huge fines required of him indicates that Ibn Ḥajar's assessment of him as corrupt was accurate.

Notorious Rather than Notable

Ibn Ḥajar not only recorded persons whose career, wealth, or learning made them notables, but he also included persons who had become famous through some exceptional action. One of these persons is a commoner, a tailor called Waḍḍāḥ,[62] who was a native of Aleppo. Waḍḍāḥ became notorious in 753 when, according to Ibn Ḥajar, the Devil made him err and proclaim that he was a prophet. He was imprisoned for some days and was encouraged to repent. He did repent and was pardoned and released from prison. The occurrence obviously did not improve the

[60] Ibn Ḥajar gives only the name Sanjar, but he was presumably ʿAlam al-Dīn Sanjar ibn ʿAbd Allāh al-Khāzān (d. 735/1335). Ibn Taghrībirdī, *Al-Nujūm,* 9:67–68, reports Sanjar as the *wālī* in 721 and Sanjar seems to have held the position until his death (cf. the obituary, ibid., 9:305).

[61] Al-Maqrīzī, *Al-Sulūk,* 2:370, 381–82, 565, 664, 670. Ibn Ḥajar, *Al-Durar,* 2:47.

tailor's social status, but his action guaranteed him fame and immortalized him in an entry in Ibn Ḥajar's biographical dictionary.

Conclusions

Presumably, many commoners had modest successes and may have improved their social status within the ranks of the commoners, but their careers remain unrecorded and only the histories of those whose prestige, fame, or wealth earned them a notable status are included in Ibn Ḥajar's dictionary. This gives us only a partial view of the careers of the commoners and their chances of social advancement in Mamluk society. Even if the material does not give us the full picture, the very low number of entries portraying people of common origin clearly indicates that social advancement cannot have been easy, and a successful climb up the social ladder was an exception rather than a rule.

Social historians tend to view the scholarly class as an open career track, where individual merits weighed more than lineage or wealth, but my findings in Ibn Ḥajar's dictionary do not support this view. Theoretically, the scholarly world was indeed open to everybody, and merits were important; if one lacked the invaluable network of contacts, however, the prestigious appointments remained elusive. A baker's son could find a way to study with some of the well-known scholars of his day, but this did not secure him an endowed position in the madrasah system or the judiciary.

Ibn Ḥajar's dictionary shows that most of the commoners who gained prestige in scholarly circles were *muḥaddith*s. A literate person endowed with a good memory could gain a position as an authority on hadiths. This led the person into scholarly circles, and the possibilities of social advancement increased. Rubbing shoulders with esteemed scholars was a beginning in forming the network that was indispensable for building up a career. The scholars might recommend one's talents as a notary, or they could request one to prepare copies of books, or they could patronize one's paper shop; the records show, however, that even three generations were not necessarily enough to establish a family as one of the recognized scholarly families.

The number of commoners who managed to enter the scholarly circles was not very large, but Ibn Ḥajar's records show some examples of remarkable advancement within one generation. A son of a carpenter could first learn carpentry and then turn to studies and finally be promoted to an assistant judgeship. It seems that the positions of judge or assistant judge were the highest occupations in the judiciary reached by a commoner. Ibn Ḥajar reports on two artisans who were appointed assistant judges, whereas the only judge with a commoner origin proved to be a scion of an eastern scholarly family that had fled to Syria. The lists of scholars' occupational posts given in Carl Petry's study on the scholars in Cairo point in the same direction. An assistant judge was more likely than a judge to have had an artisan

occupation. It is also significant that none of those appointed as *qāḍī al-quḍāh,* the highest legal office, had ever had an occupation belonging to the artisan group.[63]

Moving from modest artisan professions to the circles of wealthy merchants seems to have been rare as well. Ibn Ḥajar mentions only one case where an artisan was able to build a large fortune through trade and one case where initial accumulation of wealth was combined with a judicious marriage, securing the next generation an economic head start. It may well be that a much larger number of commoners became affluent through trade, but their wealth did not reach the level of exceptional opulence that would have merited their inclusion among the dictionary entries.

Some commoners were able to attain powerful administrative positions through personal relationships with members of the Mamluk elite. The Cairene dancer is an example of a person who was able to use his status as the amir's favorite to make a career. The dancer's career was obviously a spectacular single occurrence and as such caught the attention of both chroniclers and biographers, who recorded it in their books.

It can be concluded that Ibn Ḥajar's biographical entries show a society in which lineage and networks were important ingredients of social advancement. Individual merits played an important role but did not suffice to guarantee any upward social mobility.

[63] Carl Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton 1981), 362–67, list of Category IV occupations in the artisan group: the numbers of artisans among *nāʾib al-qāḍī*s is 57, among *qāḍī*s 32, and among *qāḍī al-quḍāṭ* 0.

The *Ḥalqah* in the Mamluk Army: Why Was It Not Dissolved When It Reached Its Nadir?

I

The *ḥalqah*[1] was held in high regard during Ṣalāḥ al-Dīn's reign as the sultan's small elite bodyguard that was under his personal command on the battlefield.[2] According to Stephen R. Humphreys, there is little mention of the *ḥalqah* in the sources after Ṣalāḥ al-Dīn's death until it reappears in the last years of al-Ṣāliḥ Ayyūb's reign (637–47/1239–49).[3] At that time the *ḥalqah* continued to enjoy elite status, but which units were included in it or the number of its troops is unclear.[4] The question of whether the Ayyubid *ḥalqah* had something in common with its immediate descendant in the Mamluk army is still open. Humphreys is of the opinion that the *ḥalqah* in its classic Mamluk form appeared no earlier than the first years of al-Ẓāhir Baybars' reign (658–76/1260–77) and had little in common with the elite royal guard of Ayyubid times. Its position in the army was made secondary to the Royal Mamluks and the amirs' mamluks who comprised the new ruling elite. However, as long as the *ḥalqah* retained professional and fully trained soldiers it enjoyed a prestigious position in the army.[5] David Ayalon, on the other hand, argues that although certain changes occurred in the army with the transition from Ayyubid to Mamluk rule, they did not affect the continuity existing between the two armies.[6] During the early period of the Mamluk Sultanate the *ḥalqah* maintained a considerable part of its power and high position from Ayyubid times. It was only later that it lost its prominence to the Royal Mamluks, mainly due to the cadastral surveys conducted by al-Manṣūr Lājīn (697/1297) and al-Nāṣir Muḥammad (713/1313; 715/1315). David Ayalon links the *ḥalqah*'s decline mainly with the fact that its

[1] Quatremère and David Ayalon were of the opinion that the name of the *ḥalqah* is derived from its function as the sultan's bodyguard and its central position around him in battlefield. A. N. Poliak, on the other hand, thought that the name came from the battle tactics employed by Turkish warriors of surrounding their enemies. Ayalon, "Studies on the Structure of the Mamluk Army—II," *Bulletin of the School of Oriental and African Studies* 16 (1954): 448.

members were not mamluks and therefore lacked their military vigor and solidarity *(khushdāshīyah).*

The sources clearly show that from the time of its inception, the *ḥalqah* was a flexible military structure, open to change according to circumstances. Political, social, and moral considerations guided the decision-makers to include military and non-military groups in the *ḥalqah.* Later, patronage had a decisive influence on the *ḥalqah*'s makeup and its division of resources. The purpose of this article is to discuss the changes the *ḥalqah* in Egypt underwent in its makeup and structure, in light of the short- and long-term processes that took place in the Mamluk military and political systems.

II

When Baybars took power he inherited a patchwork army comprised of a large number of old and disorganized military units, both Egyptian Royal Mamluks from al-Ṣāliḥ Ayyūb's reign up to his own time, and former Ayyubid armies. Since Humphreys has studied Baybars' army, mention of his main points will suffice here. Baybars was the first Mamluk sultan to reorganize the army, among other state institutions in the Mamluk Sultanate, according to new principles that marked the initiation of a new central government and the Mamluks' new status as the holders of power. The Mamluk army was divided into three groups: the Royal Mamluks *(al-mamālīk al-sulṭānīyah),* the amirs' mamluks *(mamālīk al-umarāʾ)*, and the *ḥalqah*. The Royal Mamluks included mainly mamluks from the Egyptian royal regiments, such as al-Ṣāliḥ Ayyūb's, al-Muʿizz Aybak's, and Baybars' own mamluks, and were to gain exclusive status. The amirs' mamluks remained under the direct command of their masters but were to be placed at the sultan's disposal when necessary, mainly on expeditions. The Egyptian *ḥalqah* included part of the former Ayyubid regiments in Syria—the freeborn Kurdish Shahrazūrīyah and the Mamluk ʿAzīzīyah and Nāṣirīyah—that were permitted to remain in Egypt after the battle of ʿAyn Jālūt (the Spring of Goliath, 658/1260), and the rest were absorbed into the *ḥalqah* corps of the Mamluk armies in the Syrian provinces. It should be noted that Turkmen, Kurdish, and Arab tribesmen served as auxiliaries in the army. The masses of Ayyubid freeborn and mamluk soldiers admitted to the *ḥalqah* strengthened the army when the Sultanate was in need of a well-prepared, qualified army for its wars against the Mongols and Crusaders. No less important was the need to institutionalize these disorganized military groups, which could have otherwise turned into anarchist elements in the realm. The *ḥalqah*'s secondary status in the Mamluk army was marked by the fact that although the *ḥalqah* was under the sultan's direct control, its troopers did not share a common living quarters

financed by the sultan, as was the case with his recruits.[7] The *ḥalqah* troopers also had to provide their own equipment, again unlike the sultan's mamluks. Therefore the sultan's effective control over them depended on the personal authority their commanders had on them, and this was formally restricted to expeditions only. The division between these three groups was not clear-cut. In addition to his mamluks, Baybars' Sultani regiment included Ayyubid mamluks and freeborn officers, some of whom inherited their military status and *iqṭāʿ* according to previous Ayyubid norms.[8] However, the domination of the new Mamluk elite in political and military institutions was made clear by the smaller *iqṭāʿāt* (s. *iqṭāʿ*), or fiefs, and lower ranks granted to the Ayyubid and other veterans, as well as the preference of appointing Baybars' colleagues and mamluks to the Sultani regiment and high offices.

Another group of enlistees into the *ḥalqah* were the Wāfidīyah, the thousands of Turko-Mongol tribesmen troops that had deserted the Mongol Ilkhanate for the Mamluk Sultanate since the 1260s.[9] The first wave of Wāfidis left the Ilkhanate, where they were stationed, in 660–62/1262–64 under the orders of their master, Berke Khan (654–65/1256–66), the ruler of the Golden Horde, as a result of an open conflict he had with Hülegü, ruler of the Ilkhanate. The first group of Wāfidis arrived in 660/1262 and included two hundred horsemen with their families. They were received in Egypt with great honor; their commanders were granted amirates, and the rest were incorporated into the Baḥrīyah, most probably *ḥalqah* units that at the time were assigned guarding duties in the Citadel of Cairo and other citadels in the Syrian provinces.[10] They embraced Islam and settled in the Lūq quarter of

[7] Every forty *ḥalqah* soldiers had a *ḥalqah* commander *(muqaddam al-ḥalqah*—pl. *muqaddamū al-ḥalqah)* whose commanding authority was limited to expeditions only. During war time both the *muqaddam al-ḥalqah* and his troops were stationed, together with other Sultani and amirs' mamluks, under the command of a *muqaddam alf,* an amir of one hundred who acted as commander of one thousand soldiers, or *ṭulb,* in battle order (Ayalon, "Studies on the Mamluk Army II," 450–51). The *muqaddamū al-ḥalqah* were responsible for the call-up to battle of the troops under their command.

Cairo, which was built by Baybars especially for them.[11] In 661/1263, more than thirteen hundred of Berke Khan's warriors arrived in Egypt and again their commanders were granted amirates, but the sources do not mention that their warriors were incorporated into the *ḥalqah.*[12] In 662/1264 a group of refugees arrived from Shiraz, headed by notables from the Khwarizmi and ancient Iraqi regimes and many chieftains of the Khafājah, the Iraqi Arab tribes. Their chief commander, Amir Sayf al-Dīn Baklak, was granted an amirate of forty, but the Arab tribesmen were sent back to their own country.[13] Baybars became concerned by the continuous influx of warriors from the Ilkhanate when in the same year another group of Tatars entered Mamluk territory seeking refuge. He ordered the army to keep watch until it became clear whether they were indeed refugees *(musta'minīn)*.[14] In 675/1276, sixteen Turkmen notables defected with their families from the Seljuk vassal principality of the Ilkhanid Mongols in East Anatolia. They were not granted amirates, and in the same year they joined Baybars on an expedition to Anatolia in an attempt to establish a Mamluk vassal principality in that region.[15] About thirty years would elapse from the first wave of immigration in the early 1260s until another group of three hundred Tatar troops arrived in Egypt in 691/1291.[16] In 695/1295, during al-ʿĀdil Kitbughā's reign (694–96/1294–96), eighteen thousand Oirat families (in the Arab sources they appear as *uwayrātīyah*), or ten thousand according to another version, left the Ilkhanate and entered the Mamluk Sultanate.[17] Only their commanders and notables, who numbered about two hundred (or one hundred and thirteen, depending on the source), including Hülegü's son-in-law, were received with great honor and were permitted to enter Cairo. Their commander Ṭurghāy was granted an amirate of forty; another amir, Alūṣ, received an amirate of ten; and the rest were appointed as *ḥalqah* commanders with *iqṭāʿāt*. The thousands of

Oirats who came with them were ordered to settle on the Palestinian coast, in the environs of ʿAtlīth, and in al-Biqāʿ in south Lebanon.[18] These thousands of Oirats included women, children, and elderly and middle-aged men, with many of them making their way on foot. They were not allowed to enter the cities on their way from Syria to ʿAtlīth and al-Biqāʿ; instead, the town markets came out to them. The sultan also ordered Amir Sanjar al-Duwaydārī, who was in charge of them, to keep them in Syria until his arrival. Under these circumstances, many of their elders died and their young sons were taken into the amirs' service in Syria.[19] The rest were incorporated into the provinces' armies, where in time they embraced Islam.[20] In 704/1304, another group of two hundred Tatar warriors arrived in Cairo, among them the two brothers and mother of Salār, the amir who was the power behind the nominal sultan al-Nāṣir Muḥammad. The two brothers received amirates and *iqṭāʿāt*, and others entered the amirs' service.[21] In 717/1317 another Mongol grand amir, Ṭāṭāy, reached Cairo with one hundred horsemen and their families. Up until 741/1340 the sources mention only a few Mongol soldiers who immigrated on an individual basis. A famine in the lands in 741/1341 caused multitudes to cross the Euphrates into Mamluk territories. They were allowed to stay in the vicinity of Aleppo, and only two hundred of them were allowed to enter Cairo. Al-Nāṣir Muḥammad chose about eighty of them for his personal service. Some were sent to the barracks in the Citadel, some were housed in the Citadel or were allocated amirates, and the others entered the *ḥalqah* or were divided among the amirs.[22] This group completed the Wāfidīyah immigration into Mamluk territories.[23]

At first glance, the impression received from the events related to the Wāfidīyah is that there was a constant influx of Tatars into the Mamluk Sultanate over a long period. In fact, there were only two significant waves of immigration, one between 660/1262 and 662/1264, and the second in 695/1296. All other records on the arrival of Turko-Mongol warriors and notables in the Sultanate might be classified as trickles that totaled no more than a few hundred. When summing up the number of Wāfidis that immigrated to the Mamluk Sultanate according to the sources' reports, we find that it was actually not much more than fifteen hundred commanders and warriors during Baybars' rule.[24] Whereas the Turkmen and Arab tribesmen

[24] Ayalon maintains that three thousand horsemen entered into the Mamluk Sultanate during Ba - bars' rule. Ayalon, "Wāfidiyya," 98.

were sent back to their own territories, the Mongol Wāfidis were incorporated into the army and were even settled in Cairo. We might assume that the majority were directed to the *ḥalqah,* although the sources do not explicitly indicate this. In the second wave of immigration in the 690s/1290s, the number of Wāfidis who were admitted into the *ḥalqah* in Cairo was about six hundred soldiers: three hundred in 691/1291 and another two hundred in 695/1296. The number of warriors among the thousands of Oirats that immigrated in 695/1296 is unclear, for this group included the elderly, women, and children. Only one hundred thirteen of their notables reached the *ḥalqah* in Cairo.[25] The majority of their warriors and youths were absorbed into the amirs' households in the Syrian provinces.

Another group of freeborn soldiers included in the *ḥalqah* was comprised of the mamluks' sons *(awlād al-nās).*[26] Baybars arranged subsistence grants for orphans of soldiers, in spite of their great numbers.[27] It is unclear whether the custom of admitting sons of amirs into the *ḥalqah* was initiated during Baybars' reign. However, during Sultan al-Manṣūr Qalāwūn's reign (678–89/1279–90) the admission of amirs' sons was done according to professional standards. This is borne out in the story related by Aḥmad ibn ʿAlī al-Maqrīzī (d. 845/1442), the fifteenth-century historian, about Qalāwūn's refusal to grant fiefs in the *ḥalqah* to young and inexperienced sons of amirs. Al-Maqrīzī relates, without mentioning his source, that Amir Ḥusām al-Dīn Ṭurunṭāy, Qalāwūn's vicegerent *(nāʾib al-salṭanah),* and Amir Zayn al-Dīn Kitbughā, the vicegerent in absentia *(nāʾib al-ghaybah),* each married their sons to the daughters of the other and petitioned Qalāwūn to grant them *iqṭāʿāt* in the *ḥalqah*. Qalāwūn refused their request, arguing: "By God, had I seen them striking their swords or marching in front of me on the battlefield, I would find granting them fiefs in the *ḥalqah* unworthy for fear that it would be said: 'he had granted the fiefs to youths'" [*wa-Allāhi law raʾaytuhumā fī maṣāf al-qitāl yaḍribān bi-al-sayf aw kānā fī zaḥf quddāmī astaqbiḥu an uʿṭiya la-humā akhbāz fī al-ḥalqah khashyatan an yuqāla aʿtá al-ṣibyān akhbāz*].[28] Ibn Faḍl Allāh al-ʿUmarī (d. 749/1349), who was a chancery official during al-Nāṣir Muḥammad's

[28] Al-Maqrīzī, *Khiṭaṭ,* 2:216.

third reign (710–41/1310–41), mentions in his account of the Mamluk army of his time that the sons of amirs were customarily allocated payment and provisions such as meat, bread, and fodder by the sultan until they became eligible for recruitment (*taʾahhala*) into the *ḥalqah*. The more fortunate among them were granted amirates of ten or forty.[29] There is no reference to a similar customary track for the sons of low-ranking mamluks in the sources. However, destitute sons of mamluks were admitted to the *ḥalqah* on moral grounds. For example, out of respect for his colleagues from the Baḥrīyah, Qalāwūn inaugurated a special unit in the *ḥalqah,* called al-Baḥrīyah, for their sons who were found dallying in Cairo or made their living as artisans and craftsmen.[30] When, in 738/1337, there were forty *ḥalqah* members among the many soldiers who died in the battle of Āyās, a port in Lesser Armenia, al-Nāṣir Muḥammad asked for their sons and granted them fiefs in the *ḥalqah.*[31]

The entry of mamluks from the amirs' households into the *ḥalqah* was done in the early Mamluk period on a limited scale. There are only a few references to amirs' mamluks who were permitted to enter the *ḥalqah,* most often after their master's death but very occasionally during his lifetime. It was only in 678/1279 that an amir's mamluk received an *iqṭāʿ* in the *ḥalqah* because he had brought about the arrest of two criminals who had bullied the Cairenes for quite a long time.[32] In 719/1319 a mamluk of Amir Baktāsh al-Fakhrī was made a *muqaddam* in the *ḥalqah.*[33] In 733/1332–33, after the death of Baktamūr al-Sāqī, one of the most prominent amirs at the time, al-Nāṣir Muḥammad took some of his mamluks into his service as Sultani Mamluks and granted others *iqṭāʿat* in the *ḥalqah*. It should also be mentioned that al-Nāṣir was accused of Baktamūr's assassination, which drove him to outdo himself to placate the latter's relatives, mamluks, and adherents.[34]

We have seen that during the first thirty years of its existence the *ḥalqah* was, in fact, a very flexible institution. It was dependent *a priori* on available qualified military manpower, from inside and outside the Sultanate's territories. Professionalism was the standard for admission into the *ḥalqah,* but political, social, and moral considerations also guided the sultans to include non-military groups,

such as the indigent sons of mamluks and Wāfidīyah notables. This makeup of the *ḥalqah* indicates that it was open to change according to circumstances; the sources do not reveal the total number of soldiers included in the *ḥalqah* and do not show that a manpower quota had been determined for all units in the Egyptian or Syrian armies. No reforms were made to reorganize the *ḥalqah* until al-Manṣūr Lājīn's (696–98/1296–99) cadastral survey of 697/1298, nor were any attempts made to determine the number of its troops before al-Nāṣir Muhammad's cadastral surveys of 713/1313 and 715/1315. New recruits, such as the sons of mamluks and Wāfidis, were admitted without purging the veterans from the ranks for about thirty years after the *ḥalqah*'s inception. The majority of those who were admitted into the *ḥalqah* at its inception were experienced soldiers, some of them adults in the middle or at the end of their military careers. This means that those who still survived in the 1290s must have been elders. Indeed, the *ḥalqah*'s makeup during the 1290s reflected its problematic and anachronistic position, for it included many of "those whose contribution equaled nothing" [*man lā yughná ʿanhu wa-lā yujdá majīʾuhu shayʾan*].[35] At the same time, new mamluk units of superior military quality had been founded—at least two of them, Baybars' Ẓāhirīyah and Qalāwūn's Burjīyah, were elite units—while Mamluk hegemony in the Sultanate became well established, legitimizing the diversion of more state resources into Mamluk hands. This situation came into the open in the cadastral survey initiated by al-Manṣūr Lājīn in 697/1298, which is called in the sources al-Rawk al-Ḥusāmī.

III

Lājīn rose to power (in 696/1296) after a struggle between two factions of Qalāwūn's mamluks, broadly divided into the Burjīyah, which included mainly Circassian mamluks who supported Lājīn, and the rest of the Manṣūrīyah, Qalāwūn's veteran mamluks to which Kitbughā, the deposed sultan, belonged. In 693/1294, when Kitbughā acted as vicegerent *(nāʾib al-salṭanah)* behind al-Nāṣir Muḥammad's nominal rule, this division between Qalāwūn's mamluks erupted into an open struggle.[36] Most of the *ḥalqah* soldiers, the Mongols, and the Shahrasūrīyah Kurds joined Kitbughā, who was himself of Mongol origin. It was because of the Burjīyah opposition that Kitbughā allowed only the Oirats' commanders and notables to enter Cairo out of the thousands that arrived in 695/1295–96 (see above). After Lājīn's rise to power, he launched a reform in the army through a cadastral survey with the aim of building a new *ḥalqah* (or according to another version, to create a new mamluk unit), as a power base for his rule, from among the unemployed soldiers *(baṭṭālūn)*.[37] In ei-

[35] Al-Maqrīzī, *Sulūk,* 1:800.

[37] Al-Nuwayrī, *Nihāyat al-Arab,* 31:347–48; al-ʿAynī, *ʿIqd,* 3:397; Ibn Taghrībirdī, *Nujūm,* 8: 92, 93.

ther case the *rawk* was intended to increase mamluk hegemony in the army, for the creation of a new military unit necessitated the purchase of fresh mamluk recruits, and the *baṭṭālūn* must have been veteran mamluks of earlier sultans and amirs, such as Baybars' Ẓāhirīyah or al-Ashraf Khalīl's (689–93/1290–93) Ashrafīyah.

No less important was Lājīn's aim of restricting the dependence of the *ḥalqah* on the dominant Manṣūrīyah amirs by means of abolishing their *ḥimāyah* (protection) services on the *iqṭāʿ*s held by the *ḥalqah* troops, or *ajnād*. Since the *ḥimāyah* prevailed in the army throughout the Mamluk period and had its roots in earlier periods in the Muslim world, a discussion of this practice is in order. Claude Cahen observed three kinds of *ḥimāyah* in classical Islam. One was the protection Bedouin tribes provided, with or without governmental approval, to settlers or travelers in their territories in return for payment. This procedure was identical to *khafārah* (guarding), which goes back to a nomadic pre-Islamic procedure. The more popular practice of *ḥimāyah* was related to the patronage institution that prevailed in the late Roman and Byzantine Empires and later in classical Islam. The *walāʾ,* the patronage relations between the Muslim conquerors and their non-Arab clients *(mawālī),* during the early centuries of Islam was one version of the *ḥimāyah*. Although Muslim jurisprudence did not recognize *ḥimāyah,* it did recognize *taljiʾah,* which was an identical practice and synonym of *ḥimāyah*. It was a tacit agreement whereby small separate landed properties were put under the protection of local potentates for payment, fictively registered under their names for all dealings with tax authorities. The small estates' holders did not cede their ownership on the property to the "protectors," but at the same time the latter could inherit the right to the *ḥimāyah* fees. The *ḥimāyah* practice easily led to the creation of vast domains by those in power and the rendering of small landholders into share-croppers. In addition to the *taljiʾah,* the *ḥimāyah* included, on occasion, a non-land-based fee for *khafārah* collected by the potentates for their protection of the roads and crops against bandits in the territory. With the advent of the Buyids and the enlargement of the *iqṭāʿ* system in the fourth/tenth century, which granted the new military aristocracy all administrative and fiscal rights on the land in their district, the *ḥimāyah* was abolished, both in terms of landed property and police work. Later, the term *ḥimāyah* continued for several centuries to designate the urban *ḥimāyah,* which was a tax levied by the chief of police of town quarters for ensuring public order. On occasion, undisciplined urban groups, such as the *futūwah* of Baghdad, imposed their protection on merchants.[38] Whether the *ḥimāyah* nevertheless persisted uninterruptedly into the Mamluk period is not clear. John L. Meloy addressed the issue of the power structure in Mamluk society in a focused discussion on *ḥimāyah* as a gauge of the state's control of coercive power. Meloy's main argument is that the *ḥimāyah* was

[38] Claude Cahen, "*Ḥimāya*," *Encyclopaedia of Islam,* 2nd ed., 3:394; idem, "Notes pour l'histoire de la *ḥimāyah,*" in *Melanges Louis Massignon,* vol. 1 (Damascus, 1956), 287–303.

ripe in the Mamluk sultanate during the fifteenth century in the form of a protection racket or the extortion of protection money levied from weak rural and urban sectors by powerful members of the elite. The providers of the *ḥimayah* formed private sources of power that rendered the sultan's grip on Mamluk society and economy tenuous.[39] While the present author has some doubts about the criminal features attributed to the *ḥimāyah* practice (see below), she shares Meloy's opinion that the private protection services, as much as private justice and public order services, diminished the state's authority. Sources from the Mamluk period furnish evidence that the *ḥimāyah* served as a crucial vehicle for maintaining patronage networks impinging on the sultan's authority. In spite of the efforts the sultans made to curb it, it survived throughout the Mamluk period and was used by both the sultan and the amirs to amass great fortunes and build their own patronage networks.

The *ḥimāyah* in the sense of *talji'ah* and *khafārah* was ripe in Mamluk Egypt before Lājīn's cadastral survey. Al-Maqrīzī confirms that fiefs of *ḥalqah* troops were registered in the amirs' bureaus and in fact became their *iqṭā'*s, so that the former gained nothing from their fiefs' income (*fa-lā yaṣilu ilá al-ajnād minhā shay'*).[40] Thus, for example, Sayf al-Dīn Mankūtimur (d. 698/1299), the sultan's vicegerent, amassed one hundred thousand *irdabb*s[41] of cereal per annum from the *ḥimāyah* alone. Al-Maqrīzī also refers to the confusion that prevailed in the *ajnād*-cultivated lands when law-breakers and rabble-rousers rendered the levying of official taxes *(al-ḥuqūq wa-al-muqarrarāt al-dīwānīyah)* impossible. Therefore these taxes became prey for the amirs' guards who did the policing work and their officials *(a'wān al-umarā' wa-mustakhdamīhim)* who harmed the peasants residing on the *iqṭā'* lands. Lājīn ordered the abolition of the *ḥimāyah* in the amirs' bureaus, making Mankūtimur's own *dīwān* an example to be followed by the rest of the amirs. Al-Maqrīzī relates that in the wake of Lājīn's action, *iqṭā'āt* were returned to their original holders and the practice of the *ḥimāyah* was stopped.[42] The amirs' encroachment on the sultan's authority through the control over the *ḥalqah* clearly stands out from this account, for the *ḥalqah* troops were formally under the sultan's direct control. It was the sultan's administration that should have been expected to provide the *ḥimāyah* services and the fees levied for it to flow to the sultanic treasury.

[42] Al-Maqrīzī, *Khiṭaṭ,* 1:88.

During the *rawk,* which took about eight months, from Jumādá I to Dhū al-Ḥijjah 697/March to October 1298, the registration of fiefs held by all sectors in the army was carried out, but since the staff was urged to conclude the *rawk* speedily, accurate registration followed by actual inspection of fiefs was only partially accomplished.[43] This information is significant because it indicates that the *ḥimāyah*'s abolition was not effectively carried out. Furthermore, the *ḥalqah*'s and the amirs' shares in the cultivated lands of Egypt *(qirāṭ* pl. *qarārīṭ)* were reduced to half in this r*awk,* while the sultan's share of four twenty-fourths remained untouched. The *ḥalqah* and the amirs had each held ten twenty-fourths of the lands, while after the survey they together held ten twenty-fourths, and one twenty-fourth was kept as a reserve to compensate those who were dissatisfied with their new allocations. The remaining nine twenty-fourths were assigned for the establishment of a new *ḥalqah* that was planned to be as big as the existing army.[44] Mankūtimur, who is described as a strict observer of the rules and an honest amir, conducted the *rawk* stringently, not allowing any petitions regarding the new allocation of *iqṭā*ʿs.[45] There were "soldiers who were fortunate and others who were unfortunate, and there were those who were unsuccessful and others who were successful with what they got" *[fa-min al-jund man saʿida wa-minhum man shaqiya wa-minhum man khāba wa-minhum man anjaḥa bi-mā laqiya].*[46] Although most of the *ḥalqah* soldiers were dissatisfied, they received their new *iqṭā*ʿs without protest. Only those "who still retained vigor and bravery" *[baqīyah min ahl al-quwwah wa-al-shajāʿah]* protested and threatened to move to the amirs' service or even remain unemployed.[47] They were imprisoned but thereafter released. This information confirms the impression that many of the *ḥalqah* soldiers, the survivors of those who had entered the *ḥalqah* during the early years of the sultanate, were in a miserable condition and unfit for service.

Lājīn's intention to initiate a new military unit was nipped in the bud when both he and his vicegerent were killed by the disaffected amirs. All the *iqṭā*ʿs saved by Lājīn were not returned to their original holders but were distributed among the amirs in addition to the *iqṭā*ʿs they already held.[48] The *ḥalqah* ranks were left with many unfit old soldiers with much smaller *iqṭā*ʿ resources, about one third or one half less than those they had held earlier. This *rawk,* then, strengthened the Mamluk amirs' position through the formal registration, under their names,

of the *ḥalqah iqṭāʿāt,* which had been previously exploited informally through the *ḥimāyah* arrangement. To add insult to injury, the *rawk* did not stop the practice of the *ḥimāyah,* but only replaced the previous prominent amirs with the emerging Burjīyah oligarchy.[49]

In his *rawk* of 715/1315 in Egypt, al-Nāṣir Muḥammad attained the targets that Lājīn had set for his cadastral survey, and beyond. Since updating the land registers was not successfully accomplished in the al-Rawk al-Ḥusāmī, part of the *iqṭāʿ* redistribution was based on figurative lists that survived from Ayyubid times. Al-Nāṣir Muḥammad determined a permanent manpower quota for the army and a correlative remuneration scale as the basis for the *iqṭāʿ* redistribution.[50] Al-Nāṣir's manpower quota for the Mamluk army in Egypt included twenty four thousand troops organized in the following order:[51]

1. Twenty-four commanders of a thousand who had in their service two thousand four hundred mamluks.
2. Two hundred amirs of forty with eight thousand mamluks in their service.
3. Five hundred forty-seven prefects and inspectors in the various districts of Egypt, with five hundred sixty mamluks.
4. Two hundred amirs of ten with two thousand mamluks.
5. Seven regional prefects.
6. Forty *muqaddam mamālīk* over more than two thousand Sultani mamluks.
7. Eight thousand nine hundred thirty-two *ḥalqah* soldiers, with one hundred *muqaddamūn* and twenty-four *nuqabāʾ* (commanders of one thousand troops on the battlefield).

Al-Nāṣir's manpower quota shows that the *ḥalqah* was the largest body in the army, about thirty-seven percent of the army. Obviously, the resources designated to the *ḥalqah,* though divided into small shares of *iqṭāʿ,* amounted to a huge fortune. Al-Nāṣir started dismissing the surplus manpower already in 712/1312, when he ordered the mustering of the *ḥalqah* and the Sultani mamluks. Contemporary sources from al-Nāṣir's reign report that eight hundred, or one thousand two hundred according to another version, did not pass muster, among them the elderly, those unfit for service, and youths. The elderly received an allowance sufficient for their livelihood instead of their *iqṭāʿ*s. Their fiefs were distributed among salaried *(jāmakīyah)* Sultani mamluks. In 721/1321, again more than forty-three *ajnād* were dismissed.[52]

[52] Shams al-Dīn al-Shujāʿī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Ṣāliḥī wa-Awlādihi,* ed. Barbara Schafer (Wiesbaden, 1977), 114; Ibn al-Dawādārī, *Kanz al-Durar,* 9:244;

The land survey was conducted in all Egyptian districts on a basis of each and every village.[53] Al-Nāṣir himself spent two months in Upper Egypt to facilitate communication with the amirs who carried out the land registration.[54] Whereas Lājīn did not change the sultan's personal share in the *iqṭāʿ* division, al-Nāṣir increased it from four twenty-fourths to ten twenty-fourths. The remaining fourteen *qirāṭ*s of Egypt's cultivated lands were reserved for the amirs and *ḥalqah* soldiers. Al-Nāṣir also changed the *iqṭāʿ* system by limiting it to cultivated lands only; all *iqṭāʿ*s based on non-agricultural taxes and customs, such as the tax levied on the grain stores at al-Maqs port in Būlāq, were abolished or transferred to either the state bureaus or the sultan's private treasury *(khāṣṣ)*. The *muqṭaʿ,* or fief holder, was entitled to levy only the land tax *(kharāj)* and the poll tax paid by non-Muslims *(jizyah* or *jawālī),* while all other taxes were abolished.[55] All other payments that had been informally imposed on the peasants by fief holders, such as gifts *(ḍiyāfah* or *hadīyah),* were calculated in the *ʿibrah,* the formal and total revenues levied from the *iqṭāʿ*.[56] Even the *ḥimāyah* was calculated in the *iqṭāʿ ʿibrah*. Formally relinquishing the *ḥimāyah* money to the amirs by including it among the taxes the fief holders were formally authorized to levy might be regarded as part of al-Nāṣir Muḥammad's plan to minimize the sultanic administration's dealing with fiscal matters. More significantly, this move illustrates that it was beyond the sultan's power to mandate the abolition of the *ḥimāyah*. Therefore he resorted to directing the *ḥimāyah*'s funds to the royal treasury, for their inclusion in the *ʿibrah* enabled the sultan to allocate smaller *iqṭāʿ*s to fief holders. As will be shown, this rivalry between the amirs and the sultan over control of the *ḥalqah*'s manpower and financial resources would last until the end of the Mamluk period and would entail changes in the *ḥalqah*'s makeup and structure.

In Dhū al-Ḥijjah 715/1315 al-Nāṣir distributed the *iqṭāʿ*s in person, and no advocacy of amirs on behalf of the *muqṭaʿ*s was permitted.[57] Since the *iqṭāʿ* was no longer based solely on the *kharāj* tax but now also included the *jizyah,* in practice the *muqṭaʿ*'s income became smaller. The Coptic peasants, who exploited the decentralization of tax collection, evaded the *jizyah* payment by moving from village to village, declaring that they had already paid it elsewhere. Also, the *iqṭāʿ* was divided in various locations in Upper and Lower Egypt in order to curb the *muqṭaʿ*'s influence and his regional power. While these reforms secured the sultan's grip over the amirs and eased the administrative burden connected with the collection

of the *jizyah,* they imposed a heavy burden on the amirs' administration because they had to increase the number of clerks to deal with these new tasks. The *ḥalqah* troops' income was reduced to below the *ʿibrah* that had been determined in the Ḥusāmī Rawk. Before the Ḥusāmī Rawk, the *ajnād al-ḥalqah* each held a full *iqṭāʿ,* which yielded an income of between ten thousand and thirty thousand dirhams per annum, according to rank. In addition to these incomes the *ajnād* also levied *ḍiyāfah,* which reached five thousand dirhams in the larger *iqṭāʿ*s. In the wake of the Ḥusāmī Rawk, their average income was reduced to twenty thousand dirhams, and after al-Nāṣir's, it fell to ten thousand or less, which meant that several *ajnād* shared the same *iqṭāʿ*.[58] The *muqaddamū al-ḥalqah* received nine thousand dirhams per annum, including fodder in the amount of nine hundred dirhams. Below them there were seven classes of *ajnād:* in the first there were fifteen hundred cavalryman with an income of nine thousand dirhams; the second included one thousand three hundred fifty *jundī*s with an income of eight thousand dirhams; the third had one thousand three hundred fifty *jundī*s with an income of seven thousand dirhams; the fourth had one thousand three hundred *jundī*s with six thousand dirhams; the fifth one thousand three hundred *jundī*s with five thousand dirhams; the sixth one thousand one hundred *jundī*s with four thousand dirhams; and the seventh one thousand thirty-two *jundī*s with three thousand dirhams.[59] The income of the lower-rank *ajnād* now reached a level that was insufficient for livelihood, and certainly not enough to pay for equipment.[60] Some of them were driven to selling their *iqṭāʿ*s. In 728/1328, a note was dropped in the sultan's stable condemning him for ruining the army because the *awlād al-nās* had sold their *iqṭāʿ*s out of need and had turned to begging. In response, al-Nāṣir ordered a review of the *ajnād al-ḥalqah* in order to discover those who had no horses or had sold their *iqṭāʿ*s. Fourteen sons of amirs were dismissed, some *ajnād al-ḥalqah* were beaten, and others were imprisoned for two months and upon their release were sent to Syria.[61] This incident proves that at this stage the *awlād al-nās* already constituted a weak sector in the *ḥalqah*.

The arrival of the Wāfidis in Cairo in 741/1341 (see above) was another opportunity for al-Nāṣir to muster the *ḥalqah*. The *ḥalqah* soldiers were invited to the muster on the pretext that those who had accumulated debts would be allowed to pay them off in three annual installments. The elders and disabled were told that they would be allowed to retire and still keep their *iqṭaʿ*s by registering them under the names of their sons or other relatives who would fulfill their duty when neces-

[60] Al-Shujāʿī, *Tārīkh al-Malik al-Nāṣir Muḥammad,* 97–98; Ibn Abī al-Faḍāʾil, *Al-Nahj al-Sadīd*, trans. and ed. by Samira Kortantamer as *Ägypten und Syrien zwischen 1317 und 1341 in der Chronik des Mufaḍḍal b. Abī l-Faḍāʾil* (Freiburg, 1973), 99–100; al-Maqrīzī, *Sulūk,* 2:517–19.

[61] Al-Maqrīzī, *Sulūk,* 2:228–29.

sary. This might well be one of the ways by which second and third generations of Mamluks entered the *ḥalqah.* Those who sold their *iqṭāʿ*s were promised that they would be restored by paying the buyers one eighth of their value in three annual installments. All the elders, disabled, and those who had admitted to selling their *iqṭāʿ*s—sixty-five solders altogether—were dismissed. Some of the restored *iqṭāʿ*s were given to low-ranking Sultani mamluks and the newly arrived Wāfidis incorporated into the Sultani household, and the rest were returned to the state treasury.

The small number of those who were dismissed in 721/1321, 728/1328, and 741/1341, out of the inclusive number of the *ajnād al-ḥalqah,* indicates that the great and systematic purge in the *ḥalqah* had occurred earlier—as early as 712/1312. Most of the *iqṭāʿ*s released from the *ḥalqah* during al-Nāṣir's reign went to the low-ranking Sultani mamluks. In fact, al-Nāṣir followed Lājīn's original policy of increasing mamluk dominance over the *iqṭāʿ* resources. The "mamlukization" of the army was not only felt in the transferral of *iqṭāʿ* resources from the *ḥalqah* to the Sultani mamluks, but also in the makeup of the *ḥalqah,* in which veteran mamluks of previous sultans and amirs increasingly replaced freeborn soldiers. The ensuing decrease in the income of the *ajnād ḥalqah* in the wake of Lājīn's and al-Nāṣir's cadastral surveys, and the fee they had to pay for the *ḥimāyah,* pushed them to selling or leasing their small and unprofitable *iqṭāʿ*s. It was only al-Nāṣir's strong authority that prevented this practice, which, as will be shown below, would flourish under weaker rulers with the amirs' encouragement.

IV

After al-Nāṣir Muḥammad's demise (741/1341), the Mamluk Sultanate was afflicted by forty-one years of incessant struggle over effective power among the dominant amirs who held that power and acted as patrons of most of al-Nāṣir's descendants.[62] The sources record no less than forty-two political clashes between powerful amirs and the ensuing reshuffling of short-lived factional coalitions for power.[63] Important for our purposes here are the ramifications of the frequent disintegration of these power networks for the *ḥalqah* and its place in the power structure of the Mamluk army during this period.

From 741/1341 until the deposing of the house of Qalāwūn in 784/1382, the dominant amirs installed twelve sultans in the sultanate (one, al-Nāṣir Ḥasan, was in office twice, 748–52/1347–51 and 755–62/1354–61). All but one—al-Ṣāliḥ Ismāʿīl, who died of an illness—were deposed by the amirs, and seven were murdered after their removal. The short reigns of the Qalawunid sultans and their dependence on their patrons prevented the foundation of new Sultani mamluk households, while the prominent amirs' resources and households grew increasingly. Qawṣūn

---

(742/1342), who held executive power immediately after al-Nāṣir Muḥammad's death, had seven hundred mamluks.[64] Bashtāk (741/1341), Qawṣūn's rival, had at least three hundred fifty mamluks of his own.[65] Yalbughā al-ʿUmarī (d. 767/1365), one of al-Nāṣir Ḥasan's favorite mamluks who played a leading role in his master's murder, held a mamluk household that included over eighteen hundred recruits, *julbān* or *ajlāb,*[66] and it was from among them that Barqūq rose to power and deposed the Qalawunid house in 784/1382. Al-Nāṣir Ḥasan and al-Ashraf Shaʿbān (764–78/1363–77) were the only Qalawunid sultans who succeeded in recruiting mamluk households of their own, owing to their long reigns (by the standards of this period), and the executive power they exercised. Yet their mamluk households were smaller than those of the dominant amirs, and both were murdered when they attempted to rule autonomously, thus impinging on the amirs' power and patronage. Ḥasan was murdered by Yalbughā al-ʿUmarī, who then acted as vicegerent, attempting to create a counterbalance to the mamluk amirs by encouraging the advancement of *awlād al-nās* to prominent amirates and governorships in the provinces. Al-Ashraf Shaʿbān's murder came against the background of a land survey he carried out in 777/1376, in which members of the Qalawunid house, the *asyād*, were allocated *iqṭāʿāt* with rich revenues in Upper Egypt and the vicinity of Cairo.[67] Al-Ashraf's new distribution of state resources led to a rebellion against him by both loyalist and oppositionist Mamluks. In this context, the survey of state revenues and expenditure conducted by the amirs in 750/1349 is indicative of the power and wealth the amirs accumulated during this period. The purpose of this survey was originally to check the high expenditure of the Sultani household, which at the time reached 22,000 dirhams a day. Yet the same survey also revealed that the major part of the sultan's land revenues all over Egypt, including *iqṭāʿāt* and leased lands, were distributed as grants to the amirs or were registered in their names as beneficiaries.[68]

In spite of their great power, the dominant amirs were insecure in the face of the common and permanent danger of the disintegration of their support in favor of new power networks. In their bid for power expansion and the sequential conflicts over power, the amirs, who acted as patrons, placated other amirs and low-ranking mamluks with money and privileges to encourage them to shift their allegiance

from one patron to another.[69] As a result of the intensive mobility of mamluks between the factions and coalitions, power networks were continuously being formed and dissolved, leaving the amirs uncertain regarding the support they had organized as their power base. At the head of these coalitions stood two or more amirs who would temporarily put aside personal rivalries and join forces to expand their power networks and, no less important, to limit and inspect the political and economic power of their partner-rivals. Examples of this pattern abound in the sources dealing with this period.[70] As to the low-ranking mamluks, in general they benefited from the reshufflings in the power networks, for they improved their bargaining power; the atmosphere of an open market for support improved their remuneration and their socio-political position vis-à-vis the decision makers. However, on the personal level, the low-ranking mamluks, like the amirs, suffered uncertainty during the frequent political reshufflings. Most of the mamluks strove towards a timely move from the waning network to the ascendant one with the expectation of obtaining higher remuneration for their support. By contrast, those associated with the defeated amirs, especially those who belonged to their households and were quite numerous during this period, were excluded from the new power networks. Some received minor positions in the army, some were expelled from Cairo, and others were left unemployed *(baṭṭālūn).* Normally, the majority of the unemployed mamluks were given minor allowances and *iqṭāʿ*s in Egypt, mainly in the *ḥalqah*. Thus, for example, in 748/1347, when two hundred mamluks who had been in the amirs' service complained about unemployment, the amirs' council *(majlis al-mashūrah)* decided to divide them among the amirs.[71] Before his flight to Karak in 742/1342, al-Nāṣir Aḥmad intended to recruit Qawṣūn's and Bashtāk's unemployed mamluks and place them in the Citadel as his bodyguard against his vicegerent, Ṭashtamur. According to his abortive plan, these mamluks were to be paid by *iqṭāʿāt* in the *ḥalqah*.[72] After the Crusader attack on Alexandria in 766/1365 by Peter I of Lusignan, the king of Cyprus who was also titular king of Jerusalem, it was decided to send an expedition to Cyprus to curb Christian piracy based in that island and Rhodes. In 767/1365–66, Yalbughā al-ʿUmarī ordered a muster of the *ḥalqah* soldiers, which was interrupted after reviewing two thirds of the troops when the rebellion against him broke out. The muster was thereupon discontinued and the *ḥalqah* soldiers were asked to join his forces against the rebels.[73] After Yalbughā's assassina-

[72] Ibn Taghrībirdī, *Nujūm,* 10:64.

[73] Al-Maqrīzī, *Sulūk,* 3:114, 129, 131; Muḥammad ibn Aḥmad Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Cairo, 1982–84), 1:2:28, 44.

tion, those who were dismissed from the *ḥalqah* during the muster were reinstated by the new holders of power, and their *iqṭāʿ*s were restored.[74] During al-Ashraf Shaʿbān's reign, a large number of mamluks from previous amirs' households were employed as *ḥalqah* soldiers in the service of royal family members *(asyād).* Barqūq, the future sultan al-Ẓāhir, and his coalition partner Barkah, were among the Yalbughāwīyah mamluks who had been exiled to Syria in 769/1368 for their part in the rebellion against their master and his murder.[75] They were summoned to Cairo by al-Ashraf Shaʿbān to serve under his sons for *iqṭāʿ*s in the *ḥalqah*. It was from this position that Barqūq would take part in future rebellions and pave his way to rule.[76] Qurṭāy al-Ṭāzī, Asandamur al-Dhabbāḥ al-Sirghitmushī, Balāṭ al-Ṣaghīr al-Sayfī, and Yalbughā al-Niẓāmī were all mamluks of amirs who rose to high rank from the position of *mufradī* (pl. *mafāridah*), i.e., *iqṭāʿ* holder in the *ḥalqah*.[77] In 784/1382, al-Ẓāhir Barqūq (784–801/1382–99) surveyed al-Ashraf Shaʿbān's mamluks with the intention of purging them from the army; those of them who held large *iqṭāʿ*s were made *muqaddamūn* in the *ḥalqah,* while the rest were reduced to simple *ḥalqah* soldiers. Then Barqūq inquired about other Ashrafi mamluks who earned ten thousand dirhams per annum, i.e., the largest *iqṭāʿāt* in the *ḥalqah*. He found that four hundred such mamluks had been admitted to the *ḥalqah* after their master's death; he also found one hundred mamluks who had held *jāmikīyah,* or an allowance, of this same amount of ten thousand dirhams in the sultan's bureau. The holders of *jāmikīyāt* were dismissed and their allowances were given to Barqūq's mamluks; the *ḥalqah* soldiers were relieved of their duties, although they were allowed to keep their fiefs for their livelihood.[78] In 782/1380, Barqūq called for the *ḥalqah* and the unemployed soldiers to fight for him against his partner-rival Barkah.[79] During this period, then, the *ḥalqah* was under the amirs' control and served as a sort of temporary occupation for many young mamluks from defeated factions until their fortunes changed and brought them back into an effective power network.

As was mentioned earlier, al-Nāṣir Muḥammad prevented the protection of amirs over *ḥalqah* soldiers and dealt severely with *ḥalqah ajnād* who had sold their *iqṭāʿ*s. By contrast, the prominent amirs who held effective power during this

[79] Ibn Iyās, *Badāʾiʿ,* 1:2:258.

period often allowed the selling and exchanging of *iqṭāʿ*s in the *ḥalqah* for money. As early as 744/1343, the vicegerent Āl Malik al-Ḥājj, a man of moral integrity, forbade the relinquishing of *iqṭāʿāt (al-nuzūl ʿan al-iqṭaʿāt)* by *ḥalqah* soldiers or exchanging *(al-muqyāḍāt)* them for money. The practice of exchanging fiefs in the *ḥalqah* ceased for a while when Āl Malik demanded that monies paid in these transactions be transferred to the state treasury instead of the amirs' and clerks' pockets. [80] Only two years later, when a new power network was formed, the amir Ghurlū, who was in charge of the tax bureaus *(shādd al-dawāwīn),* introduced the norm of paying the state treasury for posts and for relinquishing or exchanging *iqṭāʿ*s.[81] Lack of strong control by the central government reached its peak during the Black Death (748–49/1348–49), allowing the admittance of civilians to the *ḥalqah*. A large number of *ḥalqah* soldiers were decimated in the Black Death, so much so that within a week an *iqṭāʿ* would move between six soldiers consecutively. This confusion was exploited by commoners who bought vacant *iqṭāʿ*s in the *ḥalqah*.[82] In 753/1352, when the amir Qublāy emerged as vicegerent of a newly formed power coalition, the phenomenon of *iqṭāʿ* sale and exchange reached a level whereby even the *muqaddamū al-ḥalqah* sold their commandership. A group of about three hundred agents *(muhayyisūn)* was formed during these years, moving among the *ajnād al-ḥalqah* and encouraging them to sell their *iqṭāʿ*s that were coveted by artisans.[83] Worthy of mention is that between 744/1343 and 754/1353 the wars between the Bedouin tribes of the ʿArak and Banū Hilāl over hegemony in Upper Egypt made travelling in the region impossible, damaged agriculture, and prevented the levying of land tax. The weakness of the government vis-à-vis the Bedouin reached such a level that Muḥammad Ibn Wāṣil came to depend on al-Aḥdab, the chief of the ʿArak tribe that controlled Upper Egypt, to collect the *kharāj*.[84] In 754/1353, when the economic crisis in the Sultanate reached its worst, the *majlis al-mashūrah*[85] authorized the amir Shaykhū, who acted as *al-amīr al-kabīr,* to take drastic measures to put an end to the disorder prevailing in the government. It was during this year that the Sultani harem that squandered the sultan's private treasury was eliminated, the Coptic clerks were purged from the state administration, the Coptic Church's estates were confiscated, and the Bedouin in Upper and Lower Egypt were dealt a heavy blow.[86] Unsurprisingly, this was also the year in which Shaykhū ordered the abolition of relinquishing and exchanging *iqṭāʿāt* in the army, and he also ordered

that clerks in the army bureau *(dīwān al-jaysh),* who amassed great fortunes from the frequent transactions of fiefs, would levy only three dirhams instead of twenty for issuing fief allocation decrees.[87] Shaykhū's measures terminated some fifteen years of disorder in the *ḥalqah* administration that was used by amirs and clerks to amass great wealth. After Shaykhū's murder, the amirs' grip over the *ḥalqah* was gradually renewed.

It was during the reign of al-Ẓāhir Barqūq that *ḥalqah iqṭāʿ*s were shared formally between the sultan and the amirs, probably as part of the arrangement he made to placate the amirs after deposing the House of Qalāwūn. That is to say, the *ḥalqah* was manned mainly by mamluks from the sultan's and the amirs' households. *Ḥalqah iqṭāʿ*s were allocated to recruits from the sultan's mamluk household registered in the *dīwān al-mufrad* (the bureau established by him especially for payment of the sultan's mamluks)[88] and to mamluks in amirs' households in addition to the incomes they already held.[89] In this way, considerable disparities in income level became widespread in the *ḥalqah* between increased income holders, who had a double and triple income, and others whose *iqṭāʿ* income remained so low that it was unfeasible to levy it.[90] In addition, the practice of collecting *ḥimāyah* fees and leases was widespread among the amirs in Egypt. Yalbughā al-Naṣirī (d. 817/1414) was outstanding in abstaining from levying them, so much so that al-Maqrīzī thought it was an important piece of information to be included in his obituary.[91] During the twelve-year civil war that prevailed in the sultanate after Barqūq's death, the amirs' patronage was also instrumental in the inclusion of their protégés in the *dīwān al-mufrad*. For example, in 805/1403, al-Nāṣir Faraj, Barqūq's son, decided to cut the salaries and fodder payments of twelve hundred mamluks who had been registered in the *dīwān al-mufrad* since his father's death. Due to the amirs' advocacy, they were reinstated, except for two hundred thirty "who had no one to protect them *[lam yūjad man yaʿtanī bi-him].*"[92] In 821/1418, when al-Muʾayyad Shaykh (815–24/1412–21) was preparing for an expedition against Qārā Yusūf, the Turkmen chieftain who then ruled northern Iraq, he used the *ḥalqah* survey as an opportunity to renew the separation between the amirs' households, the *ḥalqah,*

and *dīwān al-mufrad*. Consequently the amirs' mamluks had to choose between service in their masters' households or the *ḥalqah*. Those who chose the *ḥalqah* but still complained about low income had their *iqṭāʿ*s increased, probably to prevent *ḥimāyah* payment to the amirs.[93] However, al-Muʾayyad's reforms did not last long, for the historians al-Maqrīzī and Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī (d. 874/1470) contend that the double position practice was the reason for the diminished number of soldiers in the army in their days, i.e., after al-Muʾayyad's reign.[94] The sources do not show that mamluks in the amirs' households held *iqṭāʿ*s in the *ḥalqah,* but they do show that many Sultani mamluks continued to hold both a *jāmikīyah* from the *dīwān al-mufrad* and an *iqṭāʿ* in the *ḥalqah*. While distributing salaries to Sultani mamluks in 827/1424, al-Ashraf Barsbāy (825–42/1422–38) decided to cut the *jawāmik* of those who also held *iqṭāʿ*s in the *ḥalqah*.[95] In 873/1468, *ḥalqah* soldiers who held both *jāmikīyah* and *iqṭāʿ* could choose between going on the expedition organized against Shāh Suwār, the rebelling Turkmen chief of the Dhū al-Qādirid vassal principality in eastern Anatolia, or paying one hundred dinars to cover the expenses of a substitute *(badīl)*.[96] In 890/1485, when news of the Ottoman invasion into Mamluk territories in eastern Anatolia arrived, the veteran mamluks *(qarāniṣah)* and *awlād al-nās* who were unable to go on the expedition were required to bring a fully-equipped substitute and a horse, and those who held a *jāmikīyah* and *iqṭāʿ* had to pay one hundred dinars in case they could not provide the substitute for the expedition.[97]

The exclusion of the mamluks in the amirs' service from the *ḥalqah* and *dīwān al-mufrad* obviously did not influence the amirs' informal patronage over the *ḥalqah* and Sultani mamluks. The sources reveal some personal testimonies of amirs' patronage in the *ḥalqah* and the *dīwān al-mufrad*. ʿAlī ibn Dāwud al-Ṣayrafī (d. 900/1495), a fifteenth-century historian and a grandson of a *ḥalqah jundī,* testifies that in 833/1430, when he was fifteen years old, the amir ʿAlāʾ al-Dīn Āqbughā al-Jamālī (d. 837/1434) arranged a position in the official mint *(ṣarrāf)* for his father, and a *jāmikīyah* in the *dīwān al-mufrad* for ʿAlī himself, which he held until Āqbughā's death.[98] Muḥammad ibn Aḥmad Ibn Iyās, the grandson of a fourteenth-century amir,[99] mentions that in 914/1508 he was among the *awlād al-nās* whose *iqṭāʿ*s in the *ḥalqah* were cut and given to the sultan's mamluks. His *iqṭāʿ* was allocated to four mamluks, which means that it was not a small one, but, he contends,

it was restored to him with Allāh's help.[100] A more vital indication of the amirs' patronage over *ḥalqah* and Sultani mamluks is borne out by the evidence that the practice of *ḥimāyah* was enlarged in the fifteenth century by both the increase in the number of fees levied for protection *(ḥimāyāt)* and its diffusion throughout most parts of Egypt, probably in reaction to the closing of the *ḥalqah* ranks to mamluks in the amirs' service. Ibn Taghrībirdī testifies that after al-Muʾayyad's reign the *ḥimāyah* increased in Egypt and became a norm *(sunnah),* reaching an unprecedented degree during al-Ashraf Īnāl's reign (857–65/1453–60) and bringing about the destruction of the cultivated lands in the country.[101] Al-Ashraf Barsbāy had considerable incomes from *ḥimāyah* levied on *iqṭāʿ* lands.[102] Both Barsbāy's son, al-ʿAzīz, and Īnāl's son, Aḥmad, amassed during their fathers' reigns a fortune from their *iqṭāʿ*s, *ḥimāyah* payments, and the leasing of estates.[103] In 919/1513, the whole army, except the fifth corps that was manned with very low-salaried soldiers equipped with firearms, was dissatisfied with Qānṣūh al-Ghawrī's (906–22/1501–16) payment policy, while the amirs considered deposing him. All the mamluks complained not only about the cuts in payment for fodder and meat, but more so about the ruin of their *iqṭāʿ*s because of the *ḥimāyāt* payments and the oppression of the tax officials and the local Bedouin chieftains.[104]

Except for al-Maqrīzī's aforementioned description of the *ḥimāyah* in the context of the thirteenth century, fifteen-century chronicles do not provide details on the nature of the new *ḥimāyāt.* Meloy brought to our attention a forgotten source from the fifteenth century, which was published already in 1968, that shed light on this issue.[105] It is a tract by Muḥammad ibn Muḥammad ibn Khalīl al-Asadī, a clerk who served in *dīwān al-inshāʾ* (the correspondence bureau),[106] bearing the title *Al-Taysīr wa-al-Iʿtibār wa-al-Taḥrīr wa-al-Ikhtibār fīmā Yajibu min Ḥusn al-Tadbīr wa-al-Taṣarruf wa-al-Ikhtiyār,* which might be loosely translated as "The quest for and investigation about the right management, conduct, and experience of rulership." The tract advocates economic and administrative reform in line with Islamic principles to remedy the prevailing dire economic situation.[107] Although the tract

[107] Meloy, "The Privatization of Protection," 199–200.

represents a moralistic and ideological outlook, it still provides vital information about how the economic patronage networks functioned and the role the *ḥimāyāt* played in them. Al-Asadī counts the *ḥimāyāt* among the defects resulting from the inadequate salaries paid to administrative officials and the purchase of government positions that had become a norm since the middle of the fourteenth century. Since offices were obtained by payment to the sultan and reshufflings in state administration to increase the sultan's income became frequent, office holders resorted to regain their investment to a harsh tax collection from the lower sectors of the population in both urban centers and villages. To repel complaints charged against them for their misconduct and to secure their interests, the office holders sought the protection of powerful patrons close to the ruler. On the other hand, the weak villagers and many *iqṭāʿ* holders and *ajnād* also sought the protection of influential elite members, marking their lands as *ḥimāyāt (wasamū bilādahum bi-al-ḥimāyāt)* for a sum of money *(jumlah min al-māl)* to relieve themselves of the administrators' oppression.[108] Al-Asadī contends that several kinds of *ḥimāyāt* were invented in arable lands and villages in accordance with the taxes the prefects in the provinces *(wulāh,* s. *wālī)* and inspectors in cultivated lands *(kushshāf,* s. *kāshif)* imposed on the villagers. For example, when the maintenance of the irrigation system was thrust upon the prefects and inspectors by the sultans, taxes were imposed on the peasants for cleaning the canals and conduits and repairing the dams in their districts. In reaction, the villagers and holders of small *iqṭāʿ*s were obliged to seek protection with prominent amirs, viziers, and others who held sway as men of influence with the sultan *(ahl al-shawkah).* Since *ḥimāyah* in urban centers is beyond the scope of the present article, it is sufficient to mention that protection fees were paid to the same top military and civilian elites by business owners such as millers, bakers, and brokers against the sultan's administrators. Under the protection of these potentates, business owners evaded paying taxes, escaped the inspection of *muḥtasib*s (who also paid for their own protection), raised prices, and hoarded cereals and other vital staples in order to make high and easy profits from price fluctuations they created in the market.[109]

While the *ḥimāyah* practice was admittedly immoral in terms of Islamic principles, which call for equity and universal and equal access to the state resources, it was not considered a criminal activity such as racket protection.[110] It was a formalized and widely recognized arrangement, encompassing most sectors in society and, as in classical Islam, it was considered the protector's *(ḥāmī)* right once it was agreed upon. Al-Asadī confirms that when the prefect and inspector were stronger than the protector, the latter was ignored and the oppression of the weak

[108] Al-Asadī, *Al-Taysīr wa-al-Iʿtibār,* 95–96, 136.

was doubled.[111] The protector then would neither listen to the peasants' complaints nor protect them. Nevertheless, he would levy the *ḥimāyah* because it became an obligatory custom *(ʿādah maqḍīyah).*[112] Al-Asadī's testimony proves that *ḥimāyah* providers did not come as a rule from among the most potent elite members of society, nor did they always hold coercive power sufficient to enforce protection rackets. Al-Asadī also testifies that in spite of the wide dispersion of the *ḥimāyāt,* there were areas that were not protected by the *ḥimāyāt* and therefore their populations were oppressed without hindrance by government officials.[113] Clearly traceable in al-Asadī's account is the rivalry that prevailed in the fifteenth century over the landed revenues between the Sultani tax collectors and the *ḥimāyah* providers, a situation reminiscent of the tension that had existed over the *ḥimāyah* between the sultan and the amirs in the early days of the sultanate.

Musters of the *ḥalqah* in the fifteenth century prove that many of its members were protégés of strong elite figures. Ibn Taghrībirdī relates that in 839/1435, the amir Arkamās unwisely conducted the *ḥalqah* muster, held in preparation for an expedition to Syria, wherein he instructed the soldiers to contribute each according to his ability without examining their true economic situation. As a result, those who held large *iqṭāʿ*s were untouched because they were protected by men of power *(ahl al-shawkah)* or paid for their *iqṭāʿ,* while the poor who had low-income *iqtāʿ*s "had no zealous supporter" *[lā ʿaṣabīyah la-hu]* to protect them from getting into trouble *(tawarraṭa).*[114] When the amir Ibn Taghrībirdī surveyed the *ḥalqah* in 844/1440 in order to form a force to be stationed in the Egyptian Mediterranean ports of Rashīd and al-Ṭīnā against anticipated Christian piracy, it was decided to choose only soldiers whose *iqṭāʿ* income was thirty thousand dirhams or more, i.e., the stronger *ḥalqah* soldiers. However, soon they were exempted from the expedition because of the widespread belief that "whoever stood against the *ḥalqah* soldiers, his rule would be terminated" *[man taʿarraḍa li-ajnād al-ḥalqah zālat dawlatuhu].*[115] These cases clearly show that musters of the *ḥalqah* were normally designated for its weak and helpless members, those who were easy prey *[ka-al-farīsah bi-yad fārisihā]* for the office holders.[116] This might be the reason for the small numbers indicated in the sources for the soldiers reviewed during fifteenth-century *ḥalqah* musters. Thus after al-Mu'ayyad's purge of the amirs' mamluks from the *ḥalqah* in

821/1418, the number of its troopers was about one thousand. Only four hundred of them were mustered, most of whom were poor and unfit.[117]

The musters were used as opportunities for sultans to get rid of those who were not protected, the main group among them consisting of *awlād al-nās*. In the muster of 839/1435, mentioned above, among the penniless soldiers surveyed were elders, infants, and the blind.[118] In 868/1464 al-Ẓāhir Khushqadam cut the clothing payment for the weak *ajnād* and *awlād al-nās*.[119] In Ṣafar 873/October 1468, al-Ashraf Qāytbāy suspended payment of allowances to *awlād al-nās* until they proved their military ability in archery using a heavy bow. They were humiliated, and the *jāmikīyah* of a number of them was cut.[120] In Rabīʿ I/November, when Qāytbāy prepared for the expedition against Shāh Suwār, the *awlād al-nās* were put to an archery test again, this time with the test including three bows, each offering a different challenge. The *jāmikīyah*s of some of those who were incapable of shooting the bows were cut, and others were required to pay one hundred dinars each for a substitute who went into battle in his place. Some of the amirs interceded with the sultan on behalf of those who held a *jāmikīyah* of one thousand dirhams—which was a very low annual income—to retain their posts and others to pay fifty instead of one hundred dinars.[121] It might well be that the amirs' advocacy made Qāytbāy change his demands on the *awlād al-nās* in the following muster he held in Jumādá II/January 1468. Those who held both *jāmikīyah* and *iqṭāʿ* could choose between going on the expedition or paying one hundred dinars to cover the expenses of a substitute, and those who held a *jāmikīyah* of one thousand dirhams to pay twenty-five dinars.[122]

As we have seen, the majority of the *ḥalqah* troops were in fact either Sultani mamluks or the amirs' protégés, while the weaker ones, including many of the *awlād al-nās,* formed only a small part of the *ḥalqah*. The latter were not true soldiers but rather the weaker members of the Mamluk elite that were kept in the *ḥalqah* with very low monthly wages out of charity instead of being given alms *(ṣadaqah)* from the sultan's treasury.[123] Since the early days of the Mamluk sultanate the *ḥalqah* had served as the framework for absorbing the weaker sectors of the Mamluk elite. Veteran mamluks ended their military careers in the *ḥalqah* even

[123] ʿAlī ibn Dāwud al-Jawharī (al-Ṣayrafī), *Inbāʾ al-Haṣr bi-Abnāʾ al-ʿAṣr,* ed. Ḥasan Ḥabashī (Ca - ro, 1970), 501–2.

when they reached old age and became disabled,[124] and mamluks' descendents, including orphans of both genders, inherited their father's *iqṭāʿ* or *jāmkīyah* out of moral considerations.[125] As mentioned above, destitute sons of Baḥrīyah mamluks were admitted to the *ḥalqah* by Qalāwūn on moral grounds. The sons of forty *ḥalqah* members who died in the battle of Āyās in 738/1337 were granted fiefs in the *ḥalqah.*[126] Providing for the needs of the poor was one of the traditional functions of government in Islam and fell into line with the Mamluk ethos of factional solidarity and the right of equal access to economic resources.[127] The sultans' fear of criticism for infringing upon that right of the poor and weak was the main reason for the measured purges of the unfit from the *ḥalqah* and the cuts in their meager payments. In 751/1350, al-Nāṣir Ḥasan wanted to get rid of the children and artisans who had purchased *iqṭāʿāt* in the *ḥalqah,* and he ordered the amir Baybughā Ṭaṭar to survey the *ḥalqah*. A group of artisans, babies carried by their mothers, children, and youths pleaded for mercy. After a consultation among the amirs, it was decided to abolish the muster.[128] When al-Muẓaffar Ḥājjī intended to inspect the *ḥalqah* (747/1346), Amir Aruqṭāy thwarted him.[129] On Sirāj al-Dīn ʿUmar al-Bulqīnī's advice, al-Ẓāhir Barqūq cancelled the *ḥalqah* survey he had decided upon and even begun to implement in 789/1387.[130]

Qānṣūh al-Ghawrī departed aggressively from those principles of protecting the poor when he started persecuting the weak members in the *ḥalqah,* diverting their resources to his plan for the introduction of firearms into the Mamluk army. Particularly notable is the absence of cases in which al-Ghawrī cut the income of the high-income members of the *ḥalqah*. Al-Ghawrī was confronted by the strong opposition of the Mamluk elite when he established the corps of harquebusiers, known in the sources as the "Fifth Corps." Therefore it was financed largely from

---

[124] See for example the reasons the amir Ṭaṭar gave his rivals for the inclusion of his old veteran mamluks in the *ḥalqah* (Ibn Taghrībirdī, *Nujūm,* 14:184–85).

unofficial resources derived from the manipulation of *awqāf*[131] and the resources he cut off from *dīwān al-mufrad* and the weak sector in the *ḥalqah*.[132] In 907/1501 al-Ghawrī surveyed the holders of *jawāmik* from among the *awlād al-nās,* including orphans and women, and cut their wages. Later al-Ghawrī cut the salaries of many of the most respectable among the *awalād al-nās*.[133] In 910/1504, the sultan surveyed again a group of the same *awlād al-nās* and *sayfīyah* mamluks (mamluks of deceased amirs) whose *jawāmik* had been taken; part of them retained their *jawāmik* and others were given only half of their allowance.[134] In 914/1508, al-Ghawrī increased the scope of his purges when he cut off, for no obvious reason as Ibn Iyās reports, four hundred *iqṭāʿāt* and *waqf* allowances, most of them held by *awlād al-nās* serving in the *ḥalqah* and women supported by charitable trusts. In this event, the *awlād al-nās* were humiliated by the sultan's mamluks who attacked them in their homes.[135] While distributing the *jawāmik* in 918/1512, al-Ghawrī cut one third of the clothing allocation given to *awlād al-nās* and the elderly among the mamluks.[136] The allowances and *iqṭāʿ*s that had been saved were directed to the Fifth Corps, manned again by *awlād al-nās,* the sultan's mamluk recruits, and foreigners such as Turkmens and North Africans. Unlike the *ḥalqah* or *dīwān al-mufrad* in which the *iqṭāʿ*s and *jawāmik* had been allocated until al-Muʾayyad's reign as a second income, mainly to mamluks from the sultan's and amirs' households, payment in the Fifth Corps was the only allowance given to its members. Their allowances were low and reached only one thousand five hundred dirhams, approximately the same as the *jawāmik* that had been cut from the weak and poor *ḥalqah* soldiers.[137]

Conclusion

At its inception in the early 1260s, the *ḥalqah* was already characterized as a flexible and diverse military body, comprised of individuals from many backgrounds. Their secondary status in the Mamluk army was reflected by the smaller fiefs they were granted. At the same time the *ḥalqah* was the biggest body in the army, and the total sum of the relatively small fiefs held by its members was identical to the amirs' share of the state resources. The weakness of the *ḥalqah* soldiers induced the involvement of powerful patrons and clerks in the military administration, especial-

ly in the absence of a strong central government. The *ḥimāyah* was used by amirs to include *ḥalqah* soldiers in their patronage network and lay their hands on part of their income. Since the amirs encroached on the sultan's control and authority in the *ḥalqah,* the *ḥimāyah* became an object of tension between the sultan and the amirs. From the amirs' perspective, denying them *ḥimāyah* over *ḥalqah* soldiers meant not only preventing them access to landed incomes but also harming their prestige as patrons of power networks, i.e., as their clients' advocates with the authorities. It is in this context that al-Manṣūr Lājīn's cadastral survey of 697/1298 should be viewed. Through this survey Lājīn intended to reclaim state resources from the power network that rivaled his own. He intended to stop the amirs' *ḥimāyah* and restore the sultan's control over the *ḥalqah*. This round in the conflict between the sultan and the amirs ended with the strengthening of the latter's power, since with Lājīn's murder all the *iqṭāʿ*s taken from the *ḥalqah* formally went to the amirs. The *ḥimāyah* was not abolished, but the old patrons of power networks were replaced by new ones. As a weak, unorganized military group, the *ḥalqah* remained with numerous unfit old soldiers with far fewer *iqṭāʿ* resources. Al-Nāṣir Muḥammad attained the targets that Lājīn had set for his cadastral survey, not only because of his strong authority but also because he determined, for the first time in the Mamluk state, a permanent manpower quota for the army and a correlative remuneration scale as the basis for the *iqṭāʿ* distribution. The *ḥalqah*'s size was fixed as one third of the army, over eight thousand soldiers out of twenty-four thousand, and it held about thirty percent of the *iqṭāʿ* resources.

The frequent reshufflings of power after al-Nāṣir Muḥammad's death, and the ensuing creation and disintegration of power networks headed by prominent amirs, tipped the balance in the tension between the sultan and the amirs over control of the *ḥalqah* in the amirs' favor. The *ḥalqah*'s makeup was changed when, in addition to the old members and artisans who bought *iqṭāʿ*s in the *ḥalqah* in the wake of the Black Death, it became a temporary haven for many young mamluks from defeated factions until their fortunes changed and brought them back to an effective power network. Thus the *ḥalqah* was again open to the patronage of powerful amirs and its involvement in power struggles over rule increased. The amirs' control over the *ḥalqah* soldiers reached its peak when al-Ẓāhir Barqūq formalized their patron-client status by allowing the registration of mamluks from the amirs' households as *iqṭāʿ* holders in the *ḥalqah* together with his own Sultani mamluks. Control over the *ḥalqah* was, in fact, divided between the sultan and the amirs, although the form of this division is unclear. Al-Muʾayyad restored the sultan's control over the *ḥalqah;* the amirs' mamluks were denied access to the *ḥalqah,* while Sultani mamluks continued to be numbered among the *ḥalqah* soldiers. Yet the amirs' patronage over the *ḥalqah* members and Sultani mamluks was not curbed but rather increased because in the fifteenth century their households played a central part in the state's econom-

ic, military, and political power networks. Thus, due to the dire economic situation, the sultans employed oppressive tax policies to increase their income, while the amirs and some civilian elite members provided protection, *ḥimāyah,* to the lower military and civilian sectors against the state officials, encroaching on the sultan's authority. The *ḥalqah*'s makeup reflected the Mamluk patronage system and power structure. In the main, it was manned by strong, protected persons: mamluks from the sultan's household and the amirs' protégés. In contrast, the weak and oppressed *ḥalqah* soldiers, who constituted a small part of the *ḥalqah,* remained unprotected. They were the soldiers who were mustered before expeditions, to go into battle or to pay a part of their already low salary, and dismissals from the *ḥalqah* were from their number. They were the soldiers to whom the seemingly sorry plight of the *ḥalqah* in the fifteenth century can be attributed.

Hanafism and the Turks in al-Ṭarasūsī's *Gift for the Turks* (1352)

Wilferd Madelung's articles on the relationship between the spread of Hanafism and Maturidism and the expansion of Turkish political influence over the Near East underline "the militant Ḥanafism of the Turks."[1] During the reign of Ṭuğrul Bey (431–55/1040–63), for instance, the Seljuq state was strongly engaged in curbing the Shafiʿis, and the ruler himself stood behind the measures, as is evident from an open letter of Abū al-Qāsim al-Qushayrī written in defense of Ashʿarism, the theological school mostly identified with the Shafiʿis.[2] This strong Seljuqid interest in Hanafism, coupled with the fact that the Ottomans, who succeeded in establishing the longest lasting dominion over Muslim lands, were also Hanafis, leads one to wonder whether Hanafism might be in any way more "government-friendly" than other legal schools. Or, to put it differently, would it have affected the political success of the Turks had they been, let us say, Shafiʿis? This article is an attempt to answer this question negatively with a consideration of the Mamluk example.

The Turkish Mamluks, who ruled over Egypt and Syria for almost 150 years (648–784/1250–1382),[3] officially adopted the principle of the equality of the four

This study is the slightly revised and updated version of a paper that was written in 1996–97 for Michael Cook's graduate seminar on primary sources of Islamic Studies at Princeton University. I would like to thank Rifa'at Abou-El-Haj, Shahab Ahmed, Michael Cook, Hossein Modarressi, Yossef Rapoport, and the anonymous reviewer of *Mamlūk Studies Review* who read this piece in different versions since then and offered various suggestions. The responsibility for not following some of them is entirely mine.

[1] Wilferd Madelung, "The Spread of Māturīdism and the Turks," in *Actas do IV Congresso de Estudos Arabes e Islâmicos, Coimbra-Lisboa 1968* (Leiden, 1971), 109–68, reprinted in Madelung, *Religious Schools and Sects in Medieval Islam* (London, 1985); idem, "The Two Factions of Sunnism: Ḥanafism and Shāfiʿism," in *Religious Trends in Early Islamic Iran* (Albany, 1988), 26–38; idem, "The Early Murji'a in Khurāsān and Transoxania and the Spread of Ḥanafism," *Der Islam* 59 (1982): 32–39, reprinted in *Religious Schools and Sects;* and idem, "The Murjiʾa and Sunnite Traditionalism," in *Religious Trends in Early Islamic Iran,* 13–25, provide a plausible explanation of the Turkish attraction to the Hanafi school in the eastern provinces.

[2] Madelung, "The Spread of Māturīdism," 129. In 469/1077, however, the son of the same Abū al-Qāsim, Abū al-Naṣr Ibn al-Qushayrī, came to Baghdad to preach Ashʿarism, with the official support of Niẓām al-Mulk, the Shafiʿi grand vizier of the Seljuqs; Sibṭ ibn al-Jawzī, *Al-Muntaẓam fī Tawārīkh al-Mulūk wa-al-Umam* (Beirut, 1995), 9:538–39.

[3] The personal religious affiliation of Turkish Mamluks, as a ruling class, is not easy to establish. Quṭuz (r. 657–58/1259–60) is blamed for being a Hanafi by Shafiʿi sources, and Baybars (r. 658–

Sunni schools of law.[4] The fact that they created three chief judgeships in addition to the Shafiʿi one might be considered an attempt to stunt the Shafiʿi position, yet they actually preserved the priority of the Shafiʿi school, as will be shown below.[5]

Within this framework where the Hanafis enjoyed a secondary rank at best, Najm al-Dīn Ibrāhīm ibn ʿAlī al-Ṭarasūsī (d. 758/1357), the Hanafi *qāḍī al-quḍāh* of Damascus (746–58/1346–57), authored a treatise called *Tuḥfat al-Turk fīmā Yajib an Yuʿmala fī al-Mulk,* in which he engaged in a deep effort to "sell" Hanafism to the Mamluk sultanate as the official law of the state.[6] In order to do this, the author strove to argue that Shafiʿism is not "government-friendly," especially toward

76/1260–77) is known to have shown personal favor to Hanafis; Jorgen S. Nielsen, "Sultan al-Ẓāhir Baybars and the Appointment of Four Chief Qāḍīs, 663/1265," *Studia Islamica* 60 (1984): 173–75. The appointment of mostly Hanafi *qāḍī al-ʿaskars* (Joseph H. Escovitz, *The Office of* Qâḍî al-Quḍât *in Cairo under the Baḥrî Mamlûks* [Berlin, 1984], 187–89) suggests that the military establishment was predominantly Hanafi. As to how Hanafism may have spread among them, it is clear that the young "slaves" were going through some sort of religious education (David Ayalon, "L'esclavage du Mamelouk," *Oriental Notes and Studies* 1 [1951]: 1–66, reprinted in Ayalon, *The Mamlūk Military Society* [London, 1979], 13). My colleague Adam Sabra suggested that this education would have been conducted by scholars who knew Turkish, and that condition would have been most easily met by Hanafi scholars who came from the eastern provinces as a result of the Seljuqid expansion and later the Mongol invasion. As to the Circassian Mamluks (784–922/1382–1517), I do not have any idea about their personal preference among legal schools, and that is why their period is excluded from this study. It is quite plausible, however, that they followed the Turks, since they even used to change their names to Turkish ones; David Ayalon, "Names, titles and 'nisbas' of the Mamlūks," *Israel Oriental Studies* 5 (1975): 189–232, reprinted in Ayalon, *The Mamlūk Military Society*, 196.

[4] In 663/1265, Baybars established a chief judge for each of the generally-recognized Sunni schools of law, following the already established administrative practice of the Fatimids and Ayyubids (Nielsen, "Sultan al-Ẓāhir Baybars," 169–71). I do not agree with the author, however, in his underlying assumption that the establishment of four chief judgeships broke the Shafiʿi predominance.

[5] This, of course, does not mean that the Shafiʿis were happy with the new arrangement; see Ma -elung, "The Spread of Māturīdism," 165, n. 145.

[6] This text was first published by Riḍwān al-Sayyid (Beirut, 1992) with an extremely useful intr -duction (titled "Ṣirāʿ al-Fuqahāʾ ʿalá al-Sulṭah wa-al-Sulṭān fī al-ʿAṣr al-Mamlūkī min khilāl Kitāb 'Tuḥfat al-Turk' lil-Ṭarasūsī," 5–50) and notes throughout the text, which led me to most of the references I used for this study. Al-Sayyid's edition of the *Tuḥfat al-Turk* is based on MS Berlin 5614; the manuscript I checked it with is İstanbul Millet Kütüphanesi, Feyzullah Efendi collection, 2122, fols. 96b–105b (hereafter MK), for which I have to thank Rifa'at Abou-El-Haj once more. For the life and works of the author, see Appendix I; for a study of this work, see Michael Winter, "Inter-*Madhhab* Competition in Mamluk Damascus: Al-Tarsusi's Counsel for the Turkish Sultans," *Jerusalem Studies in Arabic and Islam* 25 (2001): 195–211. Since I completed the first draft of this study, I have come across two other editions of the *Tuḥfat al-Turk,* one by Abū ʿAbd Allāh Muḥammad Ḥasan Muḥammad Ḥasan Ismāʿīl (Beirut, 1995), and another one by Mohamed Menasri (Damascus, 1997), the latter of which includes a detailed study as well as a complete French translation of the work. All citations in this article refer to al-Sayyid's edition.

a government of Turks. Yet, a closer look into his arguments and an examination of Shafiʿi views in a Mamluk context—which he at times misrepresents—reveal that: first, principles of constitutional law held by legal schools, at least those of Shafiʿism, tend to accommodate political developments; second, in certain respects, Shafiʿism may at times be even more "government friendly" than Hanafism; and third, there is a considerable tension between the letter of the law and its practice, which renders theoretical limitations meaningless in effect.

The first chapter of the *Tuḥfat al-Turk,* or *Gift for the Turks,* "on the explanation (of the validity) of the sultanate of the Turks,"[7] will be the focus of this article. Here, the author first outlines the necessary conditions for an imam, as laid down by the Shafiʿi sources, which emphasize that the imam should be of Quraysh and a *mujtahid*. Hanafism, argues al-Ṭarasūsī, does not claim any of these conditions.[8] Yet when he finishes his quotations from the Shafiʿi sources, he twists his earlier exposition and concludes that for Shafiʿis the *sultan* should be of Quraysh and a *mujtahid,* in which case neither the Turks, nor the Persians, could be legitimate

[7] *Fī Bayān (Ṣiḥḥat) Salṭanat al-Turk; ṣiḥḥah* does not appear in the Berlin manuscript (see *Tuḥfat al-Turk,* 60, and W. Ahlwardt, *Verzeichnis der arabischen Handschriften* [Berlin, 1893, reprinted: Hildesheim, 1980], 5:116), yet it is in the MK, fol. 96b, line 14.

[8] Al-Ṭarasūsī does not quote any Hanafi sources directly but states that Abu Ḥanīfah and his *aṣḥāb* see neither descent from Quraysh, nor the quality of being a *mujtahid,* nor justice as a requirement expected from a sultan and presents the fact that Muʿāwiyah was followed by the *ṣaḥābah,* despite his controversy with ʿAlī during the latter's rule, as an example supporting his point; *Tuḥfat al-Turk,* 63; MK, fol. 96b, lines 26–28. Yet descent from Quraysh as a condition for the imam had been accepted in Hanafi circles elsewhere. Even during the Ottoman era, the question had to be dealt with, when, for instance, Luṭfī Pasha (d. c. 970/1562–63) was confronted by people citing ʿUmar al-Nasafī (d. 537/1142) and Saʿd al-Dīn al-Taftāzānī (d. 790s/1390s), asking whether they had a valid imam; Hamilton A. R. Gibb, "Luṭfī Pa a on the Ottoman Caliphate," *Oriens* 15 (1962): 287–95; see al-Taftāzānī, *Sharḥ al-ʿAqāʾid al-Nasafīyah* (Cairo, 1987), 98, where al-Nasafī states that the imam must be of Quraysh and al-Taftāzānī strenghtens it by citing the tradition of the Prophet (see below) to that effect. As for the Shafiʿi ones, he quotes [*Tuḥfat al-Turk,* 63–65; MK, fol. 96b, line 29–fol. 97a, line 3] al-Shāfiʿī through al-Rāfiʿī's (d. 623/1226) *Kitāb al-Jināyāt al-Mūjibah lil-ʿUqūbāt,* which I have not been able to locate; al-Māwardī (d. 450/1058), *Al-Aḥkām al-Sulṭānīyah* (Bonn, 1853), 5–6; and al-Nawawī (d. 676/1277), *Rawḍat al-Ṭālibīn* (Beirut, 1992), 7:262—the quotations are not word-for-word, yet are in essence correct. He cites the Prophetic tradition *al-aʾimmah min quraysh* as the Shafiʿi justification of their position (among the six books examined by A. J. Wensinck, *Concordance et Indices de la Tradition Musulmane* [Leiden, 1936], 1:92, this hadith is only found in Ibn Ḥanbal, *Musnad* [Beirut, 1993], 3:163, no. 12292; 3:231–32, no. 12884; 4:565, no. 19722. But it is also found in al-Bayhaqī (d. 458/1066), *Al-Sunan al-Kubrá* [Beirut, 1994], 3:172 and 8:247–48, most of the chains coming from Anas). Interestingly enough, al-Shāfiʿī himself does not cite this tradition when he deals with the qualification of the imams in the context of the prayer, though he does cite other traditions favoring Quraysh (*Kitāb al-Umm* [Beirut, 1993], 1:287–88), yet al-Muzanī (d. 264/878) puts it into the same section in his *mukhtaṣar;* ibid., 9:28.

rulers. Thus, declares al-Ṭarasūsī, Hanafism is more suitable for the Turks than Shafiʿism.[9]

Yet, as Riḍwān al-Sayyid points out, he not only misrepresents al-Māwardī, who actually engaged in an effort to justify the sultanate-by-force within the framework of Muslim constitutional law,[10] but also neglects Badr al-Dīn Ibn Jamāʿah's (d. 733/1333) constitutional theory,[11] which shows very well how constitutional law accommodated political developments. Let us look at the political developments first.

After the end of the caliphate in Baghdad in 656/1258, the Mamluk sultan al-Ẓāhir Baybars (r. 658–76/1260–77) recognized the caliphate of an Abbasid prince in 659/1261,[12] creating a caliphate in Cairo, which brought some prestige and legitimacy to a sultanate of "slaves." Yet, the caliph became nothing more than a ceremonial figure;[13] in time, the *bayʿah,* which was traditionally given by the subjects to a superior power as a sign of recognition, began to be given by the caliph to the sultan.[14] Thus, the distinction between the sultanate and the caliphate became negligible, so much so that the Ottomans did not even bother to continue the institution

S. Lambton, *State and Government in Medieval Islam, an Introduction to the Study of Islamic Political Theory: The Jurists* (New York, 1981), 100–2.

[11] Ibn Jamāʿah held the Shafiʿi chief judgeships of Jerusalem, Damascus, and Cairo several times throughout his life (see al-Maqrīzī, *Al-Muqaffá* [Beirut, 1991], 5:89–94) and authored, among other things, an important treatise called *Taḥrīr al-Aḥkām fī Tadbīr Ahl al-Islām* (ed. Fuʾād ʿAbd al-Munʿim Aḥmad, 3rd. ed. [Qatar, 1988)]); for a short assessment of this work, see Lambton, *State and Government,* 138–43; Nagel, *Staat und Glaubensgemeinschaft,* 1:436–40.

[12] David Ayalon, "Studies on the Transfer of the Abbasid Caliphate from Baghdad to Cairo," *Ar - bica* 7 (1960): 50–51, reprinted in Ayalon, *Studies on the Mamlūks of Egypt (1250-1517)* (London, 1977).

[13] "When in 709/1310 the usurper al-Muẓaffar Baybars was confronted with a general revolt and tried to reinforce his authority with a new diploma from the caliph, his act provoked only the jeering comment, 'Stupid fellow. For God's sake—who pays any heed to the caliph now?'" P. M. Holt, "The Position and Power of the Mamlūk Sultan," *Bulletin of the School of Oriental and African Studies* 38 (1975): 248. According to al-Maqrīzī, the caliph "had no authority, not even the right of expressing his opinion. He spent his time among nobles, high officials, scribes, and judges, paying them visits to thank them for the dinners and entertainments to which they had invited him." Cited by Donald P. Little, "Religion under the Mamlūks," *Muslim World* 73 (1983): 173, reprinted in Little, *History and Historiography of the Mamlūks* (London, 1986).

[14] P. M. Holt states that the formula *bāyaʿahu al-khalīfah bi-al-salṭanah* "appears occasionally from the accession of al-Nāṣir Aḥmad (740/1342) to the end of the Qalawunid dynasty, and becomes usual with al-Ẓāhir Barqūq and the Circassian sultans." (P. M. Holt, "The Structure of Government in the Mamluk Sultanate," in *The Eastern Mediterranean Lands in the Period of the Crusades*, ed. P. M. Holt [Warminster, 1977], 45).

of the Abbasid caliphate after they conquered Egypt in 1517. Selim I brought the last caliph, Muḥammad ibn Yaʿqūb al-Mutawakkil, to Istanbul where he first imprisoned him at the Seven Towers (Yedikule). In 1520, as Selim was approaching his death, he ordered the release of al-Mutawakkil and permitted him to move back to Egypt with a daily allowance of 60 *akçe*s, where the latter died in January 1539, leaving behind two sons who continued to receive allowances from the Ottoman treasury.[15] Clearly, the Ottomans did not regard the last caliph and his male heirs as a threat to their sovereignty.

Ibn Jamāʿah, writing during this process of marginalization of the caliphate, updated the constitutional theory by putting the sultanate on an equal footing with the caliphate. Whereas for al-Māwardī, what one can get by force was only an *imārah,* but not an *imāmah,* Ibn Jamāʿah states that there are two types of *imāmah,* one by election and one by force. When enumerating the conditions for the imam by election, he does count descent from Quraysh as one of them.[16] Yet, for the imam whose *bayʿah* is concluded as a result of his might and soldiers, no such condition is given; furthermore, it is stated that his being ignorant or sinful does not impair his *imāmah,* and anyone for whom the *bayʿah* is concluded deserves to be called *khalīfat rasūl Allāh.*[17] Moreover, while counting the rights of the ruler over the subjects and his responsibilities toward them, Ibn Jamāʿah uses the term *sulṭān* instead of *imām,* in contrast to al-Māwardī.[18] Thus, in the constitutional theory of

[15] Muṣṭafā Cenābī, "Gülşen-i Tevârîḫ," Dār al-Kutub al-Qawmīyah (Cairo) MS 170 Tārīkh Turkī Ṭalʿat, fol. 80b; Aḥmad ibn Yūsuf al-Qaramānī, *Akhbār al-Duwal wa-Āthār al-Uwal fī al-Tārīkh,* ed. Aḥmad Ḥaṭīṭ and Fahmī Saʿd (Beirut, 1992), 2:226.

[16] Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 51. An anonymous writer with strong Sufi leanings had argued, about half a century earlier, that Qurashi descent is not a necessary condition, in an effort to identify the imam with the ruling sultan Baybars; W. Madelung, "A Treatise on the Imamate dedicated to Sultan Baybars I," in *Proceedings of the 14th Congress of the Union Européenne des Arabisants et Islamisants*, part one, ed. A. Fodor, in *The Arabist, Budapest Studies in Arabic* 13–14 (1995): 95; in this context I should note that Madelung's presentation of Ibn Jamāʿah, according to which the notion of a Qurashi representative head of the Muslim community is retained by Ibn Jamāʿah (ibid., 102), slightly disagrees with my presentation.

[17] Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 55, 57. It is interesting to note that Ibn Jamāʿah clearly prohibits the use of the term *khalīfat Allāh* (ibid., 57), whereas al-Māwardī mentions this prohibition only as the view of the majority, and he himself seems to be inclined to see it as permissible (*Al-Aḥkām al-Sulṭānīyah,* 22–23).

[18] Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 61, 65; al-Māwardī, *Al-Aḥkām al-Sulṭānīyah,* 23, 25; it is also interesting to note that whereas in al-Māwardī the responsibilities come first, and the rights are only two, Ibn Jamāʿah first counts ten rights, and then ten responsibilities. Moreover, when explaining the meaning of the word *sulṭān* in the Arabic language, Ibn Jamāʿah, citing the Quran, 14:10 (. . . Bring to us then a clear *proof* [Ahmed Ali tr. (Princeton, 1994), 218]), states that the sultan is so called for his being the proof of God and his unity (*Taḥrīr al-Aḥkām,* 73); also indicated by Nagel, *Staat und Glaubensgemeinschaft,* 1:438.

Ibn Jamāʿah, we witness that the Shafiʿi principles change in order to accommodate political developments, invalidating al-Ṭarasūsī's claims that Shafiʿis do not recognize a government of the Turks.[19]

In the rest of the chapter, al-Ṭarasūsī discusses thirteen points of comparison between Hanafism and Shafiʿism, which are meant to strengthen his contention that Hanafism is better suited for the Turks. It is hard to categorize the issues, yet one may divide them roughly into five groups: finances, land management, criminal law, prayer, and war booty. Out of these, I chose to focus on the first two groups, as I believe they matter most for the smooth operation of a government.[20]

There are three points that pertain to land law. First, according to Abū Ḥanīfah, the sultan has the right to hire out *kharāj* land that belongs to someone who is unable to cultivate it and pay its *kharāj*, and to take the *kharāj* from the rent, whether the holder of the land consents or not; whereas al-Shāfiʿī does not bestow this right upon the ruler.[21] Second, the sultan is entitled, according to Abū Ḥanīfah, to confirm the conquered lands of the infidels in the hands of the current holders and levy *jizyah* on them, instead of dividing the lands among the soldiers, whether the soldiers consent or not. In contrast, for al-Shāfiʿī, the consent of the soldiers is necessary for the sultan to do that, otherwise he has to divide it among them.[22] And third, according to Abū Ḥanīfah, the person who revitalizes waste land may only own it with the permission of the ruler, whereas for al-Shāfiʿī, the permission of the sultan is not needed.[23]

---

[19] That was certainly not the first modification of constitutional law; al-Juwaynī (d. 499/1105), for instance, already questioned the condition of descent from Quraysh in his *al-Irshād;* Lambton, *State and Government,* 106.

[20] The points that I left out are summarized in Appendix II.

[21] *Tuḥfat al-Turk,* 65; MK, fol. 97a, lines 9–11. Sibṭ Ibn al-Jawzī actually goes further and states that the sultan is entitled to sell the land as well, if nobody is found to rent it, and take its *kharāj* from the price (*Al-Intiṣār wa-al-Tarjīḥ lil-Madhhab al-Ṣaḥīḥ* (Madīnat Naṣr, n.d.), 17).

[22] *Tuḥfat al-Turk,* 66; MK, fol. 97a, lines 11–14; Sibṭ Ibn al-Jawzī, *Al-Intiṣār wa-al-Tarjīḥ*, 17. This is a quite long debate stemming from the conquest of al-Sawād and how later jurists interpreted Caliph ʿUmar's action in not dividing the land among the soldiers, but levying *kharāj* on the current holders of the land. Al-Shāfiʿī is not against the levy of *jizyah,* but his real contention is that any land that is conquered by force should be considered as *ghanīmah,* and should be divided accordingly (one fifth for the ruler, and four-fifths to the soldiers) unless the soldiers consent otherwise; al-Māwardī, *Al-Aḥkām al-Sulṭānīyah,* 254–55, 302–3; al-Sarakhsī (d. 483/1090), *Kitāb al-Mabsūṭ* (Cairo, 1324), 10:15, 37; Abū Yūsuf (d. 182/798), *Kitāb al-Kharāj* (Cairo, 1981), 73–91. There is an important financial issue at stake, as the land divided among the soldiers becomes *ʿushr* land, whereas the land left to its holders is considered *kharāj* land (Abū Yūsuf, *Kitāb al-Kharāj,* 149), the tax rate of which is higher.

[23] *Tuḥfat al-Turk,* 66–67; MK, fol. 97a, lines 19–20; Sibṭ Ibn al-Jawzī, *Al-Intiṣār wa-al-Tarjīḥ*, 17; al-Māwardī, *Al-Aḥkām al-Sulṭānīyah,* 308–11. Al-Ṭarasūsī is actually not representing the general Hanafi view by quoting only Abū Ḥanīfah; see al-Marghīnānī (d. 593/1197), *Al-Hidāyah: Sharḥ*

None of these points had much significance for the Mamluk rulers. To begin with, the contemporary Shafiʿi viewpoint is slightly modified. Regarding the second point, for instance, Ibn Jamāʿah is ambivalent in stressing the consent of the soldiers: "Land conquered by force: it is divided among the 'capturers,' then the imam calls upon them to forgo it, then he satisfies them with a substitute *(ʿiwaḍ)* or without a substitute, and he institutes it as a *waqf (waqqafa)* for the benefit of Muslims and imposes upon it the *kharāj,* as ʿUmar ibn al-Khaṭṭāb, may God be pleased with him, did with the *sawād al-ʿirāq*. . . ."[24] Moreover, regarding the third point, Ibn Jamāʿah inserts a significant limitation and states that no one may "guard" *(yaḥmī)* a waste land "guarded" by the sultan, and he would not "own" it if he did that. This statement might very well be regarded as qualifying his earlier statement that anyone may revitalize a waste land without the permission of the sultan.[25]

Furthermore, what really mattered for the Mamluks was the *iqṭāʿ,* the basic principle of the exploitation of land by the "state." Al-Maqrīzī summarizes this point very well by stating that "from the days of Saladin Yūsuf ibn Ayyūb until today, all Egyptian cultivated land has been assigned in the form of *iqṭāʿ*s to the sultan, his *ajnād,* and his amirs."[26] And on this issue the Shafiʿi understanding of the law does not present any problems for the ruler, at least as presented by Ibn Jamāʿah, who states that this type of *iqṭāʿ* is the contemporary practice in the lands of Egypt and Syria.[27]

Moreover, even when the law presented difficulties for the ruler, it was not necessarily the Shafiʿis who caused the problems. The reconquest of territory from the Mongols, for instance, raised the question of whether the land reverted to the original owners and their heirs, or could be disposed of by the sultan. In 666/1267–68,

Bidāyah al-Mubtadī (Cairo, 1995), 6:199–203; and Abū Yūsuf, *Kitāb al-Kharāj,* 137–41, where it is clear that Abū Ḥanīfah's view was modified, as the tradition of the Prophet, *man aḥyā arḍan mawātan/maytatan fa-hiya lahu* is evoked; Wensinck, *Concordance,* 1:539, indicates that the tradition is mentioned in all the six books he examines.

[24] Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 102–3; actually, he treats the land conquered by force under *ʿushr* land as well, where he states that it is divided among the "capturers," and that it becomes their *milk* (ibid., 106). Then he discusses the issue once more and presents the views of all the four founders of legal schools, without making any judgment; Mālik's view is even stronger than Abū Ḥanīfah's, and Aḥmad's is not certain as there are versions that parallel all the three (ibid., 203–4). Hossein Modarressi Tabātabāʾi, *Kharāj in Islamic Law* (London, 1983), 124–25, states that "[w]hether the *imām* had the authority to divide the land or not, most Muslim jurists agreed that such an authority had never been exercised."

[25] Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 108, 117.

[26] Cited by Hassanein Rabie, *The Financial System of Egypt A.H. 564–741/A.D. 1169–1341* (Lo - don, 1972), 26, from al-Maqrīzī's *Kitāb al-Mawāʿiẓ wa al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (Cairo, 1270), 1:97.

[27] Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 110. Al-Māwardī, on the other hand, had presented the permi - sibility of the *iqṭāʿ al-istighlāl* in a more limited way (*Al-Aḥkām al-Sulṭānīyah,* 337–41).

lawyers supported the former view. Then "Baybars called a session in the Dār al-ʿAdl to force through recognition of his rights over the land. All duly agreed with him except the Hanafi chief qadi of Damascus."[28]

Regarding finances, al-Ṭarasūsī first asserts that even if a person has already paid the *zakāt* of his *sawāʾim,* the sultan is entitled, according to Abū Ḥanīfah, to take it for a second time and distribute it to the poor, whereas al-Shāfiʿī does not accord such a prerogative to the sultan.[29] The second issue is the *jizyah,* which brings more income if collected in accordance with the Hanafi practice: 48 dirhams from the rich, 24 dirhams from the "middle class," and 12 dirhams from the poor. According to al-Shāfiʿī, it is one dinar from everyone, which makes only 10 dirhams.[30] The third is about the distribution of the *ṣadaqāt*. For Abū Ḥanīfah, the ruler is entitled to keep the chattels *(aʿyān al-ṣadaqah)* and give its equivalent to the poor if he considers this to be in the public interest, whereas al-Shāfiʿī does not allow this.[31] Finally, al-Ṭarasūsī states that if the sultan needs to strengthen his army, he may take what is necessary from the *arbāb al-amwāl w*ithout their consent.[32]

These theoretical points of law do not have much relevance when one looks at the practice. To begin with the *jizyah,* the amount collected by the Shafiʿi Ayyubids in the sixth/twelfth century seems to be in line with what al-Ṭarasūsī presents as the Hanafi practice. In the first part of the seventh century, it is recorded as 2 dinars per head. And under the Mamluks, though there is no conclusive data, the *dhimmī*s "were frequently obliged to pay double the legal amount"; moreover, the one dinar per head was at times collected as an extra tax, in addition to the *jizyah.*[33] As for the late seventh and early eighth centuries, al-Qalqashandī remarks that the amount decreased quite a bit and is taken as 25 dirhams from the richest and 10 dirhams

---

[28] "The matter was settled when the original owners agreed to pay an annual sum to Baybars to retain possession," and in 677/1279, al-Saʿīd Barka Khān succeeded in canceling this arrangement; Nielsen, "Sultan al-Ẓāhir Baybars," 174–75, and 175, n. 1.

[29] *Tuḥfat al-Turk,* 67, MK, fol. 97a, lines 23–26; Sibṭ Ibn al-Jawzī, *Al-Intiṣār wa-al-Tarjīḥ*, 17.

[30] *Tuḥfat al-Turk,* 68; MK, fol. 97a, lines 31–34. Al-Ṭaḥawī (d. 321/933), *Mukhtaṣar al-Ṭaḥawī* (Cairo, 1370), 294; and al-Marghīnānī, *Al-Hidāyah,* 4:326–27, both cite the same amounts; the latter even states that the total is collected in monthly installments. Al-Shāfiʿī, on the other hand, depends on three traditions of the Prophet and states that it should be one dinar, or its equivalent, from everyone; al-Shāfiʿī, *Kitāb al-Umm*, 4:253 (where nn. 2–4 identify the traditions).

[31] *Tuḥfat al-Turk,* 68–69; MK, fols. 97a, line 34–97b, line 1. As al-Sayyid points out, Sibṭ Ibn al-Jawzī discusses this issue in his *Īthār al-Inṣāf fī Āthār al-Khilāf* (n.p., 1987), 67–71, providing several traditions to support the Hanafi point of view against the position shared by Mālik and al-Shāfiʿī; yet his discussion is concentrated on *collecting* the substitute of that which is supposed to be collected.

[32] *Tuḥfat al-Turk,* 69; MK, fol. 97b, lines 1–2.

[33] Rabie, *The Financial System,* 108–12.

from the poorest.[34] Though not as profitable as the Hanafi figures, this practice is certainly not in line with what al-Shāfiʿī states.

As for the *zakāt* on livestock, there is not much evidence pertaining to its collection. Yet, with regard to the *zakāt* on merchandise, the practice seems to have differed from the theory, and the taxpayers did pay double *zakāt* in one year.[35] And finally, regarding the strengthening of the army, there are two cases in the seventh century in which resources were extorted, once from the *raʿāyā,* and once from the wealthy and the merchants.[36]

Thus, most of the points raised by al-Ṭarasūsī become meaningless when compared with the actual practice, which was not in line with what he presents as the Shafiʿi stance. In addition to this discrepancy, there are certain issues in which the Shafiʿi stance is actually more profitable to the "state" than the Hanafi one, as the author himself discloses: "As for the idea of the common people—and that is deeply rooted in the minds of the Turks—that the *madhhab* of al-Shāfiʿī makes the state treasury an inheritor, this is not right. What is right about the *madhhab* of al-Shāfiʿī is that in these times, the treasury does not inherit from anybody; on the contrary, the "uterine relatives" *(dhawū al-arḥām)* inherit as in the *madhhab* of Abū Ḥanīfah."[37] Here again, al-Ṭarasūsī omits the practice of the Mamluks who actually had a special institution to deal with this matter: *dīwān al-mawārīth al-ḥashrīyah,* the bureau of escheat estates. This institution provided for the public treasury to claim, at the expense of the *dhawū al-arḥām,* either the whole of the estate of a deceased person if s/he died without legal heirs, or the residue of it if the heirs were not legally entitled to the whole of the estate.[38]

[34] Al-Qalqashandī (d. 821/1418), *Die Geographie und Verwaltung von Ägypten* [an epitome of the author's *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ*], tr. F. Wüstenfeld (Göttingen, 1879), 163.

[35] The way to do this was to collect it before it fell due; Rabie, *The Financial System,* 99.

[36] The first one was during the reign of Quṭuz (657–58/1259–60) and the second in 699; Escovitz, *The Office of* Qâḍî al-Quḍât, 160.

[37] MK, fol. 97b, lines 4–5; *Tuḥfat al-Turk,* 69, where al-Sayyid makes up for a missing part in the Berlin manuscript quite well. For the right of "uterine relatives" to inherit in Hanafism, see al-Sarakhsī, *Kitāb al-Mabsūṭ,* 30:2–13. Al-Ṭarasūsī bases his contention about the Shafiʿi viewpoint on his personal conversation with Taqī al-Dīn al-Subkī (d. 756/1355), the Shafiʿi chief judge of Damascus (739–56), who said to him that there is no difference between the two *madhhab*s as to the priority of "uterine relatives" over the treasury in matters of inheritance, for the state treasury is corrupted; *Tuḥfat al-Turk,* 69; MK, fol. 97b, lines 5–7.

[38] Al-Qalqashandī, *Geographie und Verwaltung,* 164–65 ; Rabie, *The Financial System,* 127–32; Donald P. Little, "The Significance of the Ḥaram Documents for the Study of Medieval Islamic History," *Der Islam* 57 (1980): 189–219, reprinted in Little, *History and Historiography of the Mamlūks* (London, 1986), 203–5. It is interesting to note in this respect that the Hanafi theory, as presented by al-Ṭarasūsī, is in parallel to the Shiʿi one as it was applied in Fatimid Egypt; Rabie, *The Financial System,* 127.

This is not the only issue where the Hanafi stance is more disadvantageous for the public treasury. Al-Ṭarasūsī claims that the Hanafi judge should be made responsible for the properties of orphans so that they would receive a more favorable treatment, as Hanafism does not impose *zakāt* on such properties, whereas Shafiʿism does.[39] This is probably why the properties of the orphans were almost exclusively controlled by the Shafiʿi chief judge throughout the Turkish Mamluk period.[40]

A glance at the times of the Turkish Mamluks provides more examples of favors given to the Shafiʿis. Even after the establishment of the other three chief judgeships, the Shafiʿi chief judge preserved his predominance, as he "was put in charge of the moneys of the orphans, as well as verifying *waqfīyāt* and legacies."[41] Shafiʿis are also seen as viziers and occasionally even as *qāḍī al-ʿaskar*s.[42] And their priority over the Hanafis is symbolized by the seating arrangements in the Dār al-ʿAdl in Cairo, where all the four chief judges sat to the right of the sultan, the Shafiʿi one preceding the Hanafi chief judge. Though the latter was later moved next to the sultan on his left side, preceding the Hanbali judge, he was still inferior to the Shafiʿi one, who kept his original seat on the right side of the sultan.[43] In exchange, the Shafiʿi judges seem to have been quite cooperative with the political authority, as some of the "government-friendly" decisions they took bear witness.[44] Inciden-

[39] *Tuḥfat al-Turk,* 80; MK, fol. 98b, lines 10–15; the issue arises from the Hanafi viewpoint that the children, alongside "lunatics," are exempted from *zakāt,* which is seen as part of the *ʿibādah;* Sibṭ Ibn al-Jawzī, *Īthār,* 72–75.

[40] Escovitz, *The Office of* Qâḍî al-Quḍât, 183.

[41] Ibid., 24.

[42] For viziers, see ibid., 175–77; for a Shafiʿi army judge, ibid., 189. The latter post was more gene - ally given to the Hanafis, as al-Ṭarasūsī himself points out; *Tuḥfat al-Turk,* 91; MK, fol. 100a, lines 12–14.

[43] Escovitz, *The Office of* Qâḍî al-Quḍât, 25.

[44] To cite one example among many: in 780, when the judges were summoned to discuss the abol - tion of all the *awqāf* of Egypt and Syria, the Shafiʿi chief judge, Badr al-Dīn al-Subkī, "took the most politically advantageous line by saying that all the land belonged to the sultan, and he could do whatever he liked." As a result a number of *awqāf* were turned into *iqṭāʿ*s (ibid., 153). Though in a different context, other Shafiʿi scholars, too, showed signs of a positive disposition toward Turkish Mamluk rule; Ibn al-Nafīs (d. 687/1288), a doctor and *faqīh,* for instance, presented the rule of Baybars as almost the outcome of a foreordained divine plan; Remke Kruk, "History and Apocalypse: Ibn al-Nafîs' Justification of Mamluk Rule," *Der Islam* 72 (1995): 331. There is also Abū Ḥāmid al-Qudsī's (d. 888/1483) later work in which he cited *ẓulm al-turk wa-lā ʿadl al-ʿarab,* yet he is too late for our purposes and does not seem to be a good representative of the Shafiʿites; Ulrich Haarmann, "Rather the Injustice of the Turks than the Righteousness of the Arabs—Changing ʿUlamāʾ Attitudes towards Mamluk Rule in the late Fifteenth Century," *Studia Islamica* 68 (1988): 61–77; Haarmann is extremely unfair toward Mamluk jurists when he claims that "[t]he radical changes the Mamluk system of government introduced were kept out of systematic speculation" (ibid., 61–62), and he seems to be unaware of Ibn Jamāʿah and Najm al-Dīn Ibrāhīm when he attributes a paucity of political writing to Mamluk Egypt and Syria.

tally, when the Ottoman sultan Murad II decided to attack the Karamanid dynasty of central Anatolia and sought legal opinions from Egyptian jurists that would legitimize his military enterprise against another Muslim power, the fatwa of the Shafiʿi judge, who happened to be the famous Ibn Ḥajar al-ʿAsqalānī (d. 1448), was much more permissive than that of his Hanafi colleague.[45]

Thus, in Egypt under the Turkish Mamluks, we witness an ethnically Turkish rule operating quite well without engaging in an effort to make Hanafism—the legal school adhered to by most of the military establishment—the law of the state. And we see a legal school, Shafiʿism, the foundations of which go back to the hadith movement that aimed at limiting the law-making capacity of the political authority, cooperating with and even legitimizing a political authority that did not necessarily follow the letter of the law as defined by al-Shāfiʿī. It seems not only that the theoretical limitations put on political authority do change with a view to accommodating new developments, but also that the guardians of the theory do cooperate with rulers who contravene that very theory with their practice; and this collaboration is by no means limited to a particular legal school. As argued by Yossef Rapoport, the state and jurists from all four schools of law "shared a common vision of the social good."[46] Therefore I would say it would not matter very much for the political success of the Turks had they been, let us say, Shafiʿis.

Appendix I: The Life and Works of Najm al-Dīn Ibrāhīm Ibn ʿAlī al-Ṭarasūsī (d. 758/1357)

There are a couple of small problems related to the identity of al-Ṭarasūsī. First, Ḥājjī Khalīfah mentions him in one of his entries as Burhān al-Dīn, and second, al-Qurashī identifies him as Aḥmad ibn ʿAlī ibn ʿAbd al-Wāḥid. Al-Qurashī names his father once as ʿAlī ibn ʿAbd al-Wāḥid, and once as ʿAlī ibn Aḥmad ibn ʿAbd al-Wāḥid, though talking about the same person in both cases. Probably because of the work of al-Qurashī, later biographers fall into some confusion.[47] Yet, the earliest sources available establish his identity quite firmly as Najm al-Dīn Ibrāhīm ibn ʿAlī ibn ʿAbd al-Wāḥid, though the question remains as to how al-Qurashī created this confusion despite his personal contact with the father ʿAlī.[48]

---

[47] Ḥājjī Khalīfah, *Kashf al-Ẓunūn ʿan Asāmī al-Kutub wa-al-Funūn* (Tehran, 1967, 3rd reprint), 1:183; ʿAbd al-Qādir al-Qurashī (d. 775/1373), *Al-Jawāhir al-Muḍīyah fī Ṭabaqāt al-Ḥanafīyah,* ed. ʿAbd al-Fattāḥ Muḥammad al-Ḥulw (Cairo, 1978–), 1:213–14 (Aḥmad ibn ʿAlī ibn ʿAbd al-Wāḥid); 2:535–36 (ʿAlī ibn Aḥmad ibn ʿAbd al-Wāḥid); #2040 in the *ansāb* section of the work (ʿAlī ibn ʿAbd al-Wāḥid—I could not read this entry as it was not accessible to me during my research, yet the editor, to whom I owe a lot for leading me to most of the sources I used in this appendix, states that both entries talk about the same person, and give the name of the son as Aḥmad). Besides, Ibn Ḥajar al-ʿAsqalanī (d. 852/1449) has an entry for Aḥmad ibn ʿAlī ibn ʿAbd al-Wāḥid, yet it only gives the name without any biography (*Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah* [Hyderabad, 1348], 1:217); and he provides the biography of Ibrāhīm ibn ʿAlī ibn Aḥmad ibn ʿAbd al-Wāḥid on pp. 43–44. Moreover, Abū al-Maḥāsin ibn Taghrībirdī (d. 874/1470) has two entries describing our author in his *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʿd al-Wāfī,* ed. Aḥmad Yūsuf Najātī (Cairo, 1956), 1:110–11 and 379–80 (the latter entry is named for Aḥmad ibn ʿAlī ibn ʿAbd al-Wāḥid, whereas the former is for Ibrāhīm ibn ʿAlī ibn Aḥmad ibn ʿAbd al-Wāḥid). Later sources are aware of the problem and state that the name should be Ibrāhīm; see Taqī al-Dīn Ibn ʿAbd al-Qādir al-Tamīmī (d. 1010/1601), *Al-Ṭabaqāt al-Sanīyah fī Tarājim al-Ḥanafīyah,* ed. ʿAbd al-Fattāḥ Muḥammad al-Ḥulw (Riyadh, 1983), 1:213–15; and ʿAbd al-Ḥayy al-Laknawī (d. 1304/1886), *Kitāb al-Fawāʾid al-Bahīyah fī Tarājim al-Ḥanafīyah* (Cairo, 1324), 10–11 [as indicated in the introduction, this work is for the most part an abridgement of Maḥmūd ibn Sulaymān al-Kaffawī's (d. 990/1582) *Katāʾib Aʿlām al-Akhyār*].

[48] The earliest sources for the life of the author are al-Ṣafadī (d. 764/1363), *Aʿyān al-ʿAṣr wa-Aʿwān al-Naṣr,* ed. F. Sezgin and M. Amawi (Frankfurt am Main, 1990), 1:23–24, where the author mentions a personal contact with Ibrāhīm in 757/1356; and Muḥammad ibn ʿAlī al-Ḥusaynī (d. 765/1363–64), "Al-Dhayl al-Thānī lil-Ḥusaynī," in *Min Dhuyūl al-ʿIbar lil-Dhahabī wa-al-Ḥusaynī,* ed. Muḥammad Rashād al-Muṭṭalib (Kuwait, n.d.), 269 (for the father), 315–16 (for the son). Al-Qurashī, *Al-Jawāhir al-Muḍīyah,* 2:536, mentions that the father visited them *(wa-qadima ʿalaynā al-Qāhirah ṣuḥbat al-quḍāt);* the editor of *Al-Manhal,* 379, n. 5, quotes probably another edition of al-Qurashī, which reads *qadima ʿalaynā min Dimashq ilá al-Qāhirah ṣuḥbat al-ʿaskar fī salṭanat al-malik al-Nāṣir Aḥmad ibn Muḥammad ibn Qalāʾūn,* which establishes the date of the visit of the father to Cairo as 742–43/1342.

Though the *nisbah* Ṭarasūsī refers to Tarsus,[49] Ibrāhīm's father ʿImād al-Dīn ʿAlī ibn Aḥmad actually came from Egypt. He was born in 669/1271 in Munyah ibn Khaṣīb in Upper Egypt.[50] His teaching career in Damascus seems to have begun in 720/1320 at the Qalʿah Mosque.[51] In 722/1322, upon the death of Shams al-Dīn ibn al-ʿIzz, the deputy of the Hanafi chief judge of Damascus, ʿImād al-Dīn succeeded the deceased, who happened to be his father-in-law as well, in office.[52] This led him to succeed the chief judge, when the latter died in 727/1327. He taught at a number of madrasahs, such as al-Nūrīyah and al-Qaymāzīyah.[53]

Chamberlain argues for a strong competition for *manṣib*s among the elite of Damascus in the thirteenth and fourteenth centuries.[54] Teaching posts seem to have been a means of preserving the elite status of one's family in the future, and fathers worked hard for their sons to succeed them in their posts. Taqī al-Dīn al-Subkī could do no more than wish for "just three things: that my son here take up my posts, that I see my [dead] son Aḥmad in a dream, and that I die in Cairo." Later he went to the tomb of Shaykh Ḥamād outside the Bāb al-Ṣaghīr and sought the

[49] Yāqūt, *Muʿjam al-Buldān* (Beirut, 1955–57), 4:28, states: *madīnah bi-thughūr al-Shām bayna Anṭākiyah wa-Ḥalab wa-bilād al-rūm;* and al-Samʿānī, *Al-Ansāb* (Hyderabad, 1978), 9:65, reads: *bilād al-thaghr bi-al-Shām*. Gabriela Linda Guellil, *Damaszener Akten des 8./14. Jahrhunderts nach aṭ-Ṭarsūsīs* Kitāb al-Iʿlām: *Eine Studie zum arabischen Justizwesen* (Bamberg, 1985), 17, n. 3, takes it correctly to refer to Tarsus in modern Turkey, hence her title; yet she, too, is aware that in the sources the proper spelling is al-Ṭarasūsī.

[50] Al-Qurashī, *Al-Jawāhir al-Muḍīyah,* 2:535; al-Nuʿaymī (d. 927/1521), *Al-Dāris fī Tārīkh al-Madāris* (Damascus, 1948), 1:622; Ibn Ṭūlūn (d. 953/1546), *Quḍāt Dimashq* (Damascus, 1956), 196. Munyah ibn Khaṣīb is located, according to al-Nuʿaymī and Ibn Ṭūlūn, in upper Ṣaʿīd (Upper Egypt), whereas Yāqūt, *Muʿjam al-Buldān,* 5:218, calls the town Munyah Abī al-Khuṣayb and indicates that it is in lower Ṣaʿīd. Al-Ḥulw states that this town is modern Minyā, located on the western bank of the Nile, the capital of the province of Minyā, one of the provinces of central Ṣaʿīd; al-Qurashī, *Al-Jawāhir al-Muḍīyah,* 2:535, n. 1.

[51] Al-Nuʿaymī (*Al-Dāris,* 1:622); Ibn Ṭūlūn (*Quḍāt Dimashq,* 196); Ibn Kathīr (d. 774/1373), *Al-Bidāyah wa-al-Nihāyah* (Beirut, 1994), 14:7:77.

[52] That ʿImād al-Dīn was the son-in-law of Shams al-Dīn ibn al-ʿIzz is only mentioned by Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:7:81. Yet Najm al-Dīn Ibrāhīm does refer to him as his maternal grandfather in *Tuḥfat al-Turk,* 109, where the name appears wrongly because of the Berlin manuscript; see MK, fol. 102a, lines 14–15, where the name is correct; al-Sayyid misidentifies the person, reading Shams al-Dīn as Ṣadr al-Dīn (*Tuḥfat al-Turk,* 109, n. 2).

[53] For the location of these madrasahs, see Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190-1350* (Cambridge, 1994), map 2, p. xv. Besides these two, he also taught at al-Rayḥānīyah, the tenure of which he held even after giving up his chief judgeship, and al-Muqaddamīyah; Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:7:126, 175; al-Nuʿaymī, *Al-Dāris,* 1:622; Ibn Ṭūlūn, *Quḍāt Dimashq,* 197; for a document about his appointment to al-Rayḥānīyah, see al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ* (Cairo, 1332-40), 12:78–80, cited by Guellil, *Damaszener Akten,* 18.

[54] Chamberlain, *Knowledge and Social Practice,* 91–107.

shaykh's intercession: "I have three sons, one of whom has gone to God, another is in Ḥijāz and I know nothing of him, and the third is here. I want him to take my posts."[55]

ʿImād al-Dīn seems to have operated in this framework as well. In 734/1334, his son Najm al-Dīn Ibrāhīm began teaching at al-Iqbālīyah al-Ḥanafīyah, when he was only 15 years old; and in 737/1337, he taught at al-Shiblīyah.[56]

A widely used method for securing the tenure of one's intimates was the *nuzūl,* or "resignation," of the office holder in favor of them, while he "had the power to do so."[57] That is exactly what ʿImād al-Dīn did in 746/1346; thus Najm al-Dīn, after a deputyship of about two years, became the chief Hanafi judge of Damascus and succeeded his father in the teaching position at al-Nūrīyah as well.[58] ʿImād al-Dīn died in 748/1348 in al-Mizzah, on the outskirts of Damascus.[59]

Najm al-Dīn Ibrāhīm was born in al-Mizzah, in 720/1320.[60] From 746/1346 onwards, he held the Hanafi chief judgeship and a teaching position at al-Nūrīyah. Among the interesting anecdotes about his life mentioned in the biographical dic-

[55] Cited by Chamberlain, *Knowledge and Social Practice,* 95 and n. 23, from al-Subkī, *Ṭabaqāt al-Shāfiʿīyah al-Kubrá* (Cairo, 1964–76), 6:175. What Taqī al-Dīn asked for was realized, as his son Tāj al-Dīn succeeded him in office; Ibn Ṭūlūn, *Quḍāt Dimashq,* 103.

[56] Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah*, 14:7:133–34, 141. Al-Shiblīyah is on the foot of Mount Qāsyūn, northwest of Damascus; Ibn Ṭūlūn, *Al-Qalāʾid al-Jawharīyah fī Tārīkh al-Ṣāliḥīyah* (Damascus, 1949), 128–29.

[57] Chamberlain, *Knowledge and Social Practice,* 93–94.

[58] Al-Ṣafadī, *Aʿyān al-ʿAṣr,* 23, uses the exact terminology: *nazala la-hu wāliduhu ʿan manṣib al-qaḍāʾ*. To arrange this affair, the father talks to the amir Sayf al-Dīn Yalbughā [*nāʾib* in Damascus, 746–48; Ibn Ṭūlūn, *Iʿlām al-Wará bi-man Wulliya Nāʾiban min al-Atrāk bi-Dimashq al-Shām al-Kubrá* (Cairo, 1973), 19–20], who in turn writes to the sultan and gets his approval. See also Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah*, 14:7:175; and for a document about his appointment to al-Nūrīyah, see al-Qalqashandī, *Ṣubḥ al-Aʿshá* (Cairo ed.), 12:353–55, cited by Guellil, *Damaszener Akten,* 21. The way the father succeeds his father-in-law and is succeeded by his son is very much in line with the predominant practice of the age. Escovitz indicates that 25 out of 31 judges of Cairo under Turkish Mamluk sultans, whose reason for appointment can be discerned, came to office through nepotism, *nāʾib* succession, the combination of both, and patronage (see the chart of "Reasons for Appointments" in Escovitz, *The Office of* Qâḍî al-Quḍât, 82). This should lead us to consider carefully whether these informal ways of coming to office are anomalies, or the very basis, hence the norm, of the operation of public offices.

[59] For Mizzah, see Yāqūt, *Muʿjam al-Buldān,* 5:122. Besides the sources cited, biographical information about ʿImād al-Dīn may also be found in al-Ḥusaynī, "Al-Dhayl al-Thānī," 269; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:18–19; Abū al-Maḥāsin Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1949), 10:181; and al-Laknawī, *Al-Fawāʾid al-Bahīyah,* 117.

[60] The date is given as 721 by al-Ṣafadī, *Aʿyān al-ʿAṣr,* 23, and Ibn Ḥajar, *Al-Durar al-Kāminah,* 4:43, though this date does not agree with Ibn Kathīr, who states that Najm al-Dīn was 15 years old in 734/1334 (*Al-Bidāyah wa-al-Nihāyah,* 14:7:133–34). Ibn Ṭūlūn, *Quḍāt Dimashq,* 198, gives a precise date, 2 Muḥarram 720, which is closer to Ibn Kathīr's statement.

tionaries, there is one that supports Chamberlain's argument about the competition among the elite over available positions at madrasahs. Najm al-Dīn was challenged over the position at al-Khātūnīyah by someone called ʿAlāʾ al-Dīn Ibn al-Uṭrūsh, and some members of the scholarly elite got involved in the issue by writing letters in support of Najm al-Dīn. One of them, Abū al-Baqāʾ al-Subkī, later Shafiʿi chief judge of Damascus, claimed Najm al-Dīn to be the shaykh of Ḥanafīyah in all Syria (al-Shām).[61]

Najm al-Dīn seems to have had good relationships with the political authorities as well; in 750/1349, he received a robe of honor from Cairo.[62] And when he died in 758/1357, his funeral prayer was led by the amir ʿAlī al-Mārdānī, the deputy of the sultan in Damascus.[63] His works are many, and the following is a tentative list:

- *Tuḥfat al-Turk fīmā Yajib an Yuʿmala fī al-Mulk,* written in 753/1352, for which Brockelmann mentions three copies, among them the Berlin 5614, which is the manuscript used by al-Sayyid for publication. In addition to the ones mentioned by Brockelmann, at least two more copies exist, the second of which formed the basis for a draft translation into English by Rifa'at Abou-El-Haj.[64]
- *Al-Nūr al-Lāmiʿ fīmā Yuʿmalu bi-hi fī al-Jāmiʿ,* a short treatise about the administration of the Umayyad mosque in Damascus, inserted into the sixth

[61] Ibn Ḥajar, *Al-Durar al-Kāminah,* 4:43; al-Tamīmī, *Al-Ṭabaqāt al-Sanīyah,* 1:214; the latter source is the fullest about Najm al-Dīn's life, as it makes use of almost all the biographical dictionaries written earlier. For Abū al-Baqāʾ al-Subkī, see Ibn Ṭūlūn, *Quḍāt Dimashq,* 106–7.

[62] Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah,* 14:7:186. Actually, the text suggests that this occasion might be his official appointment as well: on Monday, 15 Jumādá II, . . . Najm al-Dīn . . . *ḥukkima/ḥakama*, *wa dhālika bi-tawqīʿ sulṭānī wa-khilʿah min al-diyār al-Miṣrīyah*. The date corresponds to the coming of the new *nāʾib* Aytamish; Ibn Ṭūlūn, *Iʿlām,* 21. Gaudefroy-Demombynes, *La Syrie a L'époque des Mamelouks* (Paris, 1923), 160, states that the chief judges of Damascus were appointed by the *tawqīʿ sharīf* of the palace. If that was his official appointment, one wonders on what grounds he may have held his office until then.

[63] Al-Ṣafadī, *Aʿyān al-ʿAṣr,* 23, and following him, Ibn Ḥajar, *Al-Durar al-Kāminah,* 4:43; al-Tamīmī, *Al-Ṭabaqāt al-Sanīyah,* 1:214; al-Mardānī was the *nāʾib* of Damascus between 753 and 759; Ibn Ṭūlūn, *Iʿlām,* 22–23.

[64] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 1:364, and Ibn Taghrībirdī, *Al-Manhal*, 1:111, both give the same date, suggesting the possibility that they saw the autograph version of the work. For the three copies, see C. Brockelmann, *Geschichte der Arabischen Literatur* (Leiden, 1949), 2:95/79; idem, Supplementband II (Leiden, 1938), 87; Ahlwardt, *Verzeichnis,* 5:116. A fourth copy is mentioned by al-Ziriklī, *Al-Aʿlām* (Beirut, 1979, 4th ed.), 1:51 (cited by al-Sayyid, "Ṣirāʿ al-Fuqahāʾ," 18, n. 2), as ʿĀrif Ḥikmat Library (in Medina), *fiqh ḥanafī,* n. 83; and the fifth one is in İstanbul, Millet Kütüphanesi, Feyzullah Efendi collection, 2122, fols. 96b–105b, ascribed to Feyzullah Efendi (d. 1115/1703), an Ottoman *şeyhülislâm,* of which Rifa'at Abou-El-Haj was kind enough to let me borrow the microfilm. Abou-El-Haj's unpublished English translation is a draft, though it greatly helped me in finding my way in the Arabic original.

chapter of the *Tuḥfah,* thus published by al-Sayyid as well.[65] Ḥājjī Khalīfah attributes it to Ibn al-ʿIzz al-Ḥanafī, a name mentioned as a pseudo-author in his entry for the *Tuḥfah* as well.[66]

- *Anfaʿ al-Wasāʾil ilá Taḥrīr al-Masāʾil,* or *Al-Fatāwá al-Ṭarasūsīyah,* the best-known work of the author. Several manuscripts exist; it was published in 1926, and it was abridged by at least three later authors.[67]
- *Al-Iʿlām bi-Muṣtalaḥ al-Shuhūd wa-al-Ḥukkām,* large parts of which have been published and translated into German by Guellil.[68]
- *Urjūzah fī Maʿrifat mā bayna al-Ashāʿirah wa-al-Ḥanafīyah min al-Khilāf fī Uṣūl al-Dīn,* a short poem, mentioned by Ibn Ḥajar, and already reproduced by al-Ṣafadī.[69]

Apart from these published works, there are six titles mentioned by al-Maqrīzī:[70]

- *Rafʿ al-Kulfah ʿan al-Ikhwān fī Dhikr mā Quddima fīhi al-Qiyās ʿalá al-Istiḥsān;*[71]

[65] *Tuḥfat al-Turk,* 102–5; MK, fol. 101a, line 26–fol. 101b, line 35; also see, Ahlwardt, *Verzeichnis,* 5:393. Although Guellil, *Damaszener Akten,* 23, n. 32, thinks that the Berlin manuscript only includes a fragment of the work, as al-Sayyid points out, it contains all of it ("Ṣirāʿ al-Fuqahāʾ," 19–20, n. 1).

[66] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 1:364, 2:1983; Ahlwardt, *Verzeichnis,* 5:116, argues that Ibn al-ʿIzz and Najm al-Dīn should be the same person since the grandfather of Najm al-Dīn was called Shams al-Dīn al-ʿIzz. Yet, first of all, the grandfather is Shams al-Dīn *ibn* al-ʿIzz, and he is a maternal grandfather, as MK, fol. 102 a, lines 14–15 reads (see also note 52 above); and second, the Paris copy of the *Tuḥfat al-Turk* is ascribed to Aḥmad ibn al-ʿIzz al-Ḥanafī, not Ibrāhīm (Brockelmann, *GAL,* 2:95/79). Thus, this problem might be connected to the biographical issue with the name Aḥmad, mentioned above; however, none of this endangers the identification of the author of *Tuḥfat al-Turk* and *al-Nūr;* see the next footnote.

[67] *Al-Fatāwá al-Ṭarasūsīyah aw Anfaʿ al-Wasāʾil ilá Taḥrīr al-Masāʾil,* ed. Muṣṭafá Muḥammad Khafājī (n.p., 1344/1926). See Brockelmann, *GAL,* 2:95/79, and Supplementband II, 87, where it is mentioned that the two abridgements were made in the sixteenth and eighteenth centuries; the third one is taken from Ḥājjī Khalīfah's entry on the book in *Kashf al-Ẓunūn,* 1:183, which does not give a date. The *Anfaʿ* is referred to by the author in the *Tuḥfat al-Turk* as his own work, clinching the case for Najm al-Dīn's authorship of the *Tuḥfat al-Turk* (*Tuḥfat al-Turk,* 136; MK, fol. 104b, lines 32–33).

[68] See n. 49 above. The four manuscripts examined by Guellil are described in *Damaszener Akten,* 29–32. The work is also attributed to a different author: see Brockelmann, Supplementband II, 87; and Ḥājjī Khalīfah, *Kashf al-Ẓunūn*, 1:127. Guellil resolves the problem, *Damaszener Akten,* 29.

[69] Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:44, and following him al-Tamīmī, *Al-Ṭabaqāt al-Sanīyah,* 1:215; they may have seen the poem in al-Ṣafadī, *Aʿyān al-ʿAṣr,* 23–24.

[70] Al-Maqrīzī (d. 845/1442), *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk* (Cairo, 1970), 3:1:36; and following him, Ibn Taghrībirdī, *Al-Nujūm,* 10:326, and idem, *Al-Manhal,* 1:110–11.

[71] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 1:830 and 910, both referring apparently to the same work.

- *Al-Ikhtilāfāt al-Wāqiʿah fī al-Muṣannafāt;*[72]
- *Manāsik al-Ḥājj;*[73]
- *Maḥẓūrāt al-Iḥrām;*[74]
- *Al-Ishārāt fī Ḍabṭ al-Mushkilāt;*[75]
- *Al-Fawāʾid al-Manẓūmah fī al-Fiqh.*[76]

Another important title might be *Wafayāt al-Aʿyān min Madhhab Abī Ḥanīfah al-Nuʿmān,* which seems to be at least three volumes.[77]
Two more works of his are available in manuscript form:

- *ʿUmdat al-Ḥukkām fīmā lā Yanfudhu min al-Aḥkām;*[78]
- *Al-Unmūdhaj min al-ʿUlūm li-Arbāb al-Fuhūm.*[79]

Other titles attributed to him are:

- *Al-Khiṣāl fī Furūʿ al-Ḥanafīyah;*[80]
- *Risālah fī Jawāz (al-Jumʿah) fī Mawḍiʿayn min Miṣr;*[81]

[72] Ibid., 1:33.

[73] Ibid., 2:1832, referred to as *Manāsik al-Ṭarasūsī,* yet the description of the book as *muṭawwal* parallels al-Maqrīzī and Ibn Taghrībirdī.

[74] Ibid., 2:1616.

[75] Ibid., 1:97.

[76] This is the work referred to by Brockelmann as *Al-Fawāʾid al-Fiqhīyah al-Badrīyah,* written in 754/1352, composed in one thousand verses; see *GAL* 2:95/79, and Supplementband II, 87. Ḥājjī Khalīfah has two different entries, one called *Al-Fawāʾid al-Fiqhīyah,* described as a *manẓūmah* (*Kashf al-Ẓunūn,* 2:1300); and one called *Manẓūmah fī al-Furūʿ,* described as comprising a thousand verses. Ḥājjī Khalīfah adds that the author called it *Al-Fawāʾid al-Badrīyah al-Fiqhīyah,* then wrote a commentary on it, called *Al-Durrah al-Sanīyah,* which became a source for the *manẓūmah* of Ibn Wahbān (ibid., 2:1867); see also Ismāʿīl Pāshā al-Baghdādī, *Īḍāḥ al-Maknūn fī al-Dhayl ʿalá Kashf al-Ẓunūn* (Tehran, 1967, 3rd ed.), 1:615. This work is probably the second-best-known title of the author, as Ibn Quṭlūbughā (d. 879/1474), *Tāj al-Tarājim fī Ṭabaqāt al-Ḥanafīyah* (Baghdad, 1962), 4, only cites two works of the author in his short entry, namely *Al-Fawāʾid* and *Al-Fatāwá*.

[77] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 2:1098 and 2019, apparently both referring to the same work; al-Ziriklī mentions a copy of it in al-Ẓāhirīyah library in Damascus (*Al-Aʿlām,* 1:51, n. 9625); and Maḥmūd Ḥasan al-Tunkī, *Muʿjam al-Muṣannifīn* (Beirut, 1344), 3:243, mentions that he came across the first and third volumes of this work. This work might be the reason why Wüstenfeld included Najm al-Dīn Ibrāhīm among the historians of the Arabs in his *Die Geschichtsschreiber der Araber und ihre Werke* (Göttingen, 1882), 419.

[78] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 2:1166–67; Brockelmann, *GAL,* 2:95/79.

[79] Ismāʿīl Pāshā al-Baghdādī, *Īḍāḥ al-Maknūn,* 1:137; al-Ziriklī, *Al-Aʿlām*, 1:51, states this title is available in Awqāf Baghdād, no. 6470.

[80] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 1:705; Ismāʿīl Pāshā al-Baghdādī, *Īḍāḥ al-Maknūn,* 1:430.

[81] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 1:858; this treatise is written in response to *Risālah fī al-Jumʿah wa-ʿAdam Jawaz al-Ṣalāt fī Mawāḍiʿ Mutaʿaddidah* by a certain Qiwām al-Dīn Amīr Kātib ibn

- a *sharḥ* to the famous *Hidāyah* of al-Marghīnānī;[82]
- *Al-Sirāj wa-al-Wahhāj;*[83]
- *Rafʿ Kulfat al-Taʿab li-mā Yuʿmalu fī al-Durūs wa-al-Khuṭab;*[84]
- *Dhakhīrat al-Nāẓir fī Ashbāh wa-al-Naẓāʾir.*[85]

Amīr ʿUmar.

[82] Ibid., 2:2039, supposedly in five volumes.

[83] Ibid., 1:984, yet the identification of the author is far from certain, as only the *nisbah* al-Ṭarasūsī is mentioned. According to the description of Ḥājjī Khalīfah, the work seems to have been translated into Ottoman Turkish in the sixteenth century.

[84] Ibid., 1:910.

[85] Al-Ziriklī, *Al-Aʿlām*, 1:51.

Appendix II: Further Points of Comparison between Hanafism and Shafiʿism[86]

First, the application of a *ḥadd* punishment to a slave: according to al-Ṭarasūsī, Abū Ḥanīfah states that the owner of the slave is not eligible to apply the *ḥadd* without the permission of the ruler, whereas al-Shāfiʿī claims that the owner does not need the permission of the ruler. For the author, this is an offense against the sovereignty of the sultan because the Prophet said: "(The prerogative of) the *ḥudūd* belongs to the rulers."[87]

Second, according to al-Ṭarasūsī, whereas Abū Ḥanīfah does not hold the ruler responsible for a person who dies under a deserved *taʿzīr,* al-Shāfiʿī does.[88]

Third, if a person kills a *laqīṭ,* according to Abū Ḥanīfah, the sultan has the license to execute retaliation, whereas for al-Shāfiʿī, he does not.[89]

Fourth, for Abū Ḥanīfah, the feast prayer is permissible only if the sultan or his deputy is present, whereas al-Shāfiʿī does not see the sultan's or his deputy's presence as necessary.[90]

---

[86] See n. 20 above.

[87] *Tuḥfat al-Turk,* 67; MK, fol. 97a, lines 20–23. Here, as in most of the other points, the source of al-Ṭarasūsī, as indicated by al-Sayyid, seems to be Sibṭ Ibn al-Jawzī's (d. 654/1256) *Al-Intiṣār wa-al-Tarjīḥ lil-Madhhab al-Ṣaḥīḥ* (Madīnat Naṣr, n.d.), 17. However, Sibṭ Ibn al-Jawzī never mentions al-Shāfiʿī as the opposing view; he states the other view as *wa-qāla ghayruhu,* or *wa-qāla man khālafahu* in all his nine points. Another Hanafi, al-Marghīnānī (al-Ṭarasūsī wrote a *sharḥ* of his *Al-Hidāyah;* see Appendix I), states that al-Shāfiʿī argues that the owner has absolute *wilāyah* over his slave; then he invokes the tradition of the Prophet that four (prerogatives) belong to the rulers, among them the *ḥudūd,* which is a version of the tradition that al-Ṭarasūsī employs (*Al-Hidāyah*, 4:119–20). Yet the tradition seems to be quite weak, as there are at least three versions of it where the four things mentioned differ, and one of them includes only three prerogatives; see Jamāl al-Dīn al-Zaylaʿī (d. 762), *Naṣb al-Rāyah, Takhrīj Aḥādīth al-Hidāyah* (published together with *al-Hidāyah*), 4:119–20, for the three versions the transmissions of which do not reach back to the Prophet; the tradition is not mentioned by Wensinck.

[88] *Tuḥfat al-Turk,* 66; MK, fol. 97a, lines 16–18; Sibṭ Ibn al-Jawzī, *Al-Intiṣār wa-al-Tarjīḥ*, 17. Al-Marghīnānī, *Al-Hidāyah,* 4:175, states that al-Shāfiʿī holds the *bayt al-māl* responsible for blood money.

[89] *Tuḥfat al-Turk,* 68; MK, fol. 97a, lines 28–29; Sibṭ Ibn al-Jawzī, *Al-Intiṣār wa-al-Tarjīḥ*, 18.

[90] *Tuḥfat al-Turk,* 67–68, MK, fol. 97a, lines 26–28. There is a disagreement over the presence of the sultan or his deputy at the Friday prayer, but I could not find any reference to the issue in feast prayer; see al-Ṭaḥawī, *Mukhtaṣar al-Ṭaḥawī,* 35; al-Marghīnānī, *Al-Hidāyah*, 2:233; al-Sarakhsī, *Kitāb al-Mabsūṭ,* 2:25, where the author states that if the sultan stays in his residence, then the people should find out whether its door is open or not, the open door indicating permission for the Friday prayer. The argument seems to depend on the weak tradition referred to above, as the Friday prayer is one of the four prerogatives mentioned. On the other hand, the Shafiʿi al-Shīrāzī (d. 476) recognizes the permission of the sultan for Friday prayer as a *sunnah;* and al-Māwardī, by dividing the mosques into two, the government mosques—which are big and hence host the Friday prayer—and the public mosques, and by giving the right of appointment of a prayer leader to the former

Fifth, in a funeral prayer where both the sultan and the relatives of the deceased are present, Abū Ḥanīfah says that the sultan should lead the prayer, while al-Shāfiʿī claims that the relatives have priority.[91]

Sixth, the booty of the killed does not belong to the killer according to Abū Ḥanīfah, unless the ruler specifies beforehand that whoever kills someone has the right to the booty of the killed; whereas for al-Shāfiʿī, the booty belongs to the killer whether the ruler stipulated so or not.[92]

exclusively to the sultan, in effect modifies the Shafiʿi view; Norman Calder, "Friday Prayer and the Juristic Theory of Government: Sarakhsī, Shīrāzī, Māwardī," *BSOAS* 49 (1986): 41, 44–45; al-Māwardī, *Al-Aḥkām al-Sulṭānīyah,* 172, 179–80.

[91] *Tuḥfat al-Turk,* p. 68; MK, fol. 97a, l. 29–31; Sibṭ Ibn al-Jawzī, *Al-Intiṣār wa-al-Tarjīḥ*, 18. Al-Shāfiʿī, *Kitāb al-Umm*, 1:461, sees this as a private matter, hence the priority of the relatives. See also al-Ṭaḥawī, *Mukhtaṣar al-Ṭaḥawī,* 41; and al-Marghīnānī, *Al-Hidāyah*, 2:315, who gives an elaborate line of succession according to which if the sultan is not present, then the *qāḍī* should lead the prayer; if he is not present either, then the imam of the neighborhood should lead the prayer; the relatives come only after him.

[92] *Tuḥfat al-Turk,* p. 66; MK, fol. 97a, lines 14–16; Sibṭ Ibn al-Jawzī, *Al-Intiṣār wa-al-Tarjīḥ*, 17; al-Sarakhsī, *Kitāb al-Mabsūṭ,* 10:47–48. Al-Shāfiʿī, *Kitāb al-Umm*, 4:184, states that what the Prophet said at the battle of Ḥunayn, *man qatala qatīlan la-hu salabuhu,* is a *ḥukm* since the Prophet gave the booty to the killer on other occasions as well, as opposed to an *ijtihād* limited to this particular case, a view held by Mālik (see n. 2, p. 184). This becomes a trivial issue as that kind of booty is limited to the things that are on the body of the person who is killed, excluding his properties (Ibn Jamāʿah, *Taḥrīr al-Aḥkām,* 220); besides, there are five conditions which qualify whether the killer deserves the booty of the killed (ibid., 219–20).

The Politics of Insult: The Mamluk Sultanate's Response to Criminal Affronts

Authority, to be acknowledged, requires a recognized capacity for enforcement of its edicts. But from a broader perspective, the effective implementation of edicts rests on respect. In medieval Muslim societies, such respect accrued to the governing agents pledged to rule as custodians of *sharīʿah* and *sunnah*, law and orthodoxy. The members of the oligarchy that stood at the apex of authority in the Mamluk state regarded themselves as the legitimate upholders of the revealed law, guardians of accepted canons of belief, and guarantors of that public order requisite to the function of God's commonwealth among the faithful. God had seen fit to grant them alone the means to serve in this singular role.

God's endorsement of their custodianship rested on a venerable foundation of legal theory. The learned establishment (ulama) concurred that the ruler and his retainers served legitimately as God's adjutants in this life. Obedience of their commands was equivalent to obedience to God himself.[1] The scholars' rationale behind such a sweeping delegation of legitimacy derived from their association of the power to enforce with the need for order. Humankind was prone to endemic conflict, and only through its resolution could order be maintained. No practical legal system can tolerate anarchy, and no divine injunctions readily sanction it. The classical jurists thus reasoned that the ruler acted as a successor to the Prophet, standing as a bulwark against anarchy by upholding order. The *sharīʿah* was applied as a divine dispensation to assure the welfare of Muslim believers. Their welfare required stability, while anarchy was antithetical to it. The ruling authorities, despite their temporal flaws, accordingly warranted obedience since they were essential to stability and thus welfare.[2] The Mamluk oligarchy took seriously their obligations as custodians of *sharīʿah* and guarantors of order, not the least because their own origins as independent rulers stemmed from usurpation. Keenly aware

[1] Khaled Abou El Fadl, *Religion and Violence in Islamic Law* (Cambridge, 2001), 15–16, discusses the analysis posed by Aziz al-Azmeh (*Muslim Kingship: Power and the Sacred in Muslim, Christian and Pagan Politics* [London, 1997], 123), who claims that commands from the legitimate ruler were to be obeyed as the equivalent of God's ordinances. Al-Azmeh relied on such theorists as al-Mawārdī and Ibn Jamāʿah.

[2] Abou El Fadl, *Religion and Violence,* 26: the legal system does not endorse anarchy; 27: the ruler succeeds the Prophet as upholder of order which is requisite to the function of the Islamic commonwealth. Order was essential to the welfare of Muslim believers.

that the founders of their regime had deposed and executed a legitimate member of the preceding dynasty, the Mamluks sought to justify their coup by standing as a bulwark against chaos. The coterie of senior officers who made up this oligarchy, first of whom was the sultan, expected the jurists and scholars to provide the ideological justification for their exercise of power. The latter supplied the requisite principles as expressed by the classical expounders of the law. According to them, the ruler possessed the discretion *(takhyīr)* to determine criminal penalties according to the severity of the crime.[3] More specifically, the ruler could decide the degree of heinousness of crimes committed via "banditry" *(muḥārabah)*—a term with a flexible definition, embracing a broad range of larceny and theft. Severity was measured according to stealth applied, value of commodities stolen, extent of injury inflicted, or number of lives taken.[4] While the ruler was in theory not free to impose punishments arbitrarily, the imperatives of assuring order and preserving God's commonwealth gave him a virtually free hand in practice—to the extent of his enforcement capacity and personal inclinations.

Mamluk sultans readily adopted the stance of severe but just arbiters of criminal litigation, particularly when attempting to solidify their reigns. Several chroniclers noted the discomfiture caused by al-Ẓāhir Barqūq in Ramaḍān 789/September–October 1387, when he announced his readiness to hear petitions twice a week from victims of crime at all social levels.[5] The authors elaborated on the trepidation this proclamation stirred among political notables *(ahl al-dawlah)* who, by implication, were responsible for much of the criminal predation suffered by the masses. But one commentator, Ibn al-Ṣayrafī, went so far as to claim that this proclamation tempted "the lowest *(al-asāfil)* [in society] to assault the highest *(al-aʿālī)*." Al-Maqrīzī subsequently mused over Barqūq's stratagems that aimed cleverly at ameliorating the impression that he had acted for simple revenge. In Muḥarram 793/December 1390, the sultan imprisoned the amir Āqbughā al-Mārdīnī, former governor of Upper Egypt and a potential contender for the throne, on the grounds of his tyranny and oppression.[6] Al-Maqrīzī noted that Barqūq had waited patiently until the amir's cruelty necessitated his removal. The amir's manifest criminality

obscured any popular perception that the sultan was acting in his own self-interest. He struck down his rival when the latter's own acts merited reprisal in the cause of justice.

The Mamluk oligarchy often displayed its commitment to preserving public order by periodically demonstrating its rigorous enforcement of public morals. Restricting the movement of women outside the home was a reliable ritual imposed when natural crises such as plague signaled to many God's wrath over lapsed morals. Chroniclers on several occasions commented on edicts forbidding women to depart their dwellings even during festivals when they customarily went out to fulfill religious obligations.[7] Elaborate instructions setting the appropriate length for gowns, sleeves, and veils often accompanied these edicts. Penalties for ignoring these edicts were potentially severe and might even warrant bisection—for both the female offender and the conveying mule driver foolish enough to have disobeyed the sultan's warning. Yet chroniclers noted that these strictures inevitably lapsed, and women resumed their previous penchant for public egress, until the next crisis necessitated a re-imposition of control over their movements.[8]

An illuminating example of an individual whose behavior embodied qualities sought by the ruler seeking to curb crime by intimidation may be seen in the appointment of one Dawlāt Khujā al-Ẓāhirī by Sultan Barsbāy to the Cairo prefecture of police in Ramaḍān 836/April–May 1433.[9] Ibn Taghrībirdī discussed this individual's character at length, stressing his vulgarity and malice. Barsbāy had noticed his bellicosity when both were serving as line troopers during Barqūq's reign. Upon Barsbāy's own enthronement, he sent Dawlāt Khujā to inspect several provinces. When Dawlāt showed himself sufficiently formidable, the sultan made him inspector *(kāshif)* over all of Upper Egypt "where he devised diverse torments of criminal elements *(ahl al-fasād)* and highwaymen *(quṭṭāʿ al-ṭarīq)*. When he apprehended a criminal, he inflated him through his buttocks with a bellows so that his eyes popped out and his brain burst." Ibn Taghrībirdī did not intend his gruesome depictions of Dawlāt's ferocity to obscure the amir's astuteness upon his appointment to the pre-

[9] Ibn Taghrībirdī, *Nujūm,* 14:359, line 23: on appointment of Dawlāt Khujā as *walī.*

fecture of Cairo. Dawlāt initiated his tenure by releasing most hardened criminals from Cairo's jails. His magnanimity was tempered by an ominous warning. After recording the names of all prisoners set free, the *wālī* informed them that any who were subsequently apprehended in thievery would be bisected—no exceptions, no chance for reincarceration. Ibn Taghrībirdī stated that Dawlāt inflicted a veritable reign of terror over Cairo's criminal classes. He also noted wryly that his methods were brutally effective; theft came to a virtual standstill during his prefecture. Although Dawlāt's savagery offended too many influential persons and led to his temporary dismissal, the sultan soon found his talents indispensable. In Ramaḍān 841/ March 1438, he appointed him market inspector *(muḥtasib),* commissioning him to apply similar tactics under the guise of a different office.[10] Ibn Taghrībirdī claimed that Barsbāy rejected a list of candidates submitted to him by his advisors, presumably as excessively humane. He then claimed "to know one who is not (a devout) Muslim, and does not fear God." Barsbāy summoned Dawlāt, bestowed his robe of office, and urged him to enforce his duties rigorously. Dawlāt was enjoined to focus his special attention on regulating women's public movements, even though his previous restrictions on them had forced his earlier dismissal. Rising alarm over successive plague epidemics apparently induced the ulama to sanction the sultan's re-imposition of strict regulations over women's dress and the circumstances under which they might leave their homes (primarily to purchase household supplies). Dawlāt enforced the sultan's commands so severely that he was alleged to have denied mothers the right to visit their children's gravesites upon interment.

The example of Dawlāt Khujā as police chief and market inspector may seem extreme, but he clearly manifested traits thought necessary for the effective curbing of violence and quelling of crime. Public outcry over the methods of such an individual might oblige his temporary dismissal. But he was invariably recalled when public alarm reached a critical stage that threatened the collapse of order. Such a calamity signaled the potential disintegration of society. The preservation of order was essential even if individual rights were compromised. But were the ruling authorities dedicated to upholding law and order solely on principle rather than self-interest? Their record on this issue was mixed.

The political system over which the Mamluk oligarchy presided accepted conspiracy and violence as normative to advancement. As a military caste whose origins in Egypt were steeped in supplanting rivals, the Mamluks eschewed a dynastic rationale for the political elite's legitimacy. Prowess in the martial arts ranked as perhaps the most esteemed skill a recruit could offer to earn his status in the dominant caste. And since the training to which young recruits were subjected upon their arrival from Turkestan or Circassia emphasized factional loyalties cemented in barracks drill units, the potential for rivalry or outright sedition was omnipresent.

---

[10] Ibn Taghrībirdī, *Nujūm,* 15:94, line 9: Dawlāt Khujā appointed *muḥtasib*.

All the way through the promotional ranks from line soldier, medial officers, senior amirs, to the sultan himself, a pervasive sense of competition and potential deposition pervaded the military caste. This deeply imbedded attitude combined with an ingrained belief in personal immunity from laws governing the civilian masses to produce a mentality that eagerly anticipated violence as an opportunity rather than a liability. The Mamluk military system that evolved in Egypt and Syria during the later Middle Ages has been the object of detailed scholarship for more than half a century, and it requires no elaboration here.[11] The issue relevant to this discussion centers on the tie between the Mamluks' proclivity for conspiracy and violence, and the propensity of this caste to exploit its advantage in criminal ways. That the ruling oligarchy routinely indulged in certain kinds of crime while simultaneously justifying its military monopoly to protect civilians from criminals is a paradox of the ruling elite's stance.

This paradox becomes explicable if the Mamluk commitment to order is seen as a collective necessity while its proclivity for violence is recognized as a path to individual advantage.[12] The military elite realized that their primary sources of income were rents from landed estates (*iqṭāʿ*s), or taxes paid by commercially productive groups in urban centers. The regularized flow of revenue from these sources depended on the maintenance of order and stability. But as noted previously, the Mamluk procedure of advancement was highly individualized—pitting soldiers and officers against each other and even their own peers in endemic factional rivalry. Moreover, those who manifested aggressive traits and relished armed conflict were simply displaying the martial values most admired by the ruling caste. Persons who harbored a congenital aversion to conflict were unlikely to rise high in the Mamluk oligarchy. These people liked to fight.

And beyond the significance of personal inclinations, the Mamluk oligarchy discerned the substantial rewards to be gained by sponsoring, if not actually committing, profitable forms of crime. These officers were fully prepared to exploit the

prerogatives of their military status to pursue the illegal activities they were sworn to suppress.[13] This tendency was exacerbated by endemic cash shortfalls the ruling oligarchy encountered in the second half of the Mamluk period. As their demands for revenues relentlessly outdistanced the supply yielded from licit sources, the oligarchy turned increasingly to extra-legal means to make up the difference.[14] Elaborate programs of confiscation concocted by the sultan himself were only the most notorious strategy in this process. The sultan's subordinate officers devised their own extortion schemes, striking deals with a wide range of gang leaders and Bedouin chiefs. And at the oligarchy's base, trainees and recruits *(julbān)* staged riots almost routinely to demand stipend or bonus payments that had fallen into arrears. All of these factors combined to create a pragmatic inducement to violence among the military elite. Its occurrence was always a latent possibility. What then were the selective categories of criminality that the elite was not prepared to tolerate? The answer is those that challenged its primacy or diminished its sources of income.

The ruling oligarchy assumed a stance of absolute supremacy in the political hierarchy. In return for their defense of order, the oligarchy expected all subordinate elements to acknowledge their hegemony. They were prepared to confront and subdue any individual or group that challenged this primacy, the essence of which was a monopoly over military force. Any acts they perceived as threatening or otherwise compromising their primacy were met with vigorous reprisal—while other obstreperous behavior confined to lower classes was often ignored.[15] Al-Ẓāhir Barqūq, founder of the Circassian line of sultans, demonstrated an acumen for maintaining a balance between autocracy and magnanimity. While demanding submission from his subjects, Barqūq was solicitous of their interests and garnered widespread popular support. The historian al-Maqrīzī appreciated this acumen on the sultan's part, and gave him credit for much of his success among the masses as

[13] Barbara Hanawalt discussed "fur-collar" crimes committed by persons high placed in the En - lish military establishment in *Crime and Conflict in English Communities, 1300–1348* (Cambridge, 1979), 138–39. Hanawalt also described extortion and protection rackets overseen by English nobles (142–43), nobles and their household gangs (214), and nobles directing criminals responsible for the acts (215).

[14] See Petry, *Protectors,* chapters 6 and 7, for analysis of confiscation schemes devised by Mamluk sultans to ward off insolvency.

[15] Severe reprisals against regional crimes were meted out when the regime's reputation had been flaunted. Al-Maqrīzī (*Sulūk,* 2:383, line 9: Rajab 735/Feb.–Mar. 1335) observed that an individual, whose legacy of cruelty in Damascus qualified him for the inspectorship of the Delta, imposed draconian penalties on highwaymen who had discredited the government. The same author noted a similar appointment decades later (*Sulūk,* 3:352, line 2, Muḥarram 781/Apr.–May 1379) when tribal predation around Aswan exceeded tolerable limits. Al-Maqrīzī emphasized the negative consequences of the new governor's ferocity, since the tribes responded with increased raiding, to the extent that Aswan was temporarily isolated from Cairo's control.

a rejuvenator of the Mamluk oligarchy.[16] The interdependence between defense of stability and demand for acknowledged primacy was hardly unique to the Mamluk Sultanate. Historians who have pondered crime in medieval and renaissance Europe have noted a widespread tendency for ruling classes to reserve their most ruthless reprisals for those who disputed their authority. Guido Ruggiero, for example, noted that the Council of Ten, organized in fourteenth-century Venice to prosecute criminals regarded as inimical to the interests of the commercial elite in that city, concentrated its attention on speech crimes that slandered the motives behind governmental policies.[17] Overall, several commentators have observed that the steady rise of state control over crime in pre-modern Europe broadly paralleled a simultaneous intensification of the local regime's demand for recognition of primacy from its subjects.[18]

The ruling oligarchy of Cairo, and their civilian staff who administered the apparatus of government, therefore regarded as particularly odious crimes that: (a) compromised their control over society, (b) denigrated their status, (c) disrupted access to property, (d) alarmed custodians of religious belief, or (e) rattled moral sensibilities to the extent that order was threatened. The sources comment extensively on all of these categories. They are considered below seriatim to indicate the special characteristics of the threats they posed. The tension between formal principle and pragmatic interest is revealed in the rich roster of cases emerging in each category.

Civil disorder was the most brazen act of defiance the lower classes could carry out. Eruptions of mob violence starkly challenged the regime's ability to assert its authority. But despite their failure to prevent it, the regime could not let it pass unnoticed. Incidents of mob violence permeated the logs of all the chroniclers and were omnipresent in Ibn Ṭūlūn's reports on events in Damascus. This second city of the empire during the Sultanate's final decades appears to have been riven with clashes between rival gangs that had staked out their control over local districts. Although Cairo was no stranger to mob violence, the rate of cases mentioned involving civilians does not approach their frequency in Damascus. Whether this disparity

[16] Al-Maqrīzī (*Sulūk*, 3:352, line 13, Muḥarram 781/Apr.–May 1379) claimed that Barqūq "was ever solicitous of the masses' favor, defending their interests so that they admired him and fanatically supported him."

[17] Ruggiero (*Violence,* 131) observed that in Venice speech considered slanderous was condemned as a violation of communal honor and warranted the most vigorous repression.

[18] See *Crime and the Law: The Social History of Crime in Western Europe since 1500,* ed. V. A. C. Gatrell, Bruce Lenman, and Geoffrey Parker (London, 1980), 18, for intense reprisals inflicted on those who challenge the established social order. Juridical sources focus on crimes regarded as such threats, while neglecting crimes regarded as inconsequential to this issue. E. Muir and G. Ruggiero (*History from Crime* [Baltimore, 1994], 227) note this focus of sources emphasizing crimes that confront the ruling authorities.

is due to more effective control by the police forces in Cairo or to innate differences between the propensity of social elements to commit mob violence in each city is an issue weighed subsequently.

Mob violence was rarely indiscriminate; its outbursts reveal distinct perpetrators: organized criminal bands, rival gangs fighting for hegemony over local turf, or Mamluk recruits obstreperously defying commands to behave docilely from their officers—often following shortfalls in rations or delayed stipend payments. The regime's responses to these diverse patterns of disruption corresponded in severity to the perceived challenge they posed. Repeated assaults by criminals represented coordinated action calculated to profit from civil unrest. The authorities' reprisals against repeat offenders—when they succeeded in catching them—ranged from spectacular cruelty to resigned cooption. But indifference could not be an option in the face of defiance.

The eminent legal scholar Ibn Ḥajar, whose logs included only notorious criminal cases, reported a mass execution of repeat offenders profiting from riots in Damascus during Rajab 804/February–March 1402.[19] The group was "suspended from hooks driven through their orifices" and left to expire slowly. Ibn Ḥajar was keenly aware of the shock value posed by this grisly mutilation. But he hardly condemned it, noting that these hardened thieves "had assailed the populace, murdering, strangling, and plundering. The amount of clothing *(qumāsh)* they had seized was beyond calculation." Although the dry goods the authorities could locate were placed on display for victims to reclaim, Ibn Ḥajar also stated that this reprisal did not deter but in fact motivated the thieves' comrades to even further predation. This ambiguous outcome of an extreme punishment was echoed by all the chroniclers uniformly. Yet the regime persisted with such measures throughout the later medieval period.[20]

Gang warfare, as distinct from more random mob violence, was often described as a reaction to premeditated provocation. Depictions of incidents revealed evi-

dence of long-standing, coordinated operational structures and hidden arms caches. As noted above, the overwhelming majority of such incidents were reported for Damascus.[21] The quarters of al-Shāghūr, Maydān al-Ḥaṣā, and al-Qubaybah emerged as hotbeds of armed conflict, brigades of their residents sallying forth to seek revenge for a slight from a rival district. Violence was invariably directed against the symbol of governmental restriction: the *nāʾib* governor. In Jumādá II 890/June–July 1485, Ibn al-Ḥimṣī reported a massive riot that began with the murder of a Shāghūrī.[22] The victim had himself instigated the incident by accosting an individual from another quarter with murderous intent. But the latter's son apprehended the Shāghūrī, who was then struck down by his intended victim. Ibn al-Ḥimṣī then stated that the residents of al-Shāghūr gathered to avenge the homicide of one of their own. After plundering the bowmakers' market (almost certainly not a coincidence since the regime had attempted to monopolize this weapon), the Shāghūrī brigade refused to disperse when confronted by a spokesman for the governor. Defying the *nāʾib*'s emblems displayed to demand surrender of weapons, the Shāghūrīs assumed "full battle gear" and marched against the governor's residence. Alarmed by this massive show of resistance, the *nāʾib* recalled companies deployed in the countryside to quell the Bedouin. When these units formed up in front of the *nāʾib*'s palace and charged the rebels, the Shāghūrīs retreated back to their district. However, the governor found himself incapable of further pursuit because the rebels broke down gates and bridges, barring access to their quarter. "The women perched on the roofs, casting stones from slingshots. Some of them were killed, some wounded. A devastating event that closed the markets."

This kind of incident, reported so often by chroniclers of Damascene politics, exhibits several common features. First, the inhabitants of al-Shāghūr were well-organized militarily and heavily armed. Second, their ulterior aim was theft rather than vengeance. They stood ready to seize upon any provocation to raid markets, in particular those containing weapons that were otherwise off-limits to civilians. Third, these rioters regarded themselves as rebels defending their autonomy from the regime. When the authorities displayed the ritual emblems calling for their submission, the rioters openly defied them. Finally, the regime itself, in the person of

[21] Of twenty-four incidents depicting gang actions that motivated the regime to respond, only two occurred in Cairo. The evidence indicates organized gang militias in several districts of Damascus. See in this context James Grehan, "Street Violence and Social Imagination in Late-Mamluk and Ottoman Damascus (ca. 1500–1800)," *International Journal of Middle East Studies* 35, no. 2 (May 2003): 215–36; Miura Toru, "Urban Society in Damascus as the Mamluk Era was Ending," *Mamlūk Studies Review* 10, no. 1 (2006), in particular 176–89. Miura's discussion of gangs is the most informed on the subject to date.

[22] Shihāb al-Dīn Ibn al-Ḥimṣī, *Ḥawādithal-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut, 1999), 1:300, line 15, Jumādá II 890/June–July 1485: riot in Shāghūr district of Damascus over murder plot.

the *nāʾib* governor, took whatever measures were necessary to put down the rebellion, even to the extent of recalling units sent on other military duties. But these measures could quash only the immediate incident, never its root cause. The rebels withdrew in the face of superior forces, yet blocked the regime's entrance into their district, regrouping to riot another day. The latent propensity continued unabated. Nonetheless, the regime did not contemplate passivity in the face of this endemic challenge.

While Cairo, as the seat of imperial power and the most heavily garrisoned city in the central Arab lands, did not endure the incessant conflicts of ward gangs that sapped Damascus, the capital suffered from near-endemic revolts by its own soldiers. These riots increased in frequency and intensity during the latter decades of the Mamluk Sultanate, fueled by heightened awareness on the troopers' part of their potential power to paralyze commerce until their demands were met and their discontent over delayed wages and short rations was allayed. But chroniclers aware of market forces discerned that many junior soldiers showed themselves quick studies who learned how to profit from their riots and matured into seasoned criminals. It was this transition from naive recruit to astute predator that the regime most feared and attacked most rigorously.

The perceptive historian Ibn Taghrībirdī described this ominous trend in the context of a sultanic proclamation forbidding recruit larceny.[23] "On Wednesday the twenty-third [of Ramaḍān 860/26 August 1456], the Mamluk recruits were ordered not to oppress the populace, traders, and merchants. But this proclamation had the force of a fiddler's bow or a fly's buzz. The recruits persisted with their seizure of the people's assets, their harshness causing prices to rise for all kinds of foodstuffs, clothing, cereals, and fodder. They initially went to the outskirts of Cairo and confiscated what they found of barley, hay, and clover, paying excessively low prices (for indeed they wanted to seize them without any payment). Those [cultivators] who suffered this abuse tended not to raise these commodities a second time unless compelled by dire need. Consequently, these crops became scarce. Even as their prices climbed, they were in short supply. The recruits then began to plunder storage magazines for summer melons and other produce. Ultimately, the recruits applied their tactics to cloth merchants and other retailers. Prices of many commodities thus rose in the wake of their assaults against prominent traders *(arbābihim),* producing a condition that adversely affected all the populace, elite and commons alike. This incident signaled the start of more sordid acts to follow."

Ibn Taghrībirdī's summary of this event depicted the recruits' learning curve as they progressed from simple confiscators to sophisticated plunderers whose actions depressed Cairo's commerce as the ninth/fifteenth century drew on. The historian brusquely dismissed the sultan's proclamation as inconsequential, a fruitless ges-

[23] Ibn Taghrībirdī, *Nujūm,* 16:98, line 1, Ramaḍān 860/Aug.–Sep. 1456.

ture in the face of a rising tide of lawlessness. The regime recognized the portent of this trend and did not limit its responses to proclamations. Troop revolts, in particular those between recruits and veterans of former rulers, were vigorously repressed after admonitions to desist were met with derision. But the propensity to rebel could not be eradicated, especially as the recruits perceived its lucrative potential. Troop rioting thus had a foreboding future. Suffice it to note that it constituted a significant aspect of resistance to the regime's authority. The regime could not ignore these challenges to its primacy, and it doggedly sought to put down each incident. While the Sultanate could not eliminate the root causes of threats to its primacy, those posing these threats never succeeded in supplanting the regime itself.[24] Until the arrival of the Ottomans in 923/1517, the Mamluk Sultanate retained its position at the apex of the political structure in Egypt and Syria. An uneasy equilibrium between disruption and stability prevailed. What about the Sultanate's reaction to those who denigrated its status as an affront?

Some incidents are described primarily in terms of the insult they dealt to the regime; these incidents aroused the regime's consternation over its consequent embarrassment, but also frustration over its incapacity to mete out effective reprisal. Chagrin stemmed as much from this frustration as from any injury done to victims. Events evoking the impression of an affront were especially associated with Bedouin raiding, rural and urban banditry, or rioting by civilians and recruits. The potential for disruption of agriculture and commerce by Bedouin *(al-ʿurbān)* long predated the Mamluk period. Ever since the migration of tribes from the Arabian Peninsula into the Nile Valley following the conquest, ruling authorities in Egypt had encountered their sporadic plundering and, on occasion, open revolt. In light of the Mamluk Sultanate's own history of usurpation, however, its pledge of security for at least the settled portions of the realm ranked high in its own scale of legitimacy. Chroniclers were thus sensitive to those episodes of resistance tinged with brazen contempt on the perpetrators' part.

[24] Analysts of criminal violence in western Europe during the later Middle Ages reached parallel conclusions about the obsession of governments to proclaim their primacy of control over all subordinate elements. Of course, their success varied considerably. B. Hanawalt noted how much of English criminal law evolved as a mechanism of social control from the top (*Crime and Conflict,* 3, 63). Esther Cohen summarized the intent of criminal court proceedings in fourteenth-century Paris as primarily the preservation of order ("The Hundred Years' War and Crime in Paris," in *The Civilization of Crime: Violence in Town and Country since the Middle Ages,* ed. E. Johnson and E. H. Monkkonen [Urbana, 1996], 121). Mary Perry's study of violent crime in sixteenth-century Seville discerned the authorities' incapacity to restrict arms bearing (*Crime and Society in Early Modern Seville* [Hanover, NH, 1980], 70). The regime resigned itself to using agents of law enforcement as a buffer between themselves and the instigators of violence. G. Ruggiero, in his analysis of crime in Venice, detected an elaborate process of control. The Venetian elites acknowledged that the root causes of violence were ineradicable. But they could be suppressed enough for the elites' primacy to be upheld. See *History from Crime,* 43–44, 82, 88, 121.

Al-Maqrīzī reported a spate of Bedouin raiding early in the Circassian period.[25] "During this month [Jumādá I 818/July–August 1415], repercussions from banditry increased throughout Egyptian territory, north and south. This was due to the Bedouin's departure from obedience, and their assaults on travelers by land and the river. Many were killed. The troops were prevented from touring the districts and thus could not collect their crop yields. This [condition] resulted from the Bedouin's lack of respect for the Sultanate, and the vigor of their boldness." Ire over a "lack of respect" at the least paralleled the authorities' consternation over interruptions in collection of rents from their rural estates. Reprisals that concluded with brutal executions of those offenders they could capture led at best to temporary respites. More often, they goaded the tribes to further predation. Yet the regime persisted with this reaction.

In Syria, where the Mamluk garrisons dealt with even more destructive raiding, reprisals were correspondingly savage. Ibn Ṭūlūn described a district inspector's response as unusually barbaric.[26] "On Friday the fourteenth [of Rabīʿ II 893/28 March 1488], the *kāshif* of Ḥawrān apprehended a band known as Haytham, after the *nāʾib* governor had honored them, and written an edict (*marsūm*: of safe conduct) for them. They had showed this edict to the *kāshif,* but he paid it no heed. [Rather], he executed some thirty of them. He [then] slashed the wombs of many pregnant women, killed many youths, and seized their sheep and cattle. He inflicted on them acts not committed [even] during war. There is no power save in God, for indeed it was claimed that they [the band] were merchants of the Bedouin." While Ibn Ṭūlūn's rendition of this reprisal was intended to reveal the inspector's excess, it underscores the authorities' frustration over their perception of the affront posed by incessant Bedouin raiding.

A more personally-focused incident occurred late in the Sultanate, during the reign of Qānṣūh al-Ghawrī. The chronicler Ibn Iyās described the Sultan's outrage over the theft of an Ottoman emissary's diplomatic pouch by Bedouin near Cairo. The incident occurred in Jumādá II 920/August 1514, as relations between the Mamluk and Ottoman regimes were progressively worsening. Al-Ghawrī was keen to preserve Cairo's neutral stance while simultaneously pursuing clandestine stratagems with the Safavid regime in Iran to curb Ottoman expansion.[27] Alarmed over the probable reaction by the Ottoman sultan Selim, already known for his irascible temper, al-Ghawrī was particularly piqued by the seizure of the pouch while the emissary slept at his encampment in al-Ṣāliḥīyah, just north of Cairo. The act signaled the regime's failure to assure the safe passage of an important foreign dignitary at the doorstep of its own capital, the alleged bastion of its security. Al-

[25] Al-Maqrīzī, *Sulūk,* 4:319, line 3.

[26] Ibn Ṭūlūn, *Mufākahah,* 1:87, line 18.

[27] Ibn Iyās, *Badāʾiʿ,* 4:385, line 3.

Ghawrī allegedly tore at his mustache upon learning of the theft, and dashed off an ultimatum to the regional *shaykh al-ʿarab,* Aḥmad ibn Baqar, demanding immediate apprehension of the culprit and return of the pouch. If the emissary's letter went missing, the shaykh's life would be forfeit. Convinced apparently of the sultan's readiness to inflict this penalty, Ibn al-Baqar captured the offender and restored the pouch, letter intact, the same day.

Vivid incidents of this kind figured prominently in the chroniclers' reportage of Bedouin activity in Egypt and Syria. They emphasized bold raids or stealthy thefts in the vicinity of Cairo and Damascus to highlight the regime's inability to prevent them, despite the ferocity of its reprisals. But the continuous occurrence of both raids and reprisals, as noted by narrative historians over some 250 years of the Mamluk era, also indicates the authorities' profound need to make a dramatic show of response. Even if the Bedouin threat was irrepressible, it could not go unanswered. The Sultanate obviously felt obliged to mete out brutal punishments that involved torture and mutilation prior to execution. Such punishments seemingly gave the authorities a measure of satisfaction over the infliction of suffering, even if aware of their dubious efficacy. And the authorities seem to have believed that these reprisals genuinely bolstered their stance of primacy. By reacting ferociously to every provocation that defied this stance, the regime declared that Bedouin predation might embarrass but never supplant it.

Banditry that affected the ruling elite was regarded as an affront equivalent to Bedouin raids. While many accounts of larceny left both perpetrators and victims unnamed, accounts of larceny affecting notables and officials usually identified them, elaborated on articles stolen, and noted whether their assaulters were apprehended. That a majority of these bandits escaped with their loot caused the authorities their deepest chagrin. When perpetrators were caught, their execution was certain.[28]

[28] For incidents of banditry aimed at officials, see Ibn al-Ṣayrafī, *Inbāʾ,* 438, line 8, Dhū al-Ḥijjah 876/May–June 1472: *raʾs nawbah* and *ḥājib al-ḥujjāb* incensed over robbery of latter's wife by bandits, uncaptured; Ibn Iyās, *Badāʾiʿ,* 3:218, line 4, Jumādá I 890/May–June 1485: bandits pillage prominent visitors to Qarāfah cemetery; bandits not captured, victims stripped, veils taken, "disgusting event;" Ibn Ṭūlūn, *Mufākahah,* 1:161, line 15, Ṣafar 900/November 1494: bandits rob trousseau of eminent shaykh's wife, no sign of forced entry, no arrests; Ibn Iyās, *Badāʾiʿ,* 3:319, line 1, Jumādá II 901/Feb.–Mar. 1496: *nāẓir al-khāṣṣ* of Cairo assaulted while visiting his own tomb; his valuables taken, no mention of capture; ibid., 4:181, line 19, Ṣafar 916/May 1510: groom of senior amir arrested for pilfering his master's gold inlay saddles and bridles, groom bisected; ibid., 4:417, line 10, Dhū al-Qaʿdah 920/Dec. 1514–Jan. 1515: mass thievery during fireworks display hosted by sultan at al-Raydanīyah, sultan's palanquin rifled, perpetrators not captured; ibid., 5:273, line 15, Ramaḍān 924/Sep.–Oct. 1518: Ottoman soldier catches pickpocket in the act of pilfering four *aṣnāf* coins; thief bisected by viceroy as warning to those who assault the occupiers; Ibn Iyās finds the penalty unjust.

Ironically, the most unsettling insults to the regime were dealt by its own soldiery: the *julbān* or recruits only recently manumitted from cadet status. The impact of this cadre of troops as an endemic criminal class has been noted previously. Throughout the economic troubles of the Circassian period, these recruits took to menacing their own officers along with the fiscal officials. Perceiving these individuals as oppressors who withheld their stipends, the *julbān* frequently threatened them lethally.

In Rabīʿ II 835/December 1431, Ibn Taghrībirdī described an assassination plot by recruits against Karīm al-Dīn ibn Kātib al-Munākh, currently serving as vizier and *ustādār* simultaneously, and thus responsible for paying troop stipends and overseeing their distribution.[29] The vizier, having picked up on the plot, managed to lock his house and escape. Missing their chance for homicide and robbery, the recruits rampaged through the neighborhood. Ibn Taghrībirdī wryly observed that Sultan Barsbāy, having ordered the *wālī* prefect to arrest the marauding soldiers, was taken aback when the prefect intended to bisect them. The sultan queried as to whether fellow Muslims should be treated in this way. The *wālī* brusquely disputed their status as true believers, whereupon Barsbāy mockingly threatened to arrest him. Whatever the prefect's fate, this incident disclosed the embarrassment felt over *julbān* criminality. It also provided a glimpse into the backbiting that erupted during arguments over appropriate responses.

These arguments were often heated because of the authorities' ambivalence regarding their fiscal officials' vulnerability. Compelled to implement the sultan's draconian reductions in stipend payments, such a figure as the vizier Karīm al-Dīn deflected the recruits' rage away from the autocrat. Yet if the *julbān* actually succeeded in murdering him, they would insult the regime and remove a skilled procurer of clandestine funds for the autocrat. The complexity of this dilemma resurfaced three years later, in Ṣafar 838/September 1434, when the *julbān* again raided Karīm al-Dīn's house in a sweep that included the home of the current *nāẓir al-jaysh*.[30] The sultan apparently held the vizier responsible for provoking the *julbān,* and consigned him in chains to the *wālī* prefect "until his wrath subsided." But the next day, he restored Karīm al-Dīn to his offices of *ustādār* and vizier, acknowledging his crucial role as a key player in the ruler's fiscal priorities. Throughout the later Mamluk period, the *julbān* would vent their anger over stipend cuts by attacking the sultan's agents they held accountable. The autocrat and his senior amirs had to

[29] Ibn Taghrībirdī, *Nujūm,* 14:356, line 1.

[30] Badr al-Dīn al-ʿAynī, *ʿIqd al-Jumān fī Tārīkh Ahl al-Zamān*, ed. ʿAbd al-Razzāq al-Ṭanṭāwī al-Qarmūṭ (Cairo, 1989), 455, line 3.

balance their impulse to scapegoat their officials against their need to protect such adroit minions and uphold the regime's facade of dignity.[31]

The realities of *julbān* fury rendered this stratagem problematic. In Ṣafar 846/June 1442, al-ʿAynī described a massive riot by the recruits that threatened to overwhelm the regime's capacity to subdue them.[32] The *julbān* climbed onto the roofs of their barracks, closing down the Citadel, and stoned anyone trying to enter or leave. They then managed to penetrate the arsenal, seizing 20,000 dinars worth of weapons. When Sultan Jaqmaq ordered his officers to confront them, they refused, claiming that they could not put down 2,000 armed rioters. An effective stand-off was settled only after two days of negotiation. Al-ʿAynī did not disclose whether the recruits received any back pay or delayed bonus money. But his depiction of the event, which nearly resulted in the *kātib al-sirr*'s death after he met with the *julbān* on the barracks roof, vividly indicated the regime's dilemma. They were forced to back away from an open clash with their recruits. In this instance, negotiation showed the only path to resolution. On-site bargaining may have reconciled this specific incident, but it cannot have enhanced the regime's prestige. For their part, the recruits may have sensed that their own future was tied to the regime's primacy, and therefore sullenly disbanded, albeit ready to riot again. Mutual recognition that undermining the primacy of the regime cut two ways—with the potential for denigration of the entire Mamluk corps if internecine strife exceeded certain limits—could have led both parties to call a truce. The murky expedient of a stand-off was resorted to when a decisive reprisal was not perceived as a viable option. For all their obstreperousness, the *julbān* recruits represented the future of the Mamluk elite, the reservoir from which new regime leaders and dominant factions would evolve. Mutual interdependence plus a stake in upholding caste supremacy, from which all members benefited, tempered the viability of violent suppression.

The ambiguities stemming from intra-caste violence were starkly exposed when control over property was compromised. Security of assets was a basic component of the regime's claim to legitimacy. Yet its own soldiers posed one of the most endemic threats to the security of property. The quandary imposed on the ruling authorities was not lost on contemporary chroniclers. Spoliation of markets during troop revolts outnumbered parallel rampages by civilian bandits in their reports of thievery that highlighted the authorities' discomfiture. The essence of the regime's

[31] Ibn Taghrībirdī, *Nujūm,* 15:232, line 4, Muḥarram 842/June–July 1438: prominent fiscal official openly attacked by Ashrafī Mamluks during sultan's court review; al-ʿAynī, *ʿIqd,* 652, line 11, Shaʿbān 850/Oct.–Nov. 1446: *sulṭānī* Mamluks attempt to assassinate *ustadār;* Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. [32] Al-ʿAynī, *ʿIqd,* 578, line 3.

predicament centered on agents of reprisal: upon whom could it rely to inflict penalty and reclaim property? Since the most persistent culprits were recruits, the sultan and senior amirs had little recourse but to summon line troops and veterans to curb them. Yet as noted above, assaults on recruits, particularly when sparked by grievances, weakened the solidarity that sustained the entire military system. Would trainees who felt betrayed by attacks from their superiors fight on their behalf in time of war? This quandary lurked in many of the chroniclers' depictions.

Rampages by recruits directed against markets and other large repositories of property became a fact of life in Cairo during the Sultanate's last decades. Ibn Taghrībirdī reported a ploy in Shaʿbān 861/June–July 1457 that *julbān* recruits exploited to limit access to desirable produce items such as summer melons *(baṭṭīkh ṣayfī).*[33] Initially offering sums in excess of what wholesalers could pay, recruits bought up the available supply and presumably hoarded it until re-sale at higher prices was feasible. Ibn Taghrībirdī chose the term "mockery" *(ʿabath)* to describe this scheme, implying the recruits' disdain for the commoners' welfare. That it occurred during the reign of Īnāl, known for his nepotism and placidity, was not happenstance. Even during more forceful administrations, *julbān* assaults on property increased in frequency and severity. Several years later, the same historian detailed a riot by recruits stemming from the breach of an arrangement over horse sales.[34] In Jumādá II 868/February 1464, a band of "low-ranking" recruits set upon merchants in the horse market whom they believed were violating a covert agreement to sell mounts to them at prices they could afford, rather than to amirs or manumitted soldiers *(jund)* who bid more. The recruits, angered over losing out on the better stock, attacked the horse merchants with daggers. They were joined by other brigades from the barracks and began pillaging the cloth market. Ibn Taghrībirdī claimed that the recruits dared to assault notables riding horses, forcing them off and confiscating their mounts. When reports of these excesses reached Sultan Khushqadam, they "troubled him" *(shaqqa ʿalayhi).* He invited anyone abused by recruits to ascend the Citadel and inform him personally, presumably for compensation. Ibn Taghrībirdī mentioned no direct reprisal against the offending recruits, however; only a proclamation which the historian admitted did produce a "timely benefit."

But only temporarily. Raids on markets launched to protest wages and rations the recruits found stingy continued to escalate. Despite the high marks accorded him overall by historians, Sultan Qāytbāy never dealt conclusively with these revolts. They exploded in epidemic proportions during the tenure of his ultimate successor, Qānṣūh al-Ghawrī. Perhaps the most devastating of these occurred at the height of al-Ghawrī's powers, during Muḥarram 916/April 1510.[35] Ibn Iyās dwelled at length

[33] Ibn Taghrībirdī, *Ḥawādith,* 8:301, line 6.

[34] Ibid., 8:457, line 11.

[35] Ibn Iyās, *Badāʾiʿ,* 4:177, line 8.

on the circumstances behind this event. Recruits in the Citadel barracks had requested a bonus payment of 100 dinars per man (expected as their reward for training in anticipation of likely confrontations with Bedouin at home or the Ottomans abroad). When al-Ghawrī refused, and his supply master failed to deliver delayed meat rations, the recruits forced the *atābak* Qurqmās and several other officers to repeat their demands to the sultan in person. Upon his adamant rejection and threat of abdication, the recruits descended upon several of Cairo's busiest markets (in the Ṭūlūn, Taḥt al-Rabʿ, and Busṭiyīn districts) in a fury of pillage that lasted two days. They went so far as to confront the armaments officer, Dawlāt Bāy, at his home in al-Azbakīyah with a demand that he assume the sultanate (an ultimatum he flatly declined, instead joining al-Ghawrī in the Citadel). At the height of the riot, the recruits were joined by grooms and black slaves, indicating the propensity for indentured persons lower down the social ladder to seize upon the recruits' initiative to pillage items otherwise unavailable to them. This riot effectively shut down commerce in Cairo, since merchants in remaining markets bolted their gates and waited for eventual intervention. Ultimately, when the senior amirs rallied troops from their own companies and veterans, the *julbān* realized that they faced certain defeat and disbanded.

Now the regime faced the demands for reparations from outraged merchants. Ibn Iyās tallied the figure for despoiled shops, with damage claims totaling twenty thousand dinars. The amirs organized searches in the recruits' barracks to recover some of the stolen goods for return to their owners. Nonetheless, the sultan's accountants were called upon to make up the differences from his own resources. Whether al-Ghawrī and his personal enforcer, Zaynī Barakat ibn Mūsá, actually compensated the merchants in full Ibn Iyās did not say. He left the impression of smoldering dissatisfaction among all concerned parties (since no mention was made of al-Ghawrī acceding to the recruits' initial bonus request that sparked the disaster). The potential for incidents of this magnitude remained a reality, exercising a depressing effect over commerce in the capital (and other cities of the empire) up to the Ottoman conquest and beyond. The regime's inability to curb troop raids on property reveals limits on both its capacity and will to enforce order. Shows of reprisal were mandatory, but effective solutions may have proven unobtainable. Various interest groups in Cairo, Damascus, and Aleppo thus began to adopt their own measures of security. Jewish merchants in the Zuwaylah district of Cairo who suffered heavy property losses during riots in Dhū al-Ḥijjah 902/July–August 1497 anticipated subsequent problems. When raids by occupying Janissaries were rumored twenty-four years later, they moved their goods elsewhere and barricaded entrances to their quarter.[36] Other marketers reacted in similar ways.

[36] Ibid., 3:375, line 9; 5:374, line 4.

The preceding remarks should not obscure assaults on property committed by persons outside the military hierarchy. Later discussions will analyze acts of larceny at the hands of individuals and gangs from both the civilian and military sectors. But in the context of culpability and reprisal, historians who weighed the damage in stolen goods and lost confidence clearly held the regime's recruits responsible for the worst ravages. To them, the most heinous criminality linked to theft was part and parcel of the recruits' legacy. The historians readily acknowledged the regime's difficulties as it contemplated responses to the outrages of its wayward cadets. They still made clear their skepticism over long-term efficacy.

Ibn Iyās, commenting on conditions in Cairo following the Ottoman occupation, saw few signs of improvement. He expressed his contempt for the behavior of the former officer in al-Ghawrī's service who had betrayed his cause to the Ottomans at Marj Dābiq and was rewarded for his treason with the viceroyship of Egypt. In Jumādá I 924/May–June 1518, he described the viceroy's brutal execution of a prayer caller (muezzin) for his theft of a medicinal herb.[37] Cultivation of this herb, *khiyār shanbar* (purging cassia), had been placed under the viceroy's control. When the prayer caller was arrested for cutting off two branches of the plant, he was turned over to the *wālī* prefect—who subsequently brought him before the viceroy. Because the muezzin violated the latter's prohibition, he ordered his bisection. The muezzin was led to the execution site with the basket containing the pilfered branches hanging from his neck. Ibn Iyās stated that the value of the stolen herb did not exceed four *aṣnāf,* bitterly musing over the disparity between a petty loss and severe punishment (the prayer caller left behind "children, a wife, and mother"). He went on to denounce the viceroy for personal immorality (drunkenness) and a disdain for equitable rule. Yet this incident amply demonstrated the issue of affront, the continuity of readiness on the regime's part to mete out reprisal—especially following theft by civilians outside its hierarchy.[38] Acts that alarmed custodians of

[37] Ibid., 5:254, line 21.

[38] Analyses of assaults on property in other societies reveal similar patterns of reprisal. V. Gatrell and G. Parker noted that, in later medieval Europe, commercial classes increasingly demanded rigorous deterrents against theft due to the heightened production of commodities. See *Crime and the Law*, 38; J. Given discerned a tie between a demand for prosecution of theft and the rise of trade in medieval England. See *Society and Homicide in Thirteenth-Century England* (Stanford, 1977), 111–12. He also noted the development of "entrepreneurial banditry" as a skilled craft unimaginable without a growing urban setting; B. Hanawalt discussed a link between organized thievery and economic depression, a parallel with the situation in fifteenth–sixteenth-century Egypt. See *Crime and Conflict*, 238; P. Huang found the most consistent expectation of the courts in Qing China focused on protection of property against thieves. See *Civil Justice in China; Representation and Practice in the Qing* (Stanford, 1996), 15; T. Gurr also concluded that the classes benefitting from "early capitalism" in western Europe were the most ardent advocates of tougher and more consistent laws, enforcement, and punishment for property offenses. See "Development and Decay: Their Impact on Public Order in Western History," in *History and Crime: Implications for Criminal Justice Policy,*

religious observance and accepted canons of belief posed dilemmas no less complex.

Events that riled the religious establishment in Cairo or Damascus enough to compel the regime to intervene involved disputes over Christian activism or allegations of aberrant views laid against prominent Muslims. Behavior by Christians in Egypt regarded as excessively assertive frequently stemmed from their attempts to restore churches, or complaints over religious services that impinged on Muslim sensibilities. Incidents that incited vigorous opposition from Muslim clerics sufficient to draw in the regime were clearly regarded as criminal acts, in that they entailed investigations to ascertain the veracity of the claim and subsequent imposition of a penalty. For example, al-Maqrīzī reported a petition by a delegation of Christians from the Delta province of Gharbīyah, submitted in the distant past (755/1354–55, no month given).[39] The delegation had requested the sultan to allow their restoration of a church, once titled al-Naḥrīrīyah, they claimed had been illegally converted to a mosque *(masjid).* Al-Maqrīzī did not provide details on why their suit was dismissed (possibly too remote for survival of background data). But he did state that the petitioners were evicted from the sultan's presence after being flogged, treatment usually reserved for convicts rather than failed litigants in a civil hearing. The delegates may have pressed their case belligerently, or a counter accusation from unnamed defenders of the mosque may have claimed they overstepped communal limits.

A case with known circumstances occurred a quarter century later in Jumādá I 780/August–September 1378.[40] Notorious enough for two historians to discuss, the incident focused on a claim by an unnamed Sufi esteemed for his piety, who complained of noise from hand bells *(nawāqīs)* rung at the church of Abū Numrus in Jiza province so loudly that they disrupted the Friday *khuṭbah* in an adjacent mosque. The Sufi alleged that the bells were sounded deliberately to drown out the Muslim sermon. The sultan, al-Ashraf Shaʿbān, found the Sufi's protest unsubstantiated. Undaunted, the Sufi proceeded to the Hijaz, from where he returned with documents certifying that he had sojourned at the Prophet's tomb pleading with God's

---

ed. J. Inciardi (Beverly Hills, 1980), 34; M. Perry observed a sophisticated underworld active in sixteenth-century Seville, many of whose members were out-of-service soldiers more closely paralleling the status of unemployed Mamluks than anywhere else in Europe; see *Crime and Society,* 24. Finally, G. Ruggiero identified the Venetian social category of "important people" as those having the status of property or office holders without formal membership in the nobility. As the category most vulnerable to theft, they made the most consistent demands for protection against property crime. By contrast, the nobility were, as individuals, among the most violent elements in Venetian society, since they regarded themselves as personally beyond prosecution, similar to the Mamluk elite. See *Violence,* 59–61, 65, 84, 148.

[39] Al-Maqrīzī, *Sulūk,* 2:918, line 5.

[40] Ibid., 3:340, line 12; Ibn Ḥajar, *Inbāʾ,* 1:177, line 1.

messenger for an endorsement of the church's demolition. Appealing to the *atābak* and future sultan, Barqūq, the Sufi persuaded him to send the current *muḥtasib* to investigate his allegations. Upon his return the market inspector confirmed the Sufi's accusation, adding that the church's congregation had lavished money on its expansion. It was on these latter grounds, as concrete violations of *sharīʿah,* that the *atābak* ordered the church demolished. Following the *muḥtasib*'s report, Barqūq had summoned the Jacobite patriarch (to whose rite the church presumably belonged) and rebuked him for transgressing established law limiting churches to existing proportions. This case is interesting because the criminal offense that achieved the demolition had nothing formally to do with the disruptive bell ringing. Irritating as it may have been, the music emanating from Christian services did not constitute as clear a violation as did the church's enlargement. The persistent Sufi got his way, but only via indirect means.

Disputes erupting over allegations of blasphemy by Muslims were potentially more explosive than reactions to Christian activism because of the dissension the former caused within the majority community. Sultans and their adjutants often found the outcome problematic regardless of how they ruled, since partisans on both sides of a case had taken obdurate stands. When sultans or grand amirs convened councils of judges to review allegations, the qadis themselves often deadlocked over a decision. Yet the authorities, as ultimate agents of enforcement, were bound to demand a decision and impose the appropriate censure. And individuals who had already attracted a devoted following before their alleged deviance was brought to the authorities' attention posed risks of widespread disorder if they were arrested summarily. Al-Sakhāwī described a manumitted black slave from Damascus called Mubārak who was accused of corrupting the faith in Ramaḍān 899/June–July 1494.[41] Having previously established himself as a revered person *(muʿtaqad)* in Syria with a large following, this Mubārak arrived in Cairo with a reputation for rabble rousing. Making the rounds of venerated tombs in the Egyptian capital, he was denounced for preaching blasphemous views at such strongholds of orthodoxy as the Azhar. A group of senior ulama demanded his arrest, but Sultan Qāytbāy and his advisors were reluctant to imprison or execute him after their interrogation. They considered the revered Mubārak more incendiary as a potential martyr than as a public nuisance. However annoying his pronouncements may have been to the clerics, removing or eliminating him was more likely to inflame the masses and incite a riot.

Alleged blasphemers did not routinely escape unscathed, however. Persons who recklessly transgressed conventions of accepted conduct were convicted more often than popular preachers. Ibn Iyās discussed several incidents of such deviance

[41] Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, "Al-Dhayl al-Tāmm ʿalá Duwal al-Islām," Dār al-Kutub al-Waẓīfah (Tunis) MS 6856, fol. 245, line 30.

during Qānṣūh al-Ghawrī's reign. In Shaʿbān 911/December 1505–January 1506, a dervish from Upper Egypt behaved in ways that brought capital charges of atheism *(zandaqah)* and sorcery *(suḥūr)* against him.[42] Denounced for performing his ablutions with milk and other untoward acts "contrary to the *sharīʿah,*" he was turned over by the sultan to the chief Maliki qadi for questioning. After the judge found him guilty of unbelief, he was beheaded outside the Ṣāliḥīyah Madrasah, seat of the highest judicial tribunal in Cairo. This dervish's execution seems to have presented al-Ghawrī with few risks since the chronicler reported no mob of advocates who might riot in his defense.

A more complex case decided less to the sultan's liking occurred two years later in Jumādá I 913/September–October 1507.[43] The defendant in this incident was no fringe mendicant but a prominent Hanafi *khaṭīb*. Accused of making "impertinent remarks" about the prophet Abraham in his sermons, the *khaṭīb* was interrogated by a senior judge—who concluded that his statements did not warrant punishment for *kufr*. Al-Ghawrī thought otherwise. Partisan to the prophet Abraham, al-Ghawrī asserted that the *khaṭīb*'s comments indeed merited his execution. The sultan convened the four senior qadis and other eminent clerics to review the offensive statements. After a stormy debate, the council rejected al-Ghawrī's call for the *khaṭīb*'s beheading. According to precedents set by similar events in the past, if the accused sincerely retracted his depiction of Abraham, he should not pay the ultimate price. The council sentenced the *khaṭīb* to a jail term pending his recantation. Ibn Iyās stated that the council reached this verdict despite the sultan's demand for an execution. This case revealed tensions that often surfaced between clerical authorities charged with determining the veracity of blasphemy charges and the regime pledged to back their decisions, even if they disagreed. Incidents that the regime had presented on its own initiative were particularly galling when the ulama ruled contrary to its wishes—often to assert their own primacy in matters of religion. But regardless of whose agenda was favored, such cases were unlikely to go unprosecuted. Even if the defendant's stature mitigated against a conviction for deviance—whatever his guilt or innocence—both the regime and clerics felt obliged to subject him to a criminal investigation. The legitimacy of both groups rested on principles that required them to conduct a formal procedure. Events that shocked moral sensibilities imposed similar expectations on them.

Acts provoking hostile responses from turbulent sectors of the populace required rapid responses from the authorities to head off riots that might ignite city-wide conflagrations. While immediate reprisals were necessary, the volatility inherent in such acts presented the authorities with difficult choices. Their underlying goals were curbing further disorder and maintaining security. Their success at achieving

[42] Ibn Iyās, *Badāʾiʿ,* 4:87, line 1.

[43] Ibid., 4:120, line 11.

them varied according to incident. Acts regarded as morally corrupt or threatening to sectarian identities were especially inflammatory. They were sufficiently notorious to warrant recording by historians long after they occurred. In Rajab 727/May–June 1327, al-Maqrīzī discussed an incident of sexual assault alleged against a European *(firanjī)* merchant in the port of Alexandria.[44] The merchant was apprehended in the act of soliciting a "beardless youth" to commit indecency. The intervener was an adult Muslim who charged the European with impermissible behavior. The merchant responded by striking his accoster in the face with his shoe, whereupon a mob set upon him. The European's community immediately rose in his defense. A pitched battle with drawn weapons threatened to erupt between the two factions, until the commandant of the Alexandria garrison interceded. The Muslims insisted that the merchant had committed acts meriting his execution. Yet al-Maqrīzī simply concluded the incident by stating that he was taken before a judge for questioning. But he also noted that the resultant tension necessitated closing gates and markets—a temporary stalling of the commerce basic to Alexandria's economy. Whether the European was actually terminated for this allegation (a response that might provoke a more serious reaction from the foreign mercantile community) remains unknown from al-Maqrīzī's depiction.

The chronicler Ibn al-Ṣayrafī described at length an incident with more damaging potential due to its incitement of sectarian conflict. In Shawwāl 876/March–April 1472, he detailed a case of attempted conversion of Christian children.[45] A Maghribī (otherwise unnamed) residing at a mosque in the Jiza district acquired renown for evocative preaching. Too evocative for local Christians, it would seem, since some of their children fell under the Maghribī's spell and converted to Islam. Their enraged parents fell upon the preacher, throttled him until his tongue came out, cut it off (perhaps a symbolic means of punishing the offending vehicle of speech), and then began to disembowel him. After failing to find a pit into which they might cast him, they were arrested by the Jiza inspector *(kāshif).*

At this stage, Ibn al-Ṣayrafī's narrative becomes alert to the nuances of communal rivalries confronting the authorities. When the *kāshif* conveyed the Christians to the Cairo prefect *(wālī),* the latter decided that a senior officer should take charge of them. He therefore consigned the Christians to the *amīr akhūr al-kabīr* (grand officer of the horse), a member of the sultan's advisory council. But even he hesitated before ordering the Christians' execution, despite their brutal murder publicly witnessed. The amir elected to bring the offenders, who numbered six, before Sultan Qāytbāy himself. As the final arbiter of criminal cases, the sovereign opted for imprisonment. Seemingly convinced that the Maghribī had overstepped accepted boundaries of communal autonomy by actively proselytizing to minors and thus

[44] Al-Maqrīzī, *Sulūk,* 2:284, line 7.

[45] Ibn al-Ṣayrafī, *Inbāʾ,* 424, line 5.

unduly provoking their parents, Qāytbāy ruled the Christians' behavior justifiable homicide. But his decision was not met with equanimity by his co-religionists. A mob gathered at the base of the Citadel, seized the Christians from their Mamluk guards and stoned five of them to death. Only one of them converted to Islam on the spot to save himself and was spared. Ibn al-Ṣayrafī reported Qāytbāy's wrath upon learning of the mob's vigilantism. He caused the *wālī* to proclaim an edict forbidding ordinary subjects to take the law into their own hands, or to "seize the Mamluks' bridles." But he took no further action. Indeed, the caution and reluctance over assuming responsibility for the fate of these Christians at progressive stages of the ruling oligarchy underscores the regime's unease over the explosiveness of a case that put Christians and Muslims at odds. None of the officers charged with apprehending the Christians displayed any sympathy for the Maghribī who had sparked the incident. Charismatics who deliberately aggravated adherents of a rival faith were the true culprits in their eyes, responsible for unleashing forces that compromised their authority.

Although hesitant to prosecute members of their caste, the ruling oligarchy could not ignore assaults committed by Mamluks who wantonly disregarded public morality. Yet neither could they allow the masses free rein to take revenge. Ibn Ṭūlūn noted the arrest of an officer described as a European from Tripoli in Ramaḍān 906/March–April 1501.[46] This individual was accused of several murders for theft, concealment of his victims, raping women after stealing their jewelry, and casually eating after his debauchery. While the *nāʾib* governor of Damascus ordered the Mamluk's dismemberment, the masses got to him first. After stabbing the Mamluk multiple times, they dragged him to the gallows district and set him on fire. Infuriated by this mob action, the *nāʾib* ordered his troops to ride the offenders down indiscriminately. Those who survived were detained and fined. He also ordered the markets temporarily closed.

Incidents of this kind were not unique to Damascus. Cairo often witnessed similar events at the hands of soldiers. Ibn Taghrībirdī mentioned their plundering and "gross atrocities" against women attending Friday prayers at the Ibn al-ʿĀṣ mosque in Fusṭāṭ during Ramaḍān 863/July 1459.[47] Yet chroniclers provided more lurid descriptions of shocking behavior, especially during unsettled transitions within the regime itself. Ibn Iyās, who looked askance at the deportment of Qāytbāy's son, al-Nāṣir Muḥammad, held up the depravity of a recently promoted recruit as an example of troop excess unhindered by a lax sovereign. In Shaʿbān 903/March–April 1498, while riding a spirited horse, this recruit encountered a funeral procession. His mount bucked in alarm, throwing off his rider. Angered by the pallbearers, the recruit threatened them and they ran off, abandoning the corpse. Venting his ire

[46] Ibn Ṭūlūn, *Mufākahah,* 1:235, line 10.

[47] Ibn Taghrībirdī, *Nujūm,* 16:135, line 5.

further, the recruit struck at the body several times with his dagger until he calmed down and departed. The body was left lying where it had fallen, unburied to the end of the day. Ibn Iyās mentioned no punishment of a single recruit for this incident. But he elaborated on more devastating cases involving whole units of soldiers, particularly during the early stages of the Ottoman occupation. In Muḥarram 924/February 1519, Ibn Iyās stated that the outrages committed by the Ottoman soldiery had become unbearable. Arrogantly ignoring time limits placed on plundering, they stripped several districts of wood and metal furnishings for use as tinder and tools in the Citadel barracks.[48]

Damaging as such pillage was, it was endured as the inevitable consequence of defeat. But the personal debaucheries of the occupiers were intolerable. The Ottomans were alleged to convene mass orgies in their barracks, enlivened with copious draughts of beer *(būzah).* Their assaults victimized both women and young boys. They went on drunken rampages through the town, seizing the turbans of passers-by and showering them with insults. Eventually, groups of notables petitioned the Ottoman "emperor"'s *(khandakar)* own head qadi, who now presided over the four chief justices, for redress. Upon hearing their complaints, he approached the most senior Mamluk officer remaining from the previous government, Qāytbāy al-Dawādār (no relation to the eminent sultan). The two ascended to the governor Khayrbak (referred to as the *malik al-umarāʾ*) and demanded an audience. The Ottoman judge accosted the governor as follows: "Pay heed to the Muslims' condition, for if you do not, Cairo *(Miṣr)* will be ruined totally. The state of affairs has gravely worsened, and if the *khandakar* were to learn of the situation, he would order our necks cut (i.e., decapitated). He would say: 'How have you dared to conceal from me Cairo's state, and to neglect the condition of the Muslims so that these events have occurred?'"

The governor's response conveyed, as a microcosm, the essence of his dilemma and political savvy. Apparently indifferent to the complaints of his civilian subjects (recall that Khayrbak was the renegade who betrayed Qānṣūh al-Ghawrī at the battle of Marj Dābiq), he could not dismiss an accusation from his patron's justice minister. Nor could he afford to alienate the Ottoman troops on whom he relied for his own survival (the indigenous Mamluks loathed him as a traitor). Thus, Khayrbak responded with a review of both the Janissary (*al-Inkishārīyah*) and the Sipahi (*al-Isbahanīyah*) units, interrogating them as to who were guilty of these acts. But Ibn Iyās mentioned no further reprisals. Rather, he noted that the governor confined women and youths to their houses for ten days, and named the shrines of al-Sayyidah al-Nafīsah, al-Ḥusayn, and the commercial district of Bayn al-Qaṣrayn as off-limits (possibly to the Ottomans, although this is unclear from the text). All

[48] Ibn Iyās, *Badāʾiʿ,* 5:233, line 2.

shops were to close after sundown. Khayrbak thereby sought to cool off the situation without personally penalizing those guilty of perpetrating it.

An incident at the hands of the occupiers even more repellent occurred four years later, and it disclosed Khayrbak's long memory over a slight. Ibn Iyās, in Jumādá I 928/March–April 1522, described a clash between Janissaries and Mamluks over the former's abuse of a Christian.[49] The Janissaries had impaled this Christian (cause not mentioned) and left him to expire. Passing by him subsequently, in the company of several Mamluks who served Qāytbāy al-Dawādār, the Janissaries refused him a draft of water. Appalled by their callousness, the Mamluks sought to relieve the Christian's pitiable state. After taking him down, they pulled out his stake and let him drink. Affronted, the Janissaries disputed the Mamluks' mercy. One of the latter stabbed a Janissary. The Mamluks then retreated to Qāytbāy's house, pursued by the Janissaries who threatened to set its gate on fire when the *bawwāb* barred their access. As word of the dispute spread, a full riot between Janissaries and Mamluks ensued. The *wālī* prefect sent his adjutant to re-impale the Christian, "who still breathed." The governor Khayrbak was informed of the incident the following day. Harboring his resentment of Qāytbāy, he demanded that he turn over the Mamluks involved. Qāytbāy sent his brother to remonstrate with him, but Khayrbak was adamant. The governor sent out an edict warning anyone who hid a guilty Mamluk in his house would be hanged "without recourse." But whoever intercepted a Mamluk who set off the riot would receive 100 dinars and a velvet caftan.

On the tenth of Ramaḍān/3 August, the governor descended to the Maydān to witness the punishment of two Mamluks arrested by the *wālī,* and the doorman who had denied the Janissaries access: bisection for all three. Khayrbak forced Qāytbāy to witness the mutilation of his own officers and servant, "since he despised him intensely." The Citadel commandant and one other officer stood up and interceded for the *bawwāb*, noting that he had children and an aged father. But Khayrbak "did not relent from his cruelty." As for Qāytbāy, the governor succeeded in tarnishing his prestige permanently, thus eclipsing his career. Ibn Iyās stated that Qāytbāy attempted to mollify the Janissary wounded by his Mamluk with a compensation of 100 dinars and a silk robe lined with squirrel fur to replace his robe slashed during the dispute. Ibn Iyās depicted this episode as "one of the most cruel and odious events."

Yet his anger cannot conceal Khayrbak's ultimate victory over a popular opponent surviving from their mutual careers under al-Ghawrī. Qāytbāy's diminution left Khayrbak in unfettered control over Cairo. His unswerving support of the occupiers cemented his own position with no meaningful opposition until his own death. Khayrbak triumphed because he understood the political necessity of maintaining

[49] Ibid., 5:445, line 19.

the support of his Ottoman troops, while Qāytbāy met defeat as a remnant of the old, defeated order. His presence had been a nagging reminder of personal betrayal. Khayrbak's response to the Ottomans' barbarity in Cairo overall was to act belatedly when confronted by the *khandakar*'s representative. Otherwise, he remained aloof to moral outrages inflicted on the commons.

Civilians who violated moral sensibilities could be dealt with more summarily. Ibn Iyās mentioned a tomb robber in Shawwāl 903/May–June 1498, who stole the deceased's shrouds, presumably for resale.[50] The sultan, Qāytbāy's minimally admired successor al-Nāṣir Muḥammad, ordered the thief's face flayed while he was still alive. His skin was left hanging down to his chest, the facial bones exposed. The thief was conveyed in this state to the Bāb al-Naṣr where he was hanged. Cairo's gravediggers were then warned to respect the shrouds of the deceased. Many of the sensational murders minutely recorded for their shock value by the chroniclers could be considered here as gruesome examples of moral depravity. Since these cases warrant analysis in the context of their complex motives, they are relegated to a separate discussion of homicide.

But one case of extraordinary fraud does indicate a degree of creativity so nefarious that it bemused as well as shocked. This incident was sufficiently famous that it was remembered and recorded a century after it occurred. Al-Maqrīzī discussed at length the antics of a charlatan who duped many into believing he had discovered a tomb containing several Companions of the Prophet. The incident happened in Rabīʿ II 744/August–September 1343, in the Lūq district outside Cairo.[51] Al-Maqrīzī described the site as a rubbish heap known as the Dung Hill *(Kawm al-Zibl).* He claimed that "people of iniquity, the worst riff-raff" repaired to it. While digging into the site, remains of previous structures—some containing fragments of documents—were uncovered. One of the excavators, named Shuʿayb, whom al-Maqrīzī condemned as "a devil among the masses," claimed that he received visions while asleep confirming that these ruins sat on top of a sepulcher where the Companions were interred. He went further, proclaiming that his dreams empowered him to cure the crippled and restore sight to the blind. His fellow ruffians eagerly heeded his words and began digging down two fathoms until they reached the remains of a mosque. This discovery evoked wild rejoicing among the mob and their uproar attracted wider notice in the vicinity. By dawn, some one thousand persons had gathered, all digging away at the rubbish heap. Shuʿayb announced that the excavated ruins indeed belonged to the Prophet's Companions. His powers of persuasion were acute, it would seem, since notables of both the military and civil elites now visited the site. Al-Maqrīzī observed that women were especially taken in by Shuʿayb's therapeutic promises, stating that the sultan's mother came herself.

[50] Ibid., 3:391, line 8.

[51] Al-Maqrīzī, *Sulūk,* 2:649, line 6.

Shuʿayb would conduct cure seekers personally into the now-vast pit, from whence they emerged shouting, amid cries of "God is Most Great!" that their maladies were remedied, their sight regained. All, of course, willingly paid the dinars or dirhams Shuʿayb and his comrades charged for this treatment.

As the notoriety of the alleged Companions' tomb spread, several amirs and qadis became alarmed over the presence of such a throng now attending the site night and day. They urged the *wālī* prefect to inspect the *kawm,* their missive noting reports that the ruffians had exhumed cadavers from legitimate graves to be passed off as the Companions' remains. When the prefect arrived at the hill, the mob greeted him with howls of "vile denunciations," their protest so intense that his soldiers shot arrows to disperse them. Shuʿayb and his cohort fled, leaving the *wālī*'s contingent to excavate until they reached bedrock and a sewer. No verifiable indications of a tomb were discovered and the huge pit was filled in. The mob eventually lost interest in the site and calm was restored. Nonetheless, Shuʿayb and his fellow charlatans made off with a trove of money and apparel.

A case involving individuals at the opposite end of the social spectrum took place just after al-Maqrīzī's lifetime, as observed by his disciple, Ibn Taghrībirdī. He reported a case following a stalled Nile flood in Shawwāl 866/June–July 1462, in which the son of a respected jurist was implicated in a sex scandal.[52] As was customary during crises affecting Egypt's sole source of water, the sultan (Khushqadam) enjoined the magistrates to demand abstinence of the populace "from sin" *(al-maʿasin).* The *wālī* prefect duly rode out to Būlāq, a quarter apparently known for its looseness, to carry out his orders. After arresting revelers there, he crossed over to an island that had emerged as a result of the low level of the river. A crowd had assembled there, and the prefect rounded up a large number of men and women, seemingly engaged in unchaperoned activities. These he placed on donkeys and paraded from Būlāq to Cairo. Among them was a son of the chief qadi Shams al-Dīn al-Qāyātī. The son had attempted to mask his face in order to conceal his identity while mounted ignominiously on the donkey. His humiliation greatly incensed the juristic establishment, and a delegation confronted the prefect with a complaint of inappropriate arrest. The famous shaykh and hadith scholar Amīn al-Dīn al-Āqsarāʾī took his denunciation of the *wālī* to the sultan himself. But the pious Khushqadam replied that he had so ordered the prefect personally. The jurists refused to desist, and again accused the prefect of defaming the scion of an esteemed family. The *wālī* responded: "Why does the son of al-Qāyātī sit with his [ad-hoc] harem among commoners *(al-ʿawāmm),* exposed to onlookers?" Although he did release the son, the damage to his family's reputation had been done. The jurists remained agitated *(fī harj marj).* The sultan saw no reason to budge from his stance of probity. He granted the prefect a splendid robe and congratulated him for

[52] Ibn Taghrībirdī, *Ḥawādith,* 8:424, line 9.

his resolute enforcement of public decency. A second proclamation was read out, forbidding attendance at diversions *(muftarajāt).* All subjects were to shun "moral defilements" *(al-qadhūrāt).* "Thus was the stature of the *wālī* augmented, and everyone held his tongue about him."

This incident disclosed contention when a sweep to ensnare revelers whose behavior was deemed insulting to God unexpectedly trapped the offspring of a prominent family who had pledged to uphold morality. Quite prepared to endorse these sweeps when limited to commoners, the juristic elite, cream of the ulama, were acutely embarrassed when one of their own was exposed. They uniformly closed ranks to denounce the prefect and defend Ibn al-Qāyātī's honor (and that of his father). Sultan Khushqadam refused to relent in this instance and threw his promotion of the *wālī* in their faces. The readiness of the sovereign, whose status as legal arbiter granted him jurisdiction over even the chief qadis, to oppose them, while simultaneously winking at his recruits' excesses in other circumstances, suggests something of the paradox clearly evident in the regime's application of criminal justice.

All the preceding events, despite their diversity, highlight common trends that impelled the authorities to act, but often compromised their capacity to resolve. All either posed a challenge to the authorities' powers of control over subordinate elements, or aroused significant sectors of society by adversely affecting property rights or defying accepted canons of faith and moral conduct. Disturbances threatening public order or violating property rights repeatedly involved members of the ruling elite, notably its young recruits only recently promoted from cadet status. These troops precipitated many of the most turbulent episodes disrupting order and trade in the Sultanate's major cities, seats of its most influential social groups and wealthiest stores of capital assets. The authorities could not allow the disruptive criminality so ubiquitously associated with their own recruits to go unchecked. Yet neither could they take definitive steps to crush the cadres from whose ranks their successors would be drawn. Every senior amir, as well as the sultan, had invested substantial sums training the soldiers on whose loyalty his political future—and often physical survival—depended. These events therefore provided intriguing insights into the dilemmas faced by the authorities as they sought to contain the violence endemic to their troops within manageable limits.

It is worth noting that these troops were virtually absent from disputes over canons of belief, and only marginally visible in affronts to public morality—at least until the Ottoman occupation. These crimes occurred, in the main, within the civilian sectors of society. But the authorities rarely found themselves freer to assert themselves decisively, or to act without regard for the sensibilities and biases of competing factions. Nonetheless, however complicated the circumstances of crimes

affecting religion or morality, the authorities could not ignore them.[53] Their claims to primacy over preservation of order, and the foundations of their legitimacy as defenders of a Sunni Muslim polity and arbiters of its criminal suits, demanded their intimate involvement. The civilian sectors of society, whose numeric advantage was overwhelming and whose assets, taxed or confiscated, were essential to the ruling elite's support, submitted to that elite's political supremacy in return for the latter's enforcement of judgments emanating from the legists and clerics who served as custodians of faith and definers of morality. This symbiosis was visible in every salient case stemming from conflicts over religion and probity. It was this interdependence that shaped the context of authority over criminal matters in the Mamluk Sultanate. We can discern the disparate aspects of this context repeatedly as we analyze the several categories of crime reported by the narrative sources. Their authors were uniformly sensitive to them.

[53] Claude Gauvard noted that the French monarchy in the later Middle Ages was expected by the clergy to intervene in morals cases, depicted by the clergy as God's punishment for sin. Even though such crimes were interpreted as divine retribution, the king was required to protect his subjects from them. See "Fear of Crime in Late Medieval France," in *Medieval Crime and Social Control,* ed. B. Hanawalt and D. Wallace (Minneapolis, 1999), 3.

On the Brink of a New Era? Yalbughā al-Khāṣṣakī (d. 1366) and the Yalbughāwīyah

Introduction

In the winter of the year 1366, the Mamluk political scene was all set for the rising star of the amir Sayf al-Dīn Yalbughā al-ʿUmarī al-Nāṣirī al-Khāṣṣakī (d. 1366) to reach its zenith.[1] The adolescent Qalāwūnid sultan, al-Malik al-Ashraf Shaʿbān (1353–77; r. 1363–77), was firmly patronized by this former mamluk of Shaʿbān's uncle, the sultan al-Malik al-Nāṣir Ḥasan (d. 1361; r. 1347–51 and 1354–61).[2] Furthermore, in February 1366, Yalbughā's gradual empowerment after Ḥasan's violent deposition in 1361 had reached a final stage when he managed to finish off the amir Ṭaybughā al-Ṭawīl (1325–68), the last of his rivals for effective power behind the Qalāwūnid throne.[3] Finally, a major setback to Yalbughā's increasing success, which had suddenly and quite unexpectedly emerged from the Latin West in October 1365—the "Alexandrian crusade" of Peter I of Lusignan, king of Cyprus—had been turned to his own advantage by late November 1366.[4] In that month, a large

[1] For a detailed account, analysis, and assessment of Yalbughā's career, within the larger framework of the Qalāwūnid sultanate and of Qalāwūnid political culture, see Jo Van Steenbergen, "The Amir Yalbughā al-Khāṣṣakī, the Qalāwūnid Sultanate, and the Cultural Matrix of Mamlūk Society: A Reassessment of Mamlūk Politics in the 1360s," *Journal of the American Oriental Society,* in press.

[3] See Van Steenbergen, "The Amir Yalbughā al-Khāṣṣakī"; idem, *Order Out of Chaos,* 159.

[4] Robert Irwin, on the other hand, considers this event a major factor in Yalbughā's downfall (Ro - ert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250–1382* [London, 1986], 145). On this crusade, see Peter Edbury, "The Crusading Policy of King Peter I of Cyprus, 1359–1369," in *The Eastern Mediterranean Lands in the Periods of the Crusades,* ed. Peter M. Holt (London, 1977), 90–105; Peter Edbury, *The Kingdom of Cyprus and the Crusades, 1191–1374* (Cambridge, 1991); Martina Müller-Wiener, *Eine Stadtgeschichte Alexandrias von 564/1169 bis in die Mitte des 9./15. Jahrhunderts: Verwaltung und innerstädtische Organisationsformen* (Berlin, 1992); Jo Van Steenbergen, "The Alexandrian Crusade (1365) and the Mamluk Sources: Reassessment of the *Kitāb al-Ilmām* of an-Nuwayrī al-Iskandarānī (d. 1372 AD)," in *East and West in the Crusader States: Context, Contacts, Confrontations, III. Acta of the congress held at Hernen Castle in September 2000,* ed. K. Ciggaar and H. G. B. Teule (Leuven, 2003), 123–37 (however, this paper should be treated with some caution [I consider it to demonstrate my callowness at the time!] in light of Otfried Weintritt, *Formen spätmittelalterlicher islamischer Geschichtsdarstellung: Untersuchung zu an-Nuwairī al-Iskandarānīs* Kitāb al-Ilmām *und verwandten zeitgenössischen Texten* [Beirut, 1992]).

revenge fleet's construction was completed, manned, and equipped for war against the island of Cyprus, and on Saturday 28 November its formidable combat capacities were demonstrated on the Nile outside Cairo, in a massively attended and awe-inspiring enactment of sea warfare, described by al-Maqrīzī as follows:

> The sultan, the amir Yalbughā and all the regime's amirs and notables rode out to view the warships *(al-shawānī).* They had been successfully completed and their crews were ready. . . . The sultan led his armies from the citadel to the island of Urwā [or Jazīrat al-Wuṣṭá, between the islands of Rawḍah and Ḥalīmah], and boarded the "fire ship" *(al-ḥarrāqah),* while the banks were filled with people. The warships came and their crews played with the war equipment, as one would do in an engagement with the enemy, with their drums being beaten, their trumpets being blown, and the naphtha bombs being released. It was a frightening but beautiful spectacle, and would have been a good thing if it had served its purpose *(law tamma)*.[5]

Commissioned by Yalbughā and constructed, as one contemporary author testified, "in less than a year, despite the lack of wood and material,"[6] this fleet of 100 warships—each manned by some 150 sailors[7] as well as by a handful from each of the amirs' mamluks, geared for war[8]—generally must have been considered a remarkable feat and a clear token of Yalbughā's promising capacities. Hence, its spectacular public presentation in late November 1366 washed off any stain left by the Alexandrian crusade on Yalbughā's public image as the legitimate power holder behind the ephemeral Qalāwūnid sultan Shaʿbān. When Yalbughā thereupon proceeded to go hunting on the Nile's west bank, near Giza, there was nothing and

[8] See al-Maqrīzī, *Sulūk,* 3:129.

no one left to vie with his status and authority. At least, that is what things looked like. But Yalbughā was soon to experience how appearances can be misleading!

As al-Maqrīzī suggested from hindsight, Yalbughā's fleet would never really serve its purpose. On the contrary: instead of setting sail to Cyprus, it remained on the Nile, between Cairo and Būlāq al-Takrūrī on the west bank, and was probably for the most part left to rot.[9] This, however, would only happen after it was deployed there one more time, about a fortnight after its promising inauguration. On this occasion, instead of being deployed as a mighty instrument of Muslim revenge against crusading infidels, it was used against fellow Muslims, the latter ironically including Yalbughā himself! On Tuesday 8 December Yalbughā narrowly escaped a murder attempt at his hunting camp near Giza, only managing to cross back to his residence near Cairo in the course of the following day. Subsequently, he tried to undo this rebellion by isolating it and preventing his opponents from crossing the Nile and returning to Cairo. But when the latter obtained part of their opponent's revenge fleet, the Nile between Cairo and Giza again witnessed an enactment of sea warfare, but now for real and between two groups of amirs and mamluks, one supportive of Yalbughā on the east side and on the island of Urwā, and another opposing him on the west bank, featuring the sultan al-Malik al-Ashraf Shaʿbān as well as large numbers of Yalbughā's own mamluks, the Yalbughāwīyah. This spectacle surely must have been as impressive as the one that was staged two weeks earlier, at least according to historical reports like the following one by the mysterious contemporary chronicler Aḥmad al-Bayrūtī:

> [Yalbughā] remained on the Jazīrat al-Wusṭá [/Urwā] while al-Malik al-Ashraf and his company were on the bank of [Būlāq] al-Takrūrī. Someone known as Muḥammad ibn Bint Labṭah, the captain *(al-rāyis),* then came to al-Malik al-Ashraf, offered him about thirty of the newly-built ships, with crew, and he broke the ships' rigging *(burūq al-marākib),* thus flattening them so that they could cross over. A number of the amirs and mamluks of Yalbughā embarked upon them for the crossing, but Yalbughā shot naphtha bombs at them. Thereupon, they made the ships' crews bring them close to the river bank, shooting arrows at Yalbughā so as to hit his companions and drive them back to where they came from. But Yalbughā

[9] In fact, one of these ships is explicitly reported to have been used, in the course of 1368, by a sea captain (*rāyis al-baḥr*) known as Muḥammad al-Tāzī al-Maghrabī in a successful corsairing campaign against a ship of the "Franks" (al-Maqrīzī, *Sulūk,* 3:159). Most of this Egyptian fleet's whereabouts, however, remain unknown, but it may indeed have shared in the fate of its Syrian counterpart, which was left to rot near Beirut (see Albrecht Fuess, "Rotting Ships and Razed Harbors: The Naval Policy of the Mamluks," *Mamlūk Studies Review* 5 [2001]: 52–53; on rotting ships, see also Agius, *Classic Ships of Islam,* 253–54, 260–62).

> and his companions shot at them with arrows and naphtha, without, however, impressing them.[10]

Thus, Yalbughā tried to regain control of the situation with a host of impressive strategic, military, and institutional maneuvers. These included not only his blockade of the Nile and his engagement in sea warfare, but also such remarkable measures as the installation of yet another Qalāwūnid sultan instead of the recalcitrant and absent Shaʿbān: al-Malik al-Manṣūr Ānūk ibn Ḥusayn ibn Muḥammad ibn Qalāwūn (d. 1391), mockingly referred to by commoners and chroniclers alike as "*sulṭān al-jazīrah,*" since he only held court for one day on the above-mentioned island.[11] When, however, on Saturday 12 December al-Ashraf Shaʿbān and his supporters eventually managed to cross the Nile and catch up with their Cairene supporters, Yalbughā's attempts to reverse the situation proved futile, and after his arrest the conflict ended in the following gruesome manner:

> [Yalbughā's] mamluks came, took him from the prison, and brought him down from the citadel. When he went through the Bāb al-Qalʿah and waited at the wall, they brought him a horse to ride. But when he intended to mount, a mamluk called Qarātamur hit him [with his sword], decapitating him, whereupon [others] jumped at him with their swords, cutting him to pieces. They took his head and held it in a burning torch for the bleeding to stop, though some of them refused to have anything to do with that. When they removed the torch, the bleeding had stopped and they wiped [the head] clean. They could no longer recognize him [in it] but for the scar he had under his ear. Then, they took his body and brought it to al-ʿArūsatayn to hide it there. But under cover of the night['s darkness], Ṭashtamur, [Yalbughā's] *dawādār,* came and took the head from them, and he looked for the body until he found it. He had it stitched, and then he buried it in the mausoleum which [Yalbughā] had constructed near

[10] Al-Bayrūtī, fol. 3r (for a single, extremely brief reference to this so-far untraceable chronicler and the unique 788 A.H. [1386 C.E.] manuscript [in 131 folia] of his very valuable chronicle for the years 769–779, see Carl Brockelmann, *Geschichte der Arabischen Litteratur: Zweite den Supplementbänden angepasste Auflage* [Leiden, 1943–49], 2:61 ["A. al-Bairūtī schrieb: Eine Geschichte der J. 768–80/1366–78 *(sic !)* mit Nekrologen"]). Another account of this engagement, with even more detail, may be found in al-Maqrīzī, *Sulūk,* 3:133–35. Thanks are due to Dionisius A. Agius for helping me with the translation of this passage.

AN ASSESSMENT OF HISTORIOGRAPHY

When Mamluk studies have awarded any attention at all to this drawn-out military engagement in early December 1366, it has been done indifferently and quite briefly within a larger historical or conceptual framework. Moreover, in their summary reconstructions, such studies have invariably identified either al-Ashraf Shaʿbān or a nameless mass of the Yalbughāwīyah, or both, as the culprits for this remarkable and abominable turn of events. Thus, in the 1960s, in William Brinner's preliminary attempt to make sense of late fourteenth-century power struggles, he entirely blamed the sultan, claiming that he was "determined to be ruler in fact as well as in name."[13] In the early 1980s, Werner Krebs's chronological reconstruction of Mamluk history between 1341 and 1382 accused Yalbughā's mamluks first and foremost, identifying them as "die Masse seiner namenlosen Mamluken."[14] In their historical surveys of "medieval" Islamic history, both published in 1986, Robert Irwin and Peter Holt generally agreed with this view, adding some more nuances. The former stated that "Yalbughā was killed in 1366 by some of his own mamluks who had been unable to endure their master's harsh discipline any longer," adding that "though the sultan approved their action, he was not fully master of the changed situation."[15] Agreeing about the Yalbughāwīyah's involvement, Holt, however, also repeated Brinner's accusation against Shaʿbān, claiming that "al-Ashraf Shaʿbān, now old enough to take a hand in politics, gave his patronage to a faction of malcontent Mamluks."[16] The last scholar who dealt with this conflict in any serious fashion was Amalia Levanoni, who in 1995 followed the arguments put forward by Krebs and Irwin, stating that:

> When the Yalbughāwīyah mamluks rebelled against their master, Yalbughā al-ʿUmarī, the idea of the rebellion had originated with

> the mamluks, and they were the ones who forced the senior amirs to join them, threatening those who would not unite with them with dire consequences. Following the success of the rebellion, the mamluks insisted that the sultan, al-Ashraf Shaʿbān, hand over to them their defeated master whom they then murdered.[17]

From all this, it has to be acknowledged that the analysis of this conflict has not really been furthered much beyond the eyebrow-raising views that were already formulated by the late nineteenth-century orientalist William Muir. In his "The Mameluke or Slave Dynasty of Egypt," he stated that:

> Yelbogha . . . was at first the dominant Emir; but his atrocities so transcended even the barbarous precedents of the age as to arouse the hatred of the people, who rallied to the support of the young sultan when Yelbogha rebelled and would have raised another brother to the throne. The tyrant was defeated, and his head exposed upon a burning torch. His memlukes, however, remained dominant and in their wild excesses had the city at their mercy.[18]

Despite a flavor of historical inaccuracy in the latter statement, Muir's reading of the conflict, implicating the Yalbughāwīyah, has clearly remained the bottom line of scholarly consensus until this day. Moreover, just as Muir implied that "the tyrant" really had it coming, this idea that Yalbughā's harsh attitude towards his mamluks triggered their actions has remained the prevalent explanation for such a remarkable and radical breaking of the mutually beneficial bonds that tied rank-and-file mamluks to their master. Whereas the passing references to such harshness by Irwin and Holt suggested that, like Muir, they simply considered Yalbughā unfit for the job, Levanoni in 1995 took this moral argument one step further, by linking it to a "remamlukisation" project endeavored by Yalbughā in order to stem the tide of moral laxity in the military ranks, which allegedly had set in during the reign of al-Nāṣir Muḥammad.[19] Hence, she not only blamed Yalbughā and "his crass atti-

[17] Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad Ibn Qalāwūn, 1310–1341* (Leiden, 1995), 119–20, also 89. Repeated in her "Rank-and-file Mamluks versus Amirs: New Norms in the Mamluk Military Institution," in *The Mamluks in Egyptian Politics and Society,* ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 25.

[19] For an earlier passing reference to this "remamlukisation" thesis, see Holt, "Miṣr," 171. It was also repeated and elaborated by Linda S. Northrup in her "The Baḥrī Mamlūk Sultanate, 1250–1390," in *The Cambridge History of Egypt,* Volume 1, *Islamic Egypt, 640-1517,* ed. Carl F. Petry (Cambridge, 1998), 286–89. For a critical approach to such a concept of an ideal, normative "mamlūk phenomenon," as originating in the thirteenth century, see Peter Thorau, "Einige kritische Bemerkungen zum

tude towards [his mamluks], the humiliations they suffered at his hands, and the excessive punishments he meted out," but also the Yalbughāwīyah, who "had become too reliant on conditions of material permissiveness" and who were characterized by "disloyalty, lack of restraint, and greed."[20]

However, in limiting themselves to such dismissive, negative appreciations of this episode and its protagonists—Yalbughā wronged his own mamluks, and they were all rogues and up to no good—all modern studies alike demonstrate first and foremost how deeply embedded they are in the value judgments of near-contemporary historians (and it has been sufficiently demonstrated in recent years how such an approach entails many pitfalls).[21] Thus, Ibn Khaldūn (1332–1406)—who had access to inside information on this as well as subsequent episodes because of his close friendship with the Yalbughāwī Alṭunbughā al-Jūbānī (ca. 1341–89)[22]—very succinctly assesses the background of the 1366 revolt as follows:

> Yalbughā's autocracy *(istibdāduhu)* had been lasting long for the sultan, and his cruelty *(waṭʾatuhu)* had been hard to bear for the amirs, for the regime's employees, and especially for his mamluks. He had been increasing the number of mamluks, disciplining them in an extreme fashion and overstepping all bounds when he beat them with the stick, until their noses were cut off and their ears were severed *(tajāwaza al-ḍarb fīhim bi-al-ʿaṣā ilá jadʿ al-unūf wa-iṣṭilām al-ādhān)*. . . . [That is why] they harbored [feelings of] disloyalty *(al-ghishsh)*.[23]

sogenannten 'mamlūk phenomenon,'" in *Die Mamlūke: Studien zu ihrer Geschichte und Kultur: Zum Gedenken an Ulrich Haarmann (1942–1999),* ed. Stephan Conermann and Anja Pistor-Hatam (Hamburg, 2003), 367–78.

[20] Levanoni, *A Turning Point in Mamluk History,* 88–89, 90, 103.

[21] See, e.g., Amalia Levanoni, "Al-Maqrīzī's account of the Transition from Turkish to Circassian Mamluk Sultanate: History in the Service of Faith," in *The Historiography of Islamic Egypt (c. 950–1800),* ed. Hugh Kennedy (Leiden, 2001), 93–105. On top of that, it can also be convincingly suggested that this pervasive uncritical and negative approach to the 1366 conflict owes an equal amount to the widespread tendency to assess Mamluk political history through a modern, Marxist and/or systems analysis prism, anachronistically applying modern conceptions of class, class consciousness and solidarity, and class struggle to a premodern society (i.e., the mamluk proletariat struggling for their emancipation from their control by the bourgeois amirs!). In this respect, see, for instance, Winslow W. Clifford's apt and stimulating analysis in his "*Ubi Sumus?* Mamluk History and Social Theory," *MSR* 1 (1997): 45–62.

[22] See Ibn Khaldūn, *Kitāb al-ʿIbar wa-Dīwān al-Mubtadaʾ wa-al-Khabar fī Ayyām al-ʿArab wa-al-ʿAjam wa-al-Barbar wa-man ʿĀṣarahum min Dhawī al-Sulṭān al-Akbar,* ed. N. al-Hārūnī (Cairo, 1867–68), 5:476.

[23] Ibid., 5:456.

Al-Maqrīzī, a student and well-known admirer of Ibn Khaldūn,[24] later repeated this general negative stance, claiming that this Yalbughā character would beat his mamluks with a whip and cut off their tongues.[25]

However, what has not been picked up so far, and what is very striking in this context, is that all other Mamluk chroniclers that discuss this episode in Mamluk history, including the contemporaries al-Bayrūtī (fl. latter half of the fourteenth century) and Ibn Duqmāq (ca. 1350–1407) refrain from making such value judgments. This "depreciation" of Yalbughā in particular is only present with Ibn Khaldūn (and with al-Maqrīzī after him), who actually justifies in unmistakable fashion the Yalbughāwīyah's actions against their master. Was this perhaps primarily how surviving Yalbughāwīyah—such as Ibn Khaldūn's source, Alṭunbughā, or Ibn Khaldūn's patron, the sultan Barqūq (r. 1382–89, 1390–99)—preferred to remember this black page in their history?

Nevertheless, it would be otiose to doubt that there may well be a kernel of truth in these assertions, that Yalbughā was an unpleasant man to work for, that there was a general feeling of physical maltreatment among Yalbughā's mamluks, and that the December 1366 revolt had much to do with that. Even so, it remains puzzling that these disgruntled mamluks had chosen to support Yalbughā on several earlier occasions, until just a few months earlier, in February 1366, against his peer Ṭaybughā, who at the time could count on a lot of support among the amirs and also among the commoners.[26] Why, or perhaps more appropriately, how did they change their mind and eventually turn against him, in December 1366? Was there more at stake, triggering these harbored feelings of disloyalty to erupt at this specific moment?

In all, this is one episode from a long list in Mamluk history that continues to generate many more questions than those that have been considered so far. Especially from a long-term historical perspective, it becomes increasingly relevant to pursue such questions and start digging beyond today's surface of Mamluk history. In the present context, for instance, the underlying assumption in modern historiography's face-value acceptance of Ibn Khaldūn's views seems to be that for nearly two centuries decline from an initial late thirteenth- and early-fourteenth century point of success was predominant in the sultanate's history. More precisely, the above perception of the December 1366 conflict as a total breakdown of the "natu-

[24] See for instance Robert Irwin, "Al-Maqrīzī and Ibn Khaldūn: Historians of the Unseen," *MSR* 7, no. 2 (2003): 217–25; Anne F. Broadbridge, "Royal Authority, Justice, and Order in Society: The Influence of Ibn Khaldūn on the Writings of al-Maqrīzī and Ibn Taghrībirdī," *MSR* 7, no. 2 (2003): 231–45.

[25] Al-Maqrīzī, *Sulūk,* 3:130. See also Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* ed. Ibrāhīm ʿAlī Ṭarkhān (Cairo, 1963–72), 11:36.

[26] See Van Steenbergen, "The Amir Yalbughā al-Khāṣṣakī."

ral" relationship between mamluks and their master turns it into a telling exception to the alleged rule that there was a "Mamluk system" of unconditional loyalty to one's master *(ustādh)* and to one's peers *(khushdāsh)* dominating Mamluk politics at large, which had been responsible for the sultanate's initial successes, but which became increasingly strained thereafter.[27] Therefore, the conflict's perception as the breaking of this crucial taboo and normative code perfectly confirms and illustrates the idea of crisis and of the breakdown of norms and behavior in the quagmire of what must have been a horrible fourteenth century, from which the sultanate would never really manage to escape again, despite any attempts at "remamlukisation."

But does such a linear, comparative approach really do justice to what actually happened in that fourteenth century, let alone to what happened thereafter? As said, the time has definitely come to start delving beyond such static, judgmental, and negative views of Mamluk history, moving away from a focus on "what went wrong" and towards an appreciation of the many dimensions of Mamluk historical change in their own right. Therefore, in the second part of this article, the December 1366 conflict will be analyzed from one among quite a few possible alternative angles.[28] It will be claimed that prosopography, and a more accurate identification of Yalbughā's opponents and of their relationship with Yalbughā in general, opens up very interesting new perspectives. This will eventually allow for a more positive reading of the causes and consequences of this conflict, moving away from the depressing "Khaldūnian decline paradigm" that has perverted Mamluk studies for far too long now, and towards an understanding in its own right of the process of change and transformation that the Mamluk sultanate clearly was undergoing by the latter half of the fourteenth century, and which was to ensure its continued existence well into the sixteenth century![29]

---

[27] On this "Mamluk system," as the static backbone of the Mamluk political economy, see esp - cially the various pioneering works by David Ayalon (mainly republished in his collected volumes: *The Mamlūk Military Society: Collected Studies* [London, 1979]; *Outsiders in the Lands of Islam: Mamluks, Mongols, and Eunuchs* [London, 1988]; *Islam and the Abode of War* [Aldershot, 1994]; and neatly summarised in Reuven Amitai, "David Ayalon, 1914–1998," *MSR* 3 [1999]: 1–12). For an updated, more dynamic (in a negative sense, though [see n. 29]) version, see Levanoni, *Turning Point,* esp. 4–27.

[28] Inspiration for these angles may (in fact, should) certainly be searched for in concepts, views, and ideas as developed in related fields of pre-modern historical research, such as (among others) in the works of Gerd Althoff (e.g., his *Die Macht der Rituale: Symbolik und Herrschaft im Mittelalter* [Darmstadt, 2003]); Marco Mostert (e.g., *New Approaches to Medieval Communication* [Turnhout, 1999]); and Geoffrey Koziol (e.g., *Begging Pardon and Favor: Ritual and Political Order in Early Medieval France* [Ithaca, 1992]).

[29] For the identification of a notion of "decline" permeating Levanoni's *Turning Point,* see the r - view by Winslow W. Clifford in *MSR* 1 (1997): 179–82. For a very stimulating survey of modern Ottoman historiography's recent move away from its "decline paradigm," see Donald Quataert, "Ottoman History Writing and Changing Attitudes Towards the Notion of 'Decline,'" *History Com-*

The Yalbughāwīyah: Veteran Amirs and Junior Mamluks

If one takes a closer look at the December 1366 conflict, and at Yalbughā's opponents in particular, there certainly are a number of factors that deserve much more attention than they have hitherto been awarded. As far as causes and consequences of the rebellion are concerned, the most important factor seems to be the sliding scale of multiple relationships between Yalbughā and his opponents, revealing how in many modern studies the latter so far have been unjustly reduced to generic terms such as "the Yalbughāwīyah mamluks." Certainly, Yalbughā's mamluks were deeply involved, but not all of them at the same time, nor for the same reasons, nor in similar fashion. There was indeed much more at stake than malcontent mamluks simply breaking up with their master!

Veteran Amirs

Continuing his above-mentioned account of the rebellion, Ibn Khaldūn actually explains how one amir's brother fell victim to Yalbughā's notorious temper one day; the brother then enjoined that amir, Asandamur al-Nāṣirī (d. 1368), to conspire with his peers and the sultan against Yalbughā.[30] The other extant contemporary accounts, by Ibn Duqmāq and al-Bayrūtī, give more details on this aspect of the rebellion. In almost identical wording, they both claimed that:

> it was agreed [to revolt] by the mamluks of Yalbughā who had been promoted amir by him, by their "brothers," and by the leading *ḥalqah* chiefs *(mamālīk Yalbughā alladhīna ammarahum wa-ikhwatuhum wa-ruʾūs al-bāshāt),*[31] including Aqbughā al-Aḥmadī, known as al-Jalab, Asandamur al-Nāṣirī, Qajmās al-Ṭāzī, Taghrī Birmish al-ʿAlāʾī, Aqbughā Jarkas Amīr Silāḥ, and Qarābughā al-

---

pass 1 (2003): 1–9. The conceptual and practical parallels with Mamluk historiography, both modern and contemporary, are extremely striking, and call for a similar revision that may "offer a more nuanced view of the [Mamluk] experience, . . . discussing the realities of those experiences rather than [Mamluk] failures to follow particular patterns of change" (ibid., 3); if gradually implemented in Mamluk studies, also in light of a larger perspective offered by comparative and global history, such a revision will undoubtedly be as revealing as in the Ottoman case, where Quataert describes how "the emerging new scholarship is revealing an Ottoman state (society and economy) in the process of continuous transformation, rather than a decline or fall from idealized norms of the past. . . . In this new understanding, the Ottoman state underwent continuous modifications in its domestic policy, an ongoing evolution in which there is no idealized form, since change itself is understood as the norm" (ibid., 4).

[30] Ibn Khaldūn, *Kitāb al-ʿIbar,* 5:356.

[31] On the latter title, rarely encountered and therefore less well known, see Khalīl ibn Shāhīn al-Ẓāhirī, *Zubdat Kashf al-Mamālik fī Bayān al-Ṭuruq wa-al-Masālik,* ed. Paul Ravaisse (Paris, 1894), 116: "every one hundred from a thousand [*ḥalqah* troopers] have a chief *(bāsh)* and a superintendent *(naqīb)*."

> Ṣarghitmishī, as well as those that had allied with them. They geared up [for combat], rode out and attacked their *ustādh,* the honorable *atābak* Yalbughā al-ʿUmarī, raiding his encampment [at Giza] and intending to kill him.[32]

Al-Maqrīzī, for his part, agreeing on the identity of these six as leaders of the revolt, explains their action further, incorporating these contemporary accounts and at the same time implementing, it would seem, an expanded version of Ibn Khaldūn's moralizing story line. He claims that the young recruits got fed up with Yalbughā's harsh treatment of them, whereupon these six amirs went to Yalbughā to plead their case, asking him to relent and to show them some mercy. Thereupon, however, Yalbughā supposedly insulted and threatened these amirs, which ultimately convinced them to attack Yalbughā's encampment in conjunction with those malcontent mamluks.[33]

Whatever the truth of the matter, this "gang" of six Yalbughāwī amirs clearly constituted a major factor in the conflict's initial phase, and, as it would turn out, they were also to figure prominently among its political and institutional benefi-

[32] Quoted from al-Bayrūtī, fol. 2v; also in Ibrāhīm ibn Muḥammad ibn Aydamur ibn Duqmāq, "N - zhat al-Anām fī Tārīkh al-Islām," Forschungs- und Landesbibliothek Gotha MS Orient A 1572, fol. 2v. In fact, this passage's version in the latter autograph manuscript, dated 784/1382, shows only three slight but reductive modifications to al-Bayrūtī's text, as it appears in the Bodleian manuscript from 788/1386: Ibn Duqmāq's text collapses the phrase (*wa-ruʾūs al-bāshāt minhum,* "by the leading *ḥalqah* chiefs, including . . .") into a less enigmatic variant (*wa-ruʾūsuhum* . . ., "and their leaders were . . .") and drops altogether the attributive relative clause (*al-maʿrūf bi-*, "known as") after the name of Aqbughā al-Aḥmadī, as well as the verb (*labisū*, "they geared up").

An identical fragment, also with slight modifications (but not as reductive as Ibn Duqmāq's), is in the fifteenth-century chronicle of Maḥmūd al-ʿAynī, "ʿIqd al-Jumān fī Tārīkh Ahl al-Zamān," Dār al-Kutub MS 1584 *tārīkh,* fol. 144r (in this version, the initial verb is put in the third person feminine singular *(ittafaqat)* instead of the third person masculine plural *(ittafaqū)* in al-Bayrūtī and Ibn Duqmāq; the verb *kabasū* ("they attacked/raided") is dropped (and not *labisū* as in Ibn Duqmāq); there are minor adjustments to certain names (twice adding al-Khāṣṣakī to Yalbughā's name, once changing his title from the official form of address (*al-maqarr al-atābakī,* "the honorable *atābak*") to the more functional *(al-atābak),* and once specifying that "Aqbughā al-Aḥmadī, known as Jalab, [was] *raʾs nawbah* [a mamluks' chief]"). On the problematic identity of this manuscript in relation to other extant copies of the work of this author, see my discussion with Sami Massoud as reconstructed in his *The Chronicles and Annalistic Sources of the Early Mamluk Circassian Period* (Leiden, 2007), 41–45.

An adjusted, but clearly related version of this passage may be found in the *Jawhar al-Thamīn,* the summary chronicle of Islamic history by the same Ibn Duqmāq, interestingly now denoting these six amirs as chiefs *[bāshātuhum]* (Ibn Duqmāq, *Al-Jawhar al-Thamīn fī Siyar al-Khulafāʾ wa-al-Mulūk wa-al-Salāṭīn,* ed. S. ʿA. ʿĀshūr [Mecca, 1982], 415).

Finally, the version of Ibn Taghrībirdī is also clearly similar in substance, demonstrating obvious textual traces of a contemporary original (Ibn Taghrībirdī, *Nujūm,* 11:36).

[33] Al-Maqrīzī, *Sulūk,* 3:130–31.

ciaries. The morning after Yalbughā's murder, four amirs—including three out of these six initiators: Aqbughā al-Aḥmadī al-Jalab (d. 1367), Asandamur al-Nāṣirī (d. 1368), and Qajmās al-Ṭāzī (fl. 1360s)[34]—were even reported to have been "installed as the spokesmen for the untying and tying [of the regime's business], for the giving and taking [of the regime's wealth], and for the appointment and the dismissal [of the regime's functionaries]."[35] Soon thereafter, this shift was confirmed institutionally, when these "spokesmen" reshuffled al-Ashraf Shaʿbān's entourage of courtiers.[36] On the one hand, this re-organization of the court conspicuously benefited a handful of amirs and officials with clear pre-Yalbughā credentials, like Qashtamur al-Manṣūrī (ca. 1310–69), a long-standing veteran of the Qalāwūnid era;[37] Aydamur al-Shāmī, a veteran from al-Nāṣir Ḥasan's reign,[38] and Muḥammad

[34] The fourth amir, Ṭughāytamur al-Niẓāmī, a high-ranking member of the political elite for several years, had been siding with Yalbughā for most of the December 1366 conflict, but he had changed camps just in time not to be discredited by Yalbughā's downfall (al-Bayrūtī, fol. 3r–3v; al-Maqrīzī, *Sulūk,* 3:74, 75, 134–35); his (brief) leadership after Yalbughā's murder is confirmed from his biography in Ibn Ḥajar, *Durar,* 2:223.

[35] See al-Bayrūtī, fol. 4r; al-ʿAynī, "ʿIqd," fol. 147. Again in a reductive version in Ibn Duqmāq, "Nuzhat al-Anām," fol. 4r (the fourth "odd" amir, Ṭughāytamur al-Niẓāmī, is not mentioned, the verb [*istaqarra,* "to install"] is missing, and they were "spokesmen for the untying and tying" only). Clear traces of a contemporary original may again be found in Ibn Taghrībirdī, *Nujūm*, 11:40–41 (including reference to Ṭughāytamur and use of the verb *istaqarra,* "to install"). A different version, but also referring to the three Yalbughāwī amirs, is in al-Maqrīzī, *Sulūk,* 3:137 ("they started managing the affairs of the regime *[akhadhū fī tadbīr umūr al-dawlah]*").

[36] Al-Bayrūtī, fol. 4r–4v; al-ʿAynī, "ʿIqd," fol. 147. Ibn Duqmāq, "Nuzhat al-Anām," fol. 4r–4v. Al-Maqrīzī, *Sulūk,* 3:138–39. Ibn Taghrībirdī, *Nujūm*, 11:41. On the classification of Mamluk military offices, see Van Steenbergen, *Order Out of Chaos,* 38–41; in this case, the "local" nature of the December 1366 conflict, as well as the fact that power politics—including direct access to and influence with the sultan—was its main issue, is borne out by the fact that this re-organization only involved court offices and high military ranks "in the sultan's vicinity," leaving the executive offices and the administration of the realm untouched.

[37] He was a mamluk of al-Nāṣir Muḥammad ibn Qalāwūn, promoted to amir by Muḥammad's son and successor al-Manṣūr Abū Bakr (r. 1341), who between 1341 and 1366 performed a host of minor and major executive functions in Egypt and Syria; on 15 December 1366, he was made *ḥājib al-ḥujjāb* (chief chamberlain) (see Khalīl ibn Aybak al-Ṣafadī, *Kitāb al-Wāfī bi-al-Wafayāt* [Wiesbaden, 1949–(1999)], 24:246; Ibn Ḥajar, *Durar,* 3:249; Abū Bakr ibn Aḥmad Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah,* ed. ʿAdnān Darwīsh [Damascus, 1977–1994], 3:353–54; al-Maqrīzī, *Sulūk,* 3:138; al-Bayrūtī, fol. 4r; al-ʿAynī, "ʿIqd," fol. 147; Ibn Duqmāq, "Nuzhat al-Anām," fol. 4r; Ibn Taghrībirdī, *Nujūm*, 11:41). On the office of *ḥājib al-ḥujjāb,* see the references in Van Steenbergen, *Order Out of Chaos,* 40, n. 65.

[38] He had been made a high-ranking amir and senior *dawādār* (personal secretary) in the latter half of al-Nāṣir Ḥasan's reign; on 15 December 1366, he was again made a high-ranking amir and senior *dawādār* (al-Maqrīzī, *Sulūk,* 3:43, 138; al-Bayrūtī, fol. 4r; al-ʿAynī, "ʿIqd," fol. 147; Ibn Duqmāq, "Nuzhat al-Anām," fol. 4r; Ibn Taghrībirdī, *Nujūm*, 11:41). On the office of *dawādār,* see the references in Van Steenbergen, *Order Out of Chaos,* 40, n. 65.

ibn Qumārī (d. 1377), whose father had been a leading amir in the 1330s and '40s.[39] On the other hand, upon gaining pre-eminence, the new "spokesmen" obviously also made sure to cash in and to include themselves in this round of promotions and new entries into al-Ashraf Shaʿbān's court. Thus, Qajmās al-Ṭāzī, an amir of forty since March 1366, was appointed *amīr silāḥ* ("master of weaponry");[40] Aqbughā al-Aḥmadī al-Jalab, an amir of one hundred since March 1366, was awarded—according to at least one report—the title and senior status of *amīr kabīr,* "sitting in the audience hall above Asandamur al-Nāṣirī";[41] and the latter, equally an amir of one hundred since March 1366, at first remained a "spokesman" without an official title, but with court privileges concomitant with his newly acquired status, including, as just mentioned, the right to sit down in the sultan's presence. Furthermore, still in December 1366, a fourth member from that "gang" of six, the amir Qarābughā al-Ṣarghitmishī, was promoted to the highest rank—a very exceptional feat, as indicated by the explicit contemporary addendum that this happened "from the rank of amir of ten *(min al-ʿashrah)*."[42] Finally, other new or transferred court

[39] Muḥammad, an amir of forty since October 1363, was appointed *amīr shikār* ("master of the hunt") on 15 December 1366 (see al-Bayrūtī, fol. 4v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 4r ["*amīr shikār al-sulṭān*"]; al-Maqrīzī, *Sulūk,* 3:138; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:534). On the office of *amīr shikār,* see Aḥmad al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ* (Cairo, 1913–19), 4:22, 5:461; al-Ẓāhirī, *Zubdah,* 114, 126. On his father, Qumārī al-Nāṣirī al-Kabīr (d. 1346), see Khalīl ibn Aybak al-Ṣafadī, *Aʿyān al-ʿAṣr wa-Aʿwān al-Naṣr,* ed. ʿA. Abū Zayd et al. (Beirut-Damascus, 1998), 4:132–33; al-Ṣafadī, *Wāfī,* 24:275.

[40] Al-Bayrūtī, fol. 4v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 4v; al-Maqrīzī, *Sulūk,* 3:117, 138; Ibn Taghrībirdī, *Nujūm*, 11:41. On the office of *amīr silāḥ,* see the references in Van Steenbergen, *Order Out of Chaos,* 40–41, n. 66.

[41] Ibn Qāḍī Shuhbah, *Tārīkh,* 3:298; his having been appointed *amīr kabīr* is confirmed from his biography in Ibn Ḥajar, *Durar,* 1:391. On the position of *amīr kabīr,* see Van Steenbergen, *Order Out of Chaos,* 44, with additional references in n. 82.

[42] Al-Bayrūtī, fol. 4v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 4v; al-Maqrīzī, *Sulūk,* 3:139; Ibn Taghrībirdī, *Nujūm,* 11:41 (making this comment even more explicit: "at once from the rank of amir of ten *[dafʿatan wāḥidatan min imrat ʿashrah]*"; also Van Steenbergen, *Order Out of Chaos,* 36–37. As for the two remaining members of the "gang" of six, nothing further is mentioned in any source about the amir Aqbughā Jarkas Amīr Silāḥ, but Taghrī Birmish al-ʿAlāʾī, equally obscure, suddenly pops up once more in the accounts of March 1367, three months after the December 1366 conflict, when this "Taghrī Birmish put on his war gear and rode out; but the amirs rode against him and caught him," whereupon he was sent off to Alexandria (al-Bayrūtī, fol. 5r; Ibn Duqmāq, "Nuzhat al-Anām," fol. 5r [now with a longer (!) variant reading, and arguably more correct dating than al-Bayrūtī's]; Ibn Taghrībirdī, *Nujūm*, 11:42 [which is his own enhanced version of the same story, linking this to the preceding arrest of "gang" member Qarābughā al-Ṣarghitmishī]). It seems that the latter three amirs actually served in a more subordinate capacity as the "henchmen" of this "gang," considering the far less prominent role they were awarded in the conflict's aftermath, including their very direct, even brutal involvement therein, as with Qarābughā's bullying of one of Yalbughā's former civil servants to extract money from him, or with Taghrī Birmish's supervising the transfer

officers were the amir of one hundred Ṭaydamur al-Bālisī (d. 1377), the amir of forty Asanbughā al-Qawṣūnī (d. 1374), and Qarātamur al-Muḥammadī, an amir of forty, but again only since March 1366.[43] In all, this new, variegated composition of the court is certainly indicative of the fact that there were more amirs than just that "gang" of six actively involved in the preceding conflict, as also suggested in the following obituary notice of an amir known as Uzdamur al-ʿIzzī (d. 1367), promoted amir of ten by Yalbughā in March 1366: "he belonged to those that agreed to kill Yalbughā, and after his murder, he was given a rank of amir of forty."[44] Surely, this allegation similarly applied to more than just a handful of Yalbughāwī amirs for December 1366!

In due course, the amir Asandamur al-Nāṣirī, left without a functional court position on this occasion, also managed to acquire for himself a more formally defined stake in the sultan's court, for in the accounts for the summer of 1367 he starts appearing in the top office of *atābak al-ʿasākir* (commander of the army), formerly executed by Yalbughā al-Khāṣṣakī.[45] This, however, had everything to do with the fact that by that summer, the amir Asandamur had succeeded in overcoming and eliminating these former Yalbughāwī associates of his, as well as other peers and contenders for influence and authority. More precisely, two further political conflicts, one in March and one in June 1367, enabled Asandamur to finish off the authority of any other "spokesman" and, indeed, to "acquire the status of his *ustādh* Yalbughā, managing the affairs of the regime, issuing the appointments and dismissals of its officials, and living in Yalbughā's residence at al-Kabsh."[46]

Clearly, and whatever the motives of each of those who stood up against Yalbughā in December 1366 were, it was amirs who took a leading role in this conflict and benefited most prominently from it afterwards. Moreover, as most sources did not fail to notice, most of these amirs—the "gang" of six in particular—were

of a group of arrested amirs to the prisons of Alexandria (al-Bayrūtī, fol. 4v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 4v; al-Maqrīzī, *Sulūk,* 3:139).

[43] Ṭaydamur, an amir of one hundred since 1363 and formerly *amīr silāḥ,* was transferred to the o -fice of *ustādār* (majordomo); Asanbughā, an amir of forty since 1365, was made the sultan's *lālā* (tutor); Qarātamur was made the sultan's *khāzindār* (treasurer) (al-Bayrūtī, fol. 4v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 4v; al-Maqrīzī, *Sulūk,* 3:139; Ibn Taghrībirdī, *Nujūm*, 11:41). For biographies of these amirs, see Ibn Taghrībirdī, *Manhal,* 7:39; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:456, 525–26. On the offices of *ustādār* and *khāzindār,* see the references in Van Steenbergen, *Order Out of Chaos,* 40–41, n. 66.

[44] Ibn Qāḍī Shuhbah, *Tārīkh,* 3: 326.

[45] See, e.g., al-ʿAynī, "ʿIqd," fol. 150; Ibn Taghrībirdī, *Nujūm*, 11:46; idem, *Manhal,* 2:440.

[46] Al-Maqrīzī, *Sulūk,* 3:141. On these conflicts, see Van Steenbergen, *Order Out of Chaos,* 161–62, 194.

of conspicuous Yalbughāwī signature; they had Yalbughā's patronage in common, and all "had been promoted amir by him."[47]

Surprisingly, perhaps, the latter rather enigmatic source quotation turns out to be extremely helpful in reconstructing the background of the December 1366 conflict. Indeed, almost every one of the above-mentioned amirs owed his last promotion to Yalbughā and his total re-organization of the regime's elites less than a year before!

At that time, in late February 1366, Yalbughā had managed—as mentioned at the beginning of this article—to remove one of the last remaining obstacles for his absolute pre-eminence, the amir Ṭaybughā al-Ṭawīl. After a violent confrontation outside Cairo between the supporters of both grandees, Ṭaybughā was sent to the prisons of Alexandria. As Ibn Kathīr put it, recounting how this "clash *(waqʿah)* between the amirs in Egypt" was conceived of in contemporary Damascus, "there was an enormous uproar *(khabṭah ʿaẓīmah)* in Egypt, during which the *amīr kabīr* Yalbughā managed to keep his strength, support, and backing."[48] Most importantly in the present context, Yalbughā's supporters were rewarded for their backing. Therefore, in early March 1366, after the arrest of dozens of Ṭaybughā's associates, Yalbughā appointed a host of new court officials, including the amir Ṭaydamur al-Bālisī, and at the same time he promoted two trusted fellows to the rank of amir of one hundred: Aqbughā al-Aḥmadī al-Jalab and Asandamur al-Nāṣirī.[49] In the case of Aqbughā, this was his very first appearance in the sources, suggesting that he was promoted to the regime's highest ranks from very humble origins, which was later explained as a result of "his belonging to Yalbughā's mamluks and of his having a privileged status with him."[50] Moreover, the sources describe how a few days later many mamluks and amirs were "all given a robe of honor and dressed with fur hats, upon which all came down from the Dār al-ʿAdl in the citadel [proceeding] to the Manṣūrīyah madrasah, in Cairo's Bayn al-Qaṣrayn, where they were made to swear, as is the custom [for the promotion of amirs]."[51] In fact, both al-Maqrīzī and Ibn Taghrībirdī list with remarkable and conspicuous detail the names of all amirs who were thus rewarded:

> On Monday 9 March 1366, 38 amirs were promoted, among whom [the following were made] amirs of forty: Aqbughā al-Jawharī, Arghūn al-Qashtamurī, Aynabak al-Badrī, ʿAlī al-Sayfī Kashlā (the *wālī* of

[51] Al-Maqrīzī, *Sulūk,* 3:118.

> Cairo), Ṭughāy Tamur al-ʿUthmānī, Alṭunbughā al-ʿIzzī, Qajmās al-Sayfī Ṭāz, Arghūn al-ʿIzzī Kunuk, Qarātamur al-Muḥammadī, Urūs Bughā al-Khalīlī, Ṭājār min ʿAwaḍ, Quṭlūbughā al-ʿIzzī, Aqbughā al-Yūsufī, Alṭunbughā al-Māridānī, Raṣlān al-Sayfī [Shaykhū] (who was established as *ḥājib* of Alexandria), ʿAlī ibn Qashtamur, Sūdūn al-Quṭluqtamurī, Quṭlūbughā al-Shaʿbānī, Ṭughāy Tamur al-ʿIzzī, and Muḥammad al-Tarjumān [al-Turkumānī]. The remainder [were made] amirs of ten; they were: Kakbughā al-Sayfī [Baybughā], Ṭanbak al-Azqī, Arghūn al-Aḥmadī, Arghūn al-Arghūnī, Sūdūn al-Shaykhūnī, Uzdamur al-ʿIzzī, Urūs al-Niẓāmī, Yūnus al-ʿUmarī, Durtbughā al-Bālisī, Ṭūr Ḥasan, Qarābughā al-Ṣarghitmishī, Ṭāz al-Ḥasanī, Qumārī al-Jamālī, Yūsuf Shāh, Ṭaqbughā al-ʿAlāʾī, Fīr ʿAlī, Qurqumās al-Ṣarghitmishī, and Ṭājār al-Muḥammadī.[52]

Comprehensive lists such as this one, with details one would normally only expect in the regime's administrative registers, are only rarely encountered in the era's chronicles.[53] In the case of this list, its survival is extremely fortunate, as it offers an unusual but insightful glimpse into the lower strata of the regime's military hierarchy and its socio-political allegiances. Many of the names mentioned here soon faded back into historiographical oblivion, a token of the distorting top-down view dominating the Mamluk narrative source material.[54] A handful of amirs, like Aqbughā al-Jawharī (1341–90), Aynabak al-Badrī (d. 1378), ʿAlī ibn Qashtamur (d. 1381), Arghūn al-Aḥmadī (d. 1374), and Sūdūn al-Shaykhūnī (d. 1396) were to surface again as leading characters in the 1370s and beyond, and they are encountered here for the very first time.[55] Finally, as seen above and similar to their fortunate high-

[52] Ibid., 3:117–18; also Ibn Taghrībirdī, *Nujūm*, 11:33–34. This round of promotions is also referred to in Ibn Khaldūn, *Kitāb al-ʿIbar,* 5:455. No contemporary accounts of this conflict and its aftermath have survived, as extant fragments from the detailed chronicles of al-Bayrūtī and Ibn Duqmāq only start with the report for the hijri year 768 (starting in September 1366). Ibn Duqmāq's summary world history only mentions the arrest of "about twenty amirs," but not their replacement (Ibn Duqmāq, *Al-Jawhar al-Thamīn,* 413).

[53] On the administrative registers, large parts of which consisted of the detailed listings of the names of *iqṭāʿ* holders, i.e., primarily of amirs, see Shihāb al-Dīn al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab* (Cairo, 1931–77), 8:200–13. For other examples of similar extant lists, see below, for the discussion of the June 1367 list and for the reference to later lists (nn. 69, 108).

[54] No further references in any of the contemporary sources were found to any of the following twelve amirs: ʿAlī al-Sayfī Kashlā, Arghūn al-ʿIzzī Kunuk, Raṣlān al-Sayfī, Sūdūn al-Quṭluqtamurī, Ṭughāy Tamur al-ʿIzzī, Muḥammad al-Tarjumān, Ṭūr Ḥasan, Qarābughā al-Ṣarghitmishī, Ṭāz al-Ḥasanī, Ṭaqbughā al-ʿAlāʾī, Fīr ʿAlī, and Ṭājār al-Muḥammadī.

[55] Aqbughā would serve as a governor in several Syrian cities in the late 1370s and 1380s (Ibn Ḥajar, *Durar,* 1:391; Ibn Taghrībirdī, *Manhal,* 2:474–76); Aynabak was party to the rebellion against al-Ashraf Shaʿbān in 1377 and briefly held power shortly thereafter (Ibn Taghrībirdī, *Manhal,* 3:221–

ranking colleagues Ṭaydamur, Aqbughā, and Asandamur, there was a last group, including the fresh amirs of forty, Qajmās al-Ṭāzī and Qarātamur al-Muḥammadī, and the new amirs of ten, Uzdamur al-ʿIzzī and Qarābughā al-Ṣarghitmishī, whose names were to resurface much more quickly and prominently than anyone at the time might have expected.[56] Most importantly, it becomes clear from all this that most of those Yalbughāwī amirs who instigated the December 1366 conflict not only shared the fact that they were all promoted thanks to Yalbughā's patronage, but also that this had only happened very recently, in March 1366.

Moreover, the other rather striking feature common to those amirs who were opposing their patron in December 1366 is that despite such patronage none of them (apart from Yalbughā's mamluk Aqbughā) really had Yalbughā as his *ustādh* or original mamluk master, and that none of them therefore technically was a true member of the Yalbughāwīyah.[57] Thus, Asandamur's mamluk origins lay with an otherwise unknown Qalāwūnid, Mūsá ibn al-Qardamīyah ibn al-Nāṣir Muḥammad, from whom sultan al-Nāṣir Ḥasan had acquired him, turning him into one of his own mamluks (hence his *nisbah* al-Nāṣirī); only after the latter's deposition in 1361 had he been added to the mamluks of Yalbughā, who therefore technically was no more than Asandamur's patron or *makhdūm*, as well as his Nāṣirī peer *(khushdāsh),* instead of his master or *ustādh*.[58] Furthermore, as their *nisbah*s suggest, the other aforementioned "gang" members Qajmās al-Ṭāzī and Qarābughā al-Ṣarghitmishī originally had been mamluks with the great political rivals of the early 1350s, the amirs Sayf al-Dīn Ṭāz al-Nāṣirī (d. 1362) and Sayf al-Dīn Ṣarghitmish al-Nāṣirī (d. 1358) respectively.[59] Finally, also in the case of most of the other known partici-

24; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:558); ʿAlī was an amir of one hundred and court official between 1377 and 1381 (Ibn Ḥajar, *Durar,* 3:96); the same goes for Arghūn, but from 1368 until 1374 (Ibn Ḥajar, *Durar,* 1:351), and for Sūdūn, between 1381 and 1394 (Ibn Taghrībirdī, *Manhal,* 6:104–9; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:596–97).

[56] Apart from Qajmās, Qarātamur, Uzdamur, and Qarābughā, whose whereabouts have been me - tioned, there were the amirs Arghūn al-Qashtamurī (d. 1368), who was an amir of one hundred for a few months in 1367 (Ibn Ḥajar, *Durar,* 1:353–54); Ṭughāy Tamur al-ʿUthmānī (d. 1377), again amir of forty and then court official from 1368 onwards (al-Maqrīzī, *Sulūk,* 3:228, 258, 161, 183); Ṭājār min ʿAwaḍ, arrested with Qarātamur al-Manṣūrī in June 1367 (al-Maqrīzī, *Sulūk,* 3:143); Kakbughā al-Sayfī, briefly promoted amir of forty and court official in the summer of 1368 (al-Bayrūtī, fol. 40r; Ibn Duqmāq, "Nuzhat al-Anām," fol. 42v); and Ṭanbak (also referred to as Ṭanaybak) al-Azqī (d. 1369), similarly an amir of forty and court official, between 1368 and 1369 (al-Maqrīzī, *Sulūk,* 3:161, 187).

[57] On the bond between mamluks and their *ustādh* (coined "ustādhīyah"), see Van Steenbergen, *Order Out of Chaos,* 88–92; for the classic study on the subject, see David Ayalon, *L'Esclavage du Mamlouk* (Jerusalem, 1951).

[58] Ibn Ḥajar, *Durar,* 1:386.

[59] Biographical information on Qajmās and Qarābughā is very obscure, since they were not deemed important enough to be awarded individual entries in any of the era's biographical dictionaries, or

pating amirs in the December 1366 rebellion and its aftermath, such as Uzdamur al-ʿIzzī, Asanbughā al-Qawṣūnī, and Ṭaydamur al-Bālisī, it is attested that they conspicuously shared similarly twisted Yalbughāwī origins.[60]

Interestingly, the same may also be inferred for most of those on the March 1366 list of Yalbughā's newly promoted amirs. In most cases, specific information on an amir's origins remains wanting, and linking the various *nisbah*s in that list to those origins, as could be done for Qajmās and Qarābughā, quickly turns into an extremely hazardous exercise.[61] Nevertheless, such great variety already suggests that for the majority, just as for Qajmās and Qarābughā, their entry into Mamluk society has to be situated beyond the confines of Yalbughā's household, most probably in the secondary households of preceding amirs of lower profile, rank, or status. Nevertheless, for a handful of these amirs, information on their mamluk origins has been preserved, indeed again confirming, as in the case of Uzdamur al-ʿIzzī, such a non-Yalbughāwī background. It is more precisely the great households of Yalbughā's political predecessors from the 1350s that emerge as the cradles of the latter amirs' careers, most notably those set up by Qalāwūnid magnates like Baybughā Rūs al-Nāṣirī (d. 1353), Shaykhū al-ʿUmarī al-Nāṣirī (ca. 1303–57), the aforementioned Ṣarghitmish, and, once again, the Qalāwūnid sultan who managed to free himself from those magnates' reins in the late 1350s, Yalbughā's own master al-Nāṣir Ḥasan.[62]

obituaries in any of the era's chronicles. Their names are therefore all there is to reconstruct some biographical information (on Mamluk *nisbah*s and their uses, see D. Ayalon, "Names, Titles and 'Nisbas' of the Mamlūks," *Israel Oriental Studies* 5 (1975): 189–232, esp. 213–23).

[60] Uzdamur's *ustādh* was the amir Baktamur al-Muʾminī al-Wishāqī (d. 1370) (Ibn Ḥajar, *Durar,* 1:355); Asanbughā was linked to the mamluk corps of al-Nāṣir Muḥammad ibn Qalāwūn (Ibn Qāḍī Shuhbah, *Tārīkh,* 3:456); Ṭaydamur's precise mamluk origins remain unknown, but the fact that he is said to have been "transferred in the executive offices before he became an amir of one hundred and commander of one thousand in the year 65 (1363)" suggests that his origins similarly lay beyond the Yalbughāwīyah (Ibn Qāḍī Shuhbah, *Tārīkh,* 3:525)

[61] These many *nisbah*s, derived from either the title *(laqab)* or the proper name *(ism)* of a mamluk's master (or occasionally of his slave dealer) (see Ayalon, "Names, Titles, and Nisbas," 213), are: al-Jawharī, al-Qashtamurī, al-Badrī, al-Kashlāwī, al-ʿUthmānī, al-ʿIzzī, al-Muḥammadī, al-Khalīlī, al-Yūsufī, al-Quṭlūqtamurī, al-Niẓāmī, al-Bālisī, al-Ḥasanī, al-Jamālī, al-Shaʿbānī, al-Azqī, al-Aḥmadī, al-Arghūnī, and al-ʿAlāʾī. They are all either too common or too vague to allow for any positive identification of the masters to whom they were referring.

[62] Three amirs, Raslān al-Sayfī, Yūnus al-ʿUmarī, and Sūdūn al-Shaykhūnī, may be positively linked to the household of Shaykhū al-ʿUmarī (al-Bayrūtī, fol. 40v; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:596–97; Ibn Taghrībirdī, *Nujūm*, 11:33; idem, *Manhal,* 6:104–9); apart from Qarābughā, Qurqumās' *nisbah* also unequivocally suggests that he originated in Ṣarghitmish's mamluk corps; Kakbughā al-Sayfī, also referred to as al-Sayfī Baybughā and al-Baybughāwī, originated most probably from among the mamluks of Baybughā Rūs (al-Bayrūtī, fol. 40r; al-Maqrīzī, *Sulūk,* 3:161, 223); Alṭunbughā al-Māridānī was said to have been a mamluk of al-Nāṣir Ḥasan (Ibn Qāḍī Shuhbah, *Tārīkh,* 3:417–18); and, finally, the amir Arghūn al-Aḥmadī is suggested to have had a career of some sort predating

Apparently, in the 1360s there was a considerable pool of veteran mamluks available, stemming from a variety of high- and low-profile households that had dominated the preceding decades, but that all had ceased to exist one way or another due to one of the several purges of Qalāwūnid magnates in the 1340s and '50s, or that of al-Nāṣir Ḥasan in 1361.[63] While by the 1360s their masters had thus disappeared and their direct access to the regime's resources and to rank and status had therefore been blocked, these mamluks were obviously still around, undoubtedly looking for alternative avenues of subsistence and socio-political participation. In later times, the standard pattern for this would have been their re-employment in a secondary unit of the sultan's mamluks.[64] In the fourteenth century, however, such a formalized procedure is not yet attested, and considering the ephemeral status of the Qalāwūnid sultans of the 1360s, it is easy to imagine how at that time they ended up in the fresh but rapidly expanding corps of this decade's new magnates, including Yalbughā's, which were only being established in the wake of the ascendance of the latter in the late 1350s and early 1360s.[65] The fact that the numerical strength of these leaderless mamluks was supposedly still substantial by this time, stemming from regiments numbering from a handful to many hundreds of mamluks,[66] coupled with their status as "time-tested and battle-tried veterans"—as the sultan Mu'ayyad Shaykh (1412–21) was to explain his employment of similar uprooted mamluks in his service half a century later[67]—undoubtedly led their new masters to welcome them with open arms. They must have seemed extremely useful to these 1360s magnates in compensating for the evident lack of military and political experience in their own relatively fresh mamluk corps. These qualities were then clearly put to good use by these magnates to settle the new scramble for pre-eminence between 1361 and 1366, compensating those veteran mamluks for their support with promotions to military rank and status. Such is clearly borne out by one of the eventual outcomes of that scramble, the aforementioned March 1366 list naming Yalbughā's supporters who were thus compensated. That this prag-

Yalbughā by the statement that "he was transferred [in the services] until Yalbughā appointed him [in 1363] in the sultan's service" (Ibn Ḥajar, *Durar,* 1:351; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:438). On these Qalāwūnid magnates and their whereabouts in the 1350s, see Van Steenbergen, *Order Out of Chaos,* 153–58.

[63] See Van Steenbergen, *Order Out of Chaos,* 153–58.

[64] On this fifteenth-century fate of an amir's mamluks after his disappearance from the Mamluk scene, see David Ayalon, "Studies on the Structure of the Mamluk Army, I," *Bulletin of the School of Oriental and African Studies* 15 (1953): 204, 220–22, referring to al-Ẓāhirī; al-Ẓāhirī, *Zubdah,* 116.

[65] See Van Steenbergen, "The Amir Yalbughā al-Khāṣṣakī."

[66] See Van Steenbergen, *Order Out of Chaos,* 89.

[67] Ibn Taghrībirdī, *Nujūm*, 14:112; quoted here from a paraphrase of this text in Ayalon, "Studies–I," 220.

matic utilization and compensation of veteran mamluks in the 1360s was a general policy, practiced also by patrons other than Yalbughā, may be further derived from the names that were mentioned at that same occasion for the arrested supporters of Yalbughā's opponent Ṭaybughā al-Ṭawīl, which hint at most of these associates' variegated pre-1360s origins. "[Ṭaybughā] was caught, as were his associates among the amirs, including Arghūn al-Isʿardī, Urūs al-Maḥmūdī, Kūkandāy, brother of Ṭaybughā al-Ṭawīl, Jariktamur al-Sayfī Manjak, Arghūn min ʿAbd Allāh, Jumaq al-Shaykhūnī, Kilim, brother of Ṭaybughā al-Ṭawīl, Tulak, brother of Baybughā al-Ṣāliḥī, Aqbughā al-ʿUmarī al-Bālisī, Jirjī ibn Kūkandāy, Uzramuk min Muṣṭafā, and Ṭashtamur al-ʿAlāʾī."[68]

Even after Yalbughā's removal and the ascent to power of veteran mamluks from his corps in December 1366, this pool continued to prove extremely apposite and appealing to these new patrons, who lacked more than ever the time and means to set up proper corps that could be of any value in the power struggles that immediately ensued. Eventually, as mentioned, by June 1367 the veteran amir Asandamur al-Nāṣirī emerged victorious, and the radical change he once more is reported to have instilled in Egypt's military hierarchy on this occasion—rewarding his supporters—reflects again the similarly variegated and predominantly pre-1360s, non-Yalbughāwī background of the latter:

> On 10 June 1367, a robe of honor was bestowed upon the following [newly promoted] amirs *muqaddam*s *alf*: Uzdamur al-ʿIzzī Abū Daqn, appointed *amīr silāḥ,* Jariktamur al-Sayfī Manjak, appointed *amīr majlis,* Alṭunbughā al-Yalbughāwī, appointed *raʾs nawbah kabīr* [and promoted] from the rank of amir of ten *(min al-ʿashrah)* [to the rank of *muqaddam alf*], Quṭlūqtamur al-ʿAlāʾī, [appointed] *amīr jāndār,* Sulṭān [Shāh] ibn Qārā, [appointed] *ḥājib thānī,* Bayram al-ʿIzzī, [appointed] *dawādār* [and promoted to the rank of] *muqaddam alf* from the rank and file *(min al-jundīyah),* and he was granted the *iqṭāʿ* of Ṭughāytamur al-Niẓāmī, as well as all the horses, textiles, mamluks, money, grain, etc., that had been the latter's. The following were made members of the sultan's *jūkāndārīyah* ("masters of the polo mallet"): Qarāmish al-Ṣarghitmishī, Mubārak al-Ṭāzī, and Īnāl al-Yūsufī. Tulaktamur al-Muḥammadī was confirmed as *khāzindār,* as usual, and Bahādur al-Jamālī was made *shādd al-*

[68] Ibn Taghrībirdī, *Nujūm*, 11:31; also listed with slight variations in al-Maqrīzī, *Sulūk,* 3:116–17. For most of these twelve amirs, any further prosopographical information again remains wanting; only the pre-1366 whereabouts of Urūs (d. 1373) and Jariktamur (d. 1375) are known, originating indeed in the corps of al-Nāṣir Ḥasan and of the long-standing amir Manjak al-Yūsufī (ca. 1315–75), respectively (Ibn Qāḍī Shuhbah, *Tārīkh,* 3:438, 490); additionally, it may be safely assumed that Jumaq's *nisbah* indicates that he stemmed from the household of the amir Shaykhū (d. 1357).

dawāwīn, instead of Khalīl ibn ʿArrām. Khalīl ibn Qawṣūn was offered the rank of *muqaddam alf,* and Qunuq al-ʿIzzī and Arghūn al-Qashtamurī were [also] granted the rank of *muqaddam alf*. . . . Muḥammad ibn Ṭayṭaq al-ʿAlāʾī, servant of Asandamur al-Nāṣirī, was granted a rank of *muqaddam alf*. The following were promoted to the rank of amir of forty by the sultan: Arghūn al-Muḥammadī al-Ānūkī al-Khāzin, Buzlār al-ʿUmarī, Arghūn al-Arghūnī, Muḥammad ibn Ṭaqbughā al-Mājārī, Bākīsh al-Sayfī Yalbughā, Sūdūn al-Sayfī Shaykhū, Aqbughā Āṣ al-Shaykhūnī, Kubak al-Ṣarghitmishī, Julbān al-Saʿdī, Īnāl al-Yūsufī, Kumushbughā al-Ṭāzī, Qumārī al-Jamālī, Baktamur al-ʿAlamī, Arslān Khujā, Mubārak al-Ṭāzī, Maliktamur al-Kashlāwī, Asanbughā al-ʿIzzī, Quṭlūbughā al-Ḥalabī, and Maʾmūr al-Qalamṭāwī. [The following were promoted to] the rank of amir of ten: Alṭunbughā al-Maḥmūdī, Qarābughā al-Aḥmadī, Kizil al-Arghūnī, Ḥājjī Bak ibn Shādī, ʿAlī ibn Baktāsh, Rajab ibn Khiḍr, and Ṭayṭaq al-Rammāḥ.[69]

[69] Al-Bayrūtī, fols. 5v–6. With only slight variation, indicating again an obvious textual interd - pendence, in Ibn Duqmāq, "Nuzhat al-Anām," fols. 5v–6. Very similar listings are also found in al-Maqrīzī, *Sulūk,* 3:144–45; Ibn Taghrībirdī, *Nujūm*, 11:44–45. Also present in al-ʿAynī, "ʿIqd," fol. 149, but in a summary format (referring only to the first three high-ranking amirs and their new positions). On the court offices of *amīr silāḥ, raʾs nawbah kabīr, amīr jāndār,* and *khāzindār,* see the references in Van Steenbergen, *Order Out of Chaos,* 40–41, nn. 65 and 66; on the secondary court positions of *ḥājib thānī, shādd al-dawāwīn,* and *jūkāndār,* see al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 4:22, 5:458; al-Ẓāhirī, *Zubdah,* 114–15.

[This] June 1367 list indeed looks very similar to the March 1366 list as far as the diverse, pre-1360s background of the majority of these amirs is concerned. Both lists have many different pre-1360 *nisbah*s in common (besides the most conspicuous and suggestive *nisbah*s al-Ṣarghitmishī, al-Ṭāzī, and al-Shaykhūnī, these are al-Qashtamurī, al-Kashlāwi, al-ʿIzzī, al-Muḥammadī, al-Jamālī, al-Aḥmadī, al-Arghūnī, and al-ʿAlāʾī); they moreover also share the amirs Uzdamur al-ʿIzzī, Arghūn al-Arghūnī, Sūdūn al-Shaykhūnī, Qumārī al-Jamālī, and Jariktamur al-Sayfī Manjak, whose veteran status has been discussed before. Apart from all this, the origins for six more amirs on this list can moreover be positively located in preceding, vanished households; they are Bayram al-ʿIzzī (a former mamluk of the amir ʿIzz al-Dīn Tuqtay al-Nāṣirī [1319–58] who was now not just granted a high rank, but also the household means to perform that rank's demands [see Ibn Ḥajar, *Durar,* 1:514; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:327]), Mubārak al-Ṭāzī (as his *nisbah* indicates, he stemmed from the household of the aforementioned Qalāwūnid magnate Ṭāz al-Nāṣirī [see Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr fī Tārīkh,* ed. M. ʿAbd al-Muʿīd Khān (Beirut, 1986), 1:287], Bahādur al-Jamālī (whose mamluk origins went back to the household of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn [Ibn Ḥajar, *Durar,* 1:496]), Khalīl ibn Qawṣūn (son of the illustrious Qawṣūn al-Nāṣirī [d. 1342], who made a career in the reign of al-Nāṣir Ḥasan [Ibn Taghrībirdī, *Manhal,* 5:280]), Arghūn al-Muḥammadī al-Ānūkī (as his *nisbah* indicates, he had been a mamluk of Ānūk ibn Muḥammad ibn Qalāwūn [d. 1340] [Ibn Qāḍī Shuhbah, *Tārīkh,* 3:489]), and Buzlār al-ʿUmarī (a former mamluk of al-Nāṣir Ḥasan [Ibn Ḥajar, *Durar,* 1:476; Ibn Taghrībirdī, *Manhal,* 3:361]). In all, this list of 39 beneficiaries of the June 1367 round of promotions still only mentions

Nevertheless, the employment of veteran mamluks also entailed some serious disadvantages. As suggested by Ibn Taghrībirdī on a similar, but much later situation, "they are as nothing, for they generally follow the majority; none of them is tied to any particular ruler, but they serve whoever happens to ascend the throne much in the manner of the popular dictum: 'Whosoever marries my mother, to him I cry: "O my father."'"[70]

The pragmatic, opportunist, and second-hand nature of the ties that bound most of these veteran mamluks and amirs to their new households seriously conditioned their loyalty to their patrons. Most importantly, new opportunities and a change of fortune were bound to affect those ties. Thus, one might speculate, there was little to prevent some from trying their luck against Yalbughā in December 1366, when differences of opinion on the treatment of his mamluks were emerging and an opportunity arose near Giza to attack him by surprise. Certainly, most amirs at first decided to join forces with Yalbughā to quell a rebellion that only a handful of them had started anyway and that seemed too remote and isolated to succeed. There even were a handful of rebellious amirs who regretted their initial actions against Yalbughā and who still managed to cross over to Cairo, including "some of his mamluks whom he had made amir, like Aqbughā al-Jawharī, Kumushbughā, and Yalbughā Shuqayr."[71] But when the rebels managed to involve the sultan and, quite unexpectedly, to return to the citadel with him and turn the conflict's tide, there similarly was little to prevent the great majority of amirs from changing sides, so that sources observed how eventually: "Yalbughā's associates slipped away, batch after batch, and Yalbughā was forced to flee. . . . He mounted his horse and left for his residence at al-Kabsh . . . while the common people were making fun of him and were calling him names, all the way until he reached his residence."[72]

four genuine members of the Yalbughāwīyah (Alṭunbughā al-Yalbughāwī, Īnāl al-Yūsufī, Bākīsh al-Sayfī Yalbughā, and Maʾmūr al-Qalamṭāwī [on their unambiguous Yalbughāwī origins, see Ibn Taghrībirdī, *Manhal,* 3:70, 190; idem, *Nujūm*, 12:122; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:362, 3:327; Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Beirut, 1992), 2:320]).

[70] Ibn Taghrībirdī, *Extracts from Abû 'l-Maḥâsin ibn Taghrî Birdî's Chronicle Entitled Ḥawâdith ad-Duhûr fî Madâ 'l-Ayyâm wash-Shuhûr*, ed. William Popper, University of California Publications in Semitic Philology, vol. 8 (Berkeley, 1930–42), 3:443; translation quoted from Ayalon, "Studies–I," 220.

[71] See al-Bayrūtī, fol. 3r; Ibn Duqmāq, "Nuzhat al-Anām," fol. 3r; al-ʿAynī, "ʿIqd," fol. 145. Aqbughā was a member of the Yalbughāwīyah (see Ibn Taghrībirdī, *Manhal,* 2:474), as Kumushbughā was also said to have been, though his mamluk origins really lay elsewhere (see al-Sakhāwī, *Ḍawʾ,* 6:230 "the son of the lord of Ḥamāh had bought him when he was a young boy; he raised him and then presented him to al-Nāṣir Ḥasan; after Ḥasan's murder Yalbughā al-ʿUmarī took him and made him a *raʾs nawbah* with him"). No further information has survived on Yalbughā Shuqayr.

[72] Al-Maqrīzī, *Sulūk,* 3:135–36. Variant reading in al-Bayrūtī, fol. 3v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 3v.

JUNIOR MAMLUKS

While a composite group of freshly promoted veterans clearly took the lead in the December 1366 rebellion and its aftermath, this surely does not invalidate the assertion most commonly found, namely that it was Yalbughā's non-promoted mamluks who stood up against their master. Most importantly, all source descriptions of the conflict agree that it was mamluks who bore the brunt of the action, including Yalbughā's eventual lynching; as suggested above, Yalbughā's harsh disciplining undoubtedly convinced many of them to go along with those bold and defiant amirs and act against their master.

But as with the amirs above, and even more so in this context of Yalbughā's numerous mamluks, the question that remains to be answered is whether such an unusually insubordinate attitude was similarly adopted by all of them at the same time, for similar reasons, or in similar fashion. In fact, a detailed analysis of the sources' representations of the role those mamluks really played in the December 1366 conflict and its aftermath adds a number of significant nuances to the overall picture.

After Yalbughā had barely escaped the amirs' attack while he was encamped at Giza, al-Maqrīzī details the reaction of his mamluks in particular as follows:

> When they learned about Yalbughā's escape, they announced that "whoever wants his *makhdūm* Yalbughā should follow him, and who wants the sultan should stay with us." So a group *(ṭāʾifah)* followed Yalbughā, while most of them remained behind. The latter then hastened towards those who had defected from them and they overcame and enchained them, dividing everything they had brought with them among themselves.[73]

Clearly, not all of Yalbughā's mamluks had been equally ill-disposed towards their master at the start of the conflict, at least according to the later historian al-Maqrīzī. Furthermore, this author suggested in a similar vein that thereafter "a group of his intimates" *(nafar min khāṣṣatihi)* escaped to Cairo with him and that he then managed to rally "amirs and rank-and-file soldiers" *(min al-umarāʾ wa-al-ajnād)* around him in Cairo, spending the night with this "troop of his" *(bi-jamʿihi)* in his residence at al-Kabsh.[74]

Suggestions like these, that at least some of Yalbughā's mamluks maintained their loyalty, certainly gain credibility when Yalbughā's manifest and impressive resilience in the hours and days following the outbreak of the conflict—includ-

[73] Al-Maqrīzī, *Sulūk,* 3:132.

[74] Ibid., 3:131, 132. Very tellingly, Ibn Taghrībirdī explains the enigmatic "a group of his intimates" by clarifying that they were "his intimates from among his mamluks" (Ibn Taghrībirdī, *Nujūm*, 11:36).

ing the enthronement of a new sultan—is taken into consideration. In the volatile Mamluk political climate of this era, where a "shortage of men" was considered "the worst possible merchandise" *(qillat al-rijāl akhass biḍāʿah),*[75] this would have been extremely difficult for anyone to effect without any numerically persuasive support from one's own mamluk regiment.

Finally, the same consideration similarly lends validity and weight to al-Maqrīzī's detailed representation of the conflict's final hours on Saturday 12 December 1366. Whereas, as referred to above, most sources flatly claim that Yalbughā's end was drawing nigh when all the amirs fled his party and "there was no one left with him,"[76] al-Maqrīzī adds that also "his mamluks fled one after the other *(farra mamālīkuhu shayʾan baʿda shayʾin)*" and that in spite of this "a mere hundred horsemen yet remained with him *(wa-lam yabqa maʿahu illā dūna al-mīʾah fāris)*" until he got arrested.[77]

It may therefore be convincingly argued that in December 1366 Yalbughā was not just opposed by, amongst others, mamluks who all identified themselves as members of his Yalbughāwīyah, but that at the same time a substantial number of the rank and file maintained their loyalty, and that the latter group undoubtedly equally included such Yalbughāwīyah. Only in the course of the four days that this conflict lasted, therefore, and in particular when al-Ashraf Shaʿbān decided to join the rebels' cause and managed to return to Cairo, did Yalbughā's chances to emerge victorious evaporate and did most of his supporters from the Yalbughāwīyah leave him, as did the amirs, deciding the conflict to the detriment of their patron.

Unlike those promoted veterans, however, Yalbughā's non-promoted mamluks did not benefit at all from the conflict's outcome, whatever their initial stand. Actually, the precipitate fall of their patron may have done them more harm than good, for with his decapitation, they may have solved the alleged problem of their maltreatment, but at the same time a new, much bigger problem appeared. Since Yalbughā, as their employer, had been the guardian of their access to income and further resources, their killing of him, almost in a moment of insanity, had in fact deprived them of legitimate leadership, social status, and secure income. They, as it were, had severed the links that had embedded them within Mamluk society and that had offered them warrants for their own future. There is a hint at a new round of promotions a few weeks after Yalbughā's death, when al-Maqrīzī, just as in March 1366, describes how "on Thursday 21 January 1367, the group of amirs came down from the citadel [proceeding] to the Manṣūrīyah madrasah, where they were made

---

[75] Shams al-Dīn al-Shujāʿī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Ṣāliḥī wa-Awlādihi*, ed. B. Schäfer (Wiesbaden, 1977), 1:173; Van Steenbergen, *Order Out of Chaos,* 91.

[76] Al-Bayrūtī, fol. 3v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 3v; al-ʿAynī, "ʿIqd," fol. 146; Ibn Taghrībirdī, *Nujūm*, 11:39.

[77] Al-Maqrīzī, *Sulūk,* 3:135, 136.

to swear and [where] they were dressed with the fur hats, as is the custom [for the promotion of amirs]."[78] Unfortunately, in this case no names are mentioned. Yet, considering the aforementioned pattern of promotions on similar occasions, as well as the corps' subsequent history, only a handful of Yalbughā's mamluks, if any at all, may have benefited from this round.

In the months after December 1366, therefore, the majority of Yalbughā's non-promoted mamluks were forced to try to find ways to overcome a certain destiny on the edge of Mamluk society, either spreading terror in Cairo's streets and looting what they could no longer legitimately acquire, or seeking new employment and hiring their services out to new patrons, hoping for suitable rewards.[79] Thus, to mention but one example, immediately after the conflict, on 16 December 1366, one close companion of Yalbughā, the amir Aynabak al-Badrī, avoided being arrested and obtained rehabilitation, not just by "sending a lot of money to the amirs," but also by "offering to every one of [Yalbughā's] mamluks 1000 silver dirhams, which at that time was equivalent to more than 50 *mithqāl* in gold," as a token of their aggressive, fearful reputation in those days, but also of the opportunities their precarious position offered.[80]

Eventually, the one who according to all sources best managed to make use of those opportunities was the aforementioned veteran Asandamur al-Nāṣirī, who succeeded more than any of his peers in portraying himself as a credible substitute for the Yalbughāwīyah mamluks' murdered *ustādh* and patron. Hence, by early June 1367, when this evolution of re-grouping and re-employment came full circle, Yalbughā's mamluks are all presented as playing a key role in Asandamur's aforementioned ousting of his veteran peers.[81]

Now, it has already been established that an important part within those Yalbughāwīyah ranks was reserved for mamluks of veteran status, who either gained rank and status in the course of the years 1366 and 1367, or were forced once again to seek new employment after December 1366, in both cases surely losing their Yalbughāwī-status for reasons of irrelevance. What is very interesting in the same context, however, is that source reports for what happened after the December 1366 rebellion hint with increasing explicitness at a crucial common identifying feature for those Yalbughāwīyah who continued to be labeled as

[78] Ibid., 3:140.

[81] See al-Bayrūtī, fol. 5r–v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 5r–v; Ibn Khaldūn, *Kitāb al-ʿIbar,* 5:457; al-ʿAynī, "ʿIqd," fols. 148–49; al-Maqrīzī, *Sulūk,* 3:142–43; Ibn Taghrībirdī, *Nujūm,* 11:42.

such, even after their *ustādh*'s demise. In his account of the December 1366 rebellion, al-Maqrīzī, in fact, already defined the rebellious mamluks very precisely as Yalbughā's "*ajlāb* mamluks *(mamālīkuhu al-ajlāb),*" even clarifying at one point that their number had been no less than 1,800.[82] To my knowledge, this is in fact the very first time the sources generically apply the term "*ajlāb,*" which is well known from fifteenth-century Mamluk history to denote a royal corps' last import of mamluks, but quite unusual for preceding periods. Al-Maqrīzī, however, is the only one among the chroniclers to use the term in the context of this December 1366 rebellion, which suggests that it may well be an anachronism from the first half of the fifteenth century, when this historian was writing his chronicle and when use of the term, especially in the context of multifarious local problems with the sultan's junior mamluks, indeed became ubiquitous in the era's historiography.[83]

Nevertheless, also in his description of Yalbughā's mamluks' continued search for alternative patronage after December 1366, al-Maqrīzī persists in frequently applying the term "*ajlāb*."[84] Moreover, from the accounts on early June 1367 onwards, when this search ended in Asandamur's employing these mamluks' services to impose his authority, the term "*ajlāb*" gradually comes to be used by all sources alike. At first, in the course of those June 1367 actions of Asandamur against his peers, the contemporaries al-Bayrūtī and Ibn Duqmāq, and Ibn Taghrībirdī with them, still used the common denominator "Yalbughā's malicious mamluks *(mamālīk Yalbughā al-ashrār)*" for those whom al-Maqrīzī grouped in the same context under the term "*ajlāb.*"[85] After that point in the sources' historical chronologies, however, "*ajlāb*" seems the appropriate term, applied by all sources alike to denote Asandamur's new rank-and-file supporters who continued to prove extremely difficult to control.[86] Even Ibn al-Furāt (1134/5–1405), for instance, mentions how eventually "al-Ashraf Shaʿbān was victorious over the *'ajlāb'* mamluks of the amir Yalbughā al-Khāṣṣakī *(al-ajlāb mamālīk al-amīr Yalbughā al-Khāṣṣakī)*

[85] Al-Bayrūtī, fol. 5r; Ibn Duqmāq, "Nuzhat al-Anām," fol. 5r; Ibn Taghrībirdī, *Nujūm*, 11:42.

[86] Al-Bayrūtī, fol. 40r; Ibn Duqmāq, "Nuzhat al-Anām," fol. 40r; Ibn Khaldūn, *Kitāb al-ʿIbar,* 5:457, 458, 472; al-ʿAynī, "ʿIqd," fol. 152; Ibn Taghrībirdī, *Nujūm*, 11:47.

and arrested the amir Asandamur al-Nāṣirī."[87] Another contemporary, al-Nuwayrī al-Iskandarānī (d. 1372), also used this term in a similarly telling way in his passing reference to these events of late 1367: "the common people had come to the aid of the sultan al-Malik al-Ashraf Shaʿbān during the operation of the *ajlāb* mamluks *(fī ḥarakat al-mamālīk al-ajlāb)* . . ., when they intended to cause trouble for the sultan, in conjunction with the amir Asandamur al-Khāṣṣakī. . . . But the common people were mobilized, killing the *ajlāb* and making them bite the dust."[88]

In a very curious and puzzling addendum, the same author even explains such disturbing events by claiming that upon examination of these defeated "*ajlāb*," it turned out that "they had their foreskins intact and were not circumcised *(wa-hum ghulf bi-ghayr khitān),* by which it became known that they were Christians who kept away from the true faith *(naṣārá baʿīdūn ʿan al-īmān)*."[89]

It has been convincingly argued that one should be very wary of treating al-Nuwayrī al-Iskandarānī and his literary compendium as a historical source, for its key event of the Alexandrian crusade as much as for any other contemporary occurrence.[90] This "islamicized" and at once also surprising explanation for the turmoil of the year 1367 certainly warrants this kind of historiographical wariness. At the same time, however, it is doubtful that such an explanation has no bearing whatsoever on the historical reality of the late 1360s, during which its author was living and writing; it should certainly not be denied that in essence it represents in one way or another a version of the story of these "*ajlāb*" as it was being told and retold in contemporary Alexandria.[91] At the very least, al-Nuwayrī's remark hints at the extremely negative perception of these "*ajlāb*" by contemporaries by the time he was writing up his work.[92] Furthermore, in conjunction with the other contem-

[87] Nāṣir al-Dīn Muḥammad ibn ʿAbd al-Raḥīm Ibn al-Furāt, *Tārīkh Ibn al-Furāt,* ed. Qusṭanṭīn Zurayq and Najlā ʿIzz al-Dīn (Beirut, 1936–42), 9:319.

[88] Al-Nuwayrī al-Iskandarānī, *Kitāb al-Ilmām,* 6:18.

[89] Ibid.

[90] Weintritt, *Formen spätmittelalterlichen islamischer Geschichtsdarstellung*.

[91] Furthermore, in the context of literary *topoi,* there seems to exist an intriguing degree of similarity between this contemporary assessment of the "*ajlāb*" as Christians and reports by European travellers to the Mamluk sultanate that portray all mamluks as Christian renegades (cf. Ulrich Haarmann, "The Mamluk System of Rule in the Eyes of Western Travellers," *MSR* 5 (2001): esp. 6–16).

[92] Quite intriguingly, Robert Irwin, in his article "Mamluk Literature" (*MSR* 7, no. 1 [2003]: 12), stated that the term *ajlāb*, or rather its variant *julbān,* already occurred earlier, during the reign of al-Nāṣir Ḥasan, in the context of which it would have been used by the "jack-of-all-literary-trades" Shihāb al-Dīn Ibn Abī Ḥajalah (1325–75) in his "account of the revolt of the *julbān* (newly imported mamluks) against that sultan." Closer inspection, however, reveals that this account, ominously entitled "Dawr al-Zamān fī Ṭaḥn al-Julbān," does not concern the reign of that sultan, but indeed, as would be expected from the argument presented here, it deals with Yalbughā's junior mamluks and their disturbing behavior in the timeframe between December 1366 and October 1367. In fact, this brief account as preserved in its Dār al-Kutub manuscript (5664 Adab)—contained in 9 folia, only

porary and later authors' common use of "*ajlāb*" in their accounts of the events of the summer and autumn of 1367, there can be no doubt that there was at the time a distinctive body at work in Cairo that was identifiable by a generic term that explicitly linked them to Yalbughā's leaderless junior mamluks and to the December 1366 rebellion and its chaotic aftermath.

In general, it should come as no surprise that the 1360s not only provided contenders for power with a recruitment pool of ready-made veteran mamluks of various stock, but also with sufficient opportunities to acquire the usual junior rank-and-file recruits, firmly tied to their own *ustādh*'s patronage only.[93] However, as far as Yalbughā is concerned, this traditional building block of a magnate's mamluk household was expanded to a giant scale, reaching massive dimensions of, allegedly, 1,500 to 1,800 juniors.[94] Numerically, therefore, his personal corps of mamluks, including veterans as well as these *ajlāb,* surely outdid those of any of his contemporaries, with the later historian Ibn Qāḍī Shuhbah claiming that "one of [the contemporary historians[95]] stated that it was said that he had three thousand mamluks."[96] In fact, this more than anything else is what Yalbughā continued to be remembered for long after his death, so that eventually Ghars al-Dīn al-Ẓāhirī (d. 1468), in his administrative manual, considered it still apposite to include a reference to Yalbughā's corps rather than to any other historical number of mamluks, claiming that Yalbughā even had had "3,500 mamluks in his service, one of them being al-Malik al-Ẓāhir Barqūq who was still a junior *(ṣaghīran)* at the time."[97]

This quote reminds us once more of the fact that by 1366 these Yalbughāwīyah ranks were still made up in large part of juniors like Barqūq. In view of this junior status, not yet having completed their training, most of his corps surely was still

5 of which were actually used for this text—was according to the colophon written down by one ʿUmar al-Dumyāṭī al-Shāfiʿī in 1465–66 (870 AH) and annotated by a Muḥammad ibn Zayn al-Dīn al-Ḥamawī on Sunday 17 July 1611, and it was therefore only indirectly a text by Ibn Abī Ḥajalah, as suggested in the beginning of the text ("the high-minded *shaykh*, the *imām* Shihāb al-Dīn ibn Abī Ḥajalah said . . .). Most importantly in the present context, in its berating, even vituperative anti-"*ajlāb*" language, this short treatise in rhymed prose by an author who, like al-Nuwayrī, died before these juniors' partial rehabilitation in the second half of the 1370s, clearly also presents the same extremely negative perception of them as was still in vogue at the time.

[93] On the links between junior mamluks and their *ustādh,* see Van Steenbergen, *Order Out of Chaos,* 88–92; for the classic study on the subject, see Ayalon, *L'Esclavage du Mamlouk,* esp. 27–29.

[94] Al-Bayrūtī, fol. 37v; Ibn Duqmāq, "Nuzhat al-Anām," fol. 37v; al-Maqrīzī, *Sulūk,* 3:151 (1500), 139 (1800).

[95] This may well refer to Ibn al-Furāt (d. 1405), whose chronicle for these years is lost, but who was a well-attested source for Ibn Qāḍī Shuhbah (see David Reisman, "A Holograph MS of Ibn Qāḍī Shuhbah's *'Dhayl,'" MSR* 2 (1998): esp. 29–42.)

[96] Ibn Qāḍī Shuhbah, *Tārīkh,* 3:306.

[97] Al-Ẓāhirī, *Zubdah,* 113, also repeated on 148.

more of a liability than an asset to Yalbughā, despite its numerical strength. Hence his and his colleagues' pragmatic employment of veterans in the same ranks, as detailed above. In fact, the questionable political and military usefulness of the junior mamluks that made up those ranks may be further inferred from the fact that many seem to have been acquired only shortly before 1366. Thus, according to one biographical note, Barqūq was only imported and bought from a slave merchant in the course of the year 1363.[98] Indeed, the generic term "*ajlāb*" (recent imports) by which Barqūq and the many hundreds of his cohorts eventually became known in the streets of Cairo and beyond suggests that his was not a unique case.

At the same time, however, Barqūq and the other "*ajlāb*" whose biographies have survived (such as Ibn Khaldūn's eyes and ears, Alṭunbughā al-Jūbānī, or the patron of today's famous Khān al-Khalīlī in Cairo, Jarkas al-Khalīlī) were surprisingly older than one would expect of junior mamluks like this, as they were all said to have been born around the year 1340 and were therefore already in their twenties when they became mamluks.[99] In view of the career of their *ustādh* Yalbughā and his quickly rising political star, especially after the murder of Sultan Ḥasan in 1361, it can be quite convincingly suggested that it must have been for reasons of impatient ambition, peer rivalry, and concomitant time pressures that Yalbughā acquired his own mamluks at such an advanced age, attempting to transform them into a useful army in the shortest time possible by subjecting these novices to spartan training methods and relentless discipline. Undoubtedly, Yalbughā's intentions and his *ajlāb*'s training were cut short by the December 1366 conflict. This policy's partial success would nevertheless show again when the survivors among these "*ajlāb*," including Barqūq, were allowed to return to Cairo in 1373 "to train [al-Ashraf Shaʿbān's] mamluks."[100]

Overall, however, by 1366 their training and experience were still deemed insufficient, despite their numerical usefulness for Yalbughā's political muscle. When therefore support and loyalty had to be rewarded and ranks redistributed in the course of Yalbughā's struggle for pre-eminence, as in March 1366, it was in general not these junior Yalbughāwīyah who benefited. As detailed above, in view of their expertise of considerable years, their more veteran status, and perhaps also their much more artificial household membership, it was Yalbughā's veteran mamluks who were almost automatically preferred for promotion. Only in a very few cases did juniors manage to break into the military ranks, but these are exceptions that rather seem to confirm the general rule. As mentioned before, Aqbughā al-

[98] Ibn Taghrībirdī, *Nujūm*, 11:223.

[99] See, for references to their age, al-Maqrīzī, *Sulūk,* 3:476; Ibn Taghrībirdī, *Nujūm*, 12:120; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:308. On the issue of a mamluk's age, see Ayalon, *L'Esclavage du Mamlouk,* 13–14.

[100] Ibn Khaldūn, *Kitāb al-ʿIbar,* 5:462.

Aḥmadī (quite tellingly nicknamed "*al-jalab*"), for instance, was made an amir of one hundred in March 1366, but this seems primarily to have been the result of "his having a privileged status with Yalbughā."[101]

When this factor of numerous very junior Yalbughāwīyah mamluks is taken into consideration for the December 1366 conflict and its background, it becomes clear that dissatisfaction with their harsh training played an important role in inducing these "*ajlāb*" to take part in it. Moreover, a role was surely also played by the *ajlāb*'s frustrations with what those veterans in their corps were already achieving while, despite their mature age, most of the *ajlāb* were still reckoned too junior for such advancement.[102]

All in all, however, whatever the role of such *ajlāb* frustrations, it seems that all sorts of practicalities, including even the Nile, were surely as much of a decisive factor in the course the conflict took for the Yalbughāwīyah as Yalbughā's relentless and selective patronage may have been. First of all, considering that Yalbughā had only gone to Giza in December 1366 for a hunting party, it is highly unlikely that his entire corps of mamluks crossed the Nile with him, especially in view of its infamously giant size. Obviously, sufficient numbers had been left in or near his residence at al-Kabsh to prove extremely useful when, after the failed attempt against his life, he hastily returned with only a handful of his intimates. Secondly, changing camps was not made easy for those Yalbughāwīyah mamluks who had been left near Giza, considering Yalbughā's instant blockade of the Nile; as mentioned earlier, some amirs and "mamluks he had promoted" still did manage to cross and switch back to Yalbughā's side on Friday, but most who tried failed and, as stated by al-Maqrīzī, fell into the hands of their rebellious peers.[103]

---

[101] See Ibn Qāḍī Shuhbah, *Tārīkh,* 3:298.

[102] In this context, it is worthwhile to compare the case of, for instance, the amir Uljībughā al-Muẓaffarī al-Khāṣṣakī, who was said to have been only nineteen when he died in 1349, and who despite that young age already had been a leading amir in Cairo and a governor of the province of Tripoli (al-Ṣafadī, *Aʿyān*, 1:594–98; Ibn Taghrībirdī, *Nujūm*, 10:216 ["his moustache had not yet come out"]); a less extreme, more mainstream, and equally interesting example concerns that of the amir Maliktamur al-Ḥijāzī (d. 1347), who was already mentioned as an amir in Cairo in 1333 (see Mūsá ibn Muḥammad ibn Yaḥyá al-Yūsufī, *Nuzhat al-Nāẓir fī Sīrat al-Malik al-Nāṣir*, ed. A. Ḥuṭayṭ [Beirut, 1986], 179), that is, when he was in his early twenties, as suggested by paleopathological investigations of his remains in his burial crypt in Cairo ("These bones belong to the male of massive morphological structure in good state of health, most probably of the White Variety, 173 cm tall. His age at death was 35–40 years." [Tadeusz Dzierzykray-Rogalski, Jerzy Kania, and Medhat al-Minabbawi, "The investigations of burial crypts in the mausoleum of princess Tatar al-Ḥiğāziyya in Cairo," *Annales Islamologiques* 23 (1987): 83–84]). That these examples date back to two or three decades from the situation of the "*ajlāb*" is, in fact, revealing for the profound changes that are occurring (see below).

[103] Al-Maqrīzī, *Sulūk,* 3:132.

In all this, however, fear of Yalbughā's retaliation rather than any type of maltreatment seems to have been the driving force behind these and most other actions of the mamluks who tried to return to Yalbughā. Anxieties about their treatment may have easily tricked many of the Yalbughāwīyah-mamluks in Giza into their promoted veteran colleagues' scheme, but when this failed and Yalbughā escaped, leaving them cut off from the center of power on the Nile's "wrong" side, the following painful observation by one later historian may indeed have guided their further actions: "When they realized that their *ustādh* had saved himself and [that] he had fled, they became extremely worried *(ishtadda takhawwufuhum)* that when he would overcome them thereafter, he would not leave any of them alive *(lā yubqī minhum aḥadan)*."[104]

Such fears, undoubtedly most vivid among those of Yalbughā's *ajlāb* who had been at Giza with him, obviously did not materialize. Nevertheless, they eventually did to some extent become a reality for all of Yalbughā's "*ajlāb*." With the loss of their *ustādh* and their training incomplete, they did as a matter of fact experience death in financial, social, and political terms. When they realized this, and when hiring out their numerically useful services to Asandamur and his peers in 1367 did not seem to result in any lasting change of fortune or sufficient tangible rewards—unlike once again for the veteran mamluks—the consequences were dearly felt in Cairo's streets and palaces. Going totally out of control, especially after June 1367 and another missed round of rewards and promotions, they started looting and attacking whatever and whomever they could lay their hands on, and no one, not even Asandamur, seemed willing or capable to rectify that situation. It is this process that goes a long way in explaining how there gradually was generated a public and very negative awareness of their distinctive identity as Yalbughā's junior mamluks, or his "*ajlāb,*" as attested by source reports. The immediate outcome of this parallel formation of a hateful public opinion of them surely can be read in the remarkably bad press they received from al-Nuwayrī.[105] In the longer run, however, this abusive tone was moderated, reflecting in fact the lasting change of fortune that a number of these *ajlāb* did eventually experience. Hence, in a much milder and rather functional account, al-Maqrīzī (once more inspired by the very similar remarks of Ibn Khaldūn) presents the final, but in his version also rather purifying, whereabouts of Yalbughā's junior mamluks as follows:

> On Thursday 14 [October 1367], the sultan drowned a group from the Yalbughāwīyah mamluks, who had agreed to kill him, in the Nile. . . . In the morning of this Thursday, 100 of the notables of these Yalbughāwīyah *ajlāb (al-ajlāb al-Yalbughāwīyah)* were

[104] Ibn Taghrībirdī, *Nujūm*, 11:36.

[105] And from Ibn Abī Ḥajalah (see n. 92)

> nailed and cut in two. A group of them were drowned. The remainder of them were banished to Syria and to Aswan. Among those of the Yalbughāwīyah that were banished were Barqūq, Barkah, Alṭunbughā al-Jūbānī, Jarkas al-Khalīlī, and Aqbughā al-Māridānī. The *sharīf* Baktamur, *wālī* of Cairo, took them and detained them in his house, their hands fixed in wood. His lunch came, but he did not give them anything to eat. He assigned over them someone to take them to Qaṭyā. The *wālī* of Qaṭyā took them and sent them to Ghazzah. Its governor sent them to al-Karak. They were imprisoned in a dark pit, in its citadel, for several years. Then they were released and they went to Damascus, where they served the amir Manjak, *nāʾib al-Shām,* until the sultan called for the Yalbughāwīyah mamluks to employ them in the service of his two sons. So Barqūq served amongst the others that were in the service of the two sons of the sultan, until the sultan got killed after his return from ʿAqabat Aylah. Then, the amir Aynabak led the regime, Barqūq becoming one of the amirs of forty. Thereupon, he took hold of the stable and remained there until he became sultan.[106]

On the Brink of a New Era?

In sum, in the course of the four days this conflict lasted, two clear-cut but fluctuating parties appear as opposing each other, including Yalbughāwīyah mamluks and amirs on both sides. This already seems quite surprising from a modern historiographical perspective, but even more surprising is the general observation that the friction between these two multifarious parties seems less to have been caused by any lack of morality or respect for traditional values in either camp, and rather to have been closely tied up with the actual composition of the Yalbughāwīyah, and, by extension, with the subtle but irrevocable changes the Mamluk political scene was undergoing. From this perspective, modern historiography was right after all to implicate the Yalbughāwīyah, but has failed so far to grasp the actual background and the deeper meaning of that allegation!

Most importantly, one of the more conspicuous lines along which friction developed in the 1360s was a generational one, with on one end mamluks of veteran status, stemming from households long gone and yet increasingly managing to improve their status, and on the other end their junior colleagues, recently imported and firmly tied to their *ustādh*s' current successes, but despite that only left with crumbs of benefit. Undoubtedly, the actual picture was less black and white than stereotyping like this allows for. Nevertheless, from the above discussion it is clear that at the time there generally were such pragmatic processes at work in the Mam-

[106] Al-Maqrīzī, *Sulūk,* 3:154–55; see also Ibn Khaldūn, *Kitāb al-ʿIbar,* 5:458, 472.

luk sultanate, from veteran re-employment and rewarding to junior acquisition and frustration. Most importantly, the friction caused by the more striking extremes of these processes was a reality that should not be questioned and that became particularly apparent and relevant as time elapsed. Thus, in December 1366, Yalbughā al-Khāṣṣakī became the victim of a remarkable coinciding of these processes in the course of a rather classical Mamluk struggle for power. On that occasion, veteran ambitions concurred with junior frustrations to ignite a rebellious spark, and geographical circumstances, including the young sultan's presence on the rebellious side of the river, encouraged that spark to turn into a blaze that even the almighty Yalbughā proved incapable of fighting.

As seen above, this outcome did not mean the end of those processes, or of the subsequent friction. Quite to the contrary: whereas the processes were simply continued throughout 1367, the friction came increasingly to the forefront in the new struggles for power that ensued after Yalbughā's murder. In the end, Yalbughā's "*ajlāb*" themselves very prominently fell afoul of that friction, when al-Ashraf Shaʿbān's survival was at stake again and his reaction proved surprisingly astute (with due assistance, as all sources did not fail to notice, from Cairo's populace, fed up as they were with the havoc).

In the short run, therefore, the new social and political reality that emerged from this situation seriously advantaged veteran mamluks once more, when from the end of 1367 onwards al-Ashraf Shaʿbān turned—either deliberately, or simply by lack of any serious alternative, or perhaps even as a result of both—to such veterans to sustain his reign. Thus, in the course of the next few years, he signed up veterans to become the executive pillars of his regime, as with the amirs Uljāy al-Yūsufī (d. 1373), Manklī Bughā al-Shamsī (ca. 1320–72), ʿAlī al-Māridānī (ca. 1310–70), and Manjak al-Yūsufī (ca. 1315–75).[107] Even more striking, however, is the fact that Shaʿbān also chose to continue the more general line of policy vis-à-vis veterans that had been favored by Yalbughā al-Khāṣṣakī and his peers before, singling out mamluks with a clear pre-1360 background rather than his own recruits in any round of promotions, as may be gathered once more from another set of detailed lists of promoted amirs that has been preserved for the remainder of his reign, even up to its final year 1377.[108] Clearly, in the 1360s and 1370s power and authority remained closely linked to the fate and status of the many mamluks who had entered the regime in the 1350s, the 1340s, and even before.

In the long run, however, this situation did not last, and this was surely not just due to those veterans' natural life cycles. As summarized by al-Maqrīzī above, in

[107] See Van Steenbergen, *Order Out of Chaos,* 109, 162–63.

[108] For these lists, see al-Bayrūtī, fols. 40r–40v, 52v, 56v–57, 80–80v, 82, 84, 100, 107; Ibn Duqmāq, "Nuzhat al-Anām," fols. 43r, 60r, 83v, 85, 110v–111r; al-Maqrīzī, *Sulūk,* 3:161–62, 176–77, 185, 216, 219, 225–26, 255, 270, 387–88.

March 1377 rehabilitated survivors from Yalbughā's "*ajlāb*" in particular suddenly managed to engage successfully in a program of estrangement between Shaʿbān and his supporters, finally generating their own access to rank and status and eventually culminating, in November 1382, in the dissolution of the Qalāwūnid sultanate and the enthronement of one of their own, Barqūq.

Surely, friction between veterans and their established interests on the one hand and juniors and their hunger for change on the other is nothing new in history, and this qualification is all the more valid for the Mamluk sultanate, in the era of the Qalāwūnid sultanate between 1279 and 1382 as well as in general. What is remarkable in this respect, however, offering insight into another conspicuous line along which that friction developed in the 1360s, is that these processes and the conflicts they fed into no longer took place within the confines of one royal household, be it fourteenth-century Qalāwūnid or thirteenth-century Ayyubid/Ṣāliḥīd. This was not a friction that involved the royal household and its members in any meaningful manner, despite the political nature of what was at stake. Rather, in the 1360s things revolved increasingly around the household of the amir Yalbughā al-Khāṣṣakī, without any royal involvement, but also without strictly being limited to Yalbughā's assorted environment. This was in fact not even a friction that took place within the confines of any one household, between its senior and junior members, as had happened so often in the past, from the Baḥrīyah's actions against Tūrān Shāh to al-Nāṣir Ḥasan's collisions with his father's mamluks and, eventually, with some of his own. Rather, there were two broad generational social categories at work that, especially as far as veterans are concerned, had little more in common than the insecure fate they were sharing and the pragmatic approach they took to circumventing that problem. As such, the December 1366 conflict and its aftermath was one of the very first political conflicts of substance in the fourteenth century that was fought outside of the umbrella of the Qalāwūnid sultanate, that is, by a majority of contenders for authority and status that had at most only very limited ties with the royal house. This was therefore a first, but ominous, breach of the Qalāwūnid political monopoly, originating in the fissioning of great households under the Qalāwūnid umbrella in the 1340s and 1350s.[109]

Moreover, this was also a first and ominous breach in Qalāwūnid household politics, when the friction and resulting conflict were no longer about realigning loyalties within the Qalāwūnid house or its offshoots, but about gaining support

[109] For more details on this fission, see Van Steenbergen, *Order Out of Chaos,* 147–58. On the or - gins of this process, and its consequences for the Qalāwūnids, see idem, "Caught between Heredity and Merit: The Amir Qawṣūn and the Legacy of al-Nāṣir Muḥammad ibn Qalāwūn (d. 1341)," in *The Mamluk Sultanate: Political, Military, Social and Cultural Aspects,* ed. Reuven Amitai and Amalia Levanoni, forthcoming. For an assessment of the life and times of the Qalāwūnid political monopoly in general, see Van Steenbergen, "The Mamlūk Sultanate as Military Patronage State: Royalty, Household Politics and the Case of the Qalāwūnid *Bayt* (1279–1382)," forthcoming.

and status by a majority of outsiders to any such traditional framework of reference. In such a transforming environment, new political strategies had to be devised, including the tendency to give absolute priority to the alignment of those outsiders through material rewards, as opposed to the more traditional preference that used to be shown to those that were already firmly tied to one's social and political success.

The far more tiered and friction-prone political system which such strategies automatically gave rise to—with veteran amirs on one side of the political spectrum and junior mamluks or "*ajlāb*" on the other, tied through quite distinct sets of alliances to the political leaders of the day—is actually quite reminiscent of Mamluk politics as it has been described for the fifteenth century. In fact, the similarities are so striking that Jean-Claude Garcin's description of this aspect of that next century's political system in the *Cambridge History of Egypt* reminds one immediately of the historical processes described above for the December 1366 conflict and its aftermath:

> From 1428 . . . the problem first appeared of recruits who were unruly, not because they . . . would not have had a political future in the framework of their integration into the system, but because that integration could not happen fast enough. Faced with the recruits, the amirs, now with fewer mamluks, found themselves at a loss. The rift between the old troops and newcomers brought about a corresponding strengthening of the move to form the older ones into an aristocracy. . . . So a new political mechanism had gradually been imposed: any amir who rose to be sultan had first to remove his predecessor's recruits, relying on the previous age group that had been kept in the wings until that point, which marked their genuine entry into the political arena. The initial rhythm of Mamluk political life was thus much slowed down.[110]

Clearly, "the problem . . . of recruits" and the "new political mechanism" did not first appear in 1428 or thereabouts, but became increasingly apparent already from the December 1366 conflict onwards, filling the vacuum left by the slowly disintegrating Qalāwūnid house.

---

[110] Garcin, "The Regime of the Circassian Mamluks," 300–1. The workings of this "mechanism," including the new types of alliances between non-promoted *julbān* and promoted amirs, were further explored by Amalia Levanoni in her very insightful "The Sultan's *Laqab*"; on p. 115, she in fact already seems to hint at earlier precedents for this "new order," without however naming them. This "rift between the old troops and newcomers" as a typical feature of fifteenth-century Mamluk politics was first fully formulated by Amalia Levanoni in her "The Mamluk Conception of the Sultanate," esp. 386–87.

Viewed from this perspective, however, the ascendancy of the *ajlāb,* Barqūq's ending of the Qalāwūnid sultanate in November 1382, and his deliberate attempt to impose his own Ẓāhirī household, including his own lineage and his own mamluks, as the new framework of social and political reference instead of the defunct Qalāwūnid one, actually suspended the emergence of such an entirely new political system. As such, the sultanates of Barqūq and his sons (1382–1412) were not so much a radical break from the past, as references traditionally tend to portray them, but rather an attempt to link up again with that past and to restore to pre-eminence the traditional royal household, as a comprehensive political unit that firmly monopolized the regime, its political economy, and Mamluk society at large, far beyond the limits of generational pragmatism.

Despite the fact that the latter observations and their background obviously need further qualification, it is already clear that this attempt at a reversal of historical processes that had first come to the surface in the 1360s did not, in the long run, manage to eradicate those processes. This was surely as much due to their innate resilience and embryonic presence in traditional Mamluk political practices (as in the cyclical or "generational" nature of rank-and-file acquisition, training, and employment, as well as in the aforementioned reliance on numerical strength), as to the many crises that the turn of the century witnessed. From 1412 onwards, therefore, change did eventually re-emerge, when a tiered, exclusive system of veteran amirs, junior mamluks and political (and financial!) pragmatism gradually came to supersede a more inclusive household system, and an overall process set in that unmistakably should be identified as one of Mamluk state formation, at the cost of traditional household politics.[111]

Processes of historical change such as these, then, originating in the middle of the fourteenth century, catching momentum from the 1360s onwards, and only temporarily suspended towards the end of the century, led the sultanate towards its own version of early modernity in the course of the fifteenth century. Clearly, no one in particular, not even Yalbughā or his mamluks, can or should be blamed individually for generating transformations that they were all subject to. They are rather a token of the dynamic nature of Mamluk history, as they were gradually yet irrevocably heralding a new era.

[111] A research project at Ghent University (financed by the European Research Council and by the university's Research Foundation) is currently involved in the detailed reconstruction and assessment of these transformations on the basis of prosopographical research. The overarching project's title is "The Mamlukisation of the Mamluk Sultanate: Political Traditions and State Formation in 15th Century Egypt and Syria."

Book Reviews

Muhsin J. al-Musawi, *The Islamic Context of* The Thousand and One Nights (New York: Columbia University Press, 2009). Pp. x, 334.

Reviewed by Robert Irwin

Muhsin J. al-Musawi is the author of several previous studies on literature, including *Scheherazade in England: A Study of Nineteenth-Century English Criticism of the Arabian Nights* (Washington, 1981). That book concluded by quoting an article by the American scholar of Hebrew Crawford Howell Toy in the *Atlantic Review* of June 1889. Toy characterised *The Thousand and One Nights* as follows: "The book is both the history of Moslem culture and the record of Moslem *esprit* in the palmy days of the Arabs in Asia; it gives a truer as well as a more vivid picture of their life than all the ordinary histories combined."

A study of the Islamic context of *The Thousand and One Nights* would in principle be very welcome. The relevant article on "Religion" in *The Arabian Nights Encyclopedia,* edited by Ulrich Marzolph and Richard van Leeuwen, noted the omnipresence of religion in the stories. "Religion governs the moral codes, the social relations, and the imaginations of the heroes. It is part of a social and individual notion of normality that is neither unduly stressed nor questioned." The article went on to discuss fate, trust in God, proselytizing stories, and inter-faith relations. Clearly the subject is an important one and hitherto rather neglected.

There is much of value in al-Musawi's book. He relates themes and practices in the stories to those found in other literary sources including *Kalīlah wa-Dimnah,* the essays of al-Jāḥiẓ, the table talk of al-Tanūkhī, the dos and don'ts of *hisbah* manuals, the law books, and other sources. The idea that the thoroughly urban tales of the *Nights* only became popular in Europe as that continent became more urban is attractive. The hitherto neglected importance of such motifs as tree climbing (this in the frame story) is brought out. It is also pleasant to learn of the lady mentioned by al-Jāḥiẓ, who had two of the attributes of Paradise, "coolness and width." One looks forward to al-Musawi's forthcoming annotated bibliography of *The Arabian Nights*.

In *The Islamic Context of* The Thousand and One Nights, al-Musawi has set out to develop Toy's verdict on the *Nights* in considerable detail. But there are some problems. The first is that al-Musawi seems afraid of being too easily understood. Consider, for example, this sentence: "The concomitance of the judicial and the narrative is significant here, as in many other cases, since jurisprudence is predicated on factual grounds that demand an answer in keeping with Islamic teaching

from the prime period of its social and economic expansion and growth." Or this one: "The premise falls short of Ibn Khaldun's historical and social perspective, for the association with the Islamic warning against the accumulation of riches and the neglect of piety and faith implies resignation and an acceptance of consequences."

Another problem is a pervasive vagueness about chronology. He repeatedly states that the oldest surviving manuscript of the *Nights,* the one used by Antoine Galland, dates from the thirteenth or fourteenth century, but, as I suggested in *The Arabian Nights: A Companion* and as Heinz Grotzfeld has conclusively demonstrated in essays about the endings of the *Nights* and about numismatic evidence within the *Nights,* the manuscript in question must have been compiled in the late fifteenth century. At times al-Musawi wants to use the *Nights* stories to illustrate Abbasid custom and practice and, correspondingly, to use Abbasid literature to highlight or clarify themes in the stories of the *Nights*. At other times he prefers to set the stories in an Ayyubid or Mamluk context, but most often he prefers to generalize about a changeless Islamic society. It is a pity he has neglected the painstakingly researched studies by Patrice Coussonnet on the dating of individual stories, most notably in *Pensée mythique, idéologie et aspirations sociales dans un conte des Mille et une nuits* (Paris, 1989). (That particular study dated the composition of "The Story of the Great Merchant ʿAlī of Cairo, Son of Ḥasan the Jeweller of Baghdad" to the fifteenth century. In another study Coussonnet conclusively dated the story of "Nūr al-Dīn and Shams al-Dīn" to the early fifteenth century.)

It is difficult to say how much stories that are ostensibly set in the Abbasid period do actually represent Abbasid realities. In an essay entitled "From History to Fiction: The Tale Told by the King's Steward" (published in volume three of Muhsin Mahdi's edition of the core tales as they appear in the manuscript of the *Nights* from which Antoine Galland translated), Mahdi pointed that while that particular tale, notionally set in the Abbasid period, might have pleased an audience in the Mamluk period, it would not have satisfied a tenth-century audience for "they would have found it silly and cold, not because they lacked imagination or were ignorant, but because they knew too much. It was a tale about their city and history and institutions and customs, and it was ridiculously inaccurate." Although al-Musawi points to the importance of the list of foodstuffs carried by the porter who has been hired for that purpose by the lady of Baghdad, he has not noticed how many of those foodstuffs have a Syrian or Egyptian provenance. Rather, he takes the list as evidence of nostalgia for Abbasid affluence.

Noting the absence of Shiʿis in the stories, al-Musawi argues that "the material as transmitted and accumulated obviously took a final form sometime in the twelfth century when Fatimid sentiments lingered only among the general populace but rarely in elitist scholarship, which subscribed to the official discourse." First, I do not think it at all obvious that the *Nights* took final form in the twelfth century. That

would have to be demonstrated. Secondly, the official discourse in Egypt was Fatimid and Ismaʿili for almost three quarters of the twelfth century. Because so much of the discussion in *The Islamic Context of the Thousand and One Nights* takes place in a chronological limbo, there is little that is specifically relevant to students of Mamluk social history.

The discussion is concentrated on the stories found in the Galland manuscript and therefore also in the Mahdi edition and the Haddawy translation. Only occasionally does al-Musawi focus on the additional stories that are found in the Bulaq edition. This means that there is little or no discussion of stories which were almost certainly composed in the Mamluk period, such as the crime stories featuring Crafty Dalīlah and Mercury ʿAlī, or "The Man of Upper Egypt and His Frankish Wife." According to al-Musawi, the Bulaq edition of 1835 "demonstrates the intervention of compilers, editors, and redactors in matters relating to the Islamic context of the tales. Especially in religious matters and poetic extracts, this edition can authenticate or debate the nature of poetic misreading or distortion and its historical relevance to the primacy of specific Islamic laws in certain periods." But this still leaves it unclear why the Bulaq version is to be preferred to the more comprehensive Calcutta II edition of 1839–42.

A close focus on religious issues in the stories would have been welcome, but al-Musawi uses "Islam" in a broad sense to encompass the culture of a vast region over many centuries. In this very broad sense, even wine drinking and adultery can be seen as Islamic. With reference to the sifting and collating of the tales, al-Musawi writes that "the outcome is a cultural repertoire, an inventory of many directions, that may be defined metaphorically as Islamic to account for life as it was desired or made available in talks, anecdotes, and, in some cases, lived."

At several points Musawi touches on Sufi themes in the *Nights*. Referring to the three tales told by one-eyed men that are boxed within "The Story of the Porter and the Three Ladies," he argues that the "emphasis placed on the figure of the *qalandar* and the transfer into the *Thousand and One Nights* of this characterization and naming could be used to date this set of Baghdadi tales to between the eleventh and twelfth centuries." Specifically he relates it to Aḥmad al-Ghazālī's brand of Sufism, with its combination of spirit and love, the internalization of "blame" and regret in surrender and devotion to the Beloved. But if one actually reads the stories told by the three one-eyed mendicants, they seem to be devoid of any spiritual content. Though the mendicants have repented their various importunities, there is no indication that they have turned to the "Beloved" or are following any specific spiritual discipline. Al-Musawi suggests that the mendicants finally attain "total contentment upon the immersion in the divine beatitude," but the stories they tell, tales of lost love and missed opportunities, do not suggest contentment at all.

It seems unlikely that medieval readers would have discovered Sufi messages in the tales the mendicants related about subterranean love and mutilation. So how Sufi are the alleged "*qalandar*s"? It is true that their shaven heads, beards, and eyebrows certainly conform to the appearance of the *qalandar* dervishes as attested in other sources, but the author of their stories seems to have had little actual knowledge of or interest in the ways of the *qalandar*s. On a point of chronology, the *qalandar* movement seems to have originated in Khurasan in the eleventh century, but only became widespread in the western Islamic lands in the thirteenth and fourteenth centuries, so the specific linkage to al-Ghazālī's Sufism seems implausible. As al-Musawi notes elsewhere, the second *qalandar* claims to have studied jurisprudence in a book by al-Shāṭibī, and this scholar died in 1388.

"What holds the collection together, and what upholds the concept of nationhood, Islamic or Arab, is the Islamic context," according to al-Musawi, but this is studiously vague, for he never explains what "concept of nationhood" is embodied in the extremely diverse stories. Indeed, it is doubtful whether it is appropriate to think in terms of nations in pre-modern times. It is of course a chronological paradox that this collection of Islamic tales is set within a frame story about Shahriyar, Shahzaman and Shahrazad that is situated in Sassanid times. Moreover, within this frame story there is a boxed set of stories (the Hunchback cycle) that are told to the king of China, who, it is implied, is a Muslim.

As his quotation of Crawford Howell Toy may suggest, al-Musawi tends to quote the judgements of nineteenth-century figures such as Leigh Hunt, Bernard Cracroft, Walter Bagehot, Thomas Carlyle, and James Mew as authoritative, but none of these writers knew Arabic or had made any serious study of the *Nights* and several of them were mediocrities. For the most part, their essays on the subject were under-researched, bookmanly chats designed to entertain a general readership. Leigh Hunt, in particular, was a specialist in enthusing in a perfectly uncritical way about the joys of reading. (As the apparently sunny and uncritical Harold Skimpole, he featured in Dickens's *Bleak House*.) In a discussion of "The City of Brass" al-Musawi cites a not very interesting article published in the *Spectator* in 1882 with reference to the alleged "mysticism of the Desert" in this story. Surely, it would have been more useful to have taken into consideration the views of Mia Gerhardt, Andreas Hamori, or Abdelfattah Killito?

Al-Musawi's enthusiasm for Victorian litterateurs sits oddly with his bleak view that to translate something or to study something from another culture is to appropriate it. "Galland made the East a property available to be possessed, accommodated and plundered." Though the British empire later "appropriated" Arab Islamic culture in the nineteenth century, al-Musawi declares that earlier Arab empires did not appropriate the cultures of others, but it is hard to follow his reasoning on this point.

Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras IV: Proceedings of the 9th and 10th International Colloquium Organized at the Katholieke Universiteit Leuven in May 2000 and May 2001. Orientalia Lovaniensia Analecta 140. Edited by U. Vermeulen and J. Van Steenbergen (Leuven: Uitgeverij Peeters, 2005). Pp. xii + 496.

Reviewed by Paul E. Walker, The University of Chicago

This volume, the fourth to present the papers of colloquia held in successive years at the Catholic University of Louvain, is like its predecessors a mixed bag of often fine scholarship on a broad range of topics. Here there are twenty-one articles by sixteen different experts on the Fatimid, Ayyubid, and Mamluk periods, the majority in English with four in French and two in German. (Unfortunately, a few of those in English could have benefited from the help of a competent editor; as printed they are barely intelligible.) Five cover the Fatimids, seven the Ayyubids, and nine the Mamluks. The subject matter of the individual contributions is diverse, likewise the methods employed. Michael Brett, for example, offers three pieces interpreting in grand style key problems of Fatimid rule: conversion to Islam, the role of the Coptic church, and the reign of Badr al-Jamālī. At the other end of the spectrum, Hanspeter Hanisch's report on the archaeology of the citadel of Harran runs a full 125 pages in great detail, complete with tables and a copious supply of photographs. Needless to say the other entries are more modest in size, though many hardly less so in importance. Heinz Halm's attempt to pin down the source and authorship of the two texts that make up the *Kitāb al-Dhakhāʾir wa-al-Tuḥaf*, Stefan Heidemann's theories concerning Numayrid al-Raqqa, Pierre-Vincent Claverie on the "mauvais chrétiens" in the Orient of the crusading period and, separately, on Philippe Mainebeuf in Cairo (1291), Nicholas Coureas on Christian attempts to control Cypriot trade with the Mamluks, Donald S. Richards on the office of *wilāyat al-Qāhirah,* and Jo Van Steenbergen's identification of a late medieval cadastral survey of Egypt are good examples. But there are others as well.

The rest of the contributions are just as varied. Taef El-Azhari writes on Ayyubid women and eunuchs; Yehoshua Frenkel writes about chains of transmission in first Ayyubid *samāʿāt* and then in Mamluk women's *samāʿāt;* Konrad Hirschler contributes on the sociology of medieval Arabic historical scholarship (Ibn Wāṣil and Abū Shāmah); Denys Pringle reports on the Ayla/ʿAqaba fortresses; Dionisius Agius describes an inscribed ostrich egg from Qusayr; Corinne Morisot, a *waqfīyah* of Jaqmaq in favor of Mecca; Gino Schallenbergh analyzes the Sufi terminology of Ibn Qayyim al-Jawzīyah; and finally U. Vermeulen offers a short piece on the official dress of the Mamluks.

With so much offered over a long span of time, dealing with such a spread of subjects, few readers, including this reviewer, will have an equal interest in each one. And not all are either major contributions or of a similar high standard. Even so it is certain that specialists in any or all of the three periods will find many items in this volume that are quite well worth their time.

Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras V: Proceedings of the 11th, 12th and 13th International Colloquium Organized at the Katholieke Universiteit Leuven in May 2002, 2003 and 2004. Orientalia lovaniensia analecta 169. Edited by U. Vermeulen and K. d'Hulster (Leuven: Peeters, 2007).

Reviewed by Yossef Rapoport, Queen Mary University of London

The publication of the proceedings of the Leuven annual colloquia has now become an established tradition in the field of Fatimid and Mamluk studies. This is the fifth volume in the series, and, like its predecessors, it is particularly strong on economic and political history. The following remarks are intended to highlight some of the outstanding contributions in the volume, out of a total of thirty-one.

Several of the contributions in the Fatimid section deal with the institutions of the *daʿwah*. S. Calderini's survey of the surviving manuals for Ismaʿili *dāʿī*s is particularly useful. Calderini notes the overall idealized character of these manuals, but she also indicates changes over time and space, especially after the establishment of the Fatimid state, when the *dāʿī* became a representative of the head of state in the Fatimid domains, and a leader of the local Ismaʿili community outside the Fatimid realms. The essay comprehensively covers the surviving literature and places it in its historical context. D. Cortese supplements the discussion of the *daʿwah* with a study of references to women in the same manuals, pointing out that *dāʿī*s were especially encouraged to target women.

Heinz Halm offers a new reading of the career of the Fatimid vizier Badr al-Jamālī (466–87/1074–94) as a precursor to the later military regimes. Al-Jamālī's personal biography, and even his personal name, is typical of slaves. He assumes titles and responsibilities which are far beyond that of earlier Fatimid viziers—most significantly, military functions. In these respects, his role resembles that of the Ayyubid and Mamluk sultans of the following centuries. Halm is also right to note that this development parallels the emergence of the Seljuk sultans in Baghdad a few decades earlier. Rather than viewing the transition from the rule of the caliph to the rule of the sultan as an exclusively Sunni development, the rise of Badr al-Jamālī suggests a deeper shift towards military rule throughout the Islamic

world during the eleventh century. J. Den Heijer complements the discussion with a study of the building activities of the Fatimid vizier, who populated Cairo with non-official civilian population, and his reconstructing the walls of the city. The inscriptions over the renovated Bāb al-Naṣr glorified Badr al-Jamālī on par with the Fatimid caliph, and even above him.

In two rich contributions, Yaacov Lev uses a variety of previously unexplored documentary sources to examine the economic significance of the transition from Fatimid to Ayyubid rule. When Saladin ordered the dismantling of the centralized, lavish Fatimid palace, one of the results was a decline in demand for luxury goods, and Lev interestingly suggests that the decreased demand for luxury textiles is the underlying reason for the disappearance of the textile center of Tinnīs. Moreover, in contrast to the Fatimid close regulation of trade, Saladin abolished a significant number of customs and fees on merchants in the capital, as part of a more general policy of relaxing state control of the economy. Lev utilizes al-Qāḍī al-Fāḍil's *Al-Mutajaddidāt,* a daily diary quoted by al-Maqrīzī, and in particular the list of revenues and expenditures for 585/1189, as well as similar late Fatimid fiscal documents. The result is an impressive set of quantitative data, which suggests that the Ayyubids enjoyed increasing revenues from agricultural production. For the province of the Fayyum, for example, there is ample evidence to indicate a decidedly sharp rise in government revenues between 1170 and 1240. Thus, Lev is right to assert that neither the introduction of the Ayyubid *iqṭāʿ* system nor the diversion of funds towards military conquests have had any adverse impact on Egypt's economy. Moreover, by using al-Qāḍī al-Fāḍil's diary, Lev is also able to put a price tag on Saladin's financial support of the scholars and the mystics: between 200,000 and 300,000 dinars, a good investment given the impeccable reputation they have given him over the centuries.

In a well-written contribution, which is also one of the most interesting in the volume, L. Richter-Bernburg highlights the unique sensibilities of ʿAbd al-Laṭīf al-Baghdādī's account of his visit to Egypt. Unlike other medieval observers of Egypt's Pharaonic antiquities, ʿAbd al-Laṭīf's observations on architecture are resolutely naturalistic, and he refuses to resort to "jinn, primeval giants, magic whips or divine direct intervention" (p. 351). Indeed, ʿAbd al-Laṭīf's chief interest is in the ingenious craftsmanship which brought the monuments into existence, rather than in the occult or religious significance of the structure. The monument that impressed him most deeply was the great sphinx in Giza, where he most admired the technical achievement of blowing up the human features to gigantic scale, yet at the same time he shows himself to be appreciative of the monument's aesthetic value. Richter-Bernburg manages to provide a vivid portrayal of al-Baghdādī as a writer who works both within and outside the established tradition of medieval Islamic travel literature.

A. Petersen's contribution on new towns in Mamluk Palestine examines the distinct features of towns established in the Islamic world after 1000 C.E., and specifically those founded by the Mamluk authorities. While the cities of the early Islamic period have received much scholarly attention, new cities, such as the Almohad Qaṣr al-Ṣaghīr founded in 1184, or Sulṭānīyah built by Öljeitü in 1313, have been relatively neglected. In this essay, Petersen focuses on Majdal (near the destroyed port of Ascalon) and Safed. Compared to the cities of early Islam, these new urban centers were of moderate size, and of no apparent orthogonal plan. They were also based around the castle, or the *qalʿah,* which in many cases was a remnant of the Crusader period. And, finally, these new towns were built along the revived Cairo-Damascus coastal road, often replacing ports destroyed by the Mamluks during the second half of the thirteenth century.

Other contributions worthy of special note include a comprehensive, well-illustrated study of the architecture of the Citadel of Damascus under the Seljuks, Ayyubids, and Mamluks, written by H. Hanisch. This will surely be a useful reference work for the growing number of scholars interested in Mamluk military architecture. K. D'Hulster's erudite, polyglot comparison of several Turkish translations of Saʿdī's *Gülistān* offers a rare window into the cultural life of the Mamluk courts in the fourteenth and fifteenth centuries, specifically highlighting the continued influence of the Persian literary canon on the Mamluk elite. Finally, Th. M. Wijntjes' study of the visit of Pedro Mártir, an ambassador of the Spanish court, to Qānṣūh al-Ghawrī deftly demonstrates that many European sources on the late Mamluk period are yet to be fully explored.

The editors of the volume should be commended for continuing to make the proceedings of the Leuven conferences available to all scholars working in the field, especially given the number of contributions and resulting size of the volume. However, several contributions really do suffer from weak copy-editing, and plans for providing indices in future volumes in the series would be very welcome.

Norman D. Nicol, *Sylloge of Islamic Coins in the Ashmolean*. Vol. 6, *The Egyptian Dynasties* (Oxford: Ashmolean Museum, 2007). Pp. 21 + 82 plates.

Reviewed by Warren C. Schultz, DePaul University

In the mid-1990s, the Heberdon Coin Room of the Ashmolean Museum embarked upon an ambitious ten-volume plan to publish their collection of Islamic coins in sylloge format. The Ashmolean's own significant holdings had by that time been supplemented by the addition of the important Shamir Shama collection (via long-

term loan in 1994), and thus totaled some 13,500 coins. Under the series-editorship of Luke Treadwell, this volume is the fourth of the ten to appear. In it, Norman D. Nicol provides first a very brief introduction (pp. 11–13) and then detailed descriptions and images of 1584 coins (on 82 plates) from the major dynasties of Egypt and Syria for the period 254–692/868–1517: those of the Tulunids (coins 1–126); the Ikhshidids (127–217); the Fatimids (218–829); the Zengids (830–853); the Ayyubids (854–1153); and the Mamluks (1154–1584). As with the previous three volumes of the SICA series, the production values are high and the 1:1 coin images clear, precise, and detailed. The publication of these 1584 coins is a welcome addition to the monetary history of Egypt and Syria in general, and to the field of Mamluk numismatics in particular. The Heberdon holdings in Mamluk coins are particularly strong for copper *fulūs,* which, given the paucity of previously published images of these types of coins, is especially noteworthy. That said, non-numismatic specialists who will use this book should be aware of two wider contexts in which this volume appears. The first is the state of the field for the numismatic history of Egypt and Syria. The second is a wider debate on the best ways to organize numismatic material for publication.

Both contexts emerge from the following comment by Treadwell in his forward (p. 9): "This volume fills a need. To date the copious publications of medieval Egyptian and Syrian coinage *[context one]* have consisted of dynastic corpora and catalogues. This is the first catalogue to provide a regional overview of the dynasties concerned and will for this reason be of particular interest to historians and students of the medieval Near East *[context two]*." As Treadwell alluded, there is a prolific body of scholarship on the monetary and numismatic history of Egypt and Syria. Nicol, however, has provided only a very brief bibliographic introduction to this scholarship. While it is true that in sylloges the emphasis should be on the coins, as it is here, rather than an in-depth historiographic analysis of the field, users of this volume will need to turn elsewhere to get an appreciation of just how numerous these previous publications are. Mamlukists, in particular, may turn to the numismatic section of the Chicago Online Bibliography of Mamluk Studies to see the number of titles available, especially those published since the appearance of Paul Balog's seminal *The Coinage of the Mamluk Sultans of Egypt and Syria*, Numismatic Studies no. 12 (New York: American Numismatic Society, 1964).

The second context has to do with organizational schemas for presenting numismatic information. This volume is called a sylloge. This term may be unfamiliar to non-numismatists and thus some historical and terminological background is useful here. The frequent use of the term "usually," however, signals that exceptions to the following assertions may be encountered. The use of sylloges is relatively new in Islamic numismatics. The first institution to begin a sylloge series for Islamic coins was the Forschungstelle für islamische Numismatik in Tübingen, under the

directorship of Lutz Ilisch. The first volume of this institution's *Sylloge Numorum Arabicorum Tübingen*—or SNAT as it is commonly known—appeared in 1993. The Heberdon Coin Room was the second major collection to embark upon a sylloge series. As it is widely understood, sylloges publish the complete holdings of one institution, within the chronological and geographic parameters of the coinage singled out for study. Usually every coin in that collection is described and illustrated, subject to editorial and curatorial judgment, regardless of overall rarity or commonness, and independent of whether it is an example of which the institution has several specimens or only one. Thus the user of any sylloge volume will have access to information about all the pertinent coins which that collection holds, but depending on the strengths of the particular collection, will likely not see the entire range of any numismatic series. Additionally, sylloges are also usually organized by mint series, which means that coins are presented in chronological order by mint of issue. A sylloge's table of contents, for example, usually features mints as the primary organizational criterion, with regnal periods of any ruler serving as a secondary or tertiary criteria.

Sylloges are different from two other common methods of publishing coin collections, those which for better or worse can be called traditional catalogues and those known as corpora. Sylloges are different from the former in two fashions. The first is that traditional catalogues usually only describe and illustrate a sample of their collection. Duplicates, in particular, are usually just listed rather than illustrated. The second is that most traditional catalogues follow a dynastic organizational schema rather than one based upon mint series, meaning that the first level of organization is ruler's reign, as opposed to mints which are relegated to a subsidiary catalogue variable. Sylloges are also different from dynastic corpora, such as Balog's mentioned above, for the latter not only are usually organized by regnal period but aim for as complete as possible representation of the entire numismatic issues of a dynasty by drawing upon coins from many collections.

These distinctions between the regnal organization of traditional catalogues and corpora versus the mint organization of sylloges may strike the non-specialist as trivial, but they are not. To put it another way, numismatic works organized first by dynastic details primarily support the identification of individual coins, while those organized by mint series support the analysis of wider numismatic questions not specifically bound to an individual ruler or even dynasty. Moreover, one of the widely agreed aims of sylloges of collections is the publication of more specimens of coins to add to the archive of specimens readily accessible for analysis. These larger samples are necessary, to give but one example, in matters of die analysis, which in turn can shed more light on questions of mint issue output. This debate is clearly ongoing, and proponents of both organizational schemas will no doubt continue to argue their points.

This digression is pertinent since the forward to the first volume published of the SICA series (vol. 10, *Arabia and East Africa,* 1999, by Steve Album) contained the following statement:

> The choice of ordering by mint is becoming increasingly common in the field these days and for good reason: it allows the development of all aspects of a coin series to be studied in the sequence within which the coins were actually produced, i.e., in both their geographical and chronological contexts. The disadvantage of this method is that it tends to favour the reader who has some numismatic knowledge over the historian who does not. In order to facilitate the use of the catalogue by non-numismatists, careful attention has been paid to the compilation of indexes of names, titles, and dynasties (Treadwell, p. vi).

Volume 6, however, unlike the preceding three, is arranged differently:

> The catalogue is arranged in chronological sequence of the ruling dynasties subdivided by ruler. This is a departure from the procedure followed in the other volumes of this series. I find that the complex issues of several dynasties are easier to understand when the entire spectrum of each particular ruler's issues are described next to another (Nicol, vol. 6, p. 11).

Nicol is of course entitled to this view. The result, however, is a missed opportunity. By organizing by ruler rather than mint, this volume presents like a compilation of excerpts from those aforementioned "dynastic corpora and catalogues" rather than offering something that the field still lacks, namely an overview of the mint series over this long era. As it is, the reader moves from the Tulunids through the Mamluks, ruler by ruler, but does not easily see the processes which change over a chronological time span asynchronous to those regnal periods. Thus we end up with another work which is primarily an aid identification rather than a work that privileges wider analysis by situating the coins in those geographical and chronological contexts. Nevertheless, the addition of 1584 coins from this important collection to the published archive of Islamic numismatic evidence is still to be celebrated.

Abdallah Kahil, *The Sultan Ḥasan Complex in Cairo 1357–1364: A Case Study in the Formation of Mamluk Style*. Beiruter Texte und Studien 98 (Beirut: Orient-Institut Beirut, 2008). Pp. 403, illustrations.

Reviewed by Bernard O'Kane, The American University in Cairo

It is strange that we should have waited so long for an art historical monograph on the greatest Mamluk monument. Despite Cairo's fame as a city with one of the most dense concentrations of pre-modern Islamic architecture, monographs on its buildings are few and far between, most having been written from the perspective of those involved in their architectural restoration.[1]

This book is a revised version of the author's doctoral dissertation, completed in 2002, and although in the preface Kahil apologises to the publication manager of the series for late delivery of the manuscript, the intervening time has been used profitably to expand and refine his text. One of his major findings, the extensive design input of the monument's building supervisor *(shādd al-ʿimāʾir)* (the amir Muḥammad ibn Bīlīk al-Muḥsinī, who was also a noted calligrapher), was published in the interim in the festschrift for Priscilla Soucek,[2] but the information is also included here, as it should be.

In his introduction Kahil gives the historical background, discusses previous interpretations of the complex, and sets out his main purpose, which is a meticulous documentation of the building's structure and decoration, backed by copious references and comparisons not only to monuments in Cairo but also to those in such Syrian centers as Damascus, Aleppo, and Tripoli. The author's obvious familiarity with the monuments from the whole of Mamluk territory makes these comparisons all the more pertinent.

His discussion (pp. 36–38) of the annexes of the monument, those areas situated behind the portal and which now contain ablutions facilities, clearly shows them to be fabrications of Herz and the Comité. Another surprise is the extent to which the tomb was envisaged to be an independent unit within the whole complex. Reminiscent of his grandfather Qalāwūn's tomb, the entrance was guarded by ten of his manumitted slaves. Doris Behrens-Abouseif has recently highlighted how Mamluk tomb chambers were often categorized as *masjid*s in *waqfīyah*s to legitimize prayers within them,[3] and in this case, to lead the five daily prayers, the tomb even

[1] E.g., the volumes on the Barqūq and Faraj ibn Barqūq complexes by Saleh Lamei Mostafa, and Max Herz's books on the Qalāwūn and Sultan Ḥasan complexes.

[2] "The Architect/s of the Sultan Ḥasan Complex in Cairo," in *Pearls from Water, Rubies from Stone: Studies in Islamic Art in Honor of Priscilla Soucek,* ed. Linda Komaroff and Jaclynne Kerner, *Artibus Asiae* 66, no. 2 (2006), 155-74.

[3] *Cairo of the Mamluks* (Cairo, 2008), 18. Kahil (p. 58) further shows how the *waqfīyah* chara - terized the burial space within the tomb as private property, further circumventing possible legal

had its own imam, different from the one who performed the same duties in the adjacent qiblah *īwān*. The scale of the mausoleum was reflected in the provision of a team of one hundred twenty Quran readers to provide round the clock recitation—Qalāwūn's tomb had a "mere" fifty. This makes the projection of the tomb on three sides of the Maydān Rumaylah more understandable, as the continuous chanting of the Quran would have reminded passersby to pray for the occupant of the tomb.

In his extensive discussion (pp. 53–58) of the anomalous placement of the tomb behind the qiblah *īwān* Kahil alludes to the parallel of the Turbat-i Shakyh Jām complex. His characterization of the dome chamber there as a tomb is incorrect (the tomb is an open one in front of the preceding *īwān*), although Kahil rightly dismisses the example as a parallel on the grounds that the *īwān* there, as in Ilkhanid Friday mosques such as that at Varamin, was conceived as an entrance to the dome behind, unlike the qiblah *īwān* of Sultan Ḥasan which totally obscures the view of the dome and which, with its depth and elaborate decoration, was the focal point of the congregational mosque of the complex.

The portal and its decoration are the subject of the third chapter. Kahil mentions the Seljuq and Iklhanid parallels for the original paired minaret design, although he also notes that a desire to surpass previous Cairene monuments with multiple minarets would probably have been a factor. But the fact that the one being built was so unstable as to fall down during construction supports Michael Rogers' contention that, unlike the Anatolian Seljuq examples on which it might have been loosely based, it was made of stone and was not buttressed from the side of the portal, denoting the work of a craftsman who had admired the form but was unfamiliar with the structural procedures.[4] The same craftsman might have designed one particular strapwork pattern (pl. 220), a dense ungrooved basket-weave that can be read as interlocking hexagons, whose only parallels are also in Seljuk Anatolia.[5]

With regards to the reused colonettes that adorn the plinth, Kahil plausibly notes (p. 83) that after the Mamluk raid on Adana in 1360 the portal of the church was sent to Cairo, and that these might have been part of this booty, especially given their similarities to Cilician manuscript illumination. He also brings out the parallels with contemporary Cairene Quranic illumination, particularly relevant considering the involvement, noted above, of the calligrapher Muḥammad ibn Bīlīk al-Muḥsinī as supervisor of the building.

Kahil also discusses in detail the chinoiserie decoration on the chamfering at the sides of the portal (pl. 23); it might have been useful to include in the analysis the findings of Rachel Ward, who has shown how such chinoiserie quickly became

objections.

[5] Ibid., fig. 12, showing the great *īwān* of the hospital of Kaykāʾūs, Sivas, or on the mihrab of the Erzurum Friday Mosque: Ömür Bakırer, *Anadolu Mihrabları* (Ankara, 1976), pl. 30.

standard, at least in metalwork, after the establishment of trade relations between the Ilkhanids and the Mamluks in the 1320s.[6]

Throughout the book the meticulous descriptions of decoration bring into focus features that have otherwise not been noticed or discussed in the literature, such as the central recess on the northern side with an unusual six-pointed star with curving sides, and a square panel with an interlacing geometric design surrounding the oculus above it (pls. 15, 227, 261a). The appreciation of these details is greatly facilitated by the number of original drawings published by the author, helpfully grouped by him in related clusters. It is worth singling out two drawings that are notable for their virtuosity: those of the *muqarnas* of the portal and the vestibule (pls. 216–17), each of stunning complexity.

In his section (p. 126) on the living units of the madrasahs, Kahil compares them to Cairene *rabʿ*s, suggesting that the madrasah courtyards are a combination of the *rabʿ* and a *khānqāh* courtyard with an *īwān* such as that of Baybars al-Jāshankīr. However, I'm not sure that it is helpful to cite the *rabʿ* in this context, especially since one of the chief characteristics of the *rabʿ,* its arrangement of the living units in a duplex with a two-storey *īwān* unit facing the exterior, is not present at Sultan Ḥasan.

In discussing the bulbous dome of the Sultan Ḥasan fountain Kahil suggests (p. 132) that it may have derived from Fatimid prototypes at Aswan or that of the *mashhad* of al-Juyūshī. The Fatimid examples, however, even if they have a drum, are not truly bulbous. More plausible prototypes for the bulbous domes of Cairo, which appear there after the middle of the fourteenth century, might be the Muzaffarid tomb of Sultan Bakht Āghā at Isfahan datable to 752/1351, and a no longer extant dome at Isfahan from the first half of the fourteenth century that has been attributed to the Ilkhanid Sultan Abū Saʿīd.[7]

The tomb chamber receives a chapter to itself, and here as elsewhere the discussion of the formal and decorative parallels is as thorough as one could wish. Kahil notes that the painting on the pendentives was restored by Herz, but suggests (p. 160) that the painting has an Ottoman character. To me, however, the combination of arabesques on the main *muqarnas* units and of chinoiserie-inspired blossoms on the polylobed blind niches above them is fully in keeping with the original decoration of the complex. He also comments on the unusual legibility of the main inscription in the tomb chamber, and while this is certainly true, is was unfortunately achieved by large thick letters which are surprising for their lack of adherence to the usual canons that distinguish the finest Mamluk monumental epigraphy.

[6] "Brass, Gold and Silver from Mamluk Egypt: Metal Vessels Made for Sultan al-Nāṣir Muḥammad," *Journal of the Royal Asiatic Society* 14 (2004): 66.

[7] Luṭfallāh Hunarfar, *Ganjīnah-'i āsār-i tārīkhī-i Iṣfahān* (Isfahan, 1350/1971), respectively pp. 318, 295 (the drawing he reproduces on p. 295 is not, as cited, after Dieulafoy, but after Flandin).

Editorially, a number of suggestions can be made. While the author's English is admirably clear, concise, and jargon-free, there are typographical errors, slips in grammar and translation, and references to incorrect plate numbers too numerous to list that should have been caught by an editor. The continental system of pluralizing Arabic nouns by adding hyphens after them (e.g. *madhhab*-s) is distracting—the hyphens should have been omitted. An index would also have substantially increased the usefulness of the work. Some of the plates are underexposed, a pity especially in the illustration of the vestibule (pl. 41), which is given the unusual luxury of a full page reproduction. I'm not sure of the utility of the photos (pl. 7) of the sun striking the upper row of *muqarnas* on the portal: the time and angle of this varies greatly with the seasons. With regard to the bibliography, Howayda al-Harithy's *The Waqf Document of Sultan al-Nāṣir Ḥasan b. Muḥammad b. Qalāwūn* (Beirut, 2001) is omitted. Even though the author himself provides the most pertinent extracts from the *waqfīyah*s in his publication, it should have been included, or we should have been told why it was omitted.

As well as being a compendium of all the information one could want on the building, including its complete epigraphic program, for instance, the book's discussion of comparative material is comprehensive. This is well illustrated by the discussion of the possible contributions of the architect al-Ḥujayj to the complex (pp. 181 ff.), an individual who had traveled to Ḥamāh to view a *qāʿāh* that had earlier been built in the city by its ruler Abū al-Fidāʾ, before building one for his patron at the citadel.[8] Kahil rightly points out the importance of this episode in indicating the receptiveness of patrons to emulating architecture in other areas.

In sum, this work shows an extremely impressive mastery of the primary and secondary literature on the subject and related areas. It will remain the definitive account of the building for the foreseeable future.

The City in the Islamic World. Salma Jayyusi, general editor, Renata Holod, Attilio Petrucciolo, and André Raymond, special editors. Handbuch der Orientalistik/Handbook of Oriental Studies, Section 1, The Near and Middle East, vol 94. (Leiden and Boston: Brill, 2008). Two volumes. Pp. 1142 + 321 pp. of plates.

Reviewed by John Rodenbeck

Brill's blurb for this pair of hefty, expensive, and lavishly illustrated tomes quotes directly from the joint introduction by its three distinguished special editors. Both the blurb and the introduction tell us that the purpose of these volumes is "to draw

[8] Also mentioned in the contemporary publication of Behrens-Abouseif, *Cairo,* 43.

attention to the sites of life, politics and culture where current and past generations of the Islamic world have made their mark. Unlike many previous volumes dealing with the city in the Islamic world, this one has been specially expanded not only to include snapshots of historical fabric, but also to deal with the transformation of this fabric into modern and contemporary urban entities."

This latter claim is probably more or less true. The 7500-odd Western studies of "the Middle Eastern City and Islamic Urbanism" listed by Bonine, Ehlers, Krafft, and Stöber in their great bibliography (1994) do indeed divide generally into two sorts: those obviously intent on urban history and those preoccupied with urban fabric and morphology.

The general editor of these two Brill volumes is Salma Jayyusi, a scholar better known as a poet, literary anthologist, and champion of Arab culture than as an expert on cities. Her candid and graceful preface not only explains the genesis of these two books, but points to their most salient feature: the fact that they were written and edited by well-established specialists, but are intended for a far more general audience. This audience includes people who may be more or less ignorant of Middle Eastern languages and culture. It is surely for this reason that such an impressive collection found support at the cultural summit of the Muslim world, in this case funding from Prince ʿAbd al-ʿAzīz ibn Fahd ibn ʿAbd al-ʿAzīz. The venture was so risky that it is difficult to conceive of its being published otherwise.

"The single leading concept," as the special editors remark quite early in their joint introduction, "has been to consider the city as a living organism." Such words are clearly not to be taken as a rhetorical gesture towards a set of politically-correct pieties, but as signaling real attitudes that have been too rare in the past. In Cairo, for example, they were championed 30 years ago by Laila ʿAli Ibrahim, but she was virtually alone. During a conference on conservation of Cairo's Historic Zone in 1980, for example, an international expert toured the Darb al-Aḥmar checking off for demolition buildings that he thought were "un-Islamic," while a local design firm produced an elaborate and costly plan for enclosing the Darb al-Aḥmar and Fatimid al-Qāhirah in a *cordon sanitaire* of six-lane boulevards, expelling all "modern" activities, dressing the remaining inhabitants willy-nilly in medieval costume, and compelling them to turn out cheap tourist wares or perform in occasional folk-pageants.

One notes with relief that the special editors have also consciously avoided the pitfalls of deduction from some platonic idea of "the Islamic city," an abstraction built around a notion of exclusively Muslim needs. This inheritance from earlier scholars bedeviled thinking about cities and urbanism in the Muslim world for decades. The title the editors have thus carefully given these volumes suggests instead that the organic urban entities under examination and the varied elements that compose them have actually existed or do in fact still exist within the Muslim world.

Though these studies constitute a *tour d'horizon*, they do not attempt to take in the entirety of that world; and it is obvious that to have done so would have served no very useful purpose. A consideration of Indonesia, for example, is excluded completely; and out of 48 articles, only six (three each) concern the great cities of India and Persia. There is one article on Ottoman cities of the Balkans, one on Bukhara and Samarkand, one on sub-Saharan cities, while the Arabian Peninsula is represented only by an article on Sanaʿa and one on Dubai. Though references are made to scholarship at work on cities in Al-Andalus, there is no study here of Muslim urbanism in Western Europe. This reviewer, who lives in a region of southern France that had an Arab governor for 40 crucial years and where Arab rule still survives in local fact and legend, regrets the slow progress on that particular front.

Mamlukologists, though unlikely to learn anything new in their own field, will be gratified at the appearance here of important large-scale articles by scholars already well known for their work on Cairo or on specific questions about urbanism in a Mamluk context. André Raymond, for example, is not only one of the special editors, but also the author of three magisterial articles.

In an article called "The Mamluk City," Doris Behrens-Abouseif offers a parallel to Chapter VIII of her indispensable book, *Cairo of the Mamluks: A History of the Architecture and Its Culture* (2007). A significant difference, however, is that her book uses three illuminating maps, of which only two are reproduced here and in reductions of 60 per cent and 70 per cent, which limit their usefulness. Partial compensation is the addition of four stunning Orientalist views of Cairo, clearly aimed at a non-specialist audience, two by Louis-François Cassas (1756–1827) and two by K. L. Libay (1814–88). It is regrettable, incidentally, that illustrations referred to throughout this massive work had to be gathered at the end of the second volume, rather than appearing with the articles they illustrate. For the reader to locate illustrations thus requires reference to the names of the authors of particular articles as listed in the table of contents.

Sophie Denoix is represented by an article called "Founded Cities of the Muslim World," which contains separate sections on both Fusṭāṭ and al-Qāhirah. Nelly Hanna's "Guilds in Recent Historical Scholarship" wisely emphasizes what is really recent and ignores the vehemently authoritative conclusions of forty years ago to the effect that such organizations never existed. A penultimate article by Eric Denis, as circumlocutory as its subject matter would suggest, describes what is happening in the carcinopolis of present-day Cairo, which makes the Mamluk city seem like a golden dream.

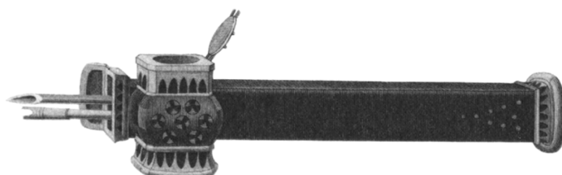
آ	ā	ُو	ū	ِي	ī
َا	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Avoid using apostrophes or single quotation marks for *ʿayn* and *hamzah*. Instead, use the Unicode characters ʿ (02BF) and ʾ (02BE).



Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence or a title. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before "sun" letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as terms which are found in English dictionaries, such as Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.
